- Management Measure – Specific, implementable, verifiable, and cost-effective action to be taken
- Monitoring – Monitoring activity to be undertaken
- Locations – Locations where the management measure and monitoring are to be implemented
- Indicators and Success Criteria – Indicators and criteria to be used to verify that the management measure is being implemented, and that it is effective and sufficient
- Reporting – Monitoring reporting requirement
- Schedule – Timing and frequency of implementing the management measure, monitoring, and reporting
- Responsibility – Delineation of responsibilities for implementing the management measure, monitoring, reporting, and oversight
- Estimated Costs – Costs of implementing the management measure and monitoring

The management measures and monitoring specified in this ESMP will be implemented, as applicable, together with the conditions, procedures, and best engineering practices specified in the design of the BWSE project prior to or irrespective of its evaluation in the ESIA. For purposes of the ESMP, best engineering practices and management measures are distinguished as follows:

- *Best engineering practices* are actions typically taken by the project proponent, construction contractor, or operator to avoid or minimize potential adverse environmental and social impacts but are not implemented in response to the impact findings of the ESIA.
- *Management measures* specified in the ESMP differ from best engineering practices in that they will be implemented specifically in response to the impact findings described in the ESIA.

In other words, best engineering practices are inherently part of the BWSE and are not additional management measures specified as a result of the impact assessment process. With respect to the construction phase, they are practices that typically are within the scope of services of the construction contracting firm performing the work. Their implementation is assumed in the impact analysis presented in the ESIA.

The best engineering practices are detailed as Technical Specifications and are set forth in Section V, Works Requirements of the Construction Contract Documents. Those technical specifications that the ESIA team assumed would be taken by the project proponent, construction contractor, or operator, and would avoid or minimize potential adverse environmental and social impacts are organized into Division 1 – General Requirements and Division 2 – Site Work, and in turn into sections. The relevant issues are addressed by technical specifications in the respective sections indicated in the two following Technical Specification text boxes.

If the best engineering practices in place avoid or sufficiently reduce the impact of activities evaluated in the ESIA below the level at which the impact would be significant, additional avoidance or minimization of potential adverse impacts may not be needed. Conversely, management measures specified in the ESMP have been developed to avoid, minimize, or offset adverse impacts; or to reinforce or enhance beneficial impacts.

## **Technical Specifications, Division 1 – General Requirements**

### **Section 01030, Special Requirements**

- Health and Safety Plan
- Product Handling
- Disposal of excess material
- Disposal of debris
- Preconstruction Video Recording of Entire Site
- Detours and Road Accessibility
- Permits, Fees and Bonds

### **Section 01046, Control of Work**

- Hours of Construction
- Open Excavations
- Occupying Private Land
- Interference with and Protection of Streets
- Care and Protection of Property
- Cleanup and Disposal of Excess Material

### **Section 01063, Miscellaneous Requirements**

- Traffic Control
- Interference with Existing Utilities
- Maintaining Flows

### **Section 01110, Environmental Protection Procedures**

- Prevention of Environmental Pollution
- Erosion Control
- Protection of Streams, Wetlands and Surface Water
- Protection of Land Resources
- Protection of Air Quality
- Noise Control

### **Section 01500, Temporary Facilities**

- Temporary Field Offices
- Internet Service
- Temporary Fence
- Potable Water
- Electricity
- Sanitary Conveniences
- Barricades and Guard Lights
- Temporary Heat
- Shelter and Protection of Materials
- Security

### **Section 01568, Erosion Control, Sedimentation & Containment of Construction Materials**

- Erosion Control

### **Section 01610, Delivery, Storage and Handling**

- Storage and Handling of Hazardous Materials

### **Section 01700, Contract Closeout**

- Final Cleaning

<b>Technical Specifications, Division 2 – Site Work</b>	
<p><b>Section 02210, Earth Excavation, Backfill, Fill and Grading</b></p> <ul style="list-style-type: none"> <li>○ Excavation</li> <li>○ Separation of Excavated Material for Reuse</li> <li>○ Trench Excavation</li> <li>○ Reuse and Disposal of Surplus Excavated Materials</li> <li>○ Care and Restoration of Property</li> <li>○ Backfilling</li> </ul> <p><b>Section 02230, Site Clearing</b></p> <ul style="list-style-type: none"> <li>○ Clearing and Grubbing</li> </ul> <p><b>Section 02672, Water Supply Well Construction, Development and Pumping Tests</b></p> <ul style="list-style-type: none"> <li>○ Generalized Water Supply Description</li> <li>○ Well Installation Plan</li> <li>○ Protection of Work and Property</li> <li>○ Clean-Up</li> <li>○ Protection of Existing Conditions</li> <li>○ Drilling Preparation</li> <li>○ Performance Pump Testing</li> <li>○ Final Disinfection</li> <li>○ Site Clean-Up</li> </ul>	

As appropriate for each of the subject project phases or the overall ESMP, the ESMP organizes and summarizes the management measures into the following constituent plans and schedules:

- Environmental Management
- Waste Management
- Social and Gender Inclusion
- Health and Safety Management
- Education, Training, and Community Outreach
- Risk Control and Emergency Response
- Monitoring and Verification, and Maintenance Actions
- Implementation Work Plan and Schedule
- Implementation Budget

The first four plans/schedules listed above detail specific management measures to mitigate adverse environmental and social impacts or reinforce potential beneficial impacts. Each management measure is detailed in a table that is specific to that measure. The remaining plans/schedules provide procedures, as appropriate referencing the management measures in the preceding plans, to address specific concerns and issues, or summarize the measure-specific procedures, timetables, and costs into a workplan, schedule, and budget estimate for implementing the ESMP.

## **F.1 Pre-Construction Phase**

### **F.1.1 Responsibilities During Pre-Construction**

## **MCA-Mongolia**

MCA-Mongolia or its representative will be responsible for oversight of the pre-construction-related management measures and monitoring specified in the ESMP. MCA-Mongolia or its representative will inform and coordinate with all applicable stakeholders regarding their corresponding mandates under or in relation to the ESMP. MCA-Mongolia or its representative will establish a Social Safeguards Team (SST), led by a Social Manager, that during the pre-construction and construction phases, in coordination with the Contractor, will coordinate with community representatives and liaisons, and project affected persons in implementing, supervising, reporting, and follow-up actions with regard to the ESMP.

### **SST Organization and Staffing**

- Social Manager, with suitable experience in resettlement and management of social issues in construction, who will lead the team
- Two Social Safeguards Officers
  - One experienced in liaison with construction companies and familiar with workplace training/toolbox
  - One experienced in social and gender inclusion, who will manage coordination of the MCA-Mongolia Grievance Redress Mechanism (GRM)
- Two Community Liaison Officers who will work at the local level, one assigned to each of Khan-Uul District and Songinokhairkhan District

As needed, MCA-Mongolia or its representative must expand the SST size in relation to the increase in supervision and monitoring of contractors.

### **SST Responsibilities**

- Finalize, update, monitor, and report as required on BWSE social plans and those prepared by the Contractor:
  - Labor Management Plan
  - Gender Integration and Social Inclusion Plan
  - Counter-Trafficking in Persons Plan
  - Stakeholder Engagement Plan
  - Construction Camp and Temporary Facilities Management Plan
  - Cultural Heritage Training Plan
- Manage, update, and implement the Stakeholder Engagement Plan
- Plan and lead community consultation meetings
- Ensure the design and delivery of effective information campaigns using all media
- Liaise with the UB MUD regarding the land acquisition and compensation process in resettlement
- Undertake further enquiry among herders as to the pattern of grazing disruption caused by land take and land reclassification
- Liaise with khoroo administration and local communities to negotiate new grazing arrangements for both winter and summer grazing
- Manage and maintain the Grievance Matrix
- Liaise with MCA-Mongolia, MUD, and contractors to implement and assist in resolution of grievances
- Inform community members of employment opportunities
- Assist local people to apply for vacancies through the Ministry of Labor and Social Protection offices

- Liaise with contractors to encourage and promote local employment over imported labor and emphasize the contractual obligations to aim for 30 percent of unskilled and semi-skilled jobs to go to women
- Liaise with experienced NGOs to find those able to design training courses on aspects of employee behavior, sexual harassment and gender-based violence, gender equity, conflicts over employment opportunities and foreign workers, cultural awareness, and chance finds processes
- Monitor and supervise contractor compliance with designing and implementing social policies and plans, training, internal grievance systems, and the MCA-Mongolia GRM
- In cases of internal complaints of sexual harassment or gender based violence within the contractor's grievance mechanism, ensure that an independent investigator is appointed, at the expense of the contractor, to lead the investigation and reporting on the grievance
- Monitor achievement of resettlement and review completion, and recommend further measures if households fail to reinstate their livelihoods
- Finalize the Vulnerable People's Plan and ensure implementation through the Ministry of Labor and Social Protection

## Contractor

The construction contracting firm performing the work, the **Contractor**, will be fully responsible for implementing and monitoring all pre-construction-related management measures specified in the ESMP—together with the conditions and procedures specified in Section V, Works Requirements of the Construction Contract Documents. The Contractor will read the ESMP, consider it in its entirety, and comply with all aspects of the ESMP that pertain to implementing and monitoring pre-construction-related environmental and social management.

The Contractor will abide by the requirements of this ESMP, which is appended to and is a part of the Contract. Following construction contract award, the Contractor will develop a site-specific Contractor's Environmental and Social Management Plan (CESMP), as further described below, for approval by the Engineer prior to start of the construction works. The Contractor will prepare the site-specific CESMP based on the contents of Section V, Works Requirements and this ESMP. The Contractor will submit the detailed, site-specific CESMP to the Engineer within 28 days after receiving the Letter of Acceptance. The CESMP must be approved by the Engineer prior to commencement of the execution of the Works.

The Contractor is advised that all sites where the Contractor will establish temporary construction facilities will be subject to environmental and social impact assessments and must be covered by an acceptable CESMP, must be permitted in accordance with all applicable permitting requirements. The Contractor will need to negotiate with and potentially compensate landowners for temporary use of land. These temporary facilities may be co-located and potentially would comprise the following:

- Construction camps
- Laydown, staging, and storage sites
- Concrete batch plants
- Site offices
- Fuel storage
- Parking areas

The Contractor will take all necessary measures and precautions to ensure that the execution of the works and all associated operations on site or off site are carried out in conformity with statutory and regulatory environmental and social requirements of the Government of Mongolia and the technical specifications, where the more stringent will apply. The Contractor will take all measures and precautions to avoid any nuisance or disturbance arising from the execution of

project activities. Wherever possible, this will be achieved by avoidance of the impact at the source rather than mitigating an impact after it has been expressed.

The Contractor will develop a grievance redress mechanism (GRM) based on guidance provided in Annex A of this ESMP.

The Contractor will designate an Environmental and Social Performance Manager as a key staff. This individual will have knowledge of relevant Mongolian, IFC, and Millennium Challenge Corporation standards and regulations, and knowledge of environmental, social and gender issues that include, but are not limited to, environmental management, waste management, gender and social inclusion, cultural resources, and health and safety management.

This individual will be responsible to:

- Work closely with MCA-Mongolia or its representative to guide the Contractor's thorough understanding of the mitigation and monitoring requirements
- Lead the Contractor's work related to implementing environmental and social management measures and relevant monitoring requirements
- Work closely with MCA-Mongolia or its representative to incorporate or modify management measures and monitoring actions proposed by the Contractor, as needed, to reflect field conditions with the approval of the Engineer.

The Contractor, while in possession of the construction sites, will be responsible for the safety measures undertaken in accordance with the Technical Specifications to protect the workforce of the Contractor's own staff as well as the Engineer's and MCA-Mongolia or its representative's supervision staff. The Contractor will conduct in this respect safety induction courses for all personnel involved with the works and who are required to supervise any activity prior to their attending any part of the works. Additional training is required to meet MCC social policy requirements as per the:

- Labor Management Plan
- Gender Integration and Social Inclusion Plan (GSI)
- Counter-Trafficking in Persons Response Plan and Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan
- Stakeholder Engagement Plan
- Construction Camp and Temporary Facilities Management Plan
- Cultural Heritage Training Plan
- Managing external grievances as part of the project GRM

The Contractor will act responsibly to provide notification of the Contractor's schedule to enable MCA-Mongolia or its representative to carry out its responsibilities. The Contractor will be required to provide verbal and written updates to MCA-Mongolia or its representative on a regular basis indicating percent achievement of the pre-construction-related management measures specified in the ESMP. On a monthly basis, as part of the Contractor's monthly progress report, the Contractor will submit an ESMP update that will report the status of all environmental and social compliance activities and actions taken by the Contractor.

### **Contractor's Environmental and Social Management Plan (CESMP)**

The site-specific CESMP is required for construction activities and will provide the implementation vehicle of specific management activities applicable for the construction sites. At the direction of the Engineer, the Contractor is required to update the CESMP, including constituent plans and procedures, during the construction works as part of its obligations under its contract. The CESMP is required to strictly follow and comply with the environmental, social, health and safety

requirements of the Millennium Challenge Corporation (MCC) and national legislation, as well as this ESMP, its constituent plans, and other applicable documents and regulations.

The site-specific CESMP will provide identified site-specific management measures, and refine organizational and operational procedures for the implementation of those measures, including implementation timeline and specific reporting requirements. The CESMP will detail the plans and procedures constituent to the CESMP and elaborate complimentary environmental, social, and health and safety management measures and training, and indicate the responsibility for implementation, technical details, and how implementation will be monitored. The CESMP, at a minimum, shall include the following plans:

- Environmental Management Plan
- Waste Management Plan
- Social and Gender Inclusion Plan
- Health and Safety Management Plan
- Education, Training, and Community Outreach Plan
- Risk Control and Emergency Response Plan
- Monitoring and Verification, and Maintenance Actions Plan

### **Objectives of the CESMP**

The Contractor will prepare the site-specific CESMP in order to properly manage its construction activities in accordance with Section V, Works Requirements and this ESMP, and in compliance with requirements of MCC and Mongolian legislation. This includes requirements on community engagement and gender integration incorporated into the ESMP, the Employer's Social and Gender Integration Plan, and Counter-Trafficking in Persons requirements of MCC, and the laws and regulations of Mongolia.

The site-specific CESMP will be prepared with the following objectives:

- Provide the environmental and social policy of the Contractor
- Provide operational and emergency procedures, developed to address the environmental aspects and risks associated with the construction activities
- Provide details on approaches and measures and appropriate personal protective equipment (PPE) and other equipment for handling hazardous waste generated on each site
- Provide details on communication and reporting, as well as contacts of site supervisors nominated to control and guide works involving disturbance of hazardous materials and waste
- Clarify the implementation and operation of the site-specific CESMP to ensure that structure and responsibilities are assigned, workers are trained, aware, and competent, and that there is proper communication, documentation, operational control, and emergency preparedness and response
- Provide organizational and technical procedures for implementation of the CESMP to ensure that construction activities associated with potential environmental and social impacts are carried out in a controlled and responsible way
- Provide checking and corrective action through monitoring and measurement
- Provide mechanisms for maintaining adequate records of corrective actions to allow effective monitoring
- Provide mechanisms for maintaining effective two-way communication between the Contractor and the community and stakeholders
- Provide full compliance with Mongolian Law on Labor, Law on Promotion of Gender Equality and other relevant employment laws. Ensure each employee has a written contract and is made aware of and signs the Worker Code of Conduct, and ensure compliance with the Labor Management Plan

- Provide training on and awareness in accordance with the following management measures:
  - Emergency Preparedness and Response
  - Waste Management
  - Labor Management
  - Gender Integration and Social Inclusion
  - Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment
  - Stakeholder Engagement, Community Consultation, and Grievance Redress
  - Construction Camp and Temporary Facilities Management
  - Cultural Heritage Protection
  - Health and Safety Management

### ***Preparation of the Site-Specific CESMP***

The CESMP will include the following:

- Management Acknowledgements
- Organization and Staffing
- Communications and Reporting
- Environmental, Social, and Health and Safety Provisions

The Contractor will prepare and submit for the Engineer's approval the site-specific CESMP, including constituent plans and procedures, within 28 days after receiving the notice of contract award. The Engineer may require periodic reviews, including updating of the CESMP during the construction works.

### ***Management Acknowledgements***

#### **1) Certification and Commitment**

The site-specific CESMP submitted by the Contractor will provide a signed statement from the Contractor's Project Director attesting to a commitment that all environmental and social protection, safety, and occupational health and safety aspects of the contract will be given highest priority in the discharge of contractual obligations and certifying a commitment to the provisions in the ESMP, its constituent plans, environmental and social requirements of the contract, as well as the approved site-specific CESMP.

#### **2) Statutory Understanding and Compliance**

The site-specific CESMP will provide a statement attesting the Contractor's understanding of, and means of ensuring due compliance with, the statutory regulations relating to construction work in Mongolia, specifically regarding compliance with:

- a) All current environmental laws and regulations, related to, but not limited to, the following:
  - Noise
  - Vibration
  - Air pollution
  - Water contamination
  - Solid and hazardous waste disposal
  - Waste disposal
  - Sanitary conditions (water supply, sewerage, wastewater disposal, etc.)
  - Use of explosives;

- Protection of public traffic
  - Historical, cultural, and archaeological monuments/sites
  - Resettlement, land acquisition, servitude, temporary use of land and compensation, etc.
- b) All current labor laws and laws related to, but not limited to, the following:
- Contract of employment and labor disputes
  - Working conditions
  - Management, monitoring, and supervision
  - Gender-based discrimination in employment
  - Child labor
  - Trafficking in persons
  - Gender-based violence
  - Sexual harassment
- c) All occupational health and safety legislation including, without limitation, the rules and regulations of Mongolia and the authorities having jurisdiction. These provisions will be included and regulated through the Health and Safety Management Plan.

### 3) Availability of Documents

The site-specific CESMP will state where copies of environmental and social regulations and documents will be available on the construction sites and verify that all regulations and documents have been or will be made available.

### 4) Management of Subcontractors

The requirements of this and related sections and obligations therein will be included for implementation of parts of the construction activities by the approved subcontractors, while the Contractor will:

- a) Provide subcontractors with copies of the site-specific CESMP, the ESMP, the constituent plans, and other relevant environmental and social policies, plans, documents, and regulations, while incorporating such provisions into all subcontracts and ensuring compliance with such plans under the Contract.
- b) Require all subcontractors to appoint an environmental representative, social representative, and health and safety representative, who will be available on the sites throughout the operational period of the respective subcontract and ensure as far as is practically possible that staff and employees of subcontractor(s) are conversant with appropriate parts of the site-specific CESMP and the relevant environmental and social documents and regulations.

## **Organization and Staffing**

### 1) Organization Chart

The site-specific CESMP will include an organization chart identifying, by job title and by the name of the individual, the personnel to be engaged solely for environmental protection, social and gender, and health and safety control. The chart and the supporting text will identify participants and their contact details.

### 2) Identification of Responsibilities

The site-specific CESMP will provide descriptions of the responsibilities of the Environmental and Social Performance Manager, Social and Gender Manager, and Health and Safety Manager

appearing on the organization chart. Additionally, the CESMP will provide a description of the responsibilities of the Contractor's Social Safeguards Officer or Social Safeguards Team.

a) Environmental and Social Performance Manager

The Environmental and Social Performance Manager, qualified in ESMP and resettlement implementation, throughout the construction period will be primarily responsible for daily inspection and monitoring of ESMP implementation. The Environmental and Social Manager will prepare monthly and as-needed incident reports and submit them to the Engineer. MCA-Mongolia will report to MCC and send feedback to the Contractor through the Engineer or directly when urgent action is required. Monitoring and reporting on the implementation of follow-up action will also be part of the Environmental and Social Manager's duties.

The Environmental and Social Performance Manager additionally will be responsible for environmental management of the construction sites and day-to-day management of environmental issues. The Environmental and Social Manager will be empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements of the site-specific CESMP or relevant environmental documents and regulations.

The Environmental and Social Performance Manager will maintain a daily site diary/record-book comprehensively recording all relevant matters concerning the construction sites' environmental management, safety, and traffic control, inspections, and audits, related incidents and the like. The site diary will be available at all times for inspection by the Engineer.

b) Social and Gender Manager

The Social and Gender Manager will be responsible for day-to-day management of social issues for the duration of construction works. The Social and Gender Manager will be empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements of the site-specific CESMP or relevant social documents and regulations. The Social and Gender Manager will be responsible for overall stakeholder engagement and consultation process, ensuring proper labor contracting and working conditions, issues related to trafficking in persons, and organizing and delivering trainings, appropriate communication, and reporting.

Additionally, the Social and Gender Manager will monitor the internal grievance mechanism. In case of sexual harassment or violence, will liaise with the MCA-Mongolia or its representative's Social Safeguards Team and engage an independent third party such as the Centre for Gender Equality to manage investigations of allegations.

With input from site supervisors, the Social and Gender Manager will maintain a diary/record-book comprehensively recording all relevant matters concerning site social issues management, inspections and monitoring, incidents and emergencies, as well as other relevant issues. The diary will be available at all times for inspection by the Engineer.

c) Health and Safety Manager

The Health and Safety Manager will be responsible for day-to-day management of health and safety issues for the duration of construction works, including HIV/AIDS and Covid-

19 related issues. The Health and Safety Manager will be empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements of the Health and Safety Management Plan or requirements of health and safety documents and regulations.

The Health and Safety Manager through input from site supervisors will maintain a health and safety diary/record-book comprehensively recording all relevant matters concerning site health and safety management, inspections, and monitoring, incidents and emergencies, as well as other relevant issues. The diary will be available at all times for inspection by the Engineer.

d) Social Safeguards Officer / Social Safeguards Team

The Contractor's Social Safeguards Officer or Social Safeguards Team, under the Social and Gender Manager, will be appointed to manage the contractual obligations specified in the construction contract. Depending on the size of the company, the Contractor designate at least Social Safeguards Officer; more if the number of employees exceed 50. Additionally, a Contractor Community Liaison Officer may be needed to work with local labor.

The responsibilities of the Contractor's Social Safeguards Officer or Social Safeguards Team are the following:

- Coordinate with the MCA-Mongolia or its representative's SST regarding the protocols for community contact
- Maintain records of all community contacts and integrate with the project Stakeholder Matrix
- Liaise with the MCA-Mongolia or its representative's SST over community contacts
- Liaise with the MCA-Mongolia or its representative's SST to implement and assist in resolution of grievances
- Inform the MCA-Mongolia or its representative's SST of employment vacancies and recruit through the Ministry of Labor offices and process
- Monitor and promote the employment of women to achieve the recommended target of 30 percent or more
- Plan and ensure delivery of the contractually required employee awareness training and information programs
- Liaise with training organizations and experienced NGOs to find those able to design training courses on aspects of employee behavior, sexual harassment and gender based violence, gender equity, HIV/AIDS, conflicts over employment opportunities and foreign workers, cultural awareness, and chance finds processes
- Support complainants to the Contractor's internal grievance system, particularly those alleging sexual harassment or gender-based violence
- Assist the Contractor's personnel department to manage the internal employee grievance mechanism for reporting grievances
- Manage the Contractor's responsibilities with the project GRM; documenting, reporting, and taking part in finding solutions

3) Appointments

The Contractor will include the CV of the following proposed personnel in the bidding package and submit to MCA-Mongolia for approval the names and details (full CVs) of these proposed personnel within 14 days after the notification of contract award:

- Environmental and Social Performance Manager
- Social and Gender Manager
- Health and Safety Manager

The proposed personnel will hold the attestation/proof of professional qualification required from the relevant government authorities to perform and submit pertinent studies and documentation to relevant Government agencies, with an advanced post graduate degree in a relevant discipline or as a certified consulting engineer, and relevant post-graduate experience in Mongolia.

The Contractor will obtain approval and appoint the Environmental and Social Performance Manager, Social and Gender Manager, and Health and Safety Manager prior to commencement of construction works, unless otherwise, in exceptional circumstances, it is agreed in writing with the Engineer. Key personnel identified in Section IV, the Environmental and Social Performance Manager, Social and Gender Manager, and Health and Safety Manager will not be removed from the construction works without written permission of the Engineer. Within 14 days of any such removal or notice of intent of removal, a replacement for the respective personnel will be nominated by the Contractor for approval by the Engineer and MCA-Mongolia (MCA-Mongolia will approve any key staff).

### **Communications and Reporting**

The site-specific CESMP will explain the proposed interaction and communication procedures between construction personnel and environmental, social and gender, and health and safety staff, including:

- Communication facilities
- Routine communication and reporting systems
- Stakeholder engagement and consultation activities

#### **1) Environmental, Social and Gender, and Health and Safety Reports**

The Contractor will submit the environmental, social and gender, and health and safety reports shown in Table 1.

**Table 1 Summary of Reporting Requirements**

Report	Submission Schedule	Content
<b>Site-specific CESMP</b>	One time during mobilization, within 28 days after the Letter of Acceptance	<p>The Contractor will carry out an assessment of environmental, social and gender, and health and safety conditions at the work sites to define site-specific impacts and adequate mitigation measures. The Contractor will also develop constituent plans and procedures required as a part of CESMP.</p> <p>The site-specific CESMP must be approved by the Engineer prior to commencement of construction activities.</p>
<b>Training and Orientation Report</b>	<p>One time during mobilization, before commencement of works</p> <p>Monthly updates during implementation of works</p>	<p>The Contractor will summarize information regarding training and orientation mandated under each plan, carried out before involvement of the labor in construction activities and during toolbox talks. Toolbox talks on each plan topic must be delivered monthly.</p> <p>The Contractor will provide copies of the Training and Orientation Reports to the Engineer. The Contractor will provide monthly updates of training and orientation activities during implementation of works in the Monthly Progress Reports.</p>
<b>Regular Weekly Environmental, Social and Gender, and Health and Safety Reports</b>	Weekly during implementation of works	<p>The Contractor will undertake environmental, social and gender, health and safety inspections and report weekly, and will provide copies of such reports to the Engineer each month for the duration of contract.</p> <p>The weekly environmental reports will include:</p> <ul style="list-style-type: none"> <li>• Environmental and health and safety management actions / measures taken, including approvals sought from local or national authorities</li> <li>• Observations and concerns raised and/or decisions taken with regard to environmental and gender, and health and safety management during site meetings</li> <li>• Problems encountered in relation to environmental and health and safety aspects (including delays, incidents, damages and cost consequences, emergencies, etc.)</li> <li>• Lack of compliance with this ESMP and the technical specifications in relation to environmental, and health and safety requirements on the part of the Contractor and/or subcontractor(s).</li> </ul> <p>The social and gender reporting will include sections on issues arising in the fields of:</p> <ul style="list-style-type: none"> <li>• Recruitment strategy, employment of men and women, and prohibition of child labor</li> <li>• Implementation of the Worker Behavior Code of Conduct and outcomes</li> <li>• Gender related grievances and investigations</li> <li>• Training on employee behavior, gender, social inclusion, counter-trafficking in persons, gender-based violence and sexual harassment, health education, cultural awareness, and feedback from employees</li> </ul>

Report	Submission Schedule	Content
<b>Monthly Progress Reports</b>	Monthly during implementation of works	<p>Summaries of these reports (including information on environmental and social activities undertaken, permits and agreements obtained, etc.) will be included in the monthly progress reports to be submitted to Engineer for review and approval. It is expected that monthly progress reports will include information on:</p> <ul style="list-style-type: none"> <li>• Employment records of workers (used to track participation in training and progress toward women's employment targets and local labor targets)</li> <li>• Training and orientation activities</li> <li>• Environmental, social and gender, and health and safety management actions / measures taken, including approvals sought from local or national authorities</li> <li>• Observations and concerns raised and/or decisions taken with regard to environmental, social and gender, and health and safety management during site meetings</li> <li>• Problems encountered in relation to environmental, social and gender, and health and safety aspects (including delays, incidents, damages and cost consequences, emergencies, etc.)</li> <li>• Investigations into the contractor internal grievance redress mechanism with outcomes</li> <li>• Lack of compliance with this ESMP and the technical specifications in relation to environmental, social and gender, and health and safety requirements on the part of the Contractor and/or subcontractor(s)</li> <li>• Changes of assumptions, conditions, measures, designs, and actual works in relation to environmental, social and gender, and health and safety requirements</li> <li>• Chance historical, cultural, and archaeological finds</li> <li>• Follow-up on incident investigation</li> <li>• Follow-up on the status of measures and/or corrective actions identified (including remedial measures) and their efficacy, to eliminate and minimize lack of compliance with contract requirements</li> <li>• Stakeholder engagement and consultation activities carried out during reporting period, grievances registered and resolved</li> <li>• Grievances registered and resolved</li> </ul>

## 2) Notification of Incidents and Changes

The site-specific CESMP will verify that provisions have been made to ensure that the Contractor notifies relevant parties in accordance with Section VIII Particular Conditions of Contract, Sub-Clause 4.8 after the following incidents and changes:

- Occurrence of any incident that has resulted, or could reasonably be foreseen to result, in lack of compliance with this ESMP and the technical specifications in relation to environmental, social and gender, especially internal complaints related to sexual harassment, gender-based violence and trafficking in persons, and health and safety requirements
- Changes of assumptions, conditions, measures, designs, and actual works in relation to environmental, social and gender, and health and safety requirements
- Chance historical, cultural, and archaeological finds

In addition to the initial written notification, the Contractor will submit a preliminary report on incident investigation within 7 days after the incident, as well as final report on incident investigation within 14 days after the incident. All incidents should be investigated by the competent professional (relevant independent professionals can also be involved, as needed). The final report on the incident investigation will include information on the investigation's objectives, methodology applied, analysis and tests carried out, findings, conclusions, and recommendations.

Allegations against staff of sexual harassment or gender-based violence, or involvement in trafficking in persons inside the contractor's organization require reporting to the MCA-Mongolia or its representative. The Contractor's Social and Gender Manager will liaise with the MCA or its representative and other relevant parties and arrange for a third party investigator to lead the enquiry into allegations together with the Contractor's human resources representative. Proven harassment or violence offences in contravention of the Worker Behavior Code of Conduct must result in the immediate firing of the perpetrator and reporting through the project system.

Allegations of trafficking in persons must be dealt with according to the Section VIII Particular Conditions of Contract Sub-Clause 6.16, "Combating Trafficking in Persons", which summarizes the Contractor's reporting requirements and specifies remedies that the MCA Entity will apply to confirmed cases.

Section VIII Particular Conditions of Contract Sub-Clause 6.17, "Prohibition of Sexual Harassment", specifies that "The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction."

## 3) Communication with Subcontractor(s)

The site-specific CESMP will specify:

- How environmental, social and gender, and health and safety requirements will be communicated to subcontractor(s) at all levels and how their compliance with the CESMP and all relevant regulations will be ensured.
- Subcontractor(s) will be supplied with copies of the CESMP and other environmental and social documents developed for the project (which will be deemed part of the subcontract), and will attend and report on all relevant training and orientation sessions prior to commencement of their work and will continue covering the same topics in toolbox talks.

- The procedures for reviewing and monitoring compliance with the site-specific CESMP and environmental and social regulations. This could include, for example, the monitoring of performance against environmental and safety criteria as a part the daily and/or weekly site inspections.

### **Environmental, Social and Gender, and Health and Safety Provisions**

The site-specific CESMP, including constituent plans and procedures, will include at a minimum acknowledgement of the requirements to meet the CESMP standards, the methodology and resources to meet the requirements of the management measures prescribed in the following sections of this ESMP, as well as the environmental, social and gender, and health and safety provisions of Section V, Works Requirements.

In accordance with MCC Environmental Guidelines and IFC Performance Standards, the Contractor is obliged to implement all reasonable measures with regard to soil erosion, water and air quality, noise and vibration, solid waste, hazardous materials, wastewater discharges, health and safety hazards, labor and working conditions. In a similar way, the Contractor is obliged to implement risk management strategies to protect the beneficiary communities from 1) physical, chemical, or other hazards associated with sites under construction, 2) hazards associated with increased traffic and rerouting of vehicles, and 3) communicable and vector-borne diseases associated with the population of workers.

Parallel plans and policies will be developed by the Contractor as a part of CESMP to implement mitigation measures specific for each construction site and ensure compliance with environmental, and social and gender, and health and safety requirements.

## **F.1.2 Environmental Management**

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## **F.1.3 Waste Management**

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## **F.1.4 Social and Gender Inclusion**

### **Management Measure Wells - 1: Labor Management**

<b>POTENTIAL IMPACT</b>
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>• Professional management and conditions of labor</li> <li>• Opportunities for local labor and supply of goods and services, and provision of local jobs with fair and competitive wages</li> <li>• Women's short-term employment in construction and engineering-related work</li> <li>• Potential alleviation of poverty in local area</li> <li>• Reduction in child labor</li> <li>• Improved grievance management in employment</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>• Discrimination against women</li> <li>• Increased foreign labor, reducing local employment opportunities</li> <li>• Use of child labor</li> <li>• Use of forced labor</li> <li>• Use of trafficked labor</li> </ul>

<ul style="list-style-type: none"> <li>• Exploitation of workers and Labor Code violations</li> <li>• Sexual harassment</li> </ul>
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Constitution of Mongolia <ul style="list-style-type: none"> <li>- Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>• Mongolian Civil Code <ul style="list-style-type: none"> <li>- Requires providing office space, tools and equipment necessary to ensure employees' health.</li> </ul> </li> <li>• Mongolian Law on Gender Equality <ul style="list-style-type: none"> <li>- Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>• Mongolian Law on Labor <ul style="list-style-type: none"> <li>- Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>- Prohibits employing children under the age of 16 or under 18 in dangerous industries, including construction</li> </ul> </li> <li>• Mongolian Law on Minimum Wage <ul style="list-style-type: none"> <li>- Minimum wage is fixed by National Tripartite Committee on Labor and Social Consensus representatives.</li> </ul> </li> <li>• Mongolian Law on the Protection of the Rights of the Child <ul style="list-style-type: none"> <li>- Prohibits employing children in any work that is likely to harm their health or morale, and exploiting or paying unjust wages to children</li> </ul> </li> <li>• Mongolian Law on Social Protection of Disabled Persons <ul style="list-style-type: none"> <li>- Prohibits building any buildings and facilities that do not meet needs and requirements of persons with disabilities.</li> </ul> </li> <li>• Mongolian Law on Combating Human Trafficking <ul style="list-style-type: none"> <li>- Requires regulating the workplace to ensure the implementation of the legislation on combating human trafficking, and if it is not specified, it shall be obliged to comply with the instructions, recommendations, statements and instructions given by the competent authorities and officials.</li> </ul> </li> <li>• Mongolian Law on Sending Labor Force Abroad and Receiving Labor Force and Specialists from Abroad <ul style="list-style-type: none"> <li>- Regulates relations with respect to employment of a Mongolian citizen abroad and a foreign citizen in Mongolia, and protection of their rights and interests.</li> <li>- Reinforces provisions of the Constitution of Mongolia, Labor Law, Social Insurance Law, and other related legal acts, and legal status of a foreign citizen.</li> </ul> </li> <li>• IFC Performance Standard 2 <ul style="list-style-type: none"> <li>- Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.</li> <li>- Contractor will adopt and implement human resources policies and procedures appropriate to its size and workforce that set out its approach to managing workers consistent with the requirements of this performance standard and national law.</li> <li>- Contractor will provide workers with documented information that is clear and understandable regarding their rights under national labor and employment law and any applicable collective agreements, including their rights related to hours of work, wages, overtime, compensation, and benefits upon beginning the working relationship and when any material changes occur.</li> </ul> </li> </ul>

- Contractor will not make employment decisions on the basis of personal characteristics unrelated to inherent job requirements. Contractor will base the employment relationship on the principle of equal opportunity and fair treatment, and will not discriminate with respect to any aspects of the employment relationship, such as recruitment and hiring, compensation (including wages and benefits), working conditions and terms of employment, access to training, job assignment, promotion, termination of employment or retirement, and disciplinary practices. Contractor will take measures to prevent and address harassment, intimidation, and/or exploitation, especially in regard to women. The principles of non-discrimination apply to migrant workers.
- Prohibits employment of child labor.
- Millennium Challenge Corporation Counter-Trafficking in Persons Policy (C-TIP Policy)
  - Requires contractors to take a zero-tolerance policy with regard to human trafficking and to actively manage employment conditions to prevent exploitation of trafficking in persons and related activities workers by employers and specifies remedies that the MCA-Entity may take in response to confirmed cases of TIP.
- Millennium Challenge Account Social and Gender Integration Plan (SGIP)
  - Sets out guidelines for Contractors related to social risk mitigation measures in infrastructure, including making working conditions suitable for both male and female employees
  - Requires developing and implementing an employment plan that prioritizes using local labor particularly from the Area of Influence of the project
  - Sets a target to encourage contractors to employ as workers at least 30% women of all workers at each skill/occupational level
  - Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates.
- Millennium Challenge Corporation Guidance Note to MCAs on Sexual Harassment
  - Requires that contractors are well-informed about existing anti-sexual harassment policies and procedures, and that contractors meet the requirements in the standard bidding documents.
  - Ministry of Construction and Urban Design (MCUD) Gender Responsiveness Policy
    - Calls for gender targets in employment via “international and domestic tenders, so that one gender should not be lower than 15 percent among workers, and 25 percent among decision makers.”
  - Ministry of Labor and Social Welfare Order (2016)
    - Expanded the types of hazardous work prohibited for children under the age of 18 to include construction
  - International Labor Organization fundamental conventions, and International Human Rights instruments and conventions

## OBJECTIVES

The Labor Management Plan ensures that contractors and their workers have clear expectations about the behaviors and conditions expected of the Contractor and all workers.

- Promote fair treatment, non-discrimination, and equal opportunity of workers
- Promote local labor opportunities and procurement from local suppliers
- Target women’s employment as 30% of all labor at each skill/occupational level
- Establish and maintain and improve a constructive worker-management relationship
- Protect workers, including vulnerable categories of workers such as children, migrant workers, workers engaged by third parties, and workers in the supply chain
- Avoid the use of forced labor or trafficked labor
- Maximize the beneficial impact of the project on the affected communities

## MANAGEMENT MEASURE

### Labor Management

The MCA-Mongolia or its representative’s Social Safeguards Team (SST) will:

- Encourage Contractor to employ local unskilled and semi-skilled labor, particularly youth and women, and to procure goods and services from local businesses and entrepreneurs
- Facilitate the Contractor's cooperation with the local District Labor Offices
- Facilitate the Contractor's publication of vacancies and procurements within affected communities
- Facilitate the Contractor's holding of job fairs and procurement workshops within affected communities to support local applicants to apply for jobs and local businesses and entrepreneurs to bid
- Support local job applicants to apply, and local businesses and entrepreneurs to bid
- Gather names of interested workers from project affected households and through community information programs and consultation meetings
- Share the names of interested workers with District and Khoroo Labor Offices and Contractor
- Encourage Contractor to employ women at a rate of at least 30% of personnel at each skill/occupational level
- Facilitate Contractors' engagement with relevant university engineering programs, technical and vocational education and training (TVET), and professional associations to 1) identify and recruit qualified job applicants and 2) establish internships and apprenticeships
- Encourage Contractor to employ socially excluded and vulnerable people

The Contractor will:

- Fully comply with the requirements of this management measure and related contract clauses
- Perform the work in accordance with relevant sections of the ESMP

#### *Access to Employment*

The Contractor will:

- Publish vacancies (listing the required qualifications for all categories of employment) within project-affected communities and at District and khoroo offices and provide such information to the Engineer and during each community meeting. Ensure the exchange of information between Contractor and the local population on employment opportunities
- Publish and communicate employment opportunities listing the required qualifications for all categories of employment city-wide, and beyond in Mongolia, if the vacancies cannot be filled from local communities
- Ensure that a staff person responds to questions from the local population regarding employment and procurement opportunities
- Develop an employment forecast and a written recruitment strategy to: 1) encourage the employment of qualified individuals among the local population(s) in project construction and ancillary activities in all phases, with particular focus on women and youth, and disadvantaged groups; 2) target achieving women's employment as at least 30% of personnel at each skill/occupational level; and 3) provide training for local construction brigades on how to be effective contractors for local construction brigades
- Through the Contractor's Social Safeguards Officer, liaise with the MCA-Mongolia or its representative's SST and local labor offices to provide support with the job application process, encourage local employment (including women's employment), implement and publicize a job fair, consistent and transparent recruitment process
- In disseminating information on potential employment opportunities, take steps to consider ways in which to maximize outreach, using all forms of media that may be appropriate
- Ensure that all staff have written employment contracts specifying fair employment conditions and equal pay for equal work to men and women, and fulfilling all conditions specified under the Mongolian Law on Labor defining the contracts

The Contractor is encouraged to:

- Create pay bands for each category of worker to help equal pay for equal work

As feasible, the Contractor will:

- Develop and submit a plan for providing on-the-job training and skills transfer opportunities to the local labor force

- Engage with training, education, and professional organizations—such as Technical and Vocational Education and Training, Implementing Agency of the Ministry of Labor and Social Protections, Mongolian University of Science and Technology, and the Mongolian Builder's Association—to recruit qualified applicants, and provide apprenticeships and internships for students who study water engineering and relevant subjects at university

The Contractor shall note contract clauses on “Gender,” “Engagement of Staff and Labor,” “Foreign Personnel,” “Prohibition of Forced or Compulsory Labor,” “Prohibition of Harmful Child Labor,” “Employment Records of Workers,” and “Non-Discrimination and Equal Opportunity.”

#### *Local Procurement*

The Contractor will:

- Proactively procure goods and services from local businesses and entrepreneurs in Khan-Uul and Songinokhairkhan Districts and Ulaanbaatar, and members of targeted disadvantaged groups (e.g., women, people with disabilities), achieved through:
  - Publicizing procurements within the targeted geographical area or targeted group, for example at the District and khoroo offices and via notice boards, print media (newspapers, etc.), recruitment agencies, or job and career fairs
  - Publicizing and holding procurement workshops within the targeted geographical area or targeted group
  - Adding priority criteria for businesses and entrepreneurs in the targeted geographical area or members of the targeted group to the selection procedure
- In disseminating information on potential service procurement opportunities, take steps to maximize outreach, using all forms of media that may be appropriate

#### *Workplace Environment*

The Contractor will:

- Establish, execute, and enforce a Worker Behavior Code of Conduct on which all employees will be briefed, that all employees are required to sign, and that mandates immediate dismissal for serious offences including sexual harassment, violence, or confirmed cases of engagement in trafficking in persons. The Code will specify:
  - Expectations of worker behavior, and penalties for transgression
  - MCC and Mongolian legal definitions of trafficking in persons (TIP), zero-tolerance for TIP, and remedies that the MCA Entity may take in response to confirmed cases of engagement of trafficking in persons
  - Zero-tolerance for gender-based violence
  - Compliance with the Contractor's Anti-Sexual Harassment Policy and notification of the Contractor's Sexual Harassment Incident Reporting and Referral Plan
  - Rights of employees to a grievance mechanism, holidays, and cultural and festival access
  - Conditions for work camps, shelter, water and sanitation, food, and security
  - The responsibility of all workers, regardless of their role or duration of employment, will be expected to review and acknowledge the Workers' Code of Conduct by signing the code sheet
  - The requirement to respect local customs and practices
- Establish and execute a worker's grievance redress procedure that:
  - Formalizes a system for receiving and managing internal complaints of sexual harassment, gender-based violence, or issues of trafficking persons (including engaging in commercial sex with a person under 18 years of age)
  - Guarantees confidentiality to makers of allegations
  - Designate the Contractor's Social Safeguards Officer or other officer as responsible for collaborating with the human resources department on the grievance redress procedures
  - Refers to the Contractor's Sexual Harassment Incident Reporting and Referral Plan for allegations of sexual harassment
  - Specifies that the Contractor's zero-tolerance for gender-based violence addresses any complaints of gender-based violence against its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.

- In cases of discrimination against women or of allegations of sexual harassment or violence, requires that the Contractor's Social Safeguards Officer contact the MCA-Mongolia or its representative's SST to include them in the investigation and appoint a third party—such as a representative from an NGO such as the Centre for Gender Equality or equivalently qualified, experienced organization—to lead the investigation
- The Contractor shall note the contract clause on “Prohibition of Sexual Harassment”
- The Contractor shall note the contract clause on “Facilities for Staff and Labor” and provide suitable gender-segregated facilities to enable the safe employment of both men and women – e.g. Toilet facilities, changing facilities on all sites and enabling physical access to office accommodation for people with disabilities.

### *Training*

The Contractor will:

- Provide training to enhance the skills of employees using on-the-job training, internships, apprenticeships, and secondment to training programs such as Technical and Vocational Education and Training, etc.
- Mandate for all employees, before each worker starts work on the site, induction packages that include:
  - Employment rights and conditions, including non-discrimination and equal opportunity
  - The Contractor's responsibility to “adopt recruitment, hiring and retention practices that support the employment of women and staff from diverse backgrounds” per the contract clause on “Engagement of Staff and Labor,” the Contractor's employment forecast and recruitment strategy, and the Contractor's Gender Integration and Social Inclusion Plan (described below)
  - Gender-based violence
  - Contractor's Anti-sexual Harassment Policy – including awareness of what constitutes sexual harassment, exploitation and abuse, and the Contractor's Sexual Harassment Incident Reporting and Referral Plan
  - Using the internal Grievance Mechanism for allegations of gender-based discrimination
  - Rights to have access to local festivals
  - Cultural sensitivities, and social norms and practices in each area
  - Expectations on avoiding poor relations between employees and local communities caused by behavior relating to alcohol, gambling, prostitution, illegal drug use, violence and sexual abuse of women, minors and lesbian, gay, bisexual, transgender, queer, and others (LGBTQ+) persons
  - Countering the Trafficking in Persons Response Plan – awareness of responsibilities to counter the trafficking of people around the project area, the remedies that the Contractor and the MCA Entity may apply, and mechanisms for reporting suspected instances of TIP with the Contractor's TIP Response Plan
  - Awareness of the possibilities of the transmission of HIV/AIDS and communicable illnesses and how to prevent HIV/AIDS transmission
- Undertake a series of employment and social plan inductions and employee awareness programs that:
  - All employees must attend at the commencement of employment and over the employment period twice yearly
  - Incorporate toolbox talks that include reinforcement of all training programs
- Commission training modules on gender integration and social inclusion topics for all employees at intervals agreed with the MCA-Mongolia or its representative's SST
- Require that the Social Safeguards Officer, together with the MCA-Mongolia or its representative's SST Community Liaison Officers, conduct awareness raising with workers on child labor issues in the local community as part of an ongoing community awareness program on social issues
  - These toolbox talks will include ways that workers can report suspected child labor to the District Children, Youth and Family Offices, and the MCA-Mongolia or its representative's Social Manager

### *Site-specific Labor Management Plan*

The Contractor will prepare and submit for the Engineer's written approval a site-specific Labor Management Plan that:

- Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
- Includes the Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan and the Workers' Code of Conduct
- Is consistent and compliant with:
  - Mongolian Law on Labor
  - Relevant aspects of the Conditions of Contract, as well as the MCC Gender Policy and the MCA-Mongolia Social and Gender Integration Plan
  - The MCC Policy on Counter-Trafficking in Persons
- Assigns roles and responsibilities for labor management

#### LOCATIONS:

All construction sites and temporary construction facilities

#### **MONITORING**

MCA-Mongolia or its representative:

- Monitor implementation of the Contractor's Labor Management Plan and Worker Behavior Code of Conduct, including prohibitions against trafficking in persons, gender-based violence, sexual harassment, and child labor
- Monitor implementation of the Contractor's employment recruitment strategies and assist Contractor to reach potential workers among local women, youth, and people from disadvantaged groups
- Monitor participation by all parties in the Contractor's internal grievance redress procedure and external project Grievance Redress Mechanisms

Contractor:

- Record results of Contractor's labor management responsibilities, with all data and statistics gender disaggregated by age and gender, following, at a minimum, the contract clause on "Employment Records of Workers" and recording, for each worker hiring and leaving dates, along with duration (days) of employment and skills/occupational category and home location of workers (project-affected district/khoroos, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia)
- Document implementation of the requirements above for the Labor Management Plan, including all recruitment activities
- Document Worker Behavior Code of Conduct infringements and outcomes, and internal grievance redress activities under the Contractor's internal grievance process

#### LOCATIONS:

All construction sites and temporary construction facilities

#### INDICATORS AND SUCCESS CRITERIA:

Indicators:

- Required plans written, approved, and implemented
- Number, content, and outcome of employment against home location (project-affected district/khoroos, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia), gender, and age brackets (under 30, 30 to 49, 50 and over), and total days of employment for each individual worker
- Use of written contracts with defined pay scales by employment activity
- Employment recruitment activities, interactions with local employment offices and communities, professional associations, TVET centers
- Percent of all employees that are workers from project-affected districts/khoroos and elsewhere in UB/Mongolia
- Percent of all employees that are women, disaggregated by skill/occupational level

<ul style="list-style-type: none"> <li>Records of attendance and dates of all trainings and toolbox talks delivered on social and gender topics</li> <li>Numbers of grievance redress actions, the number of days necessary to resolve them, and their outcomes</li> </ul> <p>Success Criteria:</p> <ul style="list-style-type: none"> <li>Successful outcome of: <ul style="list-style-type: none"> <li>100% of contractor and employees have attended the child labor toolbox session on identifying and reporting child labor incidents</li> <li>Zero tolerance of child labor – no child labor on site or with any contract activity</li> <li>Any cases of child or forced labor are reported and dealt with in a timely, manner, with respect for the child(ren) and families affected</li> <li>Maximization of local labor , such that percentage of all labor exceeds a minimum target percentage to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)</li> <li>Achievement of the non-binding 30% or more employment of women as a percentage of all staff, in each skill/occupational category</li> <li>Employment of young people and “vulnerable” and excluded groups at a target to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)</li> <li>Apprenticeships and internships Internments established and completed for each construction season</li> <li>All worker and community complaints about sexual harassment are a) addressed in a timely manner and b) resolved through the Contractor's Sexual Harassment Incident Referral and Reporting Plan</li> <li>100% of employees and sub-contractors sign the Worker Code of Conduct</li> </ul> </li> <li>Resolution of 100% of internal grievances within a duration to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)</li> </ul>

## Management Measure Wells - 2: Gender Integration and Social Inclusion (GSI)

POTENTIAL IMPACT
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Increased short-term employment and improved conditions of employment for women</li> <li>Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of forced labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Millennium Challenge Account Social and Gender Integration Plan (SGIP)             <ul style="list-style-type: none"> <li>Encourages contractors to prioritize using local labor, particularly workers from the project affected area</li> <li>Encourages contractors to employ women as at least 30% of workers</li> <li>Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates</li> </ul> </li> <li>Millennium Challenge Corporation Gender Policy             <ul style="list-style-type: none"> <li>The MCC Gender Policy states that countries will ensure that both women and men have opportunities for meaningful participation throughout the consultative processes related to a Compact program.</li> </ul> </li> <li>IFC Performance Standard 1             <ul style="list-style-type: none"> <li>Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> </ul> </li> <li>IFC Performance Standard 2             <ul style="list-style-type: none"> <li>Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.</li> </ul> </li> <li>Constitution of Mongolia             <ul style="list-style-type: none"> <li>Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>Mongolian Law on Gender Equality             <ul style="list-style-type: none"> <li>Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>Mongolian Law on Labor             <ul style="list-style-type: none"> <li>Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> </ul> </li> </ul>

- Prohibits employing children under the age of 16 – under 18 in dangerous industries e.g. construction

## OBJECTIVES

The Gender Integration and Social Inclusion (GSI) Plan complements the Labor Management Plan and provides additional management steps to address GSI considerations with respect to workers and local communities.

T

- To promote the fair treatment, non-discrimination, and equal opportunity of workers.
- To encourage the employment of women as at least 30% of the Contractor's workforce, calculated over full and part time positions as a percentage of total number of staff hired in the life of the contract, at each skill/occupation level
- To enable local people, particularly youth and people in project-affected districts/khoroos to gain short-term employment and training opportunities
- Maximize the perceived beneficial impact of the BWSE project on the project affected communities

## MANAGEMENT MEASURE

### Gender Integration and Social Inclusion

- Under the Gender Integration and Social Inclusion Plan, the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure the widest exchange of information between the Contractor and the local population and district and khoroo Labor Offices on planned and continuing works and employment opportunities through a program of community consultations and participatory meetings.
- The Contractor will prepare and submit for the Engineer's written approval a Contractor's Gender Integration and Social Inclusion Plan, which will be:
  - Consistent with the Mongolian Law on Labor and
  - Consistent with the MCC Gender Policy's emphasis on community consultation and participation
  - Consistent with IFC Performance Standard 1: Assessment and Management of Environmental and Social Risks and Impacts
  - Agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer

#### *Community Engagement*

- The Contractor will hold at least one meeting in each project-affected District and khoroo office prior to construction to inform community members of the expected conduct of workers and the contents of the Labor Management Plan, and thereafter monthly, minimally covering the following:
  - Efforts to hire local labor and the Contractor's employment forecast
  - Efforts to maximize women's employment
  - Efforts to maximize local procurement and the Contractor's procurement forecast
  - Prohibitions against child labor and forced labor in supply chains
  - Zero-tolerance of trafficking in persons, MCC and Mongolian legal definition of trafficking in persons, and Contractors' Counter-Trafficking in Persons Response Plan
  - Zero-tolerance of gender-based violence
  - Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan

#### *Expanding Short-term Employment Opportunities*

- The Contractor will actively consider working with the existing construction brigades to enable local labor currently organized into brigades to gain employment. The brigades may require additional training to enable them to work on this large scale project – training in:
  - Modern tools and techniques where needed
  - Brigade internal labor management, accounting, and estimation techniques

- As referenced in the Labor Management Plan and its recruitment strategy, the Contractor will encourage the employment of qualified individuals among the local population(s) in project activities, with particular focus on women, youth, and disadvantaged groups. This may include small-scale supply contracts or services, with announcement of jobs published on project information boards, in District and khoroo Labor Offices and with information on employment disseminated by the Contractor's Social Safeguards Officer, the MCA or its representative or other means approved by the Engineer.
- Where appropriate, the Contractor will provide training to enhance the skills of employees and local people using on-site apprenticeships and internships.
- As referenced in the Labor Management Section above, the Contractor is encouraged to cooperate with, secondment to training programs such as Technical and Vocational Education and Training Centers and professional associations and to draw workers from among their graduates and members, etc.

#### *Local Procurement*

- The Contractor will develop and submit a procurement forecast of all goods and services that could be procured locally. The MCA-Mongolia or its representative's Social Safeguards Team will assist in disseminating this information to local communities with the Contractor's Social Safeguards Officer.
- The Contractor will develop and submit for review and approval by the Engineer, a procurement strategy to inform local communities and businesses of opportunities to provide goods and services to the Contractor and to project workers, particularly targeting small businesses and those owned by women.
- The Contractor Social Safeguards Officer and MCA-Mongolia or its representative's Social Safeguards Team will hold community meetings to inform people about the procurement processes and include District and khoroo offices, community organizations and the media.

#### LOCATIONS:

All construction sites and temporary construction facilities and project affected communities

#### MONITORING

MCA-Mongolia or its representative's SST:

- Monitor Contractor Gender Integration and Social Inclusion Plan
- Monitor Contractor employment recruitment strategies and assist Contractor to reach potential women, youth and other excluded groups
- Monitor participation by all parties in the Contractor's internal and external project Grievance Redress Mechanisms
- Document Contractor performance in Gender Integration and Social Inclusion Plan

Contractor:

- Record results of Contractor's Gender Integration and Social Inclusion responsibilities
- Document all grievance redress activities under the Contractor's internal grievance process and external Grievance Redress Mechanism

#### LOCATIONS:

All construction sites and temporary construction facilities and project affected communities

#### INDICATORS AND SUCCESS CRITERIA:

Indicators:

- Employment recruitment activities
- Employment records of workers
- Number, dates, and locations of community engagement meetings
- Community related grievance redress actions and outcomes

- Number of purchase orders signed each year with UB businesses, disaggregated by those in Khan-Uul and Songinokhairkhan Districts and the rest of UB, indicated as a number and percent of the total dollar amount of annual procurements
- Total annual dollar amount of procurements with businesses from UB, disaggregated by those in Khan-Uul and Songinokhairkhan Districts and those in the rest of UB, indicated as a number and percent of the total dollar amount of annual procurements
- Number, percentage and dollar amount of purchase orders signed with women-owned businesses each year against the total number and dollar amount of purchase orders

**Success Criteria:**

- 100% of required community meetings are held, with all topics covered
- Maximization of local labor, such that percentage of all labor exceeds a minimum target percentage to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
- Achievement of the non-binding 30% employment of women as a percentage of all staff, in each skill/occupational category
- Employment of young people and "vulnerable" groups at a target to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
- Apprenticeships and internships established and completed for each construction season
- Contractor enters into and maintains an agreement with at least one TVET center and employs TVET graduates at a target to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
- All worker and community complaints about sexual harassment are a) addressed in a timely manner and b) resolved through the Contractor's Sexual Harassment Incident Referral and Reporting Plan
- Contracts and purchase orders with local business and service providers split including women-owned businesses and service providers, reach targets to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
  - Targets to be expressed as a number, as a percentage of all contracts and purchase orders, and as a dollar amount (USD)
  - Targets to be set for all locally owned business, for businesses in the two project-affected districts, and for women-owned businesses.

**REPORTING:**

- Reports on Gender Integration and Social Inclusion to be included in project monthly reports
- Summarize Gender Integration and Social Inclusion activities undertaken during reporting period
- Specify any material deviations or non-compliances to this management measure, and any other issues of concern,
- Define activities planned during next reporting period

**SCHEDULE**

**MANAGEMENT MEASURE:**

*Implementation:*

- Initiated during pre-construction prior to starting any construction activities and ongoing throughout pre-construction and construction

**MONITORING:**

*Implementation:*

- Update recording of GSI activities and grievance redress actions as they occur

*Reporting:*

- Monthly in CESMP update

**RESPONSIBILITY**

**MANAGEMENT MEASURE:**

*Implementation:* Contractor  
*Oversight:* Engineer

**MONITORING:**

*Implementation:* Contractor  
*Reporting:* Contractor  
*Oversight:* Engineer

### Management Measure Wells - 3: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment

POTENTIAL IMPACT
<p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>• Sexual harassment on construction sites and in temporary construction facilities and project-affected communities</li> <li>• Trafficking in persons within and outside the project</li> <li>• Gender-based violence on construction sites and in temporary construction facilities and project-affected communities</li> </ul>
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• MCC Counter-Trafficking in Persons Policy (C-TIP Policy) <ul style="list-style-type: none"> <li>○ States, “Trafficking in Persons” means (a) Sex trafficking in which a commercial sex act is induced by force, fraud, or coercion, or in which the person induced to perform such act has not attained 18 years of age; (b) The recruitment, harboring, transportation, provision, or obtaining of a person for labor or services, through the use of force, fraud, or coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery.”</li> <li>○ Adopts “a zero-tolerance policy to TIP and prohibits “The Contractor, the Contractor’s Personnel, any Subcontractor or supplier, or any of their respective personnel, or any agent or affiliate of any of the forgoing shall not engage in any form of Trafficking in Persons during the period of performance of any contract...”</li> <li>○ Requires each Contractor to “acknowledge that engaging in such activities is cause for suspension or termination of employment or of the Contract” and specifies remedies that the MCA Entity will apply once a TIP incident has been confirmed.</li> </ul> </li> <li>• Mongolian Law on Promotion of Gender Equality <ul style="list-style-type: none"> <li>○ Requires the employer to incorporate into the organization’s internal procedures, specific norms for prevention of sexual harassment in a workplace and the redress of such complaints. It also requires that the organization design and conduct a program of training and retraining geared toward creating a working environment free from sexual harassment, and report on its impact in a transparent manner.</li> </ul> </li> <li>• Mongolian Law to Combat Human Trafficking <ul style="list-style-type: none"> <li>○ The law regulates relations with respect to the prevention and suppression of trafficking in persons, elimination of the causes of trafficking, and protection of victims' rights.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• To prevent incidence of trafficking of persons for sex by project employees</li> <li>• To ensure that the Contractor and its Sub-Contractors do not employ trafficked labor and to minimize the risks of trafficking of foreign workers to project sites</li> <li>• To prevent sexual harassment at all construction sites and temporary construction facilities</li> <li>• To prevent Contractor and worker involvement in sexual harassment in project-affected communities and among members of stakeholder organizations in the workplace</li> <li>• To prevent incidences of gender-based violence involving workers</li> </ul>
MANAGEMENT MEASURE
<p><b>Counter-Trafficking in Persons, Gender-Based Violence and Sexual Harassment</b></p>

The Contractor shall ensure that foreign workers on work sites or in labor camps are aware 1) of the risks of cultural conflict and of becoming victims of gender-based violence, sexual harassment and abuse, discrimination, trafficking in persons and 2) the legal and contractual remedies against such behavior. This information shall be provided in workers' induction packages, by holding an orientation before workers start on site, and by delivering a training twice a year.

#### *Counter Trafficking in Persons (C-TIP)*

- The Contractor shall prepare and submit for the Engineer's written approval a Counter-Trafficking in Persons Response Plan (TIP Response Plan), and the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure all employees are informed of expectations of behavior as per the Worker Behavior Code of Conduct and the penalties for proven infringements.
  - The Counter-Trafficking in Persons Response Plan shall Address the specific TIP risks identified in the ESIA, including withholding of foreign workers' passports and commercial sex with minors,
  - Designate a single responsible person who will notify the Engineer and MCA-Mongolia within 24 hours of an alleged incident and implement any investigation.
  - Specify when to contact legal authorities, list UB city officials, national government offices, and NGO organizations that address TIP, and state how the Contractor will deal with them in the case of a TIP incident.
  - Include mechanisms to ensure confidentiality of any TIP survivors and to refer them to law enforcement and/or supportive services if they wish.
- The Contractor shall develop, as part of its TIP Response Plan, an anonymous mechanism for workers and community members to report suspected TIP incidents to the Engineer and to MCA-Mongolia, and this must be separate from the project grievance mechanism.
- The Counter-Trafficking in Persons Response Plan shall be:
  - Consistent with the Mongolian Law on Labor, Promotion of Gender Equality, and combatting Human Trafficking
  - Compliant with the MCC Counter-Trafficking in Persons Policy
  - Coordinated and agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer
- The Counter-Trafficking in Persons Response Plan shall specifically prohibit:
  - Procuring minors for sex
  - Transporting non-employee individuals in company vehicles
- The Contractor is strongly encouraged to engage the Centre for Gender Equality or other similarly qualified and experienced organization to develop its TIP Response Plan, its anonymous reporting mechanism, its worker training, and its C-TIP content for community meetings
- The Contractor shall design and deliver twice yearly C-TIP training modules to all staff, sub-contractors, and service providers on the prevention of TIP and the Contractor's TIP Response Plan, following minimum content in MCA-Mongolia's Social and Gender Integration Plan (SGIP).
  - C-TIP training sessions must be delivered to all employees within one month of starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Information about the Contractor's zero-tolerance policy and TIP Response Plan shall be included in all community meetings and the Plan shall be provided in Mongolian, in whole, to project-affected khoroo and District governments.

#### *Gender-Based Violence*

- The Contractor shall adopt a policy of zero-tolerance for gender-based violence and address any complaints of gender-based violence against its workers or committed by its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
- The Contractor shall notify the Engineer and MCA-Mongolia within 24 hours of any alleged

incident of gender-based violence

- The Contractor shall deliver a gender-based violence prevention training to all staff, sub-contractors, and service providers prior to all workers beginning on-site and thereafter at least twice each year.
  - The Contractor is strongly encouraged to engage a local, qualified, and experienced organization to develop the training.
  - The training shall minimally identify behavior that constitutes gender-based violence, address attitudes towards violence against women and lesbian, gay, bisexual, transgender, and queer people (LGBTQ), and identify relevant Mongolian laws and organizations addressing gender-based violence.
  - It shall also explain the workings and protections in the Contractor's grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ persons.
- Include in all community meetings information about the Contractor's zero-tolerance policy toward gender-based violence committed by or against its workers and procedures for reporting it and communicate this information in writing to project-affected khoroo and District governments.

#### *Sexual Harassment*

- The Contractor shall develop and submit to the Engineer an Anti-Sexual Harassment Policy prohibiting sexual harassment directed at Compact beneficiaries, partners, or stakeholders, MCA Entity employees, MCA Entity consultants, MCC personnel, or MCC consultants and including an Incident Reporting and Referral Plan.
  - The Policy and Plan must be in form and substance satisfactory to the MCA and MCC.
  - The Incident Reporting and Referral Plan shall include a confidential mechanism for workers and community members to report sexual harassment to the Engineer and to MCA-Mongolia, separately from the Grievance Redress Mechanism.
- Employers are required to have a protocol in their Workplace Grievance mechanism in which persons alleging harassment or violence will be protected from identification and from pressure from the Contractor or other workers to dismiss the complaint.
- The Contractor's grievance manager must notify the MCA-Mongolia or its representative's Social Safeguards Team and the Contractor's Social Safeguards Officer within 24 hours of any allegation of sexual harassment.
- The Contractor must have a contract with a suitably experienced organization, such as the Centre for Gender Equality, to provide an investigation leader to manage the investigation of complaints of sexual harassment.
- The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction.
- The Contractor shall design and deliver a sexual harassment prevention training to all staff, sub-contractors, and service providers, in accordance with the Contractor's Anti-Sexual Harassment Policy, recognizing MCC's Guidance to MCAs on Sexual Harassment.
  - Training shall be conducted within one month of workers starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Training shall address
    - Attitudes to and prevention of sexual harassment in the workplace
    - Workings and protections in the Contractor's internal grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ+ persons
    - Additional requirements for minimum training content can be found in MCA-Mongolia's Social and Gender Integration Plan (SGIP)
- Information about the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral plan shall be included in all community meetings and the Policy and Plan shall be

communicated in Mongolian, in whole, to project-affected khoroo and District governments.
LOCATIONS:
All construction sites and temporary construction facilities and project affected communities
<b>MONITORING</b>
<p>MCA-Mongolia or its representative's SST:</p> <ul style="list-style-type: none"> <li>• Monitor Contractor Counter-Trafficking in Persons Response Plan</li> <li>• Monitor Contractor performance related to gender-based violence requirements</li> <li>• Monitor Contractor's development and adherence to its Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> <li>• Participate in the Contractor's internal Grievance Redress Mechanisms in relation to any on allegations of sexual harassment and gender-based violence and monitor and document the process and outcomes, maintaining confidentiality of those reporting and victims and witnesses</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>• Maintain copies of all contracts or other agreements with organizations that provide services related to the development of C-TIP, GBV prevention, or prevention of sexual harassment policy, plans, training, or reporting mechanisms</li> <li>• Maintain records of workers' participation in required trainings, including the dates of trainings and which workers participated</li> <li>• Maintain records of all community meetings at which C-TIP, gender-based violence, and sexual harassment are addressed, including the dates and locations and a record of all questions, comments, and Contractor responses</li> <li>• Document all implementation of the results of Contractor's Counter-Trafficking in Persons Response Plan responsibilities</li> <li>• Document all complaints of sexual harassment and gender-based violence, maintaining confidentiality of witnesses and victims, and all implementation of the Sexual Harassment Incident Reporting and Referral Plan and interactions with law enforcement and other relevant response institutions and organizations</li> <li>• Grievance redress activities under the Contractor's internal grievance process</li> </ul>
LOCATIONS:
All construction sites and temporary construction facilities and project affected communities
INDICATORS AND SUCCESS CRITERIA:
<p>Indicators:</p> <ul style="list-style-type: none"> <li>• Content of the Contractor's TIP Response Plan</li> <li>• Content of the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> <li>• Number and content of trainings for all staff</li> <li>• Number of community meetings at which information presented covers the Contractor's policies on C-TIP, GBV, and sexual harassment and how to report suspected cases compared to the total number of Contractor-organized community meetings, disaggregated by location</li> <li>• Numbers of complaints and grievances brought alleging sexual harassment, gender-based violence or trafficking in persons</li> <li>• Number of required notifications of suspected TIP, GBV, and sexual harassment incidents compared to the number of complaints</li> <li>• Contracts or other agreements with specialized organizations to develop and deliver plans, policies, and training</li> </ul> <p>Success Criteria:</p>

### *Counter-trafficking in persons*

- Anonymous reporting mechanism for trafficking in persons is established prior to initiation of construction and functioning effectively for the duration of the construction
- The Contractor's TIP Response Plan is thorough, references the MCC C-TIP Policy and any guidance, provides a path to involve NGOs and specialized government staff, and includes clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.
- 100% of reported or suspected cases of TIP are dealt with in a timely, survivor centered manner, according to the TIP Response Plan.
- Effective reporting and management measures are developed are implemented and information about the measures are introduced to the employees and sub-contractors in toolbox sessions and by other means
- 100% of community meetings include reference to the zero-tolerance policy against TIP and to the Contractor's TIP Response Plan

### *Gender-based violence*

- Culture of unacceptability of gender-based violence and assaults on women and LGBTQ+ persons established via:
  - 100% of workers having participated in gender-based violence prevention training prior to beginning work on-site
  - The Contractor notifying the Engineer and MCA-Mongolia within 24 hours of 100% of any alleged incident of gender-based violence
  - Timely, confidential, and thorough dealing with complaints of gender-based violence and 100% implementation of zero-tolerance policy in confirmed cases
  - 100% of community meetings including reference to the zero-tolerance policy against gender-based violence and procedures for reporting it

### *Sexual harassment*

- The Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan are thorough, reference the Contract, aspects of the MCC Guidance to MCAs on Sexual Harassment, and Mongolian Law; provide a path to involve NGOs and specialized government staff; and include clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.
- 100% of employees and sub-contractors have taken the sexual harassment prevention training prior to on-site work
- All worker and community complaints about sexual harassment are
  - addressed confidentially
  - addressed in a timely manner and
  - resolved following the procedures in the Contractor's Sexual Harassment Incident Referral and Reporting plan
- After investigation, appropriate measures are taken against perpetrators of sexual harassment on the job site, in temporary facilities, and in surrounding communities

### **REPORTING:**

- Reports on measures to prevent and address counter-trafficking in persons, gender-based violence, and sexual harassment shall be included in project monthly reports
- Summarize activities related to counter-trafficking in persons, gender-based violence, and sexual harassment undertaken during each reporting period
- Specify any material deviations or non-compliances to this management measure, and any other issues of concern,
- Define activities planned during next reporting period

### **SCHEDULE**

#### **MANAGEMENT MEASURE:**

*Implementation:*

#### **MONITORING:**

*Implementation:*

<ul style="list-style-type: none"> <li>Initiated during pre-construction prior to starting any construction activities and ongoing throughout pre-construction and construction</li> </ul>	<ul style="list-style-type: none"> <li>Initiated during pre-construction prior to starting any construction activities and ongoing throughout pre-construction and construction</li> </ul>
<b>RESPONSIBILITY</b>	
<b>MANAGEMENT MEASURE:</b> <i>Implementation:</i> Contractor <i>Oversight:</i> Engineer	<b>MONITORING:</b> <i>Implementation:</i> Contractor <i>Oversight:</i> Engineer – MCA-Mongolia or its representative's Social Safeguards Team

## F.1.5 Health and Safety Management

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## F.1.6 Education, Training, Community Outreach and Grievance Redress

Incorporated in various management measures are requirements for education, training, and outreach. The overall goals of these requirements are to provide project employees with an understanding of the commitments included in those management measures and inherent in associated laws, regulations, and policies, and to provide the employees with an appreciation of their own accountability for maintaining mutually supportive relationships with local communities. All required training is to be provided as part of induction training (to provide general awareness) and job-specific training as necessary.

In addition to the management measure under this heading, the following management measures also specify training requirements:

- Management Measure Wells - 1: Labor Management
- Management Measure Wells - 2: Gender Integration and Social Inclusion (GSI)
- Management Measure Wells - 3: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment

Together, these management measures comprise the Education, Training, and Community Outreach Plan.

### Management Measure Wells - 4: Stakeholder Engagement, Community Consultation, and Grievance Redress

<b>POTENTIAL IMPACT</b>
Delays, increased grievances, political interference, and unnecessary pressure from uninformed groups resulting from lack of information and discussion/consultation
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b> Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>IFC Performance Standard 1</li> </ul>

- Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities
- Requires establishment of a grievance mechanism to receive and facilitate resolution of affected communities' concerns and grievances about environmental and social performance, and scaled to the risks and adverse impacts of the project and with the affected communities as its primary user.

#### OBJECTIVES

- Inform and involve all stakeholders
- Have in place a defined policy for dealing with external parties
- Foster positive relations and effective partnerships with local communities throughout project construction and operation
- Maximize the beneficial impact of the BWSE project on the affected communities

#### MANAGEMENT MEASURE

##### Stakeholder Engagement, Community Consultation, and Grievance Redress

The stakeholders and affected communities are to be informed of the construction activities, including implementation timeline and grievance redress procedure.

##### Stakeholder Engagement

- The Contractor will prepare and submit for the Engineer's written approval a Contractor's Stakeholder Engagement Plan, based on requirements described in Annex B of this ESMP
- At a minimum, the Contractor's Stakeholder Engagement Plan will document and specify:
  - Contractor's responsibilities and participation in community consultation, specifying:
    - A standard operating procedure agreed with MCA-Mongolia that governs how the Contractor will interact with local communities
    - How contacts with the communities are to be made and recorded, and reported to the SST for documenting in the Stakeholder Engagement Matrix
    - How information is to be shared with the communities and other project partners
    - Protocols for conducting, recording, and disseminating the results of community consultation
  - Contractor's responsibilities and participation in the project Grievance Redress Mechanism, specifying how the Contractor will:
    - Take action to resolve low level grievances
    - Ensure all employees are trained to understand their role in the project Grievance Redress Mechanism
    - Participate in higher tier grievance resolution
    - Participation in the overall monitoring and evaluation of the project
- The Contractor will prepare and submit for the Engineer's written approval a project specific Grievance Redress Mechanism (GRM) based on requirement described in Annex A of this ESMP.

##### Community Consultation

- The MCA-Mongolia or its representatives will:
  - Introduce Contractor's officers to communities
  - Monitor and supervise Contractor contacts with communities and other stakeholders
  - Ensure that gender and social inclusion measures implemented by the Contractor are taken when planning meetings, and that thereby all sections of the community are equally informed and consulted
- In coordination with the MCA-Mongolia or its representative, the Contractor will:
  - Undertake community information dissemination, consultation, and outreach addressing the influx of migrant workers and the associated risks to the affected communities, the Grievance Redress Mechanism, and other issues that arise during consultation
  - Actively promote awareness and disclose information in affected communities on the following

<ul style="list-style-type: none"> <li>○ Purpose, nature, and scale of the project</li> <li>○ Duration of proposed project activities</li> <li>- Record results of Contractor's community consultation activities</li> <li>- Document all community consultation activities in the Stakeholder Engagement Matrix</li> </ul>	
<b>Grievance Redress</b> <ul style="list-style-type: none"> <li>• The MCA-Mongolia or its representative will: <ul style="list-style-type: none"> <li>- Supervise, and monitor participation by all parties</li> </ul> </li> <li>• The Contractor will: <ul style="list-style-type: none"> <li>- Develop and implement the Grievance Redress Mechanism consistent with Annex A of this ESMP.</li> <li>- Designate the Contractor's Social Safeguards Officer or other officer as responsible for collaborating with the project Grievance Redress Mechanism</li> <li>- Document all grievance redress actions</li> <li>- Report on the Grievance Redress Mechanism to the Engineer</li> </ul> </li> </ul>	
<b>LOCATIONS:</b> All construction sites and temporary construction facilities and project affected communities	
<b>MONITORING</b>

### F.1.7 Risk Control and Emergency Response

The Risk Control and Emergency Response Plan references procedures specified in the management measures in the preceding plans that are pertinent to 1) controlling risks and 2) responding to emergencies. Such risks and emergencies include, for example, fuel spills and encountering previously unidentified cultural heritage resources, as well as incidents involving sexual harassment, human trafficking, and gender-based violence.

Due to the broad scope of the Risk Control and Emergency Response Plan, effectively the plan incorporates by reference the procedures specified in the management measures in all preceding plans for this project phase.

### F.1.8 Monitoring and Verification, and Maintenance Actions

This Monitoring and Verification, and Maintenance Actions Plan scopes the use of an adaptive approach to:

1. Verify that the management measures in the preceding plans are implemented, and that they are effective and sufficient
2. Revise those management measures that prove ineffective or insufficient

This approach acknowledges the risk and uncertainty of environmental and social management and fosters targeted modification of management measures to correct performance and outcomes. It will be executed as a continuous, iterative process by which the consequences of all management actions are systematically evaluated and, as needed, specific measures are modified in response to a determination that their forecasted outcomes will not meet requirements. As needed, this process of systematically evaluating the performance of the management measures and modifying the management measures to achieve the required outcomes, as well as the respective responsibilities of MCA-Mongolia or its representative and the Contractor, will extend into the construction phase.

In the preceding plans, indicators and success criteria are designated for each management measure. For each management measure, MCA-Mongolia or its representative, in its oversight capacity, will determine whether progress toward the designated success criteria is sufficient and will document its determination. If progress decidedly fails to meet iterative requirements, MCA-Mongolia or its representative will inform the Contractor of the need to formulate a management measure-specific adaptive maintenance action to implement midcourse corrections. In

coordination with the Contractor, MCA-Mongolia or its representative will reformulate the management measure to foster meeting the success criteria, incorporating as applicable operational or structural changes, and considering the cost effectiveness of incorporating the changes. The scope of most management measures likely will remain fairly stable; whereas, it is expected that some methods will be added, modified, or dropped over the implementation timeline of some management measures.

With the prior approval of MCA-Mongolia, the Contractor will implement and monitor the revised management measure, and MCA-Mongolia or its representative will provide oversight.

## F.2 Construction Phase

### F.2.1 Responsibilities During Construction

#### MCA-Mongolia

MCA-Mongolia or its representative and the Engineer will be responsible for oversight of the construction-related management measures and monitoring specified in the ESMP. Oversight will be accomplished by MCA-Mongolia or its representative via a combination of regular visits to the construction sites and on-site supervision of management and monitoring activities. MCA-Mongolia or its representative will inform and coordinate with all applicable stakeholders regarding their corresponding mandates under or in relation to the ESMP. MCA-Mongolia or its representative will establish a Social Safeguards Team (SST) to coordinate with the Contractor during the pre-construction and construction phases in implementing, supervising, reporting, and follow-up actions with regard to the ESMP.

#### Contractor

The construction contracting firm performing the work, the **Contractor**, will be fully responsible for implementing and monitoring all construction-related management measures specified in the ESMP—together with the conditions and procedures specified in Section V, Works Requirements of the Construction Contract Documents. The Contractor will read the ESMP, consider it in its entirety, and comply with all aspects of the ESMP that pertain to implementing and monitoring construction-related environmental and social management.

The Contractor will abide by the requirements of this ESMP, which is appended to and is a part of the Contract. The Contractor will take all necessary measures and precautions to ensure that the execution of the works and all associated operations on site or off site are carried out in conformity with statutory and regulatory environmental and social requirements of the Government of Mongolia, the MCC Environmental Guidelines, the IFC Performance Standards, and the technical specifications, where the more stringent will apply. The Contractor will take all measures and precautions to avoid any nuisance or disturbance arising from the execution of project activities. Wherever possible, this will be achieved by avoidance of the impact at the source rather than mitigating an impact after it has been expressed.

The Contractor will designate an Environmental and Social Performance Manager. This individual(s) will have knowledge of relevant Mongolian, IFC, and Millennium Challenge Corporation standards and regulations, and knowledge of environmental and social issues that include, but are not limited to, environmental management, waste management, gender and social inclusion, cultural resources, and health and safety management.

This individual(s) will be responsible to:

- Work closely with MCA-Mongolia or its representative to guide the Contractor's thorough understanding of the mitigation and monitoring requirements
- Lead the Contractor's work related to implementing environmental and social management measures and associated reporting requirements
- Work closely with MCA-Mongolia or its representative to incorporate or modify management measures and monitoring actions to reflect on-site field conditions, as needed, with the approval of the Engineer

The Contractor, while in possession of the construction sites, will be responsible for the safety measures undertaken in accordance with the Technical Specifications to protect the workforce of the Contractor's own staff as well as the Engineer's and MCA-Mongolia or its representative's supervision staff. The Contractor will conduct in this respect safety induction courses for all personnel involved with the works and who are required to supervise any activity prior to their attending any part of the works. Additional training is required to meet MCC social policy requirements as per the:

- Labor Management Plan
- Gender Integration and Social Inclusion Plan
- Counter-Trafficking in Persons Response Plan
- Stakeholder Engagement Plan
- Construction Camp and Temporary Facilities Management Plan
- Cultural Heritage Training Plan
- Managing external grievances as part of the project GRM

The Contractor will act responsibly to provide notification of the Contractor's schedule to enable MCA-Mongolia or its representative to carry out its responsibilities. The Contractor will be required to provide verbal and written updates to MCA-Mongolia or its representative on a regular basis indicating percent achievement of the construction-related management measures specified in the ESMP. On a monthly basis, as part of the Contractor's monthly progress report, the Contractor will submit an ESMP update that will report the status of all environmental and social compliance activities and actions taken by the Contractor.

## F.2.2 Environmental Management

### Management Measure Wells - 5: Emergency Preparedness and Response

POTENTIAL IMPACT
Accidents, natural disaster, or sabotage that occur during construction and risk jeopardizing worker and public health and safety, and the environment
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>• Mongolian Law on Environmental Protection <ul style="list-style-type: none"> <li>- Requires business entities eliminating or suspending their activities if they adversely affect the environment in breach of environmental legislation, standards and permissible maximum levels.</li> </ul> </li> <li>• Mongolian Law on Disaster Protection <ul style="list-style-type: none"> <li>- Requires establishing management for disaster protection service, staff and specialized unit and to organize their training and preparedness.</li> </ul> </li> <li>• Mongolian Law on Fire Safety <ul style="list-style-type: none"> <li>- Requires ensuring the readiness of fire protection equipment and training their employees.</li> </ul> </li> <li>• Mongolian Law on Environmental Impact Assessment <ul style="list-style-type: none"> <li>- Requires preparing a report presenting the findings of the detailed environmental impact assessment and develop an environmental management plan.</li> </ul> </li> </ul>

<ul style="list-style-type: none"> <li>• Mongolian Law on Labor Safety and Hygiene</li> <li>- Requires employees attending short term training on labor safety and hygiene in compliance with procedures approved by the state central administrative organization in charge of labor issues and acquire knowledge and training.</li> <li>• Mongolian Criminal Code</li> <li>- Requires providing an emergency aid to the injured, to report to the relevant authority or official after having caused.</li> <li>• IFC Performance Standards 1, 3, and 4</li> <li>- Requires that emergency preparedness and response activities will be periodically reviewed and revised, as necessary, to reflect changing conditions.</li> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning</li> <li>- Provides guidance on cleanup of spill and releases of oil, fuel, lubricants, hydraulic fluids.</li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>• Avoid, minimize, and effectively respond to emergency situations and resulting adverse impacts to the environment and communities associated with accidents, natural disasters, or sabotage</li> <li>• Effectively and efficiently respond to hazardous material spills so as to minimize their human health, safety, and environmental impacts</li> </ul>
<b>MANAGEMENT MEASURE</b>
<p><b>Emergency Preparedness and Response</b></p> <p>The Contractor will:</p> <ul style="list-style-type: none"> <li>• Fully comply with the requirements of this management measure</li> <li>• Provide emergency preparedness and response training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the Contractor’s site-specific Emergency Preparedness and Response Plan, to all employees and subcontractors at the time of their induction and annually thereafter</li> <li>• Prepare and submit for the Engineer’s written approval a site-specific Emergency Preparedness and Response Plan that specifies preventive measures and response strategies the Contractor will implement in case of accidents, natural disasters, or sabotage to protect worker and public health and safety, and the environment. The requirements of the Plan are detailed below.</li> </ul> <p><b>Hazardous Materials Management</b></p> <ul style="list-style-type: none"> <li>• Obtain from the appropriate Mongolian authorities all permits for the use and handling of hazardous materials</li> <li>• Develop prioritized material-specific handling procedures and training requirements as necessary according to risk</li> <li>• Assign an officer to manage and advise on hazardous materials management</li> </ul> <p><i>Handling</i></p> <ul style="list-style-type: none"> <li>• Nominate all equipment used to transfer hazardous materials for approval by the Engineer to assess that control measures are sufficient</li> <li>• Provide spill kits, protective equipment, and other necessary equipment wherever hazardous materials are stored or used in significant quantities</li> <li>• Provide and require use of personal protective equipment (PPE) and fire protection equipment at all times when handling hazardous materials, as specified in the relevant material safety data sheets (MSDS)</li> <li>• Avoid handling and do not store hazardous materials in close proximity to drainage systems, waterways, or wells</li> </ul> <p><i>Transport</i></p> <ul style="list-style-type: none"> <li>• Nominate all haulers used to transport hazardous materials for approval by the Engineer to assess that they are appropriately qualified to transport and handle hazardous materials</li> </ul>

- Nominate all containers used to transport hazardous materials for approval by the Engineer to assess that control measures are sufficient
- Provide and require use of fire extinguishers, fire prevention materials, and spill prevention materials appropriate for the hazardous materials being transported
- Properly secure containers containing hazardous materials prior to transport
- Properly mark, label, and placard containers and trucks in accordance with the MSDS
- Maintain chemical manifests in accordance with Mongolian regulations.

#### *Equipment Use and Maintenance*

- Maintain oil-filled electrical appliances in good and fire-resistant condition
- Undertake all planned equipment, plant, and vehicle maintenance in designated service areas with suitable containment to prevent contamination of the environment
- Place drip trays under all stationary equipment that use fuel, oil, or lubricants that are not self-contained (including, but not limited to, generators, mobile lighting towers, pumps)
- Equip tanks and machinery with measurement devices and overflow protection (e.g., flow and level meters, relief valves, overflow protection valves, and emergency shutoff)

#### **Spill Response Procedure**

- Contractor employees are responsible for verbally reporting all spills to their immediate supervisor.
- Supervisors will then coordinate the spill response process and report the spill as an environmental incident to the Engineer.

#### *Spill Response Kits*

- Supervisors will clearly label and store spill response kits in locations that will facilitate a prompt response to spills
- Spill response kits in all work areas will contain the following equipment:
  - Shovel
  - 2 x respiratory masks
  - Absorbent material (pads and socks)
  - 2 x goggles
  - 60-liter sealable container
  - 2 x PVC gloves
  - Jug granular absorbent
  - Red wheelie bin
- Spill response kits will be carried in mobile machinery where a significant spill risk is identified with its operation. The contents of these spill kits will be specific to the risks presented from the mobile machinery and will be adequate and appropriate for the materials being transported.
- Where there are significant spill risks apparent outside of workshops or designated hazardous material storage areas, spill response equipment will be specific to the risks posed.

#### *Control of Hazardous Material Spills*

- The health and safety of employees, subcontractors, and bystanders will be considered prior to initiating the spill response process.
- Personnel considered at risk of harm in the event of a spill will be evacuated from the spill impact area by the supervisor in charge of the work area.
- If the spill presents an emergency risk to bystanders or the environment, the site emergency response team will be notified immediately of this situation by the individual who identifies the risk.
- If safe to do so, trained individuals will attempt to control the spill at the source and remove all sources of heat and ignition.
- Spills will then be reported verbally to the immediate supervisor, who will arrange for spill containment and cleanup to occur.

- The supervisor will notify the Engineer of the spill details to enable advice to be provided and statutory reporting processes to be initiated.

#### *Containment and Clean Up of Hydrocarbons*

- Contain the extent of the spill by using absorbent material around the perimeter of the spill or earthen bunds if outside of designated workshops or storage areas.
- Excess hydrocarbons may be soaked up using absorbent materials, including dirt, or removed by use of a vacuum truck if the spill is present as free product or is on water.
- Prevent hydrocarbons entering drainage systems and waterways. If hydrocarbons do enter drainage systems or waterways, these should be dammed or have booms placed in them to minimize the spread of hydrocarbons.
- Waste material will be disposed of appropriately:
  - Absorbent material, booms, etc. will be placed into designated bins.
  - Contaminated soil and water will be removed and stored in a designated area as advised by the Engineer.

#### *Containment and Clean Up of Sewage*

- Contain the spill with sand or earth to prevent it entering drainage systems and waterways.
- Calcium hypochlorite powder will be spread around the site for spills likely to be encountered by personnel.
- Any wastewater that enters waterways or drainage systems will be disinfected with the use of calcium hypochlorite powder.
- Wastewater then will be removed by use of a vacuum truck and taken to a waste treatment facility.
- Remaining water and solids will be disinfected using calcium hypochlorite powder.

#### *Containment and Clean Up of Chemicals*

- Contain the extent of the spill using sand, earth, sawdust, or other inert material to prevent it entering drainage systems and waterways.
- Chemicals clean up may vary depending on the chemical type.
- General purpose spill kit supplies, instead of oil-absorbent supplies, will be used.
- Collect recoverable product, if possible, and dispose of at an approved disposal site or facility in accordance with guidance provided by the Engineer.

#### *Containment and Clean Up of Battery Acid*

- Contain the spill and neutralize with a basic substance such as sodium bicarbonate in accordance with guidance provided by the Engineer.
- Collect recoverable product and neutralize with sodium bicarbonate in accordance with guidance provided by the Engineer.
- Dispose of with process water on site.

#### *Follow-up Sampling, Storage, and Treatment*

- For spills rated as significant risk on incident reporting, quality of cleanup work will be determined by follow-up sampling of contamination-receiving environment and compared against the Mongolian environmental standards on permissible levels of pollutants in air, water, and soil.
- If any exceedance of pollutant permissible levels is noted, cleanup work will be considered as inadequate and further cleanup will be required.
- Follow-up sampling will be carried for all spills to evaluate reporting requirements to the Engineer.
- Hydrocarbon contaminated soils will be excavated and placed within a dedicated area for storage and treatment.

### **Emergency Preparedness and Response Plan**

- Prepare and submit for the Engineer's written approval a site-specific Emergency Preparedness and Response Plan and associated procedures that, as a minimum:
  - Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan

<ul style="list-style-type: none"> <li>- Complies with Construction Contract Documents Section V, Works Requirements, Section 01030 Special Requirements, Paragraph 1.04.D Emergency Action Plan</li> <li>- Specifies: <ul style="list-style-type: none"> <li>o Site-specific preventive measures and response strategies the Contractor will implement in case of accidents, natural disasters, or sabotage to protect worker and public health and safety, and the environment</li> <li>o Potential emergencies and key areas prone to emergency situations</li> <li>o Existing emergency response structures and capacities in the respective project areas—i.e., police, fire brigades, paramedics / ambulances, hospitals, etc.</li> <li>o Actions to be taken prior to an emergency—i.e., preventive and preparatory measures</li> <li>o Actions to be taken during an emergency—i.e., response measures</li> <li>o Actions to be taken after an emergency—i.e., recovery and assessment measures</li> <li>o Contact lists for emergency situations</li> <li>o Description of collaboration mechanisms of the project's emergency preparedness and response teams with existing emergency response structures in the respective project areas</li> </ul> </li> <li>- Assigns roles and responsibilities for emergency preparedness and response</li> <li>• Post copies of the Plan and the list of emergency contact numbers in highly visible locations within the construction sites and temporary facilities</li> <li>• In case of any accidents, the Contractor will immediately undertake the procedures contained within the Plan that complies with From IFB sub clause 4.8 safety procedures: "The Contractor shall notify the Engineer, the Employer, and MCC within 24 hours or as soon as reasonably possible after the occurrence of any accident which has resulted in damage or loss of property, disability or loss of human life, or which has or which could reasonably be foreseen to have a material impact on the environment and shall submit to the Engineer, the Employer, and MCC no later than 7 days after the occurrence of such an event, a summary report thereof.</li> </ul>

## F.2.3 Waste Management

### Management Measure Wells - 6: Waste Management

<b>POTENTIAL IMPACT</b>
Risks and adverse impacts of handling, storing, treating, and disposing of waste
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Mongolian Law on Hazardous and Toxic Chemicals               <ul style="list-style-type: none"> <li>- Requires depositing the waste based on conclusion of the related professional organization to the place determined by the district governor.</li> </ul> </li> <li>• Mongolian Law on Sanitation               <ul style="list-style-type: none"> <li>- Prohibits disposing waste in the places other than the specified points.</li> </ul> </li> <li>• Mongolian Law on Waste               <ul style="list-style-type: none"> <li>- Prohibits establishing centralized waste disposal sites in urban settlement areas, water sanitary and protection zones and mining areas.</li> </ul> </li> <li>• Government of Mongolia Resolution No. 135 of 2002 addressing the procedures of the classification, collection, packaging, transportation, treatment, storage, and disposal of hazardous waste</li> <li>• Government of Mongolia Resolution No. 116 of 2018 addressing Articles 7.1.2 and 7.1.3 of the Law on Waste (repealed Government Resolution No. 135 of 2002).</li> <li>• Joint Order No. A-320/305 of Minister of Nature, Environment and Tourism and Minister of Health of 2011 addressing the procedures of the disposal of medical wastes               <ul style="list-style-type: none"> <li>- Requires providing personal protective equipment to the organization's waste management officer.</li> </ul> </li> <li>• Minister's Order No. 404 of 2006 of Ministry of Nature, Environment and Tourism addressing the procedure of the disposal and landfill of waste               <ul style="list-style-type: none"> <li>- Minister's Order No. A/443 of 2018 addressing Articles 4.4.1, 4.4.2, 4.4.3 of the Law on Hygiene (repealed Minister's Order No. 404 of 2006).</li> </ul> </li> <li>• IFC Performance Standards 3 and 4               <ul style="list-style-type: none"> <li>- Encourages recovering and reusing waste in a manner that is safe for human health and the environment.</li> </ul> </li> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning               <ul style="list-style-type: none"> <li>- Provides guidance on management of non-hazardous solid waste generated at construction sites and associated facilities, hazardous materials, and wastewater discharges.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>• Effectively manage waste by minimizing waste generation and safely handling, storing, treating, and disposing of generated wastes</li> </ul>
<b>MANAGEMENT MEASURE</b>
<b>Waste Management</b>

The Contractor will:

- Comply with Construction Contract Documents Section V, Works Requirements, Section 01030 Special Requirements:
  - Paragraph 1.04.E Hazardous Waste Management Plan
  - Paragraph 1.14 Disposal of Excess Material
  - Paragraph 1.21 Disposal of Debris
- Comply with Construction Contract Documents Section V, Works Requirements, Section 01110 Environmental Protection Procedures:
  - Paragraph 3.04.I, requiring the disposal of all debris and excess material outside wetland or floodplain areas in an environmentally sound manner
  - Paragraph 3.05.A, prohibiting the use of burning at the project site for the disposal of refuse and debris
- Comply with Construction Contract Documents Section V, Works Requirements, Section 01610 Delivery, Storage and Handling:
  - Paragraph 1.05.C Storage and Protection
- Comply with Construction Contract Documents Section V, Works Requirements, Section 02100 Site Preparation:
  - Paragraph 1.07.D, requiring the legal disposal of all waste and surplus material
  - Paragraph 3.03 Disposal of Waste Materials
- Comply with Construction Contract Documents Section V, Works Requirements, Section 02210 Earth Excavation, Backfill, Fill and Grading:
  - Paragraph 3.11 Reuse and Disposal of Surplus Excavated Materials
- Fully comply with the requirements of this management measure
- Provide in storage locations and principle points of use material safety data sheets (MSDSs) for all stored materials in Mongolian, English, and any other languages as appropriate
- Provide 150%-capacity secondary containment for fluids stored in drums and buckets or 25% of the capacity of all the total volume of the stored individual containers within the bund, whichever is larger, for all storage of liquid hazardous materials, including, but not limited to, waste oil and solvents
- Do not store waste oils for extended periods in underground sumps
- Empty and inspect regularly tanks and sumps for any signs of cracks or holes
  - Record findings of inspections
  - Repair any cracks or holes
  - Record any repairs conducted
- Make available on site spill kits, protective equipment, and other necessary equipment where hazardous materials are handled, to clean and mitigate spills
- Locate appropriate first aid close to hazardous material storage areas, including, but not limited to, eye-wash, showers, and first aid kits
- Only transport hazardous materials using operators licensed and approved by the Engineer for the specific material
- Implement the following waste management hierarchy, in the following order of preference:
  - Waste avoidance and reduction at source
  - Waste reuse and recycling
  - Waste storage, treatment, and disposal to local, Mongolian, and international standards
- Classify all wastes according to the following and based on internationally accepted regulations, guidelines, definitions, and methodologies:
  - Mineral waste
  - Non-hazardous waste, including domestic waste and inert waste
  - Hazardous waste, including medical waste
  - Wastewater
- Segregate, securely contain, and monitor waste at the source of generation pending treatment, transport, or disposal
- Prohibit open burning of non-hazardous and hazardous solid waste

- Transfer recyclable wastes only to facilities operated by licensed recycling contractors, subject to assessment by the Engineer of the contractors and facilities
- Transfer non-hazardous waste, other than recyclable wastes, only to waste disposal facilities licensed in accordance with applicable Mongolian laws and regulations
- Sterilize medical waste by autoclave in 121°C for at least 20 minutes prior to transfer to disposal and a licensed facility
- Properly store on site all hazardous wastes for which there is not an engineered and approved treatment or disposal method available until a treatment and/or disposal route becomes available
- Maintain an inventory by location, specifying quantity per month and cumulative total, and detailing:
  - Wastes generated
  - Wastes sent for off-site recycling
  - Wastes subject to hazardous waste treatment
  - Wastes subject to non-hazardous waste disposal
  - Unrecyclable hazardous wastes stored
- Provide waste management training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the Contractor's site-specific Waste Management Plan, to all employees and subcontractors at the time of their induction and annually thereafter

The Contractor will prepare and submit for the Engineer's written approval a site-specific Waste Management Plan and associated procedures that, as a minimum:

- Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
- Assigns roles and responsibilities for waste management
- Disposition of hazardous wastes for which no engineered and approved treatment or disposal method is available

#### LOCATIONS:

All construction sites, construction camps, and temporary facilities where waste is generated, stored, treated, or disposed of

#### MONITORING

##### Document:

- Provision, maintenance, and/or updating of:
  - MSDSs
  - Secondary containment capacity for all storage of liquid hazardous materials
  - Tanks and sumps inspection records
  - Spill kits
  - First aid
  - Waste inventory
  - Waste management training
- Submission and approval of site-specific Waste Management Plan

#### LOCATIONS:

All construction sites, construction camps, and temporary facilities where waste is generated, stored, treated, or disposed of

#### INDICATORS AND SUCCESS CRITERIA:

##### Indicators:

- Submission of site-specific Waste Management Plan
- Volumes of waste generated
- Volumes of waste sent for off-site recycling
- Number of reported non-compliances with the controls identified in the plan
- Number of reported incidents of hazardous material releases leading to actual or potential harm to humans or the environment

<ul style="list-style-type: none"> <li>• Number of reported waste incidents</li> <li>• Number of waste related community complaints</li> <li>• Instances of off-site contamination identified</li> </ul> <p>Success Criteria:</p> <ul style="list-style-type: none"> <li>• Approval of site-specific Waste Management Plan</li> <li>• Minimize volume of waste generated</li> <li>• Maximize volume of waste sent for off-site recycling</li> <li>• Zero: <ul style="list-style-type: none"> <li>○ Reported non-compliances with the controls identified in the plan</li> <li>○ Reported incidents of hazardous material releases leading to actual or potential harm to humans or the environment</li> <li>○ Reported waste incidents</li> <li>○ Number of waste related community complaints</li> <li>○ Instances of off-site contamination identified</li> </ul> </li> </ul>	
<p><b>REPORTING:</b></p> <ul style="list-style-type: none"> <li>• Report communications and written approval of Engineer of site-specific Waste Management Plan</li> <li>• Update performance relative to indicators and comparison to respective success criteria, as listed above and detailed in the plan</li> <li>• Summarize other activities undertaken during reporting period</li> <li>• Specify any material deviations or non-compliances to this management measure, and any other issues of concern</li> <li>• Define activities planned during next reporting period</li> </ul>	
<p><b>SCHEDULE</b></p>	
<p><b>MANAGEMENT MEASURE:</b></p> <p><i>Implementation:</i></p> <ul style="list-style-type: none"> <li>• Plan preparation and submission, and written Engineer approval prior to starting any construction activities</li> <li>• Management measure and plan implementation throughout construction</li> </ul>	<p><b>MONITORING:</b></p> <p><i>Implementation:</i></p> <ul style="list-style-type: none"> <li>• Document communications and written approval of Engineer as they occur</li> <li>• Document actions taken to meet management measure and plan requirements, and compliance and non-compliance as they occur</li> </ul> <p><i>Reporting:</i></p> <ul style="list-style-type: none"> <li>• Monthly in ESMP update</li> </ul>
<p><b>RESPONSIBILITY</b></p>

## F.2.4 Social and Gender Inclusion

### Management Measure Wells - 7: Labor Management

<p><b>POTENTIAL IMPACT</b></p> <p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>• Professional management and conditions of labor</li> <li>• Opportunities for local labor and supply of goods and services, and provision of local jobs with fair and competitive wages</li> <li>• Women's short-term employment in construction and engineering-related work</li> </ul>
---

<ul style="list-style-type: none"> <li>• Potential alleviation of poverty in local area</li> <li>• Reduction in child labor</li> <li>• Improved grievance management in employment</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>• Discrimination against women</li> <li>• Increased foreign labor, reducing local employment opportunities</li> <li>• Use of child labor</li> <li>• Use of forced labor</li> <li>• Use of trafficked labor</li> <li>• Exploitation of workers and Labor Code violations</li> <li>• Sexual harassment</li> </ul>
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Constitution of Mongolia <ul style="list-style-type: none"> <li>- Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>• Mongolian Civil Code <ul style="list-style-type: none"> <li>- Requires providing office space, tools and equipment necessary to ensure employees' health.</li> </ul> </li> <li>• Mongolian Law on Gender Equality <ul style="list-style-type: none"> <li>- Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>• Mongolian Law on Labor <ul style="list-style-type: none"> <li>- Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>- Prohibits employing children under the age of 16 or under 18 in dangerous industries, including construction</li> </ul> </li> <li>• Mongolian Law on Minimum Wage <ul style="list-style-type: none"> <li>- Minimum wage is fixed by National Tripartite Committee on Labor and Social Consensus representatives.</li> </ul> </li> <li>• Mongolian Law on the Protection of the Rights of the Child <ul style="list-style-type: none"> <li>- Prohibits employing children in any work that is likely to harm their health or morale, and exploiting or paying unjust wages to children</li> </ul> </li> <li>• Mongolian Law on Social Protection of Disabled Persons <ul style="list-style-type: none"> <li>- Prohibits building any buildings and facilities that do not meet needs and requirements of persons with disabilities.</li> </ul> </li> <li>• Mongolian Law on Combating Human Trafficking <ul style="list-style-type: none"> <li>- Requires regulating the workplace to ensure the implementation of the legislation on combating human trafficking, and if it is not specified, it shall be obliged to comply with the instructions, recommendations, statements and instructions given by the competent authorities and officials.</li> </ul> </li> <li>• Mongolian Law on Sending Labor Force Abroad and Receiving Labor Force and Specialists from Abroad <ul style="list-style-type: none"> <li>- Regulates relations with respect to employment of a Mongolian citizen abroad and a foreign citizen in Mongolia, and protection of their rights and interests.</li> <li>- Reinforces provisions of the Constitution of Mongolia, Labor Law, Social Insurance Law, and other related legal acts, and legal status of a foreign citizen.</li> </ul> </li> <li>• IFC Performance Standard 2</li> </ul>

- Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.
- Contractor will adopt and implement human resources policies and procedures appropriate to its size and workforce that set out its approach to managing workers consistent with the requirements of this performance standard and national law.
- Contractor will provide workers with documented information that is clear and understandable regarding their rights under national labor and employment law and any applicable collective agreements, including their rights related to hours of work, wages, overtime, compensation, and benefits upon beginning the working relationship and when any material changes occur.
- Contractor will not make employment decisions on the basis of personal characteristics unrelated to inherent job requirements. Contractor will base the employment relationship on the principle of equal opportunity and fair treatment, and will not discriminate with respect to any aspects of the employment relationship, such as recruitment and hiring, compensation (including wages and benefits), working conditions and terms of employment, access to training, job assignment, promotion, termination of employment or retirement, and disciplinary practices. Contractor will take measures to prevent and address harassment, intimidation, and/or exploitation, especially in regard to women. The principles of non-discrimination apply to migrant workers.
- Prohibits employment of child labor.
- Millennium Challenge Corporation Counter-Trafficking in Persons Policy (C-TIP Policy)
  - Requires contractors to take a zero-tolerance policy with regard to human trafficking and to actively manage employment conditions to prevent exploitation of trafficking in persons and related activities workers by employers and specifies remedies that the MCA-Entity may take in response to confirmed cases of TIP.
- Millennium Challenge Account Social and Gender Integration Plan (SGIP)
  - Sets out guidelines for Contractors related to social risk mitigation measures in infrastructure, including making working conditions suitable for both male and female employees
  - Requires developing and implementing an employment plan that prioritizes using local labor particularly from the Area of Influence of the project
  - Sets a target to encourage contractors to employ as workers at least 30% women of all workers at each skill/occupational level
  - Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates.
- Millennium Challenge Corporation Guidance Note to MCAs on Sexual Harassment
  - Requires that contractors are well-informed about existing anti-sexual harassment policies and procedures, and that contractors meet the requirements in the standard bidding documents.
  - Ministry of Construction and Urban Design (MCUD) Gender Responsiveness Policy
  - Calls for gender targets in employment via “international and domestic tenders, so that one gender should not be lower than 15 percent among workers, and 25 percent among decision makers.”
  - Ministry of Labor and Social Welfare Order (2016)
  - Expanded the types of hazardous work prohibited for children under the age of 18 to include construction
  - International Labor Organization fundamental conventions, and International Human Rights instruments and conventions

## OBJECTIVES

The Labor Management Plan ensures that contractors and their workers have clear expectations about the behaviors and conditions expected of the Contractor and all workers.

- Promote fair treatment, non-discrimination, and equal opportunity of workers
- Promote local labor opportunities and procurement from local suppliers
- Target women’s employment as 30% of all labor at each skill/occupational level

- Establish and maintain and improve a constructive worker-management relationship
- Protect workers, including vulnerable categories of workers such as children, migrant workers, workers engaged by third parties, and workers in the supply chain
- Avoid the use of forced labor or trafficked labor
- Maximize the beneficial impact of the project on the affected communities

## MANAGEMENT MEASURE

### Labor Management

The MCA-Mongolia or its representative's Social Safeguards Team (SST) will:

- Encourage Contractor to employ local unskilled and semi-skilled labor, particularly youth and women, and to procure goods and services from local businesses and entrepreneurs
- Facilitate the Contractor's cooperation with the local District Labor Offices
- Facilitate the Contractor's publication of vacancies and procurements within affected communities
- Facilitate the Contractor's holding of job fairs and procurement workshops within affected communities to support local applicants to apply for jobs and local businesses and entrepreneurs to bid
- Support local job applicants to apply, and local businesses and entrepreneurs to bid
- Gather names of interested workers from project affected households and through community information programs and consultation meetings
- Share the names of interested workers with District and Khoroo Labor Offices and Contractor
- Encourage Contractor to employ women at a rate of at least 30% of personnel at each skill/occupational level
- Facilitate Contractors' engagement with relevant university engineering programs, technical and vocational education and training (TVET), and professional associations to 1) identify and recruit qualified job applicants and 2) establish internships and apprenticeships
- Encourage Contractor to employ socially excluded and vulnerable people

The Contractor will:

- Fully comply with the requirements of this management measure and related contract clauses
- Perform the work in accordance with relevant sections of the ESMP

### *Access to Employment*

The Contractor will:

- Publish vacancies (listing the required qualifications for all categories of employment) within project-affected communities and at District and khoroo offices and provide such information to the Engineer and during each community meeting. Ensure the exchange of information between Contractor and the local population on employment opportunities
- Publish and communicate employment opportunities listing the required qualifications for all categories of employment city-wide, and beyond in Mongolia, if the vacancies cannot be filled from local communities
- Ensure that a staff person responds to questions from the local population regarding employment and procurement opportunities
- Develop an employment forecast and a written recruitment strategy to: 1) encourage the employment of qualified individuals among the local population(s) in project construction and ancillary activities in all phases, with particular focus on women and youth, and disadvantaged groups; 2) target achieving women's employment as at least 30% of personnel at each skill/occupational level; and 3) provide training for local construction brigades on how to be effective contractors for local construction brigades
- Through the Contractor's Social Safeguards Officer, liaise with the MCA-Mongolia or its representative's SST and local labor offices to provide support with the job application process, encourage local employment (including women's employment), implement and publicize a job fair, consistent and transparent recruitment process

- In disseminating information on potential employment opportunities, take steps to consider ways in which to maximize outreach, using all forms of media that may be appropriate
- Ensure that all staff have written employment contracts specifying fair employment conditions and equal pay for equal work to men and women, and fulfilling all conditions specified under the Mongolian Law on Labor defining the contracts

The Contractor is encouraged to:

- Create pay bands for each category of worker to help equal pay for equal work

As feasible, the Contractor will:

- Develop and submit a plan for providing on-the-job training and skills transfer opportunities to the local labor force
- Engage with training, education, and professional organizations—such as Technical and Vocational Education and Training, Implementing Agency of the Ministry of Labor and Social Protections, Mongolian University of Science and Technology, and the Mongolian Builder's Association—to recruit qualified applicants, and provide apprenticeships and internships for students who study water engineering and relevant subjects at university

The Contractor shall note contract clauses on “Gender,” “Engagement of Staff and Labor,” “Foreign Personnel,” “Prohibition of Forced or Compulsory Labor,” “Prohibition of Harmful Child Labor,” “Employment Records of Workers,” and “Non-Discrimination and Equal Opportunity.

#### *Local Procurement*

The Contractor will:

- Proactively procure goods and services from local businesses and entrepreneurs in Khan-Uul and Songinokhairkhan Districts and Ulaanbaatar, and members of targeted disadvantaged groups (e.g., women, people with disabilities), achieved through:
  - Publicizing procurements within the targeted geographical area or targeted group, for example at the District and khoroo offices and via notice boards, print media (newspapers, etc.), recruitment agencies, or job and career fairs
  - Publicizing and holding procurement workshops within the targeted geographical area or targeted group
  - Adding priority criteria for businesses and entrepreneurs in the targeted geographical area or members of the targeted group to the selection procedure
- In disseminating information on potential service procurement opportunities, take steps to maximize outreach, using all forms of media that may be appropriate

#### *Workplace Environment*

The Contractor will:

- Establish, execute, and enforce a Worker Behavior Code of Conduct on which all employees will be briefed, that all employees are required to sign, and that mandates immediate dismissal for serious offences including sexual harassment, violence, or confirmed cases of engagement in trafficking in persons. The Code will specify:
  - Expectations of worker behavior, and penalties for transgression
  - MCC and Mongolian legal definitions of trafficking in persons (TIP), zero-tolerance for TIP, and remedies that the MCA Entity may take in response to confirmed cases of engagement of trafficking in persons
  - Zero-tolerance for gender-based violence
  - Compliance with the Contractor's Anti-Sexual Harassment Policy and notification of the Contractor's Sexual Harassment Incident Reporting and Referral Plan
  - Rights of employees to a grievance mechanism, holidays, and cultural and festival access
  - Conditions for work camps, shelter, water and sanitation, food, and security
  - The responsibility of all workers, regardless of their role or duration of employment, will be expected to review and acknowledge the Workers' Code of Conduct by signing the code sheet
  - The requirement to respect local customs and practices
- Establish and execute a worker's grievance redress procedure that:

- Formalizes a system for receiving and managing internal complaints of sexual harassment, gender-based violence, or issues of trafficking persons (including engaging in commercial for sex with a person under 18 years of age)
- Guarantees confidentiality to makers of allegations
- Designate the Contractor's Social Safeguards Officer or other officer as responsible for collaborating with the human resources department on the grievance redress procedures
- Refers to the Contractor's Sexual Harassment Incident Reporting and Referral Plan for allegations of sexual harassment
- Specifies that the Contractor's zero-tolerance for gender-based violence addresses any complaints of gender-based violence against its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
- In cases of discrimination against women or of allegations of sexual harassment or violence, requires that the Contractor's Social Safeguards Officer contact the MCA-Mongolia or its representative's SST to include them in the investigation and appoint a third party—such as a representative from an NGO such as the Centre for Gender Equality or equivalently qualified, experienced organization—to lead the investigation
- The Contractor shall note the contract clause on "Prohibition of Sexual Harassment"
- The Contractor shall note the contract clause on "Facilities for Staff and Labor" and provide suitable gender-segregated facilities to enable the safe employment of both men and women – e.g. Toilet facilities, changing facilities on all sites and enabling physical access to office accommodation for people with disabilities.

### *Training*

The Contractor will:

- Provide training to enhance the skills of employees using on-the-job training, internships, apprenticeships, and secondment to training programs such as Technical and Vocational Education and Training, etc.
- Mandate for all employees, before each worker starts work on the site, induction packages that include:
  - Employment rights and conditions, including non-discrimination and equal opportunity
  - The Contractor's responsibility to "adopt recruitment, hiring and retention practices that support the employment of women and staff from diverse backgrounds" per the contract clause on "Engagement of Staff and Labor," the Contractor's employment forecast and recruitment strategy, and the Contractor's Gender Integration and Social Inclusion Plan (described below)
  - Gender-based violence
  - Contractor's Anti-sexual Harassment Policy – including awareness of what constitutes sexual harassment, exploitation and abuse, and the Contractor's Sexual Harassment Incident Reporting and Referral Plan
  - Using the internal Grievance Mechanism for allegations of gender-based discrimination
  - Rights to have access to local festivals
  - Cultural sensitivities, and social norms and practices in each area
  - Expectations on avoiding poor relations between employees and local communities caused by behavior relating to alcohol, gambling, prostitution, illegal drug use, violence and sexual abuse of women, minors and lesbian, gay, bisexual, transgender, queer, and others (LGBTQ+) persons
  - Countering the Trafficking in Persons Response Plan – awareness of responsibilities to counter the trafficking of people around the project area, the remedies that the Contractor and the MCA Entity may apply, and mechanisms for reporting suspected instances of TIP with the Contractor's TIP Response Plan
  - Awareness of the possibilities of the transmission of HIV/AIDS and communicable illnesses and how to prevent HIV/AIDS transmission
- Undertake a series of employment and social plan inductions and employee awareness programs that:

<ul style="list-style-type: none"> <li>○ All employees must attend at the commencement of employment and over the employment period twice yearly</li> <li>○ Incorporate toolbox talks that include reinforcement of all training programs</li> <li>• Commission training modules on gender integration and social inclusion topics for all employees at intervals agreed with the MCA-Mongolia or its representative's SST</li> <li>• Require that the Social Safeguards Officer, together with the MCA-Mongolia or its representative's SST Community Liaison Officers, conduct awareness raising with workers on child labor issues in the local community as part of an ongoing community awareness program on social issues <ul style="list-style-type: none"> <li>○ These toolbox talks will include ways that workers can report suspected child labor to the District Children, Youth and Family Offices, and the MCA-Mongolia or its representative's Social Manager</li> </ul> </li> </ul> <p><i>Site-specific Labor Management Plan</i></p> <p>The Contractor will prepare and submit for the Engineer's written approval a site-specific Labor Management Plan that:</p> <ul style="list-style-type: none"> <li>• Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan</li> <li>• Includes the Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan and the Workers' Code of Conduct</li> <li>• Is consistent and compliant with: <ul style="list-style-type: none"> <li>○ Mongolian Law on Labor</li> <li>○ Relevant aspects of the Conditions of Contract, as well as the MCC Gender Policy and the MCA-Mongolia Social and Gender Integration Plan</li> <li>○ The MCC Policy on Counter-Trafficking in Persons</li> </ul> </li> <li>• Assigns roles and responsibilities for labor management</li> </ul>
LOCATIONS:
All construction sites and temporary construction facilities
<b>MONITORING</b>
<p>MCA-Mongolia or its representative:</p> <ul style="list-style-type: none"> <li>• Monitor implementation of the Contractor's Labor Management Plan and Worker Behavior Code of Conduct, including prohibitions against trafficking in persons, gender-based violence, sexual harassment, and child labor</li> <li>• Monitor implementation of the Contractor's employment recruitment strategies and assist Contractor to reach potential workers among local women, youth, and people from disadvantaged groups</li> <li>• Monitor participation by all parties in the Contractor's internal grievance redress procedure and external project Grievance Redress Mechanisms</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>• Record results of Contractor's labor management responsibilities, with all data and statistics gender disaggregated by age and gender, following, at a minimum, the contract clause on "Employment Records of Workers" and recording, for each worker hiring and leaving dates, along with duration (days) of employment and skills/occupational category and home location of workers (project-affected district/khoroov, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia)</li> <li>• Document implementation of the requirements above for the Labor Management Plan, including all recruitment activities</li> <li>• Document Worker Behavior Code of Conduct infringements and outcomes, and internal grievance redress activities under the Contractor's internal grievance process</li> </ul>
LOCATIONS:
All construction sites and temporary construction facilities
INDICATORS AND SUCCESS CRITERIA:

**Indicators:**

- Required plans written, approved, and implemented
- Number, content, and outcome of employment against home location (project-affected district/khoroos, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia), gender, and age brackets (under 30, 30 to 49, 50 and over), and total days of employment for each individual worker
- Use of written contracts with defined pay scales by employment activity
- Employment recruitment activities, interactions with local employment offices and communities, professional associations, TVET centers
- Percent of all employees that are workers from project-affected districts/khoroos and elsewhere in UB/Mongolia
- Percent of all employees that are women, disaggregated by skill/occupational level
- Records of attendance and dates of all trainings and toolbox talks delivered on social and gender topics
- Numbers of grievance redress actions, the number of days necessary to resolve them, and their outcomes

**Success Criteria:**

- Successful outcome of:
  - 100% of contractor and employees have attended the child labor toolbox session on identifying and reporting child labor incidents
  - Zero tolerance of child labor – no child labor on site or with any contract activity
  - Any cases of child or forced labor are reported and dealt with in a timely, manner, with respect for the child(ren) and families affected
  - Maximization of local labor, such that percentage of all labor exceeds a minimum target percentage to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
  - Achievement of the non-binding 30% or more employment of women as a percentage of all staff, in each skill/occupational category
  - Employment of young people and “vulnerable” and excluded groups at a target to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
  - Apprenticeships and internships Internments established and completed for each construction season
  - All worker and community complaints about sexual harassment are a) addressed in a timely manner and b) resolved through the Contractor's Sexual Harassment Incident Referral and Reporting Plan
  - 100% of employees and sub-contractors sign the Worker Code of Conduct
- Resolution of 100% of internal grievances within a duration to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)

**REPORTING:**

- Report communications and written approval of Engineer of site-specific Labor Management Plan
- Report enforcement actions related to the Anti-Sexual Harassment Policy and implementation of Sexual Harassment Incident Reporting and Referral Plan
- Summarize activities undertaken during reporting period, using the categories above: 1) Access to Employment 2) Local Procurement 3) Workplace Environment 4) Training and 5) Site-specific Labor Management Plan
- Specify any material deviations or non-compliances to this management measure, and any other issues of concern
- Define activities planned during next reporting period

### Management Measure Wells - 8: Gender Integration and Social Inclusion (GSI)

<b>POTENTIAL IMPACT</b>
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Increased short-term employment and improved conditions of employment for women</li> <li>Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of forced labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Millennium Challenge Account Social and Gender Integration Plan (SGIP) <ul style="list-style-type: none"> <li>Encourages contractors to prioritize using local labor, particularly workers from the project affected area</li> <li>Encourages contractors to employ women as at least 30% of workers</li> <li>Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates</li> </ul> </li> <li>Millennium Challenge Corporation Gender Policy <ul style="list-style-type: none"> <li>The MCC Gender Policy states that countries will ensure that both women and men have opportunities for meaningful participation throughout the consultative processes related to a Compact program.</li> </ul> </li> <li>IFC Performance Standard 1 <ul style="list-style-type: none"> <li>Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> </ul> </li> </ul>

- IFC Performance Standard 2
  - Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.
- Constitution of Mongolia
  - Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.
- Mongolian Law on Gender Equality
  - Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.
- Mongolian Law on Labor
  - Prohibits discriminating against race, social origin or status, wealth, religion, or ideology
  - Prohibits employing children under the age of 16 – under 18 in dangerous industries e.g. construction

#### OBJECTIVES

The Gender Integration and Social Inclusion (GSI) Plan complements the Labor Management Plan and provides additional management steps to address GSI considerations with respect to workers and local communities.

T

- To promote the fair treatment, non-discrimination, and equal opportunity of workers.
- To encourage the employment of women as at least 30% of the Contractor's workforce, calculated over full and part time positions as a percentage of total number of staff hired in the life of the contract, at each skill/occupation level
- To enable local people, particularly youth and people in project-affected districts/khoroos to gain short-term employment and training opportunities
- Maximize the perceived beneficial impact of the BWSE project on the project affected communities

#### MANAGEMENT MEASURE

##### Gender Integration and Social Inclusion

- Under the Gender Integration and Social Inclusion Plan, the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure the widest exchange of information between the Contractor and the local population and district and khoroo Labor Offices on planned and continuing works and employment opportunities through a program of community consultations and participatory meetings.
- The Contractor will prepare and submit for the Engineer's written approval a Contractor's Gender Integration and Social Inclusion Plan, which will be:
  - Consistent with the Mongolian Law on Labor and
  - Consistent with the MCC Gender Policy's emphasis on community consultation and participation
  - Consistent with IFC Performance Standard 1: Assessment and Management of Environmental and Social Risks and Impacts
  - Agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer

##### *Community Engagement*

- The Contractor will hold at least one meeting in each project-affected District and khoroo office prior to construction to inform community members of the expected conduct of workers and the contents of the Labor Management Plan, and thereafter monthly, minimally covering the following:
  - Efforts to hire local labor and the Contractor's employment forecast
  - Efforts to maximize women's employment
  - Efforts to maximize local procurement and the Contractor's procurement forecast
  - Prohibitions against child labor and forced labor in supply chains

- Zero-tolerance of trafficking in persons, MCC and Mongolian legal definition of trafficking in persons, and Contractors' Counter-Trafficking in Persons Response Plan
- Zero-tolerance of gender-based violence
- Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan

*Expanding Short-term Employment Opportunities*

- The Contractor will actively consider working with the existing construction brigades to enable local labor currently organized into brigades to gain employment. The brigades may require additional training to enable them to work on this large scale project – training in:
  - Modern tools and techniques where needed
  - Brigade internal labor management, accounting, and estimation techniques
- As referenced in the Labor Management Plan and its recruitment strategy, the Contractor will encourage the employment of qualified individuals among the local population(s) in project activities, with particular focus on women, youth, and disadvantaged groups. This may include small-scale supply contracts or services, with announcement of jobs published on project information boards, in District and khoroo Labor Offices and with information on employment disseminated by the Contractor's Social Safeguards Officer, the MCA or its representative or other means approved by the Engineer.
- Where appropriate, the Contractor will provide training to enhance the skills of employees and local people using on-site apprenticeships and internships.
- As referenced in the Labor Management Section above, the Contractor is encouraged to cooperate with, secondment to training programs such as Technical and Vocational Education and Training Centers and professional associations and to draw workers from among their graduates and members, etc.

*Local Procurement*

- The Contractor will develop and submit a procurement forecast of all goods and services that could be procured locally. The MCA-Mongolia or its representative's Social Safeguards Team will assist in disseminating this information to local communities with the Contractor's Social Safeguards Officer.
- The Contractor will develop and submit for review and approval by the Engineer, a procurement strategy to inform local communities and businesses of opportunities to provide goods and services to the Contractor and to project workers, particularly targeting small businesses and those owned by women.
- The Contractor Social Safeguards Officer and MCA-Mongolia or its representative's Social Safeguards Team will hold community meetings to inform people about the procurement processes and include District and khoroo offices, community organizations and the media.

**LOCATIONS:**

All construction sites and temporary construction facilities and project affected communities

**MONITORING**

MCA-Mongolia or its representative's SST:

- Monitor Contractor Gender Integration and Social Inclusion Plan
- Monitor Contractor employment recruitment strategies and assist Contractor to reach potential women, youth and other excluded groups
- Monitor participation by all parties in the Contractor's internal and external project Grievance Redress Mechanisms
- Document Contractor performance in Gender Integration and Social Inclusion Plan

Contractor:

- Record results of Contractor's Gender Integration and Social Inclusion responsibilities

<b>OBJECTIVES</b>

- To prevent incidence of trafficking of persons for sex by project employees
- To ensure that the Contractor and its Sub-Contractors do not employ trafficked labor and to minimize the risks of trafficking of foreign workers to project sites
- To prevent sexual harassment at all construction sites and temporary construction facilities
- To prevent Contractor and worker involvement in sexual harassment in project-affected communities and among members of stakeholder organizations in the workplace
- To prevent incidences of gender-based violence involving workers

## MANAGEMENT MEASURE

### Counter-Trafficking in Persons, Gender-Based Violence and Sexual Harassment

The Contractor shall ensure that foreign workers on work sites or in labor camps are aware 1) of the risks of cultural conflict and of becoming victims of gender-based violence, sexual harassment and abuse, discrimination, trafficking in persons and 2) the legal and contractual remedies against such behavior. This information shall be provided in workers' induction packages, by holding an orientation before workers start on site, and by delivering a training twice a year.

#### *Counter Trafficking in Persons (C-TIP)*

- The Contractor shall prepare and submit for the Engineer's written approval a Counter-Trafficking in Persons Response Plan (TIP Response Plan), and the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure all employees are informed of expectations of behavior as per the Worker Behavior Code of Conduct and the penalties for proven infringements.
  - The Counter-Trafficking in Persons Response Plan shall Address the specific TIP risks identified in the ESIA, including withholding of foreign workers' passports and commercial sex with minors,
  - Designate a single responsible person who will notify the Engineer and MCA-Mongolia within 24 hours of an alleged incident and implement any investigation.
  - Specify when to contact legal authorities, list UB city officials, national government offices, and NGO organizations that address TIP, and state how the Contractor will deal with them in the case of a TIP incident.
  - Include mechanisms to ensure confidentiality of any TIP survivors and to refer them to law enforcement and/or supportive services if they wish.
- The Contractor shall develop, as part of its TIP Response Plan, an anonymous mechanism for workers and community members to report suspected TIP incidents to the Engineer and to MCA-Mongolia, and this must be separate from the project grievance mechanism.
- The Counter-Trafficking in Persons Response Plan shall be:
  - Consistent with the Mongolian Law on Labor, Promotion of Gender Equality, and combatting Human Trafficking
  - Compliant with the MCC Counter-Trafficking in Persons Policy
  - Coordinated and agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer
- The Counter-Trafficking in Persons Response Plan shall specifically prohibit:
  - Procuring minors for sex
  - Transporting non-employee individuals in company vehicles
- The Contractor is strongly encouraged to engage the Centre for Gender Equality or other similarly qualified and experienced organization to develop its TIP Response Plan, its anonymous reporting mechanism, its worker training, and its C-TIP content for community meetings
- The Contractor shall design and deliver twice yearly C-TIP training modules to all staff, sub-contractors, and service providers on the prevention of TIP and the Contractor's TIP Response Plan, following minimum content in MCA-Mongolia's Social and Gender Integration Plan (SGIP).

- C-TIP training sessions must be delivered to all employees within one month of starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
- Information about the Contractor's zero-tolerance policy and TIP Response Plan shall be included in all community meetings and the Plan shall be provided in Mongolian, in whole, to project-affected khoroo and District governments.

#### *Gender-Based Violence*

- The Contractor shall adopt a policy of zero-tolerance for gender-based violence and address any complaints of gender-based violence against its workers or committed by its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
- The Contractor shall notify the Engineer and MCA-Mongolia within 24 hours of any alleged incident of gender-based violence
- The Contractor shall deliver a gender-based violence prevention training to all staff, sub-contractors, and service providers prior to all workers beginning on-site and thereafter at least twice each year.
  - The Contractor is strongly encouraged to engage a local, qualified, and experienced organization to develop the training.
  - The training shall minimally identify behavior that constitutes gender-based violence, address attitudes towards violence against women and lesbian, gay, bisexual, transgender, and queer people (LGBTQ), and identify relevant Mongolian laws and organizations addressing gender-based violence.
  - It shall also explain the workings and protections in the Contractor's grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ persons.
- Include in all community meetings information about the Contractor's zero-tolerance policy toward gender-based violence committed by or against its workers and procedures for reporting it and communicate this information in writing to project-affected khoroo and District governments.

#### *Sexual Harassment*

- The Contractor shall develop and submit to the Engineer an Anti-Sexual Harassment Policy prohibiting sexual harassment directed at Compact beneficiaries, partners, or stakeholders, MCA Entity employees, MCA Entity consultants, MCC personnel, or MCC consultants and including an Incident Reporting and Referral Plan.
  - The Policy and Plan must be in form and substance satisfactory to the MCA and MCC.
  - The Incident Reporting and Referral Plan shall include a confidential mechanism for workers and community members to report sexual harassment to the Engineer and to MCA-Mongolia, separately from the Grievance Redress Mechanism.
- Employers are required to have a protocol in their Workplace Grievance mechanism in which persons alleging harassment or violence will be protected from identification and from pressure from the Contractor or other workers to dismiss the complaint.
- The Contractor's grievance manager must notify the MCA-Mongolia or its representative's Social Safeguards Team and the Contractor's Social Safeguards Officer within 24 hours of any allegation of sexual harassment.
- The Contractor must have a contract with a suitably experienced organization, such as the Centre for Gender Equality, to provide an investigation leader to manage the investigation of complaints of sexual harassment.
- The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction.
- The Contractor shall design and deliver a sexual harassment prevention training to all staff, sub-contractors, and service providers, in accordance with the Contractor's Anti-Sexual Harassment Policy, recognizing MCC's Guidance to MCAs on Sexual

<p>Harassment.</p> <ul style="list-style-type: none"> <li>○ Training shall be conducted within one month of workers starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.</li> <li>○ Training shall address <ul style="list-style-type: none"> <li>▪ Attitudes to and prevention of sexual harassment in the workplace</li> <li>▪ Workings and protections in the Contractor's internal grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ+ persons</li> <li>▪ Additional requirements for minimum training content can be found in MCA-Mongolia's Social and Gender Integration Plan (SGIP)</li> </ul> </li> <li>• Information about the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral plan shall be included in all community meetings and the Policy and Plan shall be communicated in Mongolian, in whole, to project-affected khoroo and District governments.</li> </ul>
<p><b>LOCATIONS:</b></p> <p>All construction sites and temporary construction facilities and project affected communities</p>
<p><b>MONITORING</b></p>
<p>MCA-Mongolia or its representative's SST:</p> <ul style="list-style-type: none"> <li>• Monitor Contractor Counter-Trafficking in Persons Response Plan</li> <li>• Monitor Contractor performance related to gender-based violence requirements</li> <li>• Monitor Contractor's development and adherence to its Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> <li>• Participate in the Contractor's internal Grievance Redress Mechanisms in relation to any on allegations of sexual harassment and gender-based violence and monitor and document the process and outcomes, maintaining confidentiality of those reporting and victims and witnesses</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>• Maintain copies of all contracts or other agreements with organizations that provide services related to the development of C-TIP, GBV prevention, or prevention of sexual harassment policy, plans, training, or reporting mechanisms</li> <li>• Maintain records of workers' participation in required trainings, including the dates of trainings and which workers participated</li> <li>• Maintain records of all community meetings at which C-TIP, gender-based violence, and sexual harassment are addressed, including the dates and locations and a record of all questions, comments, and Contractor responses</li> <li>• Document all implementation of the results of Contractor's Counter-Trafficking in Persons Response Plan responsibilities</li> <li>• Document all complaints of sexual harassment and gender-based violence, maintaining confidentiality of witnesses and victims, and all implementation of the Sexual Harassment Incident Reporting and Referral Plan and interactions with law enforcement and other relevant response institutions and organizations</li> <li>• Grievance redress activities under the Contractor's internal grievance process</li> </ul>
<p><b>LOCATIONS:</b></p> <p>All construction sites and temporary construction facilities and project affected communities</p>
<p><b>INDICATORS AND SUCCESS CRITERIA:</b></p> <p>Indicators:</p> <ul style="list-style-type: none"> <li>• Content of the Contractor's TIP Response Plan</li> <li>• Content of the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> </ul>

- Number and content of trainings for all staff
- Number of community meetings at which information presented covers the Contractor's policies on C-TIP, GBV, and sexual harassment and how to report suspected cases compared to the total number of Contractor-organized community meetings, disaggregated by location
- Numbers of complaints and grievances brought alleging sexual harassment, gender-based violence or trafficking in persons
- Number of required notifications of suspected TIP, GBV, and sexual harassment incidents compared to the number of complaints
- Contracts or other agreements with specialized organizations to develop and deliver plans, policies, and training

**Success Criteria:**

*Counter-trafficking in persons*

- Anonymous reporting mechanism for trafficking in persons is established prior to initiation of construction and functioning effectively for the duration of the construction
- The Contractor's TIP Response Plan is thorough, references the MCC C-TIP Policy and any guidance, provides a path to involve NGOs and specialized government staff, and includes clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.
- 100% of reported or suspected cases of TIP are dealt with in a timely, survivor centered manner, according to the TIP Response Plan.
- Effective reporting and management measures are developed are implemented and information about the measures are introduced to the employees and sub-contractors in toolbox sessions and by other means
- 100% of community meetings include reference to the zero-tolerance policy against TIP and to the Contractor's TIP Response Plan

*Gender-based violence*

- Culture of unacceptability of gender-based violence and assaults on women and LGBTQ+ persons established via:
  - 100% of workers having participated in gender-based violence prevention training prior to beginning work on-site
  - The Contractor notifying the Engineer and MCA-Mongolia within 24 hours of 100% of any alleged incident of gender-based violence
  - Timely, confidential, and thorough dealing with complaints of gender-based violence and 100% implementation of zero-tolerance policy in confirmed cases
  - 100% of community meetings including reference to the zero-tolerance policy against gender-based violence and procedures for reporting it

*Sexual harassment*

- The Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan are thorough, reference the Contract, aspects of the MCC Guidance to MCAs on Sexual Harassment, and Mongolian Law; provide a path to involve NGOs and specialized government staff; and include clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.
- 100% of employees and sub-contractors have taken the sexual harassment prevention training prior to on-site work
- All worker and community complaints about sexual harassment are
  - addressed confidentially
  - addressed in a timely manner and
  - resolved following the procedures in the Contractor's Sexual Harassment Incident Referral and Reporting plan
- After investigation, appropriate measures are taken against perpetrators of sexual harassment on the job site, in temporary facilities, and in surrounding communities

<b>REPORTING:</b>

### Management Measure Wells - 11: Cultural Heritage Protection

<b>POTENTIAL IMPACT</b>
<ul style="list-style-type: none"> <li>• Chance finds of and potential inadvertent excavation or damage of tangible cultural heritage</li> </ul>

<ul style="list-style-type: none"> <li>• Disturbance of the cultural and sacred landscape and places of religious or spiritual significance</li> <li>• Loss of the continuity of spiritual, religious, and traditional activities</li> </ul>
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Mongolian Law on Protection of Cultural Heritage <ul style="list-style-type: none"> <li>- If tangible cultural heritage is discovered during excavation, requires halting work and immediately notifying the <i>soum</i> and <i>duureg</i> [capital city municipal district] governors, police, and concerned authorities.</li> <li>- Prohibits building infrastructure facilities in historical and cultural monuments and their activity zones, to engage in mining and agriculture. Governors of all levels have the duty to protection the intangible cultural heritage.</li> </ul> </li> <li>• IFC Performance Standard 8 <ul style="list-style-type: none"> <li>- Prohibits removing, significantly altering, or damaging critical cultural heritage.</li> <li>- Requires designing and implementing a chance find procedure when the proposed location of a project is in areas where cultural heritage is expected to be found, either during construction or operations.</li> </ul> </li> </ul>
<p><b>OBJECTIVES</b></p> <ul style="list-style-type: none"> <li>• Protect tangible cultural heritage from inadvertent excavation or damage</li> <li>• Enable and foster the continuity of spiritual, religious, and traditional activities in consideration of the unavoidable disturbance of the cultural and sacred landscape and places of religious or spiritual significance</li> </ul>
<p><b>MANAGEMENT MEASURE</b></p> <p><b>Cultural Heritage Protection</b></p> <p><b>Chance Find Procedure</b></p> <p>As unknown features/objects could be encountered during works, in particular earthworks, a chance finds procedure will be in place to stop works in case of such findings, and require investigation by an archaeologist and involvement of relevant government entities.</p> <p>Should any unexpected tangible cultural heritage be discovered:</p> <ul style="list-style-type: none"> <li>• Cease all work in the immediate area and do not disturb the chance find further, including: <ul style="list-style-type: none"> <li>- Establishing a 30-meter buffer around the chance find</li> <li>- Leaving buffer undisturbed until competent cultural heritage specialist assesses the site</li> <li>- Protecting the chance find area, for example with signs for prohibition of entry, barrier tape, etc.</li> </ul> </li> <li>• Work may continue at other locations providing there is a buffer zone between the chance find area and the construction area</li> <li>• Immediately notify the Engineer and the concerned government agencies, specifically the: <ul style="list-style-type: none"> <li>- Office of the governor of the capital city</li> <li>- Office of governor of the respective Khan-Uul District or Songinokhairkhan District</li> <li>- Local police</li> <li>- Institute of Archeology, Mongolian Academy of Sciences</li> <li>- Institute of History and Ethnography, Mongolian Academy of Sciences</li> </ul> </li> <li>• Provide the following information to the Engineer and government agencies: <ul style="list-style-type: none"> <li>- Cultural heritage site type—description and photograph(s)</li> <li>- Location—description and GPS coordinates</li> <li>- Date, time, and details of find</li> <li>- Nature of work that led to exposure of or locating the find</li> </ul> </li> <li>• Coordinate with the Engineer and the concerned government agencies to consult a cultural heritage professional on site to assess the cultural heritage and recommend mitigation</li> <li>• Follow instructions of the concerned government agencies and cultural heritage professional for the protection of the tangible cultural heritage</li> </ul>

- Restart work only upon written direction from the Engineer

### **Cultural and Sacred Landscape and Places**

- SST will conduct enhanced stakeholder engagement with religious and spiritual leaders to assess the intangible cultural impact of construction on cultural and sacred landscape and places.
- Contractor will coordinate with the SST Community Liaison Officers and the Engineer, and as directed by the Engineer accommodate the performance of periodic spiritual, religious, and traditional ceremonies and rituals on or adjacent to project sites. The ceremonies and rituals may be integrated with or, if independent, their scale may be similar to groundbreaking ceremonies.

### **Training**

The effective protection of cultural heritage is based on an understanding of the key issues, appropriate assessment, and correct action to minimize possible damage or loss.

The Contractor will:

- Prepare and submit for the Engineer's written approval a site-specific Cultural Heritage Training Plan and associated procedures that, as a minimum:
  - Specifies how the Contractor will educate and train personnel on requirements, procedures, and reporting in response to chance finds of tangible cultural heritage, in accordance with the requirements listed above
  - Specifies how the Contractor will educate and train personnel on requirements, procedures, and reporting to enable and foster the continuity of spiritual, religious, and traditional activities
  - Assigns roles and responsibilities for training
- Educate and train all Contractor personnel and provide enhanced training to key Contractor personnel—including on-site environmental staff, safety staff, construction engineers, and unit supervisors—in accordance with approved Cultural Heritage Training Plan.

#### **LOCATIONS:**

- All work sites
- Cultural and sacred landscape and places throughout project area, as all land and the landscape throughout Mongolia and the project area is sacred

### **MONITORING**

Monitor throughout construction

#### *Chance Find Procedure*

- Construction work sites during excavation or other ground disturbance

#### *Cultural and Sacred Landscape and Places*

- Communications SST Community Liaison Officers and MCA-Mongolia or its representative
- Written directions of Engineer
- Actions to accommodate spiritual, religious, and traditional ceremonies and rituals
- Performance of spiritual, religious, and traditional ceremonies and rituals

#### *Training*

- Document submission and approval of training plan
- Document training of personnel as specified in approved plan

#### **LOCATIONS:**

- All work sites

#### **INDICATORS AND SUCCESS CRITERIA:**

Indicators:

#### *Chance Find Procedure*

- Chance find of tangible cultural heritage
- Excavation or damage of tangible cultural heritage
- Cease work decision

<ul style="list-style-type: none"> <li>Protection of chance find area and tangible cultural heritage</li> </ul> <p><i>Cultural and Sacred Landscape and Places</i></p> <ul style="list-style-type: none"> <li>Performance of spiritual, religious, and traditional ceremonies and rituals</li> </ul> <p><i>Training</i></p> <ul style="list-style-type: none"> <li>Submission of training plan</li> <li>Date and location of training sessions, or as specified in approved plan</li> <li>Personnel start date, training completion date, and initial construction field date, or as specified in approved plan</li> </ul> <p>Success criteria:</p> <p><i>Chance Find Procedure</i></p> <ul style="list-style-type: none"> <li>No excavation or damage of tangible cultural heritage</li> </ul> <p><i>Cultural and Sacred Landscape and Places</i></p> <ul style="list-style-type: none"> <li>No loss of continuity of spiritual, religious, and traditional activities due to inability to perform ceremonies and rituals</li> </ul> <p><i>Training</i></p> <ul style="list-style-type: none"> <li>Training plan approval</li> <li>All personnel trained prior to initial construction field date, or as specified in approved plan</li> </ul>

## F.2.5 Health and Safety Management

In addition to the management measure under this heading, the following management measures also specify health and safety management requirements:

- Management Measure Wells - 5: Emergency Preparedness and Response
- Management Measure Wells - 6: Waste Management
- Management Measure Wells – 8: Gender Integration and Social Inclusion (GSI)
- Management Measure Wells – 9: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment
- Management Measure Wells – 10: Construction Camp and Temporary Facilities Management

### Management Measure Wells - 12: Health and Safety Management

<b>POTENTIAL IMPACT</b>
Health and safety risks and impacts on work sites and in construction camps, and in the community
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Mongolian Law on Hygiene <ul style="list-style-type: none"> <li>Requires introducing labor safety and hygiene management for protecting employees from accidents, damages, diseases which could occur during the operation.</li> </ul> </li> <li>Mongolian Law on Waste <ul style="list-style-type: none"> <li>Requires providing relevant knowledge to their staff on waste sorting and comply with safety standards in their operation.</li> </ul> </li> <li>IFC Performance Standard 4 <ul style="list-style-type: none"> <li>Requires evaluating the risks and impacts to the health and safety of the affected communities during the project life cycle and establishing preventive and control measures consistent with good international industry practice.</li> <li>Requires avoiding or minimizing transmission of communicable diseases that may be associated with the influx of temporary or permanent project labor.</li> </ul> </li> </ul>

- IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning
  - Provides guidance on occupational health and safety and community health and safety.

#### OBJECTIVES

- Identify, assess, manage, and record and communicate all health and safety hazards, and ensure:
  - Resulting risks to people, property, assets, and the environment are evaluated
  - Risks are managed in accordance with the recommended hierarchy of controls to achieve levels that are as low as reasonably practical
  - Any requirements to mitigate risks are implemented
  - Risks and actions to manage them are reported and communicated

#### MANAGEMENT MEASURE

##### Health and Safety Management

The Contractor will ensure, as far as practicable, that the health, safety, and welfare of employees and all other persons on site are secured and are protected from hazards created by the project.

The Contractor will:

- Fully comply with the requirements of this management measure
- Comply with the IFC Environmental, Health, and Safety Guidelines<sup>1</sup>
- Comply with the health and safety requirements in Contract Documents Section V, Works Requirements, including but not limited to:
  - Section 01030 Special Requirements, Paragraph 1.04.C Health and Safety Plan
  - Section 01046 Control of Work, Paragraph 3.05 Open Excavations
  - Section 01046 Control of Work, Paragraph 3.07 Interference with and Protection of Streets
  - Section 01063 Miscellaneous Requirements, Paragraph 1.03 Traffic Control
  - Protect drinking water sources, whether public or private, at all times
- Prepare and implement a traffic control plan for accessing the site, approved by Engineer
- Implement all reasonable precautions to protect the health and safety of workers
- Avoid or minimize the occurrence and transmission of communicable diseases, including surveillance, and active screening and treatment of workers
- Avoid or minimize potential hazards posed to project personnel and the public while accessing project facilities
- Undertake hazard analysis to identify opportunities to reduce the consequences of a failure or accident
- Control access to operational areas through physical barriers and demarcation, regular patrols of controlled areas, and engagement with communities
- Avoid or minimize traffic accidents and promote traffic safety by all project personnel
- Comply with local laws and international requirements applicable to the transportation of hazardous materials, and establish procedures for preventing or minimizing the consequences of releases of hazardous materials
- Inform and regularly update affected communities, including herders and vulnerable groups, and government agencies about potential project hazards and changes to project activities that may have environmental, health, or safety impacts, as well as the proposed prevention, mitigation, and emergency response measures
- Ensure that health, safety, and rescue matters are given a high degree of publicity to all persons regularly or occasionally on the project sites, as stipulated by Mongolia laws on occupational safety and health, by prominently displaying posters drawing attention to the relevant regulations in areas where Contractor and subcontractor personnel, Engineer's staff, MCA-Mongolia or its representative's staff, and site visitors will take notice
- Provide Health and Safety Management training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this

<p>management measure and the site-specific Health and Safety Management Plan, to all employees and subcontractors at the time of their induction and annually thereafter</p> <p>The Contractor will prepare and submit for the Engineer's written approval a site-specific Health and Safety Management Plan and associated procedures that, as a minimum:</p> <ul style="list-style-type: none"> <li>• Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan</li> <li>• Adhere to the MCC Health and Safety Policy (2012) and ensure the health and safety of all workers employed during the construction phase of the project</li> <li>• Complies with applicable Government of Mongolia regulations and international good practice, where the more stringent will apply</li> <li>• Specifies: <ul style="list-style-type: none"> <li>- Site security, including securing of excavations, hazardous materials, etc.</li> <li>- Confined space safety procedures</li> <li>- Excavation and trenching safety measures</li> <li>- First aid facilities, equipment, and materials</li> <li>- Protective clothing and safety equipment</li> <li>- HIV/AIDS awareness program</li> <li>- Covid-19 awareness program</li> <li>- Counter-trafficking in persons program</li> <li>- Health and Safety management monitoring and reporting</li> </ul> </li> <li>• Assigns roles and responsibilities for health and safety management</li> </ul>	
<p><b>LOCATIONS:</b></p> <p>All project sites and surrounding communities</p>

## F.2.6 Education, Training, Community Outreach and Grievance Redress

Incorporated in various management measures are requirements for education, training, and outreach. The overall goals of these requirements are to provide project employees with an understanding of the commitments included in those management measures and inherent in associated laws, regulations, and policies, and to provide the employees with an appreciation of their own accountability for maintaining mutually supportive relationships with local communities. All required training is to be provided as part of induction training (to provide general awareness) and job-specific training as necessary.

In addition to the management measure under this heading, the following management measures also specify training requirements:

- Management Measure Wells - 5: Emergency Preparedness and Response
- Management Measure Wells - 6: Waste Management
- Management Measure Wells - 7: Labor Management
- Management Measure Wells - 8: Gender Integration and Social Inclusion (GSI)
- Management Measure Wells - 9: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment
- Management Measure Wells – 10: Construction Camp and Temporary Facilities Management
- Management Measure Wells - 11: Cultural Heritage Protection
- Management Measure Wells - 12: Health and Safety Management

Together, these management measures comprise the Education, Training, and Community Outreach Plan.

### Management Measure Wells - 13: Stakeholder Engagement, Community Consultation, and Grievance Redress

POTENTIAL IMPACT
Delays, increased grievances, political interference, and unnecessary pressure from uninformed groups resulting from lack of information and discussion/consultation
<p>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• IFC Performance Standard 1 <ul style="list-style-type: none"> <li>- Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> <li>- Requires establishment of a grievance mechanism to receive and facilitate resolution of affected communities' concerns and grievances about environmental and social performance, and scaled to the risks and adverse impacts of the project and with the affected communities as its primary user.</li> </ul> </li> </ul>

OBJECTIVES
<ul style="list-style-type: none"> <li>• Inform and involve all stakeholders</li> <li>• Have in place a defined policy for dealing with external parties</li> <li>• Foster positive relations and effective partnerships with local communities throughout project construction and operation</li> <li>• Maximize the beneficial impact of the BWSE project on the affected communities</li> </ul>
MANAGEMENT MEASURE
<p><b>Stakeholder Engagement, Community Consultation, and Grievance Redress</b></p> <p>The stakeholders and affected communities are to be informed of the construction activities, including implementation timeline and grievance redress procedure.</p> <p><b>Stakeholder Engagement</b></p> <ul style="list-style-type: none"> <li>• The Contractor will: <ul style="list-style-type: none"> <li>➤ Maintain, revise, and update the Stakeholder Engagement Plan for the project consistent with the MCA-Mongolia Stakeholder Engagement Framework</li> <li>➤ Maintain, revise, and update the project Stakeholder Engagement Matrix</li> <li>➤ Document all stakeholder engagement activities in the Stakeholder Engagement Matrix:</li> </ul> </li> </ul> <p><b>Community Consultation</b></p> <ul style="list-style-type: none"> <li>• The MCA-Mongolia or its representative will <ul style="list-style-type: none"> <li>- Introduce Contractor's officers to communities</li> <li>- Monitor and supervise Contractor contacts with communities and other stakeholders</li> <li>- Ensure that gender and social inclusion measures implemented by the Contractor are taken when planning meetings, and that thereby all sections of the community are equally informed and consulted</li> </ul> </li> <li>• In coordination with the MCA-Mongolia or its representative, the Contractor will <ul style="list-style-type: none"> <li>➤ Undertake community information dissemination, consultation, and outreach addressing the influx of migrant workers and the associated risks to the affected communities, the MCA- Mongolia Grievance Redress Mechanism, and other issues that arise during consultation</li> <li>➤ Document all community consultation activities in the Stakeholder Engagement Matrix</li> </ul> </li> </ul> <p><b>Grievance Redress</b></p> <ul style="list-style-type: none"> <li>• The MCA-Mongolia or its representative will supervise, and monitor participation by all parties</li> <li>• The Contractor will: <ul style="list-style-type: none"> <li>- Implement the Grievance Redress Mechanism consistent with Annex A of this ESMP</li> <li>- Designate the Contractor's staff for collaborating with the project Grievance Redress Mechanism</li> <li>- Document all grievance redress actions in the Stakeholder Engagement Matrix</li> <li>- Report on the Grievance Redress Mechanism to MCA-Mongolia and the Engineer</li> </ul> </li> </ul>
<p>LOCATIONS:</p> <p>All construction sites and temporary construction facilities</p>
MONITORING
<p><b>MCA-Mongolia or its representative</b></p> <ul style="list-style-type: none"> <li>• Monitor Contractor contacts with stakeholders and communities</li> <li>• Monitor participation by all parties in Grievance Redress Mechanism</li> </ul> <p><b>Contractor</b></p>

<ul style="list-style-type: none"> <li>Document all stakeholder engagement activities</li> <li>Document all community consultation activities</li> <li>Record results of Contractor's community consultation activities</li> <li>Document all grievance redress activities under the Grievance Redress Mechanism</li> </ul>	
<b>LOCATIONS:</b> All construction sites and temporary construction facilities

## F.2.7 Risk Control and Emergency Response

The Risk Control and Emergency Response Plan references procedures specified in the management measures in the preceding plans that are pertinent to 1) controlling risks and 2) responding to emergencies. Such risks and emergencies include, for example, fuel spills and encountering previously unidentified cultural heritage resources, as well as incidents involving sexual harassment, human trafficking, and gender-based violence.

Due to the broad scope of the Risk Control and Emergency Response Plan, effectively the plan incorporates by reference the procedures specified in the management measures in all preceding plans for this project phase.

## **F.2.8 Monitoring and Verification, and Maintenance Actions**

This Monitoring and Verification, and Maintenance Actions Plan scopes the use of an adaptive approach to:

1. Verify that the management measures in the preceding plans are implemented, and that they are effective and sufficient
2. Revise those management measures that prove ineffective or insufficient

This approach acknowledges the risk and uncertainty of environmental and social management and fosters targeted modification of management measures to correct performance and outcomes. It will be executed as a continuous, iterative process by which the consequences of all management actions are systematically evaluated and, as needed, specific measures are modified in response to a determination that their forecasted outcomes will not meet requirements.

In the preceding plans, indicators and success criteria are designated for each management measure. For each management measure, MCA-Mongolia or its representative, in its oversight capacity, will determine whether progress toward the designated success criteria is sufficient and will document its determination in its regular updates and progress reports to MCA-Mongolia. If progress decidedly fails to meet iterative requirements, MCA-Mongolia or its representative will inform the Contractor of the need to formulate a management measure-specific adaptive maintenance action to implement midcourse corrections. In coordination with the Contractor, MCA-Mongolia or its representative will reformulate the management measure to foster meeting the success criteria, incorporating as applicable operational or structural changes, and considering the cost effectiveness of incorporating the changes. The scope of most management measures likely will remain fairly stable; whereas, it is expected that some methods will be added, modified, or dropped over the implementation timeline of some management measures.

With the prior approval of MCA-Mongolia, the Contractor will implement and monitor the revised management measure, and MCA-Mongolia or its representative will provide oversight.

## **F.3 Implementation Work Plan and Schedule**

The majority of the management measures in the preceding pre-construction phase and construction phase plans require that the Contractor prepare and submit for the Engineer's written approval plans that detail the Contractor's commitment and approach to fulfilling the requirements of the management measure. Therefore, an implementation work plan and schedule cannot be specified in this ESMP.

The Contractor is required to incorporate in the Contractor's ESMP a detailed Contract Work Plan and Schedule to facilitate implementing the Contractor's ESMP as an integral component of executing and supervising the construction work.

## **F.4 Implementation Budget**

Implementation, including monitoring, of the ESMP management measures do not entail a marginal cost. Costs are reflected in MCA-Mongolia or its representative's operating costs, the Contractor's construction contract budget for operations and procedures or the Operator's budget for operation and maintenance.

The cost of obtaining all required permits are deemed to be included in the Contractor's contract budget for operations and procedures or the Operator's budget for operation and maintenance.

The costs of implementing ESMP management measures are primarily driven by staff costs. Other costs are associated with development of policies and plans, training, and equipment.

### MCA-Mongolia or Its Representative's Costs

Staff Costs				
Role	Cost	Unit	Total	Assumption
Environmental and Social Manager	\$1,500.00	salary	\$90,000.00	3.0 million MNT/month + benefits for 5 years
Waste Management Manager	\$1,500.00	salary	\$90,000.00	3.0 million MNT/month + benefits for 5 years
HSE Manager	\$1,500.00	salary	\$90,000.00	3.0 million MNT/month + benefits for 5 years
Social Manager	\$1,500.00	salary	\$90,000.00	3.0 million MNT/month + benefits for 5 years
Social Safeguards Officers	\$1,000.00	salary	\$120,000.00	2.0 million MNT/month + benefits for 2 officers for 5 years
Community Liaison Officers	\$1,000.00	salary	\$120,000.00	2.0 million MNT/month + benefits for 2 officers for 5 years
Staff Costs Total			<b>\$ 600,000.00</b>	

### Contractor Costs

CP-1 Staffing Requirements			
Total staff on CP-1 contract	50	staff	Assumed
HR Team	2	staff	Manager + 1 HR staff/50 employees
HSE Team	2	staff	Manager + 1 HSE staff/50 employees
Social Safeguards Officer	1	staff	1 officer for CP-1
Construction Camp Management Team	2	staff	Manager + 1 support staff/100 employees
Expected duration of Construction	14	months	Estimated

ESMP Management Measures Cost Estimate:

Staff Costs				
Role	Cost	Unit	Total	Assumption
HR Manager	\$ 2,000.00	salary	\$ 28,000.00	5.0 million MNT/month + benefits
HR staff	\$ 1,000.00	salary	\$ 14,000.00	2.5 million MNT/month + benefits

<b>HSE Manager</b>	\$ 2,000.00	salary	\$ 28,000.00	5.0 million MNT/month + benefits
<b>HSE staff</b>	\$ 1,000.00	salary	\$ 14,000.00	2.5 million MNT/month + benefits
<b>Social Safeguards Officer</b>	\$ 1,000.00	salary	\$ 14,000.00	2.5 million MNT/month + benefits
<b>Construction Camp Manager</b>	\$ 2,000.00	salary	\$ 28,000.00	5.0 million MNT/month + benefits
<b>Construction Camp Management Team</b>	\$ 1,000.00	salary	\$ 14,000.00	2.5 million MNT/month + benefits
<b>Staff Costs Subtotal</b>			<b>\$ 140,000.00</b>	
<b>Cost of HR Office</b>				
Description	Unit Cost	Unit	Total Cost	Assumption

Biodiversity Training	\$ -	per employee	\$ -	Included in HSE training
CTIP Training	\$ -	per employee	\$ -	Included in Code of Conduct Training
CTIP Orientation for subcontractors and service providers	\$ -	per employee	\$ -	Included in HSE Orientation
Anti-Sexual Harassment and Discrimination Training	\$ -	per employee	\$ -	Included in Code of Conduct Training
On-job training, apprenticeships, internships	\$ -	as required	\$ -	Included in staff costs (as per Labor Management Plan)
Community training in HSE, CTIP	\$ -	as required	\$ -	Included in Community Liaison (SSO )
Training Costs subtotal			\$ 15,500.00	
<b>Equipment and Other Costs</b>				
Description	Unit Cost	Unit	Total Cost	Assumption
PPE equipment (hard hat, boots, hi-vis clothing, glasses, gloves)	\$ 100.00	per employee	\$ 10,000.00	PPE provided to all employees each year

First aid kits	\$ 100.00	each	\$ 500.00	1 kit per 10 employees
Emergency Response Plan Dissemination	\$ 2,500.00	overall	\$ 2,500.00	Posters, brochures, etc. at site/ camp indicating emergency procedures and phone numbers
Spill protection equipment	\$ 2,500.00	overall	\$ 2,500.00	Spill sheets for all vehicles, regularly changed.
GRM implementation	\$ -	per year	\$ -	Implementation of the GRM by HR staff/Social Safeguards Officer
Contract with Landfill for inert waste	\$ -	per year	\$ -	Covered in cost of construction operations
Contract with Hazardous waste company	\$ -	per year	\$ -	Covered in cost of construction operations
Bins at construction camp	\$ -	each	\$ -	Covered in cost of construction camp
Cultural Heritage - protection of known sites	\$ -	each	\$ -	Covered in cost of construction operations
Cultural Heritage - chance find	\$ 6,000.00	each	\$ -	Assume zero chance find in wellfields while drilling - most work in floodplain that is not archaeologically relevant.
Equipment and Other Costs Subtotal			\$ 15,500.00	
<b>ESMP Management Measures Costs Total</b>			<b>\$ 311,950.00</b>	

## F. Annex A – Grievance Resolution Mechanism

The Contractor shall develop and implement a grievance redress mechanism that shall be applied in the case of a complaint or grievance that is related to or results from implementation of the project activities. A well-implemented grievance redress management system shall demonstrate that the project is concerned about community members and their well-being, building trust, respect, and productive relationships. As with the broader process of stakeholder engagement, it is important that management stays informed and involved in the management of grievances so that decisive action can be taken when needed to avoid escalation of disputes.

Under the GRM all persons shall be clearly entitled to make a complaint by any means – personal contact, office visit, telephone, letter, email, website enquiry, and directly to MCA-Mongolia or its representative. There should be a dedicated free call line for complaints. The GRM must make it easy to make a complaint and for that to be addressed easily and speedily. The system shall require that any member of any company associated with the project is aware of the requirement that they must receive and transfer on any complaint submitted to them in whatever form to their Grievance Officer who then follows the protocol for resolution.

All project partners shall accept the GRM process, agree to participate, train all contractor personnel to use the protocols to report grievances, participate in grievance resolution and reporting. The requirement to collaborate with the GRM will be mandated in construction contracts which will also require the designation of a responsible officer, usually the Contractor's Social Safeguards Officer.

The project grievance redress mechanism shall compliment traditional local-level mechanisms<sup>75</sup> for complaint resolution and legal administrative approaches to complaint resolution at all levels. It shall also document complaints or grievances from the public or other stakeholders (external communications with affected communities), and how these are resolved.

The grievance redress mechanism is intended to assist in resolving grievances or complaints raised regarding environmental and/or social issues arising from the projects/investments, and does not apply to the following complaints even if they are related to project activities:

1. Procurement and contractual complaints between MCA-Mongolia and its vendors or contractors which are normally handled by the MCA-Mongolia General Counsel Office,
2. Lawsuits which fall under the mandate of the General Counsel.

The Grievance Redress Mechanism (GRM) shall be compliant with the requirements of the IFC Performance Standard 5 (2012) and the MCC RPF for Western Wellfields (2018)<sup>76</sup>, and considers MUB GRM good practices that have been implemented for development projects in Ulaanbaatar city.<sup>77</sup> References available upon request to MCA.

---

<sup>75</sup> The GSI Director will carefully consider the extent to which traditional mechanisms to resolve conflict are used, to ensure that these are not disadvantageous to women villagers, indigenous peoples, or other disadvantaged groups. A thorough assessment should be conducted to ensure that certain non-formal justice mechanism will assist women and other disadvantaged groups in accessing justice.

<sup>76</sup> Mongolia II Bulk Water Supply, Resettlement Policy Framework, Western Wellfields, MCC Feasibility Study, 2018

<sup>77</sup> Land Acquisition and Resettlement Plan for Selbe and Bayankhoshuu Subcenters: Heating Station, Kindergarten, Business Incubator and Training Center; UB Urban Services and Ger Areas Development Investment Program – Tranche 1, 2017

The MCA-Mongolia or its representative will supervise and monitor the GRM. The Contractor shall keep the Contractor shall have a grievance redress matrix that records every complaint and communication, the dates of each action and correspondence, how it is investigated and the outcome. The contracting company shall have an internal and external grievance policy and mechanism. The Contractor shall have a designated Grievance Officer to manage complaints according to the company policy. They must have a grievance policy for dealing with external complaints that is fully compliant with and integrated with their Engineer approved project GRM. The Contractor must also have an internal grievance management system.

MCA-Mongolia or its representative will monitor and supervise the contractors' Social Safeguards Officer. MCA oversight will be especially important when dealing with complaints related to sexual harassment, gender-based violence and sex trafficking complaints which require additional investigative expertise. MCA shall review, approve and be invited to attend training for contractors' personnel on roles and responsibilities for grievance management at both senior management levels and also to all members of the workforce. It is vital that all employees understand that they all can be receptors of grievances and they need to know how to deal with a complaint.

## 1.1 Complaint Resolution Procedure

The complaint resolution process shall be generally in accordance with the following. These complaint resolution procedures are compliant with Mongolian Law.

### Tier 1

- Step 1 – All contractors, staff, workers are responsible for receiving grievances and ensuring that the complainant is treated respectfully, and that the grievance is written down on the correct form and forwarded to the designated Grievance Officer in their organization.
- Step 2 - Receive and Register Complaint: The project designated person shall receive the completed complaint form, and he/she is responsible for documenting and recording the complaint in the log-in system/matrix for recording the grievance and processes to resolution. This person is also responsible for reporting as required to senior management on the grievances received and steps taken to resolve.
- Step 3 – Screening and Preliminary Assessment: An initial classification of the complaint will be conducted by the Grievance Officer who will assign the complaint to the relevant persons to resolve. The Grievance Officer is responsible for managing the response and reporting back to the project officer. The officer designated to resolve the issue is responsible for notifying the Grievance Manager or SST and sending information for inclusion in the project grievance matrix.
- Step 4 - Response to the Complaint: After consulting with the relevant personnel, the Grievance Officer contacts the complainant to acknowledge the complaint and provide information as to the expected steps and timeframe for resolution of the complaint. This communication is to be provided within 48 hours of receipt of complaint.
- Step 5 - Investigate and Resolve: This step investigates the complaint, including the underlying cause(s) of the complaint and develops actions needed to resolve the current issue and to prevent recurrence of a similar complaint. Resolution at local level can be a) rejecting the complaint with reasons or b) resolving the complaint and taking action to remedy as appropriate. The Designated Person reports the outcome to the Grievance Officer. Either way, the Grievance Designated Officer is responsible for communicating the decision to the complainant within **14 days** and to the Grievance Manager or SST for recording in the grievance matrix. The Designated Officer is responsible for implementing any works or payments or directives to subcontractors to remedy the source of the complaint, track it and document in the company and MCA-Mongolia records.
- Step 6 - If a local and immediate Tier 1 solution is not appropriate, then the receiving officer has to escalate the complaint to the next tier of grievance resolution,
- Step 7 - If the complaint cannot be resolved then the receiving officer must revise the selection or implementation of approaches.
- Step 8 - Close-out: After implementing mitigating actions or resolving the issue, a letter describing the response and outcome is sent to the complainant, signed by a project head.

- Step 9 - Follow-up: Based on the complainant satisfaction level, the response shall be archived or transferred for further investigation.

If resolution cannot be achieved the process is escalated to Tier 2.

**Tier 2:** If the complaint cannot be solved in Tier 1, the Designated Officer will assess the eligibility of the complaint and address to relevant divisions/offices of the district and its resolution is recommended to the district Governor for approval and resolved within 30 days. The Designated Officer will record its deliberations and inform the concerned parties orally or by telephone and in writing, as appropriate. If the solution is agreed by the complainant, the contractor or implementing entities will implement the solution. Written records will be made of all stages and outcomes.

During this second review process either another formal written response will be provided to the grievant in **30 days** or it may be decided to hold a meeting with contractor representatives and the grievant. If complaint is ineligible (i.e., not a project related impact), it will be recorded and passed to the relevant authorities and the complainant will be informed of the decision and reasons for rejection within 30 days according to the Law on Handling Grievances of Citizens Addressed to Government Authority and Government Officials.

**Tier 3:** If the grievance is not resolved within 30 days from its lodging at Tier 2 and/or the complainant is not satisfied with the recommended solution, the grievance will be submitted to the related divisions/offices of the MUB and its resolution is recommended to the MUB Governor for approval and action within 30 more days. If necessary, the MUB Governor will organize stakeholder meetings and/or Working Group meetings. A solution acceptable to all shall be identified including clear steps. The contractors and implementing entities will immediately implement the agreed solution. Written records will be made of all stages and outcomes.

**Tier 4:** Failing resolution at Tier 3, the complainant has recourse to the Courts which should be regarded only as a last resort. With specific regard to land disputes, in accordance with the Law on Land (Article 60, "Settlement of Land Related Disputes"), these will be settled by the relevant khoroo governor. Where this is unsuccessful, the dispute shall be settled by a higher-level authority, or in court. Alternatively, residents may also go directly to the District Land Officer.

This system is depicted in the following figure.

## Flow Chart of the GRM

## 1.2 Approaches to Locally Based Grievance Resolution

The following approaches are required for grievance resolution:

- Dissemination of information to communities on how to make a complaint
- Dissemination of information on the GRM and how to make a complaint is made to all contractors and employees so that they understand their role in receiving and transmitting on all complaints. Ensure that all employees can assist complainants to fill in forms.
- Ensure all project partners offices have complaint forms available at reception areas and instructions on the process. Ensure that visitors can approach the Grievance Officer directly.
- Include information on grievances in information bulletins and community meetings so as to maintain trust in the process.
- Use a grievance log to monitor cases and improve the organization. In addition to resolving individual or community disputes, the grievance mechanism is an opportunity to promote improvements in the project and trigger policy and practice changes
- Evaluate and improve the system. The MCA-Mongolia or its representative shall be allowed to periodically conduct an assessment of the GRM to evaluate and improve its effectiveness and the Contractor shall comply with the outcomes and recommendations of those reviews. The evaluation will include: general awareness of the mechanism; whether it is used and by whom; the types of issues addressed; the ability of the mechanism to resolve conflicts early and constructively; the actual outcomes (impacts on project operations, management systems, and benefits for communities); its efficiency; and, most fundamentally, the ability to accomplish its stated purpose and goals. The MCA-Mongolia will solicit and include the views of stakeholder representatives to see how the mechanism is proving effective in practice.

## 1.3 The Grievance Form

The Grievance Form (GF) developed by the Contractor will at minimum contain the following:

- Basic information about the affected entity (name, address, contact number)
- Category of grievance filed (legal, technical/engineering, social, financial)
- Detailed description of grievance including time, date of incident and of recording, location etc.
- Type of action(s) taken (resolved at the local level or referred to higher authorities)

As a grievance is addressed, the type of action(s) taken will also be recorded on the GF, in order to document how the grievance was resolved.

The complainant enjoys the right to use the Governmental grievance redress procedures in accordance with the Law on Handling Grievances of Citizens Addressed to Government Authority and Government Officials. This governs grievance and complaints of citizens regarding the decisions and conduct of government authority or officials, and access to the judicial system, i.e., go to the courts, at any time, if they feel their grievance or concern is not being adequately addressed through the project GRM.

## 1.4 Grievance Mechanisms for Contractor's Internal Process

Each contractor is required to have an internal grievance policy and process for employees to raise issues about conditions of contract and behavior. The usual process is run by the human resources officers with the support of the Social Safeguards Officer. However, the treatment of allegations of sexual harassment, of gender-based violence and trafficking of persons needs external assistance to undertake effective investigation into allegations.

The Contractor must have an **anonymous** mechanism for reporting suspected TIP incidents that can be used by workers and communities. The Contractor has to develop a TIP response plan covering these issues: this TIP response plan will designate the SSO to manage the investigation including an external

investigation lead from the Centre for Gender Equality, ensure a response within 24 hours and an effective resolution as soon as possible. This will also include contacting the legal authorities and qualified NGOs.

It is required that investigations into these issues are conducted with both an MCA Mongolia representative present and an external investigator drawn from a suitably qualified organization such as the Centre for Gender Equity who will chair the enquiry.

MCA Mongolia shall be able to work with the human resources department of the contractor to monitor contractor internal grievance mechanisms to ensure that allegations of sexual harassment, of gender-based violence and trafficking of persons are properly investigated with confidentiality protected and participate to ensure the investigation is properly undertaken. Appointing an independent but well-informed chair ensures effective investigation. Full documentation and recording is required.

Toolbox talks by the Contractor on anti-sexual harassment are required monthly. Contractors are required to mandate and enforce a policy refusing the transportation of non-project workers in company vehicles.

## **F. Annex B – Public Consultation and Stakeholder Engagement Plan for BWSE**

### **1.1 Introduction**

Good communication of the project with the public is vital for successful relations with all stakeholders and enhances the opportunities offered by successful projects. The risks associated with poor stakeholder relations are now better understood by all stakeholders. The concept of “stakeholder engagement” is emerging as a means of describing a broader, more inclusive, and continuous process between a project and those potentially impacted that encompasses a range of activities and approaches, and spans the entire life of a project. Increasingly, the recognition that reputational risks that come from poor stakeholder relations, place a growing emphasis on corporate social responsibility and transparency and reporting. In this context, good stakeholder relations are a prerequisite for good risk management. The focus of this SEP is on interactions with stakeholder groups “external” to the core operation of the project, such as affected communities, local government authorities, non-governmental and other civil society organizations, local institutions and other interested or affected parties.

Stakeholder engagement is an umbrella term encompassing a range of activities and interactions over the life of a project. Not all stakeholders in a particular group or sub-group will necessarily share the same concerns or have unified opinions or priorities as stakeholders come in all sorts of groupings, interests and formats. Stakeholders are persons or groups who are directly or indirectly affected by a project, as well as those who may have interests in a project and/or the ability to influence its outcome, either positively or negatively. Stakeholders may include locally affected communities or individuals and their formal and informal representatives, national or local government authorities, politicians, religious leaders, civil society organizations and groups with special interests, the academic community, or other businesses. Interactions with all these groups require a SEP.

### **1.2 Stakeholder Engagement Plan**

This section describes the elements of the Stakeholder Engagement Plan to take forward the BWSE project.

The Stakeholder Engagement Plan covers nine components:

1. Staffing and resources
2. Stakeholder Identification and Analysis
3. Information Disclosure
4. Stakeholder Consultation
5. Partnerships
6. Grievance Management
7. Stakeholder Involvement in Project Monitoring
8. Reporting to Stakeholders
9. Management Functions

### **1.3 Staffing and Resources**

There are numerous stakeholder groups with potentially conflicting interests and influence in the project and these need careful and consistent management to gain and maintain a social license to operate. Stakeholder Engagement for the BWSE requires substantial inputs of time to develop and to operate effectively. The most effective and integrated management location for the SEP team is under the MCA-Mongolia or its representative, under a trained and experienced Social Safeguards Specialist or Manager.

The SST requires a dedicated office with a small community meeting space, desks etc., filing capability, computer facilities, internet and telephones. The SST needs at least two Community Liaison Officers at field level to ensure good communication within affected communities.

The first task of the SST is to write an SEP with associated Standard Operating Procedures (SOPs) for each of the above sections to manage stakeholder interactions – this is to be regularly reviewed and updated.

### **1.4 Stakeholder Identification Analysis**

The ESIA process identified and consulted many potential stakeholders in the project. This work must be consolidated into a project wide stakeholder engagement matrix (SEM) listing each stakeholder, areas of interests and influence, contact person, contact details and add a line in the matrix for each meeting, consultation, email or telephone call etc. and the response made.

The SST must write an SOP for the management of the SEM.

The project is not static, stakeholders change interests, legislation and regulations change and institutional responsibilities mutate so that the stakeholder engagement process has to maintain and record and respond to stakeholders as they interact with the project and as they change over time. The SEP requires regular interaction with stakeholders to update and exchange information alongside the progression of the projects. To this end, the SEP is a live process, requiring regular monitoring and updating.

### **1.5 Information Disclosure**

The exchange of appropriate information with the right groups of people in an appropriate media and appropriate text and at the right time is fundamental to the success of the project. Information Disclosure must be planned and executed effectively to ensure project progress. The SST will have to plan in advance:

1. What information needs to be disseminated and when, broken down into individual messages by audience by project phase.
2. What language and wording is appropriate for each message and each audience. Will a translation be necessary?
3. Which media is suitable for each message and audience – meetings, letter, telephone call, radio broadcast, newspaper, social media etc.
4. Commission and maintain a project website to display information and enable communication from outside. This should enable complaints to be received and support the grievance redress mechanism. Members of the SST should have cards to hand out to enable people to know who they are and how to contact them.
5. Write an SOP to manage each message design and dissemination stating responsibilities and actions

6. Derive a budget for information dissemination activities over all project phases.

## **1.6 Stakeholder Consultation**

Information needs for the BWSE are not one way – not only do stakeholders need to receive project information but there needs to be a formal system of stakeholder consultation to enable external views to be heard and to enable discussion of project elements. This requires a system of consultations of stakeholders over the life of the project. The SST needs to examine the SEM and identify ways of regular consultation at appropriate intervals – some stakeholders need more frequent consultation than others at various times.

The SST needs to define a schedule of consultations, define suitable consultation intervals over the project life and draw up a calendar of consultations. These then need to be allocated to a consultation type, e.g. large physical meeting, small physical meeting, zoom/ skype call, allocated to where the meeting should/ could take place and allocate frequency, allowing for a margin of additional meetings in response to currently unknown circumstance. Resources and staffing can then be budgeted for consultations.

Regardless of the very small resettlement impacts under BWSE, special consideration needs to be made for families affected by landtake to ensure their interests are protected. The optimum consultation technique for this in BWSE, is the inclusion of two Community Liaison Officers in the SST (one per District) who will keep in contact with affected community members.

Consultation meetings need an organizer to make arrangements and distribute invitations to meetings, a meeting leader to lead the discussion and a recording assistant. It is best practice to make recordings of meetings and make a transcription as meeting notes. Copies of the meeting notes are distributed to meeting participants.

The SST needs an SOP on meeting protocol defining responsibility for arrangements, invitations, recording of meetings, distribution of minutes and integration into the SEM and data storage.

## **1.7 Partnerships**

Non-governmental organizations (NGOs) and community-based organizations (CBOs), particularly those who represent communities directly affected by a project, can be important stakeholders for companies to identify and engage on a proactive basis. NGOs may have expertise valuable to effective stakeholder engagement. For example, they can be sources of local knowledge, sounding boards for project design and mitigation, conduits for consulting with sensitive groups, and partners in planning, implementing and monitoring various project-related programs.

It is important to carry out initial research regarding the local power dynamics and existence of special interest groups to ensure that any intermediary organizations, such as NGOs, are truly representative of and accountable to the community interests they claim to support and represent. If there is NGO opposition to the project, engaging early to try and understand the concerns or critiques being raised can offer an opportunity to manage these issues before they escalate or find another outlet for expression.

Occasionally, projects require partnerships with other organizations in order to achieve some element. In BWSE, this may involve an NGO like Centre for Gender Equality, who may be needed to assist with training programs on gender and social inclusion, C-Tip training etc. and on assisting internal grievance procedures over cases alleging sexual harassment or gender based

violence within contractors. The SST needs to have an allocation in its budget for additional small levels of expenditure procuring additional partner services to meet the MCC Policies on Gender and Social Inclusion, C-TIP, HIV/ AIDS, etc. that need to be supplied externally from the MCA-Mongolia or its representative.

The SST must review potential partner organizations and explore possibilities for partnering with the MCA-Mongolia or its representative, and record communication in the SEP. An SOP on agreements and negotiations with third party partners is required.

## **1.8 Grievance Management**

The Grievance Redress Mechanism is discussed in detail in Annex A. It is vital that the mechanism is integrated into the SEP as it is the major channel of negative comment and complaint and needs effective management to resolve grievances and be reported to wider project management. Ideally, the responsibility for receiving and resolving grievances in BWSE would be of the MCA-Mongolia or its representative's SST. The SST needs sufficient staffing to manage community investigations and allegations of grievances.

The GRM requires a grievance matrix (GM) to record the incidence of each grievance and the process of investigation and response, The GM data must form part of the SST monthly reporting process.

## **1.9 Stakeholder Involvement in Project Monitoring**

One way to help satisfy stakeholder concerns and promote transparency is to involve project-affected stakeholders in monitoring the implementation of mitigation measures or other environmental and social programs. Such participation, and the flow of information generated through this process, can also encourage local stakeholders to take a greater degree of responsibility for their environment and welfare in relation to the project, and to feel empowered that they can do something practical to address issues that affect their lives. Participatory monitoring also tends to strengthen relationships between the project and its stakeholder.

Participatory monitoring goes beyond the project consulting with affected stakeholders on environmental and social monitoring data. It requires the physical presence of affected individuals at the time that monitoring takes place and involves data collection methods and indicators meaningful to the stakeholders concerned.

Participatory monitoring might include, for example:

1. Involvement of affected stakeholders in scientific sampling methods, questionnaires and analysis,
2. Observations by affected parties, triangulated to strengthen validation,
3. Group discussions on the success of mitigation or benefit measures and/or on how to manage new issues that have arisen
4. The adaptation of conventional participatory techniques to the purpose of assessing changes in the physical and socio-economic environment over time, such as a seasonal calendar, daily/weekly schedules, resource and land-use maps, and wealth ranking.

External monitoring of a company's environmental and social commitments can strengthen stakeholder engagement processes by increasing transparency and promoting trust between the project and its key stakeholders. Projects benefit by receiving an objective assessment of their environmental and social performance, which can help defuse external criticism and strengthen

support from local stakeholders. An external monitor can also help increase both the accountability of the project and the credibility of the monitoring results in the eyes of affected communities and civil society groups by serving as an independent and objective source of information and reporting. External monitors may be NGOs, government regulators, academics and scientists, community representatives, technical experts, or eminent persons.

Planning to include stakeholders in monitoring, whether internally or externally, need to be anticipated and included in the SEP and project monitoring plans. SOPs for managing these interactions are useful, particularly if they are drawn up in consultation of the stakeholder groups.

## **1.10 Reporting to Stakeholders**

Once consultations have taken place, stakeholders need to know which of their suggestions have been taken on board, what risk or impact mitigation measures will be put in place to address their concerns, and how, for example, project impacts are being monitored. In addition to reporting back to project-affected groups and other stakeholders as part of the consultation process, there are other types of reporting that target a different set of stakeholders. Sustainability reporting, for example, provides projects with an opportunity to communicate information to a much wider range of stakeholders about the environmental, social, economic, and governance performance of the project. It also offers a platform to report back on the process of stakeholder engagement itself, such as who has been consulted, on what topics, and with what results. Consequently, a number of international codes and standards for reporting now include requirements for implementing and reporting on stakeholder engagement, e.g. IFC Performance Standards.

Under this heading, the SST needs to:

1. Determine what information needs to be reported to which stakeholders, by what method and how frequently, add to the SEP budget lines.
2. Regularly update the commitments register where promises have been made to stakeholders in response to complaints or external pressure
3. and disclose progress to affected and interested parties. In particular, publicize any material changes to commitments or implementation actions that vary from publicly disclosed documents.
4. Make monitoring results publicly available, especially reports of any external monitors.
5. Regularly report on the process of stakeholder engagement as a whole, both to those stakeholders who are directly engaged, and to other interested parties.
6. Derive an SOP for reporting to stakeholders.

•

## **1.11 Management Functions**

Increasingly, good practice points to incorporating stakeholder engagement activities into a project's environmental and social management system. In practice this means making its management systematic by integrating it with core activities. To achieve this, the MCA-Mongolia or its representative will need to identify critical points in the life of the project where stakeholder engagement will be needed, and determine who will deliver these actions and how they can be integrated with core project functions. This involves trying to work out how best to deliver and integrate a number of different aspects of engagement and reporting as discussed in the previous sections, including:

1. Ongoing stakeholder analysis and the assessment of stakeholder concerns from a “risk” perspective
2. The hiring and training of community liaison officers
3. Consultation processes designed to meet the Project’s own policies and/or compliance requirements of funders and regulators
4. Input and suggestions received from stakeholders on project design and proposed mitigation measures
5. Grievance mechanisms that capture and respond to stakeholder concerns
6. The involvement of local stakeholders in project monitoring
7. Reporting information to stakeholders.

Most importantly, stakeholder engagement should be managed as one would manage any other project function — with clearly defined objectives and targets, professional, dedicated staff, established timelines and budget, and senior management responsibility and oversight.

Some good practice principles for managing stakeholder engagement processes are given below.

- Coordinate activities and assign overall responsibility: Over the life of the project, affected communities and other interested parties will likely interact with a variety of representatives from within the project and its contractors. It is essential that this diverse set of engagement activities be coordinated.
- Consistency of information: Consistency of information conveyed to stakeholders by different teams or business units within the MCA-Mongolia and its representative is important, as is keeping track of such activities in order to reduce inefficiencies, confusion, and conflicting messages or commitments. This is usually best achieved by giving a senior Social Manager overall responsibility for stakeholder engagement. This high-level oversight not only helps to underscore the importance of the function but is needed in order to effectively implement the strategy and coordinate the various activities across the project.
- Hire, train, and deploy the right personnel: Initial stakeholder analysis will provide a sense of the type of stakeholder groups the project will need to engage during different phases of the project cycle. Engaging different types of stakeholders requires different skills and staffing considerations. For example, engaging with local communities requires one or more field-based community liaison officers, whereas engagement with government officials or local, national, and international organizations will likely require different skill sets and more direct involvement of the senior Social Manager. The project should consider bringing in social advisors or other expert staff to help design and facilitate the process and assist with participatory methodologies and other specialized techniques. When hiring community liaison staff, consider people who will be able to develop and maintain good working relationships with the local communities. Since their job will involve listening and responding to local concerns and suggestions, qualities to look for include:
  - Good people and communication skills
  - A good understanding of the local language and community/cultural dynamics
  - Open-mindedness and respect for the views of others
  - A solution-oriented approach
  - A high integrity/degree of trustworthiness
  - A genuine commitment to the position and its goals

- Create clear reporting lines between the community liaison function and senior management: In order to be effective, Community Liaison Officers need to have the authority to negotiate on behalf of the project. This requires a clear reporting structure and clarification as to which decisions they can take unilaterally, and which are to be passed on to higher levels within the MCA-Mongolia and its representative. Direct reporting lines also enable senior managers to control risks by being kept informed of this type of field- level information in a timely manner. The more likely it is that the concerns of local stakeholders might pose a risk or reputational issue for the project, the more important it is for Community Liaison Officers to have a direct channel to senior managers.
  
- Communicate the strategy internally: If stakeholder engagement is to be effectively integrated into day-to-day project operations, the concept needs to be “owned” by all staff. Every project unit needs to be aware of the strategy and understand why the company is committing time and resources to the SEP. Too often, stakeholder engagement programs are compartmentalized within the project and regarded as a “soft concept” that is the domain of a few community liaison staff. By clarifying the links between stakeholder engagement and environmental and social performance – as well as its potential to impact on reputation and project outcomes –stakeholder relations becomes a collective responsibility.

---

## Appendix G ESMP – CP-2: Advanced Water Purification Plant (AWPP)

---

This environmental and social management plan (ESMP) specifies management measures to avoid, minimize, or offset potential significant adverse environmental and social impacts, or reinforce or enhance potential beneficial impacts of construction contract package CP-2: Advanced Water Purification Plant (AWPP) of the proposed Ulaanbaatar (UB) Bulk Water Supply Expansion (BWSE). Consistent with International Finance Corporation (IFC) Performance Standards on Environmental and Social Sustainability (Performance Standards), this ESMP adopts “a mitigation hierarchy to anticipate and avoid, or where avoidance is not possible, minimize, and, where residual impacts remain, compensate/offset for risks and impacts to workers, Affected Communities, and the environment.”<sup>78</sup>

Management measures and, as necessary, compensation are specified for the following project phases:

- Preconstruction – i.e., actions that need to occur prior to construction; however, not including land acquisition and involuntary resettlement, which are addressed in detail in the BWSE resettlement action plan (RAP), and not including construction mobilization
- Construction, including construction mobilization and demobilization
- Operation and Maintenance

Construction mobilization is scheduled to begin within several months of issuing this ESMP and the preconstruction phase then will have been completed. As preconstruction activities currently are underway and soon will be concluding, the associated management measures specified in the ESMP are few and predominantly reference management measures otherwise specified for the construction phase.

As discussed in Sections 3.2 and 5.2 of the BWSE environmental and social impact assessment (ESIA), the ESIA team eliminated decommissioning from detailed study. Because UB always will require water and therefore a bulk water system, effectively the useful life of the project will not end, and the system will not be decommissioned. Rather, when needed, the bulk water system will be reengineered and reconstructed to upgrade specific processes and equipment. These activities would be undertaken inherent to the operation and maintenance phase and in accordance with the design standards, and environmental procedures and regulations current at that time. Therefore, management measures are not specified for a decommissioning phase. Nonetheless, this ESMP presents a discussion of the process of and risks associated with decommissioning, albeit a necessarily general discussion as decommissioning activities are not known at this stage and the BWSE infrastructure and project sites are highly varied.

For each management measure, as appropriate for each phase of the project, the ESMP details:

- Potential Impact – Potential adverse or beneficial effect that the measure is designed to address, and target locations, resources, or communities
- Standard / Requirement Triggered – Mongolian or international standard or requirement triggered by the potential impact
- Management Measure – Specific, implementable, verifiable, and cost-effective action to be taken

---

<sup>78</sup> Performance Standard 1, Assessment and Management of Environmental and Social Risks and Impacts. International Finance Corporation. 2012. *Performance Standards on Environmental and Social Sustainability*. World Bank Group, January 1, 2012.

- Monitoring – Monitoring activity to be undertaken
- Locations – Locations where the management measure and monitoring are to be implemented
- Indicators and Success Criteria – Indicators and criteria to be used to verify that the management measure is being implemented, and that it is effective and sufficient
- Reporting – Monitoring reporting requirement
- Schedule – Timing and frequency of implementing the management measure, monitoring, and reporting
- Responsibility – Delineation of responsibilities for implementing the management measure, monitoring, reporting, and oversight
- Estimated Costs – Costs of implementing the management measure and monitoring

The management measures and monitoring specified in this ESMP will be implemented, as applicable, together with the conditions, procedures, and best engineering practices specified in the design of the BWSE project prior to or irrespective of its evaluation in the ESIA. For purposes of the ESMP, best engineering practices and management measures are distinguished as follows:

- *Best engineering practices* are actions typically taken by the project proponent, construction contractor, or operator to avoid or minimize potential adverse environmental and social impacts but are not implemented in response to the impact findings of the ESIA.
- *Management measures* specified in the ESMP differ from best engineering practices in that they will be implemented specifically in response to the impact findings described in the ESIA.

In other words, best engineering practices are inherently part of the BWSE and are not additional management measures specified as a result of the impact assessment process. With respect to the construction phase, they are practices that typically are within the scope of services of the construction contracting firm performing the work. Their implementation is assumed in the impact analysis presented in the ESIA.

The best engineering practices are detailed as Technical Specifications and are set forth in Section V, Works Requirements of the Construction Contract Documents. Those technical specifications that the ESIA team assumed would be taken by the project proponent, construction contractor, or operator, and would avoid or minimize potential adverse environmental and social impacts are organized into Division 1 – General Requirements and Division 2 – Site Work, and in turn into sections. The relevant issues are addressed by technical specifications in the respective sections indicated in the two following Technical Specification text boxes.

If the best engineering practices in place avoid or sufficiently reduce the impact of activities evaluated in the ESIA below the level at which the impact would be significant, additional avoidance or minimization of potential adverse impacts may not be needed. Conversely, management measures specified in the ESMP have been developed to avoid, minimize, or offset adverse impacts; or to reinforce or enhance beneficial impacts.

<b>1. Technical Specifications, Division 1 – General Requirements</b>
<b>Section 01030, Special Requirements</b> Health and Safety Plan Product Handling Disposal of excess material Disposal of debris Preconstruction Video Recording of Entire Site Detours and Road Accessibility Permits, Fees and Bonds <b>Section 01046, Control of Work</b> Hours of Construction Open Excavations Occupying Private Land Interference with and Protection of Streets Care and Protection of Property Cleanup and Disposal of Excess Material <b>Section 01063, Miscellaneous Requirements</b> Traffic Control Interference with Existing Utilities Maintaining Flows <b>Section 01110, Environmental Protection Procedures</b> Prevention of Environmental Pollution Erosion Control Protection of Streams, Wetlands and Surface Water Protection of Land Resources Protection of Air Quality Noise Control <b>Section 01500, Temporary Facilities</b> Temporary Field Offices Internet Service Temporary Fence Potable Water Electricity Sanitary Conveniences Barricades and Guard Lights Temporary Heat Shelter and Protection of Materials Security <b>Section 01568, Erosion Control, Sedimentation &amp; Containment of Construction Materials</b> Erosion Control <b>Section 01610, Delivery, Storage and Handling</b> Storage and Handling of Hazardous Materials <b>Section 01700, Contract Closeout</b> Final Cleaning

2. Technical Specifications, Division 2 – Site Work
<p><b>Section 02100, Site Preparation</b></p> <p>Special Requirements</p> <p>Contractor shall repair or replace any structures that are damaged</p> <p>Disposal of waste/surplus materials</p> <p>Inform Owner if there were archeological findings during site preparation</p> <p>Clearing, Grubbing, Tree &amp; Stump Removal</p> <p>Disposal of Waste Materials</p> <p>Sediment and Erosion Control</p> <p><b>Section 02140, Dewatering</b></p> <p>Dewatering</p> <p><b>Section 02210, Earth Excavation, Backfill, Fill and Grading</b></p> <p>Excavation</p> <p>Separation of Excavated Material for Reuse</p> <p>Trench Excavation</p> <p>Reuse and Disposal of Surplus Excavated Materials</p> <p>Care and Restoration of Property</p> <p>Backfilling</p> <p><b>Section 02230, Site Clearing</b></p> <p>Clearing and Grubbing</p> <p><b>Section 02268, Erosion Control Barrier</b></p> <p>Erosion Control Barrier</p> <p><b>Section 02480, Landscaping</b></p> <p>Plants</p> <p>Loam and Seed</p> <p>Planting</p> <p>Maintenance of Seeded Areas and Planting</p> <p><b>Section 02483, Planting Operations</b></p> <p>Planting and Maintenance of Trees, Shrubs and Ground Cover</p> <p><b>Section 02485, Loaming and Seeding</b></p> <p>Loaming and Seeding of disturbed area</p> <p>Wetland Seed Mixture</p> <p>Straw for Erosion Control</p>

As appropriate for each of the subject project phases or the overall ESMP, the ESMP organizes and summarizes the management measures into the following constituent plans and schedules:

- Environmental Management
- Waste Management
- Social and Gender Inclusion
- Health and Safety Management
- Education, Training, and Community Outreach
- Risk Control and Emergency Response
- Monitoring and Verification, and Maintenance Actions
- Implementation Work Plan and Schedule
- Implementation Budget

The first four plans/schedules listed above detail specific management measures to mitigate adverse environmental and social impacts or reinforce potential beneficial impacts. Each management measure is detailed in a table that is specific to that measure. The remaining plans/schedules provide procedures, as appropriate referencing the management measures in the preceding plans, to address specific concerns and issues, or summarize the measure-specific procedures, timetables, and costs into a workplan, schedule, and budget estimate for implementing the ESMP.

## G.1 Pre-Construction Phase

### G.1.1 Responsibilities During Pre-Construction

#### MCA-Mongolia

MCA-Mongolia or its representative will be responsible for oversight of the pre-construction-related management measures and monitoring specified in the ESMP. MCA-Mongolia or its representative will inform and coordinate with all applicable stakeholders regarding their corresponding mandates under or in relation to the ESMP. MCA-Mongolia or its representative will establish a Social Safeguards Team (SST), led by a Social Manager, that during the pre-construction and construction phases, in coordination with the Contractor, will coordinate with community representatives and liaisons, and project affected persons in implementing, supervising, reporting, and follow-up actions with regard to the ESMP.

#### SST Organization and Staffing

- Social Manager, with suitable experience in resettlement and management of social issues in construction, who will lead the team
- Two Social Safeguards Officers
  - One experienced in liaison with construction companies and familiar with workplace training/toolbox
  - One experienced in social and gender inclusion, who will manage coordination of the MCA-Mongolia Grievance Redress Mechanism (GRM)
- Two Community Liaison Officers who will work at the local level, one assigned to each of Khan-Uul District and Songinokhairkhan District

As needed, MCA-Mongolia or its representative must expand the SST size in relation to the increase in supervision and monitoring of contractors.

#### SST Responsibilities

- Finalize, update, monitor, and report as required on BWSE social plans and those prepared by the Contractor:
  - Labor Management Plan
  - Gender Integration and Social Inclusion Plan
  - Counter-Trafficking in Persons Plan
  - Stakeholder Engagement Plan
  - Construction Camp and Temporary Facilities Management Plan
  - Cultural Heritage Training Plan
- Manage, update, and implement the Stakeholder Engagement Plan
- Plan and lead community consultation meetings
- Ensure the design and delivery of effective information campaigns using all media

- Liaise with the UB MUD regarding the land acquisition and compensation process in resettlement
- Undertake further enquiry among herders as to the pattern of grazing disruption caused by land take and land reclassification
- Liaise with khoroo administration and local communities to negotiate new grazing arrangements for both winter and summer grazing
- Manage and maintain the Grievance Matrix
- Liaise with MCA-Mongolia, MUD, and contractors to implement and assist in resolution of grievances
- Inform community members of employment opportunities
- Assist local people to apply for vacancies through the Ministry of Labor and Social Protection offices
- Liaise with contractors to encourage and promote local employment over imported labor and emphasize the contractual obligations to aim for 30 percent of unskilled and semi-skilled jobs to go to women
- Liaise with experienced NGOs to find those able to design training courses on aspects of employee behavior, sexual harassment and gender-based violence, gender equity, conflicts over employment opportunities and foreign workers, cultural awareness, and chance finds processes
- Monitor and supervise contractor compliance with designing and implementing social policies and plans, training, internal grievance systems, and the MCA-Mongolia GRM
- In cases of internal complaints of sexual harassment or gender based violence within the contractor's grievance mechanism, ensure that an independent investigator is appointed, at the expense of the contractor, to lead the investigation and reporting on the grievance
- Monitor achievement of resettlement and review completion, and recommend further measures if households fail to reinstate their livelihoods
- Finalize the Vulnerable People's Plan and ensure implementation through the Ministry of Labor and Social Protection

## Contractor

The construction contracting firm performing the work, the **Contractor**, will be fully responsible for implementing and monitoring all pre-construction-related management measures specified in the ESMP—together with the conditions and procedures specified in Section V, Works Requirements of the Construction Contract Documents. The Contractor will read the ESMP, consider it in its entirety, and comply with all aspects of the ESMP that pertain to implementing and monitoring pre-construction-related environmental and social management.

The Contractor will abide by the requirements of this ESMP, which is appended to and is a part of the Contract. Following construction contract award, the Contractor will develop a site-specific Contractor's Environmental and Social Management Plan (CESMP), as further described below, for approval by the Engineer prior to start of the construction works. The Contractor will prepare the site-specific CESMP based on the contents of Section V, Works Requirements and this ESMP. The Contractor will submit the detailed, site-specific CESMP to the Engineer within 28 days after receiving the Letter of Acceptance. The CESMP must be approved by the Engineer prior to commencement of the execution of the Works.

The Contractor is advised that all sites where the Contractor will establish temporary construction facilities will be subject to environmental and social impact assessments and must be covered by an acceptable CESMP, must be permitted in accordance with all applicable permitting requirements. The Contractor will need to negotiate with and potentially compensate landowners

for temporary use of land. These temporary facilities may be co-located and potentially would comprise the following:

- Construction camps
- Laydown, staging, and storage sites
- Concrete batch plants
- Site offices
- Fuel storage
- Parking areas

The Contractor will take all necessary measures and precautions to ensure that the execution of the works and all associated operations on site or off site are carried out in conformity with statutory and regulatory environmental and social requirements of the Government of Mongolia and the technical specifications, where the more stringent will apply. The Contractor will take all measures and precautions to avoid any nuisance or disturbance arising from the execution of project activities. Wherever possible, this will be achieved by avoidance of the impact at the source rather than mitigating an impact after it has been expressed.

The Contractor will develop a grievance redress mechanism (GRM) based on guidance provided in Annex A of this ESMP.

The Contractor will designate an Environmental and Social Performance Manager as a key staff. This individual will have knowledge of relevant Mongolian, IFC, and Millennium Challenge Corporation standards and regulations, and knowledge of environmental, social and gender issues that include, but are not limited to, environmental management, waste management, gender and social inclusion, cultural resources, and health and safety management.

This individual will be responsible to:

- Work closely with MCA-Mongolia or its representative to guide the Contractor's thorough understanding of the mitigation and monitoring requirements
- Coordinate the Contractor's work related to implementing environmental and social management measures and monitoring
- Work closely with MCA-Mongolia or its representative to require that the Contractor, as needed, incorporates or modifies management measures and monitoring actions to reflect on-site field conditions

The Contractor, while in possession of the construction sites, will be responsible for the safety measures undertaken in accordance with the Technical Specifications to protect the workforce of the Contractor's own staff as well as the Engineer's and MCA-Mongolia or its representative's supervision staff. The Contractor will conduct in this respect safety induction courses for all personnel involved with the works and who are required to supervise any activity prior to their attending any part of the works. Additional training is required to meet MCC social policy requirements as per the:

- Labor Management Plan
- Gender Integration and Social Inclusion Plan
- Counter-Trafficking in Persons Plan
- Stakeholder Engagement Plan
- Construction Camp and Temporary Facilities Management Plan
- Cultural Heritage Training Plan
- Managing external grievances as part of the BWSE GRM

The Contractor will act responsibly to provide notification of the Contractor's schedule to enable MCA-Mongolia or its representative to carry out its responsibilities. The Contractor will be required to provide verbal and written updates to MCA-Mongolia or its representative on a regular basis indicating percent achievement of the pre-construction-related management measures specified in the ESMP. On a monthly basis, as part of the Contractor's monthly progress report, the Contractor will submit an ESMP update that will report the status of all environmental and social compliance activities and actions taken by the Contractor.

### **Contractor's Environmental and Social Management Plan (CESMP)**

The site-specific CESMP is required for construction activities and will provide the implementation vehicle of specific management activities applicable for the construction sites. At the direction of the Engineer, the Contractor is required to update the CESMP, including constituent plans and procedures, during the construction works as part of its obligations under its contract. The CESMP is required to strictly follow and comply with the environmental, social, health and safety requirements of the Millennium Challenge Corporation (MCC) and national legislation, as well as this ESMP, its constituent plans, and other applicable documents and regulations.

The site-specific CESMP will provide identified site-specific management measures, and refine organizational and operational procedures for the implementation of those measures, including implementation timeline and specific reporting requirements. The CESMP will detail the plans and procedures constituent to the CESMP and elaborate complimentary environmental, social, and health and safety management measures and training, and indicate the responsibility for implementation, technical details, and how implementation will be monitored.

#### **Objectives of the CESMP**

The Contractor will prepare the site-specific CESMP in order to properly manage its construction activities in accordance with Section V, Works Requirements and this ESMP, and in compliance with requirements of MCC and Mongolian legislation. This includes requirements on community engagement and gender integration incorporated into the ESMP, the Employer's Social and Gender Integration Plan, and Counter-Trafficking in Persons requirements of MCC, and the laws and regulations of Mongolia.

The site-specific CESMP will be prepared with the following objectives:

- Provide the environmental and social policy of the Contractor
- Provide operational and emergency procedures, developed to address the environmental aspects and risks associated with the construction activities
- Provide details on approaches and measures and appropriate personal protective equipment (PPE) and other equipment for handling hazardous waste generated on each site
- Provide details on communication and reporting, as well as contacts of site supervisors nominated to control and guide works involving disturbance of hazardous materials and waste
- Clarify the implementation and operation of the site-specific CESMP to ensure that structure and responsibilities are assigned, workers are trained, aware, and competent, and that there is proper communication, documentation, operational control, and emergency preparedness and response
- Provide organizational and technical procedures for implementation of the CESMP to ensure that construction activities associated with potential environmental and social impacts are carried out in a controlled and responsible way
- Provide checking and corrective action through monitoring and measurement
- Provide mechanisms for maintaining adequate records of corrective actions to allow effective monitoring

- Provide mechanisms for maintaining effective two-way communication between the Contractor and the community and stakeholders
- Provide full compliance with Mongolian employment law and ensure each employee has a written contract and is made aware of and signs compliance with the Labor Management Plan
- Provide training on and awareness in accordance with the following management measures:
  - Emergency Preparedness and Response
  - Waste Management
  - Labor Management
  - Gender Integration and Social Inclusion
  - Counter-Trafficking in Persons for Sex
  - Stakeholder Engagement, Community Consultation, and Grievance Redress
  - Construction Camp and Temporary Facilities Management
  - Cultural Heritage Protection
  - Health and Safety Management

### ***Preparation of the Site-Specific CESMP***

The CESMP will include the following:

- Management Acknowledgements
- Organization and Staffing
- Communications and Reporting
- Environmental, Social, and Health and Safety Provisions

The Contractor will prepare and submit for the Engineer's approval the site-specific CESMP, including constituent plans and procedures, within 28 days after receiving the notice of contract award. The Engineer may require periodic reviews, including updating of the CESMP during the construction works.

### ***Management Acknowledgements***

#### **1) Certification and Commitment**

The site-specific CESMP submitted by the Contractor will provide a signed statement from the Contractor's Managing Director(s) attesting to a commitment that all environmental and social protection, safety, and occupational health and safety aspects of the contract will be given highest priority in the discharge of contractual obligations and certifying a commitment to the provisions in the ESMP, its constituent plans, environmental and social requirements of the contract, as well as the approved site-specific CESMP.

#### **2) Statutory Understanding and Compliance**

The site-specific CESMP will provide a statement attesting the Contractor's understanding of, and means of ensuring due compliance with, the statutory regulations relating to construction work in Mongolia, specifically regarding compliance with:

- a) All current environmental laws and regulations, related to, but not limited to, the following:
  - Noise
  - Vibration
  - Air pollution
  - Water contamination

- Solid and hazardous waste disposal
- Waste disposal
- Sanitary conditions (water supply, sewerage, wastewater disposal, etc.)
- Use of explosives;
- Protection of public traffic
- Historical, cultural, and archaeological monuments/sites
- Resettlement, land acquisition, servitude, temporary use of land and compensation, etc.

b) All current labor laws and laws related to, but not limited to, the following:

- Contract of employment and labor disputes
- Working conditions
- Management, monitoring, and supervision
- Gender-based discrimination in employment
- Child labor
- Trafficking in persons
- Gender-based violence
- Sexual harassment

c) All occupational health and safety legislation including, without limitation, the rules and regulations of Mongolia and the authorities having jurisdiction. These provisions will be included and regulated through the Health and Safety Management Plan.

### 3) Availability of Documents

The site-specific CESMP will state where copies of environmental and social regulations and documents will be available on the construction sites and verify that all regulations and documents have been or will be made available.

### 4) Management of Subcontractors

The requirements of this and related sections and obligations therein will be included for implementation of parts of the construction activities by the approved subcontractors, while the Contractor will:

- a) Provide subcontractors with copies of the site-specific CESMP, the ESMP, the constituent plans, and other relevant environmental and social policies, plans, documents, and regulations, while incorporating such provisions into all subcontracts and ensuring compliance with such plans under the Contract.
- b) Require all subcontractors to appoint an environmental representative, social representative, and health and safety representative, who will be available on the sites throughout the operational period of the respective subcontract and ensure as far as is practically possible that staff and employees of subcontractor(s) are conversant with appropriate parts of the site-specific CESMP and the relevant environmental and social documents and regulations.

## Organization and Staffing

### 1) Organization Chart

The site-specific CESMP will include an organization chart identifying, by job title and by the name of the individual, the personnel to be engaged solely for environmental protection, social and gender, and health and safety control. The chart and the supporting text will identify participants and their contact details.

## 2) Identification of Responsibilities

The site-specific CESMP will provide descriptions of the responsibilities of the Environmental and Social Performance Manager, Social and Gender Manager, and Health and Safety Manager appearing on the organization chart. Additionally, the CESMP will provide a description of the responsibilities of the Contractor's Social Safeguards Officer or Social Safeguards Team.

### a) Environmental and Social Performance Manager

The Environmental and Social Performance Manager, qualified in ESMP and resettlement implementation, throughout the construction period will be primarily responsible for daily inspection and monitoring of ESMP implementation. The Environmental and Social Manager will prepare monthly and as-needed incident reports and submit them to the Engineer. MCA-Mongolia will report to MCC and send feedback to the Contractor through the Engineer or directly when urgent action is required. Monitoring and reporting on the implementation of follow-up action will also be part of the Environmental and Social Manager's duties.

The Environmental and Social Manager additionally will be responsible for environmental management of the construction sites and day-to-day management of environmental issues. The Environmental and Social Manager will be empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements of the site-specific CESMP or relevant environmental documents and regulations.

The Environmental and Social Performance Manager will maintain a daily site diary/record-book comprehensively recording all relevant matters concerning the construction sites' environmental management, safety, and traffic control, inspections, and audits, related incidents and the like. The site diary will be available at all times for inspection by the Engineer.

### b) Social and Gender Manager

The Social and Gender Manager will be responsible for day-to-day management of social issues for the duration of construction works. The Social and Gender Manager will be empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements of the site-specific CESMP or relevant social documents and regulations. The Social and Gender Manager will be responsible for overall stakeholder engagement and consultation process, ensuring proper labor contracting and working conditions, issues related to trafficking in persons, and organizing and delivering trainings, appropriate communication, and reporting.

Additionally, the Social and Gender Manager will monitor the internal grievance mechanism. In case of sexual harassment or violence, will liaise with the MCA-Mongolia or its representative's Social Safeguards Team and engage an independent third party such as the Centre for Gender Equality to manage investigations of allegations.

With input from site supervisors, the Social and Gender Manager will maintain a diary/record-book comprehensively recording all relevant matters concerning site social issues management, inspections and monitoring, incidents and emergencies, as well as other relevant issues. The diary will be available at all times for inspection by the Engineer.

### c) Health and Safety Manager

The Health and Safety Manager will be responsible for day-to-day management of health and safety issues for the duration of construction works, including HIV/AIDS and Covid-19 related issues. The Health and Safety Manager will be empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements of the Health and Safety Management Plan or requirements of health and safety documents and regulations.

The Health and Safety Manager through input from site supervisors will maintain a health and safety diary/record-book comprehensively recording all relevant matters concerning site health and safety management, inspections, and monitoring, incidents and emergencies, as well as other relevant issues. The diary will be available at all times for inspection by the Engineer.

d) Social Safeguards Officer / Social Safeguards Team

The Contractor's Social Safeguards Officer or Social Safeguards Team, under the Social and Gender Manager, will be appointed to manage the contractual obligations specified in the construction contract. Depending on the size of the company, the Contractor designate at least Social Safeguards Officer; more if the number of employees exceed 50. Additionally, a Contractor Community Liaison Officer may be needed to work with local labor.

The responsibilities of the Contractor's Social Safeguards Officer or Social Safeguards Team are the following:

- Coordinate with the MCA-Mongolia or its representative's SST regarding the protocols for community contact
- Maintain records of all community contacts and integrate with the project Stakeholder Matrix
- Liaise with the MCA-Mongolia or its representative's SST over community contacts
- Liaise with the MCA-Mongolia or its representative's SST to implement and assist in resolution of grievances
- Inform the MCA-Mongolia or its representative's SST of employment vacancies and recruit through the Ministry of Labor offices and process
- Monitor and promote the employment of women to achieve the recommended target of 30 percent or more
- Plan and ensure delivery of the contractually required employee awareness training and information programs
- Liaise with training organizations and experienced NGOs to find those able to design training courses on aspects of employee behavior, sexual harassment and gender based violence, gender equity, HIV/AIDS, conflicts over employment opportunities and foreign workers, cultural awareness, and chance finds processes
- Support complainants to the Contractor's internal grievance system, particularly those alleging sexual harassment or gender-based violence
- Assist the Contractor's personnel department to manage the internal employee grievance mechanism for reporting grievances
- Manage the Contractor's responsibilities with the project GRM; documenting, reporting, and taking part in finding solutions

3) Appointments

The Contractor will include the CV of the following proposed personnel in the bidding package and submit to MCA-Mongolia for approval the names and details (full CVs) of these proposed personnel within 14 days after the notification of contract award:

- Environmental and Social Performance Manager
- Social and Gender Manager
- Health and Safety Manager

The proposed personnel will hold the attestation/proof of professional qualification required from the relevant government authorities to perform and submit pertinent studies and documentation to relevant Government agencies, with an advanced post graduate degree in a relevant discipline or as a certified consulting engineer, and relevant post-graduate experience in Mongolia.

The Contractor will obtain approval and appoint the Environmental and Social Performance Manager, Social and Gender Manager, and Health and Safety Manager prior to commencement of construction works, unless otherwise, in exceptional circumstances, it is agreed in writing with the Engineer. Key personnel identified in Section IV, the Environmental and Social Manager, Social and Gender Manager, and Health and Safety Manager will not be removed from the construction works without written permission of the Engineer. Within 14 days of any such removal or notice of intent of removal, a replacement for the respective personnel will be nominated by the Contractor for approval by the Engineer and MCA-Mongolia (MCA-Mongolia will approve any key staff).

### **Communications and Reporting**

The site-specific CESMP will explain the proposed interaction and communication procedures between construction personnel and environmental, social and gender, and health and safety staff, including:

- Communication facilities
- Routine communication and reporting systems
- Stakeholder engagement and consultation activities

#### **1) Environmental, Social and Gender, and Health and Safety Reports**

The Contractor will submit the environmental, social and gender, and health and safety reports shown in Table 1.

**Table 1 Summary of Reporting Requirements**

Report	Submission Schedule	Content
<b>Site-specific CESMP</b>	One time during mobilization, within 28 days after the Letter of Acceptance	<p>The Contractor will carry out an assessment of environmental, social and gender, and health and safety conditions at the work sites to define site-specific impacts and adequate mitigation measures. The Contractor will also develop constituent plans and procedures required as a part of CESMP.</p> <p>The site-specific CESMP must be approved by the Engineer prior to commencement of construction activities.</p>
<b>Training and Orientation Report</b>	<p>One time during mobilization, before commencement of works</p> <p>Monthly updates during implementation of works</p>	<p>The Contractor will summarize information regarding training and orientation mandated under each plan, carried out before involvement of the labor in construction activities and during toolbox talks. Toolbox talks on each plan topic must be delivered monthly.</p> <p>The Contractor will provide copies of the Training and Orientation Reports to the Engineer. The Contractor will provide monthly updates of training and orientation activities during implementation of works in the Monthly Progress Reports.</p>
<b>Regular Weekly Environmental, Social and Gender, and Health and Safety Reports</b>	Weekly during implementation of works	<p>The Contractor will undertake environmental, social and gender, health and safety inspections and report weekly, and will provide copies of such reports to the Engineer each month for the duration of contract.</p> <p>The weekly environmental reports will include:</p> <ul style="list-style-type: none"> <li>• Environmental and health and safety management actions / measures taken, including approvals sought from local or national authorities</li> <li>• Observations and concerns raised and/or decisions taken with regard to environmental and gender, and health and safety management during site meetings</li> <li>• Problems encountered in relation to environmental and health and safety aspects (including delays, incidents, damages and cost consequences, emergencies, etc.)</li> <li>• Lack of compliance with this ESMP and the technical specifications in relation to environmental, and health and safety requirements on the part of the Contractor and/or subcontractor(s).</li> </ul> <p>The social and gender reporting will include sections on issues arising in the fields of:</p> <ul style="list-style-type: none"> <li>• Recruitment strategy, employment of men and women, and prohibition of child labor</li> <li>• Implementation of the Worker Behavior Code of Conduct and outcomes</li> <li>• Gender related grievances and investigations</li> <li>• Training on employee behavior, gender, social inclusion, counter-trafficking in persons, gender-based violence and sexual harassment, health education, cultural awareness, and feedback from employees</li> </ul>

Report	Submission Schedule	Content
<b>Monthly Progress Reports</b>	Monthly during implementation of works	<p>Summaries of these reports (including information on environmental and social activities undertaken, permits and agreements obtained, etc.) will be included in the monthly progress reports to be submitted to Engineer for review and approval. It is expected that monthly progress reports will include information on:</p> <ul style="list-style-type: none"> <li>• Employment records of workers (used to track participation in training and progress toward women's employment targets and local labor targets)</li> <li>• Training and orientation activities</li> <li>• Environmental, social and gender, and health and safety management actions / measures taken, including approvals sought from local or national authorities</li> <li>• Observations and concerns raised and/or decisions taken with regard to environmental, social and gender, and health and safety management during site meetings</li> <li>• Problems encountered in relation to environmental, social and gender, and health and safety aspects (including delays, incidents, damages and cost consequences, emergencies, etc.)</li> <li>• Investigations into the contractor internal grievance redress mechanism with outcomes</li> <li>• Lack of compliance with this ESMP and the technical specifications in relation to environmental, social and gender, and health and safety requirements on the part of the Contractor and/or subcontractor(s)</li> <li>• Changes of assumptions, conditions, measures, designs, and actual works in relation to environmental, social and gender, and health and safety requirements</li> <li>• Chance historical, cultural, and archaeological finds</li> <li>• Follow-up on incident investigation</li> <li>• Follow-up on the status of measures and/or corrective actions identified (including remedial measures) and their efficacy, to eliminate and minimize lack of compliance with contract requirements</li> <li>• Stakeholder engagement and consultation activities carried out during reporting period,</li> <li>• Grievances registered and resolved</li> </ul>

## 2) Notification of Incidents and Changes

The site-specific CESMP will verify that provisions have been made to ensure that the Contractor notifies relevant parties in accordance with Section VIII Particular Conditions of Contract, Sub-Clause 4.8 after the following incidents and changes:

- Occurrence of any incident that has resulted, or could reasonably be foreseen to result, in lack of compliance with this ESMP and the technical specifications in relation to environmental, social and gender, especially internal complaints related to sexual harassment, gender-based violence and trafficking in persons, and health and safety requirements
- Changes of assumptions, conditions, measures, designs, and actual works in relation to environmental, social and gender, and health and safety requirements
- Chance historical, cultural, and archaeological finds

In addition to the initial written notification, the Contractor will submit a preliminary report on incident investigation within 7 days after the incident, as well as final report on incident investigation within 14 days after the incident. All incidents should be investigated by the competent professional (relevant independent professionals can also be involved, as needed). The final report on the incident investigation will include information on the investigation's objectives, methodology applied, analysis and tests carried out, findings, conclusions, and recommendations.

Allegations against staff of sexual harassment or gender-based violence, or involvement in trafficking in persons inside the contractor's organization require reporting to the MCA-Mongolia or its representative. The Contractor's Social and Gender Manager will liaise with the MCA or its representative and other relevant parties and arrange for a third party investigator to lead the enquiry into allegations together with the Contractor's human resources representative. Proven harassment or violence offences in contravention of the Worker Behavior Code of Conduct must result in the immediate firing of the perpetrator and reporting through the project system.

Allegations of trafficking in persons must be dealt with according to the Section VIII Particular Conditions of Contract Sub-Clause 6.16, "Combatting Trafficking in Persons", which summarizes the Contractor's reporting requirements and specifies remedies that the MCA Entity will apply to confirmed cases.

Section VIII Particular Conditions of Contract Sub-Clause 6.17, "Prohibition of Sexual Harassment", specifies that "The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction.

## 3) Communication with Subcontractor(s)

The site-specific CESMP will specify:

- How environmental, social and gender, and health and safety requirements will be communicated to subcontractor(s) at all levels and how their compliance with the CESMP and all relevant regulations will be ensured.
- Subcontractor(s) will be supplied with copies of the CESMP and other environmental and social documents developed for the project (which will be deemed part of the subcontract), and will attend and report on all relevant training and orientation sessions prior to commencement of their work and will continue covering the same topics in toolbox talks.

- The procedures for reviewing and monitoring compliance with the site-specific CESMP and environmental and social regulations. This could include, for example, the monitoring of performance against environmental and safety criteria as a part the daily and/or weekly site inspections.

### **Environmental, Social and Gender, and Health and Safety Provisions**

The site-specific CESMP, including constituent plans and procedures, will include at a minimum acknowledgement of the requirements to meet the CESMP standards, the methodology and resources to meet the requirements of the management measures prescribed in the following sections of this ESMP, as well as the environmental, social and gender, and health and safety provisions of Section V, Works Requirements.

In accordance with MCC Environmental Guidelines and IFC Performance Standards, the Contractor is obliged to implement all reasonable measures with regard to soil erosion, water and air quality, noise and vibration, solid waste, hazardous materials, wastewater discharges, health and safety hazards, labor and working conditions. In a similar way, the Contractor is obliged to implement risk management strategies to protect the beneficiary communities from 1) physical, chemical, or other hazards associated with sites under construction, 2) hazards associated with increased traffic and rerouting of vehicles, and 3) communicable and vector-borne diseases associated with the population of workers.

Parallel plans and policies will be developed by the Contractor as a part of CESMP to implement mitigation measures specific for each construction site and ensure compliance with environmental, and social and gender, and health and safety requirements.

## **G.1.2 Environmental Management**

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## **G.1.3 Waste Management**

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## **G.1.4 Social and Gender Inclusion**

### **Management Measure AWPP - 1: Labor Management**

<b>POTENTIAL IMPACT</b>
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>• Professional management and conditions of labor</li> <li>• Opportunities for local labor and supply of goods and services, and provision of local jobs with fair and competitive wages</li> <li>• Women's short-term employment in construction and engineering-related work</li> <li>• Potential alleviation of poverty in local area</li> <li>• Reduction in child labor</li> <li>• Improved grievance management in employment</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>• Discrimination against women</li> <li>• Increased foreign labor, reducing local employment opportunities</li> <li>• Use of child labor</li> <li>• Use of forced labor</li> <li>• Use of trafficked labor</li> </ul>

<ul style="list-style-type: none"> <li>• Exploitation of workers and Labor Code violations</li> <li>• Sexual harassment</li> </ul>
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Constitution of Mongolia <ul style="list-style-type: none"> <li>- Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>• Mongolian Civil Code <ul style="list-style-type: none"> <li>- Requires providing office space, tools and equipment necessary to ensure employees' health.</li> </ul> </li> <li>• Mongolian Law on Gender Equality <ul style="list-style-type: none"> <li>- Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>• Mongolian Law on Labor <ul style="list-style-type: none"> <li>- Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>- Prohibits employing children under the age of 16 or under 18 in dangerous industries, including construction</li> </ul> </li> <li>• Mongolian Law on Minimum Wage <ul style="list-style-type: none"> <li>- Minimum wage is fixed by National Tripartite Committee on Labor and Social Consensus representatives.</li> </ul> </li> <li>• Mongolian Law on the Protection of the Rights of the Child <ul style="list-style-type: none"> <li>- Prohibits employing children in any work that is likely to harm their health or morale, and exploiting or paying unjust wages to children</li> </ul> </li> <li>• Mongolian Law on Social Protection of Disabled Persons <ul style="list-style-type: none"> <li>- Prohibits building any buildings and facilities that do not meet needs and requirements of persons with disabilities.</li> </ul> </li> <li>• Mongolian Law on Combating Human Trafficking <ul style="list-style-type: none"> <li>- Requires regulating the workplace to ensure the implementation of the legislation on combating human trafficking, and if it is not specified, it shall be obliged to comply with the instructions, recommendations, statements and instructions given by the competent authorities and officials.</li> </ul> </li> <li>• Mongolian Law on Sending Labor Force Abroad and Receiving Labor Force and Specialists from Abroad <ul style="list-style-type: none"> <li>- Regulates relations with respect to employment of a Mongolian citizen abroad and a foreign citizen in Mongolia, and protection of their rights and interests.</li> <li>- Reinforces provisions of the Constitution of Mongolia, Labor Law, Social Insurance Law, and other related legal acts, and legal status of a foreign citizen.</li> </ul> </li> <li>• IFC Performance Standard 2 <ul style="list-style-type: none"> <li>- Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.</li> <li>- Contractor will adopt and implement human resources policies and procedures appropriate to its size and workforce that set out its approach to managing workers consistent with the requirements of this performance standard and national law.</li> <li>- Contractor will provide workers with documented information that is clear and understandable regarding their rights under national labor and employment law and any applicable collective agreements, including their rights related to hours of work, wages, overtime, compensation, and benefits upon beginning the working relationship and when any material changes occur.</li> </ul> </li> </ul>

- Contractor will not make employment decisions on the basis of personal characteristics unrelated to inherent job requirements. Contractor will base the employment relationship on the principle of equal opportunity and fair treatment, and will not discriminate with respect to any aspects of the employment relationship, such as recruitment and hiring, compensation (including wages and benefits), working conditions and terms of employment, access to training, job assignment, promotion, termination of employment or retirement, and disciplinary practices. Contractor will take measures to prevent and address harassment, intimidation, and/or exploitation, especially in regard to women. The principles of non-discrimination apply to migrant workers.
- Prohibits employment of child labor.
- Millennium Challenge Corporation Counter-Trafficking in Persons Policy (C-TIP Policy)
  - Requires contractors to take a zero-tolerance policy with regard to human trafficking and to actively manage employment conditions to prevent exploitation of trafficking in persons and related activities workers by employers and specifies remedies that the MCA-Entity may take in response to confirmed cases of TIP.
- Millennium Challenge Account Social and Gender Integration Plan (SGIP)
  - Sets out guidelines for Contractors related to social risk mitigation measures in infrastructure, including making working conditions suitable for both male and female employees
  - Requires developing and implementing an employment plan that prioritizes using local labor particularly from the Area of Influence of the project
  - Sets a target to encourage contractors to employ as workers at least 30% women of all workers at each skill/occupational level
  - Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates.
- Millennium Challenge Corporation Guidance Note to MCAs on Sexual Harassment
  - Requires that contractors are well-informed about existing anti-sexual harassment policies and procedures, and that contractors meet the requirements in the standard bidding documents.
  - Ministry of Construction and Urban Design (MCUD) Gender Responsiveness Policy
    - Calls for gender targets in employment via “international and domestic tenders, so that one gender should not be lower than 15 percent among workers, and 25 percent among decision makers.”
  - Ministry of Labor and Social Welfare Order (2016)
    - Expanded the types of hazardous work prohibited for children under the age of 18 to include construction
  - International Labor Organization fundamental conventions, and International Human Rights instruments and conventions

## OBJECTIVES

The Labor Management Plan ensures that contractors and their workers have clear expectations about the behaviors and conditions expected of the Contractor and all workers.

- Promote fair treatment, non-discrimination, and equal opportunity of workers
- Promote local labor opportunities and procurement from local suppliers
- Target women’s employment as 30% of all labor at each skill/occupational level
- Establish and maintain and improve a constructive worker-management relationship
- Protect workers, including vulnerable categories of workers such as children, migrant workers, workers engaged by third parties, and workers in the supply chain
- Avoid the use of forced labor or trafficked labor
- Maximize the beneficial impact of the project on the affected communities

## MANAGEMENT MEASURE

### Labor Management

The MCA-Mongolia or its representative’s Social Safeguards Team (SST) will:

- Encourage Contractor to employ local unskilled and semi-skilled labor, particularly youth and women, and to procure goods and services from local businesses and entrepreneurs
- Facilitate the Contractor's cooperation with the local District Labor Offices
- Facilitate the Contractor's publication of vacancies and procurements within affected communities
- Facilitate the Contractor's holding of job fairs and procurement workshops within affected communities to support local applicants to apply for jobs and local businesses and entrepreneurs to bid
- Support local job applicants to apply, and local businesses and entrepreneurs to bid
- Gather names of interested workers from project affected households and through community information programs and consultation meetings
- Share the names of interested workers with District and Khoroo Labor Offices and Contractor
- Encourage Contractor to employ women at a rate of at least 30% of personnel at each skill/occupational level
- Facilitate Contractors' engagement with relevant university engineering programs, technical and vocational education and training (TVET), and professional associations to 1) identify and recruit qualified job applicants and 2) establish internships and apprenticeships
- Encourage Contractor to employ socially excluded and vulnerable people

The Contractor will:

- Fully comply with the requirements of this management measure and related contract clauses
- Perform the work in accordance with relevant sections of the ESMP

#### *Access to Employment*

The Contractor will:

- Publish vacancies (listing the required qualifications for all categories of employment) within project-affected communities and at District and khoroo offices and provide such information to the Engineer and during each community meeting. Ensure the exchange of information between Contractor and the local population on employment opportunities
- Publish and communicate employment opportunities listing the required qualifications for all categories of employment city-wide, and beyond in Mongolia, if the vacancies cannot be filled from local communities
- Ensure that a staff person responds to questions from the local population regarding employment and procurement opportunities
- Develop an employment forecast and a written recruitment strategy to: 1) encourage the employment of qualified individuals among the local population(s) in project construction and ancillary activities in all phases, with particular focus on women and youth, and disadvantaged groups; 2) target achieving women's employment as at least 30% of personnel at each skill/occupational level; and 3) provide training for local construction brigades on how to be effective contractors for local construction brigades
- Through the Contractor's Social Safeguards Officer, liaise with the MCA-Mongolia or its representative's SST and local labor offices to provide support with the job application process, encourage local employment (including women's employment), implement and publicize a job fair, consistent and transparent recruitment process
- In disseminating information on potential employment opportunities, take steps to consider ways in which to maximize outreach, using all forms of media that may be appropriate
- Ensure that all staff have written employment contracts specifying fair employment conditions and equal pay for equal work to men and women, and fulfilling all conditions specified under the Mongolian Law on Labor defining the contracts

The Contractor is encouraged to:

- Create pay bands for each category of worker to help equal pay for equal work

As feasible, the Contractor will:

- Develop and submit a plan for providing on-the-job training and skills transfer opportunities to the local labor force

- Engage with training, education, and professional organizations—such as Technical and Vocational Education and Training, Implementing Agency of the Ministry of Labor and Social Protections, Mongolian University of Science and Technology, and the Mongolian Builder's Association—to recruit qualified applicants, and provide apprenticeships and internships for students who study water engineering and relevant subjects at university

The Contractor shall note contract clauses on “Gender,” “Engagement of Staff and Labor,” “Foreign Personnel,” “Prohibition of Forced or Compulsory Labor,” “Prohibition of Harmful Child Labor,” “Employment Records of Workers,” and “Non-Discrimination and Equal Opportunity.”

#### *Local Procurement*

The Contractor will:

- Proactively procure goods and services from local businesses and entrepreneurs in Khan-Uul and Songinokhairkhan Districts and Ulaanbaatar, and members of targeted disadvantaged groups (e.g., women, people with disabilities), achieved through:
  - Publicizing procurements within the targeted geographical area or targeted group, for example at the District and khoroo offices and via notice boards, print media (newspapers, etc.), recruitment agencies, or job and career fairs
  - Publicizing and holding procurement workshops within the targeted geographical area or targeted group
  - Adding priority criteria for businesses and entrepreneurs in the targeted geographical area or members of the targeted group to the selection procedure
- In disseminating information on potential service procurement opportunities, take steps to maximize outreach, using all forms of media that may be appropriate

#### *Workplace Environment*

The Contractor will:

- Establish, execute, and enforce a Worker Behavior Code of Conduct on which all employees will be briefed, that all employees are required to sign, and that mandates immediate dismissal for serious offences including sexual harassment, violence, or confirmed cases of engagement in trafficking in persons. The Code will specify:
  - Expectations of worker behavior, and penalties for transgression
  - MCC and Mongolian legal definitions of trafficking in persons (TIP), zero-tolerance for TIP, and remedies that the MCA Entity may take in response to confirmed cases of engagement of trafficking in persons
  - Zero-tolerance for gender-based violence
  - Compliance with the Contractor's Anti-Sexual Harassment Policy and notification of the Contractor's Sexual Harassment Incident Reporting and Referral Plan
  - Rights of employees to a grievance mechanism, holidays, and cultural and festival access
  - Conditions for work camps, shelter, water and sanitation, food, and security
  - The responsibility of all workers, regardless of their role or duration of employment, will be expected to review and acknowledge the Workers' Code of Conduct by signing the code sheet
  - The requirement to respect local customs and practices
- Establish and execute a worker's grievance redress procedure that:
  - Formalizes a system for receiving and managing internal complaints of sexual harassment, gender-based violence, or issues of trafficking persons (including engaging in commercial for sex with a person under 18 years of age)
  - Guarantees confidentiality to makers of allegations
  - Designate the Contractor's Social Safeguards Officer or other officer as responsible for collaborating with the human resources department on the grievance redress procedures
  - Refers to the Contractor's Sexual Harassment Incident Reporting and Referral Plan for allegations of sexual harassment
  - Specifies that the Contractor's zero-tolerance for gender-based violence addresses any complaints of gender-based violence against its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.

- In cases of discrimination against women or of allegations of sexual harassment or violence, requires that the Contractor's Social Safeguards Officer contact the MCA-Mongolia or its representative's SST to include them in the investigation and appoint a third party—such as a representative from an NGO such as the Centre for Gender Equality or equivalently qualified, experienced organization—to lead the investigation
- The Contractor shall note the contract clause on “Prohibition of Sexual Harassment”
- The Contractor shall note the contract clause on “Facilities for Staff and Labor” and provide suitable gender-segregated facilities to enable the safe employment of both men and women – e.g. Toilet facilities, changing facilities on all sites and enabling physical access to office accommodation for people with disabilities.

### *Training*

The Contractor will:

- Provide training to enhance the skills of employees using on-the-job training, internships, apprenticeships, and secondment to training programs such as Technical and Vocational Education and Training, etc.
- Mandate for all employees, before each worker starts work on the site, induction packages that include:
  - Employment rights and conditions, including non-discrimination and equal opportunity
  - The Contractor's responsibility to “adopt recruitment, hiring and retention practices that support the employment of women and staff from diverse backgrounds” per the contract clause on “Engagement of Staff and Labor,” the Contractor's employment forecast and recruitment strategy, and the Contractor's Gender Integration and Social Inclusion Plan (described below)
  - Gender-based violence
  - Contractor's Anti-sexual Harassment Policy – including awareness of what constitutes sexual harassment, exploitation and abuse, and the Contractor's Sexual Harassment Incident Reporting and Referral Plan
  - Using the internal Grievance Mechanism for allegations of gender-based discrimination
  - Rights to have access to local festivals
  - Cultural sensitivities, and social norms and practices in each area
  - Expectations on avoiding poor relations between employees and local communities caused by behavior relating to alcohol, gambling, prostitution, illegal drug use, violence and sexual abuse of women, minors and lesbian, gay, bisexual, transgender, queer, and others (LGBTQ+) persons
  - Countering the Trafficking in Persons Response Plan – awareness of responsibilities to counter the trafficking of people around the project area, the remedies that the Contractor and the MCA Entity may apply, and mechanisms for reporting suspected instances of TIP with the Contractor's TIP Response Plan
  - Awareness of the possibilities of the transmission of HIV/AIDS and communicable illnesses and how to prevent HIV/AIDS transmission
- Undertake a series of employment and social plan inductions and employee awareness programs that:
  - All employees must attend at the commencement of employment and over the employment period twice yearly
  - Incorporate toolbox talks that include reinforcement of all training programs
- Commission training modules on gender integration and social inclusion topics for all employees at intervals agreed with the MCA-Mongolia or its representative's SST
- Require that the Social Safeguards Officer, together with the MCA-Mongolia or its representative's SST Community Liaison Officers, conduct awareness raising with workers on child labor issues in the local community as part of an ongoing community awareness program on social issues
  - These toolbox talks will include ways that workers can report suspected child labor to the District Children, Youth and Family Offices, and the MCA-Mongolia or its representative's Social Manager

### *Site-specific Labor Management Plan*

The Contractor will prepare and submit for the Engineer's written approval a site-specific Labor Management Plan that:

- Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
- Includes the Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan and the Workers' Code of Conduct
- Is consistent and compliant with:
  - Mongolian Law on Labor
  - Relevant aspects of the Conditions of Contract, as well as the MCC Gender Policy and the MCA-Mongolia Social and Gender Integration Plan
  - The MCC Policy on Counter-Trafficking in Persons
- Assigns roles and responsibilities for labor management

#### LOCATIONS:

All construction sites and temporary construction facilities

#### **MONITORING**

MCA-Mongolia or its representative:

- Monitor implementation of the Contractor's Labor Management Plan and Worker Behavior Code of Conduct, including prohibitions against trafficking in persons, gender-based violence, sexual harassment, and child labor
- Monitor implementation of the Contractor's employment recruitment strategies and assist Contractor to reach potential workers among local women, youth, and people from disadvantaged groups
- Monitor participation by all parties in the Contractor's internal grievance redress procedure and external project Grievance Redress Mechanisms

Contractor:

- Record results of Contractor's labor management responsibilities, with all data and statistics gender disaggregated by age and gender, following, at a minimum, the contract clause on "Employment Records of Workers" and recording, for each worker hiring and leaving dates, along with duration (days) of employment and skills/occupational category and home location of workers (project-affected district/khoroos, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia)
- Document implementation of the requirements above for the Labor Management Plan, including all recruitment activities
- Document Worker Behavior Code of Conduct infringements and outcomes, and internal grievance redress activities under the Contractor's internal grievance process

#### LOCATIONS:

All construction sites and temporary construction facilities

#### INDICATORS AND SUCCESS CRITERIA:

Indicators:

- Required plans written, approved, and implemented
- Number, content, and outcome of employment against home location (project-affected district/khoroos, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia), gender, and age brackets (under 30, 30 to 49, 50 and over), and total days of employment for each individual worker
- Use of written contracts with defined pay scales by employment activity
- Employment recruitment activities, interactions with local employment offices and communities, professional associations, TVET centers
- Percent of all employees that are workers from project-affected districts/khoroos and elsewhere in UB/Mongolia
- Percent of all employees that are women, disaggregated by skill/occupational level

<ul style="list-style-type: none"> <li>Records of attendance and dates of all trainings and toolbox talks delivered on social and gender topics</li> <li>Numbers of grievance redress actions, the number of days necessary to resolve them, and their outcomes</li> </ul> <p>Success Criteria:</p> <ul style="list-style-type: none"> <li>Successful outcome of: <ul style="list-style-type: none"> <li>100% of contractor and employees have attended the child labor toolbox session on identifying and reporting child labor incidents</li> <li>Zero tolerance of child labor – no child labor on site or with any contract activity</li> <li>Any cases of child or forced labor are reported and dealt with in a timely, manner, with respect for the child(ren) and families affected</li> <li>Maximization of local labor , such that percentage of all labor exceeds a minimum target percentage to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)</li> <li>Achievement of the non-binding 30% or more employment of women as a percentage of all staff, in each skill/occupational category</li> <li>Employment of young people and “vulnerable” and excluded groups at a target to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)</li> <li>Apprenticeships and internships Internments established and completed for each construction season</li> <li>All worker and community complaints about sexual harassment are a) addressed in a timely manner and b) resolved through the Contractor's Sexual Harassment Incident Referral and Reporting Plan</li> <li>100% of employees and sub-contractors sign the Worker Code of Conduct</li> </ul> </li> <li>Resolution of 100% of internal grievances within a duration to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)</li> </ul>

## Management Measure AWPP - 2: Gender Integration and Social Inclusion (GSI)

POTENTIAL IMPACT
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Increased short-term employment and improved conditions of employment for women</li> <li>Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of forced labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Millennium Challenge Account Social and Gender Integration Plan (SGIP)             <ul style="list-style-type: none"> <li>Encourages contractors to prioritize using local labor, particularly workers from the project affected area</li> <li>Encourages contractors to employ women as at least 30% of workers</li> <li>Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates</li> </ul> </li> <li>Millennium Challenge Corporation Gender Policy             <ul style="list-style-type: none"> <li>The MCC Gender Policy states that countries will ensure that both women and men have opportunities for meaningful participation throughout the consultative processes related to a Compact program.</li> </ul> </li> <li>IFC Performance Standard 1             <ul style="list-style-type: none"> <li>Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> </ul> </li> <li>IFC Performance Standard 2             <ul style="list-style-type: none"> <li>Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.</li> </ul> </li> <li>Constitution of Mongolia             <ul style="list-style-type: none"> <li>Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>Mongolian Law on Gender Equality             <ul style="list-style-type: none"> <li>Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>Mongolian Law on Labor             <ul style="list-style-type: none"> <li>Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> </ul> </li> </ul>

- Prohibits employing children under the age of 16 – under 18 in dangerous industries e.g. construction

## OBJECTIVES

The Gender Integration and Social Inclusion (GSI) Plan complements the Labor Management Plan and provides additional management steps to address GSI considerations with respect to workers and local communities.

T

- To promote the fair treatment, non-discrimination, and equal opportunity of workers.
- To encourage the employment of women as at least 30% of the Contractor's workforce, calculated over full and part time positions as a percentage of total number of staff hired in the life of the contract, at each skill/occupation level
- To enable local people, particularly youth and people in project-affected districts/khoroos to gain short-term employment and training opportunities
- Maximize the perceived beneficial impact of the BWSE project on the project affected communities

## MANAGEMENT MEASURE

### Gender Integration and Social Inclusion

- Under the Gender Integration and Social Inclusion Plan, the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure the widest exchange of information between the Contractor and the local population and district and khoroo Labor Offices on planned and continuing works and employment opportunities through a program of community consultations and participatory meetings.
- The Contractor will prepare and submit for the Engineer's written approval a Contractor's Gender Integration and Social Inclusion Plan, which will be:
  - Consistent with the Mongolian Law on Labor and
  - Consistent with the MCC Gender Policy's emphasis on community consultation and participation
  - Consistent with IFC Performance Standard 1: Assessment and Management of Environmental and Social Risks and Impacts
  - Agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer

#### *Community Engagement*

- The Contractor will hold at least one meeting in each project-affected District and khoroo office prior to construction to inform community members of the expected conduct of workers and the contents of the Labor Management Plan, and thereafter monthly, minimally covering the following:
  - Efforts to hire local labor and the Contractor's employment forecast
  - Efforts to maximize women's employment
  - Efforts to maximize local procurement and the Contractor's procurement forecast
  - Prohibitions against child labor and forced labor in supply chains
  - Zero-tolerance of trafficking in persons, MCC and Mongolian legal definition of trafficking in persons, and Contractors' Counter-Trafficking in Persons Response Plan
  - Zero-tolerance of gender-based violence
  - Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan

#### *Expanding Short-term Employment Opportunities*

- The Contractor will actively consider working with the existing construction brigades to enable local labor currently organized into brigades to gain employment. The brigades may require additional training to enable them to work on this large-scale project – training in:
  - Modern tools and techniques where needed
  - Brigade internal labor management, accounting, and estimation techniques

- As referenced in the Labor Management Plan and its recruitment strategy, the Contractor will encourage the employment of qualified individuals among the local population(s) in project activities, with particular focus on women, youth, and disadvantaged groups. This may include small-scale supply contracts or services, with announcement of jobs published on project information boards, in District and khoroo Labor Offices and with information on employment disseminated by the Contractor's Social Safeguards Officer, the MCA or its representative or other means approved by the Engineer.
- Where appropriate, the Contractor will provide training to enhance the skills of employees and local people using on-site apprenticeships and internships.
- As referenced in the Labor Management Section above, the Contractor is encouraged to cooperate with, secondment to training programs such as Technical and Vocational Education and Training Centers and professional associations and to draw workers from among their graduates and members, etc.

#### *Local Procurement*

- The Contractor will develop and submit a procurement forecast of all goods and services that could be procured locally. The MCA-Mongolia or its representative's Social Safeguards Team will assist in disseminating this information to local communities with the Contractor's Social Safeguards Officer.
- The Contractor will develop and submit for review and approval by the Engineer, a procurement strategy to inform local communities and businesses of opportunities to provide goods and services to the Contractor and to project workers, particularly targeting small businesses and those owned by women.
- The Contractor Social Safeguards Officer and MCA-Mongolia or its representative's Social Safeguards Team will hold community meetings to inform people about the procurement processes and include District and khoroo offices, community organizations and the media.

#### LOCATIONS:

All construction sites and temporary construction facilities and project affected communities

#### MONITORING

MCA-Mongolia or its representative's SST:

- Monitor Contractor Gender Integration and Social Inclusion Plan
- Monitor Contractor employment recruitment strategies and assist Contractor to reach potential women, youth and other excluded groups
- Monitor participation by all parties in the Contractor's internal and external project Grievance Redress Mechanisms
- Document Contractor performance in Gender Integration and Social Inclusion Plan

Contractor:

- Record results of Contractor's Gender Integration and Social Inclusion responsibilities
- Document all grievance redress activities under the Contractor's internal grievance process and external Grievance Redress Mechanism

#### LOCATIONS:

All construction sites and temporary construction facilities and project affected communities

#### INDICATORS AND SUCCESS CRITERIA:

Indicators:

- Employment recruitment activities
- Employment records of workers
- Number, dates, and locations of community engagement meetings
- Community related grievance redress actions and outcomes

- Number of purchase orders signed each year with UB businesses, disaggregated by those in in Khan-Uul and Songinokhairkhan Districts and the rest of UB, indicated as a number and percent of the total dollar amount of annual procurements
- Total annual dollar amount of procurements with businesses from UB, disaggregated by those in Khan-Uul and Songinokhairkhan Districts and those in the rest of UB, indicated as a number and percent of the total dollar amount of annual procurements
- Number, percentage and dollar amount of purchase orders signed with women-owned businesses each year against the total number and dollar amount of purchase orders

**Success Criteria:**

- 100% of required community meetings are held, with all topics covered
- Maximization of local labor, such that percentage of all labor exceeds a minimum target percentage to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
- Achievement of the non-binding 30% employment of women as a percentage of all staff, in each skill/occupational category
- Employment of young people and “vulnerable” groups at a target to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
- Apprenticeships and internships established and completed for each construction season
- Contractor enters into and maintains an agreement with at least one TVET center and employs TVET graduates at a target to be to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
- All worker and community complaints about sexual harassment are a) addressed in a timely manner and b) resolved through the Contractor's Sexual Harassment Incident Referral and Reporting Plan
- Contracts and purchase orders with local business and service providers split including women-owned businesses and service providers, reach targets to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
  - Targets to be expressed as a number, as a percentage of all contracts and purchase orders, and as a dollar amount (USD)
  - Targets to be set for all locally owned business, for businesses in the two project-affected districts, and for women-owned businesses.

**REPORTING:**

- Reports on Gender Integration and Social Inclusion to be included in project monthly reports
- Summarize Gender Integration and Social Inclusion activities undertaken during reporting period
- Specify any material deviations or non-compliances to this management measure, and any other issues of concern,
- Define activities planned during next reporting period

**SCHEDULE**

**MANAGEMENT MEASURE:**

*Implementation:*

- Initiated during pre-construction prior to starting any construction activities and ongoing throughout pre-construction and construction

**MONITORING:**

*Implementation:*

- Update recording of GSI activities and grievance redress actions as they occur

*Reporting:*

- Monthly in CESMP update

**RESPONSIBILITY**

**MANAGEMENT MEASURE:**

*Implementation:* Contractor  
*Oversight:* Engineer

**MONITORING:**

*Implementation:* Contractor  
*Reporting:* Contractor  
*Oversight:* Engineer

### Management Measure AWPP - 3: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment

POTENTIAL IMPACT
<p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>• Sexual harassment on construction sites and in temporary construction facilities and project-affected communities</li> <li>• Trafficking in persons within and outside the project</li> <li>• Gender-based violence on construction sites and in temporary construction facilities and project-affected communities</li> </ul>
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• MCC Counter-Trafficking in Persons Policy (C-TIP Policy) <ul style="list-style-type: none"> <li>◦ States, "Trafficking in Persons" means (a) Sex trafficking in which a commercial sex act is induced by force, fraud, or coercion, or in which the person induced to perform such act has not attained 18 years of age; (b) The recruitment, harboring, transportation, provision, or obtaining of a person for labor or services, through the use of force, fraud, or coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery."</li> <li>◦ Adopts "a zero-tolerance policy to TIP and prohibits "The Contractor, the Contractor's Personnel, any Subcontractor or supplier, or any of their respective personnel, or any agent or affiliate of any of the forgoing shall not engage in any form of Trafficking in Persons during the period of performance of any contract..."</li> <li>◦ Requires each Contractor to "acknowledge that engaging in such activities is cause for suspension or termination of employment or of the Contract" and specifies remedies that the MCA Entity will apply once a TIP incident has been confirmed.</li> </ul> </li> <li>• Mongolian Law on Promotion of Gender Equality <ul style="list-style-type: none"> <li>◦ Requires the employer to incorporate into the organization's internal procedures, specific norms for prevention of sexual harassment in a workplace and the redress of such complaints. It also requires that the organization design and conduct a program of training and retraining geared toward creating a working environment free from sexual harassment, and report on its impact in a transparent manner.</li> </ul> </li> <li>• Mongolian Law to Combat Human Trafficking <ul style="list-style-type: none"> <li>◦ The law regulates relations with respect to the prevention and suppression of trafficking in persons, elimination of the causes of trafficking, and protection of victims' rights.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• To prevent incidence of trafficking of persons for sex by project employees</li> <li>• To ensure that the Contractor and its Sub-Contractors do not employ trafficked labor and to minimize the risks of trafficking of foreign workers to project sites</li> <li>• To prevent sexual harassment at all construction sites and temporary construction facilities</li> <li>• To prevent Contractor and worker involvement in sexual harassment in project-affected communities and among members of stakeholder organizations in the workplace</li> <li>• To prevent incidences of gender-based violence involving workers</li> </ul>
MANAGEMENT MEASURE
<b>Counter-Trafficking in Persons, Gender-Based Violence and Sexual Harassment</b>

The Contractor shall ensure that foreign workers on work sites or in labor camps are aware 1) of the risks of cultural conflict and of becoming victims of gender-based violence, sexual harassment and abuse, discrimination, trafficking in persons and 2) the legal and contractual remedies against such behavior. This information shall be provided in workers' induction packages, by holding an orientation before workers start on site, and by delivering a training twice a year.

#### *Counter Trafficking in Persons (C-TIP)*

- The Contractor shall prepare and submit for the Engineer's written approval a Counter-Trafficking in Persons Response Plan (TIP Response Plan), and the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure all employees are informed of expectations of behavior as per the Worker Behavior Code of Conduct and the penalties for proven infringements.
  - The Counter-Trafficking in Persons Response Plan shall Address the specific TIP risks identified in the ESIA, including withholding of foreign workers' passports and commercial sex with minors,
  - Designate a single responsible person who will notify the Engineer and MCA-Mongolia within 24 hours of an alleged incident and implement any investigation.
  - Specify when to contact legal authorities, list UB city officials, national government offices, and NGO organizations that address TIP, and state how the Contractor will deal with them in the case of a TIP incident.
  - Include mechanisms to ensure confidentiality of any TIP survivors and to refer them to law enforcement and/or supportive services if they wish.
- The Contractor shall develop, as part of its TIP Response Plan, an anonymous mechanism for workers and community members to report suspected TIP incidents to the Engineer and to MCA-Mongolia, and this must be separate from the project grievance mechanism.
- The Counter-Trafficking in Persons Response Plan shall be:
  - Consistent with the Mongolian Law on Labor, Promotion of Gender Equality, and combatting Human Trafficking
  - Compliant with the MCC Counter-Trafficking in Persons Policy
  - Coordinated and agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer
- The Counter-Trafficking in Persons Response Plan shall specifically prohibit:
  - Procuring minors for sex
  - Transporting non-employee individuals in company vehicles
- The Contractor is strongly encouraged to engage the Centre for Gender Equality or other similarly qualified and experienced organization to develop its TIP Response Plan, its anonymous reporting mechanism, its worker training, and its C-TIP content for community meetings
- The Contractor shall design and deliver twice yearly C-TIP training modules to all staff, sub-contractors, and service providers on the prevention of TIP and the Contractor's TIP Response Plan, following minimum content in MCA-Mongolia's Social and Gender Integration Plan (SGIP).
  - C-TIP training sessions must be delivered to all employees within one month of starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Information about the Contractor's zero-tolerance policy and TIP Response Plan shall be included in all community meetings and the Plan shall be provided in Mongolian, in whole, to project-affected khoroo and District governments.

#### *Gender-Based Violence*

- The Contractor shall adopt a policy of zero-tolerance for gender-based violence and address any complaints of gender-based violence against its workers or committed by its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
- The Contractor shall notify the Engineer and MCA-Mongolia within 24 hours of any alleged

incident of gender-based violence

- The Contractor shall deliver a gender-based violence prevention training to all staff, sub-contractors, and service providers prior to all workers beginning on-site and thereafter at least twice each year.
  - The Contractor is strongly encouraged to engage a local, qualified, and experienced organization to develop the training.
  - The training shall minimally identify behavior that constitutes gender-based violence, address attitudes towards violence against women and lesbian, gay, bisexual, transgender, and queer people (LGBTQ), and identify relevant Mongolian laws and organizations addressing gender-based violence.
  - It shall also explain the workings and protections in the Contractor's grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ persons.
- Include in all community meetings information about the Contractor's zero-tolerance policy toward gender-based violence committed by or against its workers and procedures for reporting it and communicate this information in writing to project-affected khoroo and District governments.

#### *Sexual Harassment*

- The Contractor shall develop and submit to the Engineer an Anti-Sexual Harassment Policy prohibiting sexual harassment directed at Compact beneficiaries, partners, or stakeholders, MCA Entity employees, MCA Entity consultants, MCC personnel, or MCC consultants and including an Incident Reporting and Referral Plan.
  - The Policy and Plan must be in form and substance satisfactory to the MCA and MCC.
  - The Incident Reporting and Referral Plan shall include a confidential mechanism for workers and community members to report sexual harassment to the Engineer and to MCA-Mongolia, separately from the Grievance Redress Mechanism.
- Employers are required to have a protocol in their Workplace Grievance mechanism in which persons alleging harassment or violence will be protected from identification and from pressure from the Contractor or other workers to dismiss the complaint.
- The Contractor's grievance manager must notify the MCA-Mongolia or its representative's Social Safeguards Team and the Contractor's Social Safeguards Officer within 24 hours of any allegation of sexual harassment.
- The Contractor must have a contract with a suitably experienced organization, such as the Centre for Gender Equality, to provide an investigation leader to manage the investigation of complaints of sexual harassment.
- The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction.
- The Contractor shall design and deliver a sexual harassment prevention training to all staff, sub-contractors, and service providers, in accordance with the Contractor's Anti-Sexual Harassment Policy, recognizing MCC's Guidance to MCAs on Sexual Harassment.
  - Training shall be conducted within one month of workers starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Training shall address
    - Attitudes to and prevention of sexual harassment in the workplace
    - Workings and protections in the Contractor's internal grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ+ persons
    - Additional requirements for minimum training content can be found in MCA-Mongolia's Social and Gender Integration Plan (SGIP)
- Information about the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral plan shall be included in all community meetings and the Policy and Plan shall be

communicated in Mongolian, in whole, to project-affected khoroo and District governments.
LOCATIONS:
All construction sites and temporary construction facilities and project affected communities
<b>MONITORING</b>
<p>MCA-Mongolia or its representative's SST:</p> <ul style="list-style-type: none"> <li>• Monitor Contractor Counter-Trafficking in Persons Response Plan</li> <li>• Monitor Contractor performance related to gender-based violence requirements</li> <li>• Monitor Contractor's development and adherence to its Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> <li>• Participate in the Contractor's internal Grievance Redress Mechanisms in relation to any on allegations of sexual harassment and gender-based violence and monitor and document the process and outcomes, maintaining confidentiality of those reporting and victims and witnesses</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>• Maintain copies of all contracts or other agreements with organizations that provide services related to the development of C-TIP, GBV prevention, or prevention of sexual harassment policy, plans, training, or reporting mechanisms</li> <li>• Maintain records of workers' participation in required trainings, including the dates of trainings and which workers participated</li> <li>• Maintain records of all community meetings at which C-TIP, gender-based violence, and sexual harassment are addressed, including the dates and locations and a record of all questions, comments, and Contractor responses</li> <li>• Document all implementation of the results of Contractor's Counter-Trafficking in Persons Response Plan responsibilities</li> <li>• Document all complaints of sexual harassment and gender-based violence, maintaining confidentiality of witnesses and victims, and all implementation of the Sexual Harassment Incident Reporting and Referral Plan and interactions with law enforcement and other relevant response institutions and organizations</li> <li>• Grievance redress activities under the Contractor's internal grievance process</li> </ul>
LOCATIONS:
All construction sites and temporary construction facilities and project affected communities
INDICATORS AND SUCCESS CRITERIA:
<p>Indicators:</p> <ul style="list-style-type: none"> <li>• Content of the Contractor's TIP Response Plan</li> <li>• Content of the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> <li>• Number and content of trainings for all staff</li> <li>• Number of community meetings at which information presented covers the Contractor's policies on C-TIP, GBV, and sexual harassment and how to report suspected cases compared to the total number of Contractor-organized community meetings, disaggregated by location</li> <li>• Numbers of complaints and grievances brought alleging sexual harassment, gender-based violence or trafficking in persons</li> <li>• Number of required notifications of suspected TIP, GBV, and sexual harassment incidents compared to the number of complaints</li> <li>• Contracts or other agreements with specialized organizations to develop and deliver plans, policies, and training</li> </ul> <p>Success Criteria:</p>

### *Counter-trafficking in persons*

- Anonymous reporting mechanism for trafficking in persons is established prior to initiation of construction and functioning effectively for the duration of the construction
- The Contractor's TIP Response Plan is thorough, references the MCC C-TIP Policy and any guidance, provides a path to involve NGOs and specialized government staff, and includes clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.
- 100% of reported or suspected cases of TIP are dealt with in a timely, survivor centered manner, according to the TIP Response Plan.
- Effective reporting and management measures are developed are implemented and information about the measures are introduced to the employees and sub-contractors in toolbox sessions and by other means
- 100% of community meetings include reference to the zero-tolerance policy against TIP and to the Contractor's TIP Response Plan

### *Gender-based violence*

- Culture of unacceptability of gender-based violence and assaults on women and LGBTQ+ persons established via:
  - 100% of workers having participated in gender-based violence prevention training prior to beginning work on-site
  - The Contractor notifying the Engineer and MCA-Mongolia within 24 hours of 100% of any alleged incident of gender-based violence
  - Timely, confidential, and thorough dealing with complaints of gender-based violence and 100% implementation of zero-tolerance policy in confirmed cases
  - 100% of community meetings including reference to the zero-tolerance policy against gender-based violence and procedures for reporting it

### *Sexual harassment*

- The Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan are thorough, reference the Contract, aspects of the MCC Guidance to MCAs on Sexual Harassment, and Mongolian Law; provide a path to involve NGOs and specialized government staff; and include clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.
- 100% of employees and sub-contractors have taken the sexual harassment prevention training prior to on-site work
- All worker and community complaints about sexual harassment are
  - addressed confidentially
  - addressed in a timely manner and
  - resolved following the procedures in the Contractor's Sexual Harassment Incident Referral and Reporting plan
- After investigation, appropriate measures are taken against perpetrators of sexual harassment on the job site, in temporary facilities, and in surrounding communities

### REPORTING:

- Reports on measures to prevent and address counter-trafficking in persons, gender-based violence, and sexual harassment shall be included in project monthly reports
- Summarize activities related to counter-trafficking in persons, gender-based violence, and sexual harassment undertaken during each reporting period
- Specify any material deviations or non-compliances to this management measure, and any other issues of concern,
- Define activities planned during next reporting period

### SCHEDULE

#### MANAGEMENT MEASURE:

*Implementation:*

#### MONITORING:

*Implementation:*

<ul style="list-style-type: none"> <li>Initiated during pre-construction prior to starting any construction activities and ongoing throughout pre-construction and construction</li> </ul>	<ul style="list-style-type: none"> <li>Initiated during pre-construction prior to starting any construction activities and ongoing throughout pre-construction and construction</li> </ul>
<b>RESPONSIBILITY</b>	
<b>MANAGEMENT MEASURE:</b> <i>Implementation:</i> Contractor <i>Oversight:</i> Engineer	<b>MONITORING:</b> <i>Implementation:</i> Contractor <i>Oversight:</i> Engineer – MCA-Mongolia or its representative's Social Safeguards Team

## G.1.5 Health and Safety Management

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## G.1.6 Education, Training, Community Outreach and Grievance Redress

Incorporated in various management measures are requirements for education, training, and outreach. The overall goals of these requirements are to provide project employees with an understanding of the commitments included in those management measures and inherent in associated laws, regulations, and policies, and to provide the employees with an appreciation of their own accountability for maintaining mutually supportive relationships with local communities. All required training is to be provided as part of induction training (to provide general awareness) and job-specific training as necessary.

In addition to the management measure under this heading, the following management measures also specify training requirements:

- Management Measure AWPP - 1: Labor Management
- Management Measure AWPP - 2: Gender Integration and Social Inclusion (GSI)
- Management Measure AWPP - 3: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment

Together, these management measures comprise the Education, Training, and Community Outreach Plan.

### Management Measure AWPP - 4: Stakeholder Engagement, Community Consultation, and Grievance Redress

<b>POTENTIAL IMPACT</b>
Delays, increased grievances, political interference, and unnecessary pressure from uninformed groups resulting from lack of information and discussion/consultation
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b> Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>IFC Performance Standard 1</li> </ul>

- Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities
- Requires establishment of a grievance mechanism to receive and facilitate resolution of affected communities' concerns and grievances about environmental and social performance, and scaled to the risks and adverse impacts of the project and with the affected communities as its primary user.

#### OBJECTIVES

- Inform and involve all stakeholders
- Have in place a defined policy for dealing with external parties
- Foster positive relations and effective partnerships with local communities throughout project construction and operation
- Maximize the beneficial impact of the BWSE project on the affected communities

#### MANAGEMENT MEASURE

##### Stakeholder Engagement, Community Consultation, and Grievance Redress

The stakeholders and affected communities are to be informed of the construction activities, including implementation timeline and grievance redress procedure.

##### Stakeholder Engagement

- The Contractor will prepare and submit for the Engineer's written approval a Contractor's Stakeholder Engagement Plan, based on requirements described in Annex B of this ESMP
- At a minimum, the Contractor's Stakeholder Engagement Plan will document and specify:
  - Contractor's responsibilities and participation in community consultation, specifying:
    - A standard operating procedure agreed with MCA-Mongolia that governs how the Contractor will interact with local communities
    - How contacts with the communities are to be made and recorded, and reported to the SST for documenting in the Stakeholder Engagement Matrix
    - How information is to be shared with the communities and other project partners
    - Protocols for conducting, recording, and disseminating the results of community consultation
  - Contractor's responsibilities and participation in the project Grievance Redress Mechanism, specifying how the Contractor will:
    - Take action to resolve low level grievances
    - Ensure all employees are trained to understand their role in the project Grievance Redress Mechanism
    - Participate in higher tier grievance resolution
    - Participation in the overall monitoring and evaluation of the project
- The Contractor will prepare and submit for the Engineer's written approval a project specific Grievance Redress Mechanism (GRM) based on requirement described in Annex A of this ESMP.

##### Community Consultation

- The MCA-Mongolia or its representatives will:
  - Introduce Contractor's officers to communities
  - Monitor and supervise Contractor contacts with communities and other stakeholders
  - Ensure that gender and social inclusion measures implemented by the Contractor are taken when planning meetings, and that thereby all sections of the community are equally informed and consulted
- In coordination with the MCA-Mongolia or its representative, the Contractor will:
  - Undertake community information dissemination, consultation, and outreach addressing the influx of migrant workers and the associated risks to the affected communities, the Grievance Redress Mechanism, and other issues that arise during consultation
  - Actively promote awareness and disclose information in affected communities on the following

<ul style="list-style-type: none"> <li>○ Purpose, nature, and scale of the project</li> <li>○ Duration of proposed project activities</li> <li>- Record results of Contractor's community consultation activities</li> <li>- Document all community consultation activities in the Stakeholder Engagement Matrix</li> </ul>	
<b>Grievance Redress</b> <ul style="list-style-type: none"> <li>• The MCA-Mongolia or its representative will: <ul style="list-style-type: none"> <li>- Supervise, and monitor participation by all parties</li> </ul> </li> <li>• The Contractor will: <ul style="list-style-type: none"> <li>- Develop and implement the Grievance Redress Mechanism consistent with Annex A of this ESMP.</li> <li>- Designate the Contractor's Social Safeguards Officer or other officer as responsible for collaborating with the project Grievance Redress Mechanism</li> <li>- Document all grievance redress actions</li> <li>- Report on the Grievance Redress Mechanism to the Engineer</li> </ul> </li> </ul>	
<b>LOCATIONS:</b> All construction sites and temporary construction facilities and project affected communities	
<b>MONITORING</b>	
<b>MCA-Mongolia or its representative</b> <ul style="list-style-type: none"> <li>• Monitor Contractor contacts with stakeholders and communities</li> <li>• Monitor participation by all parties in Grievance Redress Mechanism</li> </ul>	
<b>Contractor</b> <ul style="list-style-type: none"> <li>• Document all Contractor's stakeholder engagement and consultation activities</li> <li>• Document all grievance redress activities under the Grievance Redress Mechanism</li> </ul>	
<b>LOCATIONS:</b> All construction sites and temporary construction facilities and project affected communities	
<b>INDICATORS AND SUCCESS CRITERIA:</b>

<b>RESPONSIBILITY</b>	
MANAGEMENT MEASURE:	MONITORING:
<p><i>Implementation:</i> Contractor</p> <p><i>Oversight:</i> MCA-Mongolia or its representative</p>	<p><i>Implementation:</i> Contractor</p> <p><i>Reporting:</i> Contractor</p> <p><i>Oversight:</i> MCA-Mongolia or its representative</p>

### G.1.7 Risk Control and Emergency Response

The Risk Control and Emergency Response Plan references procedures specified in the management measures in the preceding plans that are pertinent to 1) controlling risks and 2) responding to emergencies. Such risks and emergencies include, for example, fuel spills and encountering previously unidentified cultural heritage resources, as well as incidents involving sexual harassment, human trafficking, and gender-based violence.

Due to the broad scope of the Risk Control and Emergency Response Plan, effectively the plan incorporates by reference the procedures specified in the management measures in all preceding plans for this project phase.

### G.1.8 Monitoring and Verification, and Maintenance Actions

This Monitoring and Verification, and Maintenance Actions Plan scopes the use of an adaptive approach to:

1. Verify that the management measures in the preceding plans are implemented, and that they are effective and sufficient
2. Revise those management measures that prove ineffective or insufficient

This approach acknowledges the risk and uncertainty of environmental and social management and fosters targeted modification of management measures to correct performance and outcomes. It will be executed as a continuous, iterative process by which the consequences of all management actions are systematically evaluated and, as needed, specific measures are modified in response to a determination that their forecasted outcomes will not meet requirements. As needed, this process of systematically evaluating the performance of the management measures and modifying the management measures to achieve the required outcomes, as well as the respective responsibilities of MCA-Mongolia or its representative and the Contractor, will extend into the construction phase.

In the preceding plans, indicators and success criteria are designated for each management measure. For each management measure, MCA-Mongolia or its representative, in its oversight capacity, will determine whether progress toward the designated success criteria is sufficient and will document its determination. If progress decidedly fails to meet iterative requirements, MCA-Mongolia or its representative will inform the Contractor of the need to formulate a management measure-specific adaptive maintenance action to implement midcourse corrections. In

coordination with the Contractor, MCA-Mongolia or its representative will reformulate the management measure to foster meeting the success criteria, incorporating as applicable operational or structural changes, and considering the cost effectiveness of incorporating the changes. The scope of most management measures likely will remain fairly stable; whereas, it is expected that some methods will be added, modified, or dropped over the implementation timeline of some management measures.

With the prior approval of MCA-Mongolia, the Contractor will implement and monitor the revised management measure, and MCA-Mongolia or its representative will provide oversight.

## G.2 Construction Phase

### G.2.1 Responsibilities During Construction

#### MCA-Mongolia

MCA-Mongolia or its representative and the Engineer will be responsible for oversight of the construction-related management measures and monitoring specified in the ESMP. Oversight will be accomplished by MCA-Mongolia or its representative via a combination of regular visits to the construction sites and on-site supervision of management and monitoring activities. MCA-Mongolia or its representative will inform and coordinate with all applicable stakeholders regarding their corresponding mandates under or in relation to the ESMP. MCA-Mongolia or its representative will establish a Social Safeguards Team (SST) to coordinate with the Contractor during the pre-construction and construction phases in implementing, supervising, reporting, and follow-up actions with regard to the ESMP.

#### Contractor

Unless otherwise specified for individual management measures, the construction contracting firm performing the work, the **Contractor**, will be fully responsible for implementing and monitoring all construction-related management measures specified in the ESMP—together with the conditions and procedures specified in Section V, Works Requirements of the Construction Contract Documents. The Contractor will read the ESMP, consider it in its entirety, and comply with all aspects of the ESMP that pertain to implementing and monitoring construction-related environmental and social management.

The Contractor will abide by the requirements of this ESMP, which is appended to and is a part of the Contract. The Contractor will take all necessary measures and precautions to ensure that the execution of the works and all associated operations on site or off site are carried out in conformity with statutory and regulatory environmental and social requirements of the Government of Mongolia, the MCC Environmental Guidelines, the IFC Performance Standards, and the technical specifications, where the more stringent will apply. The Contractor will take all measures and precautions to avoid any nuisance or disturbance arising from the execution of project activities. Wherever possible, this will be achieved by avoidance of the impact at the source rather than mitigating an impact after it has been expressed.

The Contractor will designate an Environmental and Social Performance Manager. This individual(s) will have knowledge of relevant Mongolian, IFC, and Millennium Challenge Corporation standards and regulations, and knowledge of environmental and social issues that include, but are not limited to, environmental management, waste management, gender and social inclusion, cultural resources, and health and safety management.

This individual(s) will be responsible to:

- Work closely with MCA-Mongolia or its representative to guide the Contractor's thorough understanding of the mitigation and monitoring requirements
- Lead the Contractor's work related to implementing environmental and social management measures and associated reporting requirements
- Work closely with MCA-Mongolia or its representative to incorporate or modify management measures and monitoring actions to reflect on-site field conditions, as needed, with the approval of the Engineer

The Contractor, while in possession of the construction sites, will be responsible for the safety measures undertaken in accordance with the Technical Specifications to protect the workforce of the Contractor's own staff as well as the Engineer's and MCA-Mongolia or its representative supervision staff. The Contractor will conduct in this respect safety induction courses for all personnel involved with the works and who are required to supervise any activity prior to their attending any part of the works. Additional training is required to meet MCC social policy requirements as per the:

- Labor Management Plan
- Gender Integration and Social Inclusion Plan
- Counter-Trafficking in Persons Response Plan
- Stakeholder Engagement Plan
- Construction Camp and Temporary Facilities Management Plan
- Cultural Heritage Training Plan
- Managing external grievances as part of the project GRM

The Contractor will act responsibly to provide notification of the Contractor's schedule to enable MCA-Mongolia or its representative to carry out its responsibilities. The Contractor will be required to provide verbal and written updates to MCA-Mongolia or its representative on a regular basis indicating percent achievement of the construction-related management measures specified in the ESMP. On a monthly basis, as part of the Contractor's monthly progress report, the Contractor will submit an ESMP update that will report the status of all environmental and social compliance activities and actions taken by the Contractor.

## G.2.2 Environmental Management

### Management Measure AWPP - 5: Emergency Preparedness and Response

POTENTIAL IMPACT
Accidents, natural disaster, or sabotage that occur during construction and risk jeopardizing worker and public health and safety, and the environment
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>• Mongolian Law on Environmental Protection <ul style="list-style-type: none"> <li>- Requires business entities eliminating or suspending their activities if they adversely affect the environment in breach of environmental legislation, standards and permissible maximum levels.</li> </ul> </li> <li>• Mongolian Law on Disaster Protection <ul style="list-style-type: none"> <li>- Requires establishing management for disaster protection service, staff and specialized unit and to organize their training and preparedness.</li> </ul> </li> <li>• Mongolian Law on Fire Safety <ul style="list-style-type: none"> <li>- Requires ensuring the readiness of fire protection equipment and training their employees.</li> </ul> </li> <li>• Mongolian Law on Environmental Impact Assessment <ul style="list-style-type: none"> <li>- Requires preparing a report presenting the findings of the detailed environmental impact assessment and develop an environmental management plan.</li> </ul> </li> </ul>

<ul style="list-style-type: none"> <li>• Mongolian Law on Labor Safety and Hygiene</li> <li>- Requires employees attending short term training on labor safety and hygiene in compliance with procedures approved by the state central administrative organization in charge of labor issues and acquire knowledge and training.</li> <li>• Mongolian Criminal Code</li> <li>- Requires providing an emergency aid to the injured, to report to the relevant authority or official after having caused.</li> <li>• IFC Performance Standards 1, 3, and 4</li> <li>- Requires that emergency preparedness and response activities will be periodically reviewed and revised, as necessary, to reflect changing conditions.</li> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning</li> <li>- Provides guidance on cleanup of spill and releases of oil, fuel, lubricants, hydraulic fluids.</li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>• Avoid, minimize, and effectively respond to emergency situations and resulting adverse impacts to the environment and communities associated with accidents, natural disasters, or sabotage</li> <li>• Effectively and efficiently respond to hazardous material spills so as to minimize their human health, safety, and environmental impacts</li> </ul>
<b>MANAGEMENT MEASURE</b>
<p><b>Emergency Preparedness and Response</b></p> <p>The Contractor will:</p> <ul style="list-style-type: none"> <li>• Fully comply with the requirements of this management measure</li> <li>• Provide emergency preparedness and response training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the Contractor’s site-specific Emergency Preparedness and Response Plan, to all employees and subcontractors at the time of their induction and annually thereafter</li> <li>• Prepare and submit for the Engineer’s written approval a site-specific Emergency Preparedness and Response Plan that specifies preventive measures and response strategies the Contractor will implement in case of accidents, natural disasters, or sabotage to protect worker and public health and safety, and the environment. The requirements of the Plan are detailed below.</li> </ul> <p><b>Hazardous Materials Management</b></p> <ul style="list-style-type: none"> <li>• Obtain from the appropriate Mongolian authorities all permits for the use and handling of hazardous materials</li> <li>• Develop prioritized material-specific handling procedures and training requirements as necessary according to risk</li> <li>• Assign an officer to manage and advise on hazardous materials management</li> </ul> <p><i>Handling</i></p> <ul style="list-style-type: none"> <li>• Nominate all equipment used to transfer hazardous materials for approval by the Engineer to assess that control measures are sufficient</li> <li>• Provide spill kits, protective equipment, and other necessary equipment wherever hazardous materials are stored or used in significant quantities</li> <li>• Provide and require use of personal protective equipment (PPE) and fire protection equipment at all times when handling hazardous materials, as specified in the relevant material safety data sheets (MSDS)</li> <li>• Avoid handling and do not store hazardous materials in close proximity to drainage systems, waterways, or wells</li> </ul> <p><i>Transport</i></p> <ul style="list-style-type: none"> <li>• Nominate all haulers used to transport hazardous materials for approval by the Engineer to assess that they are appropriately qualified to transport and handle hazardous materials</li> </ul>

- Nominate all containers used to transport hazardous materials for approval by the Engineer to assess that control measures are sufficient
- Provide and require use of fire extinguishers, fire prevention materials, and spill prevention materials appropriate for the hazardous materials being transported
- Properly secure containers containing hazardous materials prior to transport
- Properly mark, label, and placard containers and trucks in accordance with the MSDS
- Maintain chemical manifests in accordance with Mongolian regulations

#### *Equipment Use and Maintenance*

- Maintain oil-filled electrical appliances in good and fire-resistant condition
- Undertake all planned equipment, plant, and vehicle maintenance in designated service areas with suitable containment to prevent contamination of the environment
- Place drip trays under all stationary equipment that use fuel, oil, or lubricants that are not self-contained (including, but not limited to, generators, mobile lighting towers, pumps)
- Equip tanks and machinery with measurement devices and overflow protection (e.g., flow and level meters, relief valves, overflow protection valves, and emergency shutoff)

#### **Spill Response Procedure**

- Contractor employees are responsible for verbally reporting all spills to their immediate supervisor.
- Supervisors will then coordinate the spill response process and report the spill as an environmental incident to the Engineer.

#### *Spill Response Kits*

- Supervisors will clearly label and store spill response kits in locations that will facilitate a prompt response to spills
- Spill response kits in all work areas will contain the following equipment:
  - Shovel
  - 2 x respiratory masks
  - Absorbent material (pads and socks)
  - 2 x goggles
  - 60-liter sealable container
  - 2 x PVC gloves
  - Jug granular absorbent
  - Red wheelie bin
- Spill response kits will be carried in mobile machinery where a significant spill risk is identified with its operation. The contents of these spill kits will be specific to the risks presented from the mobile machinery and will be adequate and appropriate for the materials being transported.
- Where there are significant spill risks apparent outside of workshops or designated hazardous material storage areas, spill response equipment will be specific to the risks posed.

#### *Control of Hazardous Material Spills*

- The health and safety of employees, subcontractors, and bystanders will be considered prior to initiating the spill response process.
- Personnel considered at risk of harm in the event of a spill will be evacuated from the spill impact area by the supervisor in charge of the work area.
- If the spill presents an emergency risk to bystanders or the environment, the site emergency response team will be notified immediately of this situation by the individual who identifies the risk.
- If safe to do so, trained individuals will attempt to control the spill at the source and remove all sources of heat and ignition.
- Spills will then be reported verbally to the immediate supervisor, who will arrange for spill containment and cleanup to occur.
- The supervisor will notify the Engineer of the spill details to enable advice to be provided and statutory reporting processes to be initiated.

#### *Containment and Clean Up of Hydrocarbons*

- Contain the extent of the spill by using absorbent material around the perimeter of the spill or earthen bunds if outside of designated workshops or storage areas.
- Excess hydrocarbons may be soaked up using absorbent materials, including dirt, or removed by use of a vacuum truck if the spill is present as free product or is on water.
- Prevent hydrocarbons entering drainage systems and waterways. If hydrocarbons do enter drainage systems or waterways, these should be dammed or have booms placed in them to minimize the spread of hydrocarbons.
- Waste material will be disposed of appropriately:
  - Absorbent material, booms, etc. will be placed into designated bins.
  - Contaminated soil and water will be removed and stored in a designated area as advised by the Engineer.

#### *Containment and Clean Up of Sewage*

- Contain the spill with sand or earth to prevent it entering drainage systems and waterways.
- Calcium hypochlorite powder will be spread around the site for spills likely to be encountered by personnel.
- Any wastewater that enters waterways or drainage systems will be disinfected with the use of calcium hypochlorite powder.
- Wastewater then will be removed by use of a vacuum truck and taken to a waste treatment facility.
- Remaining water and solids will be disinfected using calcium hypochlorite powder.

#### *Containment and Clean Up of Chemicals*

- Contain the extent of the spill using sand, earth, sawdust, or other inert material to prevent it entering drainage systems and waterways.
- Chemicals clean up may vary depending on the chemical type.
- General purpose spill kit supplies, instead of oil-absorbent supplies, will be used.
- Collect recoverable product, if possible, and dispose of at an approved disposal site or facility in accordance with guidance provided by the Engineer.

#### *Containment and Clean Up of Battery Acid*

- Contain the spill and neutralize with a basic substance such as sodium bicarbonate in accordance with guidance provided by the Engineer.
- Collect recoverable product and neutralize with sodium bicarbonate in accordance with guidance provided by the Engineer.
- Dispose of with process water on site.

#### *Follow-up Sampling, Storage, and Treatment*

- For spills rated as significant risk on incident reporting, quality of cleanup work will be determined by follow-up sampling of contamination-receiving environment and compared against the Mongolian environmental standards on permissible levels of pollutants in air, water, and soil.
- If any exceedance of pollutant permissible levels is noted, cleanup work will be considered as inadequate and further cleanup will be required.
- Follow-up sampling will be carried for all spills to evaluate reporting requirements to the Engineer.
- Hydrocarbon contaminated soils will be excavated and placed within a dedicated area for storage and treatment.

#### **Emergency Preparedness and Response Plan**

- Prepare and submit for the Engineer's written approval a site-specific Emergency Preparedness and Response Plan and associated procedures that, as a minimum:
  - Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
  - Complies with Construction Contract Documents Section V, Works Requirements, Section 01030 Special Requirements, Paragraph 1.04.D Emergency Action Plan

<ul style="list-style-type: none"> <li>- Specifies: <ul style="list-style-type: none"> <li>o Site-specific preventive measures and response strategies the Contractor will implement in case of accidents, natural disasters, or sabotage to protect worker and public health and safety, and the environment</li> <li>o Potential emergencies and key areas prone to emergency situations</li> <li>o Existing emergency response structures and capacities in the respective project areas—i.e., police, fire brigades, paramedics / ambulances, hospitals, etc.</li> <li>o Actions to be taken prior to an emergency—i.e., preventive and preparatory measures</li> <li>o Actions to be taken during an emergency—i.e., response measures</li> <li>o Actions to be taken after an emergency—i.e., recovery and assessment measures</li> <li>o Contact lists for emergency situations</li> <li>o Description of collaboration mechanisms of the project's emergency preparedness and response teams with existing emergency response structures in the respective project areas</li> </ul> </li> <li>- Assigns roles and responsibilities for emergency preparedness and response</li> <li>• Post copies of the Plan and the list of emergency contact numbers in highly visible locations within the construction sites and temporary facilities</li> <li>• In case of any accidents, the Contractor will immediately undertake the procedures contained within the Plan that complies with From IFB sub clause 4.8 safety procedures: "The Contractor shall notify the Engineer, the Employer, and MCC within 24 hours or as soon as reasonably possible after the occurrence of any accident which has resulted in damage or loss of property, disability or loss of human life, or which has or which could reasonably be foreseen to have a material impact on the environment and shall submit to the Engineer, the Employer, and MCC no later than 7 days after the occurrence of such an event, a summary report thereof</li> </ul>

### Management Measure AWPP - 6: Mongolian Marmot Protection and Habitat Restoration

POTENTIAL IMPACT
Disturbance of endangered Mongolia marmot ( <i>Marmota sibirica</i> ) and loss and disturbance of marmot habitat
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b> <ul style="list-style-type: none"> <li>Mongolian Law on Environmental Protection               <ul style="list-style-type: none"> <li>Requires researching and establishing the potential for State and regional development, the restoration, breeding and raising of endangered animals, protection of soil, water, and air, and for humans to live in a healthy.</li> </ul> </li> <li>Mongolian Law on Fauna               <ul style="list-style-type: none"> <li>Requires the approval of the government based on the conclusions of an environmental impact assessment of the construction of industrial plants, power stations within the territory of extremely rare fauna.</li> </ul> </li> <li>IFC Performance Standard 6               <ul style="list-style-type: none"> <li>Prohibits implementing any activities that leads to a net reduction in the national/regional population of any Critically Endangered or Endangered species over a reasonable period.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>Minimize disturbance of Mongolian marmots</li> <li>Habitat restoration to achieve a net gain in Mongolian marmot habitat</li> </ul>
MANAGEMENT MEASURE
<b>Mongolian Marmot Protection and Habitat Restoration</b>  <b>Protection and Habitat Restoration</b> MCA-Mongolia will, with reference to the figure below: <ul style="list-style-type: none"> <li>Designate construction-phase marmot protection zone extending a minimum of 200 meters from the outermost flight burrows</li> <li>Prohibit the operation of any motorized vehicles, including cars and all-terrain vehicles, and restrict foot traffic within construction-phase marmot protection zone by MCA-Mongolia, Engineer, Contractor, and subcontractor project personnel</li> <li>Develop and implement marmot protection training to be required of all construction-phase MCA-Mongolia, Engineer, Contractor, and subcontractor project personnel and visitors to project facilities and construction sites in the vicinity of the AWPP</li> </ul> The Contactor will be responsible for: <ul style="list-style-type: none"> <li>The design and construction of the following:               <ul style="list-style-type: none"> <li>Approximately 500-meter long, 2-meter high earthen berm between existing marmot burrow clusters and the proposed AWPP, located no closer than 100 meters from the flight burrows and planted with native shrubs and perennial plants, to limit disturbance of marmots</li> </ul> </li> </ul> MCA-Mongolia will employ or contract an experienced biodiversity specialist to develop and implement the following Mongolian marmot construction-phase monitoring and long-term protection program <b>Construction-Phase Monitoring and Long-term Protection</b> Prepare, submit, and implement Mongolian Marmot Monitoring and Evaluation Plan for the Engineer's written approval, to monitor and evaluate Mongolian marmot population density and structure, reproduction, and mortality in the vicinity of the proposed AWPP and replacement access road and

pedestrian path to the Monument to Terror Victims, and existing and proposed walking trail to the sacred ovoo on Songinokhairkhan Mountain. The plan will specify roles and responsibilities for marmot monitoring and evaluation.

The plan may include but not be limited to the following, as determined by the biodiversity specialist and approved by the Engineer:

*Mapping*

- Burrow clusters
- Family and individual home ranges
- Vegetation
- BWSE-related and other human encroachment

*Monitoring activities*

- Use of drone equipped with thermal imaging camera
- Direct observation aided by binoculars and spotting scopes
- Use of automatic camera trap
- Capture with or without marking

*Monitoring parameters*

- Burrow cluster population
- Age of individuals
- Sex of individuals
- Home range size
- Number of families
- Family composition
- Number of pups
- Activity/Behavior
- Predation
- Survival and mortality
- Total population
- Age and sex distribution of population

Observations are to be repeated during the morning and evening active periods.

Monitoring data for the selected parameters will be evaluated as construction, and operation and maintenance progress for changes attributed to loss of marmot habitat or disturbance of marmots. The monitoring and evaluation plan will specify impact indicators and impact criteria determined by the biodiversity specialist and approved by the Engineer.

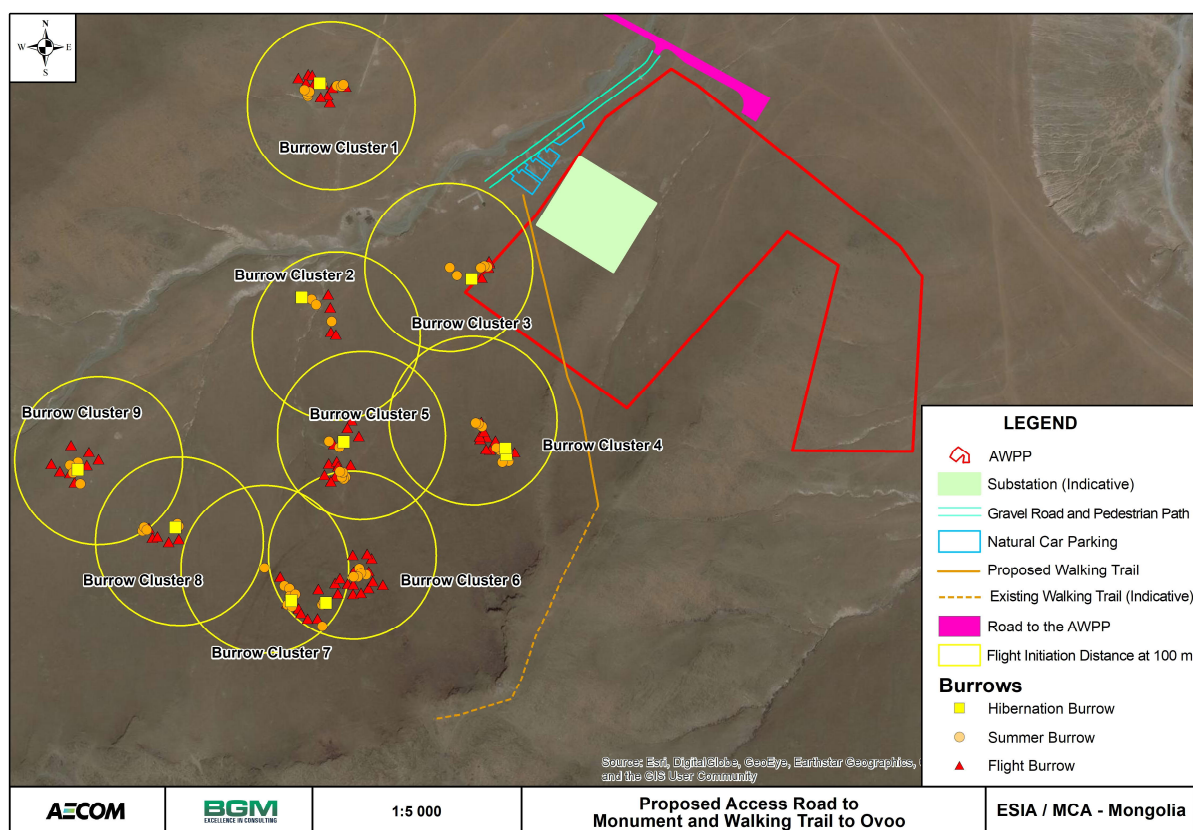

Exceedance of any of the impact criteria will trigger, ***independent of this management measure***, preparing, submitting, and implementing protective actions, in addition to those specified above, formulated to avoid, minimize, or offset the observed adverse impact. Such actions may include the following, as well as other measures recommended by the biodiversity specialist:

- Constructed buffers; e.g., vegetated earth berms
- Rock piles where marmots can watch for predators, thermoregulate, and dig burrows
- Spill protection measures
- Permanent Mongolian marmot protection zone
- Driving restrictions; e.g., prohibit or control off-road driving, set speed limits, restrict non-essential traffic to daytime
- Marmot protection and avoidance training
- Warning and interpretive signage
- Supplemental feeding to increase reproduction and survival, and attract marmots away from roads

The Contractor will be requested to provide a quotation to implement such actions identified by the biodiversity specialist should the impact criteria be triggered.

**LOCATIONS:**

Observed Mongolian marmot burrow clusters in the vicinity of the proposed AWPP and replacement access road and sidewalk to the Monument to Terror Victims and sacred ovoo on Songinokhairkhan

Mountain, as located on the following figure, and associated, nearby habitat supporting foraging, including pup-weaning, and dispersal of sub-adults including pup-weaning, and dispersal of sub-adults:

## MONITORING

Document submission and approval of plan

### LOCATIONS:

Observed Mongolian marmot burrow clusters in the vicinity of the proposed AWPP and replacement access road and sidewalk to the Monument to Terror Victims and sacred ovoo on Songinokhairkhan Mountain, as located on the above figure, and associated, nearby habitat supporting foraging, including pup-weaning, and dispersal of sub-adults including pup-weaning, and dispersal of sub-adults

### INDICATORS AND SUCCESS CRITERIA:

#### Indicators:

- Development and implementation of protection and habitat restoration measures
- Submission of construction-phase monitoring and long-term protection plan
- Collection and evaluation of Mongolian marmot population density and structure, reproduction, and mortality data
- Specific impact criteria and indicators specified in approved plan

#### Success Criteria:

- Monitoring and protection plan approval
- Identification of and timely response to changes attributed to loss of marmot habitat or disturbance of marmots

### REPORTING:

- Report communications and written approval of Engineer of Construction-Phase Monitoring and Long-Term Protection Plan
- Report monitoring activities and data evaluation findings
- Report impact criteria exceedances and recommended protective actions to be implemented
- Summarize other activities undertaken during reporting period

<ul style="list-style-type: none"> <li>Specify any material deviations or non-compliances to this management measure, and any other issues of concern</li> <li>Define activities planned during next reporting period</li> </ul>	
<b>SCHEDULE</b>	
<b>MANAGEMENT MEASURE:</b> <i>Implementation:</i> <ul style="list-style-type: none"> <li>Annual, beginning prior to construction mobilization and continuing throughout construction, commissioning, and contract operations period Year 1 and Year 2</li> <li>Late March to late September monitoring season, comprising four monitoring periods: <ul style="list-style-type: none"> <li>Late March/early April (post hibernation)</li> <li>Late June/early July (pups feeding outside burrows)</li> <li>Mid-August (newborn survival and mortality)</li> <li>Late September (pre hibernation)</li> </ul> </li> </ul>	<b>MONITORING:</b> <i>Implementation:</i> <ul style="list-style-type: none"> <li>Document communications and written approval of Engineer as they occur</li> </ul> <i>Reporting:</i> <ul style="list-style-type: none"> <li>Monthly in ESMP update</li> </ul>
<b>RESPONSIBILITY</b>	
<b>MANAGEMENT MEASURE:</b> <i>Implementation:</i> MCA-Mongolia and Biodiversity specialist employed by or contracted to MCA-Mongolia <i>Oversight:</i> MCA-Mongolia or its representative	<b>MONITORING:</b> <i>Implementation:</i> Biodiversity specialist <i>Reporting:</i> Biodiversity specialist and Contractor <i>Oversight:</i> MCA-Mongolia or its representative

## G.2.3 Waste Management

### Management Measure AWPP - 7: Waste Management

<b>POTENTIAL IMPACT</b>
Risks and adverse impacts of handling, storing, treating, and disposing of waste
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b> Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>Mongolian Law on Hazardous and Toxic Chemicals <ul style="list-style-type: none"> <li>Requires depositing the waste based on conclusion of the related professional organization to the place determined by the district governor.</li> </ul> </li> <li>Mongolian Law on Sanitation <ul style="list-style-type: none"> <li>Prohibits disposing waste in the places other than the specified points.</li> </ul> </li> <li>Mongolian Law on Waste <ul style="list-style-type: none"> <li>Prohibits establishing centralized waste disposal sites in urban settlement areas, water sanitary and protection zones and mining areas.</li> </ul> </li> <li>Government of Mongolia Resolution No. 135 of 2002 addressing the procedures of the classification, collection, packaging, transportation, treatment, storage, and disposal of hazardous waste</li> <li>Government of Mongolia Resolution No. 116 of 2018 addressing Articles 7.1.2 and 7.1.3 of the Law on Waste (repealed Government Resolution No. 135 of 2002).</li> </ul>

- Joint Order No. A-320/305 of Minister of Nature, Environment and Tourism and Minister of Health of 2011 addressing the procedures of the disposal of medical wastes
  - Requires providing personal protective equipment to the organization's waste management officer.
- Minister's Order No. 404 of 2006 of Ministry of Nature, Environment and Tourism addressing the procedure of the disposal and landfill of waste
- Minister's Order No. A/443 of 2018 addressing Articles 4.4.1, 4.4.2, 4.4.3 of the Law on Hygiene (repealed Minister's Order No. 404 of 2006).
- IFC Performance Standards 3 and 4
  - Encourages recovering and reusing waste in a manner that is safe for human health and the environment.
- IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning
  - Provides guidance on management of non-hazardous solid waste generated at construction sites and associated facilities, hazardous materials, and wastewater discharges.

#### OBJECTIVES

- Effectively manage waste by minimizing waste generation and safely handling, storing, treating, and disposing of generated wastes

#### MANAGEMENT MEASURE

##### Waste Management

The Contractor will:

- Comply with Construction Contract Documents Section V, Works Requirements, Section 01030 Special Requirements:
  - Paragraph 1.04.E Hazardous Waste Management Plan
  - Paragraph 1.14 Disposal of Excess Material
  - Paragraph 1.21 Disposal of Debris
- Comply with Construction Contract Documents Section V, Works Requirements, Section 01110 Environmental Protection Procedures:
  - Paragraph 3.04.I, requiring the disposal of all debris and excess material outside wetland or floodplain areas in an environmentally sound manner
  - Paragraph 3.05.A, prohibiting the use of burning at the project site for the disposal of refuse and debris
- Comply with Construction Contract Documents Section V, Works Requirements, Section 01610 Delivery, Storage and Handling:
  - Paragraph 1.05.C Storage and Protection
- Comply with Construction Contract Documents Section V, Works Requirements, Section 02100 Site Preparation:
  - Paragraph 1.07.D, requiring the legal disposal of all waste and surplus material
  - Paragraph 3.03 Disposal of Waste Materials
- Comply with Construction Contract Documents Section V, Works Requirements, Section 02210 Earth Excavation, Backfill, Fill and Grading:
  - Paragraph 3.11 Reuse and Disposal of Surplus Excavated Materials
- Fully comply with the requirements of this management measure
- Provide in storage locations and principle points of use material safety data sheets (MSDSs) for all stored materials in Mongolian, English, and any other languages as appropriate
- Provide 110%-capacity secondary containment or 25% of the capacity of all the total volume of the stored individual containers within the bund, whichever is larger, for all storage of liquid hazardous materials, including, but not limited to, waste oil and solvents
- Do not store waste oils for extended periods in underground sumps
- Empty and inspect regularly tanks and sumps for any signs of cracks or holes
  - Record findings of inspections
  - Repair any cracks or holes

- Record any repairs conducted
- Make available on site spill kits, protective equipment, and other necessary equipment where hazardous materials are handled, to clean and mitigate spills
- Locate appropriate first aid close to hazardous material storage areas, including, but not limited to, eye-wash, showers, and first aid kits
- Only transport hazardous materials using operators licensed and approved by the Engineer for the specific material
- Implement the following waste management hierarchy, in the following order of preference:
  - Waste avoidance and reduction at source
  - Waste reuse and recycling
  - Waste storage, treatment, and disposal to local, Mongolian, and international standards
- Classify all wastes according to the following and based on internationally accepted regulations, guidelines, definitions, and methodologies:
  - Mineral waste
  - Non-hazardous waste, including domestic waste and inert waste
  - Hazardous waste, including medical waste
  - Wastewater
- Segregate, securely contain, and monitor waste at the source of generation pending treatment, transport, or disposal
- Prohibit open burning of non-hazardous and hazardous solid waste
- Transfer recyclable wastes only to facilities operated by licensed recycling contractors, subject to assessment by the Engineer of the contractors and facilities
- Transfer non-hazardous waste, other than recyclable wastes, only to waste disposal facilities licensed in accordance with applicable Mongolian laws and regulations
- Sterilize medical waste by autoclave in 121°C for at least 20 minutes prior to transfer to disposal and a licensed facility
- Properly store on site all hazardous wastes for which there is not an engineered and approved treatment or disposal method available until a treatment and/or disposal route becomes available
- Maintain an inventory by location, specifying quantity per month and cumulative total, and detailing:
  - Wastes generated
  - Wastes sent for off-site recycling
  - Wastes subject to hazardous waste treatment
  - Wastes subject to non-hazardous waste disposal
  - Unrecyclable hazardous wastes stored
- Provide waste management training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the Contractor’s site-specific Waste Management Plan, to all employees and subcontractors at the time of their induction and annually thereafter

The Contractor will prepare and submit for the Engineer’s written approval a site-specific Waste Management Plan and associated procedures that, as a minimum:

- Affirms and executes the Contractor’s comprehensive commitment to the standards and requirements listed above and specified in the plan
- Assigns roles and responsibilities for waste management
- Disposition of hazardous wastes for which no engineered and approved treatment or disposal method is available

#### LOCATIONS:

All construction sites, construction camps, and temporary facilities where waste is generated, stored, treated, or disposed of

#### MONITORING

Document:

<ul style="list-style-type: none"> <li>Provision, maintenance, and/or updating of: <ul style="list-style-type: none"> <li>MSDSs</li> <li>Secondary containment capacity for all storage of liquid hazardous materials</li> <li>Tanks and sumps inspection records</li> <li>Spill kits</li> <li>First aid</li> <li>Waste inventory</li> <li>Waste management training</li> </ul> </li> <li>Submission and approval of site-specific Waste Management Plan</li> </ul>

## G.2.4 Social and Gender Inclusion

### Management Measure AWPP - 8: Labor Management

<b>POTENTIAL IMPACT</b>
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Professional management and conditions of labor</li> <li>Opportunities for local labor and supply of goods and services, and provision of local jobs with fair and competitive wages</li> <li>Women's short-term employment in construction and engineering-related work</li> <li>Potential alleviation of poverty in local area</li> <li>Reduction in child labor</li> <li>Improved grievance management in employment</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of forced labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b>
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Constitution of Mongolia             <ul style="list-style-type: none"> <li>Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>Mongolian Civil Code             <ul style="list-style-type: none"> <li>Requires providing office space, tools and equipment necessary to ensure employees' health.</li> </ul> </li> <li>Mongolian Law on Gender Equality             <ul style="list-style-type: none"> <li>Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>Mongolian Law on Labor             <ul style="list-style-type: none"> <li>Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>Prohibits employing children under the age of 16 or under 18 in dangerous industries, including construction</li> </ul> </li> <li>Mongolian Law on Minimum Wage             <ul style="list-style-type: none"> <li>Minimum wage is fixed by National Tripartite Committee on Labor and Social Consensus representatives.</li> </ul> </li> </ul>

- Mongolian Law on the Protection of the Rights of the Child
  - Prohibits employing children in any work that is likely to harm their health or morale, and exploiting or paying unjust wages to children
- Mongolian Law on Social Protection of Disabled Persons
  - Prohibits building any buildings and facilities that do not meet needs and requirements of persons with disabilities.
- Mongolian Law on Combating Human Trafficking
  - Requires regulating the workplace to ensure the implementation of the legislation on combating human trafficking, and if it is not specified, it shall be obliged to comply with the instructions, recommendations, statements and instructions given by the competent authorities and officials.
- Mongolian Law on Sending Labor Force Abroad and Receiving Labor Force and Specialists from Abroad
  - Regulates relations with respect to employment of a Mongolian citizen abroad and a foreign citizen in Mongolia, and protection of their rights and interests.
  - Reinforces provisions of the Constitution of Mongolia, Labor Law, Social Insurance Law, and other related legal acts, and legal status of a foreign citizen.
- IFC Performance Standard 2
  - Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.
  - Contractor will adopt and implement human resources policies and procedures appropriate to its size and workforce that set out its approach to managing workers consistent with the requirements of this performance standard and national law.
  - Contractor will provide workers with documented information that is clear and understandable regarding their rights under national labor and employment law and any applicable collective agreements, including their rights related to hours of work, wages, overtime, compensation, and benefits upon beginning the working relationship and when any material changes occur.
  - Contractor will not make employment decisions on the basis of personal characteristics unrelated to inherent job requirements. Contractor will base the employment relationship on the principle of equal opportunity and fair treatment, and will not discriminate with respect to any aspects of the employment relationship, such as recruitment and hiring, compensation (including wages and benefits), working conditions and terms of employment, access to training, job assignment, promotion, termination of employment or retirement, and disciplinary practices. Contractor will take measures to prevent and address harassment, intimidation, and/or exploitation, especially in regard to women. The principles of non-discrimination apply to migrant workers.
  - Prohibits employment of child labor.
- Millennium Challenge Corporation Counter-Trafficking in Persons Policy (C-TIP Policy)
  - Requires contractors to take a zero-tolerance policy with regard to human trafficking and to actively manage employment conditions to prevent exploitation of trafficking in persons and related activities workers by employers and specifies remedies that the MCA-Entity may take in response to confirmed cases of TIP.
- Millennium Challenge Account Social and Gender Integration Plan (SGIP)
  - Sets out guidelines for Contractors related to social risk mitigation measures in infrastructure, including making working conditions suitable for both male and female employees
  - Requires developing and implementing an employment plan that prioritizes using local labor particularly from the Area of Influence of the project
  - Sets a target to encourage contractors to employ as workers at least 30% women of all workers at each skill/occupational level

- Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates.
- Millennium Challenge Corporation Guidance Note to MCAs on Sexual Harassment
  - Requires that contractors are well-informed about existing anti-sexual harassment policies and procedures, and that contractors meet the requirements in the standard bidding documents.
  - Ministry of Construction and Urban Design (MCUD) Gender Responsiveness Policy
  - Calls for gender targets in employment via “international and domestic tenders, so that one gender should not be lower than 15 percent among workers, and 25 percent among decision makers.”
  - Ministry of Labor and Social Welfare Order (2016)
  - Expanded the types of hazardous work prohibited for children under the age of 18 to include construction
  - International Labor Organization fundamental conventions, and International Human Rights instruments and conventions

## OBJECTIVES

The Labor Management Plan ensures that contractors and their workers have clear expectations about the behaviors and conditions expected of the Contractor and all workers.

- Promote fair treatment, non-discrimination, and equal opportunity of workers
- Promote local labor opportunities and procurement from local suppliers
- Target women’s employment as 30% of all labor at each skill/occupational level
- Establish and maintain and improve a constructive worker-management relationship
- Protect workers, including vulnerable categories of workers such as children, migrant workers, workers engaged by third parties, and workers in the supply chain
- Avoid the use of forced labor or trafficked labor
- Maximize the beneficial impact of the project on the affected communities

## MANAGEMENT MEASURE

### Labor Management

The MCA-Mongolia or its representative’s Social Safeguards Team (SST) will:

- Encourage Contractor to employ local unskilled and semi-skilled labor, particularly youth and women, and to procure goods and services from local businesses and entrepreneurs
- Facilitate the Contractor’s cooperation with the local District Labor Offices
- Facilitate the Contractor’s publication of vacancies and procurements within affected communities
- Facilitate the Contractor’s holding of job fairs and procurement workshops within affected communities to support local applicants to apply for jobs and local businesses and entrepreneurs to bid
- Support local job applicants to apply, and local businesses and entrepreneurs to bid
- Gather names of interested workers from project affected households and through community information programs and consultation meetings
- Share the names of interested workers with District and Khoroo Labor Offices and Contractor
- Encourage Contractor to employ women at a rate of at least 30% of personnel at each skill/occupational level
- Facilitate Contractors’ engagement with relevant university engineering programs, technical and vocational education and training (TVET), and professional associations to 1) identify and recruit qualified job applicants and 2) establish internships and apprenticeships
- Encourage Contractor to employ socially excluded and vulnerable people

The Contractor will:

- Fully comply with the requirements of this management measure and related contract clauses
- Perform the work in accordance with relevant sections of the ESMP

### *Access to Employment*

The Contractor will:

- Publish vacancies (listing the required qualifications for all categories of employment) within project-affected communities and at District and khoroo offices and provide such information to the Engineer and during each community meeting. Ensure the exchange of information between Contractor and the local population on employment opportunities
- Publish and communicate employment opportunities listing the required qualifications for all categories of employment city-wide, and beyond in Mongolia, if the vacancies cannot be filled from local communities
- Ensure that a staff person responds to questions from the local population regarding employment and procurement opportunities
- Develop an employment forecast and a written recruitment strategy to: 1) encourage the employment of qualified individuals among the local population(s) in project construction and ancillary activities in all phases, with particular focus on women and youth, and disadvantaged groups; 2) target achieving women's employment as at least 30% of personnel at each skill/occupational level; and 3) provide training for local construction brigades on how to be effective contractors for local construction brigades
- Through the Contractor's Social Safeguards Officer, liaise with the MCA-Mongolia or its representative's SST and local labor offices to provide support with the job application process, encourage local employment (including women's employment), implement and publicize a job fair, consistent and transparent recruitment process
- In disseminating information on potential employment opportunities, take steps to consider ways in which to maximize outreach, using all forms of media that may be appropriate
- Ensure that all staff have written employment contracts specifying fair employment conditions and equal pay for equal work to men and women, and fulfilling all conditions specified under the Mongolian Law on Labor defining the contracts

The Contractor is encouraged to:

- Create pay bands for each category of worker to help equal pay for equal work

As feasible, the Contractor will:

- Develop and submit a plan for providing on-the-job training and skills transfer opportunities to the local labor force
- Engage with training, education, and professional organizations—such as Technical and Vocational Education and Training, Implementing Agency of the Ministry of Labor and Social Protections, Mongolian University of Science and Technology, and the Mongolian Builder's Association—to recruit qualified applicants, and provide apprenticeships and internships for students who study water engineering and relevant subjects at university

The Contractor shall note contract clauses on "Gender," "Engagement of Staff and Labor," "Foreign Personnel," "Prohibition of Forced or Compulsory Labor," "Prohibition of Harmful Child Labor," "Employment Records of Workers," and "Non-Discrimination and Equal Opportunity."

### *Local Procurement*

The Contractor will:

- Proactively procure goods and services from local businesses and entrepreneurs in Khan-Uul and Songinokhairkhan Districts and Ulaanbaatar, and members of targeted disadvantaged groups (e.g., women, people with disabilities), achieved through:
  - Publicizing procurements within the targeted geographical area or targeted group, for example at the District and khoroo offices and via notice boards, print media (newspapers, etc.), recruitment agencies, or job and career fairs
  - Publicizing and holding procurement workshops within the targeted geographical area or targeted group
  - Adding priority criteria for businesses and entrepreneurs in the targeted geographical area or members of the targeted group to the selection procedure
- In disseminating information on potential service procurement opportunities, take steps to maximize outreach, using all forms of media that may be appropriate

### *Workplace Environment*

The Contractor will:

- Establish, execute, and enforce a Worker Behavior Code of Conduct on which all employees will be briefed, that all employees are required to sign, and that mandates immediate dismissal for serious offences including sexual harassment, violence, or confirmed cases of engagement in trafficking in persons. The Code will specify:
  - Expectations of worker behavior, and penalties for transgression
  - MCC and Mongolian legal definitions of trafficking in persons (TIP), zero-tolerance for TIP, and remedies that the MCA Entity may take in response to confirmed cases of engagement of trafficking in persons
  - Zero-tolerance for gender-based violence
  - Compliance with the Contractor's Anti-Sexual Harassment Policy and notification of the Contractor's Sexual Harassment Incident Reporting and Referral Plan
  - Rights of employees to a grievance mechanism, holidays, and cultural and festival access
  - Conditions for work camps, shelter, water and sanitation, food, and security
  - The responsibility of all workers, regardless of their role or duration of employment, will be expected to review and acknowledge the Workers' Code of Conduct by signing the code sheet
  - The requirement to respect local customs and practices
- Establish and execute a worker's grievance redress procedure that:
  - Formalizes a system for receiving and managing internal complaints of sexual harassment, gender-based violence, or issues of trafficking persons (including engaging in commercial for sex with a person under 18 years of age)
  - Guarantees confidentiality to makers of allegations
  - Designate the Contractor's Social Safeguards Officer or other officer as responsible for collaborating with the human resources department on the grievance redress procedures
  - Refers to the Contractor's Sexual Harassment Incident Reporting and Referral Plan for allegations of sexual harassment
  - Specifies that the Contractor's zero-tolerance for gender-based violence addresses any complaints of gender-based violence against its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
  - In cases of discrimination against women or of allegations of sexual harassment or violence, requires that the Contractor's Social Safeguards Officer contact the MCA-Mongolia or its representative's SST to include them in the investigation and appoint a third party—such as a representative from an NGO such as the Centre for Gender Equality or equivalently qualified, experienced organization—to lead the investigation
- The Contractor shall note the contract clause on "Prohibition of Sexual Harassment"
- The Contractor shall note the contract clause on "Facilities for Staff and Labor" and provide suitable gender-segregated facilities to enable the safe employment of both men and women – e.g. Toilet facilities, changing facilities on all sites and enabling physical access to office accommodation for people with disabilities.

### *Training*

The Contractor will:

- Provide training to enhance the skills of employees using on-the-job training, internships, apprenticeships, and secondment to training programs such as Technical and Vocational Education and Training, etc.
- Mandate for all employees, before each worker starts work on the site, induction packages that include:
  - Employment rights and conditions, including non-discrimination and equal opportunity
  - The Contractor's responsibility to "adopt recruitment, hiring and retention practices that support the employment of women and staff from diverse backgrounds" per the contract clause on "Engagement of Staff and Labor," the Contractor's employment forecast and recruitment strategy, and the Contractor's Gender Integration and Social Inclusion Plan (described below)

- Gender-based violence
- Contractor's Anti-sexual Harassment Policy – including awareness of what constitutes sexual harassment, exploitation and abuse, and the Contractor's Sexual Harassment Incident Reporting and Referral Plan
- Using the internal Grievance Mechanism for allegations of gender-based discrimination
- Rights to have access to local festivals
- Cultural sensitivities, and social norms and practices in each area
- Expectations on avoiding poor relations between employees and local communities caused by behavior relating to alcohol, gambling, prostitution, illegal drug use, violence and sexual abuse of women, minors and lesbian, gay, bisexual, transgender, queer, and others (LGBTQ+) persons
- Countering the Trafficking in Persons Response Plan – awareness of responsibilities to counter the trafficking of people around the project area, the remedies that the Contractor and the MCA Entity may apply, and mechanisms for reporting suspected instances of TIP with the Contractor's TIP Response Plan
- Awareness of the possibilities of the transmission of HIV/AIDS and communicable illnesses and how to prevent HIV/AIDS transmission
- Undertake a series of employment and social plan inductions and employee awareness programs that:
  - All employees must attend at the commencement of employment and over the employment period twice yearly
  - Incorporate toolbox talks that include reinforcement of all training programs
- Commission training modules on gender integration and social inclusion topics for all employees at intervals agreed with the MCA-Mongolia or its representative's SST
- Require that the Social Safeguards Officer, together with the MCA-Mongolia or its representative's SST Community Liaison Officers, conduct awareness raising with workers on child labor issues in the local community as part of an ongoing community awareness program on social issues
  - These toolbox talks will include ways that workers can report suspected child labor to the District Children, Youth and Family Offices, and the MCA-Mongolia or its representative's Social Manager

#### *Site-specific Labor Management Plan*

The Contractor will prepare and submit for the Engineer's written approval a site-specific Labor Management Plan that:

- Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
- Includes the Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan and the Workers' Code of Conduct
- Is consistent and compliant with:
  - Mongolian Law on Labor
  - Relevant aspects of the Conditions of Contract, as well as the MCC Gender Policy and the MCA-Mongolia Social and Gender Integration Plan
  - The MCC Policy on Counter-Trafficking in Persons
- Assigns roles and responsibilities for labor management

#### LOCATIONS:

All construction sites and temporary construction facilities

#### **MONITORING**

MCA-Mongolia or its representative:

- Monitor implementation of the Contractor's Labor Management Plan and Worker Behavior Code of Conduct, including prohibitions against trafficking in persons, gender-based violence, sexual harassment, and child labor

<ul style="list-style-type: none"> <li>• Monitor implementation of the Contractor's employment recruitment strategies and assist Contractor to reach potential workers among local women, youth, and people from disadvantaged groups</li> <li>• Monitor participation by all parties in the Contractor's internal grievance redress procedure and external project Grievance Redress Mechanisms</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>• Record results of Contractor's labor management responsibilities, with all data and statistics gender disaggregated by age and gender, following, at a minimum, the contract clause on "Employment Records of Workers" and recording, for each worker hiring and leaving dates, along with duration (days) of employment and skills/occupational category and home location of workers (project-affected district/khoroos, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia)</li> <li>• Document implementation of the requirements above for the Labor Management Plan, including all recruitment activities</li> <li>• Document Worker Behavior Code of Conduct infringements and outcomes, and internal grievance redress activities under the Contractor's internal grievance process</li> </ul>
LOCATIONS:
All construction sites and temporary construction facilities
INDICATORS AND SUCCESS CRITERIA:
<p>Indicators:</p> <ul style="list-style-type: none"> <li>• Required plans written, approved, and implemented</li> <li>• Number, content, and outcome of employment against home location (project-affected district/khoroos, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia), gender, and age brackets (under 30, 30 to 49, 50 and over), and total days of employment for each individual worker</li> <li>• Use of written contracts with defined pay scales by employment activity</li> <li>• Employment recruitment activities, interactions with local employment offices and communities, professional associations, TVET centers</li> <li>• Percent of all employees that are workers from project-affected districts/khoroos and elsewhere in UB/Mongolia</li> <li>• Percent of all employees that are women, disaggregated by skill/occupational level</li> <li>• Records of attendance and dates of all trainings and toolbox talks delivered on social and gender topics</li> <li>• Numbers of grievance redress actions, the number of days necessary to resolve them, and their outcomes</li> </ul> <p>Success Criteria:</p> <ul style="list-style-type: none"> <li>• Successful outcome of: <ul style="list-style-type: none"> <li>○ 100% of contractor and employees have attended the child labor toolbox session on identifying and reporting child labor incidents</li> <li>○ Zero tolerance of child labor – no child labor on site or with any contract activity</li> <li>○ Any cases of child or forced labor are reported and dealt with in a timely, manner, with respect for the child(ren) and families affected</li> <li>○ Maximization of local labor, such that percentage of all labor exceeds a minimum target percentage to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)</li> <li>○ Achievement of the non-binding 30% or more employment of women as a percentage of all staff, in each skill/occupational category</li> <li>○ Employment of young people and "vulnerable" and excluded groups at a target to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)</li> <li>○ Apprenticeships and internships Internments established and completed for each construction season</li> </ul> </li> </ul>

<ul style="list-style-type: none"> <li>○ All worker and community complaints about sexual harassment are a) addressed in a timely manner and b) resolved through the Contractor's Sexual Harassment Incident Referral and Reporting Plan</li> <li>○ 100% of employees and sub-contractors sign the Worker Code of Conduct</li> <li>• Resolution of 100% of internal grievances within a duration to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)</li> </ul>	
<b>REPORTING:</b> <ul style="list-style-type: none"> <li>• Report communications and written approval of Engineer of site-specific Labor Management Plan</li> <li>• Report enforcement actions related to the Anti-Sexual Harassment Policy and implementation of Sexual Harassment Incident Reporting and Referral Plan</li> <li>• Summarize activities undertaken during reporting period, using the categories above: 1) Access to Employment 2) Local Procurement 3) Workplace Environment 4) Training and 5) Site-specific Labor Management Plan</li> <li>• Specify any material deviations or non-compliances to this management measure, and any other issues of concern</li> <li>• Define activities planned during next reporting period</li> </ul>

### Management Measure AWPP - 9: Gender Integration and Social Inclusion (GSI)

<b>POTENTIAL IMPACT</b>
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>• Increased short-term employment and improved conditions of employment for women</li> <li>• Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>• Discrimination against women</li> <li>• Increased foreign labor, reducing local employment opportunities</li> <li>• Use of child labor</li> <li>• Use of forced labor</li> </ul>

<ul style="list-style-type: none"> <li>• Use of trafficked labor</li> <li>• Exploitation of workers and Labor Code violations</li> <li>• Sexual harassment</li> </ul>
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Millennium Challenge Account Social and Gender Integration Plan (SGIP) <ul style="list-style-type: none"> <li>○ Encourages contractors to prioritize using local labor, particularly workers from the project affected area</li> <li>○ Encourages contractors to employ women as at least 30% of workers</li> <li>○ Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates</li> </ul> </li> <li>• Millennium Challenge Corporation Gender Policy <ul style="list-style-type: none"> <li>○ The MCC Gender Policy states that countries will ensure that both women and men have opportunities for meaningful participation throughout the consultative processes related to a Compact program.</li> </ul> </li> <li>• IFC Performance Standard 1 <ul style="list-style-type: none"> <li>○ Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> </ul> </li> <li>• IFC Performance Standard 2 <ul style="list-style-type: none"> <li>○ Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.</li> </ul> </li> <li>• Constitution of Mongolia <ul style="list-style-type: none"> <li>○ Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>• Mongolian Law on Gender Equality <ul style="list-style-type: none"> <li>○ Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>• Mongolian Law on Labor <ul style="list-style-type: none"> <li>○ Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>○ Prohibits employing children under the age of 16 – under 18 in dangerous industries e.g. construction</li> </ul> </li> </ul>
<p><b>OBJECTIVES</b></p> <p>The Gender Integration and Social Inclusion (GSI) Plan complements the Labor Management Plan and provides additional management steps to address GSI considerations with respect to workers and local communities.</p> <p>T</p> <ul style="list-style-type: none"> <li>• To promote the fair treatment, non-discrimination, and equal opportunity of workers.</li> <li>• To encourage the employment of women as at least 30% of the Contractor's workforce, calculated over full and part time positions as a percentage of total number of staff hired in the life of the contract, at each skill/occupation level</li> <li>• To enable local people, particularly youth and people in project-affected districts/khoroos to gain short-term employment and training opportunities</li> <li>• Maximize the perceived beneficial impact of the BWSE project on the project affected communities</li> </ul>
<p><b>MANAGEMENT MEASURE</b></p> <p><b>Gender Integration and Social Inclusion</b></p> <ul style="list-style-type: none"> <li>• Under the Gender Integration and Social Inclusion Plan, the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure the widest exchange of information between the Contractor and the local population and district</li> </ul>

and khoroo Labor Offices on planned and continuing works and employment opportunities through a program of community consultations and participatory meetings.

- The Contractor will prepare and submit for the Engineer's written approval a Contractor's Gender Integration and Social Inclusion Plan, which will be:
  - Consistent with the Mongolian Law on Labor and
  - Consistent with the MCC Gender Policy's emphasis on community consultation and participation
  - Consistent with IFC Performance Standard 1: Assessment and Management of Environmental and Social Risks and Impacts
  - Agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer

#### *Community Engagement*

- The Contractor will hold at least one meeting in each project-affected District and khoroo office prior to construction to inform community members of the expected conduct of workers and the contents of the Labor Management Plan, and thereafter monthly, minimally covering the following:
  - Efforts to hire local labor and the Contractor's employment forecast
  - Efforts to maximize women's employment
  - Efforts to maximize local procurement and the Contractor's procurement forecast
  - Prohibitions against child labor and forced labor in supply chains
  - Zero-tolerance of trafficking in persons, MCC and Mongolian legal definition of trafficking in persons, and Contractors' Counter-Trafficking in Persons Response Plan
  - Zero-tolerance of gender-based violence
  - Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan

#### *Expanding Short-term Employment Opportunities*

- The Contractor will actively consider working with the existing construction brigades to enable local labor currently organized into brigades to gain employment. The brigades may require additional training to enable them to work on this large scale project – training in:
  - Modern tools and techniques where needed
  - Brigade internal labor management, accounting, and estimation techniques
- As referenced in the Labor Management Plan and its recruitment strategy, the Contractor will encourage the employment of qualified individuals among the local population(s) in project activities, with particular focus on women, youth, and disadvantaged groups. This may include small-scale supply contracts or services, with announcement of jobs published on project information boards, in District and khoroo Labor Offices and with information on employment disseminated by the Contractor's Social Safeguards Officer, the MCA or its representative or other means approved by the Engineer.
- Where appropriate, the Contractor will provide training to enhance the skills of employees and local people using on-site apprenticeships and internships.
- As referenced in the Labor Management Section above, the Contractor is encouraged to cooperate with, secondment to training programs such as Technical and Vocational Education and Training Centers and professional associations and to draw workers from among their graduates and members, etc.

#### *Local Procurement*

- The Contractor will develop and submit a procurement forecast of all goods and services that could be procured locally. The MCA-Mongolia or its representative's Social Safeguards Team will assist in disseminating this information to local communities with the Contractor's Social Safeguards Officer.
- The Contractor will develop and submit for review and approval by the Engineer, a procurement strategy to inform local communities and businesses of opportunities to

<p>provide goods and services to the Contractor and to project workers, particularly targeting small businesses and those owned by women.</p> <ul style="list-style-type: none"> <li>The Contractor Social Safeguards Officer and MCA-Mongolia or its representative's Social Safeguards Team will hold community meetings to inform people about the procurement processes and include District and khoroo offices, community organizations and the media.</li> </ul>
<p><b>LOCATIONS:</b></p> <p>All construction sites and temporary construction facilities and project affected communities</p>
<p><b>MONITORING</b></p> <p>MCA-Mongolia or its representative's SST:</p> <ul style="list-style-type: none"> <li>Monitor Contractor Gender Integration and Social Inclusion Plan</li> <li>Monitor Contractor employment recruitment strategies and assist Contractor to reach potential women, youth and other excluded groups</li> <li>Monitor participation by all parties in the Contractor's internal and external project Grievance Redress Mechanisms</li> <li>Document Contractor performance in Gender Integration and Social Inclusion Plan</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>Record results of Contractor's Gender Integration and Social Inclusion responsibilities</li> <li>Document all grievance redress activities under the Contractor's internal grievance process and external Grievance Redress Mechanism</li> </ul>
<p><b>LOCATIONS:</b></p> <p>All construction sites and temporary construction facilities and project affected communities</p>
<p><b>INDICATORS AND SUCCESS CRITERIA:</b></p> <p>Indicators:</p> <ul style="list-style-type: none"> <li>Employment recruitment activities</li> <li>Employment records of workers</li> <li>Number, dates, and locations of community engagement meetings</li> <li>Community related grievance redress actions and outcomes</li> <li>Number of purchase orders signed each year with UB businesses, disaggregated by those in in Khan-Uul and Songinokhairkhan Districts and the rest of UB, indicated as a number and percent of the total dollar amount of annual procurements</li> <li>Total annual dollar amount of procurements with businesses from UB, disaggregated by those in Khan-Uul and Songinokhairkhan Districts and those in the rest of UB, indicated as a number and percent of the total dollar amount of annual procurements</li> <li>Number, percentage and dollar amount of purchase orders signed with women-owned businesses each year against the total number and dollar amount of purchase orders</li> </ul> <p>Success Criteria:</p> <ul style="list-style-type: none"> <li>100% of required community meetings are held, with all topics covered</li> <li>Maximization of local labor, such that percentage of all labor exceeds a minimum target percentage to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)</li> <li>Achievement of the non-binding 30% employment of women as a percentage of all staff, in each skill/occupational category</li> <li>Employment of young people and "vulnerable" groups at a target to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)</li> <li>Apprenticeships and internships established and completed for each construction season</li> <li>Contractor enters into and maintains an agreement with at least one TVET center and employs TVET graduates at a target to be to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)</li> </ul>

### Management Measure AWPP - 10: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment

<b>POTENTIAL IMPACT</b>
<p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Sexual harassment on construction sites and in temporary construction facilities and project-affected communities</li> <li>Trafficking in persons within and outside the project</li> <li>Gender-based violence on construction sites and in temporary construction facilities and project-affected communities</li> </ul>
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>MCC Counter-Trafficking in Persons Policy (C-TIP Policy) <ul style="list-style-type: none"> <li>States, "Trafficking in Persons" means (a) Sex trafficking in which a commercial sex act is induced by force, fraud, or coercion, or in which the person induced to</li> </ul> </li> </ul>

<p>perform such act has not attained 18 years of age; (b) The recruitment, harboring, transportation, provision, or obtaining of a person for labor or services, through the use of force, fraud, or coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery.”</p> <ul style="list-style-type: none"> <li>○ Adopts “a zero-tolerance policy to TIP and prohibits “The Contractor, the Contractor’s Personnel, any Subcontractor or supplier, or any of their respective personnel, or any agent or affiliate of any of the forgoing shall not engage in any form of Trafficking in Persons during the period of performance of any contract...”</li> <li>○ Requires each Contractor to “acknowledge that engaging in such activities is cause for suspension or termination of employment or of the Contract” and specifies remedies that the MCA Entity will apply once a TIP incident has been confirmed.</li> <li>• Mongolian Law on Promotion of Gender Equality <ul style="list-style-type: none"> <li>○ Requires the employer to incorporate into the organization’s internal procedures, specific norms for prevention of sexual harassment in a workplace and the redress of such complaints. It also requires that the organization design and conduct a program of training and retraining geared toward creating a working environment free from sexual harassment, and report on its impact in a transparent manner.</li> </ul> </li> <li>• Mongolian Law to Combat Human Trafficking <ul style="list-style-type: none"> <li>○ The law regulates relations with respect to the prevention and suppression of trafficking in persons, elimination of the causes of trafficking, and protection of victims' rights.</li> </ul> </li> </ul>
<p><b>OBJECTIVES</b></p>
<ul style="list-style-type: none"> <li>• To prevent incidence of trafficking of persons for sex by project employees</li> <li>• To ensure that the Contractor and its Sub-Contractors do not employ trafficked labor and to minimize the risks of trafficking of foreign workers to project sites</li> <li>• To prevent sexual harassment at all construction sites and temporary construction facilities</li> <li>• To prevent Contractor and worker involvement in sexual harassment in project-affected communities and among members of stakeholder organizations in the workplace</li> <li>• To prevent incidences of gender-based violence involving workers</li> </ul>
<p><b>MANAGEMENT MEASURE</b></p>
<p><b>Counter-Trafficking in Persons, Gender-Based Violence and Sexual Harassment</b></p>
<p>The Contractor shall ensure that foreign workers on work sites or in labor camps are aware 1) of the risks of cultural conflict and of becoming victims of gender-based violence, sexual harassment and abuse, discrimination, trafficking in persons and 2) the legal and contractual remedies against such behavior. This information shall be provided in workers’ induction packages, by holding an orientation before workers start on site, and by delivering a training twice a year.</p> <p><i>Counter Trafficking in Persons (C-TIP)</i></p> <ul style="list-style-type: none"> <li>• The Contractor shall prepare and submit for the Engineer’s written approval a Counter-Trafficking in Persons Response Plan (TIP Response Plan), and the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure all employees are informed of expectations of behavior as per the Worker Behavior Code of Conduct and the penalties for proven infringements. <ul style="list-style-type: none"> <li>○ The Counter-Trafficking in Persons Response Plan shall Address the specific TIP risks identified in the ESIA, including withholding of foreign workers’ passports and commercial sex with minors,</li> <li>○ Designate a single responsible person who will notify the Engineer and MCA-Mongolia within 24 hours of an alleged incident and implement any investigation.</li> <li>○ Specify when to contact legal authorities, list UB city officials, national government offices, and NGO organizations that address TIP, and state how the Contractor will deal with them in the case of a TIP incident.</li> </ul> </li> </ul>

- Include mechanisms to ensure confidentiality of any TIP survivors and to refer them to law enforcement and/or supportive services if they wish.
- The Contractor shall develop, as part of its TIP Response Plan, an anonymous mechanism for workers and community members to report suspected TIP incidents to the Engineer and to MCA-Mongolia, and this must be separate from the project grievance mechanism.
- The Counter-Trafficking in Persons Response Plan shall be:
  - Consistent with the Mongolian Law on Labor, Promotion of Gender Equality, and combatting Human Trafficking
  - Compliant with the MCC Counter-Trafficking in Persons Policy
  - Coordinated and agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer
- The Counter-Trafficking in Persons Response Plan shall specifically prohibit:
  - Procuring minors for sex
  - Transporting non-employee individuals in company vehicles
- The Contractor is strongly encouraged to engage the Centre for Gender Equality or other similarly qualified and experienced organization to develop its TIP Response Plan, its anonymous reporting mechanism, its worker training, and its C-TIP content for community meetings
- The Contractor shall design and deliver twice yearly C-TIP training modules to all staff, sub-contractors, and service providers on the prevention of TIP and the Contractor's TIP Response Plan, following minimum content in MCA-Mongolia's Social and Gender Integration Plan (SGIP).
  - C-TIP training sessions must be delivered to all employees within one month of starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Information about the Contractor's zero-tolerance policy and TIP Response Plan shall be included in all community meetings and the Plan shall be provided in Mongolian, in whole, to project-affected khoroo and District governments.

#### *Gender-Based Violence*

- The Contractor shall adopt a policy of zero-tolerance for gender-based violence and address any complaints of gender-based violence against its workers or committed by its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
- The Contractor shall notify the Engineer and MCA-Mongolia within 24 hours of any alleged incident of gender-based violence
- The Contractor shall deliver a gender-based violence prevention training to all staff, sub-contractors, and service providers prior to all workers beginning on-site and thereafter at least twice each year.
  - The Contractor is strongly encouraged to engage a local, qualified, and experienced organization to develop the training.
  - The training shall minimally identify behavior that constitutes gender-based violence, address attitudes towards violence against women and lesbian, gay, bisexual, transgender, and queer people (LGBTQ), and identify relevant Mongolian laws and organizations addressing gender-based violence.
  - It shall also explain the workings and protections in the Contractor's grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ persons.
- Include in all community meetings information about the Contractor's zero-tolerance policy toward gender-based violence committed by or against its workers and procedures for reporting it and communicate this information in writing to project-affected khoroo and District governments.

#### *Sexual Harassment*

- The Contractor shall develop and submit to the Engineer an Anti-Sexual Harassment Policy prohibiting sexual harassment directed at Compact beneficiaries, partners, or stakeholders, MCA Entity employees, MCA Entity consultants, MCC personnel, or MCC consultants and

including an Incident Reporting and Referral Plan.

- The Policy and Plan must be in form and substance satisfactory to the MCA and MCC.
- The Incident Reporting and Referral Plan shall include a confidential mechanism for workers and community members to report sexual harassment to the Engineer and to MCA-Mongolia, separately from the Grievance Redress Mechanism.
- Employers are required to have a protocol in their Workplace Grievance mechanism in which persons alleging harassment or violence will be protected from identification and from pressure from the Contactor or other workers to dismiss the complaint.
- The Contractor's grievance manager must notify the MCA-Mongolia or its representative's Social Safeguards Team and the Contractor's Social Safeguards Officer within 24 hours of any allegation of sexual harassment.
- The Contractor must have a contract with a suitably experienced organization, such as the Centre for Gender Equality, to provide an investigation leader to manage the investigation of complaints of sexual harassment.
- The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction.
- The Contractor shall design and deliver a sexual harassment prevention training to all staff, sub-contractors, and service providers, in accordance with the Contractor's Anti-Sexual Harassment Policy, recognizing MCC's Guidance to MCAs on Sexual Harassment.
  - Training shall be conducted within one month of workers starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Training shall address
    - Attitudes to and prevention of sexual harassment in the workplace
    - Workings and protections in the Contractor's internal grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ+ persons
    - Additional requirements for minimum training content can be found in MCA-Mongolia's Social and Gender Integration Plan (SGIP)
- Information about the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral plan shall be included in all community meetings and the Policy and Plan shall be communicated in Mongolian, in whole, to project-affected khoroo and District governments.

#### LOCATIONS:

All construction sites and temporary construction facilities and project affected communities

#### MONITORING

MCA-Mongolia or its representative's SST:

- Monitor Contractor Counter-Trafficking in Persons Response Plan
- Monitor Contractor performance related to gender-based violence requirements
- Monitor Contractor's development and adherence to its Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan
- Participate in the Contractor's internal Grievance Redress Mechanisms in relation to any on allegations of sexual harassment and gender-based violence and monitor and document the process and outcomes, maintaining confidentiality of those reporting and victims and witnesses

Contractor:

- Maintain copies of all contracts or other agreements with organizations that provide services related to the development of C-TIP, GBV prevention, or prevention of sexual harassment policy, plans, training, or reporting mechanisms

<ul style="list-style-type: none"> <li>• Maintain records of workers' participation in required trainings, including the dates of trainings and which workers participated</li> <li>• Maintain records of all community meetings at which C-TIP, gender-based violence, and sexual harassment are addressed, including the dates and locations and a record of all questions, comments, and Contractor responses</li> <li>• Document all implementation of the results of Contractor's Counter-Trafficking in Persons Response Plan responsibilities</li> <li>• Document all complaints of sexual harassment and gender-based violence, maintaining confidentiality of witnesses and victims, and all implementation of the Sexual Harassment Incident Reporting and Referral Plan and interactions with law enforcement and other relevant response institutions and organizations</li> <li>• Grievance redress activities under the Contractor's internal grievance process</li> </ul>
LOCATIONS:
All construction sites and temporary construction facilities and project affected communities
INDICATORS AND SUCCESS CRITERIA:
<p>Indicators:</p> <ul style="list-style-type: none"> <li>• Content of the Contractor's TIP Response Plan</li> <li>• Content of the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> <li>• Number and content of trainings for all staff</li> <li>• Number of community meetings at which information presented covers the Contractor's policies on C-TIP, GBV, and sexual harassment and how to report suspected cases compared to the total number of Contractor-organized community meetings, disaggregated by location</li> <li>• Numbers of complaints and grievances brought alleging sexual harassment, gender-based violence or trafficking in persons</li> <li>• Number of required notifications of suspected TIP, GBV, and sexual harassment incidents compared to the number of complaints</li> <li>• Contracts or other agreements with specialized organizations to develop and deliver plans, policies, and training</li> </ul> <p>Success Criteria:</p> <p><i>Counter-trafficking in persons</i></p> <ul style="list-style-type: none"> <li>• Anonymous reporting mechanism for trafficking in persons is established prior to initiation of construction and functioning effectively for the duration of the construction</li> <li>• The Contractor's TIP Response Plan is thorough, references the MCC C-TIP Policy and any guidance, provides a path to involve NGOs and specialized government staff, and includes clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.</li> <li>• 100% of reported or suspected cases of TIP are dealt with in a timely, survivor centered manner, according to the TIP Response Plan.</li> <li>• Effective reporting and management measures are developed are implemented and information about the measures are introduced to the employees and sub-contractors in toolbox sessions and by other means</li> <li>• 100% of community meetings include reference to the zero-tolerance policy against TIP and to the Contractor's TIP Response Plan</li> </ul> <p><i>Gender-based violence</i></p> <ul style="list-style-type: none"> <li>• Culture of unacceptability of gender-based violence and assaults on women and LGBTQ+ persons established via: <ul style="list-style-type: none"> <li>○ 100% of workers having participated in gender-based violence prevention training prior to beginning work on-site</li> </ul> </li> </ul>

- The Contractor notifying the Engineer and MCA-Mongolia within 24 hours of 100% of any alleged incident of gender-based violence
- Timely, confidential, and thorough dealing with complaints of gender-based violence and 100% implementation of zero-tolerance policy in confirmed cases
- 100% of community meetings including reference to the zero-tolerance policy against gender-based violence and procedures for reporting it

**Sexual harassment**

- The Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan are thorough, reference the Contract, aspects of the MCC Guidance to MCAs on Sexual Harassment, and Mongolian Law; provide a path to involve NGOs and specialized government staff; and include clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.
- 100% of employees and sub-contractors have taken the sexual harassment prevention training prior to on-site work
- All worker and community complaints about sexual harassment are
  - addressed confidentially
  - addressed in a timely manner and
  - resolved following the procedures in the Contractor's Sexual Harassment Incident Referral and Reporting plan
- After investigation, appropriate measures are taken against perpetrators of sexual harassment on the job site, in temporary facilities, and in surrounding communities

**REPORTING:**

- Reports on measures to prevent and address counter-trafficking in persons, gender-based violence, and sexual harassment shall be included in project monthly reports
- Summarize activities related to counter-trafficking in persons, gender-based violence, and sexual harassment undertaken during each reporting period
- Specify any material deviations or non-compliances to this management measure, and any other issues of concern,
- Define activities planned during next reporting period

**SCHEDULE**

**MANAGEMENT MEASURE:**

*Implementation:*

- Initiated during pre-construction prior to starting any construction activities and ongoing throughout pre-construction and construction

**MONITORING:**

*Implementation:*

- Initiated during pre-construction prior to starting any construction activities and ongoing throughout pre-construction and construction

**RESPONSIBILITY**

**MANAGEMENT MEASURE:**

*Implementation:* Contractor  
*Oversight:* Engineer

**MONITORING:**

*Implementation:* Contractor  
*Oversight:* Engineer – MCA-Mongolia or its representative's Social Safeguards Team

**Management Measure AWPP - 11: Construction Camp and Temporary Facilities Management**

**POTENTIAL IMPACT**

Risks and impacts that may be associated with workers' accommodation and workplace conditions

**STANDARD(S) / REQUIREMENT(S) TRIGGERED:**

Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:

- Constitution of Mongolia
- Employee possesses the right to work in favorable conditions, remuneration, rest and private enterprise.
- Mongolian Civil Code
- Requires providing office space, tools and equipment necessary to ensure employees' health and meeting safety standards and work specific requirements.
- Mongolian Labor Code
- Requires ensuring that chemical, physical and biological conditions resulting for production processes will not have a negative impact on safety, sanitation, or the natural environment.
- Mongolian Law on Labor Safety and Hygiene
- Requires informing workplace conditions, risks that can impose danger to health, industrial dangerous and poisonous factors to its employees.
- Mongolian Law of Fire Safety
- Requires inspecting availability of rooms for employees and requirements of hygiene, outcome of protection measures against negative impacts of working environments.
- Mongolian Supreme Court Interpretation of Some Provisions of Law on Labor, Supreme Court Decree No. 33
- Prohibits precluding to conclude a contract of legal entities and organizations.
- IFC Performance Standards 2 and 4
- Require identifying environmental and social risks and impacts that are in the context of the project's area of influence.
- Mongolian Law on Combating Human Trafficking
- Requires having a written management plan on worker camps and housing facilities.
- IFC and EBRD (2009) guidance at *Workers' Accommodation: Processes and Standards*<sup>1</sup>
- Requires having a written management plan on worker camps and housing facilities.
- IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning
- Provides specific guidance on prevention and control of community health and safety impacts that may occur during project construction and decommissioning.

#### OBJECTIVES

- Ensure that all individuals who reside in the Contractor's construction camps or work in the Contractor's temporary facilities can do so in a safe, secure, clean, and hygienic environment, free from intimidation.

#### MANAGEMENT MEASURE

##### Construction Camp and Temporary Facilities Management

The Contractor will:

- Fully comply with the requirements of this management measure
- Ensure that all individuals who reside or work in, accommodated at, or visit construction camps and workplaces can do so in a safe, secure, clean, hygienic, respectful, and harmonious environment
- Ensure compliance with IFC and EBRD (2009) guidance at *Workers' Accommodation: Processes and Standard* for accommodation; including clean and safe areas that ensure the minimum space requirements, air conditioning, heating, and ventilation that is appropriate for the local climatic conditions, gender-based accommodation facilities, etc.
- Ensure compliance with IFC and EBRD guidance at *Workers' Accommodation: Processes and Standards* for on-site facilities; including canteen, sanitary facilities, adequate amenities for socialization and resting, etc.
- Survey accommodation facilities to be provided off-site (if any) and ensure they also comply with IFC and EBRD guidance at *Workers' Accommodation: Processes and Standards*
- Ensure drinking and utility water to be supplied meet the requirements of the Mongolian National Drinking Water Standards and World Health Organization (WHO) Guidelines for Drinking Water Quality

<ul style="list-style-type: none"> <li>• Provide gender-segregated toilet and washing facilities at construction camps and all sites where women work</li> <li>• Provide all accommodation sites with sufficient supplies and services</li> <li>• Provide all accommodation sites with sufficient emergency response equipment such as first aid kits and fire-fighting equipment, and conduct periodic checks to ensure they are in working condition</li> <li>• Conduct visual checks on site to ensure proper housekeeping</li> <li>• Ensure suitable first aid equipment is kept on site, at various appropriate locations</li> <li>• Conduct periodic medical checks for personnel and provide vaccination and/or other mitigating measures when required</li> <li>• Establish adequate medical rooms at the construction camps, provide sufficient human resources, and keep suitable patient transport vehicle on site for medical emergencies</li> <li>• Provide training—information and awareness sessions, and job category-specific specialized training—to all employees and subcontractors, including those accommodated at construction camps, at the time of their induction and annually thereafter on: <ul style="list-style-type: none"> <li>- Construction Camp and Temporary Facilities Management consistent with the requirements of this management measure and the site-specific Construction Camp and Temporary Facilities Management Plan</li> <li>- General waste management, housekeeping, first aid practices, and communicable diseases</li> </ul> </li> <li>• Prepare and submit for the Engineer's written approval a site-specific Construction Camp and Temporary Facilities Management Plan and associated procedures that, as a minimum: <ul style="list-style-type: none"> <li>- Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan</li> <li>- Assigns roles and responsibilities for construction camp and temporary facilities management</li> </ul> </li> </ul>

### Management Measure AWPP - 12: Cultural Heritage Protection

<b>POTENTIAL IMPACT</b>
<ul style="list-style-type: none"> <li>Chance finds of and potential inadvertent excavation or damage of tangible cultural heritage</li> <li>Disturbance of the cultural and sacred landscape and places of religious or spiritual significance</li> <li>Loss of the continuity of spiritual, religious, and traditional activities</li> </ul>
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Mongolian Law on Protection of Cultural Heritage <ul style="list-style-type: none"> <li>If tangible cultural heritage is discovered during excavation, requires halting work and immediately notifying the <i>soum</i> and <i>duureg</i> [capital city municipal district] governors, police, and concerned authorities.</li> <li>Prohibits building infrastructure facilities in historical and cultural monuments and their activity zones, to engage in mining and agriculture. Governors of all levels have the duty to protect the intangible cultural heritage.</li> </ul> </li> <li>IFC Performance Standard 8 <ul style="list-style-type: none"> <li>Prohibits removing, significantly altering, or damaging critical cultural heritage.</li> <li>Requires designing and implementing a chance find procedure when the proposed location of a project is in areas where cultural heritage is expected to be found, either during construction or operations.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>Protect tangible cultural heritage from inadvertent excavation or damage</li> <li>Enable and foster the continuity of spiritual, religious, and traditional activities in consideration of the unavoidable disturbance of the cultural and sacred landscape and places of religious or spiritual significance</li> </ul>
<b>MANAGEMENT MEASURE</b>
<p><b>Cultural Heritage Protection</b></p> <p><b>Chance Find Procedure</b></p> <p>As unknown features/objects could be encountered during works, in particular earthworks, a chance finds procedure will be in place to stop works in case of such findings, and require investigation by an archaeologist and involvement of relevant government entities.</p>

Should any unexpected tangible cultural heritage be discovered:

- Cease all work in the immediate area and do not disturb the chance find further, including:
  - Establishing a 30-meter buffer around the chance find
  - Leaving buffer undisturbed until competent cultural heritage specialist assesses the site
  - Protecting the chance find area, for example with signs for prohibition of entry, barrier tape, etc.
- Work may continue at other locations providing there is a buffer zone between the chance find area and the construction area
- Immediately notify the Engineer and the concerned government agencies, specifically the:
  - Office of the governor of the capital city
  - Office of governor of the Songinokhairkhan District
  - Local police
  - Institute of Archeology, Mongolian Academy of Sciences
  - Institute of History and Ethnography, Mongolian Academy of Sciences
- Provide the following information to the Engineer and government agencies:
  - Cultural heritage site type—description and photograph(s)
  - Location—description and GPS coordinates
  - Date, time, and details of find
  - Nature of work that led to exposure of or locating the find
- Coordinate with the Engineer and the concerned government agencies to consult a cultural heritage professional on site to assess the cultural heritage and recommend mitigation
- Follow instructions of the concerned government agencies and cultural heritage professional for the protection of the tangible cultural heritage
- Restart work only upon written direction from the Engineer

#### **Cultural and Sacred Landscape and Places**

- SST will conduct enhanced stakeholder engagement with religious and spiritual leaders to assess the intangible cultural impact of construction on cultural and sacred landscape and places.
- Contractor will coordinate with the SST Community Liaison Officers and the Engineer, and as directed by the Engineer accommodate the performance of periodic spiritual, religious, and traditional ceremonies and rituals on or adjacent to project sites. The ceremonies and rituals may be integrated with or, if independent, their scale may be similar to groundbreaking ceremonies.

#### **Training**

The effective protection of cultural heritage is based on an understanding of the key issues, appropriate assessment, and correct action to minimize possible damage or loss.

The Contractor will:

- Prepare and submit for the Engineer's written approval a site-specific Cultural Heritage Training Plan and associated procedures that, as a minimum:
  - Specifies how the Contractor will educate and train personnel on requirements, procedures, and reporting in response to chance finds of tangible cultural heritage, in accordance with the requirements listed above
  - Specifies how the Contractor will educate and train personnel on requirements, procedures, and reporting to enable and foster the continuity of spiritual, religious, and traditional activities
  - Assigns roles and responsibilities for training
- Educate and train all Contractor personnel and provide enhanced training to key Contractor personnel—including on-site environmental staff, safety staff, construction engineers, and unit supervisors—in accordance with approved Cultural Heritage Training Plan.

#### **LOCATIONS:**

- All work sites
- Cultural and sacred landscape and places throughout project area, as all land and the landscape throughout Mongolia and the project area is sacred

MONITORING
<p>Monitor throughout construction</p> <p><i>Chance Find Procedure</i></p> <ul style="list-style-type: none"> <li>Construction work sites during excavation or other ground disturbance</li> </ul> <p><i>Cultural and Sacred Landscape and Places</i></p> <ul style="list-style-type: none"> <li>Communications SST Community Liaison Officers and Engineer</li> <li>Written directions of Engineer</li> <li>Actions to accommodate spiritual, religious, and traditional ceremonies and rituals</li> <li>Performance of spiritual, religious, and traditional ceremonies and rituals</li> </ul> <p><i>Training</i></p> <ul style="list-style-type: none"> <li>Document submission and approval of training plan</li> <li>Document training of personnel as specified in approved plan</li> </ul>
<p>LOCATIONS:</p> <ul style="list-style-type: none"> <li>All work sites</li> </ul>
<p>INDICATORS AND SUCCESS CRITERIA:</p> <p>Indicators:</p> <p><i>Chance Find Procedure</i></p> <ul style="list-style-type: none"> <li>Chance find of tangible cultural heritage</li> <li>Excavation or damage of tangible cultural heritage</li> <li>Cease work decision</li> <li>Protection of chance find area and tangible cultural heritage</li> </ul> <p><i>Cultural and Sacred Landscape and Places</i></p> <ul style="list-style-type: none"> <li>Performance of spiritual, religious, and traditional ceremonies and rituals</li> </ul> <p><i>Training</i></p> <ul style="list-style-type: none"> <li>Submission of training plan</li> <li>Date and location of training sessions, or as specified in approved plan</li> <li>Personnel start date, training completion date, and initial construction field date, or as specified in approved plan</li> </ul> <p>Success criteria:</p> <p><i>Chance Find Procedure</i></p> <ul style="list-style-type: none"> <li>No excavation or damage of tangible cultural heritage</li> </ul> <p><i>Cultural and Sacred Landscape and Places</i></p> <ul style="list-style-type: none"> <li>No loss of continuity of spiritual, religious, and traditional activities due to inability to perform ceremonies and rituals</li> </ul> <p><i>Training</i></p> <ul style="list-style-type: none"> <li>Training plan approval</li> <li>All personnel trained prior to initial construction field date, or as specified in approved plan</li> </ul>
<p>REPORTING:</p> <p><i>Chance Find Procedure</i></p> <ul style="list-style-type: none"> <li>Report chance find and cease work decision</li> <li>Report excavation or damage of tangible cultural heritage</li> <li>Report actions to protect chance find area and tangible cultural heritage</li> <li>Report direction to restart work</li> </ul> <p><i>Cultural and Sacred Landscape and Places</i></p> <ul style="list-style-type: none"> <li>Report communications with SST Community Liaison Officers and Engineer</li> <li>Report directions of Engineer</li> <li>Report actions to accommodate spiritual, religious, and traditional ceremonies and rituals</li> <li>Report on performance of spiritual, religious, and traditional ceremonies and rituals</li> </ul>

<p><i>Training</i></p> <ul style="list-style-type: none"> <li>• Report communications and written approval of Engineer of site-specific Cultural Heritage Training Plan</li> <li>• Report training sessions and personnel start, training, and field deployment date, or as specified in approved plan</li> </ul> <p><i>Management Measure</i></p> <ul style="list-style-type: none"> <li>• Summarize other activities undertaken during reporting period</li> <li>• Specify any material deviations or non-compliances to this management measure, and any other issues of concern</li> <li>• Define activities planned during next reporting period</li> </ul>

## G.2.5 Health and Safety Management

In addition to the management measure under this heading, the following management measures also specify health and safety management requirements:

- Management Measure AWPP - 5: Emergency Preparedness and Response
- Management Measure AWPP - 7: Waste Management
- Management Measure AWPP – 9: Gender Integration and Social Inclusion (GSI)
- Management Measure AWPP – 10 Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment

- Management Measure AWPP - 11: Construction Camp and Temporary Facilities Management

### Management Measure AWPP - 13: Health and Safety Management

POTENTIAL IMPACT
Health and safety risks and impacts on work sites and in construction camps, and in the community
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Mongolian Law on Hygiene <ul style="list-style-type: none"> <li>- Requires introducing labor safety and hygiene management for protecting employees from accidents, damages, diseases which could occur during the operation.</li> </ul> </li> <li>• Mongolian Law on Waste <ul style="list-style-type: none"> <li>- Requires providing relevant knowledge to their staff on waste sorting and comply with safety standards in their operation.</li> </ul> </li> <li>• IFC Performance Standard 4 <ul style="list-style-type: none"> <li>- Requires evaluating the risks and impacts to the health and safety of the affected communities during the project life cycle and establishing preventive and control measures consistent with good international industry practice.</li> <li>- Requires avoiding or minimizing transmission of communicable diseases that may be associated with the influx of temporary or permanent project labor.</li> </ul> </li> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning <ul style="list-style-type: none"> <li>- Provides guidance on occupational health and safety and community health and safety.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• Identify, assess, manage, and record and communicate all health and safety hazards, and ensure: <ul style="list-style-type: none"> <li>- Resulting risks to people, property, assets, and the environment are evaluated</li> <li>- Risks are managed in accordance with the recommended hierarchy of controls to achieve levels that are as low as reasonably practical</li> <li>- Any requirements to mitigate risks are implemented</li> <li>- Risks and actions to manage them are reported and communicated</li> </ul> </li> </ul>
MANAGEMENT MEASURE
<h3>Health and Safety Management</h3> <p>The Contractor will ensure, as far as practicable, that the health, safety, and welfare of employees and all other persons on site are secured and are protected from hazards created by the project.</p> <p>The Contractor will:</p> <ul style="list-style-type: none"> <li>• Fully comply with the requirements of this management measure</li> <li>• Comply with the IFC Environmental, Health, and Safety Guidelines<sup>1</sup></li> <li>• Comply with the health and safety requirements in Contract Documents Section V, Works Requirements, including but not limited to: <ul style="list-style-type: none"> <li>○ Section 01030 Special Requirements, Paragraph 1.04.C Health and Safety Plan</li> <li>○ Section 01046 Control of Work, Paragraph 3.05 Open Excavations</li> <li>○ Section 01046 Control of Work, Paragraph 3.07 Interference with and Protection of Streets</li> <li>○ Section 01063 Miscellaneous Requirements, Paragraph 1.03 Traffic Control</li> <li>○ Protect drinking water sources, whether public or private, at all times</li> </ul> </li> <li>• Prepare and implement a traffic control plan for accessing the site, approved by Engineer</li> <li>• Implement all reasonable precautions to protect the health and safety of workers</li> <li>• Avoid or minimize the occurrence and transmission of communicable diseases, including surveillance, and active screening and treatment of workers</li> </ul>

- Avoid or minimize potential hazards posed to project personnel and the public while accessing project facilities
- Undertake hazard analysis to identify opportunities to reduce the consequences of a failure or accident
- Control access to operational areas through physical barriers and demarcation, regular patrols of controlled areas, and engagement with communities
- Avoid or minimize traffic accidents and promote traffic safety by all project personnel
- Comply with local laws and international requirements applicable to the transportation of hazardous materials, and establish procedures for preventing or minimizing the consequences of releases of hazardous materials
- Inform and regularly update affected communities, including herders and vulnerable groups, and government agencies about potential project hazards and changes to project activities that may have environmental, health, or safety impacts, as well as the proposed prevention, mitigation, and emergency response measures
- Ensure that health, safety, and rescue matters are given a high degree of publicity to all persons regularly or occasionally on the project sites, as stipulated by Mongolia laws on occupational safety and health, by prominently displaying posters drawing attention to the relevant regulations in areas where Contractor and subcontractor personnel, Engineer's staff, MCA-Mongolia or its representative's staff, and site visitors will take notice
- Provide Health and Safety Management training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the site-specific Health and Safety Management Plan, to all employees and subcontractors at the time of their induction and annually thereafter

The Contractor will prepare and submit for the Engineer's written approval a site-specific Health and Safety Management Plan and associated procedures that, as a minimum:

- Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
- Adhere to the MCC Health and Safety Policy (2012) and ensure the health and safety of all workers employed during the construction phase of the project
- Complies with applicable Government of Mongolia regulations and international good practice, where the more stringent will apply
- Specifies:
  - Site security, including securing of excavations, hazardous materials, etc.
  - Confined space safety procedures
  - Excavation and trenching safety measures
  - First aid facilities, equipment, and materials
  - Protective clothing and safety equipment
  - HIV/AIDS awareness program
  - Covid-19 awareness program
  - Counter-trafficking in persons program
  - Health and Safety management monitoring and reporting
- Assigns roles and responsibilities for health and safety management

## G.2.6 Education, Training, Community Outreach and Grievance Redress

Incorporated in various management measures are requirements for education, training, and outreach. The overall goals of these requirements are to provide project employees with an understanding of the commitments included in those management measures and inherent in associated laws, regulations, and policies, and to provide the employees with an appreciation of their own accountability for maintaining mutually supportive relationships with local communities. All required training is to be provided as part of induction training (to provide general awareness) and job-specific training as necessary.

In addition to the management measure under this heading, the following management measures specify training requirements:

- Management Measure AWPP - 5: Emergency Preparedness and Response
- Management Measure AWPP - 6: Mongolian Marmot Protection and Habitat Restoration
- Management Measure AWPP - 7: Waste Management
- Management Measure AWPP - 8: Labor Management
- Management Measure AWPP - 9: Gender Integration and Social Inclusion (GSI)
- Management Measure AWPP - 10: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment
- Management Measure AWPP - 11: Construction Camp and Temporary Facilities Management
- Management Measure AWPP - 12: Cultural Heritage Protection

- Management Measure AWPP - 13: Health and Safety Management

Together, these management measures comprise the Education, Training, and Community Outreach Plan.

#### **Management Measure AWPP - 14: Stakeholder Engagement, Community Consultation, and Grievance Redress**

<b>POTENTIAL IMPACT</b>
Delays, increased grievances, political interference, and unnecessary pressure from uninformed groups resulting from lack of information and discussion/consultation
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• IFC Performance Standard 1 <ul style="list-style-type: none"> <li>- Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> <li>- Requires establishment of a grievance mechanism to receive and facilitate resolution of affected communities' concerns and grievances about environmental and social performance, and scaled to the risks and adverse impacts of the project and with the affected communities as its primary user.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>• Inform and involve all stakeholders</li> <li>• Have in place a defined policy for dealing with external parties</li> <li>• Foster positive relations and effective partnerships with local communities throughout project construction and operation</li> <li>• Maximize the beneficial impact of the BWSE project on the affected communities</li> </ul>
<b>MANAGEMENT MEASURE</b>

## G.2.7 Risk Control and Emergency Response

The Risk Control and Emergency Response Plan references procedures specified in the management measures in the preceding plans that are pertinent to 1) controlling risks and 2) responding to emergencies. Such risks and emergencies include, for example, fuel spills and encountering previously unidentified cultural heritage resources, as well as incidents involving sexual harassment, human trafficking, and gender-based violence.

Due to the broad scope of the Risk Control and Emergency Response Plan, effectively the plan incorporates by reference the procedures specified in the management measures in all preceding plans for this project phase.

## G.2.8 Monitoring and Verification, and Maintenance Actions

This Monitoring and Verification, and Maintenance Actions Plan scopes the use of an adaptive approach to:

1. Verify that the management measures in the preceding plans are implemented, and that they are effective and sufficient
2. Revise those management measures that prove ineffective or insufficient

This approach acknowledges the risk and uncertainty of environmental and social management and fosters targeted modification of management measures to correct performance and outcomes. It will be executed as a continuous, iterative process by which the consequences of all management actions are systematically evaluated and, as needed, specific measures are modified in response to a determination that their forecasted outcomes will not meet requirements.

In the preceding plans, indicators and success criteria are designated for each management measure. For each management measure, MCA-Mongolia or its representative, in its oversight capacity, will determine whether progress toward the designated success criteria is sufficient and will document its determination in its regular updates and progress reports to MCA-Mongolia. If progress decidedly fails to meet iterative requirements, MCA-Mongolia or its representative will inform the Contractor of the need to formulate a management measure-specific adaptive maintenance action to implement midcourse corrections. In coordination with the Contractor, MCA-Mongolia or its representative will reformulate the management measure to foster meeting the success criteria, incorporating as applicable operational or structural changes, and considering the cost effectiveness of incorporating the changes. The scope of most management measures likely will remain fairly stable; whereas, it is expected that some methods will be added, modified, or dropped over the implementation timeline of some management measures.

With the prior approval of MCA-Mongolia, the Contractor will implement and monitor the revised management measure, and MCA-Mongolia or its representative will provide oversight.

## G.3 Implementation Work Plan and Schedule

The majority of the management measures in the preceding pre-construction phase and construction phase plans require that the Contractor prepare and submit for the Engineer's written approval plans that detail the Contractor's commitment and approach to fulfilling the requirements of the management measure. Therefore, an implementation work plan and schedule cannot be specified in this ESMP.

The Contractor is required to incorporate in the Contractor's ESMP a detailed Contract Work Plan and Schedule to facilitate implementing the Contractor's ESMP as an integral component of executing and supervising the construction work.

## G.4 Implementation Budget

Implementation, including monitoring, of the ESMP management measures, with one exception, do not entail a marginal cost. Costs are reflected MCA-Mongolia or its representative's operating costs, the Contractor's construction contract budget for operations and procedures or the Operator's budget for operation and maintenance.

The cost of obtaining all required permits are deemed to be included in the Contractor's contract budget for operations and procedures or the Operator's budget for operation and maintenance.

The costs of implementing ESMP management measures are primarily driven by staff costs. Other costs are associated with development of policies and plans, training, and equipment.

### MCA-Mongolia or Its Representative's Costs

Staff Costs				
Role	Cost	Unit	Total	Assumption
Environmental and Social Manager	-	salary	-	Covered in Section F.6
Waste Management Manager	-	salary	-	Covered in Section F.6

Equipment and Other Costs Subtotal			\$ 94,380.00	
<b>ESMP Management Measures Costs Total</b>			<b>\$ 1,099,280.00</b>	

## G. Annex A – Grievance Resolution Mechanism

The Contractor shall develop and implement a grievance redress mechanism that shall be applied in the case of a complaint or grievance that is related to or results from implementation of the project activities. A well-implemented grievance redress management system shall demonstrate that the project is concerned about community members and their well-being, building trust, respect, and productive relationships. As with the broader process of stakeholder engagement, it is important that management stays informed and involved in the management of grievances so that decisive action can be taken when needed to avoid escalation of disputes.

Under the GRM all persons shall be clearly entitled to make a complaint by any means – personal contact, office visit, telephone, letter, email, website enquiry, and directly to MCA-Mongolia or its representative. There should be a dedicated free call line for complaints. The GRM must make it easy to make a complaint and for that to be addressed easily and speedily. The system shall require that any member of any company associated with the project is aware of the requirement that they must receive and transfer on any complaint submitted to them in whatever form to their Grievance Officer who then follows the protocol for resolution.

All project partners shall accept the GRM process, agree to participate, train all contractor personnel to use the protocols to report grievances, participate in grievance resolution and reporting. The requirement to collaborate with the GRM will be mandated in construction contracts which will also require the designation of a responsible officer, usually the Contractor's Social Safeguards Officer.

The project grievance redress mechanism shall compliment traditional local-level mechanisms<sup>79</sup> for complaint resolution and legal administrative approaches to complaint resolution at all levels. It shall also document complaints or grievances from the public or other stakeholders (external communications with affected communities), and how these are resolved.

The grievance redress mechanism is intended to assist in resolving grievances or complaints raised regarding environmental and/or social issues arising from the projects/investments, and does not apply to the following complaints even if they are related to project activities:

3. Procurement and contractual complaints between MCA-Mongolia and its vendors or contractors which are normally handled by the MCA-Mongolia General Counsel Office,
4. Lawsuits which fall under the mandate of the General Counsel.

The Grievance Redress Mechanism (GRM) shall be compliant with the requirements of the IFC Performance Standard 5 (2012) and the MCC RPF for Western Wellfields (2018)<sup>80</sup>, and considers MUB GRM good practices that have been implemented for development projects in Ulaanbaatar city.<sup>81</sup> References available upon request to MCA.

---

<sup>79</sup> The GSI Director will carefully consider the extent to which traditional mechanisms to resolve conflict are used, to ensure that these are not disadvantageous to women villagers, indigenous peoples, or other disadvantaged groups. A thorough assessment should be conducted to ensure that certain non-formal justice mechanism will assist women and other disadvantaged groups in accessing justice.

<sup>80</sup> Mongolia II Bulk Water Supply, Resettlement Policy Framework, Western Wellfields, MCC Feasibility Study, 2018

<sup>81</sup> Land Acquisition and Resettlement Plan for Selbe and Bayankhoshuu Subcenters: Heating Station, Kindergarten, Business Incubator and Training Center; UB Urban Services and Ger Areas Development Investment Program – Tranche 1, 2017

The MCA-Mongolia or its representative will supervise and monitor the GRM. The Contractor shall keep the Contractor shall have a grievance redress matrix that records every complaint and communication, the dates of each action and correspondence, how it is investigated and the outcome. The contracting company shall have an internal and external grievance policy and mechanism. The Contractor shall have a designated Grievance Officer to manage complaints according to the company policy. They must have a grievance policy for dealing with external complaints that is fully compliant with and integrated with their Engineer approved project GRM. The Contractor must also have an internal grievance management system.

MCA-Mongolia or its representative will monitor and supervise the contractors' Social Safeguards Officer. MCA oversight will be especially important when dealing with complaints related to sexual harassment, gender-based violence and sex trafficking complaints which require additional investigative expertise. MCA shall review, approve and be invited to attend training for contractors' personnel on roles and responsibilities for grievance management at both senior management levels and also to all members of the workforce. It is vital that all employees understand that they all can be receptors of grievances and they need to know how to deal with a complaint.

## 1.1 Complaint Resolution Procedure

The complaint resolution process shall be generally in accordance with the following. These complaint resolution procedures are compliant with Mongolian Law.

### Tier 1

- Step 1 – All contractors, staff, workers are responsible for receiving grievances and ensuring that the complainant is treated respectfully, and that the grievance is written down on the correct form and forwarded to the designated Grievance Officer in their organization.
- Step 2 - Receive and Register Complaint: The project designated person shall receive the completed complaint form, and he/she is responsible for documenting and recording the complaint in the log-in system/matrix for recording the grievance and processes to resolution. This person is also responsible for reporting as required to senior management on the grievances received and steps taken to resolve.
- Step 3 – Screening and Preliminary Assessment: An initial classification of the complaint will be conducted by the Grievance Officer who will assign the complaint to the relevant persons to resolve. The Grievance Officer is responsible for managing the response and reporting back to the project officer. The officer designated to resolve the issue is responsible for notifying the Grievance Manager or SST and sending information for inclusion in the project grievance matrix.
- Step 4 - Response to the Complaint: After consulting with the relevant personnel, the Grievance Officer contacts the complainant to acknowledge the complaint and provide information as to the expected steps and timeframe for resolution of the complaint. This communication is to be provided within 48 hours of receipt of complaint.
- Step 5 - Investigate and Resolve: This step investigates the complaint, including the underlying cause(s) of the complaint and develops actions needed to resolve the current issue and to prevent recurrence of a similar complaint. Resolution at local level can be a) rejecting the complaint with reasons or b) resolving the complaint and taking action to remedy as appropriate. The Designated Person reports the outcome to the Grievance Officer. Either way, the Grievance Designated Officer is responsible for communicating the decision to the complainant within **14 days** and to the Grievance Manager or SST for recording in the grievance matrix. The Designated Officer is responsible for implementing any works or payments or directives to subcontractors to remedy the source of the complaint, track it and document in the company and MCA-Mongolia records.
- Step 6 - If a local and immediate Tier 1 solution is not appropriate, then the receiving officer has to escalate the complaint to the next tier of grievance resolution,
- Step 7 - If the complaint cannot be resolved then the receiving officer must revise the selection or implementation of approaches.
- Step 8 - Close-out: After implementing mitigating actions or resolving the issue, a letter describing the response and outcome is sent to the complainant, signed by a project head.

- **Step 9 - Follow-up:** Based on the complainant satisfaction level, the response shall be archived or transferred for further investigation.

If resolution cannot be achieved the process is escalated to Tier 2.

**Tier 2:** If the complaint cannot be solved in Tier 1, the Designated Officer will assess the eligibility of the complaint and address to relevant divisions/offices of the district and its resolution is recommended to the district Governor for approval and resolved within 30 days. The Designated Officer will record its deliberations and inform the concerned parties orally or by telephone and in writing, as appropriate. If the solution is agreed by the complainant, the contractor or implementing entities will implement the solution. Written records will be made of all stages and outcomes.

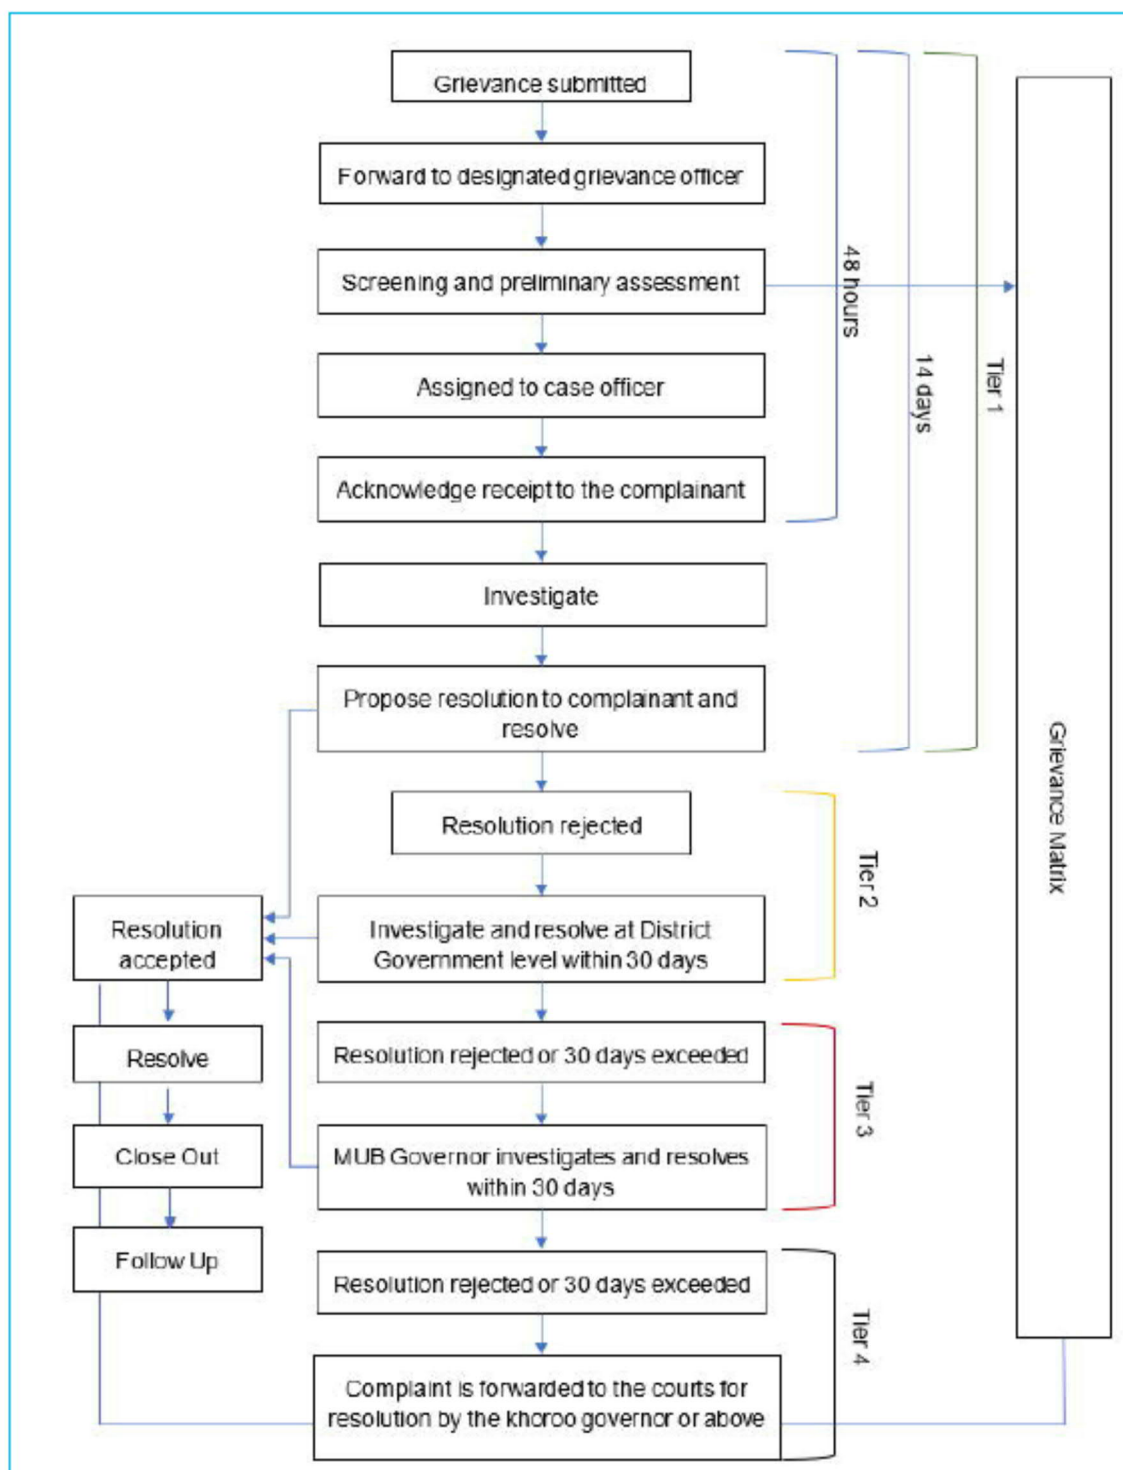

During this second review process either another formal written response will be provided to the grievant in **30 days** or it may be decided to hold a meeting with contractor representatives and the grievant. If complaint is ineligible (i.e., not a project related impact), it will be recorded and passed to the relevant authorities and the complainant will be informed of the decision and reasons for rejection within 30 days according to the Law on Handling Grievances of Citizens Addressed to Government Authority and Government Officials.

**Tier 3:** If the grievance is not resolved within 30 days from its lodging at Tier 2 and/or the complainant is not satisfied with the recommended solution, the grievance will be submitted to the related divisions/offices of the MUB and its resolution is recommended to the MUB Governor for approval and action within 30 more days. If necessary, the MUB Governor will organize stakeholder meetings and/or Working Group meetings. A solution acceptable to all shall be identified including clear steps. The contractors and implementing entities will immediately implement the agreed solution. Written records will be made of all stages and outcomes.

**Tier 4:** Failing resolution at Tier 3, the complainant has recourse to the Courts which should be regarded only as a last resort. With specific regard to land disputes, in accordance with the Law on Land (Article 60, "Settlement of Land Related Disputes"), these will be settled by the relevant khoroo governor. Where this is unsuccessful, the dispute shall be settled by a higher-level authority, or in court. Alternatively, residents may also go directly to the District Land Officer.

This system is depicted in the following figure.

## Flow Chart of the GRM

## 1.2 Approaches to Locally Based Grievance Resolution

The following approaches are required for grievance resolution:

- Dissemination of information to communities on how to make a complaint
- Dissemination of information on the GRM and how to make a complaint is made to all contractors and employees so that they understand their role in receiving and transmitting on all complaints. Ensure that all employees can assist complainants to fill in forms.
- Ensure all project partners offices have complaint forms available at reception areas and instructions on the process. Ensure that visitors can approach the Grievance Officer directly.
- Include information on grievances in information bulletins and community meetings so as to maintain trust in the process.
- Use a grievance log to monitor cases and improve the organization. In addition to resolving individual or community disputes, the grievance mechanism is an opportunity to promote improvements in the project and trigger policy and practice changes
- Evaluate and improve the system. The MCA-Mongolia or its representative shall be allowed to periodically conduct an assessment of the GRM to evaluate and improve its effectiveness and the Contractor shall comply with the outcomes and recommendations of those reviews. The evaluation will include: general awareness of the mechanism; whether it is used and by whom; the types of issues addressed; the ability of the mechanism to resolve conflicts early and constructively; the actual outcomes (impacts on project operations, management systems, and benefits for communities); its efficiency; and, most fundamentally, the ability to accomplish its stated purpose and goals. The MCA-Mongolia will solicit and include the views of stakeholder representatives to see how the mechanism is proving effective in practice.

## 1.3 The Grievance Form

The Grievance Form (GF) developed by the Contractor will at minimum contain the following:

- Basic information about the affected entity (name, address, contact number)
- Category of grievance filed (legal, technical/engineering, social, financial)
- Detailed description of grievance including time, date of incident and of recording, location etc.
- Type of action(s) taken (resolved at the local level or referred to higher authorities)

As a grievance is addressed, the type of action(s) taken will also be recorded on the GF, in order to document how the grievance was resolved.

The complainant enjoys the right to use the Governmental grievance redress procedures in accordance with the Law on Handling Grievances of Citizens Addressed to Government Authority and Government Officials. This governs grievance and complaints of citizens regarding the decisions and conduct of government authority or officials, and access to the judicial system, i.e., go to the courts, at any time, if they feel their grievance or concern is not being adequately addressed through the project GRM.

## 1.4 Grievance Mechanisms for Contractor's Internal Process

Each contractor is required to have an internal grievance policy and process for employees to raise issues about conditions of contact and behavior. The usual process is run by the human resources officers with the support of the Social Safeguards Officer. However, the treatment of allegations of sexual harassment, of gender-based violence and trafficking of persons needs external assistance to undertake effective investigation into allegations.

The Contractor must have an **anonymous** mechanism for reporting suspected TIP incidents that can be used by workers and communities. The Contractor has to develop a TIP response plan covering these issues: this TIP response plan will designate the SSO to manage the investigation including an external

investigation lead from the Centre for Gender Equality, ensure a response within 24 hours and an effective resolution as soon as possible. This will also include contacting the legal authorities and qualified NGOs.

It is required that investigations into these issues are conducted with both an MCA Mongolia representative present and an external investigator drawn from a suitably qualified organization such as the Centre for Gender Equity who will chair the enquiry.

MCA Mongolia shall be able to work with the human resources department of the contractor to monitor contractor internal grievance mechanisms to ensure that allegations of sexual harassment, of gender-based violence and trafficking of persons are properly investigated with confidentiality protected and participate to ensure the investigation is properly undertaken. Appointing an independent but well-informed chair ensures effective investigation. Full documentation and recording is required.

Toolbox talks by the Contractor on anti-sexual harassment are required monthly. Contractors are required to mandate and enforce a policy refusing the transportation of non-project workers in company vehicles.

## **G. Annex B - Public Consultation and Stakeholder Engagement Plan for BWSE**

### **1.1 Introduction**

Good communication of the project with the public is vital for successful relations with all stakeholders and enhances the opportunities offered by successful projects. The risks associated with poor stakeholder relations are now better understood by all stakeholders. The concept of “stakeholder engagement” is emerging as a means of describing a broader, more inclusive, and continuous process between a project and those potentially impacted that encompasses a range of activities and approaches, and spans the entire life of a project. Increasingly, the recognition that reputational risks that come from poor stakeholder relations, place a growing emphasis on corporate social responsibility and transparency and reporting. In this context, good stakeholder relations are a prerequisite for good risk management. The focus of this SEP is on interactions with stakeholder groups “external” to the core operation of the project, such as affected communities, local government authorities, non-governmental and other civil society organizations, local institutions and other interested or affected parties.

Stakeholder engagement is an umbrella term encompassing a range of activities and interactions over the life of a project. Not all stakeholders in a particular group or sub-group will necessarily share the same concerns or have unified opinions or priorities as stakeholders come in all sorts of groupings, interests and formats. Stakeholders are persons or groups who are directly or indirectly affected by a project, as well as those who may have interests in a project and/or the ability to influence its outcome, either positively or negatively. Stakeholders may include locally affected communities or individuals and their formal and informal representatives, national or local government authorities, politicians, religious leaders, civil society organizations and groups with special interests, the academic community, or other businesses. Interactions with all these groups require a SEP.

### **1.2 Stakeholder Engagement Plan**

This section describes the elements of the Stakeholder Engagement Plan to take forward the BWSE project.

The Stakeholder Engagement Plan covers nine components:

10. Staffing and resources
11. Stakeholder Identification and Analysis
12. Information Disclosure
13. Stakeholder Consultation
14. Partnerships
15. Grievance Management
16. Stakeholder Involvement in Project Monitoring
17. Reporting to Stakeholders
18. Management Functions

### **1.3 Staffing and Resources**

There are numerous stakeholder groups with potentially conflicting interests and influence in the project and these need careful and consistent management to gain and maintain a social license to operate. Stakeholder Engagement for the BWSE requires substantial inputs of time to develop and to operate effectively. The most effective and integrated management location for the SEP team is under the MCA-Mongolia or its representative, under a trained and experienced Social Safeguards Specialist or Manager.

The SST requires a dedicated office with a small community meeting space, desks etc., filing capability, computer facilities, internet and telephones. The SST needs at least two Community Liaison Officers at field level to ensure good communication within affected communities.

The first task of the SST is to write an SEP with associated Standard Operating Procedures (SOPs) for each of the above sections to manage stakeholder interactions – this is to be regularly reviewed and updated.

### **1.4 Stakeholder Identification Analysis**

The ESIA process identified and consulted many potential stakeholders in the project. This work must be consolidated into a project wide stakeholder engagement matrix (SEM) listing each stakeholder, areas of interests and influence, contact person, contact details and add a line in the matrix for each meeting, consultation, email or telephone call etc. and the response made.

The SST must write an SOP for the management of the SEM.

The project is not static, stakeholders change interests, legislation and regulations change and institutional responsibilities mutate so that the stakeholder engagement process has to maintain and record and respond to stakeholders as they interact with the project and as they change over time. The SEP requires regular interaction with stakeholders to update and exchange information alongside the progression of the projects. To this end, the SEP is a live process, requiring regular monitoring and updating.

### **1.5 Information Disclosure**

The exchange of appropriate information with the right groups of people in an appropriate media and appropriate text and at the right time is fundamental to the success of the project. Information Disclosure must be planned and executed effectively to ensure project progress. The SST will have to plan in advance:

1. What information needs to be disseminated and when, broken down into individual messages by audience by project phase.
2. What language and wording is appropriate for each message and each audience. Will a translation be necessary?
3. Which media is suitable for each message and audience – meetings, letter, telephone call, radio broadcast, newspaper, social media etc.
4. Commission and maintain a project website to display information and enable communication from outside. This should enable complaints to be received and support the grievance redress mechanism. Members of the SST should have cards to hand out to enable people to know who they are and how to contact them.
5. Write an SOP to manage each message design and dissemination stating responsibilities and actions

6. Derive a budget for information dissemination activities over all project phases.

## **1.6 Stakeholder Consultation**

Information needs for the BWSE are not one way – not only do stakeholders need to receive project information but there needs to be a formal system of stakeholder consultation to enable external views to be heard and to enable discussion of project elements. This requires a system of consultations of stakeholders over the life of the project. The SST needs to examine the SEM and identify ways of regular consultation at appropriate intervals – some stakeholders need more frequent consultation than others at various times.

The SST needs to define a schedule of consultations, define suitable consultation intervals over the project life and draw up a calendar of consultations. These then need to be allocated to a consultation type, e.g. large physical meeting, small physical meeting, zoom/ skype call, allocated to where the meeting should/ could take place and allocate frequency, allowing for a margin of additional meetings in response to currently unknown circumstance. Resources and staffing can then be budgeted for consultations.

Regardless of the very small resettlement impacts under BWSE, special consideration needs to be made for families affected by landtake to ensure their interests are protected. The optimum consultation technique for this in BWSE, is the inclusion of two Community Liaison Officers in the SST (one per District) who will keep in contact with affected community members.

Consultation meetings need an organizer to make arrangements and distribute invitations to meetings, a meeting leader to lead the discussion and a recording assistant. It is best practice to make recordings of meetings and make a transcription as meeting notes. Copies of the meeting notes are distributed to meeting participants.

The SST needs an SOP on meeting protocol defining responsibility for arrangements, invitations, recording of meetings, distribution of minutes and integration into the SEM and data storage.

## **1.7 Partnerships**

Non-governmental organizations (NGOs) and community-based organizations (CBOs), particularly those who represent communities directly affected by a project, can be important stakeholders for companies to identify and engage on a proactive basis. NGOs may have expertise valuable to effective stakeholder engagement. For example, they can be sources of local knowledge, sounding boards for project design and mitigation, conduits for consulting with sensitive groups, and partners in planning, implementing and monitoring various project-related programs.

It is important to carry out initial research regarding the local power dynamics and existence of special interest groups to ensure that any intermediary organizations, such as NGOs, are truly representative of and accountable to the community interests they claim to support and represent. If there is NGO opposition to the project, engaging early to try and understand the concerns or critiques being raised can offer an opportunity to manage these issues before they escalate or find another outlet for expression.

Occasionally, projects require partnerships with other organizations in order to achieve some element. In BWSE, this may involve an NGO like Centre for Gender Equality, who may be needed to assist with training programs on gender and social inclusion, C-Tip training etc. and on assisting internal grievance procedures over cases alleging sexual harassment or gender based

violence within contractors. The SST needs to have an allocation in its budget for additional small levels of expenditure procuring additional partner services to meet the MCC Policies on Gender and Social Inclusion, C-TIP, HIV/ AIDS, etc. that need to be supplied externally from the MCA-Mongolia or its representative.

The SST must review potential partner organizations and explore possibilities for partnering with the MCA-Mongolia or its representative, and record communication in the SEP. An SOP on agreements and negotiations with third party partners is required.

## **1.8 Grievance Management**

The Grievance Redress Mechanism is discussed in detail in Annex A. It is vital that the mechanism is integrated into the SEP as it is the major channel of negative comment and complaint and needs effective management to resolve grievances and be reported to wider project management. Ideally, the responsibility for receiving and resolving grievances in BWSE would be of the MCA-Mongolia or its representative's SST. The SST needs sufficient staffing to manage community investigations and allegations of grievances.

The GRM requires a grievance matrix (GM) to record the incidence of each grievance and the process of investigation and response, The GM data must form part of the SST monthly reporting process.

## **1.9 Stakeholder Involvement in Project Monitoring**

One way to help satisfy stakeholder concerns and promote transparency is to involve project-affected stakeholders in monitoring the implementation of mitigation measures or other environmental and social programs. Such participation, and the flow of information generated through this process, can also encourage local stakeholders to take a greater degree of responsibility for their environment and welfare in relation to the project, and to feel empowered that they can do something practical to address issues that affect their lives. Participatory monitoring also tends to strengthen relationships between the project and its stakeholder.

Participatory monitoring goes beyond the project consulting with affected stakeholders on environmental and social monitoring data. It requires the physical presence of affected individuals at the time that monitoring takes place and involves data collection methods and indicators meaningful to the stakeholders concerned.

Participatory monitoring might include, for example:

5. Involvement of affected stakeholders in scientific sampling methods, questionnaires and analysis,
6. Observations by affected parties, triangulated to strengthen validation,
7. Group discussions on the success of mitigation or benefit measures and/or on how to manage new issues that have arisen
8. The adaptation of conventional participatory techniques to the purpose of assessing changes in the physical and socio-economic environment over time, such as a seasonal calendar, daily/weekly schedules, resource and land-use maps, and wealth ranking.

External monitoring of a company's environmental and social commitments can strengthen stakeholder engagement processes by increasing transparency and promoting trust between the project and its key stakeholders. Projects benefit by receiving an objective assessment of their environmental and social performance, which can help defuse external criticism and strengthen

support from local stakeholders. An external monitor can also help increase both the accountability of the project and the credibility of the monitoring results in the eyes of affected communities and civil society groups by serving as an independent and objective source of information and reporting. External monitors may be NGOs, government regulators, academics and scientists, community representatives, technical experts, or eminent persons.

Planning to include stakeholders in monitoring, whether internally or externally, need to be anticipated and included in the SEP and project monitoring plans. SOPs for managing these interactions are useful, particularly if they are drawn up in consultation of the stakeholder groups.

## **1.10 Reporting to Stakeholders**

Once consultations have taken place, stakeholders need to know which of their suggestions have been taken on board, what risk or impact mitigation measures will be put in place to address their concerns, and how, for example, project impacts are being monitored. In addition to reporting back to project-affected groups and other stakeholders as part of the consultation process, there are other types of reporting that target a different set of stakeholders. Sustainability reporting, for example, provides projects with an opportunity to communicate information to a much wider range of stakeholders about the environmental, social, economic, and governance performance of the project. It also offers a platform to report back on the process of stakeholder engagement itself, such as who has been consulted, on what topics, and with what results. Consequently, a number of international codes and standards for reporting now include requirements for implementing and reporting on stakeholder engagement, e.g. IFC Performance Standards.

Under this heading, the SST needs to:

7. Determine what information needs to be reported to which stakeholders, by what method and how frequently, add to the SEP budget lines.
8. Regularly update the commitments register where promises have been made to stakeholders in response to complaints or external pressure
9. and disclose progress to affected and interested parties. In particular, publicize any material changes to commitments or implementation actions that vary from publicly disclosed documents.
10. Make monitoring results publicly available, especially reports of any external monitors.
11. Regularly report on the process of stakeholder engagement as a whole, both to those stakeholders who are directly engaged, and to other interested parties.
12. Derive an SOP for reporting to stakeholders.

## **1.11 Management Functions**

Increasingly, good practice points to incorporating stakeholder engagement activities into a project's environmental and social management system. In practice this means making its management systematic by integrating it with core activities. To achieve this, the MCA-Mongolia or its representative will need to identify critical points in the life of the project where stakeholder engagement will be needed, and determine who will deliver these actions and how they can be integrated with core project functions. This involves trying to work out how best to deliver and integrate a number of different aspects of engagement and reporting as discussed in the previous sections, including:

8. Ongoing stakeholder analysis and the assessment of stakeholder concerns from a “risk” perspective
9. The hiring and training of community liaison officers
10. Consultation processes designed to meet the Project’s own policies and/or compliance requirements of funders and regulators
11. Input and suggestions received from stakeholders on project design and proposed mitigation measures
12. Grievance mechanisms that capture and respond to stakeholder concerns
13. The involvement of local stakeholders in project monitoring
14. Reporting information to stakeholders.

Most importantly, stakeholder engagement should be managed as one would manage any other project function — with clearly defined objectives and targets, professional, dedicated staff, established timelines and budget, and senior management responsibility and oversight.

Some good practice principles for managing stakeholder engagement processes are given below.

- Coordinate activities and assign overall responsibility: Over the life of the project, affected communities and other interested parties will likely interact with a variety of representatives from within the project and its contractors. It is essential that this diverse set of engagement activities be coordinated.
- Consistency of information: Consistency of information conveyed to stakeholders by different teams or business units within the MCA-Mongolia and its representative is important, as is keeping track of such activities in order to reduce inefficiencies, confusion, and conflicting messages or commitments. This is usually best achieved by giving a senior Social Manager overall responsibility for stakeholder engagement. This high-level oversight not only helps to underscore the importance of the function but is needed in order to effectively implement the strategy and coordinate the various activities across the project.
- Hire, train, and deploy the right personnel: Initial stakeholder analysis will provide a sense of the type of stakeholder groups the project will need to engage during different phases of the project cycle. Engaging different types of stakeholders requires different skills and staffing considerations. For example, engaging with local communities requires one or more field-based community liaison officers, whereas engagement with government officials or local, national, and international organizations will likely require different skill sets and more direct involvement of the senior Social Manager. The project should consider bringing in social advisors or other expert staff to help design and facilitate the process and assist with participatory methodologies and other specialized techniques. When hiring community liaison staff, consider people who will be able to develop and maintain good working relationships with the local communities. Since their job will involve listening and responding to local concerns and suggestions, qualities to look for include:
  - Good people and communication skills
  - A good understanding of the local language and community/cultural dynamics
  - Open-mindedness and respect for the views of others
  - A solution-oriented approach
  - A high integrity/degree of trustworthiness
  - A genuine commitment to the position and its goals

- Create clear reporting lines between the community liaison function and senior management: In order to be effective, Community Liaison Officers need to have the authority to negotiate on behalf of the project. This requires a clear reporting structure and clarification as to which decisions they can take unilaterally, and which are to be passed on to higher levels within the MCA-Mongolia and its representative. Direct reporting lines also enable senior managers to control risks by being kept informed of this type of field-level information in a timely manner. The more likely it is that the concerns of local stakeholders might pose a risk or reputational issue for the project, the more important it is for Community Liaison Officers to have a direct channel to senior managers.
  
- Communicate the strategy internally: If stakeholder engagement is to be effectively integrated into day-to-day project operations, the concept needs to be “owned” by all staff. Every project unit needs to be aware of the strategy and understand why the company is committing time and resources to the SEP. Too often, stakeholder engagement programs are compartmentalized within the project and regarded as a “soft concept” that is the domain of a few community liaison staff. By clarifying the links between stakeholder engagement and environmental and social performance – as well as its potential to impact on reputation and project outcomes – stakeholder relations becomes a collective responsibility.

---

## Appendix H ESMP – CP-3: Raw and Finished Water Conveyance

---

This environmental and social management plan (ESMP) specifies management measures to avoid, minimize, or offset potential significant adverse environmental and social impacts, or reinforce or enhance potential beneficial impacts of construction contract package CP-3: Raw and Finished Water Conveyance of the proposed Ulaanbaatar (UB) Bulk Water Supply Expansion (BWSE). As needed, the ESMP specifies compensation for adverse impacts if mitigation is not feasible, cost-effective, or sufficient. Consistent with International Finance Corporation (IFC) Performance Standards on Environmental and Social Sustainability (Performance Standards), this ESMP adopts “a mitigation hierarchy to anticipate and avoid, or where avoidance is not possible, minimize, and, where residual impacts remain, compensate/offset for risks and impacts to workers, Affected Communities, and the environment.”<sup>82</sup>

Management measures and, as necessary, compensation are specified for the following project phases:

- Preconstruction – i.e., actions that need to occur prior to construction; however, not including land acquisition and involuntary resettlement, which are addressed in detail in the BWSE resettlement action plan (RAP), and not including construction mobilization
- Construction, including construction mobilization and demobilization
- Operation and Maintenance

Construction mobilization is scheduled to begin within several months of issuing this ESMP and the preconstruction phase then will have been completed. As preconstruction activities currently are underway and soon will be concluding, the associated management measures specified in the ESMP are few and predominantly reference management measures otherwise specified for the construction phase.

As discussed in Sections 3.2 and 5.2 of the BWSE environmental and social impact assessment (ESIA), the ESIA team eliminated decommissioning from detailed study. Because UB always will require water and therefore a bulk water system, effectively the useful life of the project will not end, and the system will not be decommissioned. Rather, when needed, the bulk water system will be reengineered and reconstructed to upgrade specific processes and equipment. These activities would be undertaken inherent to the operation and maintenance phase and in accordance with the design standards, and environmental procedures and regulations current at that time. Therefore, management measures are not specified for a decommissioning phase. Nonetheless, this ESMP presents a discussion of the process of and risks associated with decommissioning, albeit a necessarily general discussion as decommissioning activities are not known at this stage and the BWSE infrastructure and project sites are highly varied.

For each management measure, as appropriate for each phase of the project, the ESMP details:

- Potential Impact – Potential adverse or beneficial effect that the measure is designed to address, and target locations, resources, or communities
- Standard / Requirement Triggered – Mongolian or international standard or requirement triggered by the potential impact

---

<sup>82</sup> Performance Standard 1, Assessment and Management of Environmental and Social Risks and Impacts. International Finance Corporation. 2012. *Performance Standards on Environmental and Social Sustainability*. World Bank Group, January 1, 2012.

- Management Measure – Specific, implementable, verifiable, and cost-effective action to be taken
- Monitoring – Monitoring activity to be undertaken
- Locations – Locations where the management measure and monitoring are to be implemented
- Indicators and Success Criteria – Indicators and criteria to be used to verify that the management measure is being implemented, and that it is effective and sufficient
- Reporting – Monitoring reporting requirement
- Schedule – Timing and frequency of implementing the management measure, monitoring, and reporting
- Responsibility – Delineation of responsibilities for implementing the management measure, monitoring, reporting, and oversight
- Estimated Costs – Costs of implementing the management measure and monitoring

The management measures and monitoring specified in this ESMP will be implemented, as applicable, together with the conditions, procedures, and best engineering practices specified in the design of the BWSE project prior to or irrespective of its evaluation in the ESIA. For purposes of the ESMP, best engineering practices and management measures are distinguished as follows:

- *Best engineering practices* are actions typically taken by the project proponent, construction contractor, or operator to avoid or minimize potential adverse environmental and social impacts but are not implemented in response to the impact findings of the ESIA.
- *Management measures* specified in the ESMP differ from best engineering practices in that they will be implemented specifically in response to the impact findings described in the ESIA.

In other words, best engineering practices are inherently part of the BWSE and are not additional management measures specified as a result of the impact assessment process. With respect to the construction phase, they are practices that typically are within the scope of services of the construction contracting firm performing the work. Their implementation is assumed in the impact analysis presented in the ESIA.

The best engineering practices are detailed as technical specifications and are set forth in Section V, Works Requirements of the Construction Contract Documents. Those technical specifications that the ESIA team assumed would be taken by the project proponent, construction contractor, or operator, and would avoid or minimize potential adverse environmental and social impacts are organized into Division 1 – General Requirements and Division 2 – Site Work, and in turn into sections. The relevant issues are addressed by technical specifications in the respective sections indicated in the two following Technical Specification text boxes.

If the best engineering practices in place avoid or sufficiently reduce the impact of activities evaluated in the ESIA below the level at which the impact would be significant, additional avoidance or minimization of potential adverse impacts may not be needed. Conversely, management measures specified in the ESMP have been developed to avoid, minimize, or offset adverse impacts; or to reinforce or enhance beneficial impacts.

### **Technical Specifications, Division 1 – General Requirements**

#### **Section 01030, Special Requirements**

- Site-specific health and safety plan
- Site-specific emergency action plan
- Site-specific hazardous waste management plan
- Backfilling operations following pipe laying
- Application of clean water to control dust
- Removal and legal disposal of unsuitable material and excess material
- Disposal of debris
- Preconstruction Video Recording of Entire Site
- Detours and Road Accessibility
- Owner Obtained Permits

#### **Section 01046, Control of Work**

- Hours of Construction
- Safeguarding of Open Excavations
- Occupying Private Land
- Protection of Streets
- Care and Protection of Property

#### **Section 01063, Miscellaneous Requirements**

- Traffic Control
- Maintain Flows of Existing Utilities

#### **Section 01110, Environmental Protection Procedures**

- Protection of Existing Structures and Utilities
- Cleanup and Disposal of Excess Material
- Prevention of Environmental Pollution
- Erosion Control
- Protection of Streams, Wetlands and Surface Water
- Protection of Land Resources
- Protection of Air Quality
- Noise Control

#### **Section 01500, Temporary Facilities**

- Field Offices
- Visitor Center
- Internet Service
- Telephone Service
- Temporary Perimeter Fence
- Potable Water for Construction and Domestic Purposes
- Temporary Electrical
- Temporary Sanitary Conveniences
- Barricades
- Temporary Heat
- Shelter and Protection of Materials
- Site Security

### **Technical Specifications, Division 2 – Site Work**

#### **Section 02100, Site Preparation**

- Special Requirements
- Contractor shall repair or replace any structures that are damaged
- Disposal of waste/surplus materials
- Inform Owner if there were archeological findings during site preparation
- Clearing, Grubbing, Tree & Stump Removal
- Disposal of Waste Materials
- Sediment and Erosion Control

#### **Section 02140, Dewatering**

- Dewatering

#### **Section 02210, Earth Excavation, Backfill, Fill and Grading**

- Excavation
- Separation of Excavated Material for Reuse
- Trench Excavation
- Reuse and Disposal of Surplus Excavated Materials
- Care and Restoration of Property
- Backfilling

#### **Section 02230, Site Clearing**

- Clearing and Grubbing

#### **Section 02268, Erosion Control Barrier**

- Erosion Control Barrier

#### **Section 02480, Landscaping**

- Plants
- Loam and Seed
- Planting
- Maintenance of Seeded Areas and Planting

As appropriate for each of the subject project phases or the overall ESMP, the ESMP organizes and summarizes the management measures into the following constituent plans and schedules:

- Environmental Management
- Waste Management
- Social and Gender Inclusion
- Health and Safety Management
- Education, Training, and Community Outreach
- Risk Control and Emergency Response
- Monitoring and Verification, and Maintenance Actions
- Implementation Work Plan and Schedule
- Implementation Budget

The first four plans/schedules listed above detail specific management measures to mitigate adverse environmental and social impacts or reinforce potential beneficial impacts. Each management measure is detailed in a table that is specific to that measure. The remaining plans/schedules provide procedures, as appropriate referencing the management measures in the preceding plans, to address specific concerns and issues, or summarize the measure-specific procedures, timetables, and costs into a workplan, schedule, and budget estimate for implementing the ESMP.

## H.1 Pre-Construction Phase

### H.1.1 Responsibilities During Pre-Construction

#### MCA-Mongolia

MCA-Mongolia or its representative will be responsible for oversight of the pre-construction-related management measures and monitoring specified in the ESMP. MCA-Mongolia or its representative will inform and coordinate with all applicable stakeholders regarding their corresponding mandates under or in relation to the ESMP. MCA-Mongolia or its representative will establish a Social Safeguards Team (SST) and coordinate with the Contractor during the pre-construction and construction phases in implementing, supervising, reporting, and follow-up actions with regard to the ESMP.

#### *SST Organization and Staffing*

- Social Manager, with suitable experience in resettlement and management of social issues in construction, who will lead the team
- Two Social Safeguards Officers
  - One experienced in liaison with construction companies and familiar with workplace training/toolbox
  - One experienced in social and gender inclusion, who will manage coordination of the MCA-Mongolia Grievance Redress Mechanism (GRM)
- Two Community Liaison Officers who will work at the local level, one assigned to each of Khan-Uul District and Songinokhairkhan District

As needed, MCA-Mongolia or its representative must expand the SST size in relation to the increase in supervision and monitoring of contractors.

## **SST Responsibilities**

- Finalize, update, monitor, and report as required on BWSE social plans and those prepared by the Contractor:
  - Labor Management Plan
  - Gender Integration and Social Inclusion Plan
  - Counter-Trafficking in Persons Plan
  - Stakeholder Engagement Plan
  - Construction Camp and Temporary Facilities Management Plan
  - Cultural Heritage Training Plan
- Manage, update, and implement the Stakeholder Engagement Plan
- Plan and lead community consultation meetings
- Ensure the design and delivery of effective information campaigns using all media
- Liaise with the UB MUD regarding the land acquisition and compensation process in resettlement
- Undertake further enquiry among herders as to the pattern of grazing disruption caused by land take and land reclassification
- Liaise with khoroo administration and local communities to negotiate new grazing arrangements for both winter and summer grazing
- Manage and maintain the Grievance Matrix
- Liaise with MCA-Mongolia, MUD, and contractors to implement and assist in resolution of grievances
- Inform community members of employment opportunities
- Assist local people to apply for vacancies through the Ministry of Labor and Social Protection offices
- Liaise with contractors to encourage and promote local employment over imported labor and emphasize the contractual obligations to aim for 30 percent of unskilled and semi-skilled jobs to go to women
- Liaise with experienced NGOs to find those able to design training courses on aspects of employee behavior, sexual harassment and gender-based violence, gender equity, conflicts over employment opportunities and foreign workers, cultural awareness, and chance finds processes
- Monitor and supervise contractor compliance with designing and implementing social policies and plans, training, internal grievance systems, and the MCA-Mongolia GRM
- In cases of internal complaints of sexual harassment or gender based violence within the contractor's grievance mechanism, ensure that an independent investigator is appointed, at the expense of the contractor, to lead the investigation and reporting on the grievance
- Monitor achievement of resettlement and review completion, and recommend further measures if households fail to reinstate their livelihoods
- Finalize the Vulnerable People's Plan and ensure implementation through the Ministry of Labor and Social Protection

## **Contractor**

The construction contracting firm performing the work, the **Contractor**, will be fully responsible for implementing and monitoring all pre-construction-related management measures specified in the ESMP—together with the conditions and procedures specified in Section V, Works Requirements of the Construction Contract Documents. The Contractor will read the ESMP, consider it in its entirety, and comply with all aspects of the ESMP that pertain to implementing and monitoring pre-construction-related environmental and social management.

The Contractor will abide by the requirements of this ESMP, which is appended to and is a part of the Contract. Following construction contract award, the Contractor will develop a site-specific Contractor's Environmental and Social Management Plan (CESMP), as further described below, for approval by the Engineer prior to start of the construction works. The Contractor will prepare the site-specific CESMP based on the contents of Section V, Works Requirements and this ESMP. The Contractor will submit the detailed, site-specific CESMP to the Engineer within 28 days after receiving the Letter of Acceptance. The CESMP must be approved by the Engineer prior to commencement of the execution of the Works.

The Contractor is advised that all sites where the Contractor will establish temporary construction facilities will be subject to environmental and social impact assessments and must be covered by an acceptable CESMP, must be permitted in accordance with all applicable permitting requirements, and may be subject to a RAP. These temporary facilities may be co-located and potentially would comprise the following:

- Construction camps
- Laydown, staging, and storage sites
- Concrete batch plants
- Site offices
- Fuel storage
- Parking areas

The Contractor will take all necessary measures and precautions to ensure that the execution of the works and all associated operations on site or off site are carried out in conformity with statutory and regulatory environmental and social requirements of the Government of Mongolia and the technical specifications, where the more stringent will apply. The Contractor will take all measures and precautions to avoid any nuisance or disturbance arising from the execution of project activities. Wherever possible, this will be achieved by avoidance of the impact at the source rather than mitigating an impact after it has been expressed.

The Contractor will develop a grievance redress mechanism (GRM) based on guidance provided in Annex A of this ESMP.

The Contractor will designate an Environmental and Social Performance Manager. This individual will have knowledge of relevant Mongolian, IFC, and Millennium Challenge Corporation standards and regulations, and knowledge of environmental, social and gender issues that include, but are not limited to, environmental management, waste management, gender and social inclusion, cultural resources, and health and safety management.

This individual will be responsible to:

- Work closely with MCA-Mongolia or its representative to guide the Contractor's thorough understanding of the mitigation and monitoring requirements
- Coordinate the Contractor's work related to implementing environmental and social management measures and monitoring
- Work closely with MCA-Mongolia or its representative to require that the Contractor, as needed, incorporates or modifies management measures and monitoring actions to reflect on-site field conditions

The Contractor, while in possession of the construction sites, will be responsible for the safety measures undertaken in accordance with the Technical Specifications to protect the workforce of the Contractor's own staff as well as the Engineer's and MCA-Mongolia or its representative's supervision staff. The Contractor will conduct in this respect safety induction courses for all personnel involved with the works and who are required to supervise any activity prior to their

attending any part of the works. Additional training is required to meet MCC social policy requirements as per the:

- Labor Management Plan
- Gender Integration and Social Inclusion Plan
- Counter-Trafficking in Persons Plan
- Stakeholder Engagement Plan
- Construction Camp and Temporary Facilities Management Plan
- Cultural Heritage Training Plan
- Managing external grievances as part of the BWSE GRM

The Contractor will act responsibly to provide notification of the Contractor's schedule to enable MCA-Mongolia or its representative to carry out its responsibilities. The Contractor will be required to provide verbal and written updates to MCA-Mongolia or its representative on a regular basis indicating percent achievement of the pre-construction-related management measures specified in the ESMP. On a monthly basis, as part of the Contractor's monthly progress report, the Contractor will submit an ESMP update that will report the status of all environmental and social compliance activities and actions taken by the Contractor.

### **Contractor's Environmental and Social Management Plan (CESMP)**

The site-specific CESMP is required for construction activities and will provide the implementation vehicle of specific management activities applicable for the construction sites. At the direction of the Engineer, the Contractor is required to update the CESMP, including constituent plans and procedures, during the construction works as part of its obligations under its contract. The CESMP is required to strictly follow and comply with the environmental, social, health and safety requirements of the Millennium Challenge Corporation (MCC) and national legislation, as well as this ESMP, its constituent plans, and other applicable documents and regulations.

The site-specific CESMP will provide identified site-specific management measures, and refine organizational and operational procedures for the implementation of those measures, including implementation timeline and specific reporting requirements. The CESMP will detail the plans and procedures constituent to the CESMP and elaborate complimentary environmental, social, and health and safety management measures and training, and indicate the responsibility for implementation, technical details, and how implementation will be monitored.

#### **Objectives of the CESMP**

The Contractor will prepare the site-specific CESMP in order to properly manage its construction activities in accordance with Section V, Works Requirements and this ESMP, and in compliance with requirements of MCC and Mongolian legislation. This includes requirements on community engagement and gender integration incorporated into the ESMP, the Employer's Social and Gender Integration Plan, and Counter-Trafficking in Persons requirements of MCC, and the laws and regulations of Mongolia.

The site-specific CESMP will be prepared with the following objectives:

- Provide the environmental and social policy of the Contractor
- Provide operational and emergency procedures, developed to address the environmental aspects and risks associated with the construction activities
- Provide details on approaches and measures and appropriate personal protective equipment (PPE) and other equipment for handling hazardous waste generated on each site

- Provide details on communication and reporting, as well as contacts of site supervisors nominated to control and guide works involving disturbance of hazardous materials and waste
- Clarify the implementation and operation of the site-specific CESMP to ensure that structure and responsibilities are assigned, workers are trained, aware, and competent, and that there is proper communication, documentation, operational control, and emergency preparedness and response
- Provide organizational and technical procedures for implementation of the CESMP to ensure that construction activities associated with potential environmental and social impacts are carried out in a controlled and responsible way
- Provide checking and corrective action through monitoring and measurement
- Provide mechanisms for maintaining adequate records of corrective actions to allow effective monitoring
- Provide mechanisms for maintaining effective two-way communication between the Contractor and the community and stakeholders
- Provide full compliance with Mongolian employment law and ensure each employee has a written contract and is made aware of and signs compliance with the Labor Management Plan
- Provide training on and awareness in accordance with the following management measures:
  - Emergency Preparedness and Response
  - Waste Management
  - Labor Management
  - Gender Integration and Social Inclusion
  - Counter-Trafficking in Persons for Sex
  - Stakeholder Engagement, Community Consultation, and Grievance Redress
  - Construction Camp and Temporary Facilities Management
  - Cultural Heritage Protection
  - Health and Safety Management

### ***Preparation of the Site-Specific CESMP***

The CESMP will include the following:

- Management Acknowledgements
- Organization and Staffing
- Communications and Reporting
- Environmental, Social, and Health and Safety Provisions

The Contractor will prepare and submit for the Engineer's approval the site-specific CESMP, including constituent plans and procedures, within 28 days after receiving the notice of contract award. The Engineer may require periodic reviews, including updating of the CESMP during the construction works.

### ***Management Acknowledgements***

#### **1) Certification and Commitment**

The site-specific CESMP submitted by the Contractor will provide a signed statement from the Contractor's Managing Director(s) attesting to a commitment that all environmental and social protection, safety, and occupational health and safety aspects of the contract will be given highest

priority in the discharge of contractual obligations and certifying a commitment to the provisions in the ESMP, its constituent plans, environmental and social requirements of the contract, as well as the approved site-specific CESMP.

## 2) Statutory Understanding and Compliance

The site-specific CESMP will provide a statement attesting the Contractor's understanding of, and means of ensuring due compliance with, the statutory regulations relating to construction work in Mongolia, specifically regarding compliance with:

a) All current environmental laws and regulations, related to, but not limited to, the following:

- Noise
- Vibration
- Air pollution
- Water contamination
- Solid and hazardous waste disposal
- Waste disposal
- Sanitary conditions (water supply, sewerage, wastewater disposal, etc.)
- Use of explosives;
- Protection of public traffic
- Historical, cultural, and archaeological monuments/sites
- Resettlement, land acquisition, servitude, temporary use of land and compensation, etc.

b) All current labor laws and laws related to, but not limited to, the following:

- Contract of employment and labor disputes
- Working conditions
- Management, monitoring, and supervision
- Gender-based discrimination in employment
- Child labor
- Trafficking in persons
- Gender-based violence
- Sexual harassment

c) All occupational health and safety legislation including, without limitation, the rules and regulations of Mongolia and the authorities having jurisdiction. These provisions will be included and regulated through the Health and Safety Management Plan.

## 3) Availability of Documents

The site-specific CESMP will state where copies of environmental and social regulations and documents will be available on the construction sites and verify that all regulations and documents have been or will be made available.

## 4) Management of Subcontractors

The requirements of this and related sections and obligations therein will be included for implementation of parts of the construction activities by the approved subcontractors, while the Contractor will:

- a) Provide subcontractors with copies of the site-specific CESMP, the ESMP, the constituent plans, and other relevant environmental and social policies, plans,

documents, and regulations, while incorporating such provisions into all subcontracts and ensuring compliance with such plans under the Contract.

- b) Require all subcontractors to appoint an environmental representative, social representative, and health and safety representative, who will be available on the sites throughout the operational period of the respective subcontract and ensure as far as is practically possible that staff and employees of subcontractor(s) are conversant with appropriate parts of the site-specific CESMP and the relevant environmental and social documents and regulations.

## **Organization and Staffing**

### **1) Organization Chart**

The site-specific CESMP will include an organization chart identifying, by job title and by the name of the individual, the personnel to be engaged solely for environmental protection, social and gender, and health and safety control. The chart and the supporting text will identify participants and their contact details.

### **2) Identification of Responsibilities**

The site-specific CESMP will provide descriptions of the responsibilities of the Environmental and Social Manager, Social and Gender Manager, and Health and Safety Manager appearing on the organization chart. Additionally, the CESMP will provide a description of the responsibilities of the Contractor's Social Safeguards Officer or Social Safeguards Team.

#### **a) Environmental and Social Performance Manager**

The Environmental and Social Manager, qualified in ESMP and resettlement implementation, throughout the construction period will be primarily responsible for daily inspection and monitoring of ESMP implementation. The Environmental and Social Manager will prepare monthly and as-needed incident reports and submit them to the Engineer. MCA-Mongolia will report to MCC and send feedback to the Contractor through the Engineer or directly when urgent action is required. Monitoring and reporting on the implementation of follow-up action will also be part of the Environmental and Social Manager's duties.

The Environmental and Social Performance Manager additionally will be responsible for environmental management of the construction sites and day-to-day management of environmental issues. The Environmental and Social Manager will be empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements of the site-specific CESMP or relevant environmental documents and regulations.

The Environmental and Social Performance Manager will maintain a daily site diary/record-book comprehensively recording all relevant matters concerning the construction sites' environmental management, safety, and traffic control, inspections, and audits, related incidents and the like. The site diary will be available at all times for inspection by the Engineer.

#### **b) Social and Gender Manager**

The Social and Gender Manager will be responsible for day-to-day management of social issues for the duration of construction works. The Social and Gender Manager will be

empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements of the site-specific CESMP or relevant social documents and regulations. The Social and Gender Manager will be responsible for overall stakeholder engagement and consultation process, ensuring proper labor contracting and working conditions, issues related to trafficking in persons, and organizing and delivering trainings, appropriate communication, and reporting.

Additionally, the Social and Gender Manager will monitor the internal grievance mechanism. In case of sexual harassment or violence, will liaise with the MCA-Mongolia or its representative's Social Safeguards Team and engage an independent third party such as the Centre for Gender Equality to manage investigations of allegations.

With input from site supervisors, the Social and Gender Manager will maintain a diary/record-book comprehensively recording all relevant matters concerning site social issues management, inspections and monitoring, incidents and emergencies, as well as other relevant issues. The diary will be available at all times for inspection by the Engineer.

c) Health and Safety Manager

The Health and Safety Manager will be responsible for day-to-day management of health and safety issues for the duration of construction works, including HIV/AIDS and Covid-19 related issues. The Health and Safety Manager will be empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements of the Health and Safety Management Plan or requirements of health and safety documents and regulations.

The Health and Safety Manager through input from site supervisors will maintain a health and safety diary/record-book comprehensively recording all relevant matters concerning site health and safety management, inspections, and monitoring, incidents and emergencies, as well as other relevant issues. The diary will be available at all times for inspection by the Engineer.

d) Social Safeguards Officer / Social Safeguards Team

The Contractor's Social Safeguards Officer or Social Safeguards Team, under the Social and Gender Manager, will be appointed to manage the contractual obligations specified in the construction contract. Depending on the size of the company, the Contractor designate at least Social Safeguards Officer; more if the number of employees exceed 50. Additionally, a Contractor Community Liaison Officer may be needed to work with local labor.

The responsibilities of the Contractor's Social Safeguards Officer or Social Safeguards Team are the following:

- Coordinate with the MCA-Mongolia or its representative's SST the protocols for community contact
- Maintain records of all community contacts and integrate with the project Stakeholder Matrix
- Liaise with MCA-Mongolia or its representative's SST over community contacts
- Liaise with MCA-Mongolia or its representative's SST to implement and assist in resolution of grievances

- Inform MCA-Mongolia or its representative's SST of employment vacancies and recruit through the Ministry of Labor offices and process
- Monitor and promote the employment of women to achieve the recommended target of 30 percent or more
- Plan and ensure delivery of the contractually required employee awareness training and information programs
- Liaise with training organizations and experienced NGOs to find those able to design training courses on aspects of employee behavior, sexual harassment and gender based violence, gender equity, HIV/AIDS, conflicts over employment opportunities and foreign workers, cultural awareness, and chance finds processes
- Support complainants to the Contractor's internal grievance system, particularly those alleging sexual harassment or gender-based violence
- Assist the Contractor's personnel department to manage the internal employee grievance mechanism for reporting grievances
- Manage the Contractor's responsibilities with the project MCA-Mongolia GRM; documenting, reporting, and taking part in finding solutions

### 3) Appointments

The Contractor will include the CV of the following proposed personnel in the bidding package and submit to MCA-Mongolia for approval the names and details (full CVs) of these proposed personnel within 14 days after the notification of contract award:

- Environmental and Social Performance Manager
- Social and Gender Manager
- Health and Safety Manager

The proposed personnel will hold the attestation/proof of professional qualification required from the relevant government authorities to perform and submit pertinent studies and documentation to relevant Government agencies, with an advanced post graduate degree in a relevant discipline or as a certified consulting engineer, and relevant post-graduate experience in Mongolia.

The Contractor will obtain approval and appoint the Environmental and Social Performance Manager, Social and Gender Manager, and Health and Safety Manager prior to commencement of construction works, unless otherwise, in exceptional circumstances, it is agreed in writing with the Engineer. Key personnel identified in Section IV, the Environmental and Social Manager, Social and Gender Manager, and Health and Safety Manager will not be removed from the construction works without written permission of the Engineer. Within 14 days of any such removal or notice of intent of removal, a replacement for the respective personnel will be nominated by the Contractor for approval by the Engineer and MCA-Mongolia (MCA-Mongolia will approve any key staff).

### **Communications and Reporting**

The site-specific CESMP will explain the proposed interaction and communication procedures between construction personnel and environmental, social and gender, and health and safety staff, including:

- Communication facilities
- Routine communication and reporting systems
- Stakeholder engagement and consultation activities

### 1) Environmental, Social and Gender, and Health and Safety Reports

The Contractor will submit the environmental, social and gender, and health and safety reports shown in Table 1.

**Table 1 Summary of Reporting Requirements**

Report	Submission Schedule	Content
<b>Site-specific CESMP</b>	One time during mobilization, within 28 days after the Letter of Acceptance	<p>The Contractor will carry out an assessment of environmental, social and gender, and health and safety conditions at the work sites to define site-specific impacts and adequate mitigation measures. The Contractor will also develop constituent plans and procedures required as a part of CESMP.</p> <p>The site-specific CESMP must be approved by the Engineer prior to commencement of construction activities.</p>
<b>Training and Orientation Report</b>	<p>One time during mobilization, before commencement of works</p> <p>Monthly updates during implementation of works</p>	<p>The Contractor will summarize information regarding training and orientation mandated under each plan, carried out before involvement of the labor in construction activities and during toolbox talks. Toolbox talks on each plan topic must be delivered monthly.</p> <p>The Contractor will provide copies of the Training and Orientation Reports to the Engineer. The Contractor will provide monthly updates of training and orientation activities during implementation of works in the Monthly Progress Reports.</p>
<b>Regular Weekly Environmental, Social and Gender, and Health and Safety Reports</b>	Weekly during implementation of works	<p>The Contractor will undertake environmental, social and gender, health and safety inspections and report weekly, and will provide copies of such reports to the Engineer each month for the duration of contract.</p> <p>The weekly environmental reports will include:</p> <ul style="list-style-type: none"> <li>• Environmental and health and safety management actions / measures taken, including approvals sought from local or national authorities</li> <li>• Observations and concerns raised and/or decisions taken with regard to environmental and gender, and health and safety management during site meetings</li> <li>• Problems encountered in relation to environmental and health and safety aspects (including delays, incidents, damages and cost consequences, emergencies, etc.)</li> <li>• Lack of compliance with this ESMP and the technical specifications in relation to environmental, and health and safety requirements on the part of the Contractor and/or subcontractor(s).</li> </ul> <p>The social and gender reporting will include sections on issues arising in the fields of:</p> <ul style="list-style-type: none"> <li>• Recruitment strategy, employment of men and women, and prohibition of child labor</li> <li>• Implementation of the Worker Behavior Code of Conduct and outcomes</li> <li>• Gender related grievances and investigations</li> <li>• Training on employee behavior, gender, social inclusion, counter-trafficking in persons, gender-based violence and sexual harassment, health education, cultural awareness, and feedback from employees</li> </ul>

Report	Submission Schedule	Content
<b>Monthly Progress Reports</b>	Monthly during implementation of works	<p>Summaries of these reports (including information on environmental and social activities undertaken, permits and agreements obtained, etc.) will be included in the monthly progress reports to be submitted to Engineer for review and approval. It is expected that monthly progress reports will include information on:</p> <ul style="list-style-type: none"> <li>• Employment records of workers (used to track participation in training and progress toward women's employment targets and local labor targets)</li> <li>• Training and orientation activities</li> <li>• Environmental, social and gender, and health and safety management actions / measures taken, including approvals sought from local or national authorities</li> <li>• Observations and concerns raised and/or decisions taken with regard to environmental, social and gender, and health and safety management during site meetings</li> <li>• Problems encountered in relation to environmental, social and gender, and health and safety aspects (including delays, incidents, damages and cost consequences, emergencies, etc.)</li> <li>• Investigations into the contractor internal grievance redress mechanism with outcomes</li> <li>• Lack of compliance with this ESMP and the technical specifications in relation to environmental, social and gender, and health and safety requirements on the part of the Contractor and/or subcontractor(s)</li> <li>• Changes of assumptions, conditions, measures, designs, and actual works in relation to environmental, social and gender, and health and safety requirements</li> <li>• Chance historical, cultural, and archaeological finds</li> <li>• Follow-up on incident investigation</li> <li>• Follow-up on the status of measures and/or corrective actions identified (including remedial measures) and their efficacy, to eliminate and minimize lack of compliance with contract requirements</li> <li>• Stakeholder engagement and consultation activities carried out during reporting period</li> <li>• Grievances registered and resolved</li> </ul>

## 2) Notification of Incidents and Changes

The site-specific CESMP will verify that provisions have been made to ensure that the Contractor notifies relevant parties in accordance with Section VIII Particular Conditions of Contract, Sub-Clause 4.8 after the following incidents and changes::

- Occurrence of any incident that has resulted, or could reasonably be foreseen to result, in lack of compliance with this ESMP and the technical specifications in relation to environmental, social and gender, especially internal complaints related to sexual harassment, gender-based violence and trafficking in persons, and health and safety requirements
- Changes of assumptions, conditions, measures, designs, and actual works in relation to environmental, social and gender, and health and safety requirements
- Chance historical, cultural, and archaeological finds

In addition to the initial written notification, the Contractor will submit a preliminary report on incident investigation within 7 days after the incident, as well as final report on incident investigation within 14 days after the incident. All incidents should be investigated by the competent professional (relevant independent professionals can also be involved, as needed). The final report on the incident investigation will include information on the investigation's objectives, methodology applied, analysis and tests carried out, findings, conclusions, and recommendations.

Allegations against staff of sexual harassment or gender-based violence, or involvement in trafficking in persons inside the contractor's organization require reporting to the MCA-Mongolia or its representative. The Contractor's Social and Gender Manager will liaise with the MCA or its representative and other relevant parties and arrange for a third party investigator to lead the enquiry into allegations together with the Contractor's human resources representative. Proven harassment or violence offences in contravention of the Worker Behavior Code of Conduct must result in the immediate firing of the perpetrator and reporting through the project system.

Allegations of trafficking in persons must be dealt with according to the Section VIII Particular Conditions of Contract Sub-Clause 6.16, "Combatting Trafficking in Persons", which summarizes the Contractor's reporting requirements and specifies remedies that the MCA Entity will apply to confirmed cases.

Section VIII Particular Conditions of Contract Sub-Clause 6.17, "Prohibition of Sexual Harassment", specifies that "The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction

## 3) Communication with Subcontractor(s)

The site-specific CESMP will specify:

- How environmental, social and gender, and health and safety requirements will be communicated to subcontractor(s) at all levels and how their compliance with the CESMP and all relevant regulations will be ensured.
- Subcontractor(s) will be supplied with copies of the CESMP and other environmental and social documents developed for the project (which will be deemed part of the subcontract), and will attend and report on all relevant training and orientation sessions prior to commencement of their work and will continue covering the same topics in toolbox talks.

- The procedures for reviewing and monitoring compliance with the site-specific CESMP and environmental and social regulations. This could include, for example, the monitoring of performance against environmental and safety criteria as a part the daily and/or weekly site inspections.

### **Environmental, Social and Gender, and Health and Safety Provisions**

The site-specific CESMP, including constituent plans and procedures, will include at a minimum acknowledgement of the requirements to meet the CESMP standards, the methodology and resources to meet the requirements of the management measures prescribed in the following sections of this ESMP, as well as the environmental, social and gender, and health and safety provisions of Section V, Works Requirements.

In accordance with MCC Environmental Guidelines and IFC Performance Standards, the Contractor is obliged to implement all reasonable measures with regard to soil erosion, water and air quality, noise and vibration, solid waste, hazardous materials, wastewater discharges, health and safety hazards, labor and working conditions. In a similar way, the Contractor is obliged to implement risk management strategies to protect the beneficiary communities from 1) physical, chemical, or other hazards associated with sites under construction, 2) hazards associated with increased traffic and rerouting of vehicles, and 3) communicable and vector-borne diseases associated with the population of workers.

Parallel plans and policies will be developed by the Contractor as a part of CESMP to implement mitigation measures specific for each construction site and ensure compliance with environmental, and social and gender, and health and safety requirements.

## **H.1.2 Environmental Management**

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## **H.1.3 Waste Management**

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## **H.1.4 Social and Gender Inclusion**

### **Management Measure Conveyance - 1: Labor Management**

<b>POTENTIAL IMPACT</b>
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>• Professional management and conditions of labor</li> <li>• Opportunities for local labor and supply of goods and services, and provision of local jobs with fair and competitive wages</li> <li>• Women's short-term employment in construction and engineering-related work</li> <li>• Potential alleviation of poverty in local area</li> <li>• Reduction in child labor</li> <li>• Improved grievance management in employment</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>• Discrimination against women</li> <li>• Increased foreign labor, reducing local employment opportunities</li> <li>• Use of child labor</li> <li>• Use of forced labor</li> <li>• Use of trafficked labor</li> </ul>

<ul style="list-style-type: none"> <li>• Exploitation of workers and Labor Code violations</li> <li>• Sexual harassment</li> </ul>
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Constitution of Mongolia <ul style="list-style-type: none"> <li>- Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>• Mongolian Civil Code <ul style="list-style-type: none"> <li>- Requires providing office space, tools and equipment necessary to ensure employees' health.</li> </ul> </li> <li>• Mongolian Law on Gender Equality <ul style="list-style-type: none"> <li>- Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>• Mongolian Law on Labor <ul style="list-style-type: none"> <li>- Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>- Prohibits employing children under the age of 16 or under 18 in dangerous industries, including construction</li> </ul> </li> <li>• Mongolian Law on Minimum Wage <ul style="list-style-type: none"> <li>- Minimum wage is fixed by National Tripartite Committee on Labor and Social Consensus representatives.</li> </ul> </li> <li>• Mongolian Law on the Protection of the Rights of the Child <ul style="list-style-type: none"> <li>- Prohibits employing children in any work that is likely to harm their health or morale, and exploiting or paying unjust wages to children</li> </ul> </li> <li>• Mongolian Law on Social Protection of Disabled Persons <ul style="list-style-type: none"> <li>- Prohibits building any buildings and facilities that do not meet needs and requirements of persons with disabilities.</li> </ul> </li> <li>• Mongolian Law on Combating Human Trafficking <ul style="list-style-type: none"> <li>- Requires regulating the workplace to ensure the implementation of the legislation on combating human trafficking, and if it is not specified, it shall be obliged to comply with the instructions, recommendations, statements and instructions given by the competent authorities and officials.</li> </ul> </li> <li>• Mongolian Law on Sending Labor Force Abroad and Receiving Labor Force and Specialists from Abroad <ul style="list-style-type: none"> <li>- Regulates relations with respect to employment of a Mongolian citizen abroad and a foreign citizen in Mongolia, and protection of their rights and interests.</li> <li>- Reinforces provisions of the Constitution of Mongolia, Labor Law, Social Insurance Law, and other related legal acts, and legal status of a foreign citizen.</li> </ul> </li> <li>• IFC Performance Standard 2 <ul style="list-style-type: none"> <li>- Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.</li> <li>- Contractor will adopt and implement human resources policies and procedures appropriate to its size and workforce that set out its approach to managing workers consistent with the requirements of this performance standard and national law.</li> <li>- Contractor will provide workers with documented information that is clear and understandable regarding their rights under national labor and employment law and any applicable collective agreements, including their rights related to hours of work, wages, overtime, compensation, and benefits upon beginning the working relationship and when any material changes occur.</li> </ul> </li> </ul>

- Contractor will not make employment decisions on the basis of personal characteristics unrelated to inherent job requirements. Contractor will base the employment relationship on the principle of equal opportunity and fair treatment, and will not discriminate with respect to any aspects of the employment relationship, such as recruitment and hiring, compensation (including wages and benefits), working conditions and terms of employment, access to training, job assignment, promotion, termination of employment or retirement, and disciplinary practices. Contractor will take measures to prevent and address harassment, intimidation, and/or exploitation, especially in regard to women. The principles of non-discrimination apply to migrant workers.
- Prohibits employment of child labor.
- Millennium Challenge Corporation Counter-Trafficking in Persons Policy (C-TIP Policy)
  - Requires contractors to take a zero-tolerance policy with regard to human trafficking and to actively manage employment conditions to prevent exploitation of trafficking in persons and related activities workers by employers and specifies remedies that the MCA-Entity may take in response to confirmed cases of TIP.
- Millennium Challenge Account Social and Gender Integration Plan (SGIP)
  - Sets out guidelines for Contractors related to social risk mitigation measures in infrastructure, including making working conditions suitable for both male and female employees
  - Requires developing and implementing an employment plan that prioritizes using local labor particularly from the Area of Influence of the project
  - Sets a target to encourage contractors to employ as workers at least 30% women of all workers at each skill/occupational level
  - Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates.
- Millennium Challenge Corporation Guidance Note to MCAs on Sexual Harassment
  - Requires that contractors are well-informed about existing anti-sexual harassment policies and procedures, and that contractors meet the requirements in the standard bidding documents.
- Ministry of Construction and Urban Design (MCUD) Gender Responsiveness Policy
  - Calls for gender targets in employment via “international and domestic tenders, so that one gender should not be lower than 15 percent among workers, and 25 percent among decision makers.”
- Ministry of Labor and Social Welfare Order (2016)
  - Expanded the types of hazardous work prohibited for children under the age of 18 to include construction
- International Labor Organization fundamental conventions, and International Human Rights instruments and conventions

## OBJECTIVES

The Labor Management Plan ensures that contractors and their workers have clear expectations about the behaviors and conditions expected of the Contractor and all workers.

- Promote fair treatment, non-discrimination, and equal opportunity of workers
- Promote local labor opportunities and procurement from local suppliers
- Target women’s employment as 30% of all labor at each skill/occupational level
- Establish and maintain and improve a constructive worker-management relationship
- Protect workers, including vulnerable categories of workers such as children, migrant workers, workers engaged by third parties, and workers in the supply chain
- Avoid the use of forced labor or trafficked labor
- Maximize the beneficial impact of the project on the affected communities

## MANAGEMENT MEASURE

### Labor Management

The MCA-Mongolia or its representative's Social Safeguards Team (SST) will:

- Encourage Contractor to employ local unskilled and semi-skilled labor, particularly youth and women, and to procure goods and services from local businesses and entrepreneurs
- Facilitate the Contractor's cooperation with the local District Labor Offices
- Facilitate the Contractor's publication of vacancies and procurements within affected communities
- Facilitate the Contractor's holding of job fairs and procurement workshops within affected communities to support local applicants to apply for jobs and local businesses and entrepreneurs to bid
- Support local job applicants to apply, and local businesses and entrepreneurs to bid
- Gather names of interested workers from project affected households and through community information programs and consultation meetings
- Share the names of interested workers with Contractor, and District and khoroo Labor Offices
- Encourage Contractor to employ women at a rate of at least 30% of personnel at each skill/occupational level
- Facilitate Contractors' engagement with relevant university engineering programs, technical and vocational education and training (TVET), and professional associations to 1) identify and recruit qualified job applicants and 2) establish internships and apprenticeships
- Encourage Contractor to employ socially excluded and vulnerable people

The Contractor will:

- Fully comply with the requirements of this management measure and related contract clauses
- Perform the work in accordance with relevant sections of the ESMP

#### *Access to Employment*

The Contractor will:

- Publish vacancies (listing the required qualifications for all categories of employment) within project-affected communities and at District and khoroo offices and provide such information to the Engineer and during each community meeting. Ensure the exchange of information between Contractor and the local population on employment opportunities
- Publish and communicate employment opportunities listing the required qualifications for all categories of employment city-wide, and beyond in Mongolia, if the vacancies cannot be filled from local communities
- Ensure that a staff person responds to questions from the local population regarding employment and procurement opportunities
- Develop an employment forecast and a written recruitment strategy to 1) encourage the employment of qualified individuals among the local population(s) in project construction and ancillary activities in all phases, with particular focus on women and, youth, and disadvantaged groups, 2) target achieving women's employment as at least 30% of personnel at each skill/occupational level, and 3) provide training for local construction brigades on how to be effective contractors for local construction brigades
- Through the Contractor's Social Safeguards Officer, liaise with the MCA-Mongolia or its representative's SST and local labor offices to provide support with the job application process, encourage local employment (including women's employment), implement and publicize a job fair, consistent and transparent recruitment process
- In disseminating information on potential employment opportunities, take steps to consider ways in which to maximize outreach, using all forms of media that may be appropriate
- Ensure that all staff have written employment contracts specifying fair employment conditions and equal pay for equal work to men and women, and fulfilling all conditions specified under the Mongolian Law on Labor defining the contracts

The Contractor is encouraged to:

- Create pay bands for each category of worker to help ensure equal pay for equal work

As feasible, the Contractor will:

- Develop and submit a plan for providing on-the-job training and skills transfer opportunities to the local labor force
- Engage with training, education, and professional organizations—such as Technical and Vocational Education and Training, Implementing Agency of the Ministry of Labor and Social Protections, Mongolian University of Science and Technology, and the Mongolian Builder's Association—to recruit qualified applicants, and provide apprenticeships and internships for students who study water engineering and relevant subjects at university

The Contractor shall note contract clauses on “Gender,” “Engagement of Staff and Labor,” “Foreign Personnel,” “Prohibition of Forced or Compulsory Labor,” “Prohibition of Harmful Child Labor,” “Employment Records of Workers,” and “Non-Discrimination and Equal Opportunity.”

#### *Local Procurement*

The Contractor will:

- Proactively procure goods and services from local businesses and entrepreneurs in Khan-Uul and Songinokhairkhan Districts and Ulaanbaatar, and members of targeted disadvantaged groups (e.g., women, people with disabilities), achieved through:
  - Publicizing procurements within the targeted geographical area or targeted group, for example at the District and khoroo offices and via notice boards, print media (newspapers, etc.), recruitment agencies, or job and career fairs
  - Publicizing and holding procurement workshops within the targeted geographical area or targeted group
  - Adding priority criteria for businesses and entrepreneurs in the targeted geographical area or members of the targeted group to the selection procedure
- In disseminating information on potential service procurement opportunities, take steps to maximize outreach, using all forms of media that may be appropriate

#### *Workplace Environment*

The Contractor will:

- Establish, execute, and enforce a Worker Behavior Code of Conduct on which all employees will be briefed, that all employees are required to sign, and that mandates immediate dismissal for serious offences including sexual harassment, violence, or confirmed cases of engagement in trafficking in persons. The Code will specify:
  - Expectations of worker behavior, and penalties for transgression
  - MCC and Mongolian legal definitions of trafficking in persons (TIP), zero-tolerance for TIP, and remedies that the MCA Entity may take in response to confirmed cases of engagement of trafficking in persons
  - Zero-tolerance for gender-based violence
  - Compliance with the Contractor's Anti-Sexual Harassment Policy and notification of the Contractor's Sexual Harassment Incident Reporting and Referral Plan
  - Rights of employees to a grievance mechanism, holidays, and cultural and festival access
  - Conditions for work camps, shelter, water and sanitation, food, and security
  - The responsibility of all workers, regardless of their role or duration of employment, will be expected to review and acknowledge the Workers' Code of Conduct by signing the code sheet
  - The requirement to respect local customs and practices
- Establish and execute a workers' grievance redress procedure that:
  - Formalizes a system for receiving and managing internal complaints of sexual harassment, gender-based violence, or issues of trafficking persons (including engaging in commercial for sex with a person under 18 years of age)
  - Guarantees confidentiality to makers of allegations
  - Designates the Contractor's Social Safeguards Officer or other officer as responsible for collaborating with the human resources department on the grievance redress procedures
  - Refers to the Contractor's Sexual Harassment Incident Reporting and Referral Plan for allegations of sexual harassment

- Specifies that the Contractor's zero-tolerance for gender-based violence addresses any complaints of gender-based violence against its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
- In cases of discrimination against women or of allegations of sexual harassment or violence, requires that the Contractor's Social Safeguards Officer contact the MCA-Mongolia or its representative's SST to include them in the investigation and appoint a third party—such as a representative from an NGO such as the Centre for Gender Equality or equivalently qualified, experienced organization—to lead the investigation
- The Contractor shall note the contract clause on “Prohibition of Sexual Harassment”
- The Contractor shall note the contract clause on “Facilities for Staff and Labor” and provide suitable gender-segregated facilities to enable the safe employment of both men and women – e.g. Toilet facilities, changing facilities on all sites and enabling physical access to office accommodation for people with disabilities.

### *Training*

The Contractor will:

- Provide training to enhance the skills of employees using on-the-job training, internships, apprenticeships, secondment to training programs such as Technical and Vocational Education and Training, etc.
- Mandate for all employees, before each worker starts work on the site, induction packages that include:
  - Employment rights and conditions, including non-discrimination and equal opportunity
  - The Contractor's responsibility to “adopt recruitment, hiring and retention practices that support the employment of women and staff from diverse backgrounds” per the contract clause on “Engagement of Staff and Labor,” the Contractor's employment forecast and recruitment strategy, and the Contractor's Gender Integration and Social Inclusion Plan (described below)
  - Gender-based violence
  - Contractor's Anti-Sexual Harassment Policy – including awareness of what constitutes sexual harassment, exploitation, and abuse and the Contractor's Sexual Harassment Incident Reporting and Referral Plan
  - Using the internal Grievance Mechanism for allegations of gender-based discrimination
  - Rights to have access to local festivals
  - Cultural sensitivities, and social norms and practices in each area
  - Expectations on avoiding poor relations between employees and local communities caused by behavior relating to alcohol, gambling, prostitution, illegal drug use, violence and sexual abuse of women, minors and lesbian, gay, bisexual, transgender, queer, and others (LGBTQ+) persons
  - Countering the Trafficking in Persons Response Plan – awareness of responsibilities to counter the trafficking of people around the project area, the remedies that the Contractor and the MCA Entity may apply, and mechanisms for reporting suspected instances of TIP with the Contractor's TIP Response Plan
  - Awareness of the possibilities of the transmission of HIV/AIDS and communicable illnesses and how to prevent HIV/AIDS transmission
- Undertake a series of employment and social plan inductions and employee awareness programs that:
  - All employees must attend at the commencement of employment and over the employment period twice yearly
  - Incorporate toolbox talks that include reinforcement of all training programs
- Commission training modules on gender integration and social inclusion topics for all employees at intervals agreed with the MCA-Mongolia or its representative's SST
- Require that the Social Safeguards Officer, together with the MCA-Mongolia or its representative's SST Community Liaison Officers, conduct awareness raising with workers on child labor issues in the local community as part of an ongoing community awareness program on social issues.

<p>These toolbox talks will include ways that workers can report suspected child labor to the District Children, Youth and Family Offices, and the MCA-Mongolia or its representative's Social Manager</p> <p><i>Site-specific Labor Management Plan</i></p> <p>The Contractor will prepare and submit for the Engineer's written approval a site-specific Labor Management Plan that:</p> <ul style="list-style-type: none"> <li>• Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan</li> <li>• Includes the Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan and the Workers' Code of Conduct</li> <li>• Is consistent and compliant with: <ul style="list-style-type: none"> <li>○ Mongolian Law on Labor</li> <li>○ Relevant aspects of the Conditions of Contract, as well MCC Gender Policy and the MCA-Mongolia Social and Gender Integration Plan</li> <li>○ The MCC Policy on Counter-Trafficking in Persons</li> </ul> </li> <li>• Assigns roles and responsibilities for labor management</li> </ul>
<p><b>LOCATIONS:</b></p> <p>All construction sites and temporary construction facilities</p>
<p><b>MONITORING</b></p>
<p>MCA-Mongolia or its representative:</p> <ul style="list-style-type: none"> <li>• Monitor implementation of the Contractor's Labor Management Plan and Worker Behavior Code of Conduct, including prohibitions against trafficking in persons, gender-based violence, sexual harassment, and child labor</li> <li>• Monitor implementation of the Contractor's employment recruitment strategies and assist Contractor to reach potential workers among local women, youth, and people from disadvantaged and other excluded groups</li> <li>• Monitor participation by all parties in the Contractor's internal grievance redress procedure and external project Grievance Redress Mechanisms</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>• Record results of Contractor's labor management responsibilities, with all data and statistics gender disaggregated by age and gender, following, at a minimum, the contract clause on "Employment Records of Workers" and recording, for each worker hiring and leaving dates, along with duration (days) of employment and skills/occupational category and home location of workers (project-affected district/khoroov, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia)</li> <li>• Document implementation of the requirements above for the Labor Management Plan, including all recruitment activities</li> <li>• Document Worker Behavior Code of Conduct infringements and outcomes, and internal grievance redress activities under the Contractor's internal grievance process</li> </ul>
<p><b>LOCATIONS:</b></p> <p>All construction sites and temporary construction facilities</p>
<p><b>INDICATORS AND SUCCESS CRITERIA:</b></p> <p>Indicators:</p> <ul style="list-style-type: none"> <li>• Required plans written, approved, and implemented</li> <li>• Number, content, and outcome of employment against home location (project-affected district/khoroov, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia), gender, and age brackets (under 30, 30 to 49, 50 and over), and total days of employment for each individual worker</li> <li>• Use of written contracts with defined pay scales by employment activity</li> <li>• Employment recruitment activities, interactions with local employment offices and communities, professional associations, TVET centers</li> </ul>

## Management Measure Conveyance - 2: Gender Integration and Social Inclusion (GSI)

<b>POTENTIAL IMPACT</b>
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Increased short-term employment and improved conditions of employment for women</li> <li>Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of forced labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Millennium Challenge Account Social and Gender Integration Plan (SGIP)             <ul style="list-style-type: none"> <li>Encourages contractors to prioritize using local labor, particularly workers from the project affected area</li> <li>Encourages contractors to employ women as at least 30% of workers</li> <li>Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates</li> </ul> </li> <li>Millennium Challenge Corporation Gender Policy             <ul style="list-style-type: none"> <li>The MCC Gender Policy states that countries will ensure that both women and men have opportunities for meaningful participation throughout the consultative processes related to a Compact program.</li> </ul> </li> <li>IFC Performance Standard 1             <ul style="list-style-type: none"> <li>Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> </ul> </li> <li>IFC Performance Standard 2             <ul style="list-style-type: none"> <li>Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.</li> </ul> </li> <li>Constitution of Mongolia             <ul style="list-style-type: none"> <li>Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>Mongolian Law on Gender Equality</li> </ul>

<ul style="list-style-type: none"> <li>○ Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> <li>• Mongolian Law on Labor <ul style="list-style-type: none"> <li>○ Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>○ Prohibits employing children under the age of 16 – under 18 in dangerous industries e.g. construction</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<p>The Gender Integration and Social Inclusion (GSI) Plan complements the Labor Management Plan and provides additional management steps to address GSI considerations with respect to workers and local communities.</p> <p>T</p> <ul style="list-style-type: none"> <li>• To promote the fair treatment, non-discrimination, and equal opportunity of workers.</li> <li>• To encourage the employment of women as at least 30% of the Contractor's workforce, calculated over full and part time positions as a percentage of total number of staff hired in the life of the contract, at each skill/occupation level</li> <li>• To enable local people, particularly youth and people in project-affected districts/khoroos to gain short-term employment and training opportunities</li> <li>• Maximize the perceived beneficial impact of the BWSE project on the project affected communities</li> </ul>
<b>MANAGEMENT MEASURE</b>
<b>Gender Integration and Social Inclusion</b>
<ul style="list-style-type: none"> <li>• Under the Gender Integration and Social Inclusion Plan, the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure the widest exchange of information between the Contractor and the local population and district and khoroo Labor Offices on planned and continuing works and employment opportunities through a program of community consultations and participatory meetings.</li> <li>• The Contractor will prepare and submit for the Engineer's written approval a Contractor's Gender Integration and Social Inclusion Plan, which will be: <ul style="list-style-type: none"> <li>○ Consistent with the Mongolian Law on Labor and</li> <li>○ Consistent with the MCC Gender Policy's emphasis on community consultation and participation</li> <li>○ Consistent with IFC Performance Standard 1: Assessment and Management of Environmental and Social Risks and Impacts</li> <li>○ Agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer</li> </ul> </li> </ul> <p><i>Community Engagement</i></p> <ul style="list-style-type: none"> <li>• The Contractor will hold at least one meeting in each project-affected District and khoroo office prior to construction to inform community members of the expected conduct of workers and the contents of the Labor Management Plan, and thereafter monthly, minimally covering the following: <ul style="list-style-type: none"> <li>○ Efforts to hire local labor and the Contractor's employment forecast</li> <li>○ Efforts to maximize women's employment</li> <li>○ Efforts to maximize local procurement and the Contractor's procurement forecast</li> <li>○ Prohibitions against child labor and forced labor in supply chains</li> <li>○ Zero-tolerance of trafficking in persons, MCC and Mongolian legal definition of trafficking in persons, and Contractors' Counter-Trafficking in Persons Response Plan</li> <li>○ Zero-tolerance of gender-based violence</li> <li>○ Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan</li> </ul> </li> </ul> <p><i>Expanding Short-term Employment Opportunities</i></p>

- The Contractor will actively consider working with the existing construction brigades to enable local labor currently organized into brigades to gain employment. The brigades may require additional training to enable them to work on this large-scale project – training in:
  - Modern tools and techniques where needed
  - Brigade internal labor management, accounting, and estimation techniques
- As referenced in the Labor Management Plan and its recruitment strategy, the Contractor will encourage the employment of qualified individuals among the local population(s) in project activities, with particular focus on women, youth, and disadvantaged groups. This may include small-scale supply contracts or services, with announcement of jobs published on project information boards, in District and khoroo Labor Offices and with information on employment disseminated by the Contractor's Social Safeguards Officer, the MCA or its representative or other means approved by the Engineer.
- Where appropriate, the Contractor will provide training to enhance the skills of employees and local people using on-site apprenticeships and internships.
- As referenced in the Labor Management Section above, the Contractor is encouraged to cooperate with, secondment to training programs such as Technical and Vocational Education and Training Centers and professional associations and to draw workers from among their graduates and members, etc.

#### *Local Procurement*

- The Contractor will develop and submit a procurement forecast of all goods and services that could be procured locally. The MCA-Mongolia or its representative's Social Safeguards Team will assist in disseminating this information to local communities with the Contractor's Social Safeguards Officer.
- The Contractor will develop and submit for review and approval by the Engineer, a procurement strategy to inform local communities and businesses of opportunities to provide goods and services to the Contractor and to project workers, particularly targeting small businesses and those owned by women.
- The Contractor Social Safeguards Officer and MCA-Mongolia or its representative's Social Safeguards Team will hold community meetings to inform people about the procurement processes and include District and khoroo offices, community organizations and the media.

#### LOCATIONS:

All construction sites and temporary construction facilities and project affected communities

#### MONITORING

MCA-Mongolia or its representative's SST:

- Monitor Contractor Gender Integration and Social Inclusion Plan
- Monitor Contractor employment recruitment strategies and assist Contractor to reach potential women, youth and other excluded groups
- Monitor participation by all parties in the Contractor's internal and external project Grievance Redress Mechanisms
- Document Contractor performance in Gender Integration and Social Inclusion Plan

Contractor:

- Record results of Contractor's Gender Integration and Social Inclusion responsibilities
- Document all grievance redress activities under the Contractor's internal grievance process and external Grievance Redress Mechanism

#### LOCATIONS:

All construction sites and temporary construction facilities and project affected communities

#### INDICATORS AND SUCCESS CRITERIA:

Indicators:

- Employment recruitment activities
- Employment records of workers
- Number, dates, and locations of community engagement meetings
- Community related grievance redress actions and outcomes
- Number of purchase orders signed each year with UB businesses, disaggregated by those in in Khan-Uul and Songinokhairkhan Districts and the rest of UB, indicated as a number and percent of the total dollar amount of annual procurements
- Total annual dollar amount of procurements with businesses from UB, disaggregated by those in Khan-Uul and Songinokhairkhan Districts and those in the rest of UB, indicated as a number and percent of the total dollar amount of annual procurements
- Number, percentage and dollar amount of purchase orders signed with women-owned businesses each year against the total number and dollar amount of purchase orders

**Success Criteria:**

- 100% of required community meetings are held, with all topics covered
- Maximization of local labor, such that percentage of all labor exceeds a minimum target percentage to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
- Achievement of the non-binding 30% employment of women as a percentage of all staff, in each skill/occupational category
- Employment of young people and "vulnerable" groups at a target to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
- Apprenticeships and internships established and completed for each construction season
- Contractor enters into and maintains an agreement with at least one TVET center and employs TVET graduates at a target to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
- All worker and community complaints about sexual harassment are a) addressed in a timely manner and b) resolved through the Contractor's Sexual Harassment Incident Referral and Reporting Plan
- Contracts and purchase orders with local business and service providers split including women-owned businesses and service providers, reach targets to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
  - Targets to be expressed as a number, as a percentage of all contracts and purchase orders, and as a dollar amount (USD)
  - Targets to be set for all locally owned business, for businesses in the two project-affected districts, and for women-owned businesses.

**REPORTING:**

- Reports on Gender Integration and Social Inclusion to be included in project monthly reports
- Summarize Gender Integration and Social Inclusion activities undertaken during reporting period
- Specify any material deviations or non-compliances to this management measure, and any other issues of concern,
- Define activities planned during next reporting period

**SCHEDULE**

**MANAGEMENT MEASURE:**

*Implementation:*

- Initiated during pre-construction prior to starting any construction activities and ongoing throughout pre-construction and construction

**MONITORING:**

*Implementation:*

- Update recording of GSI activities and grievance redress actions as they occur

*Reporting:*

- Monthly in CESMP update

### Management Measure Conveyance - 3: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment

POTENTIAL IMPACT
<p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>• Sexual harassment on construction sites and in temporary construction facilities and project-affected communities</li> <li>• Trafficking in persons within and outside the project</li> <li>• Gender-based violence on construction sites and in temporary construction facilities and project-affected communities</li> </ul>
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• MCC Counter-Trafficking in Persons Policy (C-TIP Policy) <ul style="list-style-type: none"> <li>○ States, "Trafficking in Persons" means (a) Sex trafficking in which a commercial sex act is induced by force, fraud, or coercion, or in which the person induced to perform such act has not attained 18 years of age; (b) The recruitment, harboring, transportation, provision, or obtaining of a person for labor or services, through the use of force, fraud, or coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery."</li> <li>○ Adopts "a zero-tolerance policy to TIP and prohibits "The Contractor, the Contractor's Personnel, any Subcontractor or supplier, or any of their respective personnel, or any agent or affiliate of any of the forgoing shall not engage in any form of Trafficking in Persons during the period of performance of any contract..."</li> <li>○ Requires each Contractor to "acknowledge that engaging in such activities is cause for suspension or termination of employment or of the Contract" and specifies remedies that the MCA Entity will apply once a TIP incident has been confirmed.</li> </ul> </li> <li>• Mongolian Law on Promotion of Gender Equality <ul style="list-style-type: none"> <li>○ Requires the employer to incorporate into the organization's internal procedures, specific norms for prevention of sexual harassment in a workplace and the redress of such complaints. It also requires that the organization design and conduct a program of training and retraining geared toward creating a working environment free from sexual harassment, and report on its impact in a transparent manner.</li> </ul> </li> <li>• Mongolian Law to Combat Human Trafficking <ul style="list-style-type: none"> <li>○ The law regulates relations with respect to the prevention and suppression of trafficking in persons, elimination of the causes of trafficking, and protection of victims' rights.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• To prevent incidence of trafficking of persons for sex by project employees</li> <li>• To ensure that the Contractor and its Sub-Contractors do not employ trafficked labor and to minimize the risks of trafficking of foreign workers to project sites</li> <li>• To prevent sexual harassment at all construction sites and temporary construction facilities</li> <li>• To prevent Contractor and worker involvement in sexual harassment in project-affected communities and among members of stakeholder organizations in the workplace</li> </ul>

- To prevent incidences of gender-based violence involving workers

## MANAGEMENT MEASURE

### Counter-Trafficking in Persons, Gender-Based Violence and Sexual Harassment

The Contractor shall ensure that foreign workers on work sites or in labor camps are aware 1) of the risks of cultural conflict and of becoming victims of gender-based violence, sexual harassment and abuse, discrimination, trafficking in persons and 2) the legal and contractual remedies against such behavior. This information shall be provided in workers' induction packages, by holding an orientation before workers start on site, and by delivering a training twice a year.

#### *Counter Trafficking in Persons (C-TIP)*

- The Contractor shall prepare and submit for the Engineer's written approval a Counter-Trafficking in Persons Response Plan (TIP Response Plan), and the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure all employees are informed of expectations of behavior as per the Worker Behavior Code of Conduct and the penalties for proven infringements.
  - The Counter-Trafficking in Persons Response Plan shall Address the specific TIP risks identified in the ESIA, including withholding of foreign workers' passports and commercial sex with minors,
  - Designate a single responsible person who will notify the Engineer and MCA-Mongolia within 24 hours of an alleged incident and implement any investigation.
  - Specify when to contact legal authorities, list UB city officials, national government offices, and NGO organizations that address TIP, and state how the Contractor will deal with them in the case of a TIP incident.
  - Include mechanisms to ensure confidentiality of any TIP survivors and to refer them to law enforcement and/or supportive services if they wish.
- The Contractor shall develop, as part of its TIP Response Plan, an anonymous mechanism for workers and community members to report suspected TIP incidents to the Engineer and to MCA-Mongolia, and this must be separate from the project grievance mechanism.
- The Counter-Trafficking in Persons Response Plan shall be:
  - Consistent with the Mongolian Law on Labor, Promotion of Gender Equality, and combatting Human Trafficking
  - Compliant with the MCC Counter-Trafficking in Persons Policy
  - Coordinated and agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer
- The Counter-Trafficking in Persons Response Plan shall specifically prohibit:
  - Procuring minors for sex
  - Transporting non-employee individuals in company vehicles
- The Contractor is strongly encouraged to engage the Centre for Gender Equality or other similarly qualified and experienced organization to develop its TIP Response Plan, its anonymous reporting mechanism, its worker training, and its C-TIP content for community meetings
- The Contractor shall design and deliver twice yearly C-TIP training modules to all staff, sub-contractors, and service providers on the prevention of TIP and the Contractor's TIP Response Plan, following minimum content in MCA-Mongolia's Social and Gender Integration Plan (SGIP).
  - C-TIP training sessions must be delivered to all employees within one month of starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Information about the Contractor's zero-tolerance policy and TIP Response Plan shall be included in all community meetings and the Plan shall be provided in Mongolian, in whole, to project-affected khoroo and District governments.

### *Gender-Based Violence*

- The Contractor shall adopt a policy of zero-tolerance for gender-based violence and address any complaints of gender-based violence against its workers or committed by its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
- The Contractor shall notify the Engineer and MCA-Mongolia within 24 hours of any alleged incident of gender-based violence
- The Contractor shall deliver a gender-based violence prevention training to all staff, sub-contractors, and service providers prior to all workers beginning on-site and thereafter at least twice each year.
  - The Contractor is strongly encouraged to engage a local, qualified, and experienced organization to develop the training.
  - The training shall minimally identify behavior that constitutes gender-based violence, address attitudes towards violence against women and lesbian, gay, bisexual, transgender, and queer people (LGBTQ), and identify relevant Mongolian laws and organizations addressing gender-based violence.
  - It shall also explain the workings and protections in the Contractor's grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ persons.
- Include in all community meetings information about the Contractor's zero-tolerance policy toward gender-based violence committed by or against its workers and procedures for reporting it and communicate this information in writing to project-affected khoroo and District governments.

### *Sexual Harassment*

- The Contractor shall develop and submit to the Engineer an Anti-Sexual Harassment Policy prohibiting sexual harassment directed at Compact beneficiaries, partners, or stakeholders, MCA Entity employees, MCA Entity consultants, MCC personnel, or MCC consultants and including an Incident Reporting and Referral Plan.
  - The Policy and Plan must be in form and substance satisfactory to the MCA and MCC.
  - The Incident Reporting and Referral Plan shall include a confidential mechanism for workers and community members to report sexual harassment to the Engineer and to MCA-Mongolia, separately from the Grievance Redress Mechanism.
- Employers are required to have a protocol in their Workplace Grievance mechanism in which persons alleging harassment or violence will be protected from identification and from pressure from the Contractor or other workers to dismiss the complaint.
- The Contractor's grievance manager must notify the MCA-Mongolia or its representative's Social Safeguards Team and the Contractor's Social Safeguards Officer within 24 hours of any allegation of sexual harassment.
- The Contractor must have a contract with a suitably experienced organization, such as the Centre for Gender Equality, to provide an investigation leader to manage the investigation of complaints of sexual harassment.
- The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction.
- The Contractor shall design and deliver a sexual harassment prevention training to all staff, sub-contractors, and service providers, in accordance with the Contractor's Anti-Sexual Harassment Policy, recognizing MCC's Guidance to MCAs on Sexual Harassment.
  - Training shall be conducted within one month of workers starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Training shall address
    - Attitudes to and prevention of sexual harassment in the workplace
    - Workings and protections in the Contractor's internal grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and

<p>LGBTQ+ persons</p> <ul style="list-style-type: none"> <li>▪ Additional requirements for minimum training content can be found in MCA-Mongolia's Social and Gender Integration Plan (SGIP)</li> <li>• Information about the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral plan shall be included in all community meetings and the Policy and Plan shall be communicated in Mongolian, in whole, to project-affected khoroo and District governments.</li> </ul>
<p><b>LOCATIONS:</b></p> <p>All construction sites and temporary construction facilities and project affected communities</p>
<p><b>MONITORING</b></p>
<p>MCA-Mongolia or its representative's SST:</p> <ul style="list-style-type: none"> <li>• Monitor Contractor Counter-Trafficking in Persons Response Plan</li> <li>• Monitor Contractor performance related to gender-based violence requirements</li> <li>• Monitor Contractor's development and adherence to its Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> <li>• Participate in the Contractor's internal Grievance Redress Mechanisms in relation to any on allegations of sexual harassment and gender-based violence and monitor and document the process and outcomes, maintaining confidentiality of those reporting and victims and witnesses</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>• Maintain copies of all contracts or other agreements with organizations that provide services related to the development of C-TIP, GBV prevention, or prevention of sexual harassment policy, plans, training, or reporting mechanisms</li> <li>• Maintain records of workers' participation in required trainings, including the dates of trainings and which workers participated</li> <li>• Maintain records of all community meetings at which C-TIP, gender-based violence, and sexual harassment are addressed, including the dates and locations and a record of all questions, comments, and Contractor responses</li> <li>• Document all implementation of the results of Contractor's Counter-Ttrafficking in Persons Response Plan responsibilities</li> <li>• Document all complaints of sexual harassment and gender-based violence, maintaining confidentiality of witnesses and victims, and all implementation of the Sexual Harassment Incident Reporting and Referral Plan and interactions with law enforcement and other relevant response institutions and organizations</li> <li>• Grievance redress activities under the Contractor's internal grievance process</li> </ul>
<p><b>LOCATIONS:</b></p> <p>All construction sites and temporary construction facilities and project affected communities</p>
<p><b>INDICATORS AND SUCCESS CRITERIA:</b></p>
<p>Indicators:</p> <ul style="list-style-type: none"> <li>• Content of the Contractor's TIP Response Plan</li> <li>• Content of the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> <li>• Number and content of trainings for all staff</li> <li>• Number of community meetings at which information presented covers the Contractor's policies on C-TIP, GBV, and sexual harassment and how to report suspected cases compared to the total number of Contractor-organized community meetings, disaggregated by location</li> <li>• Numbers of complaints and grievances brought alleging sexual harassment, gender-based violence or trafficking in persons</li> </ul>

- Number of required notifications of suspected TIP, GBV, and sexual harassment incidents compared to the number of complaints
- Contracts or other agreements with specialized organizations to develop and deliver plans, policies, and training

**Success Criteria:**

*Counter-trafficking in persons*

- Anonymous reporting mechanism for trafficking in persons is established prior to initiation of construction and functioning effectively for the duration of the construction
- The Contractor's TIP Response Plan is thorough, references the MCC C-TIP Policy and any guidance, provides a path to involve NGOs and specialized government staff, and includes clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.
- 100% of reported or suspected cases of TIP are dealt with in a timely, survivor centered manner, according to the TIP Response Plan.
- Effective reporting and management measures are developed are implemented and information about the measures are introduced to the employees and sub-contractors in toolbox sessions and by other means
- 100% of community meetings include reference to the zero-tolerance policy against TIP and to the Contractor's TIP Response Plan

*Gender-based violence*

- Culture of unacceptability of gender-based violence and assaults on women and LGBTQ+ persons established via:
  - 100% of workers having participated in gender-based violence prevention training prior to beginning work on-site
  - The Contractor notifying the Engineer and MCA-Mongolia within 24 hours of 100% of any alleged incident of gender-based violence
  - Timely, confidential, and thorough dealing with complaints of gender-based violence and 100% implementation of zero-tolerance policy in confirmed cases
  - 100% of community meetings including reference to the zero-tolerance policy against gender-based violence and procedures for reporting it

*Sexual harassment*

- The Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan are thorough, reference the Contract, aspects of the MCC Guidance to MCAs on Sexual Harassment, and Mongolian Law; provide a path to involve NGOs and specialized government staff; and include clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.
- 100% of employees and sub-contractors have taken the sexual harassment prevention training prior to on-site work
- All worker and community complaints about sexual harassment are
  - addressed confidentially
  - addressed in a timely manner and
  - resolved following the procedures in the Contractor's Sexual Harassment Incident Referral and Reporting plan
- After investigation, appropriate measures are taken against perpetrators of sexual harassment on the job site, in temporary facilities, and in surrounding communities

**REPORTING:**

- Reports on measures to prevent and address counter-trafficking in persons, gender-based violence, and sexual harassment shall be included in project monthly reports
- Summarize activities related to counter-trafficking in persons, gender-based violence, and sexual harassment undertaken during each reporting period

<ul style="list-style-type: none"> <li>Specify any material deviations or non-compliances to this management measure, and any other issues of concern,</li> <li>Define activities planned during next reporting period</li> </ul>	
<b>SCHEDULE</b>	
<b>MANAGEMENT MEASURE:</b> <i>Implementation:</i> <ul style="list-style-type: none"> <li>Initiated during pre-construction prior to starting any construction activities and ongoing throughout pre-construction and construction</li> </ul>	<b>MONITORING:</b> <i>Implementation:</i> <ul style="list-style-type: none"> <li>Initiated during pre-construction prior to starting any construction activities and ongoing throughout pre-construction and construction</li> </ul>

<b>MANAGEMENT MEASURE:</b> <i>Implementation:</i> Contractor <i>Oversight:</i> Engineer	<b>MONITORING:</b> <i>Implementation:</i> Contractor <i>Oversight:</i> Engineer – MCA-Mongolia or its representative's Social Safeguards Team

## H.1.5 Health and Safety Management

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## H.1.6 Education, Training, Community Outreach and Grievance Redress

Incorporated in various management measures are requirements for education, training, and outreach. The overall goals of these requirements are to provide project employees with an understanding of the commitments included in those management measures and inherent in associated laws, regulations, and policies, and to provide the employees with an appreciation of their own accountability for maintaining mutually supportive relationships with local communities. All required training is to be provided as part of induction training (to provide general awareness) and job-specific training as necessary.

In addition to the management measure under this heading, the following management measures also specify training requirements:

- Management Measure Conveyance - 1: Labor Management
- Management Measure Conveyance - 2: Gender Integration and Social Inclusion (GSI)
- Management Measure Conveyance - 3: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment

Together, these management measures comprise the Education, Training, and Community Outreach Plan.

### Management Measure Conveyance - 4: Stakeholder Engagement, Community Consultation, and Grievance Redress

<b>POTENTIAL IMPACT</b>
Delays, increased grievances, political interference, and unnecessary pressure from uninformed groups resulting from lack of information and discussion/consultation
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b>

Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:

- IFC Performance Standard 1
  - Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities
  - Requires establishment of a grievance mechanism to receive and facilitate resolution of affected communities' concerns and grievances about environmental and social performance, and scaled to the risks and adverse impacts of the project and with the affected communities as its primary user.

#### OBJECTIVES

- Inform and involve all stakeholders
- Have in place a defined policy for dealing with external parties
- Foster positive relations and effective partnerships with local communities throughout project construction and operation
- Maximize the beneficial impact of the BWSE project on the affected communities

#### MANAGEMENT MEASURE

##### Stakeholder Engagement, Community Consultation, and Grievance Redress

The stakeholders and affected communities are to be informed of the construction activities, including implementation timeline and grievance redress procedure.

##### Stakeholder Engagement

- The Contractor will prepare and submit for the Engineer's written approval a Contractor's Stakeholder Engagement Plan, based on requirements described in Annex B of this ESMP
- At a minimum, the Contractor's Stakeholder Engagement Plan will document and specify:
  - Contractor's responsibilities and participation in community consultation, specifying:
    - A standard operating procedure agreed with MCA-Mongolia that governs how the Contractor will interact with local communities
    - How contacts with the communities are to be made and recorded, and reported to the SST for documenting in the Stakeholder Engagement Matrix
    - How information is to be shared with the communities and other project partners
    - Protocols for conducting, recording, and disseminating the results of community consultation
  - Contractor's responsibilities and participation in the project Grievance Redress Mechanism, specifying how the Contractor will:
    - Take action to resolve low level grievances
    - Ensure all employees are trained to understand their role in the project Grievance Redress Mechanism
    - Participate in higher tier grievance resolution
    - Participation in the overall monitoring and evaluation of the project
- The Contractor will prepare and submit for the Engineer's written approval a project specific Grievance Redress Mechanism (GRM) based on requirement described in Annex A of this ESMP.

##### Community Consultation

- The MCA-Mongolia or its representatives will:
  - Introduce Contractor's officers to communities
  - Monitor and supervise Contractor contacts with communities and other stakeholders
  - Ensure that gender and social inclusion measures implemented by the Contractor are taken when planning meetings, and that thereby all sections of the community are equally informed and consulted
- In coordination with the MCA-Mongolia or its representative, the Contractor will:

<ul style="list-style-type: none"> <li>- Undertake community information dissemination, consultation, and outreach addressing the influx of migrant workers and the associated risks to the affected communities, the Grievance Redress Mechanism, and other issues that arise during consultation</li> <li>- Actively promote awareness and disclose information in affected communities on the following <ul style="list-style-type: none"> <li>o Purpose, nature, and scale of the project</li> <li>o Duration of proposed project activities</li> </ul> </li> <li>- Record results of Contractor's community consultation activities</li> <li>- Document all community consultation activities in the Stakeholder Engagement Matrix</li> </ul>
<p><b>Grievance Redress</b></p> <ul style="list-style-type: none"> <li>• The MCA-Mongolia or its representative will: <ul style="list-style-type: none"> <li>- Supervise, and monitor participation by all parties</li> </ul> </li> <li>• The Contractor will: <ul style="list-style-type: none"> <li>- Develop and implement the Grievance Redress Mechanism consistent with Annex A of this ESMP.</li> <li>- Designate the Contractor's Social Safeguards Officer or other officer as responsible for collaborating with the project Grievance Redress Mechanism</li> <li>- Document all grievance redress actions</li> <li>- Report on the Grievance Redress Mechanism to the Engineer</li> </ul> </li> </ul>
<p>LOCATIONS:</p> <p>All construction sites and temporary construction facilities and project affected communities</p>
<p><b>MONITORING</b></p>
<p><b>MCA-Mongolia or its representative</b></p> <ul style="list-style-type: none"> <li>• Monitor Contractor contacts with stakeholders and communities</li> <li>• Monitor participation by all parties in Grievance Redress Mechanism</li> </ul> <p><b>Contractor</b></p> <ul style="list-style-type: none"> <li>• Document all Contractor's stakeholder engagement and consultation activities</li> <li>• Document all grievance redress activities under the Grievance Redress Mechanism</li> </ul>
<p>LOCATIONS:</p> <p>All construction sites and temporary construction facilities and project affected communities</p>
<p>INDICATORS AND SUCCESS CRITERIA:</p> <p>Indicators:</p> <ul style="list-style-type: none"> <li>• Number, content, and outcome of: <ul style="list-style-type: none"> <li>o Stakeholder engagement activities</li> <li>o Community consultation activities</li> <li>o Grievance redress actions</li> </ul> </li> </ul> <p>Success Criteria:</p> <ul style="list-style-type: none"> <li>• Successful outcome of: <ul style="list-style-type: none"> <li>o Stakeholder engagement activities</li> <li>o Community consultation activities</li> </ul> </li> <li>• Resolution of grievances</li> </ul>
<p>REPORTING:</p> <ul style="list-style-type: none"> <li>• Update project Stakeholder Engagement Matrix</li> <li>• Summarize other activities undertaken during reporting period</li> <li>• Specify any material deviations or non-compliances to this management measure, and any other issues of concern</li> <li>• Define activities planned during next reporting period</li> </ul>

## H.1.7 Risk Control and Emergency Response

The Risk Control and Emergency Response Plan references procedures specified in the management measures in the preceding plans that are pertinent to 1) controlling risks and 2) responding to emergencies. Such risks and emergencies include, for example, fuel spills and encountering previously unidentified cultural heritage resources, as well as incidents involving sexual harassment, human trafficking, and gender-based violence.

Due to the broad scope of the Risk Control and Emergency Response Plan, effectively the plan incorporates by reference the procedures specified in the management measures in all preceding plans for this project phase.

## H.1.8 Monitoring and Verification, and Maintenance Actions

This Monitoring and Verification, and Maintenance Actions Plan scopes the use of an adaptive approach to:

1. Verify that the management measures in the preceding plans are implemented, and that they are effective and sufficient
2. Revise those management measures that prove ineffective or insufficient

This approach acknowledges the risk and uncertainty of environmental and social management and fosters targeted modification of management measures to correct performance and outcomes. It will be executed as a continuous, iterative process by which the consequences of all management actions are systematically evaluated and, as needed, specific measures are modified in response to a determination that their forecasted outcomes will not meet requirements. As needed, this process of systematically evaluating the performance of the management measures and modifying the management measures to achieve the required outcomes, as well as the respective responsibilities of MCA-Mongolia or its representative and the Contractor, will extend into the construction phase.

In the preceding plans, indicators and success criteria are designated for each management measure. For each management measure, MCA-Mongolia or its representative, in its oversight capacity, will determine whether progress toward the designated success criteria is sufficient and will document its determination. If progress decidedly fails to meet iterative requirements, MCA-

Mongolia or its representative will inform the Contractor of the need to formulate a management measure-specific adaptive maintenance action to implement midcourse corrections. In coordination with the Contractor, MCA-Mongolia or its representative will reformulate the management measure to foster meeting the success criteria, incorporating as applicable operational or structural changes, and considering the cost effectiveness of incorporating the changes. The scope of most management measures likely will remain fairly stable; whereas, it is expected that some methods will be added, modified, or dropped over the implementation timeline of some management measures.

With the prior approval of MCA-Mongolia, the Contractor will implement and monitor the revised management measure, and MCA-Mongolia or its representative will provide oversight.

## H.2 Construction Phase

### H.2.1 Responsibilities During Construction

#### MCA-Mongolia

MCA-Mongolia or its representative and the Engineer will be responsible for oversight of the construction-related management measures and monitoring specified in the ESMP. Oversight will be accomplished by MCA-Mongolia or its representative via a combination of regular visits to the construction sites and on-site supervision of management and monitoring activities. MCA-Mongolia or its representative will inform and coordinate with all applicable stakeholders regarding their corresponding mandates under or in relation to the ESMP. MCA-Mongolia or its representative will establish a Social Safeguards Team (SST), to coordinate with the Contractor during the pre-construction and construction phases in implementing, supervising, reporting, and follow-up actions with regard to the ESMP..

#### Contractor

Unless otherwise specified for individual management measures, the construction contracting firm performing the work, the **Contractor**, will be fully responsible for implementing and monitoring all construction-related management measures specified in the ESMP—together with the conditions and procedures specified in Section V, Works Requirements of the Construction Contract Documents. The Contractor will read the ESMP, consider it in its entirety, and comply with all aspects of the ESMP that pertain to implementing and monitoring construction-related environmental and social management.

The Contractor will abide by the requirements of this ESMP, which is appended to and is a part of the Contract. The Contractor will take all necessary measures and precautions to ensure that the execution of the works and all associated operations on site or off site are carried out in conformity with statutory and regulatory environmental and social requirements of the Government of Mongolia, the MCC Environmental Guidelines, the IFC Performance Standards and the technical specifications, where the more stringent will apply. The Contractor will take all measures and precautions to avoid any nuisance or disturbance arising from the execution of project activities. Wherever possible, this will be achieved by avoidance of the impact at the source rather than mitigating an impact after it has been expressed.

The Contractor will designate an Environmental and Social Performance Manager. This individual(s) will have knowledge of relevant Mongolian, IFC, and Millennium Challenge Corporation standards and regulations, and knowledge of environmental and social issues that include, but are not limited to, environmental management, waste management, gender and social inclusion, cultural resources, and health and safety management.

This individual(s) will be responsible to:

- Work closely with MCA-Mongolia or its representative to guide the Contractor's thorough understanding of the mitigation and monitoring requirements
- Lead the Contractor's work related to implementing environmental and social management measures and associated reporting requirements
- Work closely with MCA-Mongolia or its representative to incorporate or modify management measures and monitoring actions to reflect on-site field conditions, as needed, with the approval of the Engineer

The Contractor, while in possession of the construction sites, will be responsible for the safety measures undertaken in accordance with the Technical Specifications to protect the workforce of the Contractor's own staff as well as the Engineer's and MCA-Mongolia or its representative's supervision staff. The Contractor will conduct in this respect safety induction courses for all personnel involved with the works and who are required to supervise any activity prior to their attending any part of the works. Additional training is required to meet MCC social policy requirements as per the:

- Labor Management Plan
- Gender Integration and Social Inclusion Plan
- Counter-Trafficking in Persons Response Plan
- Stakeholder Engagement Plan
- Construction Camp and Temporary Facilities Management Plan
- Cultural Heritage Training Plan
- Managing external grievances as part of the project GRM

The Contractor will act responsibly to provide notification of the Contractor's schedule to enable MCA-Mongolia or its representative to carry out its responsibilities. The Contractor will be required to provide verbal and written updates to MCA-Mongolia or its representative on a regular basis indicating percent achievement of the construction-related management measures specified in the ESMP. On a monthly basis, as part of the Contractor's monthly progress report, the Contractor will submit an ESMP update that will report the status of all environmental and social compliance activities and actions taken by the Contractor.

## H.2.2 Environmental Management

### Management Measure Conveyance - 5: Emergency Preparedness and Response

POTENTIAL IMPACT
Accidents, natural disaster, or sabotage that occur during construction and risk jeopardizing worker and public health and safety, and the environment
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>• Mongolian Law on Environmental Protection <ul style="list-style-type: none"> <li>- Requires business entities eliminating or suspending their activities if they adversely affect the environment in breach of environmental legislation, standards and permissible maximum levels.</li> </ul> </li> <li>• Mongolian Law on Disaster Protection <ul style="list-style-type: none"> <li>- Requires establishing management for disaster protection service, staff and specialized unit and to organize their training and preparedness.</li> </ul> </li> <li>• Mongolian Law on Fire Safety <ul style="list-style-type: none"> <li>- Requires ensuring the readiness of fire protection equipment and training their employees.</li> </ul> </li> </ul>

<ul style="list-style-type: none"> <li>• Mongolian Law on Environmental Impact Assessment</li> <li>- Requires preparing a report presenting the findings of the detailed environmental impact assessment and develop an environmental management plan.</li> <li>• Mongolian Law on Labor Safety and Hygiene</li> <li>- Requires employees attending short term training on labor safety and hygiene in compliance with procedures approved by the state central administrative organization in charge of labor issues and acquire knowledge and training.</li> <li>• Mongolian Criminal Code</li> <li>- Requires providing an emergency aid to the injured, to report to the relevant authority or official after having caused.</li> <li>• IFC Performance Standards 1, 3, and 4</li> <li>- Requires that emergency preparedness and response activities will be periodically reviewed and revised, as necessary, to reflect changing conditions.</li> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning</li> <li>- Provides guidance on cleanup of spill and releases of oil, fuel, lubricants, hydraulic fluids.</li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>• Avoid, minimize, and effectively respond to emergency situations and resulting adverse impacts to the environment and communities associated with accidents, natural disasters, or sabotage</li> <li>• Effectively and efficiently respond to hazardous material spills so as to minimize their human health, safety, and environmental impacts</li> </ul>
<b>MANAGEMENT MEASURE</b>
<p><b>Emergency Preparedness and Response</b></p> <p>The Contractor will:</p> <ul style="list-style-type: none"> <li>• Fully comply with the requirements of this management measure</li> <li>• Provide emergency preparedness and response training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the Contractor's site-specific Emergency Preparedness and Response Plan, to all employees and subcontractors at the time of their induction and annually thereafter</li> <li>• Prepare and submit for the Engineer's written approval a site-specific Emergency Preparedness and Response Plan that specifies preventive measures and response strategies the Contractor will implement in case of accidents, natural disasters, or sabotage to protect worker and public health and safety, and the environment. The requirements of the Plan are detailed below.</li> </ul> <p><b>Hazardous Materials Management</b></p> <ul style="list-style-type: none"> <li>• Obtain from the appropriate Mongolian authorities all permits for the use and handling of hazardous materials</li> <li>• Develop prioritized material-specific handling procedures and training requirements as necessary according to risk</li> <li>• Assign an officer to manage and advise on hazardous materials management</li> </ul> <p><i>Handling</i></p> <ul style="list-style-type: none"> <li>• Nominate all equipment used to transfer hazardous materials for approval by the Engineer to assess that control measures are sufficient</li> <li>• Provide spill kits, protective equipment, and other necessary equipment wherever hazardous materials are stored or used in significant quantities</li> <li>• Provide and require use of personal protective equipment (PPE) and fire protection equipment at all times when handling hazardous materials, as specified in the relevant material safety data sheets (MSDS)</li> <li>• Avoid handling and do not store hazardous materials in close proximity to drainage systems, waterways, or wells</li> </ul>

### *Transport*

- Nominate all haulers used to transport hazardous materials for approval by the Engineer to assess that they are appropriately qualified to transport and handle hazardous materials
- Nominate all containers used to transport hazardous materials for approval by the Engineer to assess that control measures are sufficient
- Provide and require use of fire extinguishers, fire prevention materials, and spill prevention materials appropriate for the hazardous materials being transported
- Properly secure containers containing hazardous materials prior to transport
- Properly mark, label, and placard containers and trucks in accordance with the MSDS
- Maintain chemical manifests in accordance with Mongolian regulations

### *Equipment Use and Maintenance*

- Maintain oil-filled electrical appliances in good and fire-resistant condition
- Undertake all planned equipment, plant, and vehicle maintenance in designated service areas with suitable containment to prevent contamination of the environment
- Place drip trays under all stationary equipment that use fuel, oil, or lubricants that are not self-contained (including, but not limited to, generators, mobile lighting towers, pumps)
- Equip tanks and machinery with measurement devices and overflow protection (e.g., flow and level meters, relief valves, overflow protection valves, and emergency shutoff)

### **Spill Response Procedure**

- Contractor employees are responsible for verbally reporting all spills to their immediate supervisor.
- Supervisors will then coordinate the spill response process and report the spill as an environmental incident to the Engineer.

### *Spill Response Kits*

- Supervisors will clearly label and store spill response kits in locations that will facilitate a prompt response to spills
- Spill response kits in all work areas will contain the following equipment:
  - Shovel
  - 2 x respiratory masks
  - Absorbent material (pads and socks)
  - 2 x goggles
  - 60-liter sealable container
  - 2 x PVC gloves
  - Jug granular absorbent
  - Red wheelie bin
- Spill response kits will be carried in mobile machinery where a significant spill risk is identified with its operation. The contents of these spill kits will be specific to the risks presented from the mobile machinery and will be adequate and appropriate for the materials being transported.
- Where there are significant spill risks apparent outside of workshops or designated hazardous material storage areas, spill response equipment will be specific to the risks posed.

### *Control of Hazardous Material Spills*

- The health and safety of employees, subcontractors, and bystanders will be considered prior to initiating the spill response process.
- Personnel considered at risk of harm in the event of a spill will be evacuated from the spill impact area by the supervisor in charge of the work area.
- If the spill presents an emergency risk to bystanders or the environment, the site emergency response team will be notified immediately of this situation by the individual who identifies the risk.
- If safe to do so, trained individuals will attempt to control the spill at the source and remove all sources of heat and ignition.

- Spills will then be reported verbally to the immediate supervisor, who will arrange for spill containment and cleanup to occur.
- The supervisor will notify the Engineer of the spill details to enable advice to be provided and statutory reporting processes to be initiated.

#### *Containment and Clean Up of Hydrocarbons*

- Contain the extent of the spill by using absorbent material around the perimeter of the spill or earthen bunds if outside of designated workshops or storage areas.
- Excess hydrocarbons may be soaked up using absorbent materials, including dirt, or removed by use of a vacuum truck if the spill is present as free product or is on water.
- Prevent hydrocarbons entering drainage systems and waterways. If hydrocarbons do enter drainage systems or waterways, these should be dammed or have booms placed in them to minimize the spread of hydrocarbons.
- Waste material will be disposed of appropriately:
  - Absorbent material, booms, etc. will be placed into designated bins.
  - Contaminated soil and water will be removed and stored in a designated area as advised by the Engineer.

#### *Containment and Clean Up of Sewage*

- Contain the spill with sand or earth to prevent it entering drainage systems and waterways.
- Calcium hypochlorite powder will be spread around the site for spills likely to be encountered by personnel.
- Any wastewater that enters waterways or drainage systems will be disinfected with the use of calcium hypochlorite powder.
- Wastewater then will be removed by use of a vacuum truck and taken to a waste treatment facility.
- Remaining water and solids will be disinfected using calcium hypochlorite powder.

#### *Containment and Clean Up of Chemicals*

- Contain the extent of the spill using sand, earth, sawdust, or other inert material to prevent it entering drainage systems and waterways.
- Chemicals clean up may vary depending on the chemical type.
- General purpose spill kit supplies, instead of oil-absorbent supplies, will be used.
- Collect recoverable product, if possible, and dispose of at an approved disposal site or facility in accordance with guidance provided by the Engineer.

#### *Containment and Clean Up of Battery Acid*

- Contain the spill and neutralize with a basic substance such as sodium bicarbonate in accordance with guidance provided by the Engineer.
- Collect recoverable product and neutralize with sodium bicarbonate in accordance with guidance provided by the Engineer.
- Dispose of with process water on site.

#### *Follow-up Sampling, Storage, and Treatment*

- For spills rated as significant risk on incident reporting, quality of cleanup work will be determined by follow-up sampling of contamination-receiving environment and compared against the Mongolian environmental standards on permissible levels of pollutants in air, water, and soil.
- If any exceedance of pollutant permissible levels is noted, cleanup work will be considered as inadequate and further cleanup will be required.
- Follow-up sampling will be carried for all spills to evaluate reporting requirements to the Engineer.
- Hydrocarbon contaminated soils will be excavated and placed within a dedicated area for storage and treatment.

#### **Emergency Preparedness and Response Plan**

- Prepare and submit for the Engineer's written approval a site-specific Emergency Preparedness and Response Plan and associated procedures that, as a minimum:

<ul style="list-style-type: none"> <li>- Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan</li> <li>- Complies with Construction Contract Documents Section V, Works Requirements, Section 01030 Special Requirements, Paragraph 1.04.D Emergency Action Plan</li> <li>- Specifies: <ul style="list-style-type: none"> <li>o Site-specific preventive measures and response strategies the Contractor will implement in case of accidents, natural disasters, or sabotage to protect worker and public health and safety, and the environment</li> <li>o Potential emergencies and key areas prone to emergency situations</li> <li>o Existing emergency response structures and capacities in the respective project areas—i.e., police, fire brigades, paramedics / ambulances, hospitals, etc.</li> <li>o Actions to be taken prior to an emergency—i.e., preventive and preparatory measures</li> <li>o Actions to be taken during an emergency—i.e., response measures</li> <li>o Actions to be taken after an emergency—i.e., recovery and assessment measures</li> <li>o Contact lists for emergency situations</li> <li>o Description of collaboration mechanisms of the project's emergency preparedness and response teams with existing emergency response structures in the respective project areas</li> </ul> </li> <li>- Assigns roles and responsibilities for emergency preparedness and response</li> <li>• Post copies of the Plan and the list of emergency contact numbers in highly visible locations within the construction sites and temporary facilities</li> <li>• In case of any accidents, the Contractor will immediately undertake the procedures contained within the Plan that complies with From IFB sub clause 4.8 safety procedures: "The Contractor shall notify the Engineer, the Employer, and MCC within 24 hours or as soon as reasonably possible after the occurrence of any accident which has resulted in damage or loss of property, disability or loss of human life, or which has or which could reasonably be foreseen to have a material impact on the environment and shall submit to the Engineer, the Employer, and MCC no later than 7 days after the occurrence of such an event, a summary report thereof</li> </ul>

### Management Measure Conveyance - 6: Tree Relocation and Revegetation

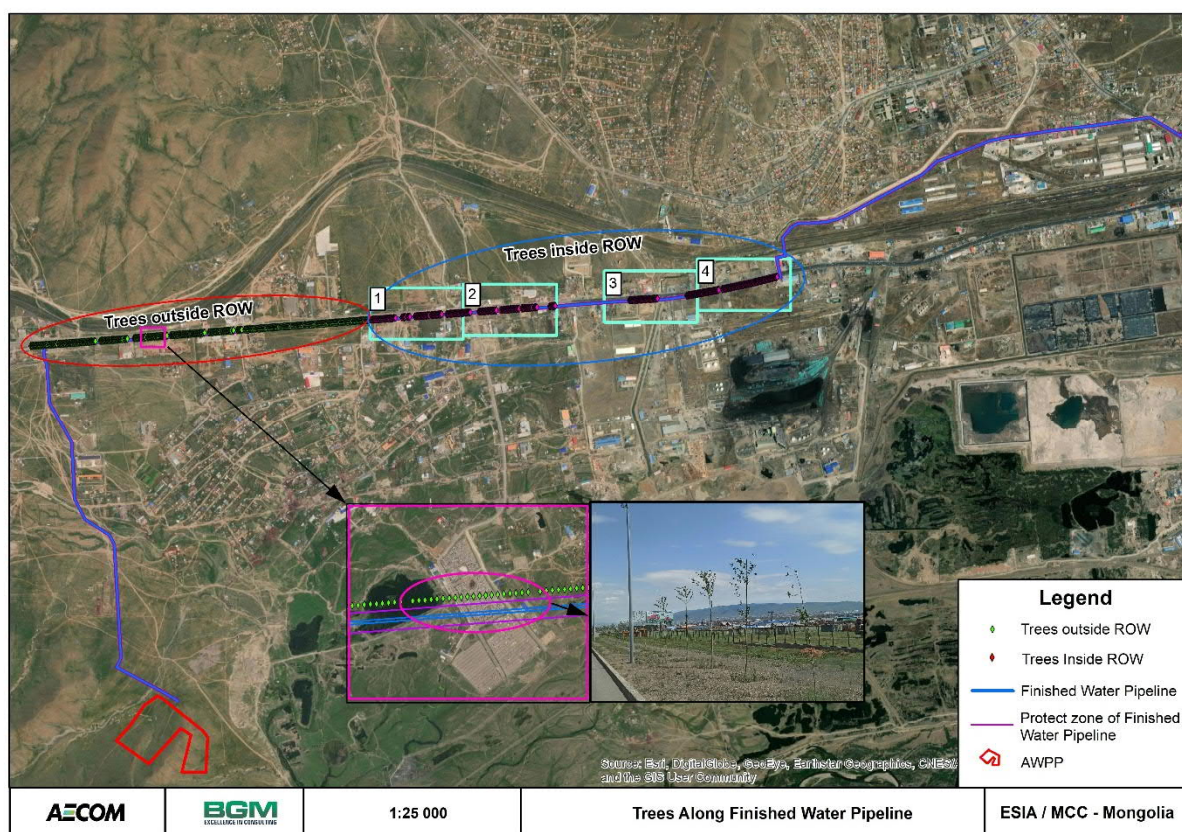

<b>POTENTIAL IMPACT</b>
Disturbance and removal of planted trees along the finished water pipeline
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Mongolian Law on Environmental Protection <ul style="list-style-type: none"> <li>Requires business entities eliminating or suspending their activities if they adversely affect the environment in breach of environmental legislation, standards and permissible maximum levels.</li> </ul> </li> <li>MNS 6774:2019 Transplanting and care of large trees seedlings. Technical requirement <ul style="list-style-type: none"> <li>This standard applies to the transplanting and maintenance of large trees and seedlings for landscaping of public, limited and special purpose green areas in cities and towns. The following documents are cited in this standard, and in the event of changes to these standards, reference shall be made to the most recent official material: <ul style="list-style-type: none"> <li>MNS 4969: 2000 Organization of training. Basic rule</li> <li>MNS 6139: 2010 Seedlings of coniferous trees. Technical requirement</li> <li>MNS 6254: 2011 Growing seedlings of trees and shrubs. General requirement</li> <li>MNS 6258-1 : 2011 Planting and pitting seedlings hole. General requirement</li> <li>MNS 6258-2 : 2011 Caring of tree and brush seedlings</li> <li>GOST 24909: 81 Seedlings of ornamental deciduous trees. Specifications</li> <li>GOST 25769-83 Conifers seedlings for planting in towns. Specifications</li> <li>GOST 28829-90 Seedlings of decorative trees and bushes in containers. Specifications</li> </ul> </li> </ul> </li> <li>Mongolian Law on Environmental Impact Assessment <ul style="list-style-type: none"> <li>Requires preparing a report presenting the findings of the detailed environmental impact assessment and develop an environmental management plan.</li> </ul> </li> <li>IFC Performance Standard 6 <ul style="list-style-type: none"> <li>Requires that impacts to biodiversity be offset.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>Relocation of affected trees and revegetation of disturbed soils</li> </ul>
<b>MANAGEMENT MEASURE</b>
<p><b>Tree Relocation and Revegetation</b></p> <p>The removal of trees and other vegetation will be kept to the minimum necessary to accommodate the permanent works that are indicated by the project drawings.</p> <p>The Contractor will prepare, submit, and implement a Tree Replanting and Revegetation Plan for the Engineer's written approval. The plan will include but not be limited to the following:</p> <ul style="list-style-type: none"> <li>Follow all applicable ESMP mitigation measures and Contract documents.</li> </ul>

- Replant all removed trees at locations where they will not interfere with safety or proposed project assets.
- The existing trees in the protection zone of the pipeline will be removed and replanted, rather than replaced, whenever possible. If a tree is damaged during removal it will be replaced.
- In concurrence with the Engineer, trees outside of the protection zone that hinder or obstruct work, or interfere with project assets will be removed and replanted, rather than replaced, whenever possible. If a tree is damaged during removal it will be replaced.
- The existing trees will be replanted next to the protection zone if there is room available; where there is no room, they will be replanted in a different location based on discussion with the local authority and concurrence of the Engineer.
- Replanted and replaced trees that die within 1 year of planting will be replaced by the Contractor.
- Ensure that any exposed surfaces are revegetated at the completion of works and in accordance with instructions of the Engineer.
- A replanting and revegetation schedule.
- A monitoring plan and schedule to ensure success in the first year of replanting and revegetation

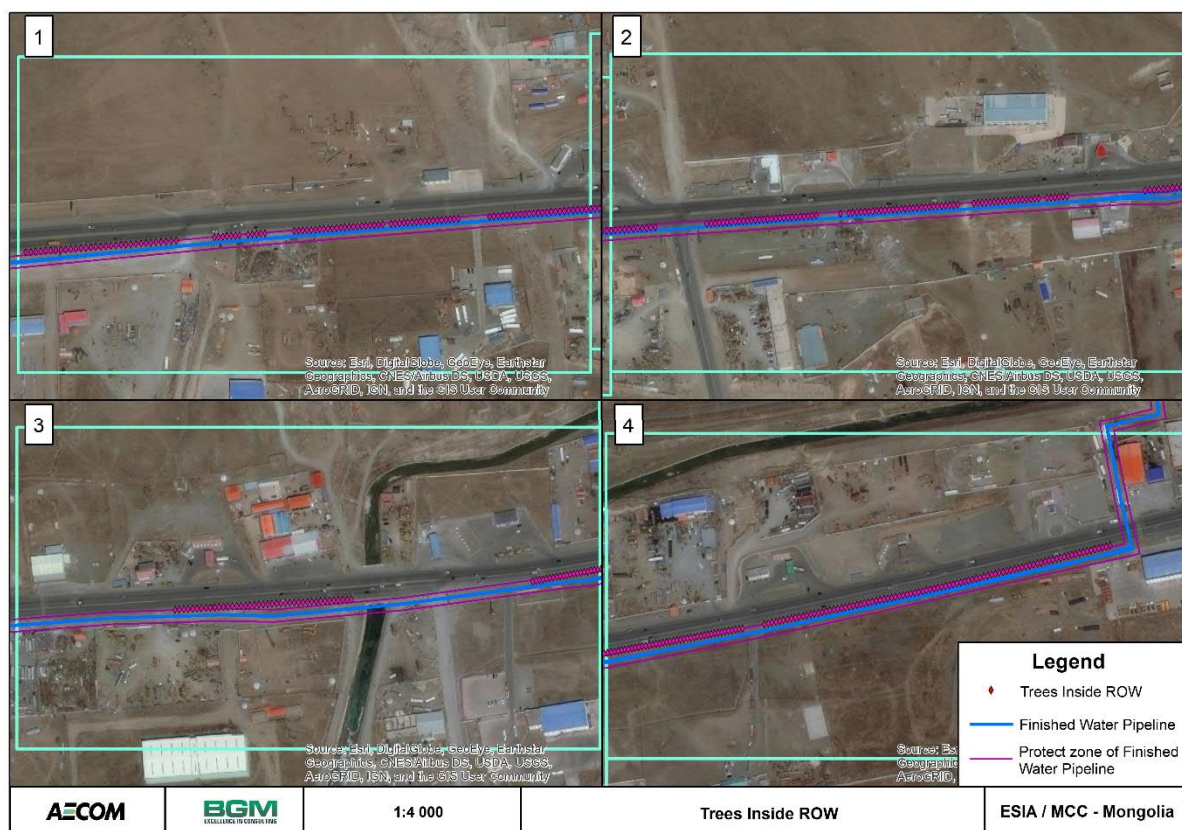

Trees along the finished water pipeline are cared for by the local authority. After replanting, in concurrence of the Engineer, the Contractor will provide formal notice to local authority to resume plant care.

#### LOCATIONS:

As indicated in the following figures, there are 879 trees along the AH3 Highway, parallel to the route of the finished water pipeline; of these 397 are within the protection zone of the pipeline and will need to be removed and relocated. In concurrence with the Engineer, the Contractor may identify trees outside of the protection zone requiring removal as they hinder or obstruct works, or interfere with project assets.

## MONITORING

### Document submission and approval of plan

#### LOCATIONS:

As indicated in the above figures, there are 879 trees along the AH3 Highway, parallel to the route of the finished water pipeline; of these 397 are within the protection zone of the pipeline and will need to be removed and relocated. In concurrence with the Engineer, the Contractor may identify trees outside of the protection zone requiring removal as they hinder or obstruct works, or interfere with project assets.

#### INDICATORS AND SUCCESS CRITERIA:

##### Indicators:

- Implementation of tree replanting and revegetation measures
- Submission of construction-phase Tree Planting and Revegetation Plan
- Specific impact criteria and indicators specified in approved plan
- Number of trees removed from along the AH3 highway
- Number of trees replanted next to the projection zone
- Number of trees replanted in different locations
- Number of trees replaced
- Hectares of exposed surfaces revegetated

##### Success Criteria:

- Tree replanting plan approval
- All removed trees replanted or replaced
- All replanted or replaced trees survive 1 year or replaced
- All exposed surfaces revegetated within 1 year

#### REPORTING:

- Report communications and written approval of Engineer of the Tree Replanting and Revegetation Plan
- Report monitoring activities and data evaluation findings

<ul style="list-style-type: none"> <li>Report impact criteria exceedances and recommended protective actions to be implemented</li> <li>Summarize other activities undertaken during reporting period</li> <li>Specify any material deviations or non-compliances to this management measure, and any other issues of concern</li> <li>Define activities planned during next reporting period</li> </ul>

### Management Measure Conveyance - 7: Mongolian Marmot Protection and Habitat Restoration

<b>POTENTIAL IMPACT</b>
Disturbance of endangered Mongolia marmot ( <i>Marmota sibirica</i> ) and loss and disturbance of marmot habitat
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b> <ul style="list-style-type: none"> <li>Mongolian Law on Environmental Protection               <ul style="list-style-type: none"> <li>Requires researching and establishing the potential for State and regional development, the restoration, breeding and raising of endangered animals, protection of soil, water, and air, and for humans to live in a healthy.</li> </ul> </li> <li>Mongolian Law on Fauna               <ul style="list-style-type: none"> <li>Requires the approval of the government based on the conclusions of an environmental impact assessment of the construction of industrial plants, power stations within the territory of extremely rare fauna.</li> </ul> </li> <li>IFC Performance Standard 6               <ul style="list-style-type: none"> <li>Prohibits implementing any activities that leads to a net reduction in the national/regional population of any Critically Endangered or Endangered species over a reasonable period.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>Minimize disturbance of Mongolian marmots</li> <li>Habitat restoration to achieve a net gain in Mongolian marmot habitat</li> </ul>
<b>MANAGEMENT MEASURE</b>
<b>Mongolian Marmot Protection and Habitat Restoration</b> <b>Protection and Habitat Restoration</b> MCA-Mongolia will, with reference to the figure below: <ul style="list-style-type: none"> <li>Designate construction-phase marmot protection zone extending a minimum of 200 meters from the outermost flight burrows</li> </ul>

- Prohibit the operation of any motorized vehicles, including cars and all-terrain vehicles, and restrict foot traffic within construction-phase marmot protection zone by MCA-Mongolia, Engineer, Contractor, and subcontractor project personnel
- Develop and implement marmot protection training to be required of all construction-phase MCA-Mongolia, Engineer, Contractor, and subcontractor project personnel and visitors to project facilities and construction sites in the vicinity of the AWPP

The Contractor will be responsible for:

- Contract the design and construction of the following:
- Approximately 25-meter long, 1-meter high permeable rock berm across intermittent, seasonal stream that divides the existing marmot habitat to arrest gully
- Plant native shrubs and perennial plants in an approximately 25,000-square meter Mongolian marmot habitat restoration area
- Install Mongolian marmot warning and interpretive signs to be placed at the natural car parking facility

MCA-Mongolia will employ or contract an experienced biodiversity specialist to develop and implement the following Mongolian marmot construction-phase monitoring and long-term protection program

### **Construction-Phase Monitoring and Long-term Protection**

Prepare, submit, and implement Mongolian Marmot Monitoring and Evaluation Plan for the Engineer's written approval, to monitor and evaluate Mongolian marmot population density and structure, reproduction, and mortality in the vicinity of the proposed AWPP and replacement access road and pedestrian path to the Monument to Terror Victims, and existing and proposed walking trail to the sacred ovoo on Songinokhairkhan Mountain. The plan will specify roles and responsibilities for marmot monitoring and evaluation.

The plan may include but not be limited to the following, as determined by the biodiversity specialist and approved by the Engineer:

#### *Mapping*

- Burrow clusters
- Family and individual home ranges
- Vegetation
- BWSE-related and other human encroachment

#### *Monitoring activities*

- Use of drone equipped with thermal imaging camera
- Direct observation aided by binoculars and spotting scopes
- Use of automatic camera trap
- Capture with or without marking

#### *Monitoring parameters*

- Burrow cluster population
- Age of individuals
- Sex of individuals
- Home range size
- Number of families
- Family composition
- Number of pups
- Activity/Behavior
- Predation
- Survival and mortality
- Total population
- Age and sex distribution of population

Observations are to be repeated during the morning and evening active periods.

Monitoring data for the selected parameters will be evaluated as construction, and operation and maintenance progress for changes attributed to loss of marmot habitat or disturbance of marmots. The

monitoring and evaluation plan will specify impact indicators and impact criteria determined by the biodiversity specialist and approved by the Engineer.

Exceedance of any of the impact criteria will trigger, ***independent of this management measure***, preparing, submitting, and implementing protective actions, in addition to those specified above, formulated to avoid, minimize, or offset the observed adverse impact.

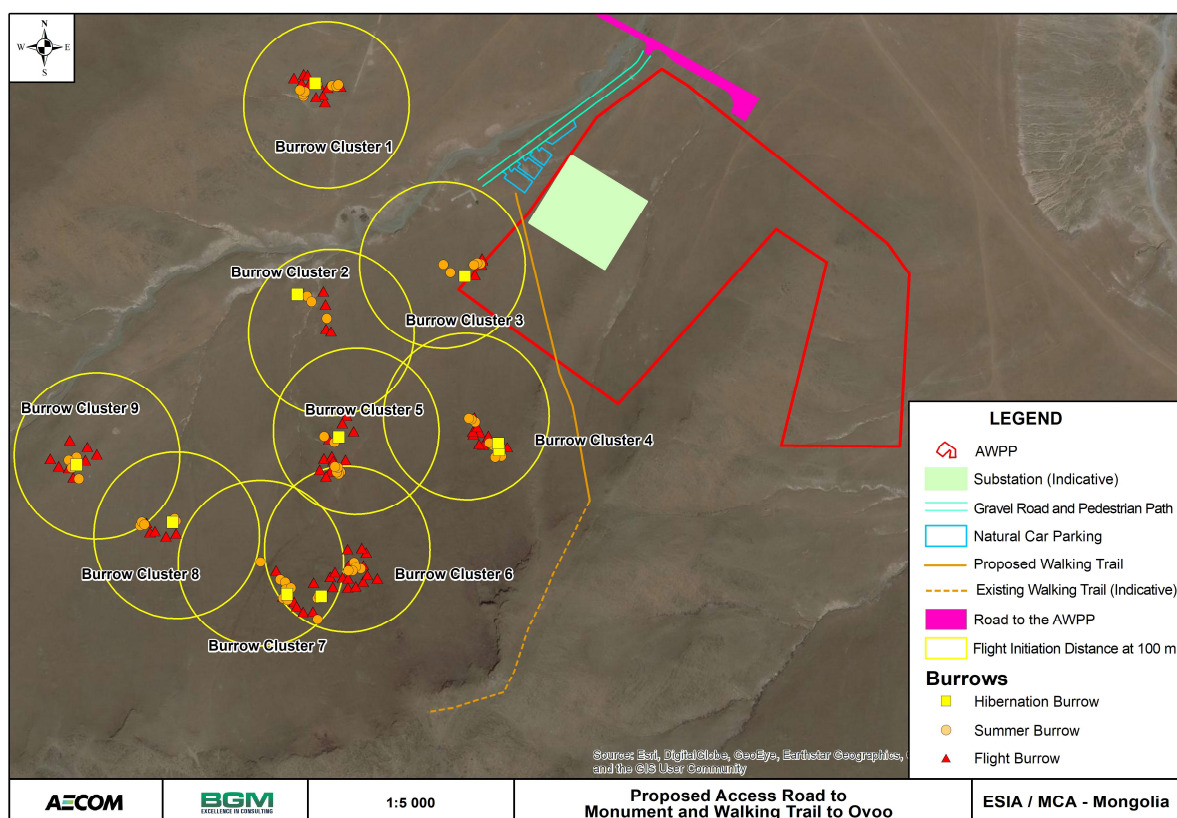

Such actions may include the following, as well as other measures recommended by the biodiversity specialist:

- Constructed buffers; e.g., vegetated earth berms
- Rock piles where marmots can watch for predators, thermoregulate, and dig burrows
- Spill protection measures
- Permanent Mongolian marmot protection zone
- Driving restrictions; e.g., prohibit or control off-road driving, set speed limits, restrict non-essential traffic to daytime
- Marmot protection and avoidance training
- Warning and interpretive signage
- Supplemental feeding to increase reproduction and survival, and attract marmots away from roads

The Contractor is/will be requested to provide a quotation to implement such actions identified by the biodiversity specialists, should the impact criteria be triggered

#### LOCATIONS:

Observed Mongolian marmot burrow clusters in the vicinity of the proposed AWPP and replacement access road and sidewalk to the Monument to Terror Victims and sacred ovoo on Songinokhairkhan Mountain, as located on the following figure, and associated, nearby habitat supporting foraging, including pup-weaning, and dispersal of sub-adults including pup-weaning, and dispersal of sub-adults:

#### MONITORING

Document submission and approval of plan

<b>LOCATIONS:</b> Observed Mongolian marmot burrow clusters in the vicinity of the proposed AWPP and replacement access road and sidewalk to the Monument to Terror Victims and sacred ovoos on Songinokhairkhan Mountain, as located on the above figure, and associated, nearby habitat supporting foraging, including pup-weaning, and dispersal of sub-adults including pup-weaning, and dispersal of sub-adults	
<b>INDICATORS AND SUCCESS CRITERIA:</b> <b>Indicators:</b> <ul style="list-style-type: none"> <li>• Development and implementation of protection and habitat restoration measures</li> <li>• Submission of construction-phase monitoring and long-term protection plan</li> <li>• Collection and evaluation of Mongolian marmot population density and structure, reproduction, and mortality data</li> <li>• Specific impact criteria and indicators specified in approved plan</li> </ul> <b>Success Criteria:</b> <ul style="list-style-type: none"> <li>• Monitoring and protection plan approval</li> <li>• Identification of and timely response to changes attributed to loss of marmot habitat or disturbance of marmots</li> </ul>

## H.2.3 Waste Management

### Management Measure Conveyance - 8: Waste Management

POTENTIAL IMPACT
Risks and adverse impacts of handling, storing, treating, and disposing of waste
<p>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Mongolian Law on Hazardous and Toxic Chemicals <ul style="list-style-type: none"> <li>- Requires depositing the waste based on conclusion of the related professional organization to the place determined by the district governor.</li> </ul> </li> <li>• Mongolian Law on Sanitation <ul style="list-style-type: none"> <li>- Prohibits disposing waste in the places other than the specified points.</li> </ul> </li> <li>• Mongolian Law on Waste <ul style="list-style-type: none"> <li>- Prohibits establishing centralized waste disposal sites in urban settlement areas, water sanitary and protection zones and mining areas.</li> </ul> </li> <li>• Government of Mongolia Resolution No. 135 of 2002 addressing the procedures of the classification, collection, packaging, transportation, treatment, storage, and disposal of hazardous waste</li> <li>• Government of Mongolia Resolution No. 116 of 2018 addressing Articles 7.1.2 and 7.1.3 of the Law on Waste (repealed Government Resolution No. 135 of 2002).</li> <li>• Joint Order No. A-320/305 of Minister of Nature, Environment and Tourism and Minister of Health of 2011 addressing the procedures of the disposal of medical wastes <ul style="list-style-type: none"> <li>- Requires providing personal protective equipment to the organization's waste management officer.</li> </ul> </li> <li>• Minister's Order No. 404 of 2006 of Ministry of Nature, Environment and Tourism addressing the procedure of the disposal and landfill of waste <ul style="list-style-type: none"> <li>- Minister's Order No. A/443 of 2018 addressing Articles 4.4.1, 4.4.2, 4.4.3 of the Law on Hygiene (repealed Minister's Order No. 404 of 2006).</li> </ul> </li> <li>• IFC Performance Standards 3 and 4 <ul style="list-style-type: none"> <li>- Encourages recovering and reusing waste in a manner that is safe for human health and the environment.</li> </ul> </li> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning <ul style="list-style-type: none"> <li>- Provides guidance on management of non-hazardous solid waste generated at construction sites and associated facilities, hazardous materials, and wastewater discharges.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• Effectively manage waste by minimizing waste generation and safely handling, storing, treating, and disposing of generated wastes</li> </ul>
MANAGEMENT MEASURE
<p><b>Waste Management</b></p> <p>The Contractor will:</p> <ul style="list-style-type: none"> <li>• Comply with Construction Contract Documents Section V, Works Requirements, Section 01030 Special Requirements: <ul style="list-style-type: none"> <li>○ Paragraph 1.04.E Hazardous Waste Management Plan</li> <li>○ Paragraph 1.14 Disposal of Excess Material</li> <li>○ Paragraph 1.21 Disposal of Debris</li> </ul> </li> <li>• Comply with Construction Contract Documents Section V, Works Requirements, Section 01110 Environmental Protection Procedures: <ul style="list-style-type: none"> <li>○ Paragraph 3.04.I, requiring the disposal of all debris and excess material outside wetland or floodplain areas in an environmentally sound manner</li> </ul> </li> </ul>

- Paragraph 3.05.A, prohibiting the use of burning at the project site for the disposal of refuse and debris
- Comply with Construction Contract Documents Section V, Works Requirements, Section 01610 Delivery, Storage and Handling:
  - Paragraph 1.05.C Storage and Protection
- Comply with Construction Contract Documents Section V, Works Requirements, Section 02100 Site Preparation:
  - Paragraph 1.07.D, requiring the legal disposal of all waste and surplus material
  - Paragraph 3.03 Disposal of Waste Materials
- Comply with Construction Contract Documents Section V, Works Requirements, Section 02210 Earth Excavation, Backfill, Fill and Grading:
  - Paragraph 3.11 Reuse and Disposal of Surplus Excavated Materials
- Fully comply with the requirements of this management measure
- Provide in storage locations and principle points of use material safety data sheets (MSDSs) for all stored materials in Mongolian, English, and any other languages as appropriate
- Provide 110%-capacity secondary containment or 25% of the capacity of all the total volume of the stored individual containers within the bund, whichever is larger, for all storage of liquid hazardous materials, including, but not limited to, waste oil and solvents
- Do not store waste oils for extended periods in underground sumps
- Empty and inspect regularly tanks and sumps for any signs of cracks or holes
  - Record findings of inspections
  - Repair any cracks or holes
  - Record any repairs conducted
- Make available on site spill kits, protective equipment, and other necessary equipment where hazardous materials are handled, to clean and mitigate spills
- Locate appropriate first aid close to hazardous material storage areas, including, but not limited to, eye-wash, showers, and first aid kits
- Only transport hazardous materials using operators licensed and approved by the Engineer for the specific material
- Implement the following waste management hierarchy, in the following order of preference:
  - Waste avoidance and reduction at source
  - Waste reuse and recycling
  - Waste storage, treatment, and disposal to local, Mongolian, and international standards
- Classify all wastes according to the following and based on internationally accepted regulations, guidelines, definitions, and methodologies:
  - Mineral waste
  - Non-hazardous waste, including domestic waste and inert waste
  - Hazardous waste, including medical waste
  - Wastewater
- Segregate, securely contain, and monitor waste at the source of generation pending treatment, transport, or disposal
- Prohibit open burning of non-hazardous and hazardous solid waste
- Transfer recyclable wastes only to facilities operated by licensed recycling contractors, subject to assessment by the Engineer of the contractors and facilities
- Transfer non-hazardous waste, other than recyclable wastes, only to waste disposal facilities licensed in accordance with applicable Mongolian laws and regulations
- Sterilize medical waste by autoclave in 121°C for at least 20 minutes prior to transfer to disposal and a licensed facility
- Properly store on site all hazardous wastes for which there is not an engineered and approved treatment or disposal method available until a treatment and/or disposal route becomes available
- Maintain an inventory by location, specifying quantity per month and cumulative total, and detailing:
  - Wastes generated

<ul style="list-style-type: none"> <li>○ Wastes sent for off-site recycling</li> <li>○ Wastes subject to hazardous waste treatment</li> <li>○ Wastes subject to non-hazardous waste disposal</li> <li>○ Unrecyclable hazardous wastes stored</li> <li>• Provide waste management training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the Contractor’s site-specific Waste Management Plan, to all employees and subcontractors at the time of their induction and annually thereafter</li> </ul> <p>The Contractor will prepare and submit for the Engineer’s written approval a site-specific Waste Management Plan and associated procedures that, as a minimum:</p> <ul style="list-style-type: none"> <li>• Affirms and executes the Contractor’s comprehensive commitment to the standards and requirements listed above and specified in the plan</li> <li>• Assigns roles and responsibilities for waste management</li> <li>• Disposition of hazardous wastes for which no engineered and approved treatment or disposal method is available</li> </ul>
<p><b>LOCATIONS:</b></p> <p>All construction sites, construction camps, and temporary facilities where waste is generated, stored, treated, or disposed of</p>
<p><b>MONITORING</b></p>
<p>Document:</p> <ul style="list-style-type: none"> <li>• Provision, maintenance, and/or updating of: <ul style="list-style-type: none"> <li>○ MSDSs</li> <li>○ Secondary containment capacity for all storage of liquid hazardous materials</li> <li>○ Tanks and sumps inspection records</li> <li>○ Spill kits</li> <li>○ First aid</li> <li>○ Waste inventory</li> <li>○ Waste management training</li> </ul> </li> <li>• Submission and approval of site-specific Waste Management Plan</li> </ul>

## H.2.4 Social and Gender Inclusion

### Management Measure Conveyance - 9: Labor Management

<b>POTENTIAL IMPACT</b>
Beneficial impacts to be enhanced: <ul style="list-style-type: none"> <li>• Professional management and conditions of labor</li> <li>• Opportunities for local labor and supply of goods and services, and provision of local jobs with fair and competitive wages</li> <li>• Women's short-term employment in construction and engineering-related work</li> <li>• Potential alleviation of poverty in local area</li> <li>• Reduction in child labor</li> <li>• Improved grievance management in employment</li> </ul> Adverse impacts to be avoided or minimized: <ul style="list-style-type: none"> <li>• Discrimination against women</li> <li>• Increased foreign labor, reducing local employment opportunities</li> <li>• Use of child labor</li> <li>• Use of forced labor</li> <li>• Use of trafficked labor</li> <li>• Exploitation of workers and Labor Code violations</li> <li>• Sexual harassment</li> </ul>

**STANDARD(S) / REQUIREMENT(S) TRIGGERED:**

Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:

- Constitution of Mongolia
  - Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.
- Mongolian Civil Code
  - Requires providing office space, tools and equipment necessary to ensure employees' health.
- Mongolian Law on Gender Equality
  - Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.
- Mongolian Law on Labor
  - Prohibits discriminating against race, social origin or status, wealth, religion, or ideology
  - Prohibits employing children under the age of 16 or under 18 in dangerous industries, including construction
- Mongolian Law on Minimum Wage
  - Minimum wage is fixed by National Tripartite Committee on Labor and Social Consensus representatives.
- Mongolian Law on the Protection of the Rights of the Child
  - Prohibits employing children in any work that is likely to harm their health or morale, and exploiting or paying unjust wages to children
- Mongolian Law on Social Protection of Disabled Persons
  - Prohibits building any buildings and facilities that do not meet needs and requirements of persons with disabilities.
- Mongolian Law on Combating Human Trafficking
  - Requires regulating the workplace to ensure the implementation of the legislation on combating human trafficking, and if it is not specified, it shall be obliged to comply with the instructions, recommendations, statements and instructions given by the competent authorities and officials.
- Mongolian Law on Sending Labor Force Abroad and Receiving Labor Force and Specialists from Abroad
  - Regulates relations with respect to employment of a Mongolian citizen abroad and a foreign citizen in Mongolia, and protection of their rights and interests.
  - Reinforces provisions of the Constitution of Mongolia, Labor Law, Social Insurance Law, and other related legal acts, and legal status of a foreign citizen.
- IFC Performance Standard 2
  - Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.
  - Contractor will adopt and implement human resources policies and procedures appropriate to its size and workforce that set out its approach to managing workers consistent with the requirements of this performance standard and national law.
  - Contractor will provide workers with documented information that is clear and understandable regarding their rights under national labor and employment law and any applicable collective agreements, including their rights related to hours of work, wages, overtime, compensation, and benefits upon beginning the working relationship and when any material changes occur.
  - Contractor will not make employment decisions on the basis of personal characteristics unrelated to inherent job requirements. Contractor will base the employment relationship on the principle of equal opportunity and fair treatment, and will not discriminate with respect to

<p>any aspects of the employment relationship, such as recruitment and hiring, compensation (including wages and benefits), working conditions and terms of employment, access to training, job assignment, promotion, termination of employment or retirement, and disciplinary practices. Contractor will take measures to prevent and address harassment, intimidation, and/or exploitation, especially in regard to women. The principles of non-discrimination apply to migrant workers.</p> <ul style="list-style-type: none"> <li>- Prohibits employment of child labor.</li> <li>• Millennium Challenge Corporation Counter-Trafficking in Persons Policy (C-TIP Policy) <ul style="list-style-type: none"> <li>- Requires contractors to take a zero-tolerance policy with regard to human trafficking and to actively manage employment conditions to prevent exploitation of trafficking in persons and related activities workers by employers and specifies remedies that the MCA-Entity may take in response to confirmed cases of TIP.</li> </ul> </li> <li>• Millennium Challenge Account Social and Gender Integration Plan (SGIP) <ul style="list-style-type: none"> <li>- Sets out guidelines for Contractors related to social risk mitigation measures in infrastructure, including making working conditions suitable for both male and female employees</li> <li>- Requires developing and implementing an employment plan that prioritizes using local labor particularly from the Area of Influence of the project</li> <li>- Sets a target to encourage contractors to employ as workers at least 30% women of all workers at each skill/occupational level</li> <li>- Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates.</li> </ul> </li> <li>• Millennium Challenge Corporation Guidance Note to MCAs on Sexual Harassment <ul style="list-style-type: none"> <li>- Requires that contractors are well-informed about existing anti-sexual harassment policies and procedures, and that contractors meet the requirements in the standard bidding documents.</li> <li>• Ministry of Construction and Urban Design (MCUD) Gender Responsiveness Policy</li> <li>- Calls for gender targets in employment via “international and domestic tenders, so that one gender should not be lower than 15 percent among workers, and 25 percent among decision makers.”</li> <li>• Ministry of Labor and Social Welfare Order (2016)</li> <li>- Expanded the types of hazardous work prohibited for children under the age of 18 to include construction</li> <li>• International Labor Organization fundamental conventions, and International Human Rights instruments and conventions</li> </ul> </li> </ul>
<p><b>OBJECTIVES</b></p>
<p>The Labor Management Plan ensures that contractors and their workers have clear expectations about the behaviors and conditions expected of the Contractor and all workers.</p> <ul style="list-style-type: none"> <li>• Promote fair treatment, non-discrimination, and equal opportunity of workers</li> <li>• Promote local labor opportunities and procurement from local suppliers</li> <li>• Target women’s employment as 30% of all labor at each skill/occupational level</li> <li>• Establish and maintain and improve a constructive worker-management relationship</li> <li>• Protect workers, including vulnerable categories of workers such as children, migrant workers, workers engaged by third parties, and workers in the supply chain</li> <li>• Avoid the use of forced labor or trafficked labor</li> <li>• Maximize the beneficial impact of the project on the affected communities</li> </ul>
<p><b>MANAGEMENT MEASURE</b></p>
<p><b>Labor Management</b></p> <p>The MCA-Mongolia or its representative’s Social Safeguards Team (SST) will:</p> <ul style="list-style-type: none"> <li>• Encourage Contractor to employ local unskilled and semi-skilled labor, particularly youth and women, and to procure goods and services from local businesses and entrepreneurs</li> <li>• Facilitate the Contractor’s cooperation with the local District Labor Offices</li> </ul>

- Facilitate the Contractor's publication of vacancies and procurements within affected communities
- Facilitate the Contractor's holding of job fairs and procurement workshops within affected communities to support local applicants to apply for jobs and local businesses and entrepreneurs to bid
- Support local job applicants to apply, and local businesses and entrepreneurs to bid
- Gather names of interested workers from project affected households and through community information programs and consultation meetings
- Share the names of interested workers with District and Khoroo Labor Offices and Contractor
- Encourage Contractor to employ women at a rate of at least 30% of personnel at each skill/occupational level
- Facilitate Contractors' engagement with relevant university engineering programs, technical and vocational education and training (TVET), and professional associations to 1) identify and recruit qualified job applicants and 2) establish internships and apprenticeships
- Encourage Contractor to employ socially excluded and vulnerable people

The Contractor will:

- Fully comply with the requirements of this management measure and related contract clauses
- Perform the work in accordance with relevant sections of the ESMP

*Access to Employment*

The Contractor will:

- Publish vacancies (listing the required qualifications for all categories of employment) within project-affected communities and at District and khoroo offices and provide such information to the Engineer and during each community meeting. Ensure the exchange of information between Contractor and the local population on employment opportunities
- Publish and communicate employment opportunities listing the required qualifications for all categories of employment city-wide, and beyond in Mongolia, if the vacancies cannot be filled from local communities
- Ensure that a staff person responds to questions from the local population regarding employment and procurement opportunities
- Develop an employment forecast and a written recruitment strategy to: 1) encourage the employment of qualified individuals among the local population(s) in project construction and ancillary activities in all phases, with particular focus on women and youth, and disadvantaged groups; 2) target achieving women's employment as at least 30% of personnel at each skill/occupational level; and 3) provide training for local construction brigades on how to be effective contractors for local construction brigades
- Through the Contractor's Social Safeguards Officer, liaise with the MCA-Mongolia or its representative's SST and local labor offices to provide support with the job application process, encourage local employment (including women's employment), implement and publicize a job fair, consistent and transparent recruitment process
- In disseminating information on potential employment opportunities, take steps to consider ways in which to maximize outreach, using all forms of media that may be appropriate
- Ensure that all staff have written employment contracts specifying fair employment conditions and equal pay for equal work to men and women, and fulfilling all conditions specified under the Mongolian Law on Labor defining the contracts

The Contractor is encouraged to:

- Create pay bands for each category of worker to help equal pay for equal work

As feasible, the Contractor will:

- Develop and submit a plan for providing on-the-job training and skills transfer opportunities to the local labor force
- Engage with training, education, and professional organizations—such as Technical and Vocational Education and Training, Implementing Agency of the Ministry of Labor and Social Protections, Mongolian University of Science and Technology, and the Mongolian Builder's

Association—to recruit qualified applicants, and provide apprenticeships and internships for students who study water engineering and relevant subjects at university  
The Contractor shall note contract clauses on “Gender,” “Engagement of Staff and Labor,” “Foreign Personnel,” “Prohibition of Forced or Compulsory Labor,” “Prohibition of Harmful Child Labor,” “Employment Records of Workers,” and “Non-Discrimination and Equal Opportunity.”

#### *Local Procurement*

The Contractor will:

- Proactively procure goods and services from local businesses and entrepreneurs in Khan-Uul and Songinokhairkhan Districts and Ulaanbaatar, and members of targeted disadvantaged groups (e.g., women, people with disabilities), achieved through:
  - Publicizing procurements within the targeted geographical area or targeted group, for example at the District and khoroo offices and via notice boards, print media (newspapers, etc.), recruitment agencies, or job and career fairs
  - Publicizing and holding procurement workshops within the targeted geographical area or targeted group
  - Adding priority criteria for businesses and entrepreneurs in the targeted geographical area or members of the targeted group to the selection procedure
- In disseminating information on potential service procurement opportunities, take steps to maximize outreach, using all forms of media that may be appropriate

#### *Workplace Environment*

The Contractor will:

- Establish, execute, and enforce a Worker Behavior Code of Conduct on which all employees will be briefed, that all employees are required to sign, and that mandates immediate dismissal for serious offences including sexual harassment, violence, or confirmed cases of engagement in trafficking in persons. The Code will specify:
  - Expectations of worker behavior, and penalties for transgression
  - MCC and Mongolian legal definitions of trafficking in persons (TIP), zero-tolerance for TIP, and remedies that the MCA Entity may take in response to confirmed cases of engagement of trafficking in persons
  - Zero-tolerance for gender-based violence
  - Compliance with the Contractor’s Anti-Sexual Harassment Policy and notification of the Contractor’s Sexual Harassment Incident Reporting and Referral Plan
  - Rights of employees to a grievance mechanism, holidays, and cultural and festival access
  - Conditions for work camps, shelter, water and sanitation, food, and security
  - The responsibility of all workers, regardless of their role or duration of employment, will be expected to review and acknowledge the Workers’ Code of Conduct by signing the code sheet
  - The requirement to respect local customs and practices
- Establish and execute a worker’s grievance redress procedure that:
  - Formalizes a system for receiving and managing internal complaints of sexual harassment, gender-based violence, or issues of trafficking persons (including engaging in commercial for sex with a person under 18 years of age)
  - Guarantees confidentiality to makers of allegations
  - Designate the Contractor’s Social Safeguards Officer or other officer as responsible for collaborating with the human resources department on the grievance redress procedures
  - Refers to the Contractor’s Sexual Harassment Incident Reporting and Referral Plan for allegations of sexual harassment
  - Specifies that the Contractor’s zero-tolerance for gender-based violence addresses any complaints of gender-based violence against its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
  - In cases of discrimination against women or of allegations of sexual harassment or violence, requires that the Contractor’s Social Safeguards Officer contact the MCA-Mongolia or its representative’s SST to include them in the investigation and appoint a

third party—such as a representative from an NGO such as the Centre for Gender Equality or equivalently qualified, experienced organization—to lead the investigation

- The Contractor shall note the contract clause on “Prohibition of Sexual Harassment”
- The Contractor shall note the contract clause on “Facilities for Staff and Labor” and provide suitable gender-segregated facilities to enable the safe employment of both men and women – e.g. Toilet facilities, changing facilities on all sites and enabling physical access to office accommodation for people with disabilities.

### *Training*

The Contractor will:

- Provide training to enhance the skills of employees using on-the-job training, internships, apprenticeships, and secondment to training programs such as Technical and Vocational Education and Training, etc.
- Mandate for all employees, before each worker starts work on the site, induction packages that include:
  - Employment rights and conditions, including non-discrimination and equal opportunity
  - The Contractor’s responsibility to “adopt recruitment, hiring and retention practices that support the employment of women and staff from diverse backgrounds” per the contract clause on “Engagement of Staff and Labor,” the Contractor’s employment forecast and recruitment strategy, and the Contractor’s Gender Integration and Social Inclusion Plan (described below)
  - Gender-based violence
  - Contractor’s Anti-sexual Harassment Policy – including awareness of what constitutes sexual harassment, exploitation and abuse, and the Contractor’s Sexual Harassment Incident Reporting and Referral Plan
  - Using the internal Grievance Mechanism for allegations of gender-based discrimination
  - Rights to have access to local festivals
  - Cultural sensitivities, and social norms and practices in each area
  - Expectations on avoiding poor relations between employees and local communities caused by behavior relating to alcohol, gambling, prostitution, illegal drug use, violence and sexual abuse of women, minors and lesbian, gay, bisexual, transgender, queer, and others (LGBTQ+) persons
  - Countering the Trafficking in Persons Response Plan – awareness of responsibilities to counter the trafficking of people around the project area, the remedies that the Contractor and the MCA Entity may apply, and mechanisms for reporting suspected instances of TIP with the Contractor’s TIP Response Plan
  - Awareness of the possibilities of the transmission of HIV/AIDS and communicable illnesses and how to prevent HIV/AIDS transmission
- Undertake a series of employment and social plan inductions and employee awareness programs that:
  - All employees must attend at the commencement of employment and over the employment period twice yearly
  - Incorporate toolbox talks that include reinforcement of all training programs
- Commission training modules on gender integration and social inclusion topics for all employees at intervals agreed with the MCA-Mongolia or its representative’s SST
- Require that the Social Safeguards Officer, together with the MCA-Mongolia or its representative’s SST Community Liaison Officers, conduct awareness raising with workers on child labor issues in the local community as part of an ongoing community awareness program on social issues
  - These toolbox talks will include ways that workers can report suspected child labor to the District Children, Youth and Family Offices, and the MCA-Mongolia or its representative’s Social Manager

### *Site-specific Labor Management Plan*

The Contractor will prepare and submit for the Engineer’s written approval a site-specific Labor Management Plan that:

<ul style="list-style-type: none"> <li>• Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan</li> <li>• Includes the Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan and the Workers' Code of Conduct</li> <li>• Is consistent and compliant with: <ul style="list-style-type: none"> <li>○ Mongolian Law on Labor</li> <li>○ Relevant aspects of the Conditions of Contract, as well as the MCC Gender Policy and the MCA-Mongolia Social and Gender Integration Plan</li> <li>○ The MCC Policy on Counter-Trafficking in Persons</li> </ul> </li> <li>• Assigns roles and responsibilities for labor management</li> </ul>
<p><b>LOCATIONS:</b></p> <p>All construction sites and temporary construction facilities</p>
<p><b>MONITORING</b></p>
<p>MCA-Mongolia or its representative:</p> <ul style="list-style-type: none"> <li>• Monitor implementation of the Contractor's Labor Management Plan and Worker Behavior Code of Conduct, including prohibitions against trafficking in persons, gender-based violence, sexual harassment, and child labor</li> <li>• Monitor implementation of the Contractor's employment recruitment strategies and assist Contractor to reach potential workers among local women, youth, and people from disadvantaged groups</li> <li>• Monitor participation by all parties in the Contractor's internal grievance redress procedure and external project Grievance Redress Mechanisms</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>• Record results of Contractor's labor management responsibilities, with all data and statistics gender disaggregated by age and gender, following, at a minimum, the contract clause on "Employment Records of Workers" and recording, for each worker hiring and leaving dates, along with duration (days) of employment and skills/occupational category and home location of workers (project-affected district/khoroos, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia)</li> <li>• Document implementation of the requirements above for the Labor Management Plan, including all recruitment activities</li> <li>• Document Worker Behavior Code of Conduct infringements and outcomes, and internal grievance redress activities under the Contractor's internal grievance process</li> </ul>
<p><b>LOCATIONS:</b></p> <p>All construction sites and temporary construction facilities</p>
<p><b>INDICATORS AND SUCCESS CRITERIA:</b></p> <p>Indicators:</p> <ul style="list-style-type: none"> <li>• Required plans written, approved, and implemented</li> <li>• Number, content, and outcome of employment against home location (project-affected district/khoroos, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia), gender, and age brackets (under 30, 30 to 49, 50 and over), and total days of employment for each individual worker</li> <li>• Use of written contracts with defined pay scales by employment activity</li> <li>• Employment recruitment activities, interactions with local employment offices and communities, professional associations, TVET centers</li> <li>• Percent of all employees that are workers from project-affected districts/khoroos and elsewhere in UB/Mongolia</li> <li>• Percent of all employees that are women, disaggregated by skill/occupational level</li> <li>• Records of attendance and dates of all trainings and toolbox talks delivered on social and gender topics</li> </ul>

### Management Measure Conveyance - 10: Gender Integration and Social Inclusion (GSI)

POTENTIAL IMPACT
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Increased short-term employment and improved conditions of employment for women</li> <li>Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of forced labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Millennium Challenge Account Social and Gender Integration Plan (SGIP) <ul style="list-style-type: none"> <li>Encourages contractors to prioritize using local labor, particularly workers from the project affected area</li> <li>Encourages contractors to employ women as at least 30% of workers</li> <li>Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates</li> </ul> </li> <li>Millennium Challenge Corporation Gender Policy <ul style="list-style-type: none"> <li>The MCC Gender Policy states that countries will ensure that both women and men have opportunities for meaningful participation throughout the consultative processes related to a Compact program.</li> </ul> </li> <li>IFC Performance Standard 1 <ul style="list-style-type: none"> <li>Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> </ul> </li> <li>IFC Performance Standard 2 <ul style="list-style-type: none"> <li>Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.</li> </ul> </li> <li>Constitution of Mongolia <ul style="list-style-type: none"> <li>Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>Mongolian Law on Gender Equality <ul style="list-style-type: none"> <li>Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>Mongolian Law on Labor <ul style="list-style-type: none"> <li>Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>Prohibits employing children under the age of 16 – under 18 in dangerous industries e.g. construction</li> </ul> </li> </ul>

## OBJECTIVES

The Gender Integration and Social Inclusion (GSI) Plan complements the Labor Management Plan and provides additional management steps to address GSI considerations with respect to workers and local communities.

T

- To promote the fair treatment, non-discrimination, and equal opportunity of workers.
- To encourage the employment of women as at least 30% of the Contractor's workforce, calculated over full and part time positions as a percentage of total number of staff hired in the life of the contract, at each skill/occupation level
- To enable local people, particularly youth and people in project-affected districts/khoroos to gain short-term employment and training opportunities
- Maximize the perceived beneficial impact of the BWSE project on the project affected communities

## MANAGEMENT MEASURE

### Gender Integration and Social Inclusion

- Under the Gender Integration and Social Inclusion Plan, the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure the widest exchange of information between the Contractor and the local population and district and khoroo Labor Offices on planned and continuing works and employment opportunities through a program of community consultations and participatory meetings.
- The Contractor will prepare and submit for the Engineer's written approval a Contractor's Gender Integration and Social Inclusion Plan, which will be:
  - Consistent with the Mongolian Law on Labor and
  - Consistent with the MCC Gender Policy's emphasis on community consultation and participation
  - Consistent with IFC Performance Standard 1: Assessment and Management of Environmental and Social Risks and Impacts
  - Agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer

#### *Community Engagement*

- The Contractor will hold at least one meeting in each project-affected District and khoroo office prior to construction to inform community members of the expected conduct of workers and the contents of the Labor Management Plan, and thereafter monthly, minimally covering the following:
  - Efforts to hire local labor and the Contractor's employment forecast
  - Efforts to maximize women's employment
  - Efforts to maximize local procurement and the Contractor's procurement forecast
  - Prohibitions against child labor and forced labor in supply chains
  - Zero-tolerance of trafficking in persons, MCC and Mongolian legal definition of trafficking in persons, and Contractors' Counter-Trafficking in Persons Response Plan
  - Zero-tolerance of gender-based violence
  - Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan

#### *Expanding Short-term Employment Opportunities*

- The Contractor will actively consider working with the existing construction brigades to enable local labor currently organized into brigades to gain employment. The brigades may require additional training to enable them to work on this large scale project – training in:
  - Modern tools and techniques where needed
  - Brigade internal labor management, accounting, and estimation techniques
- As referenced in the Labor Management Plan and its recruitment strategy, the Contractor will encourage the employment of qualified individuals among the local population(s) in

project activities, with particular focus on women, youth, and disadvantaged groups. This may include small-scale supply contracts or services, with announcement of jobs published on project information boards, in District and khoroo Labor Offices and with information on employment disseminated by the Contractor's Social Safeguards Officer, the MCA or its representative or other means approved by the Engineer.

- Where appropriate, the Contractor will provide training to enhance the skills of employees and local people using on-site apprenticeships and internships.
- As referenced in the Labor Management Section above, the Contractor is encouraged to cooperate with, secondment to training programs such as Technical and Vocational Education and Training Centers and professional associations and to draw workers from among their graduates and members, etc.

#### *Local Procurement*

- The Contractor will develop and submit a procurement forecast of all goods and services that could be procured locally. The MCA-Mongolia or its representative's Social Safeguards Team will assist in disseminating this information to local communities with the Contractor's Social Safeguards Officer.
- The Contractor will develop and submit for review and approval by the Engineer, a procurement strategy to inform local communities and businesses of opportunities to provide goods and services to the Contractor and to project workers, particularly targeting small businesses and those owned by women.
- The Contractor Social Safeguards Officer and MCA-Mongolia or its representative's Social Safeguards Team will hold community meetings to inform people about the procurement processes and include District and khoroo offices, community organizations and the media.

#### LOCATIONS:

All construction sites and temporary construction facilities and project affected communities

#### **MONITORING**

MCA-Mongolia or its representative's SST:

- Monitor Contractor Gender Integration and Social Inclusion Plan
- Monitor Contractor employment recruitment strategies and assist Contractor to reach potential women, youth and other excluded groups
- Monitor participation by all parties in the Contractor's internal and external project Grievance Redress Mechanisms
- Document Contractor performance in Gender Integration and Social Inclusion Plan

Contractor:

- Record results of Contractor's Gender Integration and Social Inclusion responsibilities
- Document all grievance redress activities under the Contractor's internal grievance process and external Grievance Redress Mechanism

#### LOCATIONS:

All construction sites and temporary construction facilities and project affected communities

#### INDICATORS AND SUCCESS CRITERIA:

Indicators:

- Employment recruitment activities
- Employment records of workers
- Number, dates, and locations of community engagement meetings
- Community related grievance redress actions and outcomes
- Number of purchase orders signed each year with UB businesses, disaggregated by those in in Khan-Uul and Songinokhairkhan Districts and the rest of UB, indicated as a number and percent of the total dollar amount of annual procurements

- Total annual dollar amount of procurements with businesses from UB, disaggregated by those in Khan-Uul and Songinokhairkhan Districts and those in the rest of UB, indicated as a number and percent of the total dollar amount of annual procurements
- Number, percentage and dollar amount of purchase orders signed with women-owned businesses each year against the total number and dollar amount of purchase orders

**Success Criteria:**

- 100% of required community meetings are held, with all topics covered
- Maximization of local labor, such that percentage of all labor exceeds a minimum target percentage to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
- Achievement of the non-binding 30% employment of women as a percentage of all staff, in each skill/occupational category
- Employment of young people and "vulnerable" groups at a target to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
- Apprenticeships and internships established and completed for each construction season
- Contractor enters into and maintains an agreement with at least one TVET center and employs TVET graduates at a target to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
- All worker and community complaints about sexual harassment are a) addressed in a timely manner and b) resolved through the Contractor's Sexual Harassment Incident Referral and Reporting Plan
- Contracts and purchase orders with local business and service providers split including women-owned businesses and service providers, reach targets to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)
  - Targets to be expressed as a number, as a percentage of all contracts and purchase orders, and as a dollar amount (USD)
  - Targets to be set for all locally owned business, for businesses in the two project-affected districts, and for women-owned businesses.

**REPORTING:**

- Reports on Gender Integration and Social Inclusion to be included in project monthly reports
- Summarize Gender Integration and Social Inclusion activities undertaken during reporting period
- Specify any material deviations or non-compliances to this management measure, and any other issues of concern,
- Define activities planned during next reporting period

**SCHEDULE**

**MANAGEMENT MEASURE:**

*Implementation:*

- Initiated during pre-construction prior to starting any construction activities and ongoing throughout pre-construction and construction

**MONITORING:**

*Implementation:*

- Update recording of GSI activities and grievance redress actions as they occur

*Reporting:*

- Monthly in CESMP update

**RESPONSIBILITY**

**MANAGEMENT MEASURE:**

*Implementation:* Contractor

*Oversight:* Engineer

**MONITORING:**

*Implementation:* Contractor

*Reporting:* Contractor

*Oversight:* Engineer

## Management Measure Conveyance - 11: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment

POTENTIAL IMPACT
<p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>• Sexual harassment on construction sites and in temporary construction facilities and project-affected communities</li> <li>• Trafficking in persons within and outside the project</li> <li>• Gender-based violence on construction sites and in temporary construction facilities and project-affected communities</li> </ul>
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• MCC Counter-Trafficking in Persons Policy (C-TIP Policy) <ul style="list-style-type: none"> <li>○ States, "Trafficking in Persons" means (a) Sex trafficking in which a commercial sex act is induced by force, fraud, or coercion, or in which the person induced to perform such act has not attained 18 years of age; (b) The recruitment, harboring, transportation, provision, or obtaining of a person for labor or services, through the use of force, fraud, or coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery."</li> <li>○ Adopts "a zero-tolerance policy to TIP and prohibits "The Contractor, the Contractor's Personnel, any Subcontractor or supplier, or any of their respective personnel, or any agent or affiliate of any of the foregoing shall not engage in any form of Trafficking in Persons during the period of performance of any contract..."</li> <li>○ Requires each Contractor to "acknowledge that engaging in such activities is cause for suspension or termination of employment or of the Contract" and specifies remedies that the MCA Entity will apply once a TIP incident has been confirmed.</li> </ul> </li> <li>• Mongolian Law on Promotion of Gender Equality <ul style="list-style-type: none"> <li>○ Requires the employer to incorporate into the organization's internal procedures, specific norms for prevention of sexual harassment in a workplace and the redress of such complaints. It also requires that the organization design and conduct a program of training and retraining geared toward creating a working environment free from sexual harassment, and report on its impact in a transparent manner.</li> </ul> </li> <li>• Mongolian Law to Combat Human Trafficking <ul style="list-style-type: none"> <li>○ The law regulates relations with respect to the prevention and suppression of trafficking in persons, elimination of the causes of trafficking, and protection of victims' rights.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• To prevent incidence of trafficking of persons for sex by project employees</li> <li>• To ensure that the Contractor and its Sub-Contractors do not employ trafficked labor and to minimize the risks of trafficking of foreign workers to project sites</li> <li>• To prevent sexual harassment at all construction sites and temporary construction facilities</li> <li>• To prevent Contractor and worker involvement in sexual harassment in project-affected communities and among members of stakeholder organizations in the workplace</li> <li>• To prevent incidences of gender-based violence involving workers</li> </ul>
MANAGEMENT MEASURE
Counter-Trafficking in Persons, Gender-Based Violence and Sexual Harassment

The Contractor shall ensure that foreign workers on work sites or in labor camps are aware 1) of the risks of cultural conflict and of becoming victims of gender-based violence, sexual harassment and abuse, discrimination, trafficking in persons and 2) the legal and contractual remedies against such behavior. This information shall be provided in workers' induction packages, by holding an orientation before workers start on site, and by delivering a training twice a year.

#### *Counter Trafficking in Persons (C-TIP)*

- The Contractor shall prepare and submit for the Engineer's written approval a Counter-Trafficking in Persons Response Plan (TIP Response Plan), and the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure all employees are informed of expectations of behavior as per the Worker Behavior Code of Conduct and the penalties for proven infringements.
  - The Counter-Trafficking in Persons Response Plan shall Address the specific TIP risks identified in the ESIA, including withholding of foreign workers' passports and commercial sex with minors,
  - Designate a single responsible person who will notify the Engineer and MCA-Mongolia within 24 hours of an alleged incident and implement any investigation.
  - Specify when to contact legal authorities, list UB city officials, national government offices, and NGO organizations that address TIP, and state how the Contractor will deal with them in the case of a TIP incident.
  - Include mechanisms to ensure confidentiality of any TIP survivors and to refer them to law enforcement and/or supportive services if they wish.
- The Contractor shall develop, as part of its TIP Response Plan, an anonymous mechanism for workers and community members to report suspected TIP incidents to the Engineer and to MCA-Mongolia, and this must be separate from the project grievance mechanism.
- The Counter-Trafficking in Persons Response Plan shall be:
  - Consistent with the Mongolian Law on Labor, Promotion of Gender Equality, and combatting Human Trafficking
  - Compliant with the MCC Counter-Trafficking in Persons Policy
  - Coordinated and agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer
- The Counter-Trafficking in Persons Response Plan shall specifically prohibit:
  - Procuring minors for sex
  - Transporting non-employee individuals in company vehicles
- The Contractor is strongly encouraged to engage the Centre for Gender Equality or other similarly qualified and experienced organization to develop its TIP Response Plan, its anonymous reporting mechanism, its worker training, and its C-TIP content for community meetings
- The Contractor shall design and deliver twice yearly C-TIP training modules to all staff, sub-contractors, and service providers on the prevention of TIP and the Contractor's TIP Response Plan, following minimum content in MCA-Mongolia's Social and Gender Integration Plan (SGIP).
  - C-TIP training sessions must be delivered to all employees within one month of starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Information about the Contractor's zero-tolerance policy and TIP Response Plan shall be included in all community meetings and the Plan shall be provided in Mongolian, in whole, to project-affected khoroo and District governments.

#### *Gender-Based Violence*

- The Contractor shall adopt a policy of zero-tolerance for gender-based violence and address any complaints of gender-based violence against its workers or committed by its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
- The Contractor shall notify the Engineer and MCA-Mongolia within 24 hours of any alleged

incident of gender-based violence

- The Contractor shall deliver a gender-based violence prevention training to all staff, sub-contractors, and service providers prior to all workers beginning on-site and thereafter at least twice each year.
  - The Contractor is strongly encouraged to engage a local, qualified, and experienced organization to develop the training.
  - The training shall minimally identify behavior that constitutes gender-based violence, address attitudes towards violence against women and lesbian, gay, bisexual, transgender, and queer people (LGBTQ), and identify relevant Mongolian laws and organizations addressing gender-based violence.
  - It shall also explain the workings and protections in the Contractor's grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ persons.
- Include in all community meetings information about the Contractor's zero-tolerance policy toward gender-based violence committed by or against its workers and procedures for reporting it and communicate this information in writing to project-affected khoroo and District governments.

#### *Sexual Harassment*

- The Contractor shall develop and submit to the Engineer an Anti-Sexual Harassment Policy prohibiting sexual harassment directed at Compact beneficiaries, partners, or stakeholders, MCA Entity employees, MCA Entity consultants, MCC personnel, or MCC consultants and including an Incident Reporting and Referral Plan.
  - The Policy and Plan must be in form and substance satisfactory to the MCA and MCC.
  - The Incident Reporting and Referral Plan shall include a confidential mechanism for workers and community members to report sexual harassment to the Engineer and to MCA-Mongolia, separately from the Grievance Redress Mechanism.
- Employers are required to have a protocol in their Workplace Grievance mechanism in which persons alleging harassment or violence will be protected from identification and from pressure from the Contractor or other workers to dismiss the complaint.
- The Contractor's grievance manager must notify the MCA-Mongolia or its representative's Social Safeguards Team and the Contractor's Social Safeguards Officer within 24 hours of any allegation of sexual harassment.
- The Contractor must have a contract with a suitably experienced organization, such as the Centre for Gender Equality, to provide an investigation leader to manage the investigation of complaints of sexual harassment.
- The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction.
- The Contractor shall design and deliver a sexual harassment prevention training to all staff, sub-contractors, and service providers, in accordance with the Contractor's Anti-Sexual Harassment Policy, recognizing MCC's Guidance to MCAs on Sexual Harassment.
  - Training shall be conducted within one month of workers starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Training shall address
    - Attitudes to and prevention of sexual harassment in the workplace
    - Workings and protections in the Contractor's internal grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ+ persons
    - Additional requirements for minimum training content can be found in MCA-Mongolia's Social and Gender Integration Plan (SGIP)
- Information about the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral plan shall be included in all community meetings and the Policy and Plan shall be

communicated in Mongolian, in whole, to project-affected khoroo and District governments.
LOCATIONS:
All construction sites and temporary construction facilities and project affected communities
<b>MONITORING</b>
<p>MCA-Mongolia or its representative's SST:</p> <ul style="list-style-type: none"> <li>• Monitor Contractor Counter-Trafficking in Persons Response Plan</li> <li>• Monitor Contractor performance related to gender-based violence requirements</li> <li>• Monitor Contractor's development and adherence to its Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> <li>• Participate in the Contractor's internal Grievance Redress Mechanisms in relation to any on allegations of sexual harassment and gender-based violence and monitor and document the process and outcomes, maintaining confidentiality of those reporting and victims and witnesses</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>• Maintain copies of all contracts or other agreements with organizations that provide services related to the development of C-TIP, GBV prevention, or prevention of sexual harassment policy, plans, training, or reporting mechanisms</li> <li>• Maintain records of workers' participation in required trainings, including the dates of trainings and which workers participated</li> <li>• Maintain records of all community meetings at which C-TIP, gender-based violence, and sexual harassment are addressed, including the dates and locations and a record of all questions, comments, and Contractor responses</li> <li>• Document all implementation of the results of Contractor's Counter-Trafficking in Persons Response Plan responsibilities</li> <li>• Document all complaints of sexual harassment and gender-based violence, maintaining confidentiality of witnesses and victims, and all implementation of the Sexual Harassment Incident Reporting and Referral Plan and interactions with law enforcement and other relevant response institutions and organizations</li> <li>• Grievance redress activities under the Contractor's internal grievance process</li> </ul>
LOCATIONS:
All construction sites and temporary construction facilities and project affected communities
INDICATORS AND SUCCESS CRITERIA:
<p>Indicators:</p> <ul style="list-style-type: none"> <li>• Content of the Contractor's TIP Response Plan</li> <li>• Content of the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> <li>• Number and content of trainings for all staff</li> <li>• Number of community meetings at which information presented covers the Contractor's policies on C-TIP, GBV, and sexual harassment and how to report suspected cases compared to the total number of Contractor-organized community meetings, disaggregated by location</li> <li>• Numbers of complaints and grievances brought alleging sexual harassment, gender-based violence or trafficking in persons</li> <li>• Number of required notifications of suspected TIP, GBV, and sexual harassment incidents compared to the number of complaints</li> <li>• Contracts or other agreements with specialized organizations to develop and deliver plans, policies, and training</li> </ul> <p>Success Criteria:</p>

### *Counter-trafficking in persons*

- Anonymous reporting mechanism for trafficking in persons is established prior to initiation of construction and functioning effectively for the duration of the construction
- The Contractor's TIP Response Plan is thorough, references the MCC C-TIP Policy and any guidance, provides a path to involve NGOs and specialized government staff, and includes clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.
- 100% of reported or suspected cases of TIP are dealt with in a timely, survivor centered manner, according to the TIP Response Plan.
- Effective reporting and management measures are developed are implemented and information about the measures are introduced to the employees and sub-contractors in toolbox sessions and by other means
- 100% of community meetings include reference to the zero-tolerance policy against TIP and to the Contractor's TIP Response Plan

### *Gender-based violence*

- Culture of unacceptability of gender-based violence and assaults on women and LGBTQ+ persons established via:
  - 100% of workers having participated in gender-based violence prevention training prior to beginning work on-site
  - The Contractor notifying the Engineer and MCA-Mongolia within 24 hours of 100% of any alleged incident of gender-based violence
  - Timely, confidential, and thorough dealing with complaints of gender-based violence and 100% implementation of zero-tolerance policy in confirmed cases
  - 100% of community meetings including reference to the zero-tolerance policy against gender-based violence and procedures for reporting it

### *Sexual harassment*

- The Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan are thorough, reference the Contract, aspects of the MCC Guidance to MCAs on Sexual Harassment, and Mongolian Law; provide a path to involve NGOs and specialized government staff; and include clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.
- 100% of employees and sub-contractors have taken the sexual harassment prevention training prior to on-site work
- All worker and community complaints about sexual harassment are
  - addressed confidentially
  - addressed in a timely manner and
  - resolved following the procedures in the Contractor's Sexual Harassment Incident Referral and Reporting plan
- After investigation, appropriate measures are taken against perpetrators of sexual harassment on the job site, in temporary facilities, and in surrounding communities

### **REPORTING:**

- Reports on measures to prevent and address counter-trafficking in persons, gender-based violence, and sexual harassment shall be included in project monthly reports
- Summarize activities related to counter-trafficking in persons, gender-based violence, and sexual harassment undertaken during each reporting period
- Specify any material deviations or non-compliances to this management measure, and any other issues of concern,
- Define activities planned during next reporting period

### Management Measure Conveyance - 12: Construction Camp and Temporary Facilities Management

<b>POTENTIAL IMPACT</b>
Risks and impacts that may be associated with workers' accommodation and workplace conditions
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b> Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>• Constitution of Mongolia             <ul style="list-style-type: none"> <li>- Employee possesses the right to work in favorable conditions, remuneration, rest and private enterprise.</li> </ul> </li> <li>• Mongolian Civil Code             <ul style="list-style-type: none"> <li>- Requires providing office space, tools and equipment necessary to ensure employees' health and meeting safety standards and work specific requirements.</li> </ul> </li> <li>• Mongolian Labor Code             <ul style="list-style-type: none"> <li>- Requires ensuring that chemical, physical and biological conditions resulting for production processes will not have a negative impact on safety, sanitation, or the natural environment.</li> </ul> </li> <li>• Mongolian Law on Labor Safety and Hygiene             <ul style="list-style-type: none"> <li>- Requires informing workplace conditions, risks that can impose danger to health, industrial dangerous and poisonous factors to its employees.</li> </ul> </li> <li>• Mongolian Law of Fire Safety             <ul style="list-style-type: none"> <li>- Requires inspecting availability of rooms for employees and requirements of hygiene, outcome of protection measures against negative impacts of working environments.</li> </ul> </li> <li>• Mongolian Supreme Court Interpretation of Some Provisions of Law on Labor, Supreme Court Decree No. 33             <ul style="list-style-type: none"> <li>- Prohibits precluding to conclude a contract of legal entities and organizations.</li> </ul> </li> <li>• IFC Performance Standards 2 and 4             <ul style="list-style-type: none"> <li>- Require identifying environmental and social risks and impacts that are in the context of the project's area of influence.</li> </ul> </li> <li>• Mongolian Law on Combating Human Trafficking             <ul style="list-style-type: none"> <li>- Requires having a written management plan on worker camps and housing facilities.</li> </ul> </li> <li>• IFC and EBRD (2009) guidance at Workers' Accommodation: Processes and Standards<sup>1</sup> <ul style="list-style-type: none"> <li>- Requires having a written management plan on worker camps and housing facilities.</li> </ul> </li> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning             <ul style="list-style-type: none"> <li>- Provides specific guidance on prevention and control of community health and safety impacts that may occur during project construction and decommissioning.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>

- Ensure that all individuals who reside in the Contractor's construction camps or work in the Contractor's temporary facilities can do so in a safe, secure, clean, and hygienic environment, free from intimidation.

#### MANAGEMENT MEASURE

##### Construction Camp and Temporary Facilities Management

The Contractor will:

- Fully comply with the requirements of this management measure
- Ensure that all individuals who reside or work in, accommodated at, or visit construction camps and workplaces can do so in a safe, secure, clean, hygienic, respectful, and harmonious environment
- Ensure compliance with IFC and EBRD (2009) guidance at *Workers' Accommodation: Processes and Standard* for accommodation; including clean and safe areas that ensure the minimum space requirements, air conditioning, heating, and ventilation that is appropriate for the local climatic conditions, gender-based accommodation facilities, etc.
- Ensure compliance with IFC and EBRD guidance at *Workers' Accommodation: Processes and Standards* for on-site facilities; including canteen, sanitary facilities, adequate amenities for socialization and resting, etc.
- Survey accommodation facilities to be provided off-site (if any) and ensure they also comply with IFC and EBRD guidance at *Workers' Accommodation: Processes and Standards*
- Ensure drinking and utility water to be supplied meet the requirements of the Mongolian National Drinking Water Standards and World Health Organization (WHO) Guidelines for Drinking Water Quality
- Provide gender-segregated toilet and washing facilities at construction camps and all sites where women work
- Provide all accommodation sites with sufficient supplies and services
- Provide all accommodation sites with sufficient emergency response equipment such as first aid kits and fire-fighting equipment, and conduct periodic checks to ensure they are in working condition
- Conduct visual checks on site to ensure proper housekeeping
- Ensure suitable first aid equipment is kept on site, at various appropriate locations
- Conduct periodic medical checks for personnel and provide vaccination and/or other mitigating measures when required
- Establish adequate medical rooms at the construction camps, provide sufficient human resources, and keep suitable patient transport vehicle on site for medical emergencies
- Provide training—information and awareness sessions, and job category-specific specialized training—to all employees and subcontractors, including those accommodated at construction camps, at the time of their induction and annually thereafter on:
  - Construction Camp and Temporary Facilities Management consistent with the requirements of this management measure and the site-specific Construction Camp and Temporary Facilities Management Plan
  - General waste management, housekeeping, first aid practices, and communicable diseases
- Prepare and submit for the Engineer's written approval a site-specific Construction Camp and Temporary Facilities Management Plan and associated procedures that, as a minimum:
  - Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
  - Assigns roles and responsibilities for construction camp and temporary facilities management

### Management Measure Conveyance - 13: Cultural Heritage Protection

<b>POTENTIAL IMPACT</b>
<ul style="list-style-type: none"> <li>Chance finds of and potential inadvertent excavation or damage of tangible cultural heritage</li> <li>Disturbance of the cultural and sacred landscape and places of religious or spiritual significance</li> <li>Loss of the continuity of spiritual, religious, and traditional activities</li> </ul>
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b> Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>Mongolian Law on Protection of Cultural Heritage</li> </ul>

<ul style="list-style-type: none"> <li>- If tangible cultural heritage is discovered during excavation, requires halting work and immediately notifying the <i>soum</i> and <i>duureg</i> [capital city municipal district] governors, police, and concerned authorities.</li> <li>- Prohibits building infrastructure facilities in historical and cultural monuments and their activity zones, to engage in mining and agriculture. Governors of all levels have the duty to protection the intangible cultural heritage.</li> <li>• IFC Performance Standard 8</li> <li>- Prohibits removing, significantly altering, or damaging critical cultural heritage.</li> <li>- Requires designing and implementing a chance find procedure when the proposed location of a project is in areas where cultural heritage is expected to be found, either during construction or operations.</li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>• Protect tangible cultural heritage from inadvertent excavation or damage</li> <li>• Enable and foster the continuity of spiritual, religious, and traditional activities in consideration of the unavoidable disturbance of the cultural and sacred landscape and places of religious or spiritual significance</li> </ul>
<b>MANAGEMENT MEASURE</b>
<p><b>Cultural Heritage Protection</b></p> <p><b>Chance Find Procedure</b></p> <p>As unknown features/objects could be encountered during works, in particular earthworks, a chance finds procedure will be in place to stop works in case of such findings, and require investigation by an archaeologist and involvement of relevant government entities.</p> <p>Should any unexpected tangible cultural heritage be discovered:</p> <ul style="list-style-type: none"> <li>• Cease all work in the immediate area and do not disturb the chance find further, including: <ul style="list-style-type: none"> <li>- Establishing a 30-meter buffer around the chance find</li> <li>- Leaving buffer undisturbed until competent cultural heritage specialist assesses the site</li> <li>- Protecting the chance find area, for example with signs for prohibition of entry, barrier tape, etc.</li> </ul> </li> <li>• Work many continue at other locations providing there is a buffer zone between the chance find area and the construction area</li> <li>• Immediately notify the Engineer and the concerned government agencies, specifically the: <ul style="list-style-type: none"> <li>- Office of the governor of the capital city</li> <li>- Office of governor of the respective Khan-Uul District or Songinokhairkhan District</li> <li>- Local police</li> <li>- Institute of Archeology, Mongolian Academy of Sciences</li> <li>- Institute of History and Ethnography, Mongolian Academy of Sciences</li> </ul> </li> <li>• Provide the following information to the Engineer and government agencies: <ul style="list-style-type: none"> <li>- Cultural heritage site type—description and photograph(s)</li> <li>- Location—description and GPS coordinates</li> <li>- Date, time, and details of find</li> <li>- Nature of work that led to exposure of or locating the find</li> </ul> </li> <li>• Coordinate with the Engineer and the concerned government agencies to consult a cultural heritage professional on site to assess the cultural heritage and recommend mitigation</li> <li>• Follow instructions of the concerned government agencies and cultural heritage professional for the protection of the tangible cultural heritage</li> <li>• Restart work only upon written direction from the Engineer</li> </ul> <p><b>Cultural and Sacred Landscape and Places</b></p> <ul style="list-style-type: none"> <li>• SST will conduct enhanced stakeholder engagement with religious and spiritual leaders to assess the intangible cultural impact of construction on cultural and sacred landscape and places.</li> <li>• Contractor will coordinate with the SST Community Liaison Officers and the Engineer, and as directed by the Engineer accommodate the performance of periodic spiritual, religious,</li> </ul>

and traditional ceremonies and rituals on or adjacent to project sites. The ceremonies and rituals may be integrated with or, if independent, their scale may be similar to groundbreaking ceremonies.

### **Training**

The effective protection of cultural heritage is based on an understanding of the key issues, appropriate assessment, and correct action to minimize possible damage or loss.

The Contractor will:

- Prepare and submit for the Engineer's written approval a site-specific Cultural Heritage Training Plan and associated procedures that, as a minimum:
  - Specifies how the Contractor will educate and train personnel on requirements, procedures, and reporting in response to chance finds of tangible cultural heritage, in accordance with the requirements listed above
  - Specifies how the Contractor will educate and train personnel on requirements, procedures, and reporting to enable and foster the continuity of spiritual, religious, and traditional activities
  - Assigns roles and responsibilities for training
- Educate and train all Contractor personnel and provide enhanced training to key Contractor personnel—including on-site environmental staff, safety staff, construction engineers, and unit supervisors—in accordance with approved Cultural Heritage Training Plan.

#### **LOCATIONS:**

- All work sites
- Cultural and sacred landscape and places throughout project area, as all land and the landscape throughout Mongolia and the project area is sacred

### **MONITORING**

Monitor throughout construction

#### *Chance Find Procedure*

- Construction work sites during excavation or other ground disturbance

#### *Cultural and Sacred Landscape and Places*

- Communications SST Community Liaison Officers and Engineer
- Written directions of Engineer
- Actions to accommodate spiritual, religious, and traditional ceremonies and rituals
- Performance of spiritual, religious, and traditional ceremonies and rituals

#### *Training*

- Document submission and approval of training plan
- Document training of personnel as specified in approved plan

#### **LOCATIONS:**

- All work sites

#### **INDICATORS AND SUCCESS CRITERIA:**

Indicators:

#### *Chance Find Procedure*

- Chance find of tangible cultural heritage
- Excavation or damage of tangible cultural heritage
- Cease work decision
- Protection of chance find area and tangible cultural heritage

## H.2.5 Health and Safety Management

In addition to the management measure under this heading, the following management measures also specify health and safety management requirements:

- Management Measure Conveyance - 5: Emergency Preparedness and Response
- Management Measure Conveyance - 8: Waste Management
- Management Measure Conveyance – 10: Gender Integration and Social Inclusion (GSI)
- Management Measure Conveyance – 11: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment
- Management Measure Conveyance - 12: Construction Camp and Temporary Facilities Management

### Management Measure Conveyance - 14: Health and Safety Management

<b>POTENTIAL IMPACT</b>
Health and safety risks and impacts on work sites and in construction camps, and in the community
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b>
Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>• Mongolian Law on Hygiene <ul style="list-style-type: none"> <li>- Requires introducing labor safety and hygiene management for protecting employees from accidents, damages, diseases which could occur during the operation.</li> </ul> </li> <li>• Mongolian Law on Waste <ul style="list-style-type: none"> <li>- Requires providing relevant knowledge to their staff on waste sorting and comply with safety standards in their operation.</li> </ul> </li> <li>• IFC Performance Standard 4 <ul style="list-style-type: none"> <li>- Requires evaluating the risks and impacts to the health and safety of the affected communities during the project life cycle and establishing preventive and control measures consistent with good international industry practice.</li> <li>- Requires avoiding or minimizing transmission of communicable diseases that may be associated with the influx of temporary or permanent project labor.</li> </ul> </li> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning <ul style="list-style-type: none"> <li>- Provides guidance on occupational health and safety and community health and safety.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>• Identify, assess, manage, and record and communicate all health and safety hazards, and ensure:</li> <li>- Resulting risks to people, property, assets, and the environment are evaluated</li> </ul>

- Risks are managed in accordance with the recommended hierarchy of controls to achieve levels that are as low as reasonably practical
- Any requirements to mitigate risks are implemented
- Risks and actions to manage them are reported and communicated

## MANAGEMENT MEASURE

### Health and Safety Management

The Contractor will ensure, as far as practicable, that the health, safety, and welfare of employees and all other persons on site are secured and are protected from hazards created by the project.

The Contractor will:

- Fully comply with the requirements of this management measure
- Comply with the IFC Environmental, Health, and Safety Guidelines<sup>1</sup>
- Comply with the health and safety requirements in Contract Documents Section V, Works Requirements, including but not limited to:
  - Section 01030 Special Requirements, Paragraph 1.04.C Health and Safety Plan
  - Section 01046 Control of Work, Paragraph 3.05 Open Excavations
  - Section 01046 Control of Work, Paragraph 3.07 Interference with and Protection of Streets
  - Section 01063 Miscellaneous Requirements, Paragraph 1.03 Traffic Control
  - Protect drinking water sources, whether public or private, at all times
- Prepare and implement a traffic control plan for accessing the site, approved by Engineer
- Implement all reasonable precautions to protect the health and safety of workers
- Avoid or minimize the occurrence and transmission of communicable diseases, including surveillance, and active screening and treatment of workers
- Avoid or minimize potential hazards posed to project personnel and the public while accessing project facilities
- Undertake hazard analysis to identify opportunities to reduce the consequences of a failure or accident
- Control access to operational areas through physical barriers and demarcation, regular patrols of controlled areas, and engagement with communities
- Avoid or minimize traffic accidents and promote traffic safety by all project personnel
- Comply with local laws and international requirements applicable to the transportation of hazardous materials, and establish procedures for preventing or minimizing the consequences of releases of hazardous materials
- Inform and regularly update affected communities, including herders and vulnerable groups, and government agencies about potential project hazards and changes to project activities that may have environmental, health, or safety impacts, as well as the proposed prevention, mitigation, and emergency response measures
- Ensure that health, safety, and rescue matters are given a high degree of publicity to all persons regularly or occasionally on the project sites, as stipulated by Mongolia laws on occupational safety and health, by prominently displaying posters drawing attention to the relevant regulations in areas where Contractor and subcontractor personnel, Engineer's staff, MCA-Mongolia or its representative's staff, and site visitors will take notice
- Provide Health and Safety Management training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the site-specific Health and Safety Management Plan, to all employees and subcontractors at the time of their induction and annually thereafter

The Contractor will prepare and submit for the Engineer's written approval a site-specific Health and Safety Management Plan and associated procedures that, as a minimum:

- Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
- Adhere to the MCC Health and Safety Policy (2012) and ensure the health and safety of all workers employed during the construction phase of the project

<ul style="list-style-type: none"> <li>Complies with applicable Government of Mongolia regulations and international good practice, where the more stringent will apply</li> <li>Specifies: <ul style="list-style-type: none"> <li>Site security, including securing of excavations, hazardous materials, etc.</li> <li>Confined space safety procedures</li> <li>Excavation and trenching safety measures</li> <li>First aid facilities, equipment, and materials</li> <li>Protective clothing and safety equipment</li> <li>HIV/AIDS awareness program</li> <li>Covid-19 awareness program</li> <li>Counter-trafficking in persons program</li> <li>Health and Safety management monitoring and reporting</li> </ul> </li> <li>Assigns roles and responsibilities for health and safety management</li> </ul>

## H.2.6 Education, Training, Community Outreach and Grievance Redress

Incorporated in various management measures are requirements for education, training, and outreach. The overall goals of these requirements are to provide project employees with an understanding of the commitments included in those management measures and inherent in associated laws, regulations, and policies, and to provide the employees with an appreciation of their own accountability for maintaining mutually supportive relationships with local communities. All required training is to be provided as part of induction training (to provide general awareness) and job-specific training as necessary.

In addition to the management measure under this heading, the following management measures specify training requirements:

- Management Measure Conveyance - 5: Emergency Preparedness and Response
- Management Measure Conveyance - 7: Mongolian Marmot Protection and Habitat Restoration
- Management Measure Conveyance - 8: Waste Management
- Management Measure Conveyance - 9: Labor Management
- Management Measure Conveyance - 10: Gender Integration and Social Inclusion (GSI)
- Management Measure Conveyance - 11: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment
- Management Measure Conveyance - 12: Construction Camp and Temporary Facilities Management
- Management Measure Conveyance - 13: Cultural Heritage Protection
- Management Measure Conveyance - 14: Health and Safety Management

Together, these management measures comprise the Education, Training, and Community Outreach Plan.

### Management Measure Conveyance - 15: Stakeholder Engagement, Community Consultation, and Grievance Redress

POTENTIAL IMPACT
Delays, increased grievances, political interference, and unnecessary pressure from uninformed groups resulting from lack of information and discussion/consultation
<p>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• IFC Performance Standard 1 <ul style="list-style-type: none"> <li>- Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> <li>- Requires establishment of a grievance mechanism to receive and facilitate resolution of affected communities' concerns and grievances about environmental and social performance, and scaled to the risks and adverse impacts of the project and with the affected communities as its primary user.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• Inform and involve all stakeholders</li> <li>• Have in place a defined policy for dealing with external parties</li> </ul>

- Foster positive relations and effective partnerships with local communities throughout project construction and operation
- Maximize the beneficial impact of the BWSE project on the affected communities

#### MANAGEMENT MEASURE

#### Stakeholder Engagement, Community Consultation, and Grievance Redress

The stakeholders and affected communities are to be informed of the construction activities, including implementation timeline and grievance redress procedure.

##### Stakeholder Engagement

- The Contractor will:
  - Maintain, revise, and update the Stakeholder Engagement Plan for the project consistent with the MCA-Mongolia Stakeholder Engagement Framework
  - Maintain, revise, and update the project Stakeholder Engagement Matrix
  - Document all stakeholder engagement activities in the Stakeholder Engagement Matrix:

##### Community Consultation

- The MCA-Mongolia or its representative will
  - Introduce Contractor's officers to communities
  - Monitor and supervise Contractor contacts with communities and other stakeholders
  - Ensure that gender and social inclusion measures implemented by the Contractor are taken when planning meetings, and that thereby all sections of the community are equally informed and consulted
- In coordination with the MCA-Mongolia or its representative, the Contractor will
  - Undertake community information dissemination, consultation, and outreach addressing the influx of migrant workers and the associated risks to the affected communities, the MCA- Mongolia Grievance Redress Mechanism, and other issues that arise during consultation
  - Document all community consultation activities in the Stakeholder Engagement Matrix

##### Grievance Redress

- The MCA-Mongolia or its representative will supervise, and monitor participation by all parties
- The Contractor will:
  - Implement the Grievance Redress Mechanism consistent with Annex A of this ESMP
  - Designate the Contractor's staff for collaborating with the project Grievance Redress Mechanism
  - Document all grievance redress actions in the Stakeholder Engagement Matrix
  - Report on the Grievance Redress Mechanism to MCA-Mongolia and the Engineer

#### LOCATIONS:

All construction sites and temporary construction facilities

#### MONITORING

##### MCA-Mongolia or its representative

- Monitor Contractor contacts with stakeholders and communities
- Monitor participation by all parties in Grievance Redress Mechanism

##### Contractor

- Document all stakeholder engagement activities
- Document all community consultation activities
- Record results of Contractor's community consultation activities

<ul style="list-style-type: none"> <li>Document all grievance redress activities under the Grievance Redress Mechanism</li> </ul>

## H.2.7 Risk Control and Emergency Response

The Risk Control and Emergency Response Plan references procedures specified in the management measures in the preceding plans that are pertinent to 1) controlling risks and 2) responding to emergencies. Such risks and emergencies include, for example, fuel spills and encountering previously unidentified cultural heritage resources, as well as incidents involving sexual harassment, human trafficking, and gender-based violence.

Due to the broad scope of the Risk Control and Emergency Response Plan, effectively the plan incorporates by reference the procedures specified in the management measures in all preceding plans for this project phase.

## H.2.8 Monitoring and Verification, and Maintenance Actions

This Monitoring and Verification, and Maintenance Actions Plan scopes the use of an adaptive approach to:

1. Verify that the management measures in the preceding plans are implemented, and that they are effective and sufficient
2. Revise those management measures that prove ineffective or insufficient

This approach acknowledges the risk and uncertainty of environmental and social management and fosters targeted modification of management measures to correct performance and outcomes. It will be executed as a continuous, iterative process by which the consequences of all management actions are systematically evaluated and, as needed, specific measures are modified in response to a determination that their forecasted outcomes will not meet requirements.

In the preceding plans, indicators and success criteria are designated for each management measure. For each management measure, MCA-Mongolia or its representative, in its oversight capacity, will determine whether progress toward the designated success criteria is sufficient and will document its determination in its regular updates and progress reports to MCA-Mongolia. If progress decidedly fails to meet iterative requirements, MCA-Mongolia or its representative will inform the Contractor of the need to formulate a management measure-specific adaptive maintenance action to implement midcourse corrections. In coordination with the Contractor, MCA-Mongolia or its representative will reformulate the management measure to foster meeting the success criteria, incorporating as applicable operational or structural changes, and considering the cost effectiveness of incorporating the changes. The scope of most management measures likely will remain fairly stable; whereas, it is expected that some methods will be added, modified, or dropped over the implementation timeline of some management measures.

With the prior approval of MCA-Mongolia, the Contractor will implement and monitor the revised management measure, and MCA-Mongolia or its representative will provide oversight.

## H.3 Implementation Work Plan and Schedule

The majority of the management measures in the preceding pre-construction phase and construction phase plans require that the Contractor prepare and submit for the Engineer's written approval plans that detail the Contractor's commitment and approach to fulfilling the requirements of the management measure. Therefore, an implementation work plan and schedule cannot be specified in this ESMP.

The Contractor is required to incorporate in the Contractor's ESMP a detailed Contract Work Plan and Schedule to facilitate implementing the Contractor's ESMP as an integral component of executing and supervising the construction work.

## H.4 Implementation Budget

Implementation, including monitoring, of the ESMP management measures, with one exception, do not entail a marginal cost. Costs are reflected in MCA-Mongolia or its representative's operating costs, the Contractor's construction contract budget for operations and procedures or the Operator's budget for operation and maintenance.

The cost of obtaining all required permits are deemed to be included in the Contractor's contract budget for operations and procedures or the Operator's budget for operation and maintenance.

The costs of implementing ESMP management measures are primarily driven by staff costs. Other costs are associated with development of policies and plans, training, and equipment.

## MCA-Mongolia or Its Representative's Costs

Staff Costs				
<i>Role</i>	<i>Cost</i>	<i>Unit</i>	<i>Total</i>	<i>Assumption</i>
<b>Environmental and Social Manager</b>	-	salary	-	Covered in Section F.6

On-job training, apprenticeships, internships	\$ -	as required	\$ -	Included in staff costs (as per Labor Management Plan)
Community training in HSE, CTIP	\$ -	as required	\$ -	Included in Community Liaison (SSO )
Training Costs subtotal			\$ 68,500.00	

#### Equipment and Other Costs

<b>Description</b>	<b>Cost</b>	<b>Unit</b>	<b>Total</b>	<b>Assumption</b>
PPE equipment (hard hat, boots, hi-vis clothing, glasses, gloves)	\$ 100.00	per employee	\$ 60,000.00	PPE provided to all employees each year
First aid kits	\$ 100.00	each	\$ 2,000.00	1 kit per 10 employees
Emergency Response Plan Dissemination	\$ 2,500.00	overall	\$ 2,500.00	Posters, brochures, etc. at site/ camp indicating emergency procedures and phone numbers
Spill protection equipment	\$ 2,500.00	overall	\$ 2,500.00	Spill sheets for all vehicles, regularly changed.
GRM implementation	\$ -	per year	\$ -	Implementation of the GRM by HR staff/Social Safeguards Officer
Contract with Landfill for inert waste	\$ -	per year	\$ -	Covered in cost of construction operations
Contract with Hazardous waste company	\$ -	per year	\$ -	Covered in cost of construction operations
Bins at construction camp	\$ -	each	\$ -	Covered in cost of construction camp

Cultural Heritage - protection of known sites	\$ -	each	\$ -	Covered in cost of construction operations
Cultural Heritage - chance find	\$ 6,000.00	each	\$ 6,000.00	Assume one chance find at AWPP site - site has already been survey by archeologists and paleontologists.
Biodiversity Monitoring Equipment	\$ 1,380.00	all	\$ 1,380.00	Binoculars, Camera, GPS
Equipment and Other Costs Subtotal			\$ 74,380.00	
<b>PPE equipment (hard hat, boots, hi-vis clothing, glasses, gloves)</b>	\$ 100.00	per employee	\$ 60,000.00	PPE provided to all employees each year
<b>First aid kits</b>	\$ 100.00	each	\$ 2,000.00	1 kit per 10 employees
<b>Emergency Response Plan Dissemination</b>	\$ 2,500.00	overall	\$ 2,500.00	Posters, brochures, etc. at site/camp indicating emergency procedures and phone numbers
<b>Spill protection equipment</b>	\$ 2,500.00	overall	\$ 2,500.00	Spill sheets for all vehicles, regularly changed.
<b>GRM implementation</b>	\$ -	per year	\$ -	Implementation of the GRM by HR staff/Social Safeguards Officer
<b>Contract with Landfill for inert waste</b>	\$ -	per year	\$ -	Covered in cost of construction operations
<b>Contract with Hazardous waste company</b>	\$ -	per year	\$ -	Covered in cost of construction operations
<b>Bins at construction camp</b>	\$ -	each	\$ -	Covered in cost of construction camp
<b>Cultural Heritage - protection of known sites</b>	\$ -	each	\$ -	Covered in cost of construction operations
<b>Cultural Heritage - chance find</b>	\$ 6,000.00	each	\$ 12,000.00	Assume two chance finds on pipelines site - site has already been survey by archeologists and paleontologists but it is extensive.
<b>Biodiversity Monitoring Equipment</b>	\$ 1,380.00	all	\$ 1,380.00	Binoculars, Camera, GPS

<b>Marmot avoidance and mitigation - earth barrier between critical habitat and AWPP site</b>	\$ 5.00	cubic meter	\$ 20,000.00	H:2 m; L: 500 m; V: 4,000 m <sup>3</sup> @ USD5/m <sup>3</sup> all inclusive
<b>Marmot avoidance and mitigation - shrubs for habitat restoration</b>	\$ 4.00	each	\$ 1,600.00	400 shrubs at USD 4.00 per shrub including labor
<b>Marmot avoidance and mitigation - rock dam for habitat protection.</b>	\$ 5.00	cubic meter	\$ 500.00	100 m <sup>3</sup> of material @ USD5/m <sup>3</sup> all inclusive
<b>Relocation of Trees - Truck</b>	\$ 85.00	per day	\$ 1,700.00	2 trucks for 10 days
<b>Relocation of Trees - Forklift Fly Jib Crane</b>	\$ 150.00	per day	\$ 1,500.00	1 Crane for 10 days
<b>Relocation of Trees - Operator for Forklift Fly Jib Crane</b>	\$ 60	per day	\$ 600	1 Crane operator for 10 days
<b>Relocation of Trees - Staff</b>	\$ 50	per day	\$ 2,000	4 staff for 10 days
<b>Relocation of Trees - Trees</b>	\$ 30	each	\$ 2,400	Replacement of damaged trees (20 % of total)
<b>Equipment and Other Costs Subtotal</b>			<b>\$ 110,680.00</b>	
<b>ESMP Management Measures Costs Total</b>			<b>\$ 1,128,480.00</b>	

## H. Annex A - Grievance Resolution Mechanism

The Contractor shall develop and implement a grievance redress mechanism that shall be applied in the case of a complaint or grievance that is related to or results from implementation of the project activities. A well-implemented grievance redress management system shall demonstrate that the project is concerned about community members and their well-being, building trust, respect, and productive relationships. As with the broader process of stakeholder engagement, it is important that management stays informed and involved in the management of grievances so that decisive action can be taken when needed to avoid escalation of disputes.

Under the GRM all persons shall be clearly entitled to make a complaint by any means – personal contact, office visit, telephone, letter, email, website enquiry, and directly to MCA-Mongolia or its representative. There should be a dedicated free call line for complaints. The GRM must make it easy to make a complaint and for that to be addressed easily and speedily. The system shall require that any member of any company associated with the project is aware of the requirement that they must receive and transfer on any complaint submitted to them in whatever form to their Grievance Officer who then follows the protocol for resolution.

All project partners shall accept the GRM process, agree to participate, train all contractor personnel to use the protocols to report grievances, participate in grievance resolution and reporting. The requirement to collaborate with the GRM will be mandated in construction contracts which will also require the designation of a responsible officer, usually the Contractor's Social Safeguards Officer.

The project grievance redress mechanism shall compliment traditional local-level mechanisms<sup>83</sup> for complaint resolution and legal administrative approaches to complaint resolution at all levels. It shall also document complaints or grievances from the public or other stakeholders (external communications with affected communities), and how these are resolved.

The grievance redress mechanism is intended to assist in resolving grievances or complaints raised regarding environmental and/or social issues arising from the projects/investments, and does not apply to the following complaints even if they are related to project activities:

5. Procurement and contractual complaints between MCA-Mongolia and its vendors or contractors which are normally handled by the MCA-Mongolia General Counsel Office,
6. Lawsuits which fall under the mandate of the General Counsel.

The Grievance Redress Mechanism (GRM) shall be compliant with the requirements of the IFC Performance Standard 5 (2012) and the MCC RPF for Western Wellfields (2018)<sup>84</sup>, and considers MUB GRM good practices that have been implemented for development projects in Ulaanbaatar city.<sup>85</sup> References available upon request to MCA.

---

<sup>83</sup> The GSI Director will carefully consider the extent to which traditional mechanisms to resolve conflict are used, to ensure that these are not disadvantageous to women villagers, indigenous peoples, or other disadvantaged groups. A thorough assessment should be conducted to ensure that certain non-formal justice mechanism will assist women and other disadvantaged groups in accessing justice.

<sup>85</sup> Land Acquisition and Resettlement Plan for Selbe and Bayankhoshuu Subcenters: Heating Station, Kindergarten, Business Incubator and Training Center; UB Urban Services and Ger Areas Development Investment Program – Tranche 1, 2017

The MCA-Mongolia or its representative will supervise and monitor the GRM. The Contractor shall keep the Contractor shall have a grievance redress matrix that records every complaint and communication, the dates of each action and correspondence, how it is investigated and the outcome. The contracting company shall have an internal and external grievance policy and mechanism. The Contractor shall have a designated Grievance Officer to manage complaints according to the company policy. They must have a grievance policy for dealing with external complaints that is fully compliant with and integrated with their Engineer approved project GRM. The Contractor must also have an internal grievance management system.

MCA-Mongolia or its representative will monitor and supervise the contractors' Social Safeguards Officer. MCA oversight will be especially important when dealing with complaints related to sexual harassment, gender-based violence and sex trafficking complaints which require additional investigative expertise. MCA shall review, approve and be invited to attend training for contractors' personnel on roles and responsibilities for grievance management at both senior management levels and also to all members of the workforce. It is vital that all employees understand that they all can be receptors of grievances and they need to know how to deal with a complaint.

## 1.1 Complaint Resolution Procedure

The complaint resolution process shall be generally in accordance with the following. These complaint resolution procedures are compliant with Mongolian Law.

### Tier 1

- Step 1 – All contractors, staff, workers are responsible for receiving grievances and ensuring that the complainant is treated respectfully, and that the grievance is written down on the correct form and forwarded to the designated Grievance Officer in their organization.
- Step 2 - Receive and Register Complaint: The project designated person shall receive the completed complaint form, and he/she is responsible for documenting and recording the complaint in the log-in system/matrix for recording the grievance and processes to resolution. This person is also responsible for reporting as required to senior management on the grievances received and steps taken to resolve.
- Step 3 – Screening and Preliminary Assessment: An initial classification of the complaint will be conducted by the Grievance Officer who will assign the complaint to the relevant persons to resolve. The Grievance Officer is responsible for managing the response and reporting back to the project officer. The officer designated to resolve the issue is responsible for notifying the Grievance Manager or SST and sending information for inclusion in the project grievance matrix.
- Step 4 - Response to the Complaint: After consulting with the relevant personnel, the Grievance Officer contacts the complainant to acknowledge the complaint and provide information as to the expected steps and timeframe for resolution of the complaint. This communication is to be provided within 48 hours of receipt of complaint.
- Step 5 - Investigate and Resolve: This step investigates the complaint, including the underlying cause(s) of the complaint and develops actions needed to resolve the current issue and to prevent recurrence of a similar complaint. Resolution at local level can be a) rejecting the complaint with reasons or b) resolving the complaint and taking action to remedy as appropriate. The Designated Person reports the outcome to the Grievance Officer. Either way, the Grievance Designated Officer is responsible for communicating the decision to the complainant within **14 days** and to the Grievance Manager or SST for recording in the grievance matrix. The Designated Officer is responsible for implementing any works or payments or directives to subcontractors to remedy the source of the complaint, track it and document in the company and MCA-Mongolia records.
- Step 6 - If a local and immediate Tier 1 solution is not appropriate, then the receiving officer has to escalate the complaint to the next tier of grievance resolution,
- Step 7 - If the complaint cannot be resolved then the receiving officer must revise the selection or implementation of approaches.
- Step 8 - Close-out: After implementing mitigating actions or resolving the issue, a letter describing the response and outcome is sent to the complainant, signed by a project head.

- Step 9 - Follow-up: Based on the complainant satisfaction level, the response shall be archived or transferred for further investigation.

If resolution cannot be achieved the process is escalated to Tier 2.

**Tier 2:** If the complaint cannot be solved in Tier 1, the Designated Officer will assess the eligibility of the complaint and address to relevant divisions/offices of the district and its resolution is recommended to the district Governor for approval and resolved within 30 days. The Designated Officer will record its deliberations and inform the concerned parties orally or by telephone and in writing, as appropriate. If the solution is agreed by the complainant, the contractor or implementing entities will implement the solution. Written records will be made of all stages and outcomes.

During this second review process either another formal written response will be provided to the grievant in **30 days** or it may be decided to hold a meeting with contractor representatives and the grievant. If complaint is ineligible (i.e., not a project related impact), it will be recorded and passed to the relevant authorities and the complainant will be informed of the decision and reasons for rejection within 30 days according to the Law on Handling Grievances of Citizens Addressed to Government Authority and Government Officials.

**Tier 3:** If the grievance is not resolved within 30 days from its lodging at Tier 2 and/or the complainant is not satisfied with the recommended solution, the grievance will be submitted to the related divisions/offices of the MUB and its resolution is recommended to the MUB Governor for approval and action within 30 more days. If necessary, the MUB Governor will organize stakeholder meetings and/or Working Group meetings. A solution acceptable to all shall be identified including clear steps. The contractors and implementing entities will immediately implement the agreed solution. Written records will be made of all stages and outcomes.

**Tier 4:** Failing resolution at Tier 3, the complainant has recourse to the Courts which should be regarded only as a last resort. With specific regard to land disputes, in accordance with the Law on Land (Article 60, "Settlement of Land Related Disputes"), these will be settled by the relevant khoroo governor. Where this is unsuccessful, the dispute shall be settled by a higher-level authority, or in court. Alternatively, residents may also go directly to the District Land Officer.

This system is depicted in the following figure.

## Flow Chart of the GRM

## 1.2 Approaches to Locally Based Grievance Resolution

The following approaches are required for grievance resolution:

- Dissemination of information to communities on how to make a complaint
- Dissemination of information on the GRM and how to make a complaint is made to all contractors and employees so that they understand their role in receiving and transmitting on all complaints. Ensure that all employees can assist complainants to fill in forms.
- Ensure all project partners offices have complaint forms available at reception areas and instructions on the process. Ensure that visitors can approach the Grievance Officer directly.
- Include information on grievances in information bulletins and community meetings so as to maintain trust in the process.
- Use a grievance log to monitor cases and improve the organization. In addition to resolving individual or community disputes, the grievance mechanism is an opportunity to promote improvements in the project and trigger policy and practice changes
- Evaluate and improve the system. The MCA-Mongolia or its representative shall be allowed to periodically conduct an assessment of the GRM to evaluate and improve its effectiveness and the Contractor shall comply with the outcomes and recommendations of those reviews. The evaluation will include: general awareness of the mechanism; whether it is used and by whom; the types of issues addressed; the ability of the mechanism to resolve conflicts early and constructively; the actual outcomes (impacts on project operations, management systems, and benefits for communities); its efficiency; and, most fundamentally, the ability to accomplish its stated purpose and goals. The MCA-Mongolia will solicit and include the views of stakeholder representatives to see how the mechanism is proving effective in practice.

## 1.3 The Grievance Form

The Grievance Form (GF) developed by the Contractor will at minimum contain the following:

- Basic information about the affected entity (name, address, contact number)
- Category of grievance filed (legal, technical/engineering, social, financial)
- Detailed description of grievance including time, date of incident and of recording, location etc.
- Type of action(s) taken (resolved at the local level or referred to higher authorities)

As a grievance is addressed, the type of action(s) taken will also be recorded on the GF, in order to document how the grievance was resolved.

The complainant enjoys the right to use the Governmental grievance redress procedures in accordance with the Law on Handling Grievances of Citizens Addressed to Government Authority and Government Officials. This governs grievance and complaints of citizens regarding the decisions and conduct of government authority or officials, and access to the judicial system, i.e., go to the courts, at any time, if they feel their grievance or concern is not being adequately addressed through the project GRM.

## 1.4 Grievance Mechanisms for Contractor's Internal Process

Each contractor is required to have an internal grievance policy and process for employees to raise issues about conditions of contract and behavior. The usual process is run by the human resources officers with the support of the Social Safeguards Officer. However, the treatment of allegations of sexual harassment, of gender-based violence and trafficking of persons needs external assistance to undertake effective investigation into allegations.

The Contractor must have an **anonymous** mechanism for reporting suspected TIP incidents that can be used by workers and communities. The Contractor has to develop a TIP response plan covering these issues: this TIP response plan will designate the SSO to manage the investigation including an external

investigation lead from the Centre for Gender Equality, ensure a response within 24 hours and an effective resolution as soon as possible. This will also include contacting the legal authorities and qualified NGOs.

It is required that investigations into these issues are conducted with both an MCA Mongolia representative present and an external investigator drawn from a suitably qualified organization such as the Centre for Gender Equity who will chair the enquiry.

MCA Mongolia shall be able to work with the human resources department of the contractor to monitor contractor internal grievance mechanisms to ensure that allegations of sexual harassment, of gender-based violence and trafficking of persons are properly investigated with confidentiality protected and participate to ensure the investigation is properly undertaken. Appointing an independent but well-informed chair ensures effective investigation. Full documentation and recording is required.

Toolbox talks by the Contractor on anti-sexual harassment are required monthly. Contractors are required to mandate and enforce a policy refusing the transportation of non-project workers in company vehicles.

## **H. Annex B - Public Consultation and Stakeholder Engagement Plan for BWSE**

### **1.1 Introduction**

Good communication of the project with the public is vital for successful relations with all stakeholders and enhances the opportunities offered by successful projects. The risks associated with poor stakeholder relations are now better understood by all stakeholders. The concept of “stakeholder engagement” is emerging as a means of describing a broader, more inclusive, and continuous process between a project and those potentially impacted that encompasses a range of activities and approaches, and spans the entire life of a project. Increasingly, the recognition that reputational risks that come from poor stakeholder relations, place a growing emphasis on corporate social responsibility and transparency and reporting. In this context, good stakeholder relations are a prerequisite for good risk management. The focus of this SEP is on interactions with stakeholder groups “external” to the core operation of the project, such as affected communities, local government authorities, non-governmental and other civil society organizations, local institutions and other interested or affected parties.

Stakeholder engagement is an umbrella term encompassing a range of activities and interactions over the life of a project. Not all stakeholders in a particular group or sub-group will necessarily share the same concerns or have unified opinions or priorities as stakeholders come in all sorts of groupings, interests and formats. Stakeholders are persons or groups who are directly or indirectly affected by a project, as well as those who may have interests in a project and/or the ability to influence its outcome, either positively or negatively. Stakeholders may include locally affected communities or individuals and their formal and informal representatives, national or local government authorities, politicians, religious leaders, civil society organizations and groups with special interests, the academic community, or other businesses. Interactions with all these groups require a SEP.

### **1.2 Stakeholder Engagement Plan**

This section describes the elements of the Stakeholder Engagement Plan to take forward the BWSE project.

The Stakeholder Engagement Plan covers nine components:

19. Staffing and resources
20. Stakeholder Identification and Analysis
21. Information Disclosure
22. Stakeholder Consultation
23. Partnerships
24. Grievance Management
25. Stakeholder Involvement in Project Monitoring
26. Reporting to Stakeholders
27. Management Functions

## **1.3 Staffing and Resources**

There are numerous stakeholder groups with potentially conflicting interests and influence in the project and these need careful and consistent management to gain and maintain a social license to operate. Stakeholder Engagement for the BWSE requires substantial inputs of time to develop and to operate effectively. The most effective and integrated management location for the SEP team is under the MCA-Mongolia or its representative, under a trained and experienced Social Safeguards Specialist or Manager.

The SST requires a dedicated office with a small community meeting space, desks etc., filing capability, computer facilities, internet and telephones. The SST needs at least two Community Liaison Officers at field level to ensure good communication within affected communities.

The first task of the SST is to write an SEP with associated Standard Operating Procedures (SOPs) for each of the above sections to manage stakeholder interactions – this is to be regularly reviewed and updated.

## **1.4 Stakeholder Identification Analysis**

The ESIA process identified and consulted many potential stakeholders in the project. This work must be consolidated into a project wide stakeholder engagement matrix (SEM) listing each stakeholder, areas of interests and influence, contact person, contact details and add a line in the matrix for each meeting, consultation, email or telephone call etc. and the response made.

The SST must write an SOP for the management of the SEM.

The project is not static, stakeholders change interests, legislation and regulations change and institutional responsibilities mutate so that the stakeholder engagement process has to maintain and record and respond to stakeholders as they interact with the project and as they change over time. The SEP requires regular interaction with stakeholders to update and exchange information alongside the progression of the projects. To this end, the SEP is a live process, requiring regular monitoring and updating.

## **1.5 Information Disclosure**

The exchange of appropriate information with the right groups of people in an appropriate media and appropriate text and at the right time is fundamental to the success of the project. Information Disclosure must be planned and executed effectively to ensure project progress. The SST will have to plan in advance:

1. What information needs to be disseminated and when, broken down into individual messages by audience by project phase.
2. What language and wording is appropriate for each message and each audience. Will a translation be necessary?
3. Which media is suitable for each message and audience – meetings, letter, telephone call, radio broadcast, newspaper, social media etc.
4. Commission and maintain a project website to display information and enable communication from outside. This should enable complaints to be received and support the grievance redress mechanism. Members of the SST should have cards to hand out to enable people to know who they are and how to contact them.
5. Write an SOP to manage each message design and dissemination stating responsibilities and actions

6. Derive a budget for information dissemination activities over all project phases.

## **1.6 Stakeholder Consultation**

Information needs for the BWSE are not one way – not only do stakeholders need to receive project information but there needs to be a formal system of stakeholder consultation to enable external views to be heard and to enable discussion of project elements. This requires a system of consultations of stakeholders over the life of the project. The SST needs to examine the SEM and identify ways of regular consultation at appropriate intervals – some stakeholders need more frequent consultation than others at various times.

The SST needs to define a schedule of consultations, define suitable consultation intervals over the project life and draw up a calendar of consultations. These then need to be allocated to a consultation type, e.g. large physical meeting, small physical meeting, zoom/ skype call, allocated to where the meeting should/ could take place and allocate frequency, allowing for a margin of additional meetings in response to currently unknown circumstance. Resources and staffing can then be budgeted for consultations.

Regardless of the very small resettlement impacts under BWSE, special consideration needs to be made for families affected by landtake to ensure their interests are protected. The optimum consultation technique for this in BWSE, is the inclusion of two Community Liaison Officers in the SST (one per District) who will keep in contact with affected community members.

Consultation meetings need an organizer to make arrangements and distribute invitations to meetings, a meeting leader to lead the discussion and a recording assistant. It is best practice to make recordings of meetings and make a transcription as meeting notes. Copies of the meeting notes are distributed to meeting participants.

The SST needs an SOP on meeting protocol defining responsibility for arrangements, invitations, recording of meetings, distribution of minutes and integration into the SEM and data storage.

## **1.7 Partnerships**

Non-governmental organizations (NGOs) and community-based organizations (CBOs), particularly those who represent communities directly affected by a project, can be important stakeholders for companies to identify and engage on a proactive basis. NGOs may have expertise valuable to effective stakeholder engagement. For example, they can be sources of local knowledge, sounding boards for project design and mitigation, conduits for consulting with sensitive groups, and partners in planning, implementing and monitoring various project-related programs.

It is important to carry out initial research regarding the local power dynamics and existence of special interest groups to ensure that any intermediary organizations, such as NGOs, are truly representative of and accountable to the community interests they claim to support and represent. If there is NGO opposition to the project, engaging early to try and understand the concerns or critiques being raised can offer an opportunity to manage these issues before they escalate or find another outlet for expression.

Occasionally, projects require partnerships with other organizations in order to achieve some element. In BWSE, this may involve an NGO like Centre for Gender Equality, who may be needed to assist with training programs on gender and social inclusion, C-Tip training etc. and on assisting internal grievance procedures over cases alleging sexual harassment or gender based

violence within contractors. The SST needs to have an allocation in its budget for additional small levels of expenditure procuring additional partner services to meet the MCC Policies on Gender and Social Inclusion, C-TIP, HIV/ AIDS, etc. that need to be supplied externally from the MCA-Mongolia or its representative.

The SST must review potential partner organizations and explore possibilities for partnering with the MCA-Mongolia or its representative, and record communication in the SEP. An SOP on agreements and negotiations with third party partners is required.

## **1.8 Grievance Management**

The Grievance Redress Mechanism is discussed in detail in Annex A. It is vital that the mechanism is integrated into the SEP as it is the major channel of negative comment and complaint and needs effective management to resolve grievances and be reported to wider project management. Ideally, the responsibility for receiving and resolving grievances in BWSE would be of the MCA-Mongolia or its representative's SST. The SST needs sufficient staffing to manage community investigations and allegations of grievances.

The GRM requires a grievance matrix (GM) to record the incidence of each grievance and the process of investigation and response, The GM data must form part of the SST monthly reporting process.

## **1.9 Stakeholder Involvement in Project Monitoring**

One way to help satisfy stakeholder concerns and promote transparency is to involve project-affected stakeholders in monitoring the implementation of mitigation measures or other environmental and social programs. Such participation, and the flow of information generated through this process, can also encourage local stakeholders to take a greater degree of responsibility for their environment and welfare in relation to the project, and to feel empowered that they can do something practical to address issues that affect their lives. Participatory monitoring also tends to strengthen relationships between the project and its stakeholder.

Participatory monitoring goes beyond the project consulting with affected stakeholders on environmental and social monitoring data. It requires the physical presence of affected individuals at the time that monitoring takes place and involves data collection methods and indicators meaningful to the stakeholders concerned.

Participatory monitoring might include, for example:

9. Involvement of affected stakeholders in scientific sampling methods, questionnaires and analysis,
10. Observations by affected parties, triangulated to strengthen validation,
11. Group discussions on the success of mitigation or benefit measures and/or on how to manage new issues that have arisen
12. The adaptation of conventional participatory techniques to the purpose of assessing changes in the physical and socio-economic environment over time, such as a seasonal calendar, daily/weekly schedules, resource and land-use maps, and wealth ranking.

External monitoring of a company's environmental and social commitments can strengthen stakeholder engagement processes by increasing transparency and promoting trust between the project and its key stakeholders. Projects benefit by receiving an objective assessment of their environmental and social performance, which can help defuse external criticism and strengthen

support from local stakeholders. An external monitor can also help increase both the accountability of the project and the credibility of the monitoring results in the eyes of affected communities and civil society groups by serving as an independent and objective source of information and reporting. External monitors may be NGOs, government regulators, academics and scientists, community representatives, technical experts, or eminent persons.

Planning to include stakeholders in monitoring, whether internally or externally, need to be anticipated and included in the SEP and project monitoring plans. SOPs for managing these interactions are useful, particularly if they are drawn up in consultation of the stakeholder groups.

## **1.10 Reporting to Stakeholders**

Once consultations have taken place, stakeholders need to know which of their suggestions have been taken on board, what risk or impact mitigation measures will be put in place to address their concerns, and how, for example, project impacts are being monitored. In addition to reporting back to project-affected groups and other stakeholders as part of the consultation process, there are other types of reporting that target a different set of stakeholders. Sustainability reporting, for example, provides projects with an opportunity to communicate information to a much wider range of stakeholders about the environmental, social, economic, and governance performance of the project. It also offers a platform to report back on the process of stakeholder engagement itself, such as who has been consulted, on what topics, and with what results. Consequently, a number of international codes and standards for reporting now include requirements for implementing and reporting on stakeholder engagement, e.g. IFC Performance Standards.

Under this heading, the SST needs to:

13. Determine what information needs to be reported to which stakeholders, by what method and how frequently, add to the SEP budget lines.
14. Regularly update the commitments register where promises have been made to stakeholders in response to complaints or external pressure
15. and disclose progress to affected and interested parties. In particular, publicize any material changes to commitments or implementation actions that vary from publicly disclosed documents.
16. Make monitoring results publicly available, especially reports of any external monitors.
17. Regularly report on the process of stakeholder engagement as a whole, both to those stakeholders who are directly engaged, and to other interested parties.
18. Derive an SOP for reporting to stakeholders.

•

## **1.11 Management Functions**

Increasingly, good practice points to incorporating stakeholder engagement activities into a project's environmental and social management system. In practice this means making its management systematic by integrating it with core activities. To achieve this, the MCA-Mongolia or its representative will need to identify critical points in the life of the project where stakeholder engagement will be needed, and determine who will deliver these actions and how they can be integrated with core project functions. This involves trying to work out how best to deliver and integrate a number of different aspects of engagement and reporting as discussed in the previous sections, including:

15. Ongoing stakeholder analysis and the assessment of stakeholder concerns from a “risk” perspective
16. The hiring and training of community liaison officers
17. Consultation processes designed to meet the Project’s own policies and/or compliance requirements of funders and regulators
18. Input and suggestions received from stakeholders on project design and proposed mitigation measures
19. Grievance mechanisms that capture and respond to stakeholder concerns
20. The involvement of local stakeholders in project monitoring
21. Reporting information to stakeholders.

Most importantly, stakeholder engagement should be managed as one would manage any other project function — with clearly defined objectives and targets, professional, dedicated staff, established timelines and budget, and senior management responsibility and oversight.

Some good practice principles for managing stakeholder engagement processes are given below.

- Coordinate activities and assign overall responsibility: Over the life of the project, affected communities and other interested parties will likely interact with a variety of representatives from within the project and its contractors. It is essential that this diverse set of engagement activities be coordinated.
- Consistency of information: Consistency of information conveyed to stakeholders by different teams or business units within the MCA-Mongolia and its representative is important, as is keeping track of such activities in order to reduce inefficiencies, confusion, and conflicting messages or commitments. This is usually best achieved by giving a senior Social Manager overall responsibility for stakeholder engagement. This high-level oversight not only helps to underscore the importance of the function but is needed in order to effectively implement the strategy and coordinate the various activities across the project.
- Hire, train, and deploy the right personnel: Initial stakeholder analysis will provide a sense of the type of stakeholder groups the project will need to engage during different phases of the project cycle. Engaging different types of stakeholders requires different skills and staffing considerations. For example, engaging with local communities requires one or more field-based community liaison officers, whereas engagement with government officials or local, national, and international organizations will likely require different skill sets and more direct involvement of the senior Social Manager. The project should consider bringing in social advisors or other expert staff to help design and facilitate the process and assist with participatory methodologies and other specialized techniques. When hiring community liaison staff, consider people who will be able to develop and maintain good working relationships with the local communities. Since their job will involve listening and responding to local concerns and suggestions, qualities to look for include:
  - Good people and communication skills
  - A good understanding of the local language and community/cultural dynamics
  - Open-mindedness and respect for the views of others
  - A solution-oriented approach
  - A high integrity/degree of trustworthiness
  - A genuine commitment to the position and its goals

- Create clear reporting lines between the community liaison function and senior management: In order to be effective, Community Liaison Officers need to have the authority to negotiate on behalf of the project. This requires a clear reporting structure and clarification as to which decisions they can take unilaterally, and which are to be passed on to higher levels within the MCA-Mongolia and its representative. Direct reporting lines also enable senior managers to control risks by being kept informed of this type of field- level information in a timely manner. The more likely it is that the concerns of local stakeholders might pose a risk or reputational issue for the project, the more important it is for Community Liaison Officers to have a direct channel to senior managers.
  
- Communicate the strategy internally: If stakeholder engagement is to be effectively integrated into day-to-day project operations, the concept needs to be “owned” by all staff. Every project unit needs to be aware of the strategy and understand why the company is committing time and resources to the SEP. Too often, stakeholder engagement programs are compartmentalized within the project and regarded as a “soft concept” that is the domain of a few community liaison staff. By clarifying the links between stakeholder engagement and environmental and social performance – as well as its potential to impact on reputation and project outcomes –stakeholder relations becomes a collective responsibility.

## Appendix I ESMP – Operations and Maintenance

This environmental and social management plan (ESMP) specifies management measures to avoid, minimize, or offset potential significant adverse environmental and social impacts, or reinforce or enhance potential beneficial impacts, during the operations and maintenance of BWSE facilities and assets, comprising the structures and infrastructure constructed under contract packages CP-1: Production Well Drilling, Construction, Development, and Acceptance Testing, CP\_2: Advanced Water Purification Plant (AWPP), and CP-3: Raw and Finished Water Conveyance. The operations and maintenance of the BWSE facilities will be carried by Water Service Provider of Ulaanbaatar, USUG, who will receive ownership of the BWSE facilities after contract Taking Over Certificates are issued. This ESMP is aligned with the ESMPs developed for the pre-construction and construction phases and is consistent with International Finance Corporation (IFC) Performance Standards on Environmental and Social Sustainability (Performance Standards), this ESMP adopts “a mitigation hierarchy to anticipate and avoid, or where avoidance is not possible, minimize, and, where residual impacts remain, compensate/offset for risks and impacts to workers, Affected Communities, and the environment.”<sup>86</sup>

Management measures are specified for the Operation and Maintenance phase of the BWSE project facilities. It is recognized that the legal mechanism requiring USUG to implement these measures is not defined; however, it is expected that they will provide a starting point, along with the training and assistance will receive during Test to Completion and Defect Notification Period, for USUG to develop, tailor or adapt adequate management measures for implementation by their staff during the operations and management phase of the BWSE project.

As discussed in Sections 3.2 and 5.2 of the BWSE environmental and social impact assessment (ESIA), the ESIA team eliminated decommissioning from detailed study. Because UB always will require water and therefore a bulk water system, effectively the useful life of the project will not end, and the system will not be decommissioned. Rather, when needed, the bulk water system will be reengineered and reconstructed to upgrade specific processes and equipment. These activities would be undertaken inherent to the operation and maintenance phase and in accordance with the design standards, and environmental procedures and regulations current at that time. Therefore, management measures are not specified for a decommissioning phase. Nonetheless, this ESMP presents a discussion of the process of and risks associated with decommissioning, albeit a necessarily general discussion as decommissioning activities are not known at this stage and the BWSE infrastructure and project sites are highly varied.

For each management measure the ESMP details:

- Potential Impact – Potential adverse or beneficial effect that the measure is designed to address, and target locations, resources, or communities
- Standard / Requirement Triggered – Mongolian or international standard or requirement triggered by the potential impact
- Management Measure – Specific, implementable, verifiable, and cost-effective action to be taken
- Monitoring – Monitoring activity to be undertaken
- Locations – Locations where the management measure and monitoring are to be implemented
- Indicators and Success Criteria – Indicators and criteria to be used to verify that the management measure is being implemented, and that it is effective and sufficient

---

<sup>86</sup> Performance Standard 1, Assessment and Management of Environmental and Social Risks and Impacts. International Finance Corporation. 2012. *Performance Standards on Environmental and Social Sustainability*. World Bank Group, January 1, 2012.

- Reporting – Monitoring reporting requirement
- Schedule – Timing and frequency of implementing the management measure, monitoring, and reporting
- Responsibility – Delineation of responsibilities for implementing the management measure, monitoring, reporting, and oversight
- Estimated Costs – Potential costs of implementing the management measure and monitoring to assist Operator in preparing for and implementing Management Measures

The management measures and monitoring specified in this ESMP should be implemented, as applicable, together with the conditions, procedures, and best operational practices specified during operations training of BWSE facilities and Operations and Maintenance Manuals. For purposes of the ESMP, best operational practices and management measures are distinguished as follows:

- *Best operational practices* are actions typically taken by the operator to avoid or minimize potential adverse environmental and social impacts but are not implemented in response to the impact findings of the ESIA.
- *Management measures* specified in the ESMP differ from best operational practices in that they will be implemented specifically in response to the impact findings described in the ESIA.

In other words, best operational practices are inherently part of good operations of the BWSE and are not additional management measures specified as a result of the impact assessment process. With respect to the operations and maintenance phase, they are practices that typically are within the scope of services of the operator performing the work. Their implementation is assumed in the impact analysis presented in the ESIA.

It is expected that best operational practices are, in part, already intrinsic in USUG's *modus operandi* and will be further developed and informed during specific training imparted to USUG staff by Contractor appointed experts prior to and during the Defects Notification Period, which will continue for one year after USUG formally take over operations of the BWSE facilities.

## I.1 Responsibilities During Operation and Maintenance

### Operator

Ulaanbaatar Water and Sewer Authority (USUG), as the **Operator** of all the water supply assets furnished by the construction contract, will be fully responsible for implementing and monitoring the operation and maintenance-related management measures specified in the ESMP. It is recommended that the Operator read the ESMP, consider it in its entirety, and adapt with all aspects of the ESMP that pertain to implementing and monitoring operation and maintenance-related environmental and social management.

The Operator should act responsibly to provide notification of the Operator's schedule to enable the Authority to carry out its responsibilities.

### Authority

USUG, as the **Authority**, should be responsible for oversight of the operation and maintenance-related management measures and monitoring specified in the ESMP. In this self-policing capacity, the Authority should fully consider the standards and regulations of the appropriate government agency with respect to each management measure and would self-disclose violations of laws to the respective agency.

It is advised that the Authority establish a Social Safeguards Team (SST), led by a Social Manager, if they do not have an equivalent body already, that during the operation and maintenance phase, in coordination with the Operator, will coordinate with community representatives and liaisons, and project affected persons in implementing, supervising, reporting, and follow-up actions with regard to the ESMP. The organization, staffing, and responsibilities of the Authority SST could be comparable to that of the MCA-Mongolia or its representative's SST, for example, as described for the pre-construction phases of Appendices F, G and H of the ESIA.

## I.2 Environmental Management

### Management Measure O&M -1: Emergency Preparedness and Response

POTENTIAL IMPACT
Accidents, natural disaster, or sabotage that occur during operations and maintenance and risk jeopardizing worker and public health and safety, and the environment
<p>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Mongolian Law on Environmental Protection <ul style="list-style-type: none"> <li>○ Requires business entities eliminating or suspending their activities if they adversely affect the environment in breach of environmental legislation, standards and permissible maximum levels.</li> </ul> </li> <li>• Mongolian Law on Disaster Protection <ul style="list-style-type: none"> <li>○ Requires establishing management for disaster protection service, staff and specialized unit and to organize their training and preparedness.</li> </ul> </li> <li>• Mongolian Law on Fire Safety <ul style="list-style-type: none"> <li>○ Requires ensuring the readiness of fire protection equipment and training their employees.</li> </ul> </li> <li>• Mongolian Law on Environmental Impact Assessment <ul style="list-style-type: none"> <li>○ Requires preparing a report presenting the findings of the detailed environmental impact assessment and develop an environmental management plan.</li> </ul> </li> <li>• Mongolian Law on Labor Safety and Hygiene <ul style="list-style-type: none"> <li>○ Requires employees attending short term training on labor safety and hygiene in compliance with procedures approved by the state central administrative organization in charge of labor issues and acquire knowledge and training.</li> </ul> </li> <li>• Mongolian Criminal Code <ul style="list-style-type: none"> <li>○ Requires providing an emergency aid to the injured, to report to the relevant authority or official after having caused.</li> </ul> </li> <li>• IFC Performance Standards 1, 3, and 4 <ul style="list-style-type: none"> <li>○ Requires that emergency preparedness and response activities will be periodically reviewed and revised, as necessary, to reflect changing conditions.</li> </ul> </li> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning <ul style="list-style-type: none"> <li>○ Provides guidance on cleanup of spill and releases of oil, fuel, lubricants, hydraulic fluids.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• Avoid, minimize, and effectively respond to emergency situations and resulting adverse impacts to the environment and communities associated with accidents, natural disasters, or sabotage</li> <li>• Effectively and efficiently respond to hazardous material spills so as to minimize their human health, safety, and environmental impacts</li> </ul>
MANAGEMENT MEASURE
<b>Emergency Preparedness and Response</b>

The Operator will:

- Fully comply with the requirements of this management measure
- Provide emergency preparedness and response training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the Operator's site-specific Emergency Preparedness and Response Plan, to all employees and contractors at the time of their induction and annually thereafter
- Prepare and submit for the Authority's written approval a site-specific Emergency Preparedness and Response Plan that specifies preventive measures and response strategies the Operator will implement in case of accidents, natural disasters, or sabotage to protect worker and public health and safety, and the environment. The requirements of the Plan are detailed below.

#### **Hazardous Materials Management**

- Obtain from the appropriate Mongolian authorities all permits for the use and handling of hazardous materials
- Develop prioritized material-specific handling procedures and training requirements as necessary according to risk
- Assign an officer to manage and advise on hazardous materials management

##### *Handling*

- Nominate all equipment used to transfer hazardous materials for approval by the Authority to assess that control measures are sufficient
- Provide spill kits, protective equipment, and other necessary equipment wherever hazardous materials are stored or used in significant quantities
- Provide and require use of personal protective equipment (PPE) and fire protection equipment at all times when handling hazardous materials, as specified in the relevant material safety data sheets (MSDS)
- Avoid handling and do not store hazardous materials in close proximity to drainage systems, waterways, or wells

##### *Transport*

- Nominate all haulers used to transport hazardous materials for approval by the Authority to assess that they are appropriately qualified to transport and handle hazardous materials
- Nominate all containers used to transport hazardous materials for approval by the Authority to assess that control measures are sufficient
- Provide and require use of fire extinguishers, fire prevention materials, and spill prevention materials appropriate for the hazardous materials being transported
- Properly secure containers containing hazardous materials prior to transport
- Properly mark, label, and placard containers and trucks in accordance with the MSDS
- Maintain chemical manifests in accordance with Mongolian regulations

##### *Storage Equipment*

- Provide spill kits, protective equipment, and other necessary equipment wherever hazardous materials are stored or used in significant quantities
- Locate suitable fire-fighting equipment, emergency equipment, and first aid kits in appropriate locations close to hazardous material storage areas
- Do not use and take out of commission damaged containers that present a risk of leakage
- Maintain an inventory hazardous materials held or generated, detailing the following:
  - Provisions of respective MSDSs
  - Segregation of potentially reactive materials
  - Measures in place to mitigate potential hazards to humans and the environment posed by inventoried hazardous materials
- Maintain at all times at hazardous material storage areas record books specifying the types, classifications, names, and quantities of stored substances

##### *Storage Area Design*

- Prepare and submit for the Authority's written approval site-specific designs of storage areas to store the types and quantities of hazardous materials required, specifying, but not limited to:
  - Facility location sufficiently distant from accommodation and work areas as determined by risk assessment
  - Access control to storage areas, where appropriate
  - Provision of sufficient space to enable safe access and handling of containers
  - Provision of 110%-capacity secondary containment or 25% of the capacity of all the total volume of the stored individual containers within the bund, whichever is larger, for all storage of liquid hazardous materials, including, but not limited to, waste oil and solvents
  - Walls, dykes, and/or berms to separate incompatible materials
  - Adequate ventilation of volatile hazardous material storage areas to prevent the build-up of explosive or harmful airborne pollutants
  - Fire prevention systems appropriate and adequate to the materials being stored, in accordance with storage facility risk assessment
  - Prevention and containment of contamination of the environment, particularly soil, surface water, and groundwater
  - Directing of surface runoff and stormwater drainage from material storage areas through a drainage system to oil/water separators and sediment traps

#### *Operational Requirements*

- Restrict access to hazardous waste storage areas to authorized personnel only
- Minimize as far as possible the overall volume of hazardous materials used, purchased, and present on site, through careful material selection, stock control, and materials inventory
- Ensure adequate storage capacity is available through stock control
- Do not store waste oils for extended periods in underground sumps
- Empty and inspect regularly tanks and sumps for any signs of cracks or holes
- Record findings of inspections
- Repair any cracks or holes
- Record any repairs conducted
- Store incompatible materials (e.g., bases and acids) in a safe manner and at a safe distance to prevent accidents, as determined through risk assessment, through:
  - Not storing incompatible materials in the same container
  - Segregating incompatible materials by appropriate means, including, but not limited to segregating by area, walls, dykes, berms, or in separate facilities
- Maintain the capacity and functionality of bunds at all times as part of periodic inspections
- Consider water removed from containment areas to be contaminated waste and treat accordingly
- In accordance with risk assessment for hazardous material storage areas:
  - Restrict ignition sources, including prohibiting smoking
  - Develop and execute appropriate fire prevention and management practices
- Properly mark, label, placard, and secure containers and storage areas in accordance with the MSDS provided in Mongolian, English, and any other languages as appropriate
- Store containers on pallets within bunds, or other suitable storage structures

#### *Equipment Use and Maintenance*

- Maintain oil-filled electrical appliances in good and fire-resistant condition
- Undertake all planned equipment, plant, and vehicle maintenance in designated service areas with suitable containment to prevent contamination of the environment
- Place drip trays under all stationary equipment that use fuel, oil, or lubricants that are not self-contained (including, but not limited to, generators, mobile lighting towers, pumps)
- Equip tanks and machinery with measurement devices and overflow protection (e.g., flow and level meters, relief valves, overflow protection valves, and emergency shutoff

#### **Spill Response Procedure**

- Operator employees are responsible for verbally reporting all spills to their immediate supervisor.
- Supervisors will then coordinate the spill response process and report the spill as an environmental incident to the Authority.

#### *Spill Response Kits*

- Supervisors will clearly label and store spill response kits in locations that will facilitate a prompt response to spills
- Spill response kits in all work areas will contain the following equipment:
  - Shovel
  - 2 x respiratory masks
  - Absorbent material (pads and socks)
  - 2 x goggles
  - 60-liter sealable container
  - 2 x PVC gloves
  - Jug granular absorbent
  - Red wheelie bin
- Spill response kits will be carried in mobile machinery where a significant spill risk is identified with its operation. The contents of these spill kits will be specific to the risks presented from the mobile machinery and will be adequate and appropriate for the materials being transported.
- Where there are significant spill risks apparent outside of workshops or designated hazardous material storage areas, spill response equipment will be specific to the risks posed.

#### *Control of Hazardous Material Spills*

- The health and safety of employees, contractors, and bystanders will be considered prior to initiating the spill response process.
- Personnel considered at risk of harm in the event of a spill will be evacuated from the spill impact area by the supervisor in charge of the work area.
- If the spill presents an emergency risk to bystanders or the environment, the site emergency response team will be notified immediately of this situation by the individual who identifies the risk.
- If safe to do so, trained individuals will attempt to control the spill at the source and remove all sources of heat and ignition.
- Spills will then be reported verbally to the immediate supervisor, who will arrange for spill containment and cleanup to occur.
- The supervisor will notify the Authority of the spill details to enable advice to be provided and statutory reporting processes to be initiated.

#### *Containment and Clean Up of Hydrocarbons*

- Contain the extent of the spill by using absorbent material around the perimeter of the spill or earthen bunds if outside of designated workshops or storage areas.
- Excess hydrocarbons may be soaked up using absorbent materials, including dirt, or removed by use of a vacuum truck if the spill is present as free product or is on water.
- Prevent hydrocarbons entering drainage systems and waterways. If hydrocarbons do enter drainage systems or waterways, these should be dammed or have booms placed in them to minimize the spread of hydrocarbons.
- Waste material will be disposed of appropriately:
  - Absorbent material, booms, etc. will be placed into designated bins.
  - Contaminated soil and water will be removed and stored in a designated area as advised by the Authority.

#### *Containment and Clean Up of Sewage*

- Contain the spill with sand or earth to prevent it entering drainage systems and waterways.
- Calcium hypochlorite powder will be spread around the site for spills likely to be encountered by personnel.

- Any wastewater that enters waterways or drainage systems will be disinfected with the use of calcium hypochlorite powder.
- Wastewater then will be removed by use of a vacuum truck and taken to a waste treatment facility.
- Remaining water and solids will be disinfected using calcium hypochlorite powder.

#### *Containment and Clean Up of Chemicals*

- Contain the extent of the spill using sand, earth, sawdust, or other inert material to prevent it entering drainage systems and waterways.
- Chemicals clean up may vary depending on the chemical type.
- General purpose spill kit supplies, instead of oil-absorbent supplies, will be used.
- Collect recoverable product, if possible, and dispose of at an approved disposal site or facility in accordance with guidance provided by the Authority.

#### *Containment and Clean Up of Battery Acid*

- Contain the spill and neutralize with a basic substance such as sodium bicarbonate in accordance with guidance provided by the Authority.
- Collect recoverable product and neutralize with sodium bicarbonate in accordance with guidance provided by the Authority.
- Dispose of with process water on site.

#### *Follow-up Sampling, Storage, and Treatment*

- For spills rated as significant risk on incident reporting, quality of cleanup work will be determined by follow-up sampling of contamination-receiving environment and compared against the Mongolian environmental standards on permissible levels of pollutants in air, water, and soil.
- If any exceedance of pollutant permissible levels is noted, cleanup work will be considered as inadequate and further cleanup will be required.
- Follow-up sampling will be carried for all spills to evaluate reporting requirements to the Authority.
- Hydrocarbon contaminated soils will be excavated and placed within a dedicated area for storage and treatment.

### **Emergency Preparedness and Response Plan**

- Prepare and submit for the Authority's written approval a site-specific Emergency Preparedness and Response Plan and associated procedures that, as a minimum:
  - Affirms and executes the Operator's comprehensive commitment to the standards and requirements listed above and specified in the plan
  - Complies with Construction Contract Documents Section V, Works Requirements, Section 01030 Special Requirements, Paragraph 1.04.D Emergency Action Plan
  - Specifies:
    - Site-specific preventive measures and response strategies the Operator will implement in case of accidents, natural disasters, or sabotage to protect worker and public health and safety, and the environment
    - Potential emergencies and key areas prone to emergency situations
    - Existing emergency response structures and capacities in the respective project areas—i.e., police, fire brigades, paramedics / ambulances, hospitals, etc.
    - Actions to be taken prior to an emergency—i.e., preventive and preparatory measures
    - Actions to be taken during an emergency—i.e., response measures
    - Actions to be taken after an emergency—i.e., recovery and assessment measures
    - Contact lists for emergency situations
    - Description of collaboration mechanisms of the project's emergency preparedness and response teams with existing emergency response structures in the respective project areas
  - Assigns roles and responsibilities for emergency preparedness and response
- Post copies of the Plan and the list of emergency contact numbers in highly visible locations within the construction sites and temporary facilities

### Management Measure O&M - 2: Mongolian Marmot Protection

<b>POTENTIAL IMPACT</b>
Disturbance of endangered Mongolia marmot ( <i>Marmota sibirica</i> ) and disturbance of marmot habitat
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b> <ul style="list-style-type: none"> <li>Mongolian Law on Environmental Protection               <ul style="list-style-type: none"> <li>Requires researching and establishing the potential for State and regional development, the restoration, breeding and raising of endangered animals, protection of soil, water, and air, and for humans to live in a healthy.</li> </ul> </li> <li>Mongolian Law on Fauna               <ul style="list-style-type: none"> <li>Requires the approval of the government based on the conclusions of an environmental impact assessment of the construction of industrial plants, power stations within the territory of extremely rare fauna.</li> </ul> </li> <li>IFC Performance Standard 6               <ul style="list-style-type: none"> <li>Prohibits implementing any activities that leads to a net reduction in the national/regional population of any Critically Endangered or Endangered species over a reasonable period.</li> </ul> </li> </ul>

OBJECTIVES
<ul style="list-style-type: none"> <li>Minimize disturbance of Mongolian marmots</li> </ul>
MANAGEMENT MEASURE
<p><b>Mongolian Marmot Protection</b></p> <p><b>Protection and Habitat Restoration</b></p> <p>The Authority will, with reference to the figure below:</p> <ul style="list-style-type: none"> <li>Designate operations-phase marmot protection zone extending a minimum of 200 meters from the outermost flight burrows</li> <li>Prohibit the operation of any motorized vehicles, including cars and all-terrain vehicles, and restrict foot traffic within operations-phase marmot protection zone by Operator personnel</li> <li>Develop and implement marmot protection training to be required of all Operator personnel and visitors to project facilities in the vicinity of the AWPP</li> </ul> <p>The Authority will employ or contract an experienced biodiversity specialist to develop and implement the following Mongolian marmot operations-phase monitoring and long-term protection program</p> <p><b>Operations-Phase Monitoring and Long-term Protection</b></p> <p>Prepare, submit, and implement Mongolian Marmot Monitoring and Evaluation Plan for the Authority's written approval, to monitor and evaluate Mongolian marmot population density and structure, reproduction, and mortality in the vicinity of the AWPP and access road and pedestrian path to the Monument to Terror Victims, and walking trail to the sacred ovoo on Songinokhairkhan Mountain. The plan will specify roles and responsibilities for marmot monitoring and evaluation.</p> <p>The plan may include but not be limited to the following, as determined by the biodiversity specialist and approved by the Engineer:</p> <p><i>Mapping</i></p> <ul style="list-style-type: none"> <li>Burrow clusters</li> <li>Family and individual home ranges</li> <li>Vegetation</li> <li>BWSE-related and other human encroachment</li> </ul> <p><i>Monitoring activities</i></p> <ul style="list-style-type: none"> <li>Use of drone equipped with thermal imaging camera</li> <li>Direct observation aided by binoculars and spotting scopes</li> <li>Use of automatic camera trap</li> <li>Capture with or without marking</li> </ul> <p><i>Monitoring parameters</i></p> <ul style="list-style-type: none"> <li>Burrow cluster population</li> <li>Age of individuals</li> <li>Sex of individuals</li> <li>Home range size</li> <li>Number of families</li> <li>Family composition</li> <li>Number of pups</li> <li>Activity/Behavior</li> <li>Predation</li> <li>Survival and mortality</li> <li>Total population</li> <li>Age and sex distribution of population</li> </ul> <p>Observations are to be repeated during the morning and evening active periods.</p> <p>Monitoring data for the selected parameters will be evaluated as operations phase progresses for changes attributed to loss of marmot habitat or disturbance of marmots. The monitoring and evaluation plan will specify impact indicators and impact criteria determined by the biodiversity specialist and approved by the Authority.</p>

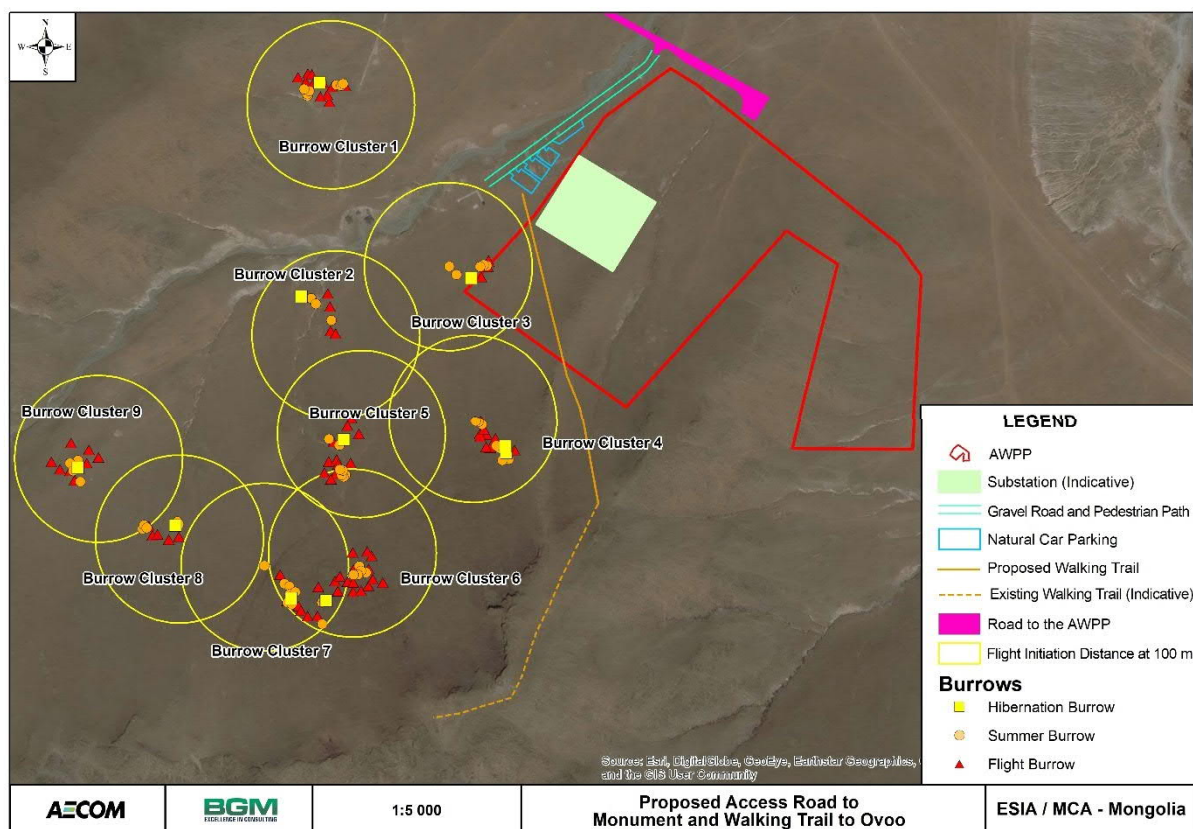

Exceedance of any of the impact criteria will trigger, ***independent of this management measure***, preparing, submitting, and implementing protective actions, in addition to those specified above, formulated to avoid, minimize, or offset the observed adverse impact. Such actions may include the following, as well as other measures recommended by the biodiversity specialist:

- Constructed buffers; e.g., vegetated earth berms
- Rock piles where marmots can watch for predators, thermoregulate, and dig burrows
- Spill protection measures
- Permanent Mongolian marmot protection zone
- Driving restrictions; e.g., prohibit or control off-road driving, set speed limits, restrict non-essential traffic to daytime
- Marmot protection and avoidance training
- Warning and interpretive signage
- Supplemental feeding to increase reproduction and survival, and attract marmots away from roads

The Operator will be requested to provide a quotation to implement such actions identified by the biodiversity specialist should the impact criteria be triggered.

#### LOCATIONS:

Observed Mongolian marmot burrow clusters in the vicinity of the proposed AWPP and replacement access road and sidewalk to the Monument to Terror Victims and sacred ovoo on Songinokhairkhan Mountain, as located on the following figure, and associated, nearby habitat supporting foraging, including pup-weaning, and dispersal of sub-adults including pup-weaning, and dispersal of sub-adults:

## I.3 Waste Management

### Management Measure O&M - 3: Waste Management

<b>POTENTIAL IMPACT</b>
Risks and adverse impacts of handling, storing, treating, and disposing of waste
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b>

Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:

- Mongolian Law on Hazardous and Toxic Chemicals
  - Requires depositing the waste based on conclusion of the related professional organization to the place determined by the district governor.
- Mongolian Law on Sanitation
  - Prohibits disposing waste in the places other than the specified points.
- Mongolian Law on Waste
  - Prohibits establishing centralized waste disposal sites in urban settlement areas, water sanitary and protection zones and mining areas.
- Government of Mongolia Resolution No. 135 of 2002 addressing the procedures of the classification, collection, packaging, transportation, treatment, storage, and disposal of hazardous waste
- Government of Mongolia Resolution No. 116 of 2018 addressing Articles 7.1.2 and 7.1.3 of the Law on Waste (repealed Government Resolution No. 135 of 2002).
- Joint Order No. A-320/305 of Minister of Nature, Environment and Tourism and Minister of Health of 2011 addressing the procedures of the disposal of medical wastes
  - Requires providing personal protective equipment to the organization's waste management officer.
- Minister's Order No. 404 of 2006 of Ministry of Nature, Environment and Tourism addressing the procedure of the disposal and landfill of waste
  - Minister's Order No. A/443 of 2018 addressing Articles 4.4.1, 4.4.2, 4.4.3 of the Law on Hygiene (repealed Minister's Order No. 404 of 2006).
- IFC Performance Standards 3 and 4
  - Encourages recovering and reusing waste in a manner that is safe for human health and the environment.
- IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning
  - Provides guidance on management of non-hazardous solid waste generated at construction sites and associated facilities, hazardous materials, and wastewater discharges.

#### OBJECTIVES

- Effectively manage waste by minimizing waste generation and safely handling, storing, treating, and disposing of generated wastes

#### MANAGEMENT MEASURE

##### Waste Management

The Operator will:

- Comply with Construction Contract Documents Section V, Works Requirements, Section 01030 Special Requirements:
  - Paragraph 1.04.E Hazardous Waste Management Plan
  - Paragraph 1.14 Disposal of Excess Material
  - Paragraph 1.21 Disposal of Debris
- Comply with Construction Contract Documents Section V, Works Requirements, Section 01110 Environmental Protection Procedures:
  - Paragraph 3.04.I, requiring the disposal of all debris and excess material outside wetland or floodplain areas in an environmentally sound manner
  - Paragraph 3.05.A, prohibiting the use of burning at the project site for the disposal of refuse and debris
- Comply with Construction Contract Documents Section V, Works Requirements, Section 01610 Delivery, Storage and Handling:
  - Paragraph 1.05.C Storage and Protection
- Comply with Construction Contract Documents Section V, Works Requirements, Section 02100 Site Preparation:
  - Paragraph 1.07.D, requiring the legal disposal of all waste and surplus material

- Paragraph 3.03 Disposal of Waste Materials
- Comply with Construction Contract Documents Section V, Works Requirements, Section 02210 Earth Excavation, Backfill, Fill and Grading:
  - Paragraph 3.11 Reuse and Disposal of Surplus Excavated Materials
- Fully comply with the requirements of this management measure
- Provide in storage locations and principle points of use material safety data sheets (MSDSs) for all stored materials in Mongolian, English, and any other languages as appropriate
- Provide 110%-capacity secondary containment or 25% of the capacity of all the total volume of the stored individual containers within the bund, whichever is larger, for all storage of liquid hazardous materials, including, but not limited to, waste oil and solvents
- Do not store waste oils for extended periods in underground sumps
- Empty and inspect regularly tanks and sumps for any signs of cracks or holes
  - Record findings of inspections
  - Repair any cracks or holes
  - Record any repairs conducted
- Make available on site spill kits, protective equipment, and other necessary equipment where hazardous materials are handled, to clean and mitigate spills
- Locate appropriate first aid close to hazardous material storage areas, including, but not limited to, eye-wash, showers, and first aid kits
- Only transport hazardous materials using operators licensed and approved by the Authority for the specific material
- Implement the following waste management hierarchy, in the following order of preference:
  - Waste avoidance and reduction at source
  - Waste reuse and recycling
  - Waste storage, treatment, and disposal to local, Mongolian, and international standards
- Classify all wastes according to the following and based on internationally accepted regulations, guidelines, definitions, and methodologies:
  - Mineral waste
  - Non-hazardous waste, including domestic waste and inert waste
  - Hazardous waste, including medical waste
  - Wastewater
- Segregate, securely contain, and monitor waste at the source of generation pending treatment, transport, or disposal
- Prohibit open burning of non-hazardous and hazardous solid waste
- Transfer recyclable wastes only to facilities operated by licensed recycling contractors, subject to assessment by the Authority of the contractors and facilities
- Transfer non-hazardous waste, other than recyclable wastes, only to waste disposal facilities licensed in accordance with applicable Mongolian laws and regulations
- Sterilize medical waste by autoclave in 121°C for at least 20 minutes prior to transfer to disposal and a licensed facility
- Properly store on site all hazardous wastes for which there is not an engineered and approved treatment or disposal method available until a treatment and/or disposal route becomes available
- Maintain an inventory by location, specifying quantity per month and cumulative total, and detailing:
  - Wastes generated
  - Wastes sent for off-site recycling
  - Wastes subject to hazardous waste treatment
  - Wastes subject to non-hazardous waste disposal
  - Unrecyclable hazardous wastes stored
- Provide waste management training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the Operator's site-specific Waste Management Plan, to all employees and contractors at the time of their induction and annually thereafter

<p>The Operator will prepare and submit for the Authority's written approval a site-specific Waste Management Plan and associated procedures that, as a minimum:</p> <ul style="list-style-type: none"> <li>• Affirms and executes the Operator's comprehensive commitment to the standards and requirements listed above and specified in the plan</li> <li>• Assigns roles and responsibilities for waste management</li> <li>• Disposition of hazardous wastes for which no engineered and approved treatment or disposal method is available</li> </ul>
<p><b>LOCATIONS:</b></p> <p>All BWSE sites and facilities where waste is generated, stored, treated, or disposed of</p>
<p><b>MONITORING</b></p>

## I.4 Social and Gender Inclusion

### Management Measure O&M - 4: Labor Management

<b>POTENTIAL IMPACT</b>
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Professional management and conditions of labor</li> <li>Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> <li>Women's employment opportunities in operations and maintenance related work in the water supply sector</li> <li>Potential alleviation of poverty in local area</li> <li></li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b>  Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>Constitution of Mongolia <ul style="list-style-type: none"> <li>Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>Mongolian Civil Code <ul style="list-style-type: none"> <li>Requires providing office space, tools and equipment necessary to ensure employees' health.</li> </ul> </li> <li>Mongolian Law on Gender Equality</li> </ul>

- Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.
- Mongolian Law on Labor
  - Prohibits discriminating against race, social origin or status, wealth, religion, or ideology
  - Prohibits employing children under the age of 16 or under 18 in dangerous industries, including construction
- Mongolian Law on Minimum Wage
  - Minimum wage is fixed by National Tripartite Committee on Labor and Social Consensus representatives.
- Mongolian Law on the Protection of the Rights of the Child
  - Prohibits employing children in any work that is likely to harm their health or morale, and exploiting or paying unjust wages to children
- Mongolian Law on Social Protection of Disabled Persons
  - Prohibits building any buildings and facilities that do not meet needs and requirements of persons with disabilities.
- Mongolian Law on Combating Human Trafficking
  - Requires regulating the workplace to ensure the implementation of the legislation on combating human trafficking, and if it is not specified, it shall be obliged to comply with the instructions, recommendations, statements and instructions given by the competent authorities and officials.
- Mongolian Law on Sending Labor Force Abroad and Receiving Labor Force and Specialists from Abroad
  - Regulates relations with respect to employment of a Mongolian citizen abroad and a foreign citizen in Mongolia, and protection of their rights and interests.
  - Reinforces provisions of the Constitution of Mongolia, Labor Law, Social Insurance Law, and other related legal acts, and legal status of a foreign citizen.
- IFC Performance Standard 2
  - Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.
  - Operator will adopt and implement human resources policies and procedures appropriate to its size and workforce that set out its approach to managing workers consistent with the requirements of this performance standard and national law.
  - Operator will provide workers with documented information that is clear and understandable regarding their rights under national labor and employment law and any applicable collective agreements, including their rights related to hours of work, wages, overtime, compensation, and benefits upon beginning the working relationship and when any material changes occur.
  - Operator will not make employment decisions on the basis of personal characteristics unrelated to inherent job requirements. Operator will base the employment relationship on the principle of equal opportunity and fair treatment, and will not discriminate with respect to any aspects of the employment relationship, such as recruitment and hiring, compensation (including wages and benefits), working conditions and terms of employment, access to training, job assignment, promotion, termination of employment or retirement, and disciplinary practices. Operator will take measures to prevent and address harassment, intimidation, and/or exploitation, especially in regard to women. The principles of non-discrimination apply to migrant workers.
  - Prohibits employment of child labor.
- Millennium Challenge Corporation Counter-Trafficking in Persons Policy
  - Requires contractors to actively manage employment conditions to prevent exploitation of workers by employers.

- Millennium Challenge Corporation Gender Policy and Commitment to Gender Integration and Social Inclusion
  - Requires developing and implementing an employment plan that prioritizes using local labor particularly from the Aol of the project and which encourages contractors to employ as workers at least 30% women
  - Requires employers to make working conditions suitable for both male and female employees.
- Millennium Challenge Corporation Guidance Note to MCAs on Sexual Harassment
  - Requires that contractors are well-informed about existing anti-sexual harassment policies and procedures, and that contractors meet the requirements in the standard bidding documents.
  - Ministry of Construction and Urban Design (MCUD) Gender Responsiveness Policy
  - Calls for gender targets in employment via “international and domestic tenders, so that one gender should not be lower than 15 percent among workers, and 25 percent among decision makers.”
  - Ministry of Labor and Social Welfare Order (2016)
  - Expanded the types of hazardous work prohibited for children under the age of 18 to include construction
  - International Labor Organization fundamental conventions, and International Human Rights instruments and conventions

#### OBJECTIVES

The Labor Management Plan ensures that the Operator and their workers have clear expectations about the behaviors and conditions expected of the Operator and all workers.

- Promote fair treatment, non-discrimination, and equal opportunity of workers
- Promote local labor opportunities
- Achieve a target of women’s employment as 30% of all labor at each skill/occupational level
- Establish and maintain a constructive worker-management relationship
- Protect workers, including vulnerable categories of workers such as children, migrant workers, workers engaged by third parties, and workers in the supply chain
- Avoid the use of forced labor
- Maximize the beneficial impact of the project on the affected communities

#### MANAGEMENT MEASURE

##### Labor Management

The Authority Social Safeguards Team (SST) will:

- Encourage Operator to employ local unskilled and semi-skilled labor, particularly youth and women, and to procure goods and services from local businesses and entrepreneurs
- Cooperate with the local District Labor Offices
- Encourage the publication of vacancies and procurements within affected communities
- Encourage the holding of job fairs and procurement workshops within affected communities to support local applicants to apply for jobs and local business and entrepreneurs to bid
- Support local job applicants to apply, and local businesses and entrepreneurs to bid
- Gather names of interested workers from affected households and through community information programs and consultation meetings
- Share the names of interested workers with District and Khoroo Labor Offices and Operator
- Encourage Operator to employ women at a rate of at least 30% of personnel at each skill/occupational level
- Encourage Operator engagement with relevant university engineering programs, technical and vocational education and training (TVET), and professional associations to 1) identify and recruit qualified job applicants and 2) establish internships and apprenticeships

The Operator will:

- Fully comply with the requirements of this management measure
- Perform the work in accordance with relevant sections of the ESMP

### *Access to Employment*

- The Operator will:
  - Publish vacancies (listing the required qualifications for all categories of employment) within project-affected communities and at District and khoroo offices and provide such information to the Engineer and during each community meeting
  - Publish and communicate employment opportunities listing the required qualifications for all categories of employment city-wide, and beyond in Mongolia, if the vacancies cannot be filled from local communities
  - Ensure that a staff person responds to questions from the local population regarding employment and procurement opportunities
  - Develop an employment forecast and a written recruitment strategy to encourage the employment of qualified individuals among the local population(s) in project operations and maintenance with particular focus on women, youth, and to achieve a target of women's employment of at least 30% of personnel at each skill/occupational level, and to provide training on how to be effective in operating and maintaining the BWSE facilities and infrastructure. Through the Operator's Social Safeguards Officer, liaise with the Authority SST and local labor offices to provide support with the job application process, encourage local employment (including women's employment), and publicize a fair, consistent and transparent recruitment process
  - In disseminating information on potential employment opportunities, take steps to maximize outreach, using all forms of media that may be appropriate
  - Ensure that all staff have written employment contracts with fair employment conditions to workers, give equal pay for equal work to men and women, and fulfil all conditions specified under the Mongolian Law on Labor defining the contracts
- The Operator is encouraged to create pay bands for each category of worker to ensure equal pay for equal work
- 
- As feasible, the Operator will:
  - Develop and submit a plan for providing on-the-job training and skills transfer opportunities to the local labor force
  - Engage with training, education, and professional organizations—such as Technical and Vocational Education and Training, Implementing Agency of the Ministry of Labor and Social Protections, Mongolian University of Science and Technology, and the Mongolian Builder's Association—to recruit qualified applicants, and provide apprenticeships and internships for students who study water engineering and relevant subjects at university

### *Local Procurement*

- The Operator will:
  - Proactively procure goods and services from local businesses and entrepreneurs in Khan-Uul and Songinokhairkhan Districts and Ulaanbaatar, and members of targeted disadvantaged groups (e.g., women, people with disabilities), achieved through:
    - Publicizing procurements within the targeted geographical area or targeted group, for example at the District and khoroo offices and via notice boards, print media (newspapers, etc.), recruitment agencies, or job and career fairs
    - Publicizing and hold procurement workshops within the targeted geographical area or targeted group
    - Adding priority criteria for businesses and entrepreneurs in the targeted geographical area or members of the targeted group to the selection procedure
  - In disseminating information on potential service procurement opportunities, take steps to maximize outreach, using all forms of media that may be appropriate

### *Workplace Environment*

- The Operator will:

- Establish, execute, and enforce a Worker Behavior Code of Conduct on which all employees will be briefed, that all employees are required to sign, and that mandates immediate dismissal for serious offences including sexual harassment, violence or confirmed cases of engagement in trafficking in persons. The Code will specify:
  - o Expectations of worker behavior, and penalties for transgression
  - o Mongolian legal definitions of trafficking in persons (TIP), zero-tolerance for TIP, and remedies that the Authority may take in response to confirmed cases of engagement of trafficking in persons
  - o Compliance with the Operator's Anti-Sexual Harassment Policy and notification of the Operator's Sexual Harassment Incident Reporting and Referral Plan
  - o Rights of employees to a grievance mechanism, holidays, and cultural and festival access
  - o Conditions for work camps, shelter, water and sanitation, food, and security
  - o The responsibility of all workers, regardless of their role or duration of employment, will be expected to review and acknowledge the Workers' Code of Conduct by signing the code sheet
  - o The requirement to respect local customs and practices
- Establish and execute a worker's grievance redress procedure that:
  - o Formalizes a system for receiving and managing internal complaints of sexual harassment, gender-based violence, or issues of trafficking persons (including engaging in commercial sex with a person under 18 years of age)
  - o Guarantees confidentiality to makers of allegations
  - o Designate the Operator's Social Safeguards Officer or other officer as responsible for collaborating with the human resources department on the grievance redress procedures
  - o Refers to the Operator's Sexual Harassment Incident Reporting and Referral Plan for allegations of sexual harassment
  - o Specifies that the Operator's zero-tolerance for gender-based violence addresses any complaints of gender-based violence against its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism
  - o In cases of discrimination against women or of allegations of sexual harassment or violence, requires that the Operator's Social Safeguards Officer contact the Authority SST to include them in the investigation and appoint a third party—such as a representative from an NGO such as the Centre for Gender Equality or equivalently qualified, experienced organization—to lead the investigation

#### *Training*

- The Operator will:
  - Provide training to enhance the skills of employees using on-the-job training, internships, and apprenticeships, secondment to training programs such as Technical and Vocational Education and Training, etc.
  - Mandate for all employees, before each worker starts work on the site, induction packages that include:
    - o Employment rights and conditions including non-discrimination and equal opportunity
    - o Gender-based violence
    - o Operator's Anti-Sexual Harassment Policy – including awareness of what constitutes sexual harassment, exploitation, and abuse and the Operator's Sexual Harassment Incident Reporting and Referral Plan
    - o Rights to have access to local festivals
    - o Cultural sensitivities, and social norms and practices in each area
    - o Expectations on avoiding poor relations between employees and local communities caused by behavior relating to alcohol, gambling, prostitution, illegal drug use, violence and sexual abuse of women, minors and lesbian, gay, bisexual, transgender, queer, and others (LGBTQ+) persons

- Countering the Trafficking in Persons Response Plan – awareness of responsibilities to counter the trafficking of people around the project area, the remedies that the Operator and the Authority may apply, and mechanisms for reporting suspected instances of TIP with the Operator's TIP Response Plan
- Awareness of the possibilities of the transmission of HIV/AIDS and communicable illnesses and how to prevent HIV/AIDS transmission
- Undertake a series of employment and social plan inductions and employee awareness programs that:
  - All employees must attend at the commencement of employment and over the employment period twice yearly
  - Incorporate toolbox talks that include reinforcement of all training programs
- Commission training modules on gender integration and social inclusion topics for all employees at intervals agreed with the Authority SST
- Require that the Social Safeguards Officer, together with the Authority SST Community Liaison Officers, conduct awareness raising with workers on child labor issues in the local community as part of an ongoing community awareness program on social issues
  - These toolbox talks will include ways that workers can report suspected child labor to the District Children, Youth and Family Offices, and the Authority Social Manager

*Site-specific Labor Management Plan*

The Operator will prepare and submit for the Authority's written approval a site-specific Labor Management Plan that:

- Affirms and executes the Operator's comprehensive commitment to the standards and requirements listed above and specified in the plan
- Includes the Operator's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan and the Workers' Code of Conduct
- Is consistent and compliant with:
  - Mongolian Law on Labor
  - Relevant aspects of the MCC Gender Policy coordinated and agreed with the Authority SST and operated by the Operator's Social Safeguards Officer
  - Employment aspects of the MCC Policy on Counter-Trafficking in Persons
- Assigns roles and responsibilities for labor management

**LOCATIONS:**

All BWSE sites and facilities

**MONITORING**

Authority SST:

- Monitor implementation of Operator's Labor Management Plan and Worker Behavior Code of Conduct, including prohibitions against trafficking in persons, gender-based violence, sexual harassment, and child labor
- Monitor implementation of Operator's employment recruitment strategies and assist Operator to reach potential local women, youth, and other excluded groups
- Monitor participation by all parties in the Operator's internal grievance redress procedure and external Grievance Redress Mechanisms

Operator:

- Record results of Operator's labor management responsibilities, with all data and statistics disaggregated by age and gender, and recording, for each worker hiring and leaving dates, along with duration (days) of employment and skills/occupational category and home location of workers (project-affected district/khoroos, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia)
- Document implementation of the requirements above for the Labor Management Plan, including all recruitment activities
- Document Worker Behavior Code of Conduct infringements and outcomes, and internal grievance redress activities under the Operator's internal grievance process

### Management Measure O&M - 5: Gender Integration and Social Inclusion (GSI)

<b>POTENTIAL IMPACT</b>
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Increased employment for women</li> <li>Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of forced labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b>
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li> <ul style="list-style-type: none"> <li>Millennium Challenge Account Social and Gender Integration Plan (SGIP) <ul style="list-style-type: none"> <li>Encourages employers to prioritize using local labor, particularly those from the project affected areas and encourages employers to employ women workers as at least 30%</li> </ul> </li> </ul> </li> <li>Millennium Challenge Corporation Gender Policy <ul style="list-style-type: none"> <li>The MCC Gender Policy states that countries will ensure that both women and men have opportunities for meaningful participation throughout the consultative processes related to a Compact program.</li> </ul> </li> <li>IFC Performance Standard 1 <ul style="list-style-type: none"> <li>Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> </ul> </li> <li>IFC Performance Standard 2 <ul style="list-style-type: none"> <li>Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.</li> </ul> </li> <li>Constitution of Mongolia <ul style="list-style-type: none"> <li>Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>Mongolian Law on Gender Equality</li> </ul>

<ul style="list-style-type: none"> <li>○ Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> <li>• Mongolian Law on Labor <ul style="list-style-type: none"> <li>○ Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>○ Prohibits employing children under the age of 16 – under 18 in dangerous industries e.g. construction</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<p>The Gender Integration and Social Inclusion (GSI) Plan complements the Labor Management Plan and provides additional management steps to address GSI considerations with respect to workers and local communities</p> <ul style="list-style-type: none"> <li>• To promote the fair treatment, non-discrimination, and equal opportunity of workers.</li> <li>• To encourage the employment of women as at least 30% of the workforce, calculated over full and part time positions as a percentage of total number of staff hired in the life of the contract at each skill/occupational level</li> <li>• To enable local people, particularly youth and people in project-affected districts/khoroos to gain short-term employment and training opportunities</li> <li>• Maximize the perceived beneficial impact of the BWSE project on the project affected communities</li> </ul>
<b>MANAGEMENT MEASURE</b>
<b>Gender Integration and Social Inclusion</b>
<ul style="list-style-type: none"> <li>• Under the Gender Integration and Social Inclusion Plan, the Operator will perform the work in accordance with relevant sections of the ESMP. The Operator will ensure the widest exchange of information between Operator and the local population and Labor Offices on planned and continuing works and employment opportunities through a program of community consultations and participatory meetings.</li> <li>• The Operator will prepare and submit for the Authority's written approval an Operator's Gender Integration and Social Inclusion Plan, which will be: <ul style="list-style-type: none"> <li>○ Consistent with the Mongolian Law on Labor and</li> <li>○ Consistent with the MCC Gender Policy's emphasis on community consultation and participation</li> <li>○ Consistent with IFC Performance Standard 1: Assessment and Management of Environmental and Social Risk and Impacts</li> <li>○ Agreed with the Authority Social Safeguards Team and operated by the Operator's Social Safeguards Officer</li> </ul> </li> <li>• The Operator will actively consider working with the existing construction brigades for maintenance work to enable local labor currently organized into brigades to gain employment. The brigades may require additional training to enable them to work on this large scale project – training in: <ul style="list-style-type: none"> <li>○ Modern tools and techniques where needed</li> <li>○ Brigade internal labor management, accounting, and estimation techniques</li> </ul> </li> <li>• As referenced in the Labor Management Plan and its recruitment strategy, the Operator will encourage the employment of qualified individuals among the local population(s) in project activities, with particular focus on women, youth, and disadvantaged groups. This may include small-scale supply contracts or services, with announcement of jobs published on information boards in District and khoroo Labor Offices and with information on employment disseminated by the Operator's Social Safeguards Officer, the Authority's SST or other means approved by the Authority.</li> <li>• Where appropriate, the Operator will provide training to enhance the skills of local people using apprenticeships and internships.</li> <li>• As referenced in the Labor Management Section above, the Contractor is encouraged to cooperate with Technical and Vocational Education and Training Centers and professional associations and to draw workers from among their graduate and members <ul style="list-style-type: none"> <li>○</li> </ul> </li> </ul>

<ul style="list-style-type: none"> <li>• The Operator will develop and submit a procurement forecast of all goods and services that could be procured locally. The Authority Social Safeguards Team will assist in disseminating this information to local communities with the Operator's Social Safeguards Officer.</li> <li>• The Operator will develop and submit for review and approval by the Authority, a procurement strategy to inform local communities and businesses of opportunities to provide goods and services to the Operator and to project workers, particularly targeting small businesses and those owned by women.</li> <li>• The Operator Social Safeguards Officer and Authority Social Safeguards Team will hold community meetings to inform people about the procurement processes and include District and khoroo offices, community organizations and the media.</li> <li>•</li> </ul>
<p><b>LOCATIONS:</b></p> <p>All BWSE sites and facilities</p>

### Management Measure O&M - 6: Counter-Trafficking in Persons, Gender-Based Violence and Sexual Harassment

<b>POTENTIAL IMPACT</b>
<p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Sexual harassment on construction sites and in temporary construction facilities and project-affected communities</li> <li>Trafficking in persons within and outside the project</li> <li>Gender-based violence on construction sites and in temporary construction facilities and project-affected communities</li> <li></li> </ul>
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b>  Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>MCC Counter-Trafficking in Persons Policy (C-TIP Policy) <ul style="list-style-type: none"> <li>States, "Trafficking in Persons" means (a) Sex trafficking in which a commercial sex act is induced by force, fraud, or coercion, or in which the person induced to perform such act has not attained 18 years of age; (b) The recruitment, harboring,</li> </ul> </li> </ul>

<p>transportation, provision, or obtaining of a person for labor or services, through the use of force, fraud, or coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery.”</p> <ul style="list-style-type: none"> <li>○ Adopts “a zero-tolerance policy to TIP and prohibits “The Contractor, the Contractor’s Personnel, any Subcontractor or supplier, or any of their respective personnel, or any agent or affiliate of any of the forgoing shall not engage in any form of Trafficking in Persons during the period of performance of any contract...”</li> <li>• Requires each Contractor to “acknowledge that engaging in such activities is cause for suspension or termination of employment or of the Contract” and specifies remedies that the MCA Entity will apply once a TIP incident has been confirmed. Mongolian Law on Promotion of Gender Equality <ul style="list-style-type: none"> <li>○ Requires the employer to incorporate into the organization’s internal procedures, specific norms for prevention of sexual harassment in a workplace and the redress of such complaints. It also requires that the organization design and conduct a program of training and retraining geared toward creating a working environment free from sexual harassment, and report on its impact in a transparent manner.</li> </ul> </li> <li>• Mongolian Law to Combat Human Trafficking <ul style="list-style-type: none"> <li>○ The law regulates relations with respect to the prevention and suppression of trafficking in persons, elimination of the causes of trafficking, and protection of victims' rights.</li> </ul> </li> <li>•</li> </ul>
<p><b>OBJECTIVES</b></p>
<ul style="list-style-type: none"> <li>• To prevent incidence of trafficking of persons for sex by project employees</li> <li>• To ensure that the Contractor and its Sub-Contractors do not employ trafficked labor and to minimize the risks of trafficking of foreign workers to project sites</li> <li>• To prevent sexual harassment at all construction sites and temporary construction facilities</li> <li>• To prevent Contractor and worker involvement in sexual harassment in project-affected communities and among members of stakeholder organizations in the workplace</li> <li>• To prevent incidences of gender-based violence involving workers</li> </ul>
<p><b>MANAGEMENT MEASURE</b></p>
<p><b>Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment</b></p>
<p><i>Counter Trafficking in Persons (C-TIP)</i></p> <ul style="list-style-type: none"> <li>• Under the Counter-Trafficking in Persons Plan, the Operator will perform the work in accordance with relevant sections of the ESMP. The Operator will ensure all employees are informed of expectations of behavior as per the Worker Behavior Code of Conduct and the penalties for proven infringements which is instant dismissal.</li> <li>• The Operator will prepare and submit for the Authority’s written approval an Operator’s Counter-Trafficking of Persons Response Plan that shall: <ul style="list-style-type: none"> <li>○ Address the specific TIP risks identified in the ESIA, including withholding of foreign workers’ passports and commercial sex with minors,</li> <li>○ Designate a single responsible person who will notify the Authority within 24 hours of an alleged incident and implement any investigation.</li> <li>○ Specify when to contact legal authorities, list UB city officials, national government offices, and NGO organizations that address TIP, and state how the Operator will deal with them in the case of a TIP incident.</li> </ul> </li> <li>• Include mechanisms to ensure confidentiality of any TIP survivors and to refer them to law enforcement and/or supportive services if they wish</li> <li>• The Operator shall develop, as part of its TIP Response Plan, an anonymous mechanism for workers and community members to report suspected TIP incidents to the Authority, and this must be separate from the project grievance mechanism The Counter-Trafficking in Persons Response Plan will be: <ul style="list-style-type: none"> <li>○ Consistent with the Mongolian Law on Labor and</li> <li>○ Compliant with Mongolian Laws on Promotion of Gender Equality, to Combat Human Trafficking and to Combat Domestic Violence</li> </ul> </li> </ul>

- Compliant with the MCC Gender Policy and the Counter-Trafficking in Persons Policy
  - Coordinated and agreed with the Authority Social Safeguards Team and operated by the Operator's Social Safeguards Officer
- The Counter-Trafficking in Persons Plan will specifically prohibit:
- - Procuring minors for sex
  - Transporting non-employee individuals in company vehicles
- The mandated penalty for proven incidence is instant dismissal
- The Operator is strongly encouraged to engage the Centre for Gender Equality or other similarly qualified and experienced organization to develop its TIP Response Plan, its anonymous reporting mechanism, its worker training, and its C-TIP content for community meetings
- The Operator shall design and deliver twice yearly training modules to all staff on sub-contractors, and service providers on the prevention of TIP and the Contractor's TIP Response Plan

#### *Gender-Based Violence*

- The Operator shall adopt a policy of zero-tolerance for gender-based violence and address any complaints of gender-based violence against its workers or committed by its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
- The Operator shall notify the Authority within 24 hours of any alleged incident of gender-based violence
- The Operator shall deliver a gender-based violence prevention training to all staff, sub-contractors, and service providers prior to all workers beginning on-site and thereafter at least twice each year.
  - The Operator is strongly encouraged to engage a local, qualified, and experienced organization to develop the training.
  - The training shall minimally identify behavior that constitutes gender-based violence, address attitudes towards violence against women and lesbian, gay, bisexual, transgender, and queer people (LGBTQ), and identify relevant Mongolian laws and organizations addressing gender-based violence.
  - It shall also explain the workings and protections in the Operator's grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ persons.

#### *Sexual Harassment*

- The Operator shall develop and submit to the Authority an Anti-Sexual Harassment Policy prohibiting sexual harassment, which includes an Incident Reporting and Referral Plan.
- The Incident Reporting and Referral Plan shall include a confidential mechanism for workers and community members to report sexual harassment to the Authority, separately from the Grievance Redress Mechanism.
- Employers are required to have a protocol in their Workplace Grievance mechanism in which persons alleging harassment or violence will be protected from identification and from pressure from the Operators or other workers to dismiss the complaint.
- The Operator must notify the Authority SST within 24 hours of any allegation of sexual harassment.
- The Operator must have a contract with a suitably experienced organization, such as the Centre for Gender Equality, to provide an investigation leader to manage the investigation of complaints of sexual harassment.
- The Authority may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Operator shall fully cooperate with any investigation conducted by the Authority regarding breach of this provision. The Operator will ensure that any incident of sexual harassment investigated by the Authority has been resolved to the Authority's satisfaction.

<ul style="list-style-type: none"> <li>The Operator shall design and deliver a sexual harassment prevention training to all staff, sub-contractors, and service providers, in accordance with the Operator's Anti-Sexual Harassment Policy. <ul style="list-style-type: none"> <li>Training shall be conducted within one month of workers starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.</li> <li>Training shall address <ul style="list-style-type: none"> <li>Attitudes to and prevention of sexual harassment in the workplace</li> <li>Workings and protections in the Contractor's internal grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ+ persons</li> <li>Additional requirements for minimum training content can be found in MCA-Mongolia's Social and Gender Integration Plan (SGIP)</li> </ul> </li> </ul> </li> <li>Information about the Operator's Anti-Sexual Harassment Policy and Incident Reporting and Referral plan shall be included in all community meetings and the Policy and Plan shall be communicated in Mongolian, in whole, to project-affected khoroo and District governments.</li> <li></li> </ul>

<b>MONITORING</b>
<p>Authority SST:</p> <ul style="list-style-type: none"> <li>Monitor Operator Counter-Trafficking in Persons Response Plan</li> <li>Monitor Contractor performance related to gender-based violence requirements</li> <li>Monitor Contractor's development and adherence to its Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> <li>Monitor Operator employment grievance mechanism</li> <li>Participate in the Operator's internal Grievance Redress Mechanisms on allegations of sexual harassment and violence</li> <li></li> </ul> <p>Operator:</p> <ul style="list-style-type: none"> <li>Maintain copies of all contracts or other agreements with organizations that provide services related to the development of C-TIP, GBV prevention, or prevention of sexual harassment policy, plans, training, or reporting mechanisms</li> <li>Maintain records of workers' participation in required trainings, including the dates of trainings and which workers participated</li> <li>Maintain records of all community meetings at which C-TIP, gender-based violence, and sexual harassment are addressed, including the dates and locations and a record of all questions, comments, and Operator responses</li> <li>Document all implementation of the results of Operator's Counter-Trafficking in Persons Response Plan responsibilities</li> <li>Document all complaints of sexual harassment and gender-based violence, maintaining confidentiality of witnesses and victims, and all implementation of the Sexual Harassment Incident Reporting and Referral Plan and interactions with law enforcement and other relevant response institutions and organizations</li> <li>Document all grievance redress activities under the Operator's internal grievance process</li> </ul>
LOCATIONS:
All BWSE sites and facilities
INDICATORS AND SUCCESS CRITERIA:
<p>Indicators:</p> <ul style="list-style-type: none"> <li>Content of the Operator's C-TIP Response Plan</li> </ul>

- Content of the Operator's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan
- Number and content of trainings for all staff
- Number of community meetings at which information presented covers the Contractor's policies on C-TIP, GBV, and sexual harassment and how to report suspected cases compared to the total number of Contractor-organized community meetings, disaggregated by location
- Numbers of complaints and grievances brought alleging sexual harassment, gender-based violence or trafficking in persons
- Number of required notifications of suspected TIP, GBV, and sexual harassment incidents compared to the number of complaints
- Contracts or other agreements with specialized organizations to develop and deliver plans, policies, and training

**Success Criteria:**

*Counter-trafficking in persons*

- Anonymous reporting mechanism for trafficking in persons is established prior to initiation of operations and functioning effectively thereafter
- The Operator's TIP Response Plan is thorough, references any guidance, provides a path to involve NGOs and specialized government staff, and includes clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.
- 100% of reported or suspected cases of TIP are dealt with in a timely, survivor centered manner, according to the TIP Response Plan.
- Effective reporting and management measures are developed are implemented and information about the measures are introduced to the employees and sub-contractors in toolbox sessions and by other means
- 100% of community meetings include reference to the zero-tolerance policy against TIP and to the Contractor's TIP Response Plan

*Gender-based violence*

- Culture of unacceptability of gender-based violence and assaults on women and LGBTQ+ persons established via:
  - 100% of workers having participated in gender-based violence prevention training prior to beginning work on-site
  - The Contractor notifying the Engineer and MCA-Mongolia within 24 hours of 100% of any alleged incident of gender-based violence
  - Timely, confidential, and thorough dealing with complaints of gender-based violence and 100% implementation of zero-tolerance policy in confirmed cases
  - 100% of community meetings including reference to the zero-tolerance policy against gender-based violence and procedures for reporting it

*Sexual harassment*

- The Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan are thorough, reference the Contract, aspects of the MCC Guidance to MCAs on Sexual Harassment, and Mongolian Law; provide a path to involve NGOs and specialized government staff; and include clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.
- 100% of employees and sub-contractors have taken the sexual harassment prevention training prior to on-site work
- All worker and community complaints about sexual harassment are
  - addressed confidentially
  - addressed in a timely manner and
  - resolved following the procedures in the Contractor's Sexual Harassment Incident Referral and Reporting plan
- After investigation, appropriate measures are taken against perpetrators of sexual harassment on the job site, in temporary facilities, and in surrounding communities

## I.5 Health and Safety Management

In addition to the management measure under this heading, the following management measures also specify health and safety management requirements:

- Management Measure O&M - 1: Emergency Preparedness and Response
- Management Measure O&M - 2: Waste Management

### Management Measure O&M - 7: Health and Safety Management

<b>POTENTIAL IMPACT</b>
Health and safety risks and impacts on work sites and in construction camps, and in the community
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:
<ul style="list-style-type: none"> <li>• Mongolian Law on Hygiene <ul style="list-style-type: none"> <li>- Requires introducing labor safety and hygiene management for protecting employees from accidents, damages, diseases which could occur during the operation.</li> </ul> </li> <li>• Mongolian Law on Waste <ul style="list-style-type: none"> <li>- Requires providing relevant knowledge to their staff on waste sorting and comply with safety standards in their operation.</li> </ul> </li> <li>• IFC Performance Standard 4 <ul style="list-style-type: none"> <li>- Requires evaluating the risks and impacts to the health and safety of the affected communities during the project life cycle and establishing preventive and control measures consistent with good international industry practice.</li> <li>- Requires avoiding or minimizing transmission of communicable diseases that may be associated with the influx of temporary or permanent project labor.</li> </ul> </li> </ul>

<ul style="list-style-type: none"> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning</li> <li>- Provides guidance on occupational health and safety and community health and safety.</li> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Water and Sanitation</li> <li>- Provides guidance on occupational health and safety and community health and safety relevant to the operation and maintenance of potable water withdrawal, treatment, and distribution systems.</li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>• Identify, assess, manage, and record and communicate all health and safety hazards, and ensure: <ul style="list-style-type: none"> <li>- Resulting risks to people, property, assets, and the environment are evaluated</li> <li>- Risks are managed in accordance with the recommended hierarchy of controls to achieve levels that are as low as reasonably practical</li> <li>- Any requirements to mitigate risks are implemented</li> <li>- Risks and actions to manage them are reported and communicated</li> </ul> </li> </ul>
<b>MANAGEMENT MEASURE</b>
<p><b>Health and Safety Management</b></p> <p>The Operator will ensure, as far as practicable, that the health, safety, and welfare of employees and all other persons on site are secured and are protected from hazards created by the project.</p> <p>The Operator will:</p> <ul style="list-style-type: none"> <li>• Fully comply with the requirements of this management measure</li> <li>• Comply with the IFC Environmental, Health, and Safety Guidelines<sup>1</sup></li> <li>• Comply with the health and safety requirements in Contract Documents Section V, Works Requirements, including but not limited to: <ul style="list-style-type: none"> <li>○ Section 01030 Special Requirements, Paragraph 1.04.C Health and Safety Plan</li> <li>○ Section 01046 Control of Work, Paragraph 3.05 Open Excavations</li> <li>○ Section 01046 Control of Work, Paragraph 3.07 Interference with and Protection of Streets</li> <li>○ Section 01063 Miscellaneous Requirements, Paragraph 1.03 Traffic Control</li> <li>○ Protect drinking water sources, whether public or private, at all times</li> </ul> </li> <li>• Prepare and implement a traffic control plan for accessing BWSE sites and facilities</li> <li>• Implement all reasonable precautions to protect the health and safety of workers</li> <li>• Avoid or minimize the occurrence and transmission of communicable diseases, including surveillance, and active screening and treatment of workers</li> <li>• Avoid or minimize potential hazards posed to project personnel and the public while accessing project facilities</li> <li>• Undertake hazard analysis to identify opportunities to reduce the consequences of a failure or accident</li> <li>• Control access to operational areas through physical barriers and demarcation, regular patrols of controlled areas, and engagement with communities</li> <li>• Avoid or minimize traffic accidents and promote traffic safety by all project personnel</li> <li>• Comply with local laws and international requirements applicable to the transportation of hazardous materials, and establish procedures for preventing or minimizing the consequences of releases of hazardous materials</li> <li>• Inform and regularly update affected communities, including herders and vulnerable groups, and government agencies about potential project hazards and changes to project activities that may have environmental, health, or safety impacts, as well as the proposed prevention, mitigation, and emergency response measures</li> <li>• Ensure that health, safety, and rescue matters are given a high degree of publicity to all persons regularly or occasionally on the project sites, as stipulated by Mongolia laws on occupational safety and health, by prominently displaying posters drawing attention to the relevant regulations in areas where Operator and subcontractor personnel, and site visitors will take notice</li> </ul>

<ul style="list-style-type: none"> <li>• Provide Health and Safety Management training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the site-specific Health and Safety Management Plan, to all employees and contractors at the time of their induction and annually thereafter</li> </ul> <p>The Operator will prepare and submit for the Authority's written approval a site-specific Health and Safety Management Plan and associated procedures that, as a minimum:</p> <ul style="list-style-type: none"> <li>• Affirms and executes the Operator's comprehensive commitment to the standards and requirements listed above and specified in the plan</li> <li>• Adhere to the MCC Health and Safety Policy (2012) and ensure the health and safety of all workers employed during the construction phase of the project</li> <li>• Complies with applicable Government of Mongolia regulations and international good practice, where the more stringent will apply</li> <li>• Specifies: <ul style="list-style-type: none"> <li>- Site security, including securing of excavations, hazardous materials, etc.</li> <li>- Confined space safety procedures</li> <li>- Excavation and trenching safety measures</li> <li>- First aid facilities, equipment, and materials</li> <li>- Protective clothing and safety equipment</li> <li>- HIV/AIDS awareness program</li> <li>- Covid-19 awareness program</li> <li>- Counter-trafficking in persons program</li> <li>- Health and Safety management monitoring and reporting</li> </ul> </li> <li>• Assigns roles and responsibilities for health and safety management</li> </ul>

## I.6 Education, Training, Community Outreach and Grievance Redress

Incorporated in various management measures are requirements for education, training, community outreach and grievance redress. The overall goals of these requirements are to provide operator employees with an understanding of the commitments included in those management measures and inherent in associated laws, regulations, and policies, and to provide the employees with an appreciation of their own accountability for maintaining mutually supportive relationships with local communities. All required training is to be provided as part of induction training (to provide general awareness) and job-specific training as necessary.

In addition to the management measure under this heading, the following management measures specify training requirements:

- Management Measure O&M - 1: Emergency Preparedness and Response
- Management Measure O&M - 2: Waste Management
- Management Measure O&M - 3: Labor Management
- Management Measure O&M - 4: Gender Integration and Social Inclusion
- Management Measure O&M - 5: Counter-Trafficking in Persons for Sex
- Management Measure O&M - 6: Health and Safety Management

Together, these management measures comprise the Education, Training, and Community Outreach Plan.

### Management Measure O&M - 8: Stakeholder Engagement, Community Consultation, and Grievance Redress

POTENTIAL IMPACT
Delays, increased grievances, political interference, and unnecessary pressure from uninformed groups resulting from lack of information and discussion/consultation
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>• IFC Performance Standard 1 <ul style="list-style-type: none"> <li>- Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> <li>- Requires establishment of a grievance mechanism to receive and facilitate resolution of affected communities' concerns and grievances about environmental and social performance, and scaled to the risks and adverse impacts of the project and with the affected communities as its primary user.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• Inform and involve all stakeholders</li> <li>• Have in place a defined policy for dealing with external parties</li> </ul>

- Foster positive relations and effective partnerships with local communities throughout project construction and operation
- Maximize the beneficial impact of the BWSE project on the affected communities

#### MANAGEMENT MEASURE

#### Stakeholder Engagement, Community Consultation, and Grievance Redress

The stakeholders and affected communities are to be informed of the construction activities, including implementation timeline and grievance redress procedure.

- The Authority will establish a Social Safeguards Team (SST) staffed by the Authority and the Operator, as follows:
  - To staff the core SST, the Authority will employ a Social Manager who will lead the team, two Social Safeguards Officers, and two Community Liaison Officers.
  - The Operator will employ an additional Social Safeguards Officer as the Operator's representative on the SST.

#### Stakeholder Engagement

- On behalf of the Authority, the SST will:
  - Maintain, revise, and update the Stakeholder Engagement Plan for the project consistent with the Authority Stakeholder Engagement Framework
  - Maintain, revise, and update the project Stakeholder Engagement Matrix
  - Document all stakeholder engagement activities in the Stakeholder Engagement Matrix
- The Operator will prepare and submit for the Authority's written approval an Operator's Stakeholder Engagement Plan, which will be:
  - Consistent with the Authority Stakeholder Engagement Plan coordinated and agreed with the Authority stakeholder engagement specialists
  - Operated by Operator's Social Safeguards Officer
- At a minimum, the Operator's Stakeholder Engagement Plan will document and specify:
  - Operator's responsibilities and participation in community consultation, specifying:
    - o A standard operating procedure agreed with the Authority that governs how the Operator will interact with local communities
    - o How contacts with the communities are to be made and recorded, and reported to the SST for documenting in the Stakeholder Engagement Matrix
    - o How information is to be shared with the communities and other project partners
    - o Protocols for conducting, recording, and disseminating the results of community consultation
  - Operator's responsibilities and participation in the project Grievance Redress Mechanism, specifying how the Operator will:
    - o Take action to resolve low level grievances
    - o Ensure all employees are trained to understand their role in the project Grievance Redress Mechanism
    - o Participate in higher tier grievance resolution
    - o Participation in the overall monitoring and evaluation of the project

#### Community Consultation

- The SST will
  - Undertake community information dissemination, consultation, and outreach addressing the influx of migrant workers and the associated risks to the affected communities, the Authority Grievance Redress Mechanism, and other issues that arise during consultation
  - Introduce Operators' officers to communities
  - Monitor and supervise Operator contacts with communities and other stakeholders
  - Ensure that gender and social inclusion measures are taken when planning meetings, and that thereby all sections of the community are equally informed and consulted
  - Document all community consultation activities in the Stakeholder Engagement Matrix

- In coordination with the Authority, the Operator will actively promote awareness and disclose information in affected communities on the following:
  - Purpose, nature, and scale of the project
  - Duration of proposed project activities
  - Opportunities for employment
  - Any risks to and potential impacts on such communities and relevant mitigation measures
  - Envisaged stakeholder engagement process
  - Grievance mechanism

#### **Grievance Redress**

- The SST will:
  - Manage, supervise, and monitor participation by all parties in, and use and operation of the Authority Grievance Redress Mechanism
  - Document all grievance redress actions in the Stakeholder Engagement Matrix
  - Report on the Grievance Redress Mechanism to Authority
- The Operator will:
  - Designate the Operator's Social Safeguards Officer or other officer as responsible for collaborating with the project Grievance Redress Mechanism
  - Prepare and submit for the Authority's written approval the Operator's internal grievance process for employees to raise issues about conditions of contact and social behavior

#### **LOCATIONS:**

All construction sites and temporary construction facilities

#### **MONITORING**

##### **Authority**

- Monitor Operator contacts with stakeholders and communities
- Document all stakeholder engagement activities
- Document all community consultation activities
- Monitor participation by all parties in Grievance Redress Mechanism
- Document all grievance redress actions under the Grievance Redress Mechanism

##### **Operator**

- Record results of Operator's community consultation activities
- Document all grievance redress activities under the Operator's internal grievance process

#### **LOCATIONS:**

All BWSE sites and facilities

#### **INDICATORS AND SUCCESS CRITERIA:**

##### **Indicators:**

- Number, content, and outcome of:
  - Stakeholder engagement activities
  - Community consultation activities
  - Grievance redress actions

##### **Success Criteria:**

- Successful outcome of:
  - Stakeholder engagement activities
  - Community consultation activities
  - Resolution of grievances

#### **REPORTING:**

- Update project Stakeholder Engagement Matrix
- Summarize other activities undertaken during reporting period
- Specify any material deviations or non-compliances to this management measure, and any other issues of concern

<ul style="list-style-type: none"> <li>Define activities planned during next reporting period</li> </ul>	
<b>SCHEDULE</b>	
<b>MANAGEMENT MEASURE:</b>  <i>Implementation:</i> <ul style="list-style-type: none"> <li>Throughout operations and maintenance</li> </ul>	<b>MONITORING:</b>  <i>Implementation:</i> <ul style="list-style-type: none"> <li>Update project Stakeholder Engagement Matrix as stakeholder engagement and community consultation activities, and grievance redress actions occur</li> </ul> <i>Reporting:</i> <ul style="list-style-type: none"> <li>Monthly in ESMP update</li> </ul>
<b>RESPONSIBILITY</b>	
<b>MANAGEMENT MEASURE:</b>  <i>Implementation:</i> Authority and Operator <i>Oversight:</i> Authority	<b>MONITORING:</b>  <i>Implementation:</i> Authority and Operator <i>Reporting:</i> Authority and Operator <i>Oversight:</i> Authority

## I.7 Risk Control and Emergency Response

The Risk Control and Emergency Response Plan references procedures specified in the management measures in the preceding plans that are pertinent to 1) controlling risks and 2) responding to emergencies. Such risks and emergencies include, for example, fuel spills and encountering previously unidentified cultural heritage resources, as well as incidents involving sexual harassment, human trafficking, and gender-based violence.

Due to the broad scope of the Risk Control and Emergency Response Plan, effectively the plan incorporates by reference the procedures specified in the management measures in all preceding plans for this project phase.

## I.8 Monitoring and Verification, and Maintenance Actions

This Monitoring and Verification, and Maintenance Actions Plan scopes the use of an adaptive approach to:

1. Verify that the management measures in the preceding plans are implemented, and that they are effective and sufficient
2. Revise those management measures that prove ineffective or insufficient

This approach acknowledges the risk and uncertainty of environmental and social management and fosters targeted modification of management measures to correct performance and outcomes. It will be executed as a continuous, iterative process by which the consequences of all management actions are systematically evaluated and, as needed, specific measures are modified in response to a determination that their forecasted outcomes will not meet requirements.

In the preceding plans, indicators and success criteria are designated for each management measure. For each management measure, the Authority, in its oversight capacity, will determine whether progress toward the designated success criteria is sufficient and will document its

determination in its regular updates and progress reports. If progress decidedly fails to meet iterative requirements, the Authority will inform the Operator of the need to formulate a management measure-specific adaptive maintenance action to implement midcourse corrections. The Authority or the Operator at the direction of the Authority will reformulate the management measure to foster meeting the success criteria, incorporating as applicable operational or structural changes, and considering the cost effectiveness of incorporating the changes. The scope of most management measures likely will remain fairly stable; whereas, it is expected that some methods will be added, modified, or dropped over the implementation timeline of some management measures.

The Operator will implement and monitor the revised management measure, and the Authority will provide oversight.

## **I.9 Decommissioning Process and Risks**

Conceptually, decommissioning the BWSE would entail removing the project infrastructure and restoring the land at the end of the bulk water system's useful life. It is likely that the technological options and preferred methods for decommissioning of the BWSE will be different at the time of decommissioning and cannot be foreseen, and the statutory and regulatory decommissioning requirements will have changed. Decommissioning activities would be undertaken in accordance with the technology and methods, and legislation and regulations prevailing at that the time of decommissioning. However, at this time, the decommissioning requirements are not known and plans for decommissioning have not been detailed.

If undertaken, decommissioning may entail:

- Establishing and decommissioning temporary facilities, including construction camps, laydown, staging, and storage facilities, and fueling stations
- Disconnecting and removing utilities
- Demolishing, removing, and/or abandoning in place infrastructure
- Disinfecting, filling, and sealing wells and pipelines
- Decommissioning well pump houses and the AWPP
- Dismantling and removing equipment and materials
- Reusing, salvaging, recycling, and/or disposing of equipment, materials, and stockpiled, stored, and residual supplies and waste

Depending on the final land uses agreed with the authorities—which in turn would depend on structural and functional shifts in land use and changes in the economy and development priorities over time—all or parts of the project sites may require restoration to a specified representative condition, such as each site's pre-disturbance condition or a condition that would enable a designated future use. This may require that the sites be backfilled with clean and/or granular material, and re-contoured so that pre-disturbance vegetation communities can be reestablished or new land uses are accommodated.

Potential risks arising from decommissioning of the project have not been assessed in detail and have been considered only generally as the useful life of the UB bulk water system and the bulk water system is anticipated to extend decades into the future. Generally, the potential risks that would arise from decommissioning of the BWSE would be similar to those environmental, and social and gender risks identified for the construction phase, as well as loss of some socioeconomic benefits of the operation and maintenance phase:

### **Environmental Risks**

- Soil disturbance, compaction, erosion, and sedimentation
- Dust generation
- Equipment and vehicle exhaust emissions
- Equipment and vehicle noise generation
- Traffic and disruptions to vehicle and pedestrian movement
- Petroleum product, chemical, hazardous and non-hazardous material, and waste spills, leaks, and disposal
- Stream and river sediment disturbance and downstream turbidity, sedimentation, and contamination
- Water quality deterioration from sediment disturbance, and leaks and spills
- Disturbance or loss of vegetation
- Disturbance or loss of fauna, notably Mongolian marmots, and habitat degradation
- Climate change

### **Social and Gender Risks**

- Loss of employment and income
- Loss of entrepreneurial opportunities
- Risks to livelihoods
- Illegal child labor
- Temporary loss of continuity of spiritual, religious, and traditional activities
- Disturbance of the cultural and sacred landscape and places
- Social conflict
- Health, safety, and security risks to decommissioning workers and the community
- Discrimination and harassment
- Gender-based violence and sexual harassment
- Trafficking in persons and prostitution

In general terms, managing these risks would require measures to reinforce beneficial impacts and avoid and mitigate adverse impacts comparable to those specified for the BWSE construction, and operation and maintenance phases. However, due to the above cited uncertainties regarding the timing of potential future decommissioning actions, applicable technological options and statutory and regulatory requirements, and future land uses and development priorities, such management measures cannot be detailed at this time.

## **I.10 Implementation Budget**

Implementation, including monitoring, of the ESMP management measures do not entail a marginal cost. Costs are reflected in the Authority's operating costs and the Operator's budget for operation and maintenance.

The cost of obtaining all required permits are deemed to be included the Operator's budget for operation and maintenance.

The costs of implementing ESMP management measures are primarily driven by staff costs. Other costs are associated with development of policies and plans, training, and equipment.

## Authority Costs

Staff Costs				
Role	Cost	Unit	Total	Assumption
Environmental and Social Manager	-	salary	-	Covered by existing USUG staff
Waste Management Manager	-	salary	-	Covered by existing USUG staff
HSE Manager	-	salary	-	Covered by existing USUG staff
Social Manager	-	salary	-	Covered by existing USUG staff
Social Safeguards Officers	-	salary	-	Covered by existing USUG staff
Community Liaison Officers	-	salary	-	Covered by existing USUG staff
Staff Costs Total			-	

Marmot Monitoring Costs (annual)				
Description	Cost	Unit	Total	Assumption
Binoculars	\$350.00	each	\$700.00	2 pairs
GPS	\$350.00	each	\$350.00	1 piece
Camera	\$1,000.00	each	\$1,000.00	1 piece
Experts in field	\$50.00	per day	\$1,600.00	Two experts, four 4-day missions per year
Reporting on each mission	\$50.00	per day	\$1,600.00	Two experts, four 4-day missions per year for 5 years
Marmot Monitoring Costs Total			\$5,250.00	

## Operator Costs

ESMP Management Measures Cost Estimate:

Staff Costs (annual)				
Role	Cost	Unit	Total	Assumption
Social Safeguards Officers	\$ 1,000.00	salary	\$ 12,000.00	2.5 million MNT/month + benefits
Cost of HR Office				
HR Office costs covered by existing USUG organization				
Cost of HSE Office				

HSE Office costs covered by existing USUG organization				
PPE for visitors and spares	\$ 100.00	per set	\$ 2,000.00	20 sets for visitors + spares.
<b>Cost of SSO Office</b>				
Description	Unit Cost	Unit	Total Cost	Assumption
Personal computer	\$ 2,000.00	each	\$ 2,000.00	1 per SSO staff
Mobile phone	\$ 300.00	each	\$ 200.00	1 per HR staff
Monthly phone plan	\$ 10.00	each	\$ 120.00	1 per HR staff per month
Vehicles		each		Existing USUG vehicle or SSO personal vehicle
Printer	\$ 1,000.00	each	\$ 1,000.00	1 printer
Stationary	\$ 50.00	per month	\$ 600.00	stationary and petty expenses per month
Regular Community Liaison	\$ 60.00	per day	\$ 3,600.00	Stakeholder and community liaison 5 days per month
HR Office Costs Subtotal			\$ 7,520.00	
<b>Plan and Policy Development Costs</b>				
<b>Description</b>	<b>Cost</b>	<b>Unit</b>	<b>Total</b>	<b>Assumption</b>
Labor Management Plan	\$ 2,500.00	each	\$ 2,500.00	HR Expert, 5 days @ \$500/day
Gender Integration and Social Inclusion Plan	\$ 2,500.00	each	\$ 2,500.00	GSI Expert, 5 days @ \$500/day
CTIP Plan	\$ 1,000.00	each	\$ 1,000.00	Expert, 2 days @ \$500/day
Code of Conduct	\$ 2,500.00	each	\$ 2,500.00	Psychologist/HR expert, 5 days @ \$500/day
Stakeholder Engagement Plan	\$ 2,500.00	each	\$ 2,500.00	Expert, 5 days @ \$500/day
Grievance Redress Mechanism (GRM)	\$ 2,000.00	each	\$ 2,000.00	Expert, 4 days @ \$500/day
Health and Safety Management Plan	\$ 2,500.00	each	\$ 2,500.00	HSE Expert, 5 days @ \$500/day
Covid-19 Prevention Plan		each		Use USUG plan
Emergency Preparedness and Response Plan	\$ 1,000.00	each	\$ 1,000.00	HSE Expert, 2 days @ \$500/day
Waste Management Plan (WMP)	\$ 1,000.00	each	\$ 1,000.00	Expert for 2 days @ \$500/day
Training Plan	\$ 2,500.00	each	\$ 2,500.00	Expert, 5 days @ \$500/day
Plan and Policy Development Costs Subtotal			\$ 20,000.00	
<b>Training Costs (annual)</b>				
<b>Description</b>	<b>Cost</b>	<b>Unit</b>	<b>Total</b>	<b>Assumption</b>

HR Policy Training		coach/day		General USUG costs
Code of Conduct Training	\$ 500.00	coach/day	\$ 1,000.00	1 training per year for all BWSE staff, full day, groups of ten (\$500/day for coach)
HSE Staff Training		coach/day		General USUG costs
HSE Training		coach/day		General USUG costs
HSE Orientation for visitors		as necessary		Included of HSE staff duties
First Aid training		coach/day		General USUG costs
Emergency Preparedness and Response Training - HSE Staff		coach/day		General USUG costs
Emergency Preparedness and Response Training - all staff	\$ -	per employee	\$ -	Included in HSE training
ESMP Implementation Training Plan	\$ -	per employee	\$ -	Included in HSE training
WMP Training	\$ -	per employee	\$ -	Included in HSE training
Tangible Cultural Heritage Protection Training	\$ -	per employee	\$ -	Included in HSE training
Biodiversity Training	\$ -	per employee	\$ -	Included in HSE training
CTIP Training	\$ -	per employee	\$ -	Included in Code of Conduct Training
CTIP Orientation for subcontractors and service providers	\$ -	per employee	\$ -	Included in HSE Orientation
Anti-Sexual Harassment and Discrimination Training	\$ -	per employee	\$ -	Included in Code of Conduct Training
On-job training, apprenticeships, internships	\$ -	as required	\$ -	Included in staff costs (as per Labor Management Plan)
Community training in HSE, CTIP	\$ -	as required	\$ -	Included in Community Liaison (SSO)
Training Costs subtotal			\$ 1,000.00	
<b>Equipment and Other Costs</b>				
<b>Description</b>	<b>Cost</b>	<b>Unit</b>	<b>Total</b>	<b>Assumption</b>

PPE equipment (hard hat, boots, hi-vis clothing, glasses, gloves)	\$ 100.00	per employee	\$ 2,000.00	PPE provided to all employees each year
First aid kits	\$ 100.00	each	\$ 200.00	1 kit per 10 employees
Emergency Response Plan Dissemination	\$ 2,500.00	overall	\$ 2,500.00	Posters, brochures, etc. at site/ camp indicating emergency procedures and phone numbers
Spill protection equipment	\$ 2,500.00	overall	\$ 2,500.00	Spill sheets for all vehicles, regularly changed.
GRM implementation	\$ -	per year	\$ -	Implementation of the GRM by HR staff/Social Safeguards Officer
Contract with Landfill for inert waste	\$ -	per year	\$ -	Covered in cost of construction operations
Contract with Hazardous waste company	\$ -	per year	\$ -	Covered in cost of construction operations
Equipment and Other Costs Subtotal			\$ 7,200.00	
<b>ESMP Management Measures Costs Total</b>			<b>\$ 49,720.00</b>	

---

## Appendix J Environmental and Social Clauses for Bids and Specifications

---

### J.1 CP-1: Production Well Drilling, Construction, Development, and Acceptance Testing

#### 1. Introduction

This environmental and social management plan (ESMP) specifies management measures to avoid, minimize, or offset potential significant adverse environmental and social impacts, or reinforce or enhance potential beneficial impacts of construction contract package CP-1: Production Well Drilling, Construction, Development, and Acceptance Testing of the proposed Ulaanbaatar (UB) Bulk Water Supply Expansion (BWSE). Consistent with International Finance Corporation (IFC) Performance Standards on Environmental and Social Sustainability (Performance Standards), this ESMP adopts “a mitigation hierarchy to anticipate and avoid, or where avoidance is not possible, minimize, and, where residual impacts remain, compensate/offset for risks and impacts to workers, Affected Communities, and the environment.”<sup>87</sup>

Management measures and, as necessary, compensation are specified for the following project phases:

- Preconstruction – i.e., actions that need to occur prior to construction; however, not including land acquisition and involuntary resettlement, which are addressed in detail in the BWSE resettlement action plan (RAP), and not including construction mobilization
- Construction, including construction mobilization and demobilization
- Operation and Maintenance, which will be conducted by others and is not included in the version of this ESMP which is being issued for construction bidding

Construction mobilization is scheduled to begin within several months of issuing this ESMP and the preconstruction phase then will have been completed. As preconstruction activities currently are underway and soon will be concluding, the associated management measures specified in the ESMP are few and predominantly reference management measures otherwise specified for the construction phase.

For each management measure, as appropriate for each phase of the project, the ESMP details:

- Potential Impact – Potential adverse or beneficial effect that the measure is designed to address, and target locations, resources, or communities
- Standard / Requirement Triggered – Mongolian or international standard or requirement triggered by the potential impact
- Management Measure – Specific, implementable, verifiable, and cost-effective action to be taken
- Monitoring – Monitoring activity to be undertaken
- Locations – Locations where the management measure and monitoring are to be implemented

---

<sup>87</sup> Performance Standard 1, Assessment and Management of Environmental and Social Risks and Impacts. International Finance Corporation. 2012. *Performance Standards on Environmental and Social Sustainability*. World Bank Group, January 1, 2012.

- Indicators and Success Criteria – Indicators and criteria to be used to verify that the management measure is being implemented, and that it is effective and sufficient
- Reporting – Monitoring reporting requirement
- Schedule – Timing and frequency of implementing the management measure, monitoring, and reporting
- Responsibility – Delineation of responsibilities for implementing the management measure, monitoring, reporting, and oversight

The management measures and monitoring specified in this ESMP will be implemented, as applicable, together with the conditions, procedures, and best engineering practices specified in the design of the BWSE project prior to or irrespective of its evaluation in the ESIA. For purposes of the ESMP, best engineering practices and management measures are distinguished as follows:

- *Best engineering practices* are actions typically taken by the project proponent, construction contractor, or operator to avoid or minimize potential adverse environmental and social impacts but are not implemented in response to the impact findings of the ESIA.
- *Management measures* specified in the ESMP differ from best engineering practices in that they will be implemented specifically in response to the impact findings described in the ESIA.

In other words, best engineering practices are inherently part of the BWSE and are not additional management measures specified as a result of the impact assessment process. With respect to the construction phase, they are practices that typically are within the scope of services of the construction contracting firm performing the work. Their implementation is assumed in the impact analysis presented in the ESIA.

The best engineering practices are detailed as Technical Specifications and are set forth in Section V, Works Requirements of the Construction Contract Documents. Those technical specifications that the ESIA team assumed would be taken by the project proponent, construction contractor, or operator, and would avoid or minimize potential adverse environmental and social impacts are organized into Division 1 – General Requirements and Division 2 – Site Work, and in turn into sections. The relevant issues are addressed by technical specifications in the respective sections indicated in the two following Technical Specification text boxes.

If the best engineering practices in place avoid or sufficiently reduce the impact of activities evaluated in the ESIA below the level at which the impact would be significant, additional avoidance or minimization of potential adverse impacts may not be needed. Conversely, management measures specified in the ESMP have been developed to avoid, minimize, or offset adverse impacts; or to reinforce or enhance beneficial impacts.

Technical Specifications, Division 1 – General Requirements
<p><b>Section 01030, Special Requirements</b></p> <ul style="list-style-type: none"> <li>0. Health and Safety Plan</li> <li>1. Product Handling</li> <li>2. Disposal of excess material</li> <li>3. Disposal of debris</li> <li>4. Preconstruction Video Recording of Entire Site</li> <li>5. Detours and Road Accessibility</li> <li>6. Permits, Fees and Bonds</li> </ul> <p><b>Section 01046, Control of Work</b></p> <ul style="list-style-type: none"> <li>7. Hours of Construction</li> <li>8. Open Excavations</li> <li>9. Occupying Private Land</li> <li>10. Interference with and Protection of Streets</li> <li>11. Care and Protection of Property</li> <li>12. Cleanup and Disposal of Excess Material</li> </ul> <p><b>Section 01063, Miscellaneous Requirements</b></p> <ul style="list-style-type: none"> <li>13. Traffic Control</li> <li>14. Interference with Existing Utilities</li> <li>15. Maintaining Flows</li> </ul> <p><b>Section 01110, Environmental Protection Procedures</b></p> <ul style="list-style-type: none"> <li>16. Prevention of Environmental Pollution</li> <li>17. Erosion Control</li> <li>18. Protection of Streams, Wetlands and Surface Water</li> <li>19. Protection of Land Resources</li> <li>20. Protection of Air Quality</li> <li>21. Noise Control</li> </ul> <p><b>Section 01500, Temporary Facilities</b></p> <ul style="list-style-type: none"> <li>22. Temporary Field Offices</li> <li>23. Internet Service</li> <li>24. Temporary Fence</li> <li>25. Potable Water</li> <li>26. Electricity</li> <li>27. Sanitary Conveniences</li> <li>28. Barricades and Guard Lights</li> <li>29. Temporary Heat</li> <li>30. Shelter and Protection of Materials</li> <li>31. Security</li> </ul> <p><b>Section 01568, Erosion Control, Sedimentation &amp; Containment of Construction Materials</b></p> <ul style="list-style-type: none"> <li>32. Erosion Control</li> </ul> <p><b>Section 01610, Delivery, Storage and Handling</b></p> <ul style="list-style-type: none"> <li>33. Storage and Handling of Hazardous Materials</li> </ul> <p><b>Section 01700, Contract Closeout</b></p> <ul style="list-style-type: none"> <li>o Final Cleaning</li> </ul>
Technical Specifications, Division 2 – Site Work

**Section 02210, Earth Excavation, Backfill, Fill and Grading**

- 34. Excavation
- 35. Separation of Excavated Material for Reuse
- 36. Trench Excavation
- 37. Reuse and Disposal of Surplus Excavated Materials
- 38. Care and Restoration of Property
- 39. Backfilling

**Section 02230, Site Clearing**

- 40. Clearing and Grubbing

**Section 02672, Water Supply Well Construction, Development and Pumping Tests**

- 41. Generalized Water Supply Description
- 42. Well Installation Plan
- 43. Protection of Work and Property
- 44. Clean-Up
- 45. Protection of Existing Conditions
- 46. Drilling Preparation
- 47. Performance Pump Testing
- 48. Final Disinfection
- 49. Site Clean-Up

As appropriate for each of the subject project phases or the overall ESMP, the ESMP organizes and summarizes the management measures into the following constituent plans and schedules:

- Environmental Management
- Waste Management
- Social and Gender Inclusion
- Health and Safety Management
- Education, Training, and Community Outreach
- Risk Control and Emergency Response
- Monitoring and Verification, and Maintenance Actions
- Implementation Work Plan and Schedule

The first four plans/schedules listed above detail specific management measures to mitigate adverse environmental and social impacts or reinforce potential beneficial impacts. Each management measure is detailed in a table that is specific to that measure. The remaining plans/schedules provide procedures, as appropriate referencing the management measures in the preceding plans, to address specific concerns and issues, or summarize the measure-specific procedures, timetables, and schedule for implementing the ESMP.

## **2. Pre-Construction Phase**

### **2.1 Responsibilities During Pre-Construction**

### 2.1.1 MCA-Mongolia

MCA-Mongolia or its representative will be responsible for oversight of the pre-construction-related management measures and monitoring specified in the ESMP. MCA-Mongolia or its representative will inform and coordinate with all applicable stakeholders regarding their corresponding mandates under or in relation to the ESMP. MCA-Mongolia or its representative will establish a Social Safeguards Team (SST) and coordinate with the Contractor during the pre-construction and construction phases in implementing, supervising, reporting, and follow-up actions with regard to the ESMP.

### 2.1.2 Contractor

The construction contracting firm performing the work, the **Contractor**, will be fully responsible for implementing and monitoring all pre-construction-related management measures specified in the ESMP—together with the conditions and procedures specified in Section V, Works Requirements of the Construction Contract Documents. The Contractor will read the ESMP, consider it in its entirety, and comply with all aspects of the ESMP that pertain to implementing and monitoring of pre-construction-related environmental and social management.

The Contractor will abide by the requirements of this ESMP, which is appended to and is a part of the Contract. Following construction contract award, the Contractor will develop a site-specific Contractor's Environmental and Social Management Plan (CESMP), as further described below, for approval by the Engineer prior to start of the construction works. The Contractor will prepare the site-specific CESMP based on the contents of Section V, Works Requirements and this ESMP. The Contractor will submit the detailed, site-specific CESMP to the Engineer within 28 days after receiving the Letter of Acceptance. The CESMP must be approved by the Engineer prior to commencement of the execution of the Works.

The Contractor is advised that all sites where the Contractor will establish temporary construction facilities will be subject to environmental and social impact assessments and must be covered by an acceptable CESMP and must be permitted in accordance with all applicable permitting requirements. The Contractor will need to negotiate with and potentially compensate landowners for temporary use of land. These temporary facilities may be co-located and potentially would comprise the following:

- Construction camps
- Laydown, staging, and storage sites
- Concrete batch plants
- Site offices
- Fuel storage
- Parking areas

The Contractor will take all necessary measures and precautions to ensure that the execution of the works and all associated operations on site or off site are carried out in conformity with statutory and regulatory environmental and social requirements of the Government of Mongolia and the technical specifications, where the more stringent will apply. The Contractor will take all measures and precautions to avoid any nuisance or disturbance arising from the execution of project activities. Wherever possible, this will be achieved by avoidance of the impact at the source rather than mitigating an impact after it has been expressed.

The Contractor will develop a grievance redress mechanism (GRM) based on guidance provided in Annex A of the ESMP.

The Contractor will designate an Environmental and Social Performance Manager as a key staff. This individual will have knowledge of relevant Mongolian, IFC, and Millennium Challenge Corporation standards and regulations, and knowledge of environmental, social, and gender issues that include, but are not limited to, environmental management, waste management, gender and social inclusion, cultural resources, and health and safety management.

This individual(s) will be responsible to:

- Work closely with MCA-Mongolia or its representative to guide the Contractor's thorough understanding of the mitigation and monitoring requirements
- Lead the Contractor's work related to implementing environmental and social management measures and relevant monitoring requirements
- Work closely with MCA-Mongolia or its representative to incorporate or modify management measures and monitoring actions proposed by the Contractor, as needed, to reflect field conditions with the approval of the Engineer.

The Contractor, while in possession of the construction sites, will be responsible for the safety measures undertaken in accordance with the Technical Specifications to protect the workforce of the Contractor's own staff as well as the Engineer's and MCA-Mongolia or its representative's supervision staff. The Contractor will conduct in this respect safety induction courses for all personnel involved with the works and who are required to supervise any activity prior to their attending any part of the works.

Additional training is required to meet MCC social policy requirements as per the:

- Labor Management Plan
- Gender Integration and Social Inclusion Plan
- Counter-Trafficking in Persons Response Plan and Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan
- Stakeholder Engagement Plan
- Construction Camp and Temporary Facilities Management Plan
- Cultural Heritage Training Plan
- Managing external grievances as part of the project GRM

The Contractor will act responsibly to provide notification of the Contractor's schedule to enable MCA-Mongolia or its representative to carry out its responsibilities. The Contractor will be required to provide verbal and written updates to MCA-Mongolia or its representative on a regular basis indicating percent achievement of the pre-construction-related management measures specified in the ESMP. On a monthly basis, as part of the Contractor's monthly progress report, the Contractor will submit an ESMP update that will report the status of all environmental and social compliance activities and actions taken by the Contractor.

### **2.1.3 Contractor's Environmental and Social Management Plan (CESMP)**

The site-specific CESMP is required for construction activities and will provide the implementation vehicle of specific management activities applicable for the construction sites. At the direction of the Engineer, the Contractor is required to update the CESMP, including constituent plans and procedures, during the construction works as part of its obligations under its contract. The CESMP is required to strictly follow and comply with the environmental, social, health and safety requirements of the Millennium Challenge Corporation (MCC) and national legislation, as well as this ESMP, its constituent plans, and other applicable documents and regulations.

The site-specific CESMP will provide identified site-specific management measures, and refine organizational and operational procedures for the implementation of those measures, including

implementation timeline and specific reporting requirements. The CESMP will detail the plans and procedures constituent to the CESMP and elaborate complimentary environmental, social, and health and safety management measures and training, and indicate the responsibility for implementation, technical details, and how implementation will be monitored. The CESMP, at a minimum, shall include the following plans:

- Environmental Management Plan
- Waste Management Plan
- Social and Gender Inclusion Plan
- Health and Safety Management Plan
- Education, Training, and Community Outreach Plan
- Risk Control and Emergency Response Plan
- Monitoring and Verification, and Maintenance Actions Plan

#### **2.1.3.1 Objectives of the CESMP**

The Contractor will prepare the site-specific CESMP in order to properly manage its construction activities in accordance with Section V, Works Requirements and this ESMP, and in compliance with requirements of MCC and Mongolian legislation. This includes requirements on community engagement and gender integration incorporated into the ESMP, the Employer's Social and Gender Integration Plan, and Counter-Trafficking in Persons requirements of MCC, and the laws and regulations of Mongolia.

The site-specific CESMP will be prepared with the following objectives:

- Provide the environmental and social policy of the Contractor
- Provide operational and emergency procedures, developed to address the environmental aspects and risks associated with the construction activities
- Provide details on approaches and measures and appropriate personal protective equipment (PPE) and other equipment for handling hazardous waste generated on each site
- Provide details on communication and reporting, as well as contacts of site supervisors nominated to control and guide works involving disturbance of hazardous materials and waste
- Clarify the implementation and operation of the site-specific CESMP to ensure that structure and responsibilities are assigned, workers are trained, aware, and competent, and that there is proper communication, documentation, operational control, and emergency preparedness and response
- Provide organizational and technical procedures for implementation of the CESMP to ensure that construction activities associated with potential environmental and social impacts are carried out in a controlled and responsible way
- Provide checking and corrective action through monitoring and measurement
- Provide mechanisms for maintaining adequate records of corrective actions to allow effective monitoring
- Provide mechanisms for maintaining effective two-way communication between the Contractor and the community and stakeholders
- Provide full compliance with Mongolian Law on Labor, Law on Promotion of Gender Equality, and other relevant employment laws. Ensure each employee has a written contract and is made aware of and signs the Worker Code of Conduct, and ensure compliance with the Labor Management Plan
- Provide training on and awareness in accordance with the following management measures:
  - Emergency Preparedness and Response

- Waste Management
- Labor Management
- Gender Integration and Social Inclusion
- Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment
- Stakeholder Engagement, Community Consultation, and Grievance Redress
- Construction Camp and Temporary Facilities Management
- Cultural Heritage Protection
- Health and Safety Management

When preparing the site-specific CESMP, it will include the following:

- Management Acknowledgements
- Organization and Staffing
- Communications and Reporting
- Environmental, Social, and Health and Safety Provisions

The Contractor will prepare and submit for the Engineer's approval the site-specific CESMP, including constituent plans and procedures, within 28 days after receiving the notice of contract award. The Engineer may require periodic reviews, including updating of the CESMP during the construction works.

#### **2.1.3.2 Management Acknowledgements**

##### **1) Certification and Commitment**

The site-specific CESMP submitted by the Contractor will provide a signed statement from the Contractor's Project Director attesting to a commitment that all environmental and social protection, safety, and occupational health and safety aspects of the contract will be given highest priority in the discharge of contractual obligations and certifying a commitment to the provisions in the ESMP, its constituent plans, environmental and social requirements of the contract, as well as the approved site-specific CESMP.

##### **2) Statutory Understanding and Compliance**

The site-specific CESMP will provide a statement attesting the Contractor's understanding of, and means of ensuring due compliance with, the statutory regulations relating to construction work in Mongolia, specifically regarding compliance with:

a) All current environmental laws and regulations, related to, but not limited to, the following:

- Noise
- Vibration
- Air pollution
- Water contamination
- Solid and hazardous waste disposal
- Waste disposal
- Sanitary conditions (water supply, sewerage, wastewater disposal, etc.)
- Use of explosives;
- Protection of public traffic
- Historical, cultural, and archaeological monuments/sites
- Resettlement, land acquisition, servitude, temporary use of land and compensation, etc.

b) All current labor laws and laws related to, but not limited to, the following:

- Contract of employment and labor disputes
- Working conditions
- Management, monitoring, and supervision
- Gender-based discrimination in employment
- Child labor
- Trafficking in persons
- Gender-based violence
- Sexual harassment

c) All occupational health and safety legislation including, without limitation, the rules and regulations of Mongolia and the authorities having jurisdiction. These provisions will be included and regulated through the Health and Safety Management Plan.

### 3) Availability of Documents

The site-specific CESMP will state where copies of environmental and social regulations and documents will be available on the construction sites and verify that all regulations and documents have been or will be made available.

### 4) Management of Subcontractors

The requirements of this and related sections and obligations therein will be included in implementation of parts of the construction activities by the approved subcontractors, while the Contractor will:

- a) Provide subcontractors with copies of the site-specific CESMP, the ESMP, the constituent plans, and other relevant environmental and social policies, plans, documents, and regulations, while incorporating such provisions into all subcontracts and ensuring compliance with such plans under the Contract.
- b) Require all subcontractors to appoint an environmental representative, social representative, and health and safety representative, who will be available on the sites throughout the operational period of the respective subcontract and ensure as far as is practically possible that staff and employees of subcontractor(s) are conversant with appropriate parts of the site-specific CESMP and the relevant environmental and social documents and regulations.

## 2.1.3.3 Organization and Staffing

### 1) Organization Chart

The site-specific CESMP will include an organization chart identifying, by job title and by the name of the individual, the personnel to be engaged solely for environmental protection, social and gender, and health and safety control. The chart and the supporting text will identify participants and their contact details.

### 2) Identification of Responsibilities

The site-specific CESMP will provide descriptions of the responsibilities of the Environmental and Social Performance Manager, Social and Gender Manager, and Health and Safety Manager appearing on the organization chart. Additionally, the CESMP will provide a description of the responsibilities of the Contractor's Social Safeguards Officer or Social Safeguards Team.

- a) Environmental and Social Manager

The Environmental and Social Performance Manager, qualified in ESMP and resettlement implementation, throughout the construction period will be primarily responsible for daily inspection and monitoring of ESMP implementation. The Environmental and Social Manager will prepare monthly and as-needed incident reports and submit them to the Engineer. MCA-Mongolia will report to MCC and send feedback to the Contractor through the Engineer or directly when urgent action is required. Monitoring and reporting on the implementation of follow-up action will also be part of the Environmental and Social Manager's duties.

The Environmental and Social Performance Manager additionally will be responsible for environmental management of the construction sites and day-to-day management of environmental issues. The Environmental and Social Manager will be empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements of the site-specific CESMP or relevant environmental documents and regulations.

The Environmental and Social Performance Manager will maintain a daily site diary/record-book comprehensively recording all relevant matters concerning the construction sites' environmental management, safety, and traffic control, inspections, and audits, related incidents and the like. The site diary will be available at all times for inspection by the Engineer.

b) Social and Gender Manager

The Social and Gender Manager will be responsible for day-to-day management of social issues for the duration of construction works. The Social and Gender Manager will be empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements of the site-specific CESMP or relevant social documents and regulations. The Social and Gender Manager will be responsible for overall stakeholder engagement and consultation process, ensuring proper labor contracting and working conditions, issues related to trafficking in persons, and organizing and delivering trainings, appropriate communication, and reporting.

Additionally, the Social and Gender Manager will monitor the internal grievance mechanism. In case of sexual harassment or violence, will liaise with the MCA-Mongolia or its representative's Social Safeguards Team and engage an independent third party such as the Centre for Gender Equality to manage investigations of allegations.

With input from site supervisors, the Social and Gender Manager will maintain a diary/record-book comprehensively recording all relevant matters concerning site social issues management, inspections and monitoring, incidents and emergencies, as well as other relevant issues. The diary will be available at all times for inspection by the Engineer.

c) Health and Safety Manager

The Health and Safety Manager will be responsible for day-to-day management of health and safety issues for the duration of construction works, including HIV/AIDS and Covid-19 related issues. The Health and Safety Manager will be empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements

of the Health and Safety Management Plan or requirements of health and safety documents and regulations.

The Health and Safety Manager through input from site supervisors will maintain a health and safety diary/record-book comprehensively recording all relevant matters concerning site health and safety management, inspections, and monitoring, incidents and emergencies, as well as other relevant issues. The diary will be available at all times for inspection by the Engineer.

d) Social Safeguards Officer / Social Safeguards Team

The Contractor's Social Safeguards Officer or Social Safeguards Team, under the Social and Gender Manager, will be appointed to manage the contractual obligations specified in the construction contract. Depending on the size of the company, the Contractor designate at least Social Safeguards Officer; more if the number of employees exceed 50. Additionally, a Contractor Community Liaison Officer may be needed to work with local labor.

The responsibilities of the Social Safeguards Officer or Social Safeguards Team are the following:

- Coordinate with the MCA-Mongolia or its representative regarding the protocols for community contact
- Maintain records of all community contacts and integrate with the project Stakeholder Matrix
- Liaise with the MCA-Mongolia or its representative over community contacts
- Liaise with the MCA-Mongolia or its representative to implement and assist in resolution of grievances
- Inform the MCA-Mongolia or its representative of employment vacancies and recruit through the Ministry of Labor offices and process
- Monitor and promote the employment of women to achieve the recommended target of 30 percent or more
- Plan and ensure delivery of the contractually required employee awareness training and information programs
- Liaise with training organizations and experienced NGOs to find those able to design training courses on aspects of employee behavior, sexual harassment and gender based violence, gender equity, HIV/AIDS, conflicts over employment opportunities and foreign workers, cultural awareness, and chance finds processes
- Support complainants to the Contractor's internal grievance system, particularly those alleging sexual harassment or gender-based violence
- Assist the Contractor's personnel department to manage the internal employee grievance mechanism for reporting grievances
- Manage the Contractor's responsibilities with the project GRM; documenting, reporting, and taking part in finding solutions

3) Appointments

The Contractor will include the CV of the following proposed personnel in the bidding package and submit to MCA-Mongolia for approval the names and details (full CVs) of these proposed personnel within 14 days after the notification of contract award:

- Environmental and Social Performance Manager
- Social and Gender Manager

- Health and Safety Manager

The proposed personnel will hold the attestation/proof of professional qualification required from the relevant government authorities to perform and submit pertinent studies and documentation to relevant Government agencies, with an advanced post graduate degree in a relevant discipline or as a certified consulting engineer, and relevant post-graduate experience in Mongolia.

The Contractor will obtain approval and appoint the Environmental and Social Performance Manager, Social and Gender Manager, Health and Safety Manager, and Social Safeguards Officer prior to commencement of construction works, unless otherwise, in exceptional circumstances, it is agreed in writing with the Engineer. Key personnel identified in Section IV, the Environmental and Social Performance Manager, Social and Gender Manager, and Health and Safety Manager, will not be removed from the construction works without written permission of the Engineer. Within 14 days of any such removal or notice of intent of removal, a replacement for the respective personnel will be nominated by the Contractor for approval by the Engineer and MCA-Mongolia (MCA-Mongolia will approve any key staff).

#### **2.1.3.4 Communications and Reporting**

The site-specific CESMP will explain the proposed interaction and communication procedures between construction personnel and environmental, social and gender, and health and safety staff, including:

- Communication facilities
- Routine communication and reporting systems
- Stakeholder engagement and consultation activities

##### **1) Environmental, Social and Gender, and Health and Safety Reports**

The Contractor will submit the environmental, social and gender, and health and safety reports shown in Table 1.

**Table 1 Reports**

Report	Submission Schedule	Content
<b>Site-specific CESMP</b>	One time during mobilization, within 28 days after the Letter of Acceptance	<p>The Contractor will carry out an assessment of environmental, social and gender, and health and safety conditions at the work sites to define site-specific impacts and adequate mitigation measures. The Contractor will also develop constituent plans and procedures required as a part of CESMP.</p> <p>The site-specific CESMP must be approved by the Engineer prior to commencement of construction activities.</p>
<b>Training and Orientation Report</b>	<p>One time during mobilization, before commencement of works</p> <p>Monthly updates during implementation of works</p>	<p>The Contractor will summarize information regarding training and orientation mandated under each plan, carried out before involvement of the labor in construction activities and during toolbox talks. Toolbox talks on each plan topic must be delivered monthly.</p> <p>The Contractor will provide copies of the Training and Orientation Reports to the Engineer. The Contractor will provide monthly updates of training and orientation activities during implementation of works in the Monthly Progress Reports.</p>
<b>Regular Weekly Environmental, Social and Gender, and Health and Safety Reports</b>	Weekly during implementation of works	<p>The Contractor will undertake environmental, social and gender, health and safety inspections and report weekly, and will provide copies of such reports to the Engineer each month for the duration of contract.</p> <p>The weekly environmental reports will include:</p> <ul style="list-style-type: none"> <li>• Environmental and health and safety management actions / measures taken, including approvals sought from local or national authorities</li> <li>• Observations and concerns raised and/or decisions taken with regard to environmental and gender, and health and safety management during site meetings</li> <li>• Problems encountered in relation to environmental and health and safety aspects (including delays, incidents, damages and cost consequences, emergencies, etc.)</li> <li>• Lack of compliance with this ESMP and the technical specifications in relation to environmental, and health and safety requirements on the part of the Contractor and/or subcontractor(s)</li> </ul> <p>The social and gender reporting will include sections on issues arising in the fields of:</p> <ul style="list-style-type: none"> <li>• Recruitment strategy, employment of men and women, and prohibition of child labor</li> <li>• Implementation of the Worker Behavior Code of Conduct and outcomes</li> <li>• Gender related grievances and investigations</li> </ul>

Report	Submission Schedule	Content
		<ul style="list-style-type: none"> <li>• Training on employee behavior, gender, social inclusion, counter-trafficking in persons, gender-based violence, and sexual harassment, health education, cultural awareness, and feedback from employees</li> </ul>
<b>Monthly Progress Reports</b>	Monthly during implementation of works	<p>Summaries of these reports (including information on environmental and social activities undertaken, permits and agreements obtained, etc.) will be included in the monthly progress reports to be submitted to Engineer for review and approval. It is expected that monthly progress reports will include information on:</p> <ul style="list-style-type: none"> <li>• Employment records of workers (used to track participation in training and progress toward women's employment targets and local labor targets)</li> <li>• Training and orientation activities</li> <li>• Environmental, social and gender, and health and safety management actions / measures taken, including approvals sought from local or national authorities</li> <li>• Observations and concerns raised and/or decisions taken with regard to environmental, social and gender, and health and safety management during site meetings</li> <li>• Problems encountered in relation to environmental, social and gender, and health and safety aspects (including delays, incidents, damages and cost consequences, emergencies, etc.)</li> <li>• Investigations into the contractor internal grievance redress mechanism with outcomes</li> <li>• Lack of compliance with this ESMP and the technical specifications in relation to environmental, social and gender, and health and safety requirements on the part of the Contractor and/or subcontractor(s)</li> <li>• Changes of assumptions, conditions, measures, designs, and actual works in relation to environmental, social and gender, and health and safety requirements</li> <li>• Chance historical, cultural, and archaeological finds</li> <li>• Follow-up on incident investigation</li> <li>• Follow-up on the status of measures and/or corrective actions identified (including remedial measures) and their efficacy, to eliminate and minimize lack of compliance with contract requirements</li> <li>• Stakeholder engagement and consultation activities carried out during reporting period, grievances registered and resolved</li> <li>• Grievances registered and resolved.</li> </ul>

## 2) Notification of Incidents and Changes

The site-specific CESMP will verify that provisions have been made to ensure that the Contractor notifies relevant parties in accordance with Section VIII Particular Conditions of Contract, Sub-Clause 4.8 after the following incidents and changes:

- Occurrence of any incident that has resulted, or could reasonably be foreseen to result, in lack of compliance with this ESMP and the technical specifications in relation to environmental, social and gender, especially internal complaints related to sexual harassment, gender-based violence and trafficking in persons for sex, and health and safety requirements
- Changes of assumptions, conditions, measures, designs, and actual works in relation to environmental, social and gender, and health and safety requirements
- Chance historical, cultural, and archaeological finds

In addition to the initial written notification, the Contractor will submit a preliminary report on incident investigation within 7 days after the incident, as well as final report on incident investigation within 14 days after the incident. All incidents should be investigated by the competent professional (relevant independent professionals can also be involved, as needed). The final report on the incident investigation will include information on the investigation's objectives, methodology applied, analysis and tests carried out, findings, conclusions, and recommendations.

Allegations against staff of sexual harassment or gender-based violence, or involvement in trafficking in persons inside the contractor's organization require reporting to the MCA-Mongolia or its representative's Social Safeguards Team. The Contractor's Social and Gender Manager will liaise with the MCA or its representative and other relevant parties and arrange for a third party investigator to lead the enquiry into allegations together with the Contractor's human resources representative. Proven harassment or violence offences in contravention of the Worker Behavior Code of Conduct must result in the immediate firing of the perpetrator and reporting through the project system.

Allegations of trafficking in persons must be dealt with according to the Section VIII Particular Conditions of Contract Sub-Clause 6.16, "Combatting Trafficking in Persons", which summarizes the Contractor's reporting requirements and specifies remedies that the MCA Entity will apply to confirmed cases.

Section VIII Particular Conditions of Contract Sub-Clause 6.17, "Prohibition of Sexual Harassment", specifies that "The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction."

## 3) Communication with Subcontractor(s)

The site-specific CESMP will specify:

- How environmental, social and gender, and health and safety requirements will be communicated to subcontractor(s) at all levels and how their compliance with the CESMP and all relevant regulations will be ensured.
- Subcontractor(s) will be supplied with copies of the CESMP and other environmental and social documents developed for the project (which will be deemed part of the subcontract), and will attend and report on all relevant training and orientation sessions prior to commencement of their work and will continue covering the same topics in toolbox talks.
- The procedures for reviewing and monitoring compliance with the site-specific CESMP and environmental and social regulations. This could include, for example, the monitoring of

performance against environmental and safety criteria as a part the daily and/or weekly site inspections.

### 2.1.3.5 Environmental, Social and Gender, and Health and Safety Provisions

The site-specific CESMP, including constituent plans and procedures, will include at a minimum acknowledgement of the requirements to meet the CESMP standards, the methodology and resources to meet the requirements of the management measures prescribed in the following sections of this ESMP, as well as the environmental, social and gender, and health and safety provisions of Section V, Works Requirements.

In accordance with MCC Environmental Guidelines and IFC Performance Standards, the Contractor is obliged to implement all reasonable measures with regard to soil erosion, water and air quality, noise and vibration, solid waste, hazardous materials, wastewater discharges, health and safety hazards, labor and working conditions. In a similar way, the Contractor is obliged to implement risk management strategies to protect the beneficiary communities from 1) physical, chemical, or other hazards associated with sites under construction, 2) hazards associated with increased traffic and rerouting of vehicles, and 3) communicable and vector-borne diseases associated with the population of workers.

Parallel plans and policies will be developed by the Contractor as a part of CESMP to implement mitigation measures specific for each construction site and ensure compliance with environmental, and social and gender, and health and safety requirements.

## 2.2 Environmental Management

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## 2.3 Waste Management

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## 2.4 Social and Gender Inclusion

### Management Measure Wells -1: Labor Management

POTENTIAL IMPACT
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Professional management and conditions of labor</li> <li>Opportunities for local labor and supply of goods and services, and provision of local jobs with fair and competitive wages</li> <li>Women's short-term employment in construction and engineering-related work</li> <li>Potential alleviation of poverty in local area</li> <li>Reduction in child labor</li> <li>Improved grievance management in employment</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of forced labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
STANDARD(S) / REQUIREMENT(S) TRIGGERED:

Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:

- Constitution of Mongolia
  - Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.
- Mongolian Civil Code
  - Requires providing office space, tools and equipment necessary to ensure employees' health.
- Mongolian Law on Gender Equality
  - Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.
- Mongolian Law on Labor
  - Prohibits discriminating against race, social origin or status, wealth, religion, or ideology
  - Prohibits employing children under the age of 16 or under 18 in dangerous industries, including construction
- Mongolian Law on Minimum Wage
  - Minimum wage is fixed by National Tripartite Committee on Labor and Social Consensus representatives.
- Mongolian Law on the Protection of the Rights of the Child
  - Prohibits employing children in any work that is likely to harm their health or morale, and exploiting or paying unjust wages to children
- Mongolian Law on Social Protection of Disabled Persons
  - Prohibits building any buildings and facilities that do not meet needs and requirements of persons with disabilities.
- Mongolian Law on Combating Human Trafficking
  - Requires regulating the workplace to ensure the implementation of the legislation on combating human trafficking, and if it is not specified, it shall be obliged to comply with the instructions, recommendations, statements and instructions given by the competent authorities and officials.
- Mongolian Law on Sending Labor Force Abroad and Receiving Labor Force and Specialists from Abroad
  - Regulates relations with respect to employment of a Mongolian citizen abroad and a foreign citizen in Mongolia, and protection of their rights and interests.
  - Reinforces provisions of the Constitution of Mongolia, Labor Law, Social Insurance Law, and other related legal acts, and legal status of a foreign citizen.
- IFC Performance Standard 2
  - Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.
  - Contractor will adopt and implement human resources policies and procedures appropriate to its size and workforce that set out its approach to managing workers consistent with the requirements of this performance standard and national law.
  - Contractor will provide workers with documented information that is clear and understandable regarding their rights under national labor and employment law and any applicable collective agreements, including their rights related to hours of work, wages, overtime, compensation, and benefits upon beginning the working relationship and when any material changes occur.
  - Contractor will not make employment decisions on the basis of personal characteristics unrelated to inherent job requirements. Contractor will base the employment relationship on the principle of equal opportunity and fair treatment, and will not discriminate with respect to any aspects of the employment relationship, such as recruitment and hiring, compensation (including wages and benefits), working conditions and terms of employment, access to training, job assignment, promotion, termination of employment or retirement, and disciplinary

practices. Contractor will take measures to prevent and address harassment, intimidation, and/or exploitation, especially in regard to women. The principles of non-discrimination apply to migrant workers.

- Prohibits employment of child labor.
- Millennium Challenge Corporation Counter-Trafficking in Persons Policy (C-TIP Policy)
  - Requires contractors to take a zero-tolerance policy with regard to human trafficking and to actively manage employment conditions to prevent exploitation of trafficking in persons and related activities workers by employers and specifies remedies that the MCA-Entity may take in response to confirmed cases of TIP.
- Millennium Challenge Account Social and Gender Integration Plan (SGIP)
  - Sets out guidelines for Contractors related to social risk mitigation measures in infrastructure, including making working conditions suitable for both male and female employees
  - Requires developing and implementing an employment plan that prioritizes using local labor particularly from the Area of Influence of the project
  - Sets a target to encourage contractors to employ as workers at least 30% women of all workers at each skill/occupational level
  - Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates.
- Millennium Challenge Corporation Guidance Note to MCAs on Sexual Harassment
  - Requires that contractors are well-informed about existing anti-sexual harassment policies and procedures, and that contractors meet the requirements in the standard bidding documents.
- Ministry of Construction and Urban Design (MCUD) Gender Responsiveness Policy
  - Calls for gender targets in employment via “international and domestic tenders, so that one gender should not be lower than 15 percent among workers, and 25 percent among decision makers.”
- Ministry of Labor and Social Welfare Order (2016)
  - Expanded the types of hazardous work prohibited for children under the age of 18 to include construction
- International Labor Organization fundamental conventions, and International Human Rights instruments and conventions

## OBJECTIVES

The Labor Management Pplan ensures that contractors and their workers have clear expectations about the behaviors and conditions expected of the Contractor and all workers.

- Promote fair treatment, non-discrimination, and equal opportunity of workers
- Promote local labor opportunities and procurement from local suppliers
- Target women’s employment as 30% of all labor at each skill/occupational level
- Establish and maintain and improve a constructive worker-management relationship
- Protect workers, including vulnerable categories of workers such as children, migrant workers, workers engaged by third parties, and workers in the supply chain
- Avoid the use of forced labor or trafficked labor
- Maximize the beneficial impact of the project on the affected communities

## MANAGEMENT MEASURE

### Labor Management

The MCA-Mongolia or its representative’s Social Safeguards Team (SST) will:

- Encourage Contractor to employ local unskilled and semi-skilled labor, particularly youth and women, and to procure goods and services from local businesses and entrepreneurs
- Facilitate the Contractor’s cooperation with the local District Labor Offices
- Facilitate the Contractor’s publication of vacancies and procurements within affected communities

- Facilitate the Contractor's holding of job fairs and procurement workshops within affected communities to support local applicants to apply for jobs and local businesses and entrepreneurs to bid
- Support local job applicants to apply, and local businesses and entrepreneurs to bid
- Gather names of interested workers from project affected households and through community information programs and consultation meetings
- Share the names of interested workers with District and khoroo Labor Offices and Contractor
- Encourage Contractor to employ women at a rate of at least 30% of personnel at each skill/occupational level
- Facilitate Contractors' engagement with relevant university engineering programs, technical and vocational education and training (TVET), and professional associations to 1) identify and recruit qualified job applicants and 2) establish internships and apprenticeships
- Encourage Contractor to employ socially excluded and vulnerable people

The Contractor will:

- Fully comply with the requirements of this management measure and related contract clauses
- Perform the work in accordance with relevant sections of the ESMP

#### *Access to Employment*

The Contractor will:

- Publish vacancies (listing the required qualifications for all categories of employment) within project-affected communities and at District and khoroo offices and provide such information to the Engineer and during each community meeting. Ensure the exchange of information between Contractor and the local population on employment opportunities
- Publish and communicate employment opportunities listing the required qualifications for all categories of employment city-wide, and beyond in Mongolia, if the vacancies cannot be filled from local communities
- Ensure that a staff person responds to questions from the local population regarding employment and procurement opportunities
- Develop an employment forecast and a written recruitment strategy to 1) encourage the employment of qualified individuals among the local population(s) in project construction and ancillary activities in all phases, with particular focus on women and, youth, and disadvantaged groups, 2) target achieving women's employment as at least 30% of personnel at each skill/occupational level, and 3) provide training for local construction brigades on how to be effective contractors for local construction brigades
- Through the Contractor's Social Safeguards Officer, liaise with the MCA-Mongolia or its representative's SST and local labor offices to provide support with the job application process, encourage local employment (including women's employment), implement and publicize a job fair, consistent and transparent recruitment process
- In disseminating information on potential employment opportunities, take steps to consider ways in which to maximize outreach, using all forms of media that may be appropriate
- Ensure that all staff have written employment contracts specifying fair employment conditions and equal pay for equal work to men and women, and fulfilling all conditions specified under the Mongolian Law on Labor defining the contracts

The Contractor is encouraged to:

- Create pay bands for each category of worker to help ensure equal pay for equal work

As feasible, the Contractor will:

- Develop and submit a plan for providing on-the-job training and skills transfer opportunities to the local labor force
- Engage with training, education, and professional organizations—such as Technical and Vocational Education and Training, Implementing Agency of the Ministry of Labor and Social Protections, Mongolian University of Science and Technology, and the Mongolian Builder's Association—to recruit qualified applicants, and provide apprenticeships and internships for students who study water engineering and relevant subjects at university

The Contractor shall note contract clauses on “Gender,” “Engagement of Staff and Labor,” “Foreign Personnel,” “Prohibition of Forced or Compulsory Labor,” “Prohibition of Harmful Child Labor,” “Employment Records of Workers,” and “Non-Discrimination and Equal Opportunity.”

#### *Local Procurement*

The Contractor will:

- Proactively procure goods and services from local businesses and entrepreneurs in Khan-Uul and Songinokhairkhan Districts and Ulaanbaatar, and members of targeted disadvantaged groups (e.g., women, people with disabilities), achieved through:
- Publicizing procurements within the targeted geographical area or targeted group, for example at the District and khoroo offices and via notice boards, print media (newspapers, etc.), recruitment agencies, or job and career fairs
- Publicizing and holding procurement workshops within the targeted geographical area or targeted group
- Adding priority criteria for businesses and entrepreneurs in the targeted geographical area or members of the targeted group to the selection procedure
- In disseminating information on potential service procurement opportunities, take steps to maximize outreach, using all forms of media that may be appropriate

#### *Workplace Environment*

The Contractor will:

- Establish, execute, and enforce a Worker Behavior Code of Conduct on which all employees will be briefed, that all employees are required to sign, and that mandates immediate dismissal for serious offences including sexual harassment, violence, or confirmed cases of engagement in trafficking in persons. The Code will specify:
  - o Expectations of worker behavior, and penalties for transgression
  - o MCC and Mongolian legal definitions of trafficking in persons (TIP), zero-tolerance for TIP, and remedies that the MCA Entity may take in response to confirmed cases of engagement of trafficking in persons
  - o Zero-tolerance for gender-based violence
  - o Compliance with the Contractor’s Anti-Sexual Harassment Policy and notification of the Contractor’s Sexual Harassment Incident Reporting and Referral Plan
  - o Rights of employees to a grievance mechanism, holidays, and cultural and festival access
  - o Conditions for work camps, shelter, water and sanitation, food, and security
  - o The responsibility of all workers, regardless of their role or duration of employment, will be expected to review and acknowledge the Workers’ Code of Conduct by signing the code sheet
  - o The requirement to respect local customs and practices
- Establish and execute a workers’ grievance redress procedure that:
  - o Formalizes a system for receiving and managing internal complaints of sexual harassment, gender-based violence, or issues of trafficking persons (including engaging in commercial for sex with a person under 18 years of age)
  - o Guarantees confidentiality to makers of allegations
  - o Designates the Contractor’s Social Safeguards Officer or other officer as responsible for collaborating with the human resources department on the grievance redress procedures
  - o Refers to the Contractor’s Sexual Harassment Incident Reporting and Referral Plan for allegations of sexual harassment
  - o Specifies that the Contractor’s zero-tolerance for gender-based violence addresses any complaints of gender-based violence against its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
  - o In cases of discrimination against women or of allegations of sexual harassment or violence, requires that the Contractor’s Social Safeguards Officer contact the MCA-Mongolia or its representative’s SST to include them in the investigation and appoint

a third party—such as a representative from an NGO such as the Centre for Gender Equality or equivalently qualified, experienced organization—to lead the investigation

- The Contractor shall note the contract clause on “Prohibition of Sexual Harassment”
- The Contractor shall note the contract clause on “Facilities for Staff and Labor” and provide suitable gender-segregated facilities to enable the safe employment of both men and women – e.g. Toilet facilities, changing facilities on all sites and enabling physical access to office accommodation for people with disabilities.

### *Training*

The Contractor will:

- Provide training to enhance the skills of employees using on-the-job training, internships, apprenticeships, secondment to training programs such as Technical and Vocational Education and Training, etc.
- Mandate for all employees, before each worker starts work on the site, induction packages that include:
  - Employment rights and conditions, including non-discrimination and equal opportunity
  - The Contractor’s responsibility to “adopt recruitment, hiring and retention practices that support the employment of women and staff from diverse backgrounds” per the contract clause on “Engagement of Staff and Labor,” the Contractor’s employment forecast and recruitment strategy, and the Contractor’s Gender Integration and Social Inclusion Plan (described below)
  - Gender-based violence
  - Contractor’s Anti-Sexual Harassment Policy – including awareness of what constitutes sexual harassment, exploitation, and abuse and the Contractor’s Sexual Harassment Incident Reporting and Referral Plan
  - Using the internal Grievance Mechanism for allegations of gender-based discrimination
  - Rights to have access to local festivals
  - Cultural sensitivities, and social norms and practices in each area
  - Expectations on avoiding poor relations between employees and local communities caused by behavior relating to alcohol, gambling, prostitution, illegal drug use, violence and sexual abuse of women, minors and lesbian, gay, bisexual, transgender, queer, and others (LGBTQ+) persons
  - Countering the Trafficking in Persons Response Plan – awareness of responsibilities to counter the trafficking of people around the project area, the remedies that the Contractor and the MCA Entity may apply, and mechanisms for reporting suspected instances of TIP with the Contractor’s TIP Response Plan
  - Awareness of the possibilities of the transmission of HIV/AIDS and communicable illnesses and how to prevent HIV/AIDS transmission
- Undertake a series of employment and social plan inductions and employee awareness programs that:
  - All employees must attend at the commencement of employment and over the employment period twice yearly
  - Incorporate toolbox talks that include reinforcement of all training programs
- Commission training modules on gender integration and social inclusion topics for all employees at intervals agreed with the MCA-Mongolia or its representative’s SST
- Require that the Social Safeguards Officer, together with the MCA-Mongolia or its representative’s SST Community Liaison Officers, conduct awareness raising with workers on child labor issues in the local community as part of an ongoing community awareness program on social issues
  - These toolbox talks will include ways that workers can report suspected child labor to the District Children, Youth and Family Offices, and the MCA-Mongolia or its representative’s Social Manager

### *Site-specific Labor Management Plan*

The Contractor will prepare and submit for the Engineer’s written approval a site-specific Labor Management Plan that:

<ul style="list-style-type: none"> <li>• Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan</li> <li>• Includes the Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan and the Workers' Code of Conduct</li> <li>• Is consistent and compliant with: <ul style="list-style-type: none"> <li>○ Mongolian Law on Labor</li> <li>○ Relevant aspects of the Conditions of Contract, as well as MCC Gender Policy and the MCA-Mongolia Social and Gender Integration Plan</li> <li>○ The MCC Policy on Counter-Trafficking in Persons</li> </ul> </li> <li>• Assigns roles and responsibilities for labor management</li> </ul>
LOCATIONS:
All construction sites and temporary construction facilities
<b>MONITORING</b>
<p>MCA-Mongolia or its representative:</p> <ul style="list-style-type: none"> <li>• Monitor implementation of the Contractor's Labor Management Plan and Worker Behavior Code of Conduct, including prohibitions against trafficking in persons, gender-based violence, sexual harassment, and child labor</li> <li>• Monitor implementation of the Contractor's employment recruitment strategies and assist Contractor to reach potential workers among local women, youth, and people from disadvantaged groups</li> <li>• Monitor participation by all parties in the Contractor's internal grievance redress procedure and external project Grievance Redress Mechanisms</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>• Record results of Contractor's labor management responsibilities, with all data and statistics gender disaggregated by age and gender, following, at a minimum, the contract clause on "Employment Records of Workers" and recording, for each worker hiring and leaving dates, along with duration (days) of employment and skills/occupational category and home location of workers (project-affected district/khoroos, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia)</li> <li>• Document implementation of the requirements above for the Labor Management Plan, including all recruitment activities</li> <li>• Document Worker Behavior Code of Conduct infringements and outcomes, and internal grievance redress activities under the Contractor's internal grievance process</li> </ul>
LOCATIONS:
All construction sites and temporary construction facilities
<p>INDICATORS AND SUCCESS CRITERIA:</p> <p>Indicators:</p> <ul style="list-style-type: none"> <li>▪ Required plans written, approved, and implemented</li> <li>▪ Number, content, and outcome of employment against home location (project-affected district/khoroos, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia), gender, and age brackets (under 30, 30 to 49, 50 and over), and total days of employment for each individual worker</li> <li>▪ Use of written contracts with defined pay scales by employment activity</li> <li>▪ Employment recruitment activities, interactions with local employment offices and communities, professional associations, TVET centers</li> <li>▪ Percent of all employees that are workers from project-affected districts/khoroos and elsewhere in UB/Mongolia</li> <li>▪ Percent of all employees that are women, disaggregated by skill/occupational level</li> <li>-</li> <li>▪ Records of attendance and dates of all trainings and toolbox talks delivered on social and gender topics</li> <li>▪ Numbers of grievance redress actions, the number of days necessary to resolve them, and their outcomes</li> </ul>

## Management Measure Wells -2: Gender Integration and Social Inclusion (GSI)

POTENTIAL IMPACT
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Increased short-term employment and improved conditions of employment for women</li> <li>Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of forced labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Millennium Challenge Account Social and Gender Integration Plan (SGIP) <ul style="list-style-type: none"> <li>Encourages contractors to prioritize using local labor, particularly workers from the project affected area</li> <li>Encourages contractors to employ women as at least 30% of workers</li> <li>Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates.</li> </ul> </li> <li>Millennium Challenge Corporation Gender Policy <ul style="list-style-type: none"> <li>The MCC Gender Policy states that countries will ensure that both women and men have opportunities for meaningful participation throughout the consultative processes related to a Compact program.</li> </ul> </li> <li>IFC Performance Standard 1 <ul style="list-style-type: none"> <li>Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> </ul> </li> <li>IFC Performance Standard 2 <ul style="list-style-type: none"> <li>Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.</li> </ul> </li> <li>Constitution of Mongolia <ul style="list-style-type: none"> <li>Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>Mongolian Law on Gender Equality <ul style="list-style-type: none"> <li>Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>Mongolian Law on Labor <ul style="list-style-type: none"> <li>Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>Prohibits employing children under the age of 16 – under 18 in dangerous industries e.g. construction</li> </ul> </li> </ul>
OBJECTIVES
<p>The Gender Integration and Social Inclusion (GSI) Plan complements the Labor Management Plan and provides additional management steps to address GSI considerations with respect to workers and local communities.</p> <ul style="list-style-type: none"> <li>To promote the fair treatment, non-discrimination, and equal opportunity of workers.</li> </ul>

<ul style="list-style-type: none"> <li>• To encourage the employment of women as at least 30% of the Contractor's workforce, calculated over full and part time positions as a percentage of total number of staff hired in the life of the contract, at each skill/occupation level</li> <li>• To enable local people, particularly youth and people in project-affected districts/khoroos to gain short-term employment and training opportunities</li> <li>• Maximize the perceived beneficial impacts of the BWSE project on the project affected communities</li> </ul>
<b>MANAGEMENT MEASURE</b>
<b>Gender Integration and Social Inclusion</b>
<ul style="list-style-type: none"> <li>• Under the Gender Integration and Social Inclusion Plan, the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure the widest exchange of information between the Contractor and the local population and District and khoroo Labor Offices on planned and continuing works and employment opportunities through a program of community consultations and participatory meetings.</li> <li>• The Contractor will prepare and submit for the Engineer's written approval a Contractor's Gender Integration and Social Inclusion Plan, which will be: <ul style="list-style-type: none"> <li>○ Consistent with the Mongolian Law on Labor and</li> <li>○ Consistent with the MCC Gender Policy's emphasis on community consultation and participation</li> <li>○ Consistent with IFC Performance Standard 1: Assessment and Management of Environmental and Social Risks and Impacts</li> <li>○ Agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer</li> </ul> </li> <li>- <i>Community engagement</i></li> <li>• The Contractor will hold at least one meeting in each project-affected District and khoroo office prior to construction to inform community members of the expected conduct of workers and the contents of the Labor Management Plan, and thereafter monthly, minimally covering the following: <ul style="list-style-type: none"> <li>○ Efforts to hire local labor and the Contractor's employment forecast</li> <li>○ Efforts to maximize women's employment</li> <li>○ Efforts to maximize local procurement and the Contractor's procurement forecast</li> <li>○ Prohibitions against child labor and forced labor in supply chains</li> <li>○ Zero-tolerance of trafficking in persons, MCC and Mongolian legal definition of trafficking in persons, and Contractors' Counter-Trafficking in Persons Response Plan</li> <li>○ Zero-tolerance of gender-based violence</li> <li>○ Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan</li> </ul> </li> <li>- <i>Expanding Short-term Employment Opportunities</i></li> <li>• The Contractor will actively consider working with the existing construction brigades to enable local labor currently organized into brigades to gain employment. The brigades may require additional training to enable them to work on this large scale project – training in: <ul style="list-style-type: none"> <li>○ Modern tools and techniques where needed</li> <li>○ Brigade internal labor management, accounting, and estimation techniques</li> </ul> </li> <li>• As referenced in the Labor Management Plan and its recruitment strategy, the Contractor will encourage the employment of qualified individuals among the local population(s) in project activities, with particular focus on women, youth, and disadvantaged groups. This may include small-scale supply contracts or services, with announcement of jobs published on project information boards, in District and khoroo Labor Offices and with information on employment disseminated by the Contractor's Social Safeguards Officer, the MCA or its representative or other means approved by the Engineer.</li> <li>• Where appropriate, the Contractor will provide training to enhance the skills of employees and local people using on-site apprenticeships and internships. As referenced in the Labor Management Section above, the Contractor is encouraged to cooperate with secondment to training programs such as Technical and Vocational Education and Training Centers and</li> </ul>

<p>professional associations and to draw workers from among their graduates and members, etc..</p> <p>-</p> <p><i>Local Procurement</i></p> <ul style="list-style-type: none"> <li>The Contractor will develop and submit a procurement forecast of all goods and services that could be procured locally. The MCA-Mongolia or its representative's Social Safeguards Team will assist in disseminating this information to local communities with the Contractor's Social Safeguards Officer.</li> <li>The Contractor will develop and submit for review and approval by the Engineer, a procurement strategy to inform local communities and businesses of opportunities to provide goods and services to the Contractor and to project workers, particularly targeting small businesses and those owned by women.</li> <li>The Contractor Social Safeguards Officer and MCA-Mongolia or its representative's Social Safeguards Team will hold community meetings to inform people about the procurement processes and include District and khoroo offices, community organizations and the media.</li> </ul>
LOCATIONS:

### Management Measure Wells -3: Counter Trafficking in Persons, Gender-Based Violence, and Sexual Harassment

<b>POTENTIAL IMPACT</b>
<p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Sexual harassment on construction sites and in temporary construction facilities and project-affected communities</li> <li>Trafficking in persons within and outside the project</li> <li>Gender-based violence on construction sites and in temporary construction facilities and project-affected communities</li> </ul>
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b>

Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:

- MCC Counter-Trafficking in Persons Policy (C-TIP Policy)
  - States, “Trafficking in Persons” means (a) Sex trafficking in which a commercial sex act is induced by force, fraud, or coercion, or in which the person induced to perform such act has not attained 18 years of age; (b) The recruitment, harboring, transportation, provision, or obtaining of a person for labor or services, through the use of force, fraud, or coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery.”
  - Adopts “a zero-tolerance policy to TIP and prohibits “The Contractor, the Contractor’s Personnel, any Subcontractor or supplier, or any of their respective personnel, or any agent or affiliate of any of the foregoing shall not engage in any form of Trafficking in Persons during the period of performance of any contract...”
  - Requires each Contractor to “acknowledge that engaging in such activities is cause for suspension or termination of employment or of the Contract” and specifies remedies that the MCA Entity will apply once a TIP incident has been confirmed.
- Mongolian Law on Promotion of Gender Equality
  - Requires the employer to incorporate into the organization’s internal procedures, specific norms for prevention of sexual harassment in a workplace and the redress of such complaints. It also requires that the organization design and conduct a program of training and retraining geared toward creating a working environment free from sexual harassment, and report on its impact in a transparent manner.
- Mongolian Law to Combat Human Trafficking
  - The law regulates relations with respect to the prevention and suppression of trafficking in persons, elimination of the causes of trafficking, and protection of victims’ rights.

## OBJECTIVES

- To prevent incidence of trafficking of persons for sex by project employees
- To ensure that the Contractor and its Sub-Contractors do not employ trafficked labor and to minimize the risks of trafficking of foreign workers to project sites
- To prevent sexual harassment at all construction sites and temporary construction facilities
- To prevent Contractor and worker involvement in sexual harassment in project-affected communities and among members of stakeholder organizations in the workplace
- To prevent incidences of gender-based violence involving workers

## MANAGEMENT MEASURE

### Counter-Trafficking in Persons, Gender-Based Violence and Sexual Harassment

The Contractor shall ensure that foreign workers on work sites or in labor camps are aware 1) of the risks of cultural conflict and of becoming victims of gender-based violence, sexual harassment and abuse, discrimination, trafficking in persons and 2) the legal and contractual remedies against such behavior. This information shall be provided in workers’ induction packages, by holding an orientation before workers start on site, and by delivering a training twice a year.

#### *Counter-Trafficking in Persons (C-TIP)*

- The Contractor shall prepare and submit for the Engineer’s written approval a Counter-Trafficking in Persons Response Plan (TIP Response Plan), and the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure all employees are informed of expectations of behavior as per the Worker Behavior Code of Conduct and the penalties for proven infringements.
  - The Counter-Trafficking in Persons Response Plan shall Address the specific TIP risks identified in the ESIA, including withholding of foreign workers’ passports and commercial sex with minors,
  - Designate a single responsible person who will notify the Engineer and MCA-Mongolia within 24 hours of an alleged incident and implement any investigation.

- Specify when to contact legal authorities, list UB city officials, national government offices, and NGO organizations that address TIP, and state how the Contractor will deal with them in the case of a TIP incident.
  - Include mechanisms to ensure confidentiality of any TIP survivors and to refer them to law enforcement and/or supportive services if they wish.
- The Contractor shall develop, as part of its TIP Response Plan, an anonymous mechanism for workers and community members to report suspected TIP incidents to the Engineer and to MCA-Mongolia, and this must be separate from the project grievance mechanism.
- The Counter-Trafficking in Persons Response Plan shall be:
  - Consistent with the Mongolian Law on Labor, Promotion of Gender Equality, and combatting Human Trafficking
  - Compliant with the MCC Counter-Trafficking in Persons Policy
  - Coordinated and agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer
- The Counter-Trafficking in Persons Response Plan shall specifically prohibit:
  - Procuring minors for sex
  - Transporting non-employee individuals in company vehicles
- The Contractor is strongly encouraged to engage the Centre for Gender Equality or other similarly qualified and experienced organization to develop its TIP Response Plan, its anonymous reporting mechanism, its worker training, and its C-TIP content for community meetings
- The Contractor shall design and deliver twice yearly C-TIP training modules to all staff, sub-contractors, and service providers on the prevention of TIP and the Contractor's TIP Response Plan, following minimum content in MCA-Mongolia's Social and Gender Integration Plan (SGIP).
  - C-TIP training sessions must be delivered to all employees within one month of starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Information about the Contractor's zero-tolerance policy and TIP Response Plan shall be included in all community meetings and the Plan shall be provided in Mongolian, in whole, to project-affected khoroo and District governments.

#### *Gender-Based Violence*

- The Contractor shall adopt a policy of zero-tolerance for gender-based violence and address any complaints of gender-based violence against its workers or committed by its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
- The Contractor shall notify the Engineer and MCA-Mongolia within 24 hours of any alleged incident of gender-based violence
- The Contractor shall deliver a gender-based violence prevention training to all staff, sub-contractors, and service providers prior to all workers beginning on-site and thereafter at least twice each year.
  - The Contractor is strongly encouraged to engage a local, qualified, and experienced organization to develop the training.
  - The training shall minimally identify behavior that constitutes gender-based violence, address attitudes towards violence against women and lesbian, gay, bisexual, transgender, and queer people (LGBTQ), and identify relevant Mongolian laws and organizations addressing gender-based violence.
  - It shall also explain the workings and protections in the Contractor's grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ persons.
- Include in all community meetings information about the Contractor's zero-tolerance policy toward gender-based violence committed by or against its workers and procedures for reporting it and communicate this information in writing to project-affected khoroo and District governments.

#### *Sexual Harassment*

- The Contractor shall develop and submit to the Engineer an Anti-Sexual Harassment Policy

<p>prohibiting sexual harassment directed at Compact beneficiaries, partners, or stakeholders, MCA Entity employees, MCA Entity consultants, MCC personnel, or MCC consultants and including an Incident Reporting and Referral Plan.</p> <ul style="list-style-type: none"> <li>○ The Policy and Plan must be in form and substance satisfactory to the MCA and MCC.</li> <li>○ The Incident Reporting and Referral Plan shall include a confidential mechanism for workers and community members to report sexual harassment to the Engineer and to MCA-Mongolia, separately from the Grievance Redress Mechanism.</li> </ul> <ul style="list-style-type: none"> <li>• Employers are required to have a protocol in their Workplace Grievance mechanism in which persons alleging harassment or violence will be protected from identification and from pressure from the Contactor or other workers to dismiss the complaint.</li> <li>• The Contractor's grievance manager must notify the MCA-Mongolia or its representative's Social Safeguards Team and the Contractor's Social Safeguards Officer within 24 hours of any allegation of sexual harassment.</li> <li>• The Contractor must have a contract with a suitably experienced organization, such as the Centre for Gender Equality, to provide an investigation leader to manage the investigation of complaints of sexual harassment.</li> <li>• The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction.</li> <li>• The Contractor shall design and deliver a sexual harassment prevention training to all staff, sub-contractors, and service providers, in accordance with the Contractor's Anti-Sexual Harassment Policy, recognizing MCC's Guidance to MCAs on Sexual Harassment. <ul style="list-style-type: none"> <li>○ Training shall be conducted within one month of workers starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.</li> <li>○ Training shall address <ul style="list-style-type: none"> <li>▪ Attitudes to and prevention of sexual harassment in the workplace</li> <li>▪ Workings and protections in the Contractor's internal grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ+ persons</li> <li>▪ Additional requirements for minimum training content can be found in MCA-Mongolia's Social and Gender Integration Plan (SGIP)</li> </ul> </li> </ul> </li> <li>• Information about the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral plan shall be included in all community meetings and the Policy and Plan shall be communicated in Mongolian, in whole, to project-affected khoroo and District governments.</li> <li>•</li> </ul>	<div style="background-color: #e0f0ff; padding: 5px;"><b>LOCATIONS:</b></div> <p>All construction sites and temporary construction facilities and project affected communities</p> <div style="background-color: #e0f0ff; padding: 5px;"><b>MONITORING</b></div> <p>MCA-Mongolia or its representative's SST:</p> <ul style="list-style-type: none"> <li>• Monitor Contractor Counter-Trafficking in Persons Response Plan</li> <li>• Monitor Contractor performance related to gender-based violence requirements</li> <li>• Monitor Contractor's development and adherence to its Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> <li>• Participate in the Contractor's internal Grievance Redress Mechanisms in relation to any on allegations of sexual harassment and gender-based violence and monitor and document the process and outcomes, maintaining confidentiality of those reporting and victims and witnesses</li> <li>•</li> </ul> <p>Contractor:</p>
--	---

<ul style="list-style-type: none"> <li>• Maintain copies of all contracts or other agreements with organizations that provide services related to the development of C-TIP, GBV prevention, or prevention of sexual harassment policy, plans, training, or reporting mechanisms</li> <li>• Maintain records of workers' participation in required trainings, including the dates of trainings and which workers participated</li> <li>• Maintain records of all community meetings at which C-TIP, gender-based violence, and sexual harassment are addressed, including the dates and locations and a record of all questions, comments, and Contractor responses</li> <li>• Document all implementation of the results of Contractor's Counter-Trafficking in Persons Response Plan responsibilities</li> <li>• Document all complaints of sexual harassment and gender-based violence, maintaining confidentiality of witnesses and victims, and all implementation of the Sexual Harassment Incident Reporting and Referral Plan and interactions with law enforcement and other relevant response institutions and organizations</li> <li>• Grievance redress activities under the Contractor's internal grievance process</li> </ul>
LOCATIONS:
All construction sites and temporary construction facilities and project affected communities

## 2.5 Health and Safety Management

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## 2.6 Education, Training, Community Outreach and Grievance Redress

Incorporated in various management measures are requirements for education, training, and outreach. The overall goals of these requirements are to provide project employees with an understanding of the commitments included in those management measures and inherent in associated laws, regulations, and policies, and to provide the employees with an appreciation of their own accountability for maintaining mutually supportive relationships with local communities. All required training is to be provided as part of induction training (to provide general awareness) and job-specific training as necessary.

In addition to the management measure under this heading, the following management measures also specify training requirements:

- Management Measure Wells - 1: Labor Management
- Management Measure Wells - 2: Gender Integration and Social Inclusion
- Management Measure Wells - 3: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment

Together, these management measures comprise the Education, Training, and Community Outreach Plan.

### Management Measure Wells - 4: Stakeholder Engagement, Community Consultation, and Grievance Redress

POTENTIAL IMPACT
Delays, increased grievances, political interference, and unnecessary pressure from uninformed groups resulting from lack of information and discussion/consultation
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>• IFC Performance Standard 1 <ul style="list-style-type: none"> <li>- Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> <li>- Requires establishment of a grievance mechanism to receive and facilitate resolution of affected communities' concerns and grievances about environmental and social performance, and scaled to the risks and adverse impacts of the project and with the affected communities as its primary user.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• Inform and involve all stakeholders</li> <li>• Have in place a defined policy for dealing with external parties</li> <li>• Foster positive relations and effective partnerships with local communities throughout project construction and operation</li> <li>• Maximize the beneficial impact of the BWSE project on the affected communities</li> </ul>
MANAGEMENT MEASURE
<b>Stakeholder Engagement, Community Consultation, and Grievance Redress</b>
The stakeholders and affected communities are to be informed of the construction activities, including implementation timeline and grievance redress procedure.
<b>Stakeholder Engagement</b>
<ul style="list-style-type: none"> <li>• The Contractor will prepare and submit for the Engineer's written approval a Contractor's Stakeholder Engagement Plan, based on requirements described in Annex B of the ESMP</li> </ul>

- At a minimum, the Contractor's Stakeholder Engagement Plan will document and specify:
  - Contractor's responsibilities and participation in community consultation, specifying:
  - A standard operating procedure agreed with MCA-Mongolia that governs how the Contractor will interact with local communities
  - How contacts with the communities are to be made and recorded, and reported to the SST for documenting in the Stakeholder Engagement Matrix
  - How information is to be shared with the communities and other project partners
  - Protocols for conducting, recording, and disseminating the results of community consultation
- The Contractor will prepare and submit for the Engineer's written approval a project specific Grievance Redress Mechanism (GRM) based on requirement described in Annex A of the ESMP

### **Community Consultation**

- The MCA-Mongolia or its representative will:
  - Introduce Contractor's officers to communities
  - Monitor and supervise Contractor contacts with communities and other stakeholders
  - Ensure that gender and social inclusion measures implemented by the Contractor are taken when planning meetings, and that thereby all sections of the community are equally informed and consulted
- In coordination with MCA-Mongolia or its representative, the Contractor will:
  - Undertake community information dissemination, consultation, and outreach addressing the influx of migrant workers and the associated risks to the affected communities, the Grievance Redress Mechanism, and other issues that arise during consultation
  - Actively promote awareness and disclose information in affected communities on the following:
    - Purpose, nature, and scale of the project
    - Duration of proposed project activities
  - Record results of Contractor's community consultation activities
  - Document all community consultation activities in the Stakeholder Engagement Matrix

### **Grievance Redress**

- The MCA-Mongolia or its representative will:
  - Supervise, and monitor participation by all parties
- The Contractor will:
  - Develop and implement the Grievance Redress Mechanism consistent with Annex A
  - Designate the Contractor's Social Safeguards Officer or other officer as responsible for collaborating with the project Grievance Redress Mechanism
  - Document all grievance redress actions
  - Report on the Grievance Redress Mechanism to the Engineer

#### **LOCATIONS:**

All construction sites and temporary construction facilities and project affected areas

#### **MONITORING**

##### **MCA-Mongolia or its representative**

- Monitor Contractor contacts with stakeholders and communities
- Monitor participation by all parties in Grievance Redress Mechanism

##### **Contractor**

- Document all Contractor's stakeholder engagement and consultation activities
- Document all grievance redress activities under the Grievance Redress Mechanism

<b>LOCATIONS:</b>	
All construction sites and temporary construction facilities and project affected areas	
<b>INDICATORS AND SUCCESS CRITERIA:</b>	
<b>Indicators:</b> <ul style="list-style-type: none"> <li>Number, content, and outcome of: <ul style="list-style-type: none"> <li>Stakeholder engagement activities</li> <li>Community consultation activities</li> <li>Grievance redress actions</li> <li>Success Criteria:</li> </ul> </li> <li>Successful outcome of: <ul style="list-style-type: none"> <li>Stakeholder engagement activities</li> <li>Community consultation activities</li> </ul> </li> <li>Resolution of grievances</li> </ul>	
<b>REPORTING:</b>	
<ul style="list-style-type: none"> <li>Update project Stakeholder Engagement Matrix</li> <li>Summarize other activities undertaken during reporting period</li> <li>Specify any material deviations or non-compliances to this management measure, and any other issues of concern</li> <li>Define activities planned during next reporting period</li> </ul>

## 2.7 Risk Control and Emergency Response

The Risk Control and Emergency Response Plan references procedures specified in the management measures in the preceding plans that are pertinent to 1) controlling risks and 2) responding to emergencies. Such risks and emergencies include, for example, fuel spills and encountering previously unidentified cultural heritage resources, as well as incidents involving sexual harassment, human trafficking, and gender-based violence.

Due to the broad scope of the Risk Control and Emergency Response Plan, effectively the plan incorporates by reference the procedures specified in the management measures in all preceding plans for this project phase.

## 2.8 Monitoring and Verification, and Maintenance Actions

This Monitoring and Verification, and Maintenance Actions Plan scopes the use of an adaptive approach to:

1. Verify that the management measures in the preceding plans are implemented, and that they are effective and sufficient
1. Revise those management measures that prove ineffective or insufficient

This approach acknowledges the risk and uncertainty of environmental and social management and fosters targeted modification of management measures to correct performance and outcomes. It will be executed as a continuous, iterative process by which the consequences of all management actions are systematically evaluated and, as needed, specific measures are modified in response to a determination that their forecasted outcomes will not meet requirements. As needed, this process of systematically evaluating the performance of the management measures and modifying the management measures to achieve the required outcomes, as well as the respective responsibilities of MCA-Mongolia or its representative and the Contractor, will extend into the construction phase.

In the preceding plans, indicators and success criteria are designated for each management measure. For each management measure, MCA-Mongolia or its representative, in its oversight capacity, will determine whether progress toward the designated success criteria is sufficient and will document its determination. If progress decidedly fails to meet iterative requirements, MCA-Mongolia or its representative will inform the Contractor of the need to formulate a management measure-specific adaptive maintenance action to implement midcourse corrections. In coordination with the Contractor, MCA-Mongolia or its representative will reformulate the management measure to foster meeting the success criteria, incorporating as applicable operational or structural changes, and considering the cost effectiveness of incorporating the changes. The scope of most management measures likely will remain fairly stable; whereas, it is expected that some methods will be added, modified, or dropped over the implementation timeline of some management measures.

With the prior approval of MCA-Mongolia, the Contractor will implement and monitor the revised management measure, and MCA-Mongolia or its representative will provide oversight.

## 3 Construction Phase

### 3.1 Responsibilities During Construction

#### 3.1.1 MCA-Mongolia

MCA-Mongolia or its representative and the Engineer will be responsible for oversight of the construction-related management measures and monitoring specified in the ESMP. Oversight will be accomplished by MCA-Mongolia or its representative via a combination of regular visits to the construction sites and on-site supervision of management and monitoring activities. MCA-Mongolia or its representative will inform and coordinate with all applicable stakeholders regarding their corresponding mandates under or in relation to the ESMP. MCA-Mongolia or its representative will establish a Social Safeguards Team (SST) to coordinate with the Contractor during the construction phases in implementing, supervising, reporting, and follow-up actions with regard to the ESMP.

#### 3.1.2 Contractor

Unless otherwise specified for individual management measures, the construction contracting firm performing the work, the **Contractor**, will be fully responsible for implementing and monitoring all construction-related management measures specified in the ESMP—together with the conditions and procedures specified in Section V, Works Requirements of the Construction Contract Documents. The Contractor will read the ESMP, consider it in its entirety, and comply with all aspects

of the ESMP that pertain to implementing and monitoring construction-related environmental and social management.

The Contractor will abide by the requirements of this ESMP, which is appended to and is a part of the Contract. The Contractor will take all necessary measures and precautions to ensure that the execution of the works and all associated operations on site or off site are carried out in conformity with statutory and regulatory environmental and social requirements of the Government of Mongolia, the MCC Environmental Guidelines, the IFC Performance Standards, and the technical specifications, where the more stringent will apply. The Contractor will take all measures and precautions to avoid any nuisance or disturbance arising from the execution of project activities. Wherever possible, this will be achieved by avoidance of the impact at the source rather than mitigating an impact after it has been expressed.

The Contractor will designate an Environmental and Social Performance Manager. This individual(s) will have knowledge of relevant Mongolian, IFC, and Millennium Challenge Corporation standards and regulations, and knowledge of environmental and social issues that include, but are not limited to, environmental management, waste management, gender and social inclusion, cultural resources, and health and safety management.

This individual(s) will be responsible to:

- Work closely with MCA-Mongolia or its representative to guide the Contractor's thorough understanding of the mitigation and monitoring requirements
- Lead the Contractor's work related to implementing environmental and social management measures and associated reporting requirements
- Work closely with MCA-Mongolia or its representative to incorporate or modify management measures and monitoring actions to reflect on-site field conditions, as needed, with the approval of the Engineer

The Contractor, while in possession of the construction sites, will be responsible for the safety measures undertaken in accordance with the Technical Specifications to protect the workforce of the Contractor's own staff as well as the Engineer's and MCA-Mongolia or its representative's supervision staff. The Contractor will conduct in this respect safety induction courses for all personnel involved with the works and who are required to supervise any activity prior to their attending any part of the works. Additional training is required to meet MCC social policy requirements as per the:

- Labor Management Plan
- Gender Integration and Social Inclusion Plan
- Counter-Trafficking in Persons Response Plan
- Stakeholder Engagement Plan
- Construction Camp and Temporary Facilities Management Plan
- Cultural Heritage Training Plan
- Managing external grievances as part of the project GRM

The Contractor will act responsibly to provide notification of the Contractor's schedule to enable MCA-Mongolia or its representative to carry out its responsibilities. The Contractor will be required to provide verbal and written updates to MCA-Mongolia or its representative on a regular basis indicating percent achievement of the construction-related management measures specified in the ESMP. On a monthly basis, as part of the Contractor's monthly progress report, the Contractor will submit an ESMP update that will report the status of all environmental and social compliance activities and actions taken by the Contractor.

## **3.2 Environmental Management**

### Management Measure Wells -5: Emergency Preparedness and Response

POTENTIAL IMPACT
Accidents, natural disaster, or sabotage that occur during construction and risk jeopardizing worker and public health and safety, and the environment
<p>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Mongolian Law on Environmental Protection <ul style="list-style-type: none"> <li>◦ Requires business entities eliminating or suspending their activities if they adversely affect the environment in breach of environmental legislation, standards and permissible maximum levels.</li> </ul> </li> <li>• Mongolian Law on Disaster Protection <ul style="list-style-type: none"> <li>◦ Requires establishing management for disaster protection service, staff and specialized unit and to organize their training and preparedness.</li> </ul> </li> <li>• Mongolian Law on Fire Safety <ul style="list-style-type: none"> <li>◦ Requires ensuring the readiness of fire protection equipment and training their employees.</li> </ul> </li> <li>• Mongolian Law on Environmental Impact Assessment <ul style="list-style-type: none"> <li>◦ Requires preparing a report presenting the findings of the detailed environmental impact assessment and develop an environmental management plan.</li> </ul> </li> <li>• Mongolian Law on Labor Safety and Hygiene <ul style="list-style-type: none"> <li>◦ Requires employees attending short term training on labor safety and hygiene in compliance with procedures approved by the state central administrative organization in charge of labor issues and acquire knowledge and training.</li> </ul> </li> <li>• Mongolian Criminal Code <ul style="list-style-type: none"> <li>◦ Requires providing an emergency aid to the injured, to report to the relevant authority or official after having caused.</li> </ul> </li> <li>• IFC Performance Standards 1, 3, and 4 <ul style="list-style-type: none"> <li>◦ Requires that emergency preparedness and response activities will be periodically reviewed and revised, as necessary, to reflect changing conditions.</li> </ul> </li> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning <ul style="list-style-type: none"> <li>◦ Provides guidance on cleanup of spill and releases of oil, fuel, lubricants, hydraulic fluids.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• Avoid, minimize, and effectively respond to emergency situations and resulting adverse impacts to the environment and communities associated with accidents, natural disasters, or sabotage</li> <li>• Effectively and efficiently respond to hazardous material spills so as to minimize their human health, safety, and environmental impacts</li> </ul>
MANAGEMENT MEASURE
<p><b>Emergency Preparedness and Response</b></p> <p>The Contractor will:</p> <ul style="list-style-type: none"> <li>• Fully comply with the requirements of this management measure</li> <li>• Provide emergency preparedness and response training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the Contractor’s site-specific Emergency Preparedness and Response Plan, to all employees and subcontractors at the time of their induction and annually thereafter</li> <li>• Prepare and submit for the Engineer’s written approval a site-specific Emergency Preparedness and Response Plan that specifies preventive measures and response strategies the Contractor will implement in case of accidents, natural disasters, or sabotage to protect worker and public health and safety, and the environment. The requirements of the Plan are detailed below.</li> </ul>

## **Hazardous Materials Management**

- Obtain from the appropriate Mongolian authorities all permits for the use and handling of hazardous materials
- Develop prioritized material-specific handling procedures and training requirements as necessary according to risk
- Assign an officer to manage and advise on hazardous materials management

### *Handling*

- Nominate all equipment used to transfer hazardous materials for approval by the Engineer to assess that control measures are sufficient
- Provide spill kits, protective equipment, and other necessary equipment wherever hazardous materials are stored or used in significant quantities
- Provide and require use of personal protective equipment (PPE) and fire protection equipment at all times when handling hazardous materials, as specified in the relevant material safety data sheets (MSDS)
- Avoid handling and do not store hazardous materials in close proximity to drainage systems, waterways, or wells

### *Transport*

- Nominate all haulers used to transport hazardous materials for approval by the Engineer to assess that they are appropriately qualified to transport and handle hazardous materials
- Nominate all containers used to transport hazardous materials for approval by the Engineer to assess that control measures are sufficient
- Provide and require use of fire extinguishers, fire prevention materials, and spill prevention materials appropriate for the hazardous materials being transported
- Properly secure containers containing hazardous materials prior to transport
- Properly mark, label, and placard containers and trucks in accordance with the MSDS
- Maintain chemical manifests in accordance with Mongolian regulations

### *Equipment Use and Maintenance*

- Maintain oil-filled electrical appliances in good and fire-resistant condition
- Undertake all planned equipment, plant, and vehicle maintenance in designated service areas with suitable containment to prevent contamination of the environment
- Place drip trays under all stationary equipment that use fuel, oil, or lubricants that are not self-contained (including, but not limited to, generators, mobile lighting towers, pumps)
- Equip tanks and machinery with measurement devices and overflow protection (e.g., flow and level meters, relief valves, overflow protection valves, and emergency shutoff)

## **Spill Response Procedure**

- Contractor employees are responsible for verbally reporting all spills to their immediate supervisor.
- Supervisors will then coordinate the spill response process and report the spill as an environmental incident to the Engineer.

### *Spill Response Kits*

- Supervisors will clearly label and store spill response kits in locations that will facilitate a prompt response to spills
- Spill response kits in all work areas will contain the following equipment:
  - Shovel
  - 2 x respiratory masks
  - Absorbent material (pads and socks)
  - 2 x goggles
  - 60-liter sealable container
  - 2 x PVC gloves
  - Jug granular absorbent
  - Red wheelie bin
- Spill response kits will be carried in mobile machinery where a significant spill risk is identified with its operation. The contents of these spill kits will be specific to the risks

presented from the mobile machinery and will be adequate and appropriate for the materials being transported.

- Where there are significant spill risks apparent outside of workshops or designated hazardous material storage areas, spill response equipment will be specific to the risks posed.

#### *Control of Hazardous Material Spills*

- The health and safety of employees, subcontractors, and bystanders will be considered prior to initiating the spill response process.
- Personnel considered at risk of harm in the event of a spill will be evacuated from the spill impact area by the supervisor in charge of the work area.
- If the spill presents an emergency risk to bystanders or the environment, the site emergency response team will be notified immediately of this situation by the individual who identifies the risk.
- If safe to do so, trained individuals will attempt to control the spill at the source and remove all sources of heat and ignition.
- Spills will then be reported verbally to the immediate supervisor, who will arrange for spill containment and cleanup to occur.
- The supervisor will notify the Engineer of the spill details to enable advice to be provided and statutory reporting processes to be initiated.

#### *Containment and Clean Up of Hydrocarbons*

- Contain the extent of the spill by using absorbent material around the perimeter of the spill or earthen bunds if outside of designated workshops or storage areas.
- Excess hydrocarbons may be soaked up using absorbent materials, including dirt, or removed by use of a vacuum truck if the spill is present as free product or is on water.
- Prevent hydrocarbons entering drainage systems and waterways. If hydrocarbons do enter drainage systems or waterways, these should be dammed or have booms placed in them to minimize the spread of hydrocarbons.
- Waste material will be disposed of appropriately:
  - Absorbent material, booms, etc. will be placed into designated bins.
  - Contaminated soil and water will be removed and stored in a designated area as advised by the Engineer.

#### *Containment and Clean Up of Sewage*

- Contain the spill with sand or earth to prevent it entering drainage systems and waterways.
- Calcium hypochlorite powder will be spread around the site for spills likely to be encountered by personnel.
- Any wastewater that enters waterways or drainage systems will be disinfected with the use of calcium hypochlorite powder.
- Wastewater then will be removed by use of a vacuum truck and taken to a waste treatment facility.
- Remaining water and solids will be disinfected using calcium hypochlorite powder.

#### *Containment and Clean Up of Chemicals*

- Contain the extent of the spill using sand, earth, sawdust, or other inert material to prevent it entering drainage systems and waterways.
- Chemicals clean up may vary depending on the chemical type.
- General purpose spill kit supplies, instead of oil-absorbent supplies, will be used.
- Collect recoverable product, if possible, and dispose of at an approved disposal site or facility in accordance with guidance provided by the Engineer.

#### *Containment and Clean Up of Battery Acid*

- Contain the spill and neutralize with a basic substance such as sodium bicarbonate in accordance with guidance provided by the Engineer.
- Collect recoverable product and neutralize with sodium bicarbonate in accordance with guidance provided by the Engineer.
- Dispose of with process water on site.

### *Follow-up Sampling, Storage, and Treatment*

- For spills rated as significant risk on incident reporting, quality of cleanup work will be determined by follow-up sampling of contamination-receiving environment and compared against the Mongolian environmental standards on permissible levels of pollutants in air, water, and soil.
- If any exceedance of pollutant permissible levels is noted, cleanup work will be considered as inadequate and further cleanup will be required.
- Follow-up sampling will be carried for all spills to evaluate reporting requirements to the Engineer.
- Hydrocarbon contaminated soils will be excavated and placed within a dedicated area for storage and treatment.

### **Emergency Preparedness and Response Plan**

- Prepare and submit for the Engineer's written approval a site-specific Emergency Preparedness and Response Plan and associated procedures that, as a minimum:
  - Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
  - Complies with Construction Contract Documents Section V, Works Requirements, Section 01030 Special Requirements, Paragraph 1.04.D Emergency Action Plan
  - Specifies:
    - Site-specific preventive measures and response strategies the Contractor will implement in case of accidents, natural disasters, or sabotage to protect worker and public health and safety, and the environment
    - Potential emergencies and key areas prone to emergency situations
    - Existing emergency response structures and capacities in the respective project areas—i.e., police, fire brigades, paramedics / ambulances, hospitals, etc.
    - Actions to be taken prior to an emergency—i.e., preventive and preparatory measures
    - Actions to be taken during an emergency—i.e., response measures
    - Actions to be taken after an emergency—i.e., recovery and assessment measures
    - Contact lists for emergency situations
    - Description of collaboration mechanisms of the project's emergency preparedness and response teams with existing emergency response structures in the respective project areas
    - Assigns roles and responsibilities for emergency preparedness and response
- Post copies of the Plan and the list of emergency contact numbers in highly visible locations within the construction sites and temporary facilities
- In case of any accidents, the Contractor will immediately undertake the procedures contained within the Plan that complies with From IFB sub clause 4.8 safety procedures: "The Contractor shall notify the Engineer, the Employer, and MCC within 24 hours or as soon as reasonably possible after the occurrence of any accident which has resulted in damage or loss of property, disability or loss of human life, or which has or which could reasonably be foreseen to have a material impact on the environment and shall submit to the Engineer, the Employer, and MCC no later than 7 days after the occurrence of such an event, a summary report thereof

#### LOCATIONS:

### 3.3 Waste Management

#### Management Measure Wells - 6: Waste Management

<b>POTENTIAL IMPACT</b>
Risks and adverse impacts of handling, storing, treating, and disposing of waste
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b>  Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>• Mongolian Law on Hazardous and Toxic Chemicals             <ul style="list-style-type: none"> <li>○ Requires depositing the waste based on conclusion of the related professional organization to the place determined by the district governor.</li> </ul> </li> <li>• Mongolian Law on Sanitation             <ul style="list-style-type: none"> <li>○ Prohibits disposing waste in the places other than the specified points.</li> </ul> </li> <li>• Mongolian Law on Waste             <ul style="list-style-type: none"> <li>○ Prohibits establishing centralized waste disposal sites in urban settlement areas, water sanitary and protection zones and mining areas.</li> </ul> </li> <li>• Government of Mongolia Resolution No. 135 of 2002 addressing the procedures of the classification, collection, packaging, transportation, treatment, storage, and disposal of hazardous waste</li> <li>• Government of Mongolia Resolution No. 116 of 2018 addressing Articles 7.1.2 and 7.1.3 of the Law on Waste (repealed Government Resolution No. 135 of 2002).</li> <li>• Joint Order No. A-320/305 of Minister of Nature, Environment and Tourism and Minister of Health of 2011 addressing the procedures of the disposal of medical wastes             <ul style="list-style-type: none"> <li>○ Requires providing personal protective equipment to the organization's waste management officer.</li> </ul> </li> </ul>

- Minister's Order No. 404 of 2006 of Ministry of Nature, Environment and Tourism addressing the procedure of the disposal and landfill of waste
- Minister's Order No. A/443 of 2018 addressing Articles 4.4.1, 4.4.2, 4.4.3 of the Law on Hygiene (repealed Minister's Order No. 404 of 2006).
- IFC Performance Standards 3 and 4
  - Encourages recovering and reusing waste in a manner that is safe for human health and the environment.
- IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning
  - Provides guidance on management of non-hazardous solid waste generated at construction sites and associated facilities, hazardous materials, and wastewater discharges.

#### OBJECTIVES

- Effectively manage waste by minimizing waste generation and safely handling, storing, treating, and disposing of generated wastes

#### MANAGEMENT MEASURE

##### Waste Management

The Contractor will:

- Comply with Construction Contract Documents Section V, Works Requirements, Section 01030 Special Requirements:
  - Paragraph 1.04.E Hazardous Waste Management Plan
  - Paragraph 1.14 Disposal of Excess Material
  - Paragraph 1.21 Disposal of Debris
- Comply with Construction Contract Documents Section V, Works Requirements, Section 01110 Environmental Protection Procedures:
  - Paragraph 3.04.I, requiring the disposal of all debris and excess material outside wetland or floodplain areas in an environmentally sound manner
  - Paragraph 3.05.A, prohibiting the use of burning at the project site for the disposal of refuse and debris
- Comply with Construction Contract Documents Section V, Works Requirements, Section 01610 Delivery, Storage and Handling:
  - Paragraph 1.05.C Storage and Protection
- Comply with Construction Contract Documents Section V, Works Requirements, Section 02100 Site Preparation:
  - Paragraph 1.07.D, requiring the legal disposal of all waste and surplus material
  - Paragraph 3.03 Disposal of Waste Materials
- Comply with Construction Contract Documents Section V, Works Requirements, Section 02210 Earth Excavation, Backfill, Fill and Grading:
  - Paragraph 3.11 Reuse and Disposal of Surplus Excavated Materials
- Fully comply with the requirements of this management measure
- Provide in storage locations and principle points of use material safety data sheets (MSDSs) for all stored materials in Mongolian, English, and any other languages as appropriate
- Provide 150%-capacity secondary containment for fluids stored in drums and buckets or 25% of the capacity of all the total volume of the stored individual containers within the bund, whichever is larger, for all storage of liquid hazardous materials, including, but not limited to, waste oil and solvents
- Do not store waste oils for extended periods in underground sumps
- Empty and inspect regularly tanks and sumps for any signs of cracks or holes
  - Record findings of inspections
  - Repair any cracks or holes
  - Record any repairs conducted
- Make available on site spill kits, protective equipment, and other necessary equipment where hazardous materials are handled, to clean and mitigate spills
- Locate appropriate first aid close to hazardous material storage areas, including, but not limited to, eye-wash, showers, and first aid kits

- Only transport hazardous materials using operators licensed and approved by the Engineer for the specific material
- Implement the following waste management hierarchy, in the following order of preference:
  - Waste avoidance and reduction at source
  - Waste reuse and recycling
  - Waste storage, treatment, and disposal to local, Mongolian, and international standards
- Classify all wastes according to the following and based on internationally accepted regulations, guidelines, definitions, and methodologies:
  - Mineral waste
  - Non-hazardous waste, including domestic waste and inert waste
  - Hazardous waste, including medical waste
  - Wastewater
- Segregate, securely contain, and monitor waste at the source of generation pending treatment, transport, or disposal
- Prohibit open burning of non-hazardous and hazardous solid waste
- Transfer recyclable wastes only to facilities operated by licensed recycling contractors, subject to assessment by the Engineer of the contractors and facilities
- Transfer non-hazardous waste, other than recyclable wastes, only to waste disposal facilities licensed in accordance with applicable Mongolian laws and regulations
- Sterilize medical waste by autoclave in 121°C for at least 20 minutes prior to transfer to disposal and a licensed facility
- Properly store on site all hazardous wastes for which there is not an engineered and approved treatment or disposal method available until a treatment and/or disposal route becomes available
- Maintain an inventory by location, specifying quantity per month and cumulative total, and detailing:
  - Wastes generated
  - Wastes sent for off-site recycling
  - Wastes subject to hazardous waste treatment
  - Wastes subject to non-hazardous waste disposal
  - Unrecyclable hazardous wastes stored
- Provide waste management training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the Contractor's site-specific Waste Management Plan, to all employees and subcontractors at the time of their induction and annually thereafter
- The Contractor will prepare and submit for the Engineer's written approval a site-specific Waste Management Plan and associated procedures that, as a minimum:
  - Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
  - Assigns roles and responsibilities for waste management
  - Disposition of hazardous wastes for which no engineered and approved treatment or disposal method is available

#### LOCATIONS:

All construction sites, construction camps, and temporary facilities where waste is generated, stored, treated, or disposed of

#### MONITORING

Document:

- Provision, maintenance, and/or updating of:
  - MSDSs
  - Secondary containment capacity for all storage of liquid hazardous materials
  - Tanks and sumps inspection records
  - Spill kits
  - First aid
  - Waste inventory
  - Waste management training
- Submission and approval of site-specific Waste Management Plan

## 3.4 Social and Gender Inclusion

### Management Measure Wells - 7: Labor Management

POTENTIAL IMPACT
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Professional management and conditions of labor</li> <li>Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> <li>Women's short-term employment in construction and engineering-related work</li> <li>Potential alleviation of poverty in local area</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of forced labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Constitution of Mongolia <ul style="list-style-type: none"> <li>Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>Mongolian Civil Code <ul style="list-style-type: none"> <li>Requires providing office space, tools and equipment necessary to ensure employees' health.</li> </ul> </li> <li>Mongolian Law on Gender Equality <ul style="list-style-type: none"> <li>Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>Mongolian Law on Labor <ul style="list-style-type: none"> <li>Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>Prohibits employing children under the age of 16 or under 18 in dangerous industries, including construction</li> </ul> </li> <li>Mongolian Law on Minimum Wage <ul style="list-style-type: none"> <li>Minimum wage is fixed by National Tripartite Committee on Labor and Social Consensus representatives.</li> </ul> </li> <li>Mongolian Law on the Protection of the Rights of the Child <ul style="list-style-type: none"> <li>Prohibits employing children in any work that is likely to harm their health or morale, and exploiting or paying unjust wages to children</li> </ul> </li> <li>Mongolian Law on Social Protection of Disabled Persons <ul style="list-style-type: none"> <li>Prohibits building any buildings and facilities that do not meet needs and requirements of persons with disabilities.</li> </ul> </li> <li>Mongolian Law on Combating Human Trafficking <ul style="list-style-type: none"> <li>Requires regulating the workplace to ensure the implementation of the legislation on combating human trafficking, and if it is not specified, it shall be obliged to comply with the instructions, recommendations, statements and instructions given by the competent authorities and officials.</li> </ul> </li> </ul>

- Mongolian Law on Sending Labor Force Abroad and Receiving Labor Force and Specialists from Abroad
  - Regulates relations with respect to employment of a Mongolian citizen abroad and a foreign citizen in Mongolia, and protection of their rights and interests.
  - Reinforces provisions of the Constitution of Mongolia, Labor Law, Social Insurance Law, and other related legal acts, and legal status of a foreign citizen.
- IFC Performance Standard 2
  - Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.
  - Contractor will adopt and implement human resources policies and procedures appropriate to its size and workforce that set out its approach to managing workers consistent with the requirements of this performance standard and national law.
  - Contractor will provide workers with documented information that is clear and understandable regarding their rights under national labor and employment law and any applicable collective agreements, including their rights related to hours of work, wages, overtime, compensation, and benefits upon beginning the working relationship and when any material changes occur.
  - Contractor will not make employment decisions on the basis of personal characteristics unrelated to inherent job requirements. Contractor will base the employment relationship on the principle of equal opportunity and fair treatment, and will not discriminate with respect to any aspects of the employment relationship, such as recruitment and hiring, compensation (including wages and benefits), working conditions and terms of employment, access to training, job assignment, promotion, termination of employment or retirement, and disciplinary practices. Contractor will take measures to prevent and address harassment, intimidation, and/or exploitation, especially in regard to women. The principles of non-discrimination apply to migrant workers.
  - Prohibits employment of child labor.
- Millennium Challenge Corporation Counter-Trafficking in Persons Policy (C-TIP Policy)
  - Requires contractors to take a zero-tolerance policy with regard to human trafficking and to actively manage employment conditions to prevent trafficking in persons and related activities and specifies remedies that the MCA-Entity may take in response to confirmed cases of TIP.
- Millennium Challenge Account Social and Gender Integration Plan (SGIP)
  - Sets out guidelines for Contractors related to social risk mitigation measures in infrastructure, including making working conditions suitable for both male and female employees
  - Requires developing and implementing an employment plan that prioritizes using local labor particularly from the Area of Influence of the project
  - Sets a target to encourage contractors to employ as workers at least 30% women of all workers at each skill/occupational level
  - Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates.
- Millennium Challenge Corporation Guidance Note to MCAs on Sexual Harassment
  - Requires that contractors are well-informed about existing anti-sexual harassment policies and procedures, and that contractors meet the requirements in the standard bidding documents.
- Ministry of Construction and Urban Design (MCUD) Gender Responsiveness Policy
  - Calls for gender targets in employment via “international and domestic tenders, so that one gender should not be lower than 15 percent among workers, and 25 percent among decision makers.”
- Ministry of Labor and Social Welfare Order (2016)

- Expanded the types of hazardous work prohibited for children under the age of 18 to include construction
- International Labor Organization fundamental conventions, and International Human Rights instruments and conventions

## OBJECTIVES

The Labor Management Plan ensures that contractors and their workers have clear expectations about the behaviors and conditions expected of the Contractor and all workers.

- Promote fair treatment, non-discrimination, and equal opportunity of workers
- Promote local labor opportunities
- Achieve a target of women's employment as 30% of all labor at each skill/occupational level
- Establish and maintain, a constructive worker-management relationship
- Protect workers, including "vulnerable" categories of workers such as children, migrant workers, workers engaged by third parties, and workers in the supply chain
- Avoid the use of forced labor
- Maximize the beneficial impact of the project on the affected communities

## MANAGEMENT MEASURE

### Labor Management

The MCA-Mongolia or its representative's Social Safeguards Team (SST) will:

- Encourage Contractor to employ local unskilled and semi-skilled labor, particularly youth and women, and to procure goods and services from local businesses and entrepreneurs
- Facilitate the Contractor's cooperation with the local District Labor Offices
- Facilitate the publication of vacancies and procurements within affected communities
- Facilitate the holding of job fairs and procurement workshops within affected communities to support local applicants to apply for jobs and local business and entrepreneurs to bid
- 
- Gather names of interested workers from project affected households and through community information programs and consultation meetings
- Share the names of interested workers with Contractor and District and khoroo Labor Offices
- Encourage Contractor to employ women at a rate of at least 30% of personnel at each skill/occupational level
- Facilitate Contractors' engagement with relevant university engineering programs, technical and vocational education and training (TVET), and professional associations to 1) identify and recruit qualified job applicants and 2) establish internships and apprenticeships

The Contractor will:

- Fully comply with the requirements of this management measure
- Perform the work in accordance with relevant sections of the ESMP

### Access to Employment

The Contractor will:

- Publish vacancies (listing the required qualifications for all categories of employment) within project-affected communities and at District and khoroo offices and provide such information to the Engineer and during each community meeting
- Publish and communicate employment opportunities listing the required qualifications for all categories of employment city-wide, and beyond in Mongolia, if the vacancies cannot be filled from local communities
- Ensure that a staff person responds to questions from the local population regarding employment and procurement opportunities
- Develop an employment forecast and a written recruitment strategy to: 1) encourage the employment of qualified individuals among the local population(s) in project construction and ancillary activities in all phases, with particular focus on women and youth; 2) achieve a target of women's employment at least 30% of personnel at each skill/occupational level; and 3) provide training for local construction brigades on how to be effective contractors

- Through the Contractor's Social Safeguards Officer, liaise with the MCA-Mongolia or its representative's SST and local labor offices to provide support with the job application process, encourage local employment (including women's employment), and publicize a fair, consistent and transparent recruitment process
- In disseminating information on potential employment opportunities, take steps to maximize outreach, using all forms of media that may be appropriate
- Ensure that all staff have written employment contracts specifying fair employment conditions for equal work to men and women, and fulfilling all conditions specified under the Mongolian Law on Labor defining the contracts

The Contractor is encouraged to:

- create pay bands for each category of worker to ensure equal pay for equal work

As feasible, the Contractor will:

- Develop and submit a plan for providing on-the-job training and skills transfer opportunities to the local labor force
- Engage with training, education, and professional organizations—such as Technical and Vocational Education and Training, Implementing Agency of the Ministry of Labor and Social Protections, Mongolian University of Science and Technology, and the Mongolian Builder's Association—to recruit qualified applicants, and provide apprenticeships and internships for students who study water engineering and relevant subjects at university
- The Contractor shall note contract clauses on "Gender," "Engagement of Staff and Labor," "Foreign Personnel," "Prohibition of Forced or Compulsory Labor," "Prohibition of Harmful Child Labor," "Employment Records of Workers," and "Non-Discrimination and Equal Opportunity."

#### *Local Procurement*

The Contractor will:

- Proactively procure goods and services from local businesses and entrepreneurs in Khan-Uul and Songinokhairkhan Districts and Ulaanbaatar, and members of targeted disadvantaged groups (e.g., women, people with disabilities), achieved through:
  - Publicizing procurements within the targeted geographical area or targeted group, for example at the District and khoroo offices and via notice boards, print media (newspapers, etc.), recruitment agencies, or job and career fairs
  - Publicizing and hold procurement workshops within the targeted geographical area or targeted group
  - Adding priority criteria for businesses and entrepreneurs in the targeted geographical area or members of the targeted group to the selection procedure
- In disseminating information on potential service procurement opportunities, take steps to maximize outreach, using all forms of media that may be appropriate

#### *Workplace Environment*

The Contractor will:

- Establish, execute, and enforce a Worker Behavior Code of Conduct on which all employees will be briefed, that all employees are required to sign, and that mandates immediate dismissal for serious offences including sexual harassment, violence, or confirmed cases of engagement in trafficking in persons.. The Code will specify:
  - Expectations of worker behavior, and penalties for transgression
  - MCC and Mongolian legal definitions of trafficking in persons (TIP), zero-tolerance for TIP, and remedies that the MCA Entity may take in response to confirmed cases of engagement of trafficking in persons
  - Zero-tolerance for gender-based violence
  - Compliance with the Contractor's Anti-Sexual Harassment Policy and notification of the Contractor's Sexual Harassment Incident Reporting and Referral Plan
  - Rights of employees to a grievance mechanism, holidays, and cultural and festival access
  - Conditions for work camps, shelter, water and sanitation, food, and security

- The responsibility of all workers, regardless of their role or duration of employment, to review and acknowledge the Workers' Code of Conduct by signing the code sheet
- The requirement to respect local customs and practices
- Establish and execute a grievance redress procedure that:
  - Formalizes a system for receiving and managing internal complaints of sexual harassment, gender-based violence, or issues of trafficking persons (including engaging in commercial sex with a person under 18 years of age)
  - Guarantees confidentiality to makers of allegations
  - Designates the Contractor's Social Safeguards Officer or other officer as responsible for collaborating with the human resources department on the grievance redress procedures
  - Refers to the Contractor's Sexual Harassment Incident Reporting and Referral Plan for allegations of sexual harassment
  - Specifies that the Contractor's zero-tolerance for gender-based violence addresses any complaints of gender-based violence against its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism
  - In cases of discrimination against women or of allegations of sexual harassment or violence, requires that the Contractor's Social Safeguards Officer contact the MCA-Mongolia or its representative's SST to include them in the investigation and appoint a third party—such as a representative from an NGO such as the Centre for Gender Equality or equivalently qualified, experienced organization—to lead the investigation
- 
- The Contractor shall note the contract clause on "Prohibition of Sexual Harassment"
- The Contractor shall note the contract clause on "Facilities for Staff and Labor" and provide suitable gender-segregated facilities to enable the safe employment of both men and women – e.g. Toilet facilities, changing facilities on all sites and enabling physical access to office accommodation for people with disabilities

### *Training*

The Contractor will:

- Provide training to enhance the skills of employees using on-the-job training, internships, and apprenticeships,.
- Mandate for all employees, before each worker starts work on the site, induction packages that include:
  - Employment rights and conditions, including non-discrimination and equal opportunity
  - The Contractor's responsibility to "adopt recruitment, hiring and retention practices that support the employment of women and staff from diverse backgrounds" per the contract clause on "Engagement of Staff and Labor," the Contractor's employment forecast and recruitment strategy, and the Contractor's Gender Integration and Social Inclusion Plan (described below)
  - Gender-based violence
  - Contractor's Anti-Sexual Harassment Policy – including awareness of what constitutes sexual harassment, exploitation, and abuse and the Contractor's Sexual Harassment Incident Reporting and Referral Plan
  - Using the internal Grievance Mechanism for allegations of gender-based discrimination
  - Rights to have access to local festivals
  - Cultural sensitivities, and social norms and practices in each area
  - Expectations on avoiding poor relations between employees and local communities caused by behavior relating to alcohol, gambling, prostitution, illegal drug use, violence and sexual abuse of women, minors and lesbian, gay, bisexual, transgender, queer, and others (LGBTQ+) persons
  - Countering the Trafficking in Persons Response Plan – awareness of responsibilities to counter the trafficking of people around the project area, the remedies that the Contractor and the MCA Entity may apply, and mechanisms for reporting suspected instances of TIP with the Contractor's TIP Response Plan

<ul style="list-style-type: none"> <li>▪ Awareness of the possibilities of the transmission of HIV/AIDS and communicable illnesses and how to prevent HIV/AIDS transmission</li> <li>○ Undertake a series of employment and social plan inductions and employee awareness programs that: <ul style="list-style-type: none"> <li>▪ All employees must attend at the commencement of employment and over the employment period twice yearly</li> <li>▪ Incorporate toolbox talks that include reinforcement of all training programs</li> </ul> </li> <li>○ Commission training modules on gender integration and social inclusion topics for all employees at intervals agreed with the MCA-Mongolia or its representative's SST</li> <li>○ Require that the Social Safeguards Officer, together with the MCA-Mongolia or its representative's SST Community Liaison Officers, conduct awareness raising with workers on child labor issues in the local community as part of an ongoing community awareness program on social issues. These toolbox talks will include ways that workers can report suspected child labor to the District Children, Youth and Family Offices, and the MCA-Mongolia or its representative's Social Manager</li> </ul>
<p><i>Site-specific Labor Management Plan</i></p> <p>The Contractor will prepare and submit for the Engineer's written approval a site-specific Labor Management Plan that:</p> <ul style="list-style-type: none"> <li>• Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan</li> <li>• Includes the Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan and the Workers' Code of Conduct</li> <li>• Is consistent and compliant with: <ul style="list-style-type: none"> <li>- Mongolian Law on Labor</li> <li>- Relevant aspects of the MCC Gender Policy coordinated and agreed with the MCA-Mongolia or its representative's SST and operated by the Contractor's Social Safeguards Officer</li> <li>- The MCC Policy on Counter-Trafficking in Persons</li> </ul> </li> <li>• Assigns roles and responsibilities for labor management</li> </ul>
<p>LOCATIONS:</p>
<p>All construction sites and temporary construction facilities</p>
<p><b>MONITORING</b></p>
<p>MCA-Mongolia or its representative's SST:</p> <ul style="list-style-type: none"> <li>• Monitor implementation of the Contractor's Labor Management Plan and Worker Behavior Code of Conduct, including prohibitions against trafficking in persons, gender-based violence, sexual harassment, and child labor</li> <li>• Monitor implementation of the Contractor's employment recruitment strategies and assist Contractor to reach potential workers among local women, youth, and people from disadvantaged groups</li> <li>• Monitor participation by all parties in the Contractor's internal grievance redress procedure and external project Grievance Redress Mechanisms</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>• Record results of Contractor's labor management responsibilities, with all data and statistics disaggregated by age and gender, following, at a minimum, the contract clause on "Employment Records of Workers" and recording, for each worker hiring and leaving dates, along with duration (days) of employment and skills/occupational category and home location of workers (project-affected district/khoroov, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia)</li> <li>• Document implementation of the requirements above for the Labor Management Plan, including all recruitment activities</li> <li>• Document Worker Behavior Code of Conduct infringements and outcomes, and internal grievance redress activities under the Contractor's internal grievance process</li> </ul> <p>LOCATIONS:</p>

All construction sites and temporary construction facilities	
INDICATORS AND SUCCESS CRITERIA:	
Indicators:	
<ul style="list-style-type: none"> <li>Required plans written, approved, and implemented</li> <li>Number, content, and outcome of employment against home location (project-affected district/khoroov, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia), gender, age brackets (under 30, 30 to 49, 50 and over), and total days of employment for each individual worker</li> <li>Use of written contracts with defined pay scales by employment activity</li> <li>Employment recruitment activities, and interactions with local employment offices and communities, professional associations, TVET centers</li> <li>Percent of all employees that are women, disaggregated by skill/occupational level</li> <li>Records of attendance and dates of all trainings and toolbox talks delivered on social and gender topics</li> <li>Number of grievance redress actions, the number of days necessary to resolve them, and their outcomes</li> </ul>

### Management Measure Wells - 8: Gender Integration and Social Inclusion (GSI)

<b>POTENTIAL IMPACT</b>
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Increased short-term employment for women Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of forced labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Millennium Challenge Account Social and Gender Integration Plan (SGIP) <ul style="list-style-type: none"> <li>Encourages contractors to prioritize using local labor, particularly workers from the project affected areas and encourages contractors to employ women workers as at least 30%</li> </ul> </li> <li>Millennium Challenge Corporation Gender Policy <ul style="list-style-type: none"> <li>The MCC Gender Policy states that countries will ensure that both women and men have opportunities for meaningful participation throughout the consultative processes related to a Compact program.</li> </ul> </li> <li>IFC Performance Standard 1 <ul style="list-style-type: none"> <li>Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> </ul> </li> <li>IFC Performance Standard 2 <ul style="list-style-type: none"> <li>Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.</li> </ul> </li> <li>Constitution of Mongolia</li> </ul>

<ul style="list-style-type: none"> <li>○ Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> <li>• Mongolian Law on Gender Equality <ul style="list-style-type: none"> <li>○ Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>• Mongolian Law on Labor <ul style="list-style-type: none"> <li>○ Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>○ Prohibits employing children under the age of 16 – under 18 in dangerous industries e.g. construction</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<p>The Gender Integration and Social Inclusion (GSI) Plan complements the Labor Management Plan and provides additional management steps to address GSI considerations with respect to workers and local communities.</p> <ul style="list-style-type: none"> <li>• To promote the fair treatment, non-discrimination, and equal opportunity of workers.</li> <li>• To encourage the employment of women as at least 30% of the Contractor's workforce, calculated over full and part time positions as a percentage of total number of staff hired in the life of the contract at each skill/occupation level</li> <li>• To enable local people, particularly youth and people in project-affected districts/khoroos to gain short-term employment and training opportunities</li> <li>• Maximize the perceived beneficial impacts of the BWSE project on the project affected communities</li> </ul>
<b>MANAGEMENT MEASURE</b>
<b>Gender Integration and Social Inclusion</b>
<ul style="list-style-type: none"> <li>• Under the Gender Integration and Social Inclusion Plan, the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure the widest exchange of information between the Contractor and the local population and Labor Offices on planned and continuing works and employment opportunities through a program of community consultations and participatory meetings.</li> <li>• The Contractor will prepare and submit for the Engineer's written approval a Contractor's Gender Integration and Social Inclusion Plan, which will be: <ul style="list-style-type: none"> <li>○ Consistent with the Mongolian Law on Labor and</li> <li>○ Consistent with the MCC Gender Policy's emphasis on community consultation and participation</li> <li>○ Consistent with IFC Performance Standard 1: Assessment and Management of Environmental and Social Risk and Impacts</li> <li>○ Agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer</li> </ul> </li> <li>-</li> <li>- <i>Community Engagement</i> <ul style="list-style-type: none"> <li>○ The Contractor will hold at least one meeting in each project-affected District and khoroo office prior to construction to inform community members of the expected conduct of workers and the contents of the Labor Management Plan, and thereafter monthly, minimally covering the following: <ul style="list-style-type: none"> <li>○ Efforts to hire local labor and the Contractor's employment forecast</li> <li>○ Efforts to maximize women's employment</li> <li>○ Efforts to maximize local procurement and the Contractor's procurement forecast</li> <li>○ Prohibitions against child labor and forced labor in supply chains</li> <li>○ Zero-tolerance of trafficking in persons, MCC and Mongolian legal definition of trafficking in persons, and Contractors' Counter-Trafficking in Persons Response Plan</li> <li>○ Zero-tolerance of gender-based violence</li> <li>○ Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan</li> </ul> </li> </ul> </li> </ul> <p><i>Expanding Short-Term Employment Opportunities</i></p>

<ul style="list-style-type: none"> <li>• The Contractor will actively consider working with the existing construction brigades to enable local labor currently organized into brigades to gain employment. The brigades may require additional training to enable them to work on this large scale project – training in: <ul style="list-style-type: none"> <li>○ Modern tools and techniques where needed</li> <li>○ Brigade internal labor management, accounting, and estimation techniques</li> </ul> </li> <li>• As referenced in the Labor Management Plan and its recruitment strategy, the Contractor will encourage the employment of qualified individuals among the local population(s) in project activities, with particular focus on women, youth, and disadvantaged groups. This may include small-scale supply contracts or services, with announcement of jobs published on project information boards, in District and khoroo Labor Offices and with information on employment disseminated by the Contractor's Social Safeguards Officer, the MCA or its representative, or other means approved by the Engineer.</li> <li>• Where appropriate, the Contractor will provide training to enhance the skills of local people using on-site apprenticeships and internships</li> <li>• As referenced in the Labor Management Section above, the Contractor is encouraged to cooperate with Technical and Vocational Education and Training Centers and professional associations and to draw workers from among their graduate and members</li> </ul> <p>-</p> <p><i>Local Procurement</i></p> <ul style="list-style-type: none"> <li>• The Contractor will develop and submit a procurement forecast of all goods and services that could be procured locally. The MCA-Mongolia or its representative's Social Safeguards Team will assist in disseminating this information to local communities with the Contractor's Social Safeguards Officer.</li> <li>• The Contractor will develop and submit for review and approval by the PMC, a procurement strategy to inform local communities and businesses of opportunities to provide goods and services to the Contractor and to project workers, particularly targeting small businesses and those owned by women.</li> <li>• The Contractor Social Safeguards Officer and MCA-Mongolia or its representative's Social Safeguards Team will hold community meetings to inform people about the procurement processes and include District and khoroo offices, community organizations and the media.</li> </ul> <p>-</p>	<p>LOCATIONS:</p> <p>All construction sites and temporary construction facilities and project affected communities</p> <p><b>MONITORING</b></p> <p>MCA-Mongolia or its representative's SST:</p> <ul style="list-style-type: none"> <li>• Monitor Contractor Gender Integration and Social Inclusion Plan</li> <li>• Monitor Contractor employment recruitment strategies and assist Contractor to reach potential women, youth and other excluded groups</li> <li>• Monitor participation by all parties in the Contractor's internal and external project Grievance Redress Mechanisms</li> <li>• Document Contractor performance in Gender Integration and Social Inclusion Plan</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>• Record results of Contractor's Gender Integration and Social Inclusion responsibilities</li> <li>• Document all grievance redress activities under the Contractor's internal grievance process and external Grievance Redress Mechanism</li> </ul> <p>LOCATIONS:</p> <p>All construction sites and temporary construction facilities and project affected communities</p> <p>INDICATORS AND SUCCESS CRITERIA:</p> <p>Indicators:</p> <ul style="list-style-type: none"> <li>• Employment recruitment activities</li> <li>• Employment records of workers</li> <li>• Number, dates, and locations of community engagement meetings</li> </ul>

## Management Measure Wells - 9: Counter-Trafficking in Persons, Gender-Based Violence and Sexual Harassment

POTENTIAL IMPACT
<p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>• Sexual harassment on construction sites and in temporary construction facilities and project-affected communities</li> <li>• Trafficking in persons within and outside the project</li> <li>• Gender-based violence on construction sites and in temporary construction facilities and project-affected communities</li> </ul>
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• MCC Counter-Trafficking in Persons Policy (C-TIP Policy) <ul style="list-style-type: none"> <li>○ States, “Trafficking in Persons” means (a) Sex trafficking in which a commercial sex act is induced by force, fraud, or coercion, or in which the person induced to perform such act has not attained 18 years of age; (b) The recruitment, harboring, transportation, provision, or obtaining of a person for labor or services, through the use of force, fraud, or coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery.”</li> <li>○ Adopts “a zero-tolerance policy to TIP and prohibits “The Contractor, the Contractor’s Personnel, any Subcontractor or supplier, or any of their respective personnel, or any agent or affiliate of any of the forgoing shall not engage in any form of Trafficking in Persons during the period of performance of any contract...”</li> <li>○ Requires each Contractor to “acknowledge that engaging in such activities is cause for suspension or termination of employment or of the Contract” and specifies remedies that the MCA Entity will apply once a TIP incident has been confirmed.</li> </ul> </li> <li>• Mongolian Law on Promotion of Gender Equality <ul style="list-style-type: none"> <li>○ Requires the employer to incorporate into the organization’s internal procedures, specific norms for prevention of sexual harassment in a workplace and the redress of such complaints. It also requires that the organization design and conduct a program of training and retraining geared toward creating a working environment free from sexual harassment, and report on its impact in a transparent manner.</li> </ul> </li> <li>• Mongolian Law to Combat Human Trafficking <ul style="list-style-type: none"> <li>○ The law regulates relations with respect to the prevention and suppression of trafficking in persons, elimination of the causes of trafficking, and protection of victims’ rights.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• To prevent incidence of trafficking of persons for sex by project employees</li> <li>• To ensure that the Contractor and its Sub-Contractors do not employ trafficked labor and to minimize the risks of trafficking of foreign workers to project sites</li> <li>• To prevent sexual harassment at all construction sites and temporary construction facilities</li> <li>• To prevent Contractor and worker involvement in sexual harassment in project-affected communities and among members of stakeholder organizations in the workplace</li> <li>• To prevent incidences of gender-based violence involving workers</li> </ul>
MANAGEMENT MEASURE
Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment
<p>The Contractor shall ensure that foreign workers on work sites or in labor camps are aware 1) of the risks of cultural conflict and of becoming victims of gender-based violence, sexual harassment and abuse, discrimination, trafficking in persons and 2) the legal and contractual remedies against such</p>

behavior. This information shall be provided in workers' induction packages, by holding an orientation before workers start on site, and by delivering a training twice a year.

*Counter-Trafficking in Persons (C-TIP)*

- The Contractor shall prepare and submit for the Engineer's written approval a Counter-Trafficking in Persons Response Plan (TIP Response Plan), and the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure all employees are informed of expectations of behavior as per the Worker Behavior Code of Conduct and the penalties for proven infringements..
  - The Counter-Trafficking in Persons Response Plan shall Address the specific TIP risks identified in the ESIA, including withholding of foreign workers' passports and commercial sex with minors,
  - Designate a single responsible person who will notify the Engineer and MCA-Mongolia within 24 hours of an alleged incident and implement any investigation.
  - Specify when to contact legal authorities, list UB city officials, national government offices, and NGO organizations that address TIP, and state how the Contractor will deal with them in the case of a TIP incident.
  - Include mechanisms to ensure confidentiality of any TIP survivors and to refer them to law enforcement and/or supportive services if they wish.
- The Contractor shall develop, as part of its TIP Response Plan, an anonymous mechanism for workers and community members to report suspected TIP incidents to the Engineer and to MCA-Mongolia, and this must be separate from the project grievance mechanism.
- The Counter-Trafficking in Persons Response Plan shall be:
  - Consistent with the Mongolian Law on Labor, Promotion of Gender Equality, and combatting Human Trafficking
  - Compliant with the MCC Counter-Trafficking in Persons Policy
  - Coordinated and agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer
- The Counter-Trafficking in Persons Response Plan shall specifically prohibit:
  - Procuring minors for sex
  - Transporting non-employee individuals in company vehicles
- The Contractor is strongly encouraged to engage the Centre for Gender Equality or other similarly qualified and experienced organization to develop its TIP Response Plan, its anonymous reporting mechanism, its worker training, and its C-TIP content for community meetings
- The Contractor shall design and deliver twice yearly C-TIP training modules to all staff, sub-contractors, and service providers on the prevention of TIP and the Contractor's TIP Response Plan, following minimum content in MCA-Mongolia's Social and Gender Integration Plan (SGIP).
  - C-TIP training sessions must be delivered to all employees within one month of starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Information about the Contractor's zero-tolerance policy and TIP Response Plan shall be included in all community meetings and the Plan shall be provided in Mongolian, in whole, to project-affected khoroo and District governments.

*Gender-Based Violence*

- The Contractor shall adopt a policy of zero-tolerance for gender-based violence and address any complaints of gender-based violence against its workers or committed by its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
- The Contractor shall notify the Engineer and MCA-Mongolia within 24 hours of any alleged incident of gender-based violence
- The Contractor shall deliver a gender-based violence prevention training to all staff, sub-contractors, and service providers prior to all workers beginning on-site and thereafter at least twice each year.
  - The Contractor is strongly encouraged to engage a local, qualified, and experienced

- organization to develop the training.
  - The training shall minimally identify behavior that constitutes gender-based violence, address attitudes towards violence against women and lesbian, gay, bisexual, transgender, and queer people (LGBTQ), and identify relevant Mongolian laws and organizations addressing gender-based violence.
  - It shall also explain the workings and protections in the Contractor's grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ persons.
- Include in all community meetings information about the Contractor's zero-tolerance policy toward gender-based violence committed by or against its workers and procedures for reporting it and communicate this information in writing to project-affected khoroo and District governments.

#### *Sexual Harassment*

- The Contractor shall develop and submit to the Engineer an Anti-Sexual Harassment Policy prohibiting sexual harassment directed at Compact beneficiaries, partners, or stakeholders, MCA Entity employees, MCA Entity consultants, MCC personnel, or MCC consultants and including an Incident Reporting and Referral Plan.
  - The Policy and Plan must be in form and substance satisfactory to the MCA and MCC.
  - The Incident Reporting and Referral Plan shall include a confidential mechanism for workers and community members to report sexual harassment to the Engineer and to MCA-Mongolia, separately from the Grievance Redress Mechanism.
- Employers are required to have a protocol in their Workplace Grievance mechanism in which persons alleging harassment or violence will be protected from identification and from pressure from the Contractor or other workers to dismiss the complaint.
- The Contractor's grievance manager must notify the MCA-Mongolia or its representative's Social Safeguards Team and the Contractor's Social Safeguards Officer within 24 hours of any allegation of sexual harassment.
- The Contractor must have a contract with a suitably experienced organization, such as the Centre for Gender Equality, to provide an investigation leader to manage the investigation of complaints of sexual harassment.
- The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction.
- The Contractor shall design and deliver a sexual harassment prevention training to all staff, sub-contractors, and service providers, in accordance with the Contractor's Anti-Sexual Harassment Policy, recognizing MCC's Guidance to MCAs on Sexual Harassment.
  - Training shall be conducted within one month of workers starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Training shall address
    - Attitudes to and prevention of sexual harassment in the workplace
    - Workings and protections in the Contractor's internal grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ+ persons
    - Additional requirements for minimum training content can be found in MCA-Mongolia's Social and Gender Integration Plan (SGIP)
- Information about the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral plan shall be included in all community meetings and the Policy and Plan shall be communicated in Mongolian, in whole, to project-affected khoroo and District governments.
-

### Management Measure Wells - 11: Cultural Heritage Protection

<p><b>POTENTIAL IMPACT</b></p> <ul style="list-style-type: none"> <li>• Chance finds of and potential inadvertent excavation or damage of tangible cultural heritage</li> <li>• Disturbance of the cultural and sacred landscape and places of religious or spiritual significance</li> <li>• Loss of the continuity of spiritual, religious, and traditional activities</li> </ul>
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Mongolian Law on Protection of Cultural Heritage <ul style="list-style-type: none"> <li>○ If tangible cultural heritage is discovered during excavation, requires halting work and immediately notifying the <i>soum</i> and <i>duureg</i> [capital city municipal district] governors, police, and concerned authorities.</li> <li>○ Prohibits building infrastructure facilities in historical and cultural monuments and their activity zones, to engage in mining and agriculture. Governors of all levels have the duty to protect the intangible cultural heritage.</li> </ul> </li> <li>• IFC Performance Standard 8 <ul style="list-style-type: none"> <li>○ Prohibits removing, significantly altering, or damaging critical cultural heritage.</li> </ul> </li> </ul>

- Requires designing and implementing a chance find procedure when the proposed location of a project is in areas where cultural heritage is expected to be found, either during construction or operations.

## OBJECTIVES

- Protect tangible cultural heritage from inadvertent excavation or damage
- Enable and foster the continuity of spiritual, religious, and traditional activities in consideration of the unavoidable disturbance of the cultural and sacred landscape and places of religious or spiritual significance

## MANAGEMENT MEASURE

### Cultural Heritage Protection

#### Chance Find Procedure

As unknown features/objects could be encountered during works, in particular earthworks, a chance finds procedure will be in place to stop works in case of such findings, and require investigation by an archaeologist and involvement of relevant government entities.

Should any unexpected tangible cultural heritage be discovered:

- Cease all work in the immediate area and do not disturb the chance find further, including:
  - Establishing a 30-meter buffer around the chance find
  - Leaving buffer undisturbed until competent cultural heritage specialist assesses the site
  - Protecting the chance find area, for example with signs for prohibition of entry, barrier tape, etc.
- Work may continue at other locations providing there is a buffer zone between the chance find area and the construction area
- Immediately notify the Engineer and the concerned government agencies, specifically the:
  - Office of the governor of the capital city
  - Office of governor of the respective Khan-Uul District or Songinokhairkhan District
  - Local police
  - Institute of Archeology, Mongolian Academy of Sciences
  - Institute of History and Ethnography, Mongolian Academy of Sciences
- Provide the following information to the Engineer and government agencies:
  - Cultural heritage site type—description and photograph(s)
  - Location—description and GPS coordinates
  - Date, time, and details of find
  - Nature of work that led to exposure of or locating the find
- Coordinate with the Engineer and the concerned government agencies to consult a cultural heritage professional on site to assess the cultural heritage and recommend mitigation
- Follow instructions of the concerned government agencies and cultural heritage professional for the protection of the tangible cultural heritage
- Restart work only upon written direction from the Engineer

#### Cultural and Sacred Landscape and Places

- SST will conduct enhanced stakeholder engagement with religious and spiritual leaders to assess the intangible cultural impact of construction on cultural and sacred landscape and places.
- Contractor will coordinate with the SST Community Liaison Officers and the Engineer, and as directed by the Engineer accommodate the performance of periodic spiritual, religious, and traditional ceremonies and rituals on or adjacent to project sites. The ceremonies and rituals may be integrated with or, if independent, their scale may be similar to groundbreaking ceremonies.

#### Training

The effective protection of cultural heritage is based on an understanding of the key issues, appropriate assessment, and correct action to minimize possible damage or loss.

The Contractor will:

<ul style="list-style-type: none"> <li>• Prepare and submit for the Engineer's written approval a site-specific Cultural Heritage Training Plan and associated procedures that, as a minimum: <ul style="list-style-type: none"> <li>○ Specifies how the Contractor will educate and train personnel on requirements, procedures, and reporting in response to chance finds of tangible cultural heritage, in accordance with the requirements listed above</li> <li>○ Specifies how the Contractor will educate and train personnel on requirements, procedures, and reporting to enable and foster the continuity of spiritual, religious, and traditional activities</li> <li>○ Assigns roles and responsibilities for training</li> </ul> </li> <li>• Educate and train all Contractor personnel and provide enhanced training to key Contractor personnel—including on-site environmental staff, safety staff, construction engineers, and unit supervisors—in accordance with approved Cultural Heritage Training Plan.</li> </ul>
<p><b>LOCATIONS:</b></p> <ul style="list-style-type: none"> <li>• All work sites</li> <li>• Cultural and sacred landscape and places throughout project area, as all land and the landscape throughout Mongolia and the project area is sacred</li> </ul>
<p><b>MONITORING</b></p>
<p>Monitor throughout construction</p> <p><i>Chance Find Procedure</i></p> <ul style="list-style-type: none"> <li>• Construction work sites during excavation or other ground disturbance</li> </ul> <p><i>Cultural and Sacred Landscape and Places</i></p> <ul style="list-style-type: none"> <li>• Communications SST Community Liaison Officers and Engineer</li> <li>• Written directions of Engineer</li> <li>• Actions to accommodate spiritual, religious, and traditional ceremonies and rituals</li> <li>• Performance of spiritual, religious, and traditional ceremonies and rituals</li> </ul> <p><i>Training</i></p> <ul style="list-style-type: none"> <li>• Document submission and approval of training plan</li> <li>• Document training of personnel as specified in approved plan</li> </ul>
<p><b>LOCATIONS:</b></p> <ul style="list-style-type: none"> <li>• All work sites</li> </ul>
<p><b>INDICATORS AND SUCCESS CRITERIA:</b></p>
<p>Indicators:</p> <p><i>Chance Find Procedure</i></p> <ul style="list-style-type: none"> <li>• Chance find of tangible cultural heritage</li> <li>• Excavation or damage of tangible cultural heritage</li> <li>• Cease work decision</li> <li>• Protection of chance find area and tangible cultural heritage</li> </ul> <p><i>Cultural and Sacred Landscape and Places</i></p> <ul style="list-style-type: none"> <li>• Performance of spiritual, religious, and traditional ceremonies and rituals</li> </ul> <p><i>Training</i></p> <ul style="list-style-type: none"> <li>• Submission of training plan</li> <li>• Date and location of training sessions, or as specified in approved plan</li> <li>• Personnel start date, training completion date, and initial construction field date, or as specified in approved plan</li> </ul> <p>Success criteria:</p> <p><i>Chance Find Procedure</i></p> <ul style="list-style-type: none"> <li>• No excavation or damage of tangible cultural heritage</li> </ul> <p><i>Cultural and Sacred Landscape and Places</i></p> <ul style="list-style-type: none"> <li>• No loss of continuity of spiritual, religious, and traditional activities due to inability to perform ceremonies and rituals</li> </ul>

<p><i>Training</i></p> <ul style="list-style-type: none"> <li>• Training plan approval</li> <li>• All personnel trained prior to initial construction field date, or as specified in approved plan</li> </ul>	
<p><b>REPORTING:</b></p> <p><i>Chance Find Procedure</i></p> <ul style="list-style-type: none"> <li>• Report chance find and cease work decision</li> <li>• Report excavation or damage of tangible cultural heritage</li> <li>• Report actions to protect chance find area and tangible cultural heritage</li> <li>• Report direction to restart work</li> </ul> <p><i>Cultural and Sacred Landscape and Places</i></p> <ul style="list-style-type: none"> <li>• Report communications with SST Community Liaison Officers and Engineer</li> <li>• Report directions of Engineer</li> <li>• Report actions to accommodate spiritual, religious, and traditional ceremonies and rituals</li> <li>• Report on performance of spiritual, religious, and traditional ceremonies and rituals</li> </ul> <p><i>Training</i></p> <ul style="list-style-type: none"> <li>• Report communications and written approval of Engineer of site-specific Cultural Heritage Training Plan</li> <li>• Report training sessions and personnel start, training, and field deployment date, or as specified in approved plan</li> </ul> <p><i>Management Measure</i></p> <ul style="list-style-type: none"> <li>• Summarize other activities undertaken during reporting period</li> <li>• Specify any material deviations or non-compliances to this management measure, and any other issues of concern</li> <li>• Define activities planned during next reporting period</li> </ul>

## 3.5 Health and Safety Management

In addition to the management measure under this heading, the following management measures also specify health and safety management requirements:

- Management Measure Wells - 5: Emergency Preparedness and Response
- Management Measure Wells - 6: Waste Management
- Management Measure Wells - 10: Construction Camp and Temporary Facilities Management

### Management Measure Wells - 12: Health and Safety Management

POTENTIAL IMPACT
Health and safety risks and impacts on work sites and in construction camps, and in the community
<p>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Mongolian Law on Hygiene <ul style="list-style-type: none"> <li>○ Requires introducing labor safety and hygiene management for protecting employees from accidents, damages, diseases which could occur during the operation.</li> </ul> </li> <li>• Mongolian Law on Waste <ul style="list-style-type: none"> <li>○ Requires providing relevant knowledge to their staff on waste sorting and comply with safety standards in their operation.</li> </ul> </li> <li>• IFC Performance Standard 4 <ul style="list-style-type: none"> <li>○ Requires evaluating the risks and impacts to the health and safety of the affected communities during the project life cycle and establishing preventive and control measures consistent with good international industry practice.</li> <li>○ Requires avoiding or minimizing transmission of communicable diseases that may be associated with the influx of temporary or permanent project labor.</li> </ul> </li> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning <ul style="list-style-type: none"> <li>○ Provides guidance on occupational health and safety and community health and safety.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• Identify, assess, manage, and record and communicate all health and safety hazards, and ensure: <ul style="list-style-type: none"> <li>○ Resulting risks to people, property, assets, and the environment are evaluated</li> <li>○ Risks are managed in accordance with the recommended hierarchy of controls to achieve levels that are as low as reasonably practical</li> <li>○ Any requirements to mitigate risks are implemented</li> <li>○ Risks and actions to manage them are reported and communicated</li> </ul> </li> </ul>
MANAGEMENT MEASURE
<p><b>Health and Safety Management</b></p> <p>The Contractor will ensure, as far as practicable, that the health, safety, and welfare of employees and all other persons on site are secured and are protected from hazards created by the project.</p> <p>The Contractor will:</p> <ul style="list-style-type: none"> <li>• Fully comply with the requirements of this management measure</li> <li>• Comply with the IFC Environmental, Health, and Safety Guidelines<sup>1</sup></li> <li>• Comply with the health and safety requirements in Contract Documents Section V, Works Requirements, including but not limited to: <ul style="list-style-type: none"> <li>○ Section 01030 Special Requirements, Paragraph 1.04.C Health and Safety Plan</li> <li>○ Section 01046 Control of Work, Paragraph 3.05 Open Excavations</li> </ul> </li> </ul>

<ul style="list-style-type: none"> <li>○ Section 01046 Control of Work, Paragraph 3.07 Interference with and Protection of Streets</li> <li>○ Section 01063 Miscellaneous Requirements, Paragraph 1.03 Traffic Control</li> <li>○ Protect drinking water sources, whether public or private, at all times</li> <li>● Prepare and implement a traffic control plan for accessing the site, approved by Engineer</li> <li>● Implement all reasonable precautions to protect the health and safety of workers</li> <li>● Avoid or minimize the occurrence and transmission of communicable diseases, including surveillance, and active screening and treatment of workers</li> <li>● Avoid or minimize potential hazards posed to project personnel and the public while accessing project facilities</li> <li>● Undertake hazard analysis to identify opportunities to reduce the consequences of a failure or accident</li> <li>● Control access to operational areas through physical barriers and demarcation, regular patrols of controlled areas, and engagement with communities</li> <li>● Avoid or minimize traffic accidents and promote traffic safety by all project personnel</li> <li>● Comply with local laws and international requirements applicable to the transportation of hazardous materials, and establish procedures for preventing or minimizing the consequences of releases of hazardous materials</li> <li>● Inform and regularly update affected communities, including herders and vulnerable groups, and government agencies about potential project hazards and changes to project activities that may have environmental, health, or safety impacts, as well as the proposed prevention, mitigation, and emergency response measures</li> <li>● Ensure that health, safety, and rescue matters are given a high degree of publicity to all persons regularly or occasionally on the project sites, as stipulated by Mongolia laws on occupational safety and health, by prominently displaying posters drawing attention to the relevant regulations in areas where Contractor and subcontractor personnel, Engineer's staff, MCA-Mongolia or its representative's staff, and site visitors will take notice</li> <li>● Provide Health and Safety Management training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the site-specific Health and Safety Management Plan, to all employees and subcontractors at the time of their induction and annually thereafter</li> </ul>
<p>The Contractor will prepare and submit for the Engineer's written approval a site-specific Health and Safety Management Plan and associated procedures that, as a minimum:</p>
<ul style="list-style-type: none"> <li>● Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan</li> <li>● Adhere to the MCC Health and Safety Policy (2012) and ensure the health and safety of all workers employed during the construction phase of the project</li> <li>● Complies with applicable Government of Mongolia regulations and international good practice, where the more stringent will apply</li> <li>● Specifies: <ul style="list-style-type: none"> <li>○ Site security, including securing of excavations, hazardous materials, etc.</li> <li>○ Confined space safety procedures</li> <li>○ Excavation and trenching safety measures</li> <li>○ First aid facilities, equipment, and materials</li> <li>○ Protective clothing and safety equipment</li> <li>○ HIV/AIDS awareness program</li> <li>○ Covid-19 awareness program</li> <li>○ Counter-trafficking in persons program</li> <li>○ Health and Safety management monitoring and reporting</li> </ul> </li> <li>● Assigns roles and responsibilities for health and safety management</li> </ul>

## 3.6 Education, Training, and Community Outreach

Incorporated in various management measures are requirements for education, training, and outreach. The overall goals of these requirements are to provide project employees with an understanding of the commitments included in those management measures and inherent in associated laws, regulations, and policies, and to provide the employees with an appreciation of their own accountability for maintaining mutually supportive relationships with local communities. All required training is to be provided as part of induction training (to provide general awareness) and job-specific training as necessary.

In addition to the management measure under this heading, the following management measures specify training requirements:

- Management Measure Wells - 5: Emergency Preparedness and Response
- Management Measure Wells - 6: Waste Management
- Management Measure Wells - 7: Labor Management
- Management Measure Wells - 8: Gender Integration and Social Inclusion
- Management Measure Wells - 9: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment
- Management Measure Wells - 10: Construction Camp and Temporary Facilities Management

- Management Measure Wells - 11: Cultural Heritage Protection
- Management Measure Conveyance - 12: Health and Safety Management

Together, these management measures comprise the Education, Training, and Community Outreach Plan.

### **Management Measure Wells - 13: Stakeholder Engagement, Community Consultation, and Grievance Redress**

<b>POTENTIAL IMPACT</b>
Delays, increased grievances, political interference, and unnecessary pressure from uninformed groups resulting from lack of information and discussion/consultation
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• IFC Performance Standard 1 <ul style="list-style-type: none"> <li>○ Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> <li>○ Requires establishment of a grievance mechanism to receive and facilitate resolution of affected communities' concerns and grievances about environmental and social performance, and scaled to the risks and adverse impacts of the project and with the affected communities as its primary user.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>• Inform and involve all stakeholders</li> <li>• Have in place a defined policy for dealing with external parties</li> <li>• Foster positive relations and effective partnerships with local communities throughout project construction and operation</li> <li>• Maximize the beneficial impact of the BWSE project on the affected communities</li> </ul>
<b>MANAGEMENT MEASURE</b>
<p><b>Stakeholder Engagement, Community Consultation, and Grievance Redress</b></p> <p>The stakeholders and affected communities are to be informed of the construction activities, including implementation timeline and grievance redress procedure.</p> <p><b>Stakeholder Engagement</b></p> <ul style="list-style-type: none"> <li>• The Contractor will: <ul style="list-style-type: none"> <li>➤ Maintain, revise, and update the Stakeholder Engagement Plan for the project consistent with the MCA-Mongolia Stakeholder Engagement Framework</li> <li>➤ Maintain, revise, and update the project Stakeholder Engagement Matrix</li> <li>➤ Document all stakeholder engagement activities in the Stakeholder Engagement Matrix</li> </ul> </li> </ul> <p><b>Community Consultation</b></p> <ul style="list-style-type: none"> <li>• The MCA-Mongolia or its representative will <ul style="list-style-type: none"> <li>➤ Introduce Contractor's officers to communities</li> <li>➤ Monitor and supervise Contractor contacts with communities and other stakeholders</li> <li>➤ Ensure that gender and social inclusion measures implemented by the Contractor are taken when planning meetings, and that thereby all sections of the community are equally informed and consulted</li> </ul> </li> </ul>

- In coordination with the MCA-Mongolia or its representative, the Contractor will:
  - Undertake community information dissemination, consultation, and outreach addressing the influx of migrant workers and the associated risks to the affected communities, the MCA- Mongolia Grievance Redress Mechanism, and other issues that arise during consultation
  - Document all community consultation activities in the Stakeholder Engagement Matrix

### **Grievance Redress**

- The MCA-Mongolia or its representative will supervise, and monitor participation by all parties
- The Contractor will:
  - Implement the Grievance Redress Mechanism consistent with Annex A
  - Designate the Contractor's staff for collaborating with the project Grievance Redress Mechanism
  - Document all grievance redress actions in the Stakeholder Engagement Matrix
  - Report on the Grievance Redress Mechanism to MCA-Mongolia and the Engineer
  -

### **LOCATIONS:**

All construction sites and temporary construction facilities

### **MONITORING**

#### **MCA-Mongolia or its representative**

- Monitor Contractor contacts with stakeholders and communities
- Monitor participation by all parties in Grievance Redress Mechanism

#### **Contractor**

- Document all stakeholder engagement activities
- Document all community consultation activities
- Record results of Contractor's community consultation activities
- Document all grievance redress activities under the Grievance Redress Mechanism

### **LOCATIONS:**

All construction sites and temporary construction facilities

### **INDICATORS AND SUCCESS CRITERIA:**

#### **Indicators:**

- Number, content, and outcome of:
  - Stakeholder engagement activities
  - Community consultation activities
  - Grievance redress actions

#### **Success Criteria:**

- Successful outcome of:
  - Stakeholder engagement activities
  - Community consultation activities
- Resolution of grievances

### **REPORTING:**

- Update project Stakeholder Engagement Matrix
- Summarize other activities undertaken during reporting period
- Specify any material deviations or non-compliances to this management measure, and any other issues of concern
- Define activities planned during next reporting period

### **SCHEDULE**

<b>MANAGEMENT MEASURE:</b> <i>Implementation:</i> <ul style="list-style-type: none"> <li>Initiated during pre-construction prior to starting any construction activities and ongoing throughout pre-construction and construction</li> </ul>	<b>MONITORING:</b> <i>Implementation:</i> <ul style="list-style-type: none"> <li>Update project Stakeholder Engagement Matrix as stakeholder engagement and community consultation activities, and grievance redress actions occur</li> </ul> <i>Reporting:</i> <ul style="list-style-type: none"> <li>Monthly in ESMP update</li> </ul>
<b>RESPONSIBILITY</b>	
<b>MANAGEMENT MEASURE:</b> <i>Implementation:</i> Contractor <i>Oversight:</i> MCA-Mongolia or its representative	<b>MONITORING:</b> <i>Implementation:</i> Contractor <i>Reporting:</i> Contractor <i>Oversight:</i> MCA-Mongolia or its representative

### 3.7 Risk Control and Emergency Response

The Risk Control and Emergency Response Plan references procedures specified in the management measures in the preceding plans that are pertinent to 1) controlling risks and 2) responding to emergencies. Such risks and emergencies include, for example, fuel spills and encountering previously unidentified cultural heritage resources, as well as incidents involving sexual harassment, human trafficking, and gender-based violence.

Due to the broad scope of the Risk Control and Emergency Response Plan, effectively the plan incorporates by reference the procedures specified in the management measures in all preceding plans for this project phase.

### 3.8 Monitoring and Verification, and Maintenance Actions

This Monitoring and Verification, and Maintenance Actions Plan scopes the use of an adaptive approach to:

1. Verify that the management measures in the preceding plans are implemented, and that they are effective and sufficient
2. Revise those management measures that prove ineffective or insufficient

This approach acknowledges the risk and uncertainty of environmental and social management and fosters targeted modification of management measures to correct performance and outcomes. It will be executed as a continuous, iterative process by which the consequences of all management actions are systematically evaluated and, as needed, specific measures are modified in response to a determination that their forecasted outcomes will not meet requirements.

In the preceding plans, indicators and success criteria are designated for each management measure. For each management measure, MCA-Mongolia or its representative, in its oversight capacity, will determine whether progress toward the designated success criteria is sufficient and will document its determination in its regular updates and progress reports to MCA-Mongolia. If progress decidedly fails to meet iterative requirements, MCA-Mongolia or its representative will inform the Contractor of the need to formulate a management measure-specific adaptive maintenance action to implement midcourse corrections. In coordination with the Contractor, MCA-Mongolia or its representative will reformulate the management measure to foster meeting the success criteria, incorporating as applicable operational or structural changes, and considering the

cost effectiveness of incorporating the changes. The scope of most management measures likely will remain fairly stable; whereas, it is expected that some methods will be added, modified, or dropped over the implementation timeline of some management measures.

With the prior approval of MCA-Mongolia, the Contractor will implement and monitor the revised management measure, and MCA-Mongolia or its representative will provide oversight.

## **4 Implementation Work Plan and Schedule**

The majority of the management measures in the preceding pre-construction phase and construction phase plans require that the Contractor prepare and submit for the Engineer's written approval plans that detail the Contractor's commitment and approach to fulfilling the requirements of the management measure. Therefore, an implementation work plan and schedule cannot be specified in this ESMP.

The Contractor is required to incorporate in the Contractor's ESMP a detailed Contract Work Plan and Schedule to facilitate implementing the Contractor's ESMP as an integral component of executing and supervising the construction work.

---

## Annex A – Grievance Resolution Mechanism

---

The Contractor shall develop and implement a grievance redress mechanism that shall be applied in the case of a complaint or grievance that is related to or results from implementation of the project activities. A well-implemented grievance redress management system shall demonstrate that the project is concerned about community members and their well-being, building trust, respect, and productive relationships. As with the broader process of stakeholder engagement, it is important that management stays informed and involved in the management of grievances so that decisive action can be taken when needed to avoid escalation of disputes.

Under the GRM all persons shall be clearly entitled to make a complaint by any means – personal contact, office visit, telephone, letter, email, website enquiry, and directly to MCA-Mongolia or its representative. There should be a dedicated free call line for complaints. The GRM must make it easy to make a complaint and for that to be addressed easily and speedily. The system shall require that any member of any company associated with the project is aware of the requirement that they must receive and transfer on any complaint submitted to them in whatever form to their Grievance Officer who then follows the protocol for resolution.

All project partners shall accept the GRM process, agree to participate, train all contractor personnel to use the protocols to report grievances, participate in grievance resolution and reporting. The requirement to collaborate with the GRM will be mandated in construction contracts which will also require the designation of a responsible officer, usually the Contractor's Social Safeguards Officer.

The project grievance redress mechanism shall compliment traditional local-level mechanisms<sup>88</sup> for complaint resolution and legal administrative approaches to complaint resolution at all levels. It shall also document complaints or grievances from the public or other stakeholders (external communications with affected communities), and how these are resolved.

The grievance redress mechanism is intended to assist in resolving grievances or complaints raised regarding environmental and/or social issues arising from the projects/investments, and does not apply to the following complaints even if they are related to project activities:

1. Procurement and contractual complaints between MCA-Mongolia and its vendors or contractors which are normally handled by the MCA-Mongolia General Counsel Office,
2. Lawsuits which fall under the mandate of the General Counsel.

The Grievance Redress Mechanism (GRM) shall be compliant with the requirements of the IFC Performance Standard 5 (2012) and the MCC RPF for Western Wellfields (2018)<sup>89</sup>, and considers MUB GRM good practices that have been implemented for development projects in Ulaanbaatar city.<sup>90</sup> References available upon request to MCA.

---

<sup>88</sup> The GSI Director will carefully consider the extent to which traditional mechanisms to resolve conflict are used, to ensure that these are not disadvantageous to women villagers, indigenous peoples, or other disadvantaged groups. A thorough assessment should be conducted to ensure that certain non-formal justice mechanism will assist women and other disadvantaged groups in accessing justice.

<sup>89</sup> Mongolia II Bulk Water Supply, Resettlement Policy Framework, Western Wellfields, MCC Feasibility Study, 2018

<sup>90</sup> Land Acquisition and Resettlement Plan for Selbe and Bayankhoshuu Subcenters: Heating Station, Kindergarten, Business Incubator and Training Center; UB Urban Services and Ger Areas Development Investment Program – Tranche 1, 2017

The MCA-Mongolia or its representative will supervise and monitor the GRM. The Contractor shall keep the Contractor shall have a grievance redress matrix that records every complaint and communication, the dates of each action and correspondence, how it is investigated and the outcome. The contracting company shall have an internal and external grievance policy and mechanism. The Contractor shall have a designated Grievance Officer to manage complaints according to the company policy. They must have a grievance policy for dealing with external complaints that is fully compliant with and integrated with their Engineer approved project GRM. The Contractor must also have an internal grievance management system.

MCA-Mongolia or its representative will monitor and supervise the contractors' Social Safeguards Officer. MCA oversight will be especially important when dealing with complaints related to sexual harassment, gender-based violence and sex trafficking complaints which require additional investigative expertise. MCA shall review, approve and be invited to attend training for contractors' personnel on roles and responsibilities for grievance management at both senior management levels and also to all members of the workforce. It is vital that all employees understand that they all can be receptors of grievances and they need to know how to deal with a complaint.

## 1.1 Complaint Resolution Procedure

The complaint resolution process shall be generally in accordance with the following. These complaint resolution procedures are compliant with Mongolian Law.

### Tier 1

- Step 1 – All contractors, staff, workers are responsible for receiving grievances and ensuring that the complainant is treated respectfully, and that the grievance is written down on the correct form and forwarded to the designated Grievance Officer in their organization.
- Step 2 - Receive and Register Complaint: The project designated person shall receive the completed complaint form, and he/she is responsible for documenting and recording the complaint in the log-in system/matrix for recording the grievance and processes to resolution. This person is also responsible for reporting as required to senior management on the grievances received and steps taken to resolve.
- Step 3 – Screening and Preliminary Assessment: An initial classification of the complaint will be conducted by the Grievance Officer who will assign the complaint to the relevant persons to resolve. The Grievance Officer is responsible for managing the response and reporting back to the project officer. The officer designated to resolve the issue is responsible for notifying the Grievance Manager or SST and sending information for inclusion in the project grievance matrix.
- Step 4 - Response to the Complaint: After consulting with the relevant personnel, the Grievance Officer contacts the complainant to acknowledge the complaint and provide information as to the expected steps and timeframe for resolution of the complaint. This communication is to be provided within 48 hours of receipt of complaint.
- Step 5 - Investigate and Resolve: This step investigates the complaint, including the underlying cause(s) of the complaint and develops actions needed to resolve the current issue and to prevent recurrence of a similar complaint. Resolution at local level can be a) rejecting the complaint with reasons or b) resolving the complaint and taking action to remedy as appropriate. The Designated Person reports the outcome to the Grievance Officer. Either way, the Grievance Designated Officer is responsible for communicating the decision to the complainant within **14 days** and to the Grievance Manager or SST for recording in the grievance matrix. The Designated Officer is responsible for implementing any works or payments or directives to subcontractors to remedy the source of the complaint, track it and document in the company and MCA-Mongolia records.
- Step 6 - If a local and immediate Tier 1 solution is not appropriate, then the receiving officer has to escalate the complaint to the next tier of grievance resolution,
- Step 7 - If the complaint cannot be resolved then the receiving officer must revise the selection or implementation of approaches.
- Step 8 - Close-out: After implementing mitigating actions or resolving the issue, a letter describing the response and outcome is sent to the complainant, signed by a project head.
- Step 9 - Follow-up: Based on the complainant satisfaction level, the response shall be archived or transferred for further investigation.

If resolution cannot be achieved the process is escalated to Tier 2.

**Tier 2:** If the complaint cannot be solved in Tier 1, the Designated Officer will assess the eligibility of the complaint and address to relevant divisions/offices of the district and its resolution is recommended to the district Governor for approval and resolved within 30 days. The Designated Officer will record its deliberations and inform the concerned parties orally or by telephone and in writing, as appropriate. If the solution is agreed by the complainant, the contractor or implementing entities will implement the solution. Written records will be made of all stages and outcomes.

During this second review process either another formal written response will be provided to the grievant in **30 days** or it may be decided to hold a meeting with contractor representatives and the grievant. If complaint is ineligible (i.e., not a project related impact), it will be recorded and passed to the relevant authorities and the complainant will be informed of the decision and reasons for rejection within 30 days according to the Law on Handling Grievances of Citizens Addressed to Government Authority and Government Officials.

**Tier 3:** If the grievance is not resolved within 30 days from its lodging at Tier 2 and/or the complainant is not satisfied with the recommended solution, the grievance will be submitted to the related divisions/offices of the MUB and its resolution is recommended to the MUB Governor for approval and action within 30 more days. If necessary, the MUB Governor will organize stakeholder meetings and/or Working Group meetings. A solution acceptable to all shall be identified including clear steps. The contractors and implementing entities will immediately implement the agreed solution. Written records will be made of all stages and outcomes.

**Tier 4:** Failing resolution at Tier 3, the complainant has recourse to the Courts which should be regarded only as a last resort. With specific regard to land disputes, in accordance with the Law on Land (Article 60, "Settlement of Land Related Disputes"), these will be settled by the relevant khoroo governor. Where this is unsuccessful, the dispute shall be settled by a higher-level authority, or in court. Alternatively, residents may also go directly to the District Land Officer.

This system is depicted in the following figure.

## Flow Chart of the GRM

## 1.2 Approaches to Locally Based Grievance Resolution

The following approaches are required for grievance resolution:

- Dissemination of information to communities on how to make a complaint
- Dissemination of information on the GRM and how to make a complaint is made to all contractors and employees so that they understand their role in receiving and transmitting on all complaints. Ensure that all employees can assist complainants to fill in forms.
- Ensure all project partners offices have complaint forms available at reception areas and instructions on the process. Ensure that visitors can approach the Grievance Officer directly.
- Include information on grievances in information bulletins and community meetings so as to maintain trust in the process.
- Use a grievance log to monitor cases and improve the organization. In addition to resolving individual or community disputes, the grievance mechanism is an opportunity to promote improvements in the project and trigger policy and practice changes
- Evaluate and improve the system. The MCA-Mongolia or its representative shall be allowed to periodically conduct an assessment of the GRM to evaluate and improve its effectiveness and the Contractor shall comply with the outcomes and recommendations of those reviews. The evaluation will include: general awareness of the mechanism; whether it is used and by whom; the types of issues addressed; the ability of the mechanism to resolve conflicts early and constructively; the actual outcomes (impacts on project operations, management systems, and benefits for communities); its efficiency; and, most fundamentally, the ability to accomplish its stated purpose and goals. The MCA-Mongolia will solicit and include the views of stakeholder representatives to see how the mechanism is proving effective in practice.

## 1.3 The Grievance Form

The Grievance Form (GF) developed by the Contractor will at minimum contain the following:

- Basic information about the affected entity (name, address, contact number)
- Category of grievance filed (legal, technical/engineering, social, financial)
- Detailed description of grievance including time, date of incident and of recording, location etc.
- Type of action(s) taken (resolved at the local level or referred to higher authorities)

As a grievance is addressed, the type of action(s) taken will also be recorded on the GF, in order to document how the grievance was resolved.

The complainant enjoys the right to use the Governmental grievance redress procedures in accordance with the Law on Handling Grievances of Citizens Addressed to Government Authority and Government Officials. This governs grievance and complaints of citizens regarding the decisions and conduct of government authority or officials, and access to the judicial system, i.e., go to the courts, at any time, if they feel their grievance or concern is not being adequately addressed through the project GRM.

## 1.4 Grievance Mechanisms for Contractor's Internal Process

Each contractor is required to have an internal grievance policy and process for employees to raise issues about conditions of contact and behavior. The usual process is run by the human resources officers with the support of the Social Safeguards Officer. However, the treatment of allegations of sexual harassment, of gender-based violence and trafficking of persons needs external assistance to undertake effective investigation into allegations.

The Contractor must have an **anonymous** mechanism for reporting suspected TIP incidents that can be used by workers and communities. The Contractor has to develop a TIP response plan covering these issues: this TIP response plan will designate the SSO to manage the investigation including an external investigation lead from the Centre for Gender Equality, ensure a response within 24 hours and an effective resolution as soon as possible. This will also include contacting the legal authorities and qualified NGOs.

It is required that investigations into these issues are conducted with both a MCA Mongolia representative present and an external investigator drawn from a suitably qualified organization such as the Centre for Gender Equity who will chair the enquiry.

MCA Mongolia shall be able to work with the human resources department of the contractor to monitor contractor internal grievance mechanisms to ensure that allegations of sexual harassment, of gender-based violence and trafficking of persons are properly investigated with confidentiality protected and participate to ensure the investigation is properly undertaken. Appointing an independent but well-informed chair ensures effective investigation. Full documentation and recording is required.

Toolbox talks by the Contractor on anti-sexual harassment are required monthly. Contractors are required to mandate and enforce a policy refusing the transportation of non-project workers in company vehicles.

---

# **Annex B – Public Consultation and Stakeholder Engagement Plan for BWSE**

---

## **1.1 Introduction**

Good communication of the project with the public is vital for successful relations with all stakeholders and enhances the opportunities offered by successful projects. The risks associated with poor stakeholder relations are now better understood by all stakeholders. The concept of “stakeholder engagement” is emerging as a means of describing a broader, more inclusive, and continuous process between a project and those potentially impacted that encompasses a range of activities and approaches, and spans the entire life of a project. Increasingly, the recognition that reputational risks that come from poor stakeholder relations, place a growing emphasis on corporate social responsibility and transparency and reporting. In this context, good stakeholder relations are a prerequisite for good risk management. The focus of this SEP is on interactions with stakeholder groups “external” to the core operation of the project, such as affected communities, local government authorities, non-governmental and other civil society organizations, local institutions and other interested or affected parties.

Stakeholder engagement is an umbrella term encompassing a range of activities and interactions over the life of a project. Not all stakeholders in a particular group or sub-group will necessarily share the same concerns or have unified opinions or priorities as stakeholders come in all sorts of groupings, interests and formats. Stakeholders are persons or groups who are directly or indirectly affected by a project, as well as those who may have interests in a project and/or the ability to influence its outcome, either positively or negatively. Stakeholders may include locally affected communities or individuals and their formal and informal representatives, national or local government authorities, politicians, religious leaders, civil society organizations and groups with special interests, the academic community, or other businesses. Interactions with all these groups require a SEP.

## **1.2 Stakeholder Engagement Plan**

This section describes the elements of the Stakeholder Engagement Plan to take forward the BWSE project.

The Stakeholder Engagement Plan covers nine components:

1. Staffing and resources
2. Stakeholder Identification and Analysis
3. Information Disclosure
4. Stakeholder Consultation
5. Partnerships
6. Grievance Management
7. Stakeholder Involvement in Project Monitoring
8. Reporting to Stakeholders
9. Management Functions

## **1.3 Staffing and Resources**

There are numerous stakeholder groups with potentially conflicting interests and influence in the project and these need careful and consistent management to gain and maintain a social licence to operate. Stakeholder Engagement for the BWSE requires substantial inputs of time to develop and to operate effectively. The most effective and integrated management location for the SEP team is under the MCA-Mongolia or its representative, under a trained and experienced Social Safeguards Specialist or Manager.

The SST requires a dedicated office with a small community meeting space, desks etc, filing capability, computer facilities, internet and telephones. The SST needs at least two Community Liaison Officers at field level to ensure good communication within affected communities.

The first task of the SST is to write an SEP with associated Standard Operating Procedures (SOPs) for each of the above sections to manage stakeholder interactions – this is to be regularly reviewed and updated.

## **1.4 Stakeholder Identification Analysis**

The ESIA process identified and consulted many potential stakeholders in the project. This work must be consolidated into a project wide stakeholder engagement matrix (SEM) listing each stakeholder, areas of interests and influence, contact person, contact details and add a line in the matrix for each meeting, consultation, email or telephone call etc. and the response made.

The SST must write an SOP for the management of the SEM.

The project is not static, stakeholders change interests, legislation and regulations change and institutional responsibilities mutate so that the stakeholder engagement process has to maintain and record and respond to stakeholders as they interact with the project and as they change over time. The SEP requires regular interaction with stakeholders to update and exchange information alongside the progression of the projects. To this end, the SEP is a live process, requiring regular monitoring and updating.

## **1.5 Information Disclosure**

The exchange of appropriate information with the right groups of people in an appropriate media and appropriate text and at the right time is fundamental to the success of the project. Information Disclosure must be planned and executed effectively to ensure project progress. The SST will have to plan in advance:

1. What information needs to be disseminated and when, broken down into individual messages by audience by project phase.
2. What language and wording is appropriate for each message and each audience. Will a translation be necessary?
3. Which media is suitable for each message and audience – meetings, letter, telephone call, radio broadcast, newspaper, social media etc.
4. Commission and maintain a project website to display information and enable communication from outside. This should enable complaints to be received and support the grievance redress mechanism. Members of the SST should have cards to hand out to enable people to know who they are and how to contact them.
5. Write an SOP to manage each message design and dissemination stating responsibilities and actions

6. Derive a budget for information dissemination activities over all project phases.

## **1.6 Stakeholder Consultation**

Information needs for the BWSE are not one way – not only do stakeholders need to receive project information but there needs to be a formal system of stakeholder consultation to enable external views to be heard and to enable discussion of project elements. This requires a system of consultations of stakeholders over the life of the project. The SST needs to examine the SEM and identify ways of regular consultation at appropriate intervals – some stakeholders need more frequent consultation than others at various times.

The SST needs to define a schedule of consultations, define suitable consultation intervals over the project life and draw up a calendar of consultations. These then need to be allocated to a consultation type, e.g. large physical meeting, small physical meeting, zoom/ skype call, allocated to where the meeting should/ could take place and allocate frequency, allowing for a margin of additional meetings in response to currently unknown circumstance. Resources and staffing can then be budgeted for consultations.

Regardless of the very small resettlement impacts under BWSE, special consideration needs to be made for families affected by landtake to ensure their interests are protected. The optimum consultation technique for this in BWSE, is the inclusion of two Community Liaison Officers in the SST (one per District) who will keep in contact with affected community members.

Consultation meetings need an organizer to make arrangements and distribute invitations to meetings, a meeting leader to lead the discussion and a recording assistant. It is best practice to make recordings of meetings and make a transcription as meeting notes. Copies of the meeting notes are distributed to meeting participants.

The SST needs an SOP on meeting protocol defining responsibility for arrangements, invitations, recording of meetings, distribution of minutes and integration into the SEM and data storage.

## **1.7 Partnerships**

Non-governmental organizations (NGOs) and community-based organizations (CBOs), particularly those who represent communities directly affected by a project, can be important stakeholders for companies to identify and engage on a proactive basis. NGOs may have expertise valuable to effective stakeholder engagement. For example, they can be sources of local knowledge, sounding boards for project design and mitigation, conduits for consulting with sensitive groups, and partners in planning, implementing and monitoring various project-related programs.

It is important to carry out initial research regarding the local power dynamics and existence of special interest groups to ensure that any intermediary organizations, such as NGOs, are truly representative of and accountable to the community interests they claim to support and represent. If there is NGO opposition to the project, engaging early to try and understand the concerns or critiques being raised can offer an opportunity to manage these issues before they escalate or find another outlet for expression.

Occasionally, projects require partnerships with other organizations in order to achieve some element. In BWSE, this may involve an NGO like Centre for Gender Equality, who may be needed to assist with training programs on gender and social inclusion, C-Tip training etc. and on assisting internal grievance procedures over cases alleging sexual harassment or gender based

violence within contractors. The SST needs to have an allocation in its budget for additional small levels of expenditure procuring additional partner services to meet the MCC Policies on Gender and Social Inclusion, C-TIP, HIV/ AIDS, etc. that need to be supplied externally from the MCA-Mongolia or its representative.

The SST must review potential partner organizations and explore possibilities for partnering with the MCA-Mongolia or its representative, and record communication in the SEP. An SOP on agreements and negotiations with third party partners is required.

## **1.8 Grievance Management**

The Grievance Redress Mechanism is discussed in detail in Annex A. It is vital that the mechanism is integrated into the SEP as it is the major channel of negative comment and complaint and needs effective management to resolve grievances and be reported to wider project management. Ideally, the responsibility for receiving and resolving grievances in BWSE would be of the MCA-Mongolia or its representative's SST. The SST needs sufficient staffing to manage community investigations and allegations of grievances.

The GRM requires a grievance matrix (GM) to record the incidence of each grievance and the process of investigation and response, The GM data must form part of the SST monthly reporting process.

## **1.9 Stakeholder Involvement in Project Monitoring**

One way to help satisfy stakeholder concerns and promote transparency is to involve project-affected stakeholders in monitoring the implementation of mitigation measures or other environmental and social programs. Such participation, and the flow of information generated through this process, can also encourage local stakeholders to take a greater degree of responsibility for their environment and welfare in relation to the project, and to feel empowered that they can do something practical to address issues that affect their lives. Participatory monitoring also tends to strengthen relationships between the project and its stakeholder.

Participatory monitoring goes beyond the project consulting with affected stakeholders on environmental and social monitoring data. It requires the physical presence of affected individuals at the time that monitoring takes place and involves data collection methods and indicators meaningful to the stakeholders concerned.

Participatory monitoring might include, for example:

1. Involvement of affected stakeholders in scientific sampling methods, questionnaires and analysis,
2. Observations by affected parties, triangulated to strengthen validation,
3. Group discussions on the success of mitigation or benefit measures and/or on how to manage new issues that have arisen
4. The adaptation of conventional participatory techniques to the purpose of assessing changes in the physical and socio-economic environment over time, such as a seasonal calendar, daily/weekly schedules, resource and land-use maps, and wealth ranking.

External monitoring of a company's environmental and social commitments can strengthen stakeholder engagement processes by increasing transparency and promoting trust between the project and its key stakeholders. Projects benefit by receiving an objective assessment of their environmental and social performance, which can help defuse external criticism and strengthen

support from local stakeholders. An external monitor can also help increase both the accountability of the project and the credibility of the monitoring results in the eyes of affected communities and civil society groups by serving as an independent and objective source of information and reporting. External monitors may be NGOs, government regulators, academics and scientists, community representatives, technical experts, or eminent persons.

Planning to include stakeholders in monitoring, whether internally or externally, need to be anticipated and included in the SEP and project monitoring plans. SOPs for managing these interactions are useful, particularly if they are drawn up in consultation of the stakeholder groups.

## **1.10 Reporting to Stakeholders**

Once consultations have taken place, stakeholders need to know which of their suggestions have been taken on board, what risk or impact mitigation measures will be put in place to address their concerns, and how, for example, project impacts are being monitored. In addition to reporting back to project-affected groups and other stakeholders as part of the consultation process, there are other types of reporting that target a different set of stakeholders. Sustainability reporting, for example, provides projects with an opportunity to communicate information to a much wider range of stakeholders about the environmental, social, economic, and governance performance of the project. It also offers a platform to report back on the process of stakeholder engagement itself, such as who has been consulted, on what topics, and with what results. Consequently, a number of international codes and standards for reporting now include requirements for implementing and reporting on stakeholder engagement, e.g. IFC Performance Standards.

Under this heading, the SST needs to:

1. Determine what information needs to be reported to which stakeholders, by what method and how frequently, add to the SEP budget lines.
  2. Regularly update the commitments register where promises have been made to stakeholders in response to complaints or external pressure
  3. and disclose progress to affected and interested parties. In particular, publicize any material changes to commitments or implementation actions that vary from publicly disclosed documents.
  4. Make monitoring results publicly available, especially reports of any external monitors.
  5. Regularly report on the process of stakeholder engagement as a whole, both to those stakeholders who are directly engaged, and to other interested parties.
  6. Derive an SOP for reporting to stakeholders.
- 50.

## **1.11 Management Functions**

Increasingly, good practice points to incorporating stakeholder engagement activities into a project's environmental and social management system. In practice this means making its management systematic by integrating it with core activities. To achieve this, the MCA-Mongolia or its representative will need to identify critical points in the life of the project where stakeholder engagement will be needed, and determine who will deliver these actions and how they can be integrated with core project functions. This involves trying to work out how best to deliver and integrate a number of different aspects of engagement and reporting as discussed in the previous sections, including:

1. Ongoing stakeholder analysis and the assessment of stakeholder concerns from a “risk” perspective
2. The hiring and training of community liaison officers
3. Consultation processes designed to meet the Project’s own policies and/or compliance requirements of funders and regulators
4. Input and suggestions received from stakeholders on project design and proposed mitigation measures
5. Grievance mechanisms that capture and respond to stakeholder concerns
6. The involvement of local stakeholders in project monitoring
7. Reporting information to stakeholders.

Most importantly, stakeholder engagement should be managed as one would manage any other project function — with clearly defined objectives and targets, professional, dedicated staff, established timelines and budget, and senior management responsibility and oversight.

Some good practice principles for managing stakeholder engagement processes are given below.

- Coordinate activities and assign overall responsibility: Over the life of the project, affected communities and other interested parties will likely interact with a variety of representatives from within the project and its contractors. It is essential that this diverse set of engagement activities be coordinated.
- Consistency of information: Consistency of information conveyed to stakeholders by different teams or business units within the MCA-Mongolia and its representative is important, as is keeping track of such activities in order to reduce inefficiencies, confusion, and conflicting messages or commitments. This is usually best achieved by giving a senior Social Manager overall responsibility for stakeholder engagement. This high-level oversight not only helps to underscore the importance of the function but is needed in order to effectively implement the strategy and coordinate the various activities across the project.
- Hire, train, and deploy the right personnel: Initial stakeholder analysis will provide a sense of the type of stakeholder groups the project will need to engage during different phases of the project cycle. Engaging different types of stakeholders requires different skills and staffing considerations. For example, engaging with local communities requires one or more field-based community liaison officers, whereas engagement with government officials or local, national, and international organizations will likely require different skill sets and more direct involvement of the senior Social Manager. The project should consider bringing in social advisors or other expert staff to help design and facilitate the process and assist with participatory methodologies and other specialized techniques. When hiring community liaison staff, consider people who will be able to develop and maintain good working relationships with the local communities. Since their job will involve listening and responding to local concerns and suggestions, qualities to look for include:
  - Good people and communication skills
  - A good understanding of the local language and community/cultural dynamics
  - Open-mindedness and respect for the views of others
  - A solution-oriented approach
  - A high integrity/degree of trustworthiness
  - A genuine commitment to the position and its goals

- Create clear reporting lines between the community liaison function and senior management: In order to be effective, Community Liaison Officers need to have the authority to negotiate on behalf of the project. This requires a clear reporting structure and clarification as to which decisions they can take unilaterally, and which are to be passed on to higher levels within the MCA-Mongolia and its representative. Direct reporting lines also enable senior managers to control risks by being kept informed of this type of field- level information in a timely manner. The more likely it is that the concerns of local stakeholders might pose a risk or reputational issue for the project, the more important it is for Community Liaison Officers to have a direct channel to senior managers.
  
- Communicate the strategy internally: If stakeholder engagement is to be effectively integrated into day-to-day project operations, the concept needs to be “owned” by all staff. Every project unit needs to be aware of the strategy and understand why the company is committing time and resources to the SEP. Too often, stakeholder engagement programs are compartmentalized within the project and regarded as a “soft concept” that is the domain of a few community liaison staff. By clarifying the links between stakeholder engagement and environmental and social performance – as well as its potential to impact on reputation and project outcomes –stakeholder relations becomes a collective responsibility.

## J.2 CP-2: Advanced Water Purification Plant (AWPP)

### 1. Introduction

This environmental and social management plan (ESMP) specifies management measures to avoid, minimize, or offset potential significant adverse environmental and social impacts, or reinforce or enhance potential beneficial impacts of construction contract package CP-2: Advanced Water Purification Plant (AWPP) of the proposed Ulaanbaatar (UB) Bulk Water Supply Expansion (BWSE). Consistent with International Finance Corporation (IFC) Performance Standards on Environmental and Social Sustainability (Performance Standards), this ESMP adopts “a mitigation hierarchy to anticipate and avoid, or where avoidance is not possible, minimize, and, where residual impacts remain, compensate/offset for risks and impacts to workers, Affected Communities, and the environment.”<sup>91</sup>

Management measures and, as necessary, compensation are specified for the following project phases:

- Preconstruction – i.e., actions that need to occur prior to construction; however, not including land acquisition and involuntary resettlement, which are addressed in detail in the BWSE resettlement action plan (RAP), and not including construction mobilization
- Construction, including construction mobilization and demobilization
- Operation and Maintenance, which will be conducted by others and is not included in the version of this ESMP which is being issued for construction bidding

Construction mobilization is scheduled to begin within several months of issuing this ESMP and the preconstruction phase then will have been completed. As preconstruction activities currently are underway and soon will be concluding, the associated management measures specified in the ESMP are few and predominantly reference management measures otherwise specified for the construction phase.

For each management measure, as appropriate for each phase of the project, the ESMP details:

- Potential Impact – Potential adverse or beneficial effect that the measure is designed to address, and target locations, resources, or communities
- Standard / Requirement Triggered – Mongolian or international standard or requirement triggered by the potential impact
- Management Measure – Specific, implementable, verifiable, and cost-effective action to be taken
- Monitoring – Monitoring activity to be undertaken
- Locations – Locations where the management measure and monitoring are to be implemented
- Indicators and Success Criteria – Indicators and criteria to be used to verify that the management measure is being implemented, and that it is effective and sufficient
- Reporting – Monitoring reporting requirement
- Schedule – Timing and frequency of implementing the management measure, monitoring, and reporting
- Responsibility – Delineation of responsibilities for implementing the management measure, monitoring, reporting, and oversight

---

<sup>91</sup> Performance Standard 1, Assessment and Management of Environmental and Social Risks and Impacts. International Finance Corporation. 2012. *Performance Standards on Environmental and Social Sustainability*. World Bank Group, January 1, 2012.

The management measures and monitoring specified in this ESMP will be implemented, as applicable, together with the conditions, procedures, and best engineering practices specified in the design of the BWSE project prior to or irrespective of its evaluation in the ESIA. For purposes of the ESMP, best engineering practices and management measures are distinguished as follows:

- *Best engineering practices* are actions typically taken by the project proponent, construction contractor, or operator to avoid or minimize potential adverse environmental and social impacts but are not implemented in response to the impact findings of the ESIA.
- *Management measures* specified in the ESMP differ from best engineering practices in that they will be implemented specifically in response to the impact findings described in the ESIA.

In other words, best engineering practices are inherently part of the BWSE and are not additional management measures specified as a result of the impact assessment process. With respect to the construction phase, they are practices that typically are within the scope of services of the construction contracting firm performing the work. Their implementation is assumed in the impact analysis presented in the ESIA.

The best engineering practices are detailed as Technical Specifications and are set forth in Section V, Works Requirements of the Construction Contract Documents. Those technical specifications that the ESIA team assumed would be taken by the project proponent, construction contractor, or operator, and would avoid or minimize potential adverse environmental and social impacts are organized into Division 1 – General Requirements and Division 2 – Site Work, and in turn into sections. The relevant issues are addressed by technical specifications in the respective sections indicated in the two following Technical Specification text boxes.

If the best engineering practices in place avoid or sufficiently reduce the impact of activities evaluated in the ESIA below the level at which the impact would be significant, additional avoidance or minimization of potential adverse impacts may not be needed. Conversely, management measures specified in the ESMP have been developed to avoid, minimize, or offset adverse impacts; or to reinforce or enhance beneficial impacts.

### **Technical Specifications, Division 1 – General Requirements**

#### **Section 01030, Special Requirements**

- Site-specific health and safety plan
- Site-specific emergency action plan
- Site-specific hazardous waste management plan
- Backfilling operations following pipe laying
- Application of clean water to control dust
- Removal and legal disposal of unsuitable material and excess material
- Disposal of debris
- Preconstruction Video Recording of Entire Site
- Detours and Road Accessibility
- Owner Obtained Permits

#### **Section 01046, Control of Work**

- Hours of Construction
- Safeguarding of Open Excavations
- Occupying Private Land
- Protection of Streets
- Care and Protection of Property

#### **Section 01063, Miscellaneous Requirements**

- Traffic Control
- Maintain Flows of Existing Utilities

#### **Section 01110, Environmental Protection Procedures**

- Protection of Existing Structures and Utilities
- Cleanup and Disposal of Excess Material
- Prevention of Environmental Pollution
- Erosion Control
- Protection of Streams, Wetlands and Surface Water
- Protection of Land Resources
- Protection of Air Quality
- Noise Control

#### **Section 01500, Temporary Facilities**

- Field Offices
- Visitor Center
- Internet Service
- Telephone Service
- Temporary Perimeter Fence
- Potable Water for Construction and Domestic Purposes
- Temporary Electrical
- Temporary Sanitary Conveniences
- Barricades
- Temporary Heat
- Shelter and Protection of Materials
- Site Security

#### **Section 01568, Erosion Control, Sedimentation & Containment of Construction Materials**

- Erosion Control

#### **Section 01610, Delivery, Storage and Handling**

- Storage and Handling of Hazardous Materials

#### **Section 01700, Contract Closeout**

- Final Cleaning

#### **Section 01710, Cleaning Up**

- Cleaning Up Project Site

### **Technical Specifications, Division 2 – Site Work**

#### **Section 02100, Site Preparation**

- Special Requirements
- Contractor shall repair or replace any structures that are damaged
- Disposal of waste/surplus materials
- Inform Owner if there were archeological findings during site preparation
- Clearing, Grubbing, Tree & Stump Removal
- Disposal of Waste Materials
- Sediment and Erosion Control

#### **Section 02140, Dewatering**

- Dewatering

#### **Section 02210, Earth Excavation, Backfill, Fill and Grading**

- Excavation
- Separation of Excavated Material for Reuse
- Trench Excavation
- Reuse and Disposal of Surplus Excavated Materials
- Care and Restoration of Property
- Backfilling

#### **Section 02230, Site Clearing**

- Clearing and Grubbing

#### **Section 02268, Erosion Control Barrier**

- Erosion Control Barrier

#### **Section 02480, Landscaping**

- Plants
- Loam and Seed
- Planting
- Maintenance of Seeded Areas and Planting

#### **Section 02483, Planting Operations**

- Planting and Maintenance of Trees, Shrubs and Ground Cover

#### **Section 02485, Loaming and Seeding**

- Loaming and Seeding of disturbed area
- Wetland Seed Mixture
- Straw for Erosion Control

As appropriate for each of the subject project phases or the overall ESMP, the ESMP organizes and summarizes the management measures into the following constituent plans and schedules:

- Environmental Management
- Waste Management
- Social and Gender Inclusion
- Health and Safety Management
- Education, Training, and Community Outreach
- Risk Control and Emergency Response
- Monitoring and Verification, and Maintenance Actions
- Implementation Work Plan and Schedule

The first four plans/schedules listed above detail specific management measures to mitigate adverse environmental and social impacts or reinforce potential beneficial impacts. Each management measure is detailed in a table that is specific to that measure. The remaining plans/schedules provide procedures, as appropriate referencing the management measures in the preceding plans, to address specific concerns and issues, or summarize the measure-specific procedures, timetables, and schedule for implementing the ESMP.

## 2. Pre-Construction Phase

### 2.1 Responsibilities During Pre-Construction

#### 2.1.1 MCA-Mongolia

MCA-Mongolia or its representative will be responsible for oversight of the pre-construction-related management measures and monitoring specified in the ESMP. MCA-Mongolia or its representative will inform and coordinate with all applicable stakeholders regarding their corresponding mandates under or in relation to the ESMP. MCA-Mongolia or its representative will establish a Social Safeguards Team (SST) and coordinate with the Contractor during the pre-construction and construction phases in implementing, supervising, reporting, and follow-up actions with regard to the ESMP.

#### 2.1.2 Contractor

The construction contracting firm performing the work, the **Contractor**, will be fully responsible for implementing and monitoring all pre-construction-related management measures specified in the ESMP—together with the conditions and procedures specified in Section V, Works Requirements of the Construction Contract Documents. The Contractor will read the ESMP, consider it in its entirety, and comply with all aspects of the ESMP that pertain to implementing and monitoring of pre-construction-related environmental and social management.

The Contractor will abide by the requirements of this ESMP, which is appended to and is a part of the Contract. Following construction contract award, the Contractor will develop a site-specific Contractor's Environmental and Social Management Plan (CESMP), as further described below, for approval by the Engineer prior to start of the construction works. The Contractor will prepare the site-specific CESMP based on the contents of Section V, Works Requirements and this ESMP. The Contractor will submit the detailed, site-specific CESMP to the Engineer within 28 days after receiving the Letter of Acceptance. The CESMP must be approved by the Engineer prior to commencement of the execution of the Works.

The Contractor is advised that all sites where the Contractor will establish temporary construction facilities will be subject to environmental and social impact assessments and must be covered by

an acceptable CESMP and must be permitted in accordance with all applicable permitting requirements. The Contractor will need to negotiate with and potentially compensate landowners for temporary use of land. These temporary facilities may be co-located and potentially would comprise the following:

- Construction camps
- Laydown, staging, and storage sites
- Concrete batch plants
- Site offices
- Fuel storage
- Parking areas

The Contractor will take all necessary measures and precautions to ensure that the execution of the works and all associated operations on site or off site are carried out in conformity with statutory and regulatory environmental and social requirements of the Government of Mongolia and the technical specifications, where the more stringent will apply. The Contractor will take all measures and precautions to avoid any nuisance or disturbance arising from the execution of project activities. Wherever possible, this will be achieved by avoidance of the impact at the source rather than mitigating an impact after it has been expressed.

The Contractor will develop a grievance redress mechanism (GRM) based on guidance provided in Annex A of the ESMP.

The Contractor will designate an Environmental and Social Performance Manager as a key staff. This individual will have knowledge of relevant Mongolian, IFC, and Millennium Challenge Corporation standards and regulations, and knowledge of environmental, social, and gender issues that include, but are not limited to, environmental management, waste management, gender and social inclusion, cultural resources, and health and safety management.

This individual(s) will be responsible to:

- Work closely with MCA-Mongolia or its representative to guide the Contractor's thorough understanding of the mitigation and monitoring requirements
- Lead the Contractor's work related to implementing environmental and social management measures and relevant monitoring requirements
- Work closely with MCA-Mongolia or its representative to incorporate or modify management measures and monitoring actions proposed by the Contractor, as needed, to reflect field conditions with the approval of the Engineer.

The Contractor, while in possession of the construction sites, will be responsible for the safety measures undertaken in accordance with the Technical Specifications to protect the workforce of the Contractor's own staff as well as the Engineer's and MCA-Mongolia or its representative's supervision staff. The Contractor will conduct in this respect safety induction courses for all personnel involved with the works and who are required to supervise any activity prior to their attending any part of the works.

Additional training is required to meet MCC social policy requirements as per the:

- Labor Management Plan
- Gender Integration and Social Inclusion Plan
- Counter-Trafficking in Persons Response Plan and Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan
- Stakeholder Engagement Plan

- Construction Camp and Temporary Facilities Management Plan
- Cultural Heritage Training Plan
- Managing external grievances as part of the project GRM

The Contractor will act responsibly to provide notification of the Contractor's schedule to enable MCA-Mongolia or its representative to carry out its responsibilities. The Contractor will be required to provide verbal and written updates to MCA-Mongolia or its representative on a regular basis indicating percent achievement of the pre-construction-related management measures specified in the ESMP. On a monthly basis, as part of the Contractor's monthly progress report, the Contractor will submit an ESMP update that will report the status of all environmental and social compliance activities and actions taken by the Contractor.

### **2.1.3 Contractor's Environmental and Social Management Plan (CESMP)**

The site-specific CESMP is required for construction activities and will provide the implementation vehicle of specific management activities applicable for the construction sites. At the direction of the Engineer, the Contractor is required to update the CESMP, including constituent plans and procedures, during the construction works as part of its obligations under its contract. The CESMP is required to strictly follow and comply with the environmental, social, health and safety requirements of the Millennium Challenge Corporation (MCC) and national legislation, as well as this ESMP, its constituent plans, and other applicable documents and regulations.

The site-specific CESMP will provide identified site-specific management measures, and refine organizational and operational procedures for the implementation of those measures, including implementation timeline and specific reporting requirements. The CESMP will detail the plans and procedures constituent to the CESMP and elaborate complimentary environmental, social, and health and safety management measures and training, and indicate the responsibility for implementation, technical details, and how implementation will be monitored. The CESMP, at a minimum, shall include the following plans:

- Environmental Management Plan
- Waste Management Plan
- Social and Gender Inclusion Plan
- Health and Safety Management Plan
- Education, Training, and Community Outreach Plan
- Risk Control and Emergency Response Plan
- Monitoring and Verification, and Maintenance Actions Plan

#### **2.1.3.1 Objectives of the CESMP**

The Contractor will prepare the site-specific CESMP in order to properly manage its construction activities in accordance with Section V, Works Requirements and this ESMP, and in compliance with requirements of MCC and Mongolian legislation. This includes requirements on community engagement and gender integration incorporated into the ESMP, the Employer's Social and Gender Integration Plan, and Counter-Trafficking in Persons requirements of MCC, and the laws and regulations of Mongolia.

The site-specific CESMP will be prepared with the following objectives:

- Provide the environmental and social policy of the Contractor
- Provide operational and emergency procedures, developed to address the environmental aspects and risks associated with the construction activities
- Provide details on approaches and measures and appropriate personal protective equipment (PPE) and other equipment for handling hazardous waste generated on each site

- Provide details on communication and reporting, as well as contacts of site supervisors nominated to control and guide works involving disturbance of hazardous materials and waste
- Clarify the implementation and operation of the site-specific CESMP to ensure that structure and responsibilities are assigned, workers are trained, aware, and competent, and that there is proper communication, documentation, operational control, and emergency preparedness and response
- Provide organizational and technical procedures for implementation of the CESMP to ensure that construction activities associated with potential environmental and social impacts are carried out in a controlled and responsible way
- Provide checking and corrective action through monitoring and measurement
- Provide mechanisms for maintaining adequate records of corrective actions to allow effective monitoring
- Provide mechanisms for maintaining effective two-way communication between the Contractor and the community and stakeholders
- Provide full compliance with Mongolian Law on Labor, Law on Promotion of Gender Equality, and other relevant employment laws. Ensure each employee has a written contract and is made aware of and signs the Worker Code of Conduct, and ensure compliance with the Labor Management Plan
- Provide training on and awareness in accordance with the following management measures:
  - Emergency Preparedness and Response
  - Waste Management
  - Labor Management
  - Gender Integration and Social Inclusion
  - Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment
  - Stakeholder Engagement, Community Consultation, and Grievance Redress
  - Construction Camp and Temporary Facilities Management
  - Cultural Heritage Protection
  - Health and Safety Management

When preparing the site-specific CESMP, it will include the following:

- Management Acknowledgements
- Organization and Staffing
- Communications and Reporting
- Environmental, Social, and Health and Safety Provisions

The Contractor will prepare and submit for the Engineer's approval the site-specific CESMP, including constituent plans and procedures, within 28 days after receiving the notice of contract award. The Engineer may require periodic reviews, including updating of the CESMP during the construction works.

### **2.1.3.2 Management Acknowledgements**

#### **5) Certification and Commitment**

The site-specific CESMP submitted by the Contractor will provide a signed statement from the Contractor's Project Director attesting to a commitment that all environmental and social protection, safety, and occupational health and safety aspects of the contract will be given highest priority in the discharge of contractual obligations and certifying a commitment to the provisions

in the ESMP, its constituent plans, environmental and social requirements of the contract, as well as the approved site-specific CESMP.

## 6) Statutory Understanding and Compliance

The site-specific CESMP will provide a statement attesting the Contractor's understanding of, and means of ensuring due compliance with, the statutory regulations relating to construction work in Mongolia, specifically regarding compliance with:

a) All current environmental laws and regulations, related to, but not limited to, the following:

- Noise
- Vibration
- Air pollution
- Water contamination
- Solid and hazardous waste disposal
- Waste disposal
- Sanitary conditions (water supply, sewerage, wastewater disposal, etc.)
- Use of explosives;
- Protection of public traffic
- Historical, cultural, and archaeological monuments/sites
- Resettlement, land acquisition, servitude, temporary use of land and compensation, etc.

b) All current labor laws and laws related to, but not limited to, the following:

- Contract of employment and labor disputes
- Working conditions
- Management, monitoring, and supervision
- Gender-based discrimination in employment
- Child labor
- Trafficking in persons
- Gender-based violence
- Sexual harassment

c) All occupational health and safety legislation including, without limitation, the rules and regulations of Mongolia and the authorities having jurisdiction. These provisions will be included and regulated through the Health and Safety Management Plan.

## 7) Availability of Documents

The site-specific CESMP will state where copies of environmental and social regulations and documents will be available on the construction sites and verify that all regulations and documents have been or will be made available.

## 8) Management of Subcontractors

The requirements of this and related sections and obligations therein will be included in implementation of parts of the construction activities by the approved subcontractors, while the Contractor will:

a) Provide subcontractors with copies of the site-specific CESMP, the ESMP, the constituent plans, and other relevant environmental and social policies, plans,

documents, and regulations, while incorporating such provisions into all subcontracts and ensuring compliance with such plans under the Contract.

- b) Require all subcontractors to appoint an environmental representative, social representative, and health and safety representative, who will be available on the sites throughout the operational period of the respective subcontract and ensure as far as is practically possible that staff and employees of subcontractor(s) are conversant with appropriate parts of the site-specific CESMP and the relevant environmental and social documents and regulations.

### **2.1.3.3 Organization and Staffing**

#### **4) Organization Chart**

The site-specific CESMP will include an organization chart identifying, by job title and by the name of the individual, the personnel to be engaged solely for environmental protection, social and gender, and health and safety control. The chart and the supporting text will identify participants and their contact details.

#### **5) Identification of Responsibilities**

The site-specific CESMP will provide descriptions of the responsibilities of the Environmental and Social Performance Manager, Social and Gender Manager, and Health and Safety Manager appearing on the organization chart. Additionally, the CESMP will provide a description of the responsibilities of the Contractor's Social Safeguards Officer or Social Safeguards Team.

- a) **Environmental and Social Performance Manager**

The Environmental and Social Performance Manager, qualified in ESMP and resettlement implementation, throughout the construction period will be primarily responsible for daily inspection and monitoring of ESMP implementation. The Environmental and Social Manager will prepare monthly and as-needed incident reports and submit them to the Engineer. MCA-Mongolia will report to MCC and send feedback to the Contractor through the Engineer or directly when urgent action is required. Monitoring and reporting on the implementation of follow-up action will also be part of the Environmental and Social Manager's duties.

The Environmental and Social Performance Manager additionally will be responsible for environmental management of the construction sites and day-to-day management of environmental issues. The Environmental and Social Manager will be empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements of the site-specific CESMP or relevant environmental documents and regulations.

The Environmental and Social Performance Manager will maintain a daily site diary/record-book comprehensively recording all relevant matters concerning the construction sites' environmental management, safety, and traffic control, inspections, and audits, related incidents and the like. The site diary will be available at all times for inspection by the Engineer.

- b) **Social and Gender Manager**

The Social and Gender Manager will be responsible for day-to-day management of social issues for the duration of construction works. The Social and Gender Manager will be

empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements of the site-specific CESMP or relevant social documents and regulations. The Social and Gender Manager will be responsible for overall stakeholder engagement and consultation process, ensuring proper labor contracting and working conditions, issues related to trafficking in persons, and organizing and delivering trainings, appropriate communication, and reporting.

Additionally, the Social and Gender Manager will monitor the internal grievance mechanism. In case of sexual harassment or violence, will liaise with the MCA-Mongolia or its representative's Social Safeguards Team and engage an independent third party such as the Centre for Gender Equality to manage investigations of allegations.

With input from site supervisors, the Social and Gender Manager will maintain a diary/record-book comprehensively recording all relevant matters concerning site social issues management, inspections and monitoring, incidents and emergencies, as well as other relevant issues. The diary will be available at all times for inspection by the Engineer.

c) Health and Safety Manager

The Health and Safety Manager will be responsible for day-to-day management of health and safety issues for the duration of construction works, including HIV/AIDS and Covid-19 related issues. The Health and Safety Manager will be empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements of the Health and Safety Management Plan or requirements of health and safety documents and regulations.

The Health and Safety Manager through input from site supervisors will maintain a health and safety diary/record-book comprehensively recording all relevant matters concerning site health and safety management, inspections, and monitoring, incidents and emergencies, as well as other relevant issues. The diary will be available at all times for inspection by the Engineer.

d) Social Safeguards Officer / Social Safeguards Team

The Contractor's Social Safeguards Officer or Social Safeguards Team, under the Social and Gender Manager, will be appointed to manage the contractual obligations specified in the construction contract. Depending on the size of the company, the Contractor designate at least Social Safeguards Officer; more if the number of employees exceed 50. Additionally, a Contractor Community Liaison Officer may be needed to work with local labor.

The responsibilities of the Social Safeguards Officer or Social Safeguards Team are the following:

- Coordinate with the MCA-Mongolia or its representative regarding the protocols for community contact
- Maintain records of all community contacts and integrate with the project Stakeholder Matrix
- Liaise with the MCA-Mongolia or its representative over community contacts
- Liaise with the MCA-Mongolia or its representative to implement and assist in resolution of grievances

- Inform the MCA-Mongolia or its representative of employment vacancies and recruit through the Ministry of Labor offices and process
- Monitor and promote the employment of women to achieve the recommended target of 30 percent or more
- Plan and ensure delivery of the contractually required employee awareness training and information programs
- Liaise with training organizations and experienced NGOs to find those able to design training courses on aspects of employee behavior, sexual harassment and gender based violence, gender equity, HIV/AIDS, conflicts over employment opportunities and foreign workers, cultural awareness, and chance finds processes
- Support complainants to the Contractor's internal grievance system, particularly those alleging sexual harassment or gender-based violence
- Assist the Contractor's personnel department to manage the internal employee grievance mechanism for reporting grievances
- Manage the Contractor's responsibilities with the project GRM; documenting, reporting, and taking part in finding solutions

## 6) Appointments

The Contractor will include the CV of the following proposed personnel in the bidding package and submit to MCA-Mongolia for approval the names and details (full CVs) of these proposed personnel within 14 days after the notification of contract award:

- Environmental and Social Performance Manager
- Social and Gender Manager
- Health and Safety Manager
- 

The proposed personnel will hold the attestation/proof of professional qualification required from the relevant government authorities to perform and submit pertinent studies and documentation to relevant Government agencies, with an advanced post graduate degree in a relevant discipline or as a certified consulting engineer, and relevant post-graduate experience in Mongolia.

The Contractor will obtain approval and appoint the Environmental and Social Performance Manager, Social and Gender Manager, Health and Safety Manager, and Social Safeguards Officer prior to commencement of construction works, unless otherwise, in exceptional circumstances, it is agreed in writing with the Engineer. Key personnel identified in Section IV, the Environmental and Social Performance Manager, Social and Gender Manager, and Health and Safety Manager, will not be removed from the construction works without written permission of the Engineer. Within 14 days of any such removal or notice of intent of removal, a replacement for the respective personnel will be nominated by the Contractor for approval by the Engineer and MCA-Mongolia (MCA-Mongolia will approve any key staff).

### **2.1.3.4 Communications and Reporting**

The site-specific CESMP will explain the proposed interaction and communication procedures between construction personnel and environmental, social and gender, and health and safety staff, including:

- Communication facilities
- Routine communication and reporting systems
- Stakeholder engagement and consultation activities

#### 4) Environmental, Social and Gender, and Health and Safety Reports

The Contractor will submit the environmental, social and gender, and health and safety reports shown in Table 1.

**Table 1 Summary of Report Requirements**

Report	Submission Schedule	Content
<b>Site-specific CESMP</b>	One time during mobilization, within 28 days after the Letter of Acceptance	<p>The Contractor will carry out an assessment of environmental, social and gender, and health and safety conditions at the work sites to define site-specific impacts and adequate mitigation measures. The Contractor will also develop constituent plans and procedures required as a part of CESMP.</p> <p>The site-specific CESMP must be approved by the Engineer prior to commencement of construction activities.</p>
<b>Training and Orientation Report</b>	<p>One time during mobilization, before commencement of works</p> <p>Monthly updates during implementation of works</p>	<p>The Contractor will summarize information regarding training and orientation mandated under each plan, carried out before involvement of the labor in construction activities and during toolbox talks. Toolbox talks on each plan topic must be delivered monthly.</p> <p>The Contractor will provide copies of the Training and Orientation Reports to the Engineer. The Contractor will provide monthly updates of training and orientation activities during implementation of works in the Monthly Progress Reports.</p>
<b>Regular Weekly Environmental, Social and Gender, and Health and Safety Reports</b>	Weekly during implementation of works	<p>The Contractor will undertake environmental, social and gender, health and safety inspections and report weekly, and will provide copies of such reports to the Engineer each month for the duration of contract.</p> <p>The weekly environmental reports will include:</p> <ul style="list-style-type: none"> <li>• Environmental and health and safety management actions / measures taken, including approvals sought from local or national authorities</li> <li>• Observations and concerns raised and/or decisions taken with regard to environmental and gender, and health and safety management during site meetings</li> <li>• Problems encountered in relation to environmental and health and safety aspects (including delays, incidents, damages and cost consequences, emergencies, etc.)</li> <li>• Lack of compliance with this ESMP and the technical specifications in relation to environmental, and health and safety requirements on the part of the Contractor and/or subcontractor(s)</li> </ul> <p>The social and gender reporting will include sections on issues arising in the fields of:</p> <ul style="list-style-type: none"> <li>• Recruitment strategy, employment of men and women, and prohibition of child labor</li> <li>• Implementation of the Worker Behavior Code of Conduct and outcomes</li> <li>• Gender related grievances and investigations</li> </ul>

Report	Submission Schedule	Content
		<ul style="list-style-type: none"> <li>• Training on employee behavior, gender, social inclusion, counter-trafficking in persons, gender-based violence, and sexual harassment, health education, cultural awareness, and feedback from employees</li> </ul>
<b>Monthly Progress Reports</b>	Monthly during implementation of works	<p>Summaries of these reports (including information on environmental and social activities undertaken, permits and agreements obtained, etc.) will be included in the monthly progress reports to be submitted to Engineer for review and approval. It is expected that monthly progress reports will include information on:</p> <ul style="list-style-type: none"> <li>• Employment records of workers (used to track participation in training and progress toward women's employment targets and local labor targets)</li> <li>• Training and orientation activities</li> <li>• Environmental, social and gender, and health and safety management actions / measures taken, including approvals sought from local or national authorities</li> <li>• Observations and concerns raised and/or decisions taken with regard to environmental, social and gender, and health and safety management during site meetings</li> <li>• Problems encountered in relation to environmental, social and gender, and health and safety aspects (including delays, incidents, damages and cost consequences, emergencies, etc.)</li> <li>• Investigations into the contractor internal grievance redress mechanism with outcomes</li> <li>• Lack of compliance with this ESMP and the technical specifications in relation to environmental, social and gender, and health and safety requirements on the part of the Contractor and/or subcontractor(s)</li> <li>• Changes of assumptions, conditions, measures, designs, and actual works in relation to environmental, social and gender, and health and safety requirements</li> <li>• Chance historical, cultural, and archaeological finds</li> <li>• Follow-up on incident investigation</li> <li>• Follow-up on the status of measures and/or corrective actions identified (including remedial measures) and their efficacy, to eliminate and minimize lack of compliance with contract requirements</li> <li>• Stakeholder engagement and consultation activities carried out during reporting period, grievances registered and resolved</li> <li>• Grievances registered and resolved.</li> </ul>

## 5) Notification of Incidents and Changes

The site-specific CESMP will verify that provisions have been made to ensure that the Contractor notifies relevant parties in accordance with Section VIII Particular Conditions of Contract, Sub-Clause 4.8 after the following incidents and changes:

- Occurrence of any incident that has resulted, or could reasonably be foreseen to result, in lack of compliance with this ESMP and the technical specifications in relation to environmental, social and gender, especially internal complaints related to sexual harassment, gender-based violence and trafficking in persons for sex, and health and safety requirements
- Changes of assumptions, conditions, measures, designs, and actual works in relation to environmental, social and gender, and health and safety requirements
- Chance historical, cultural, and archaeological finds

In addition to the initial written notification, the Contractor will submit a preliminary report on incident investigation within 7 days after the incident, as well as final report on incident investigation within 14 days after the incident. All incidents should be investigated by the competent professional (relevant independent professionals can also be involved, as needed). The final report on the incident investigation will include information on the investigation's objectives, methodology applied, analysis and tests carried out, findings, conclusions, and recommendations.

Allegations against staff of sexual harassment or gender-based violence, or involvement in trafficking in persons inside the Contractor's organization require reporting to the MCA-Mongolia or its representative's Social Safeguards Team. The Contractor's Social and Gender Manager will liaise with the MCA or its representative and other relevant parties, and arrange for a third party investigator to lead the enquiry into allegations together with the Contractor's human resources representative. Proven harassment or violence offences in contravention of the Worker Behavior Code of Conduct must result in the immediate firing of the perpetrator and reporting through the project system.

Allegations of trafficking in persons must be dealt with according to the Section VIII Particular Conditions of Contract Sub-Clause 6.16, "Combatting Trafficking in Persons", which summarizes the Contractor's reporting requirements and specifies remedies that the MCA Entity will apply to confirmed cases.

Section VIII Particular Conditions of Contract Sub-Clause 6.17, "Prohibition of Sexual Harassment", specifies that "The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction."

## 6) Communication with Subcontractor(s)

The site-specific CESMP will specify:

- How environmental, social and gender, and health and safety requirements will be communicated to subcontractor(s) at all levels and how their compliance with the CESMP and all relevant regulations will be ensured.
- Subcontractor(s) will be supplied with copies of the CESMP and other environmental and social documents developed for the project (which will be deemed part of the subcontract), and will attend and report on all relevant training and orientation sessions prior to commencement of their work and will continue covering the same topics in toolbox talks.

- The procedures for reviewing and monitoring compliance with the site-specific CESMP and environmental and social regulations. This could include, for example, the monitoring of performance against environmental and safety criteria as a part the daily and/or weekly site inspections.

### 2.1.3.5 Environmental, Social and Gender, and Health and Safety Provisions

The site-specific CESMP, including constituent plans and procedures, will include at a minimum acknowledgement of the requirements to meet the CESMP standards, the methodology and resources to meet the requirements of the management measures prescribed in the following sections of this ESMP, as well as the environmental, social and gender, and health and safety provisions of Section V, Works Requirements.

In accordance with MCC Environmental Guidelines and IFC Performance Standards, the Contractor is obliged to implement all reasonable measures with regard to soil erosion, water and air quality, noise and vibration, solid waste, hazardous materials, wastewater discharges, health and safety hazards, labor and working conditions. In a similar way, the Contractor is obliged to implement risk management strategies to protect the beneficiary communities from 1) physical, chemical, or other hazards associated with sites under construction, 2) hazards associated with increased traffic and rerouting of vehicles, and 3) communicable and vector-borne diseases associated with the population of workers.

Parallel plans and policies will be developed by the Contractor as a part of CESMP to implement mitigation measures specific for each construction site and ensure compliance with environmental, and social and gender, and health and safety requirements.

## 2.2 Environmental Management

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## 2.3 Waste Management

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## 2.4 Social and Gender Inclusion

### Management Measure AWPP - 1: Labor Management

POTENTIAL IMPACT
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>• Professional management and conditions of labor</li> <li>• Opportunities for local labor and supply of goods and services, and provision of local jobs with fair and competitive wages</li> <li>• Women's short-term employment in construction and engineering-related work</li> <li>• Potential alleviation of poverty in local area</li> <li>• Reduction in child labor</li> <li>• Improved grievance management in employment</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>• Discrimination against women</li> <li>• Increased foreign labor, reducing local employment opportunities</li> <li>• Use of child labor</li> <li>• Use of forced labor</li> <li>• Use of trafficked labor</li> <li>• Exploitation of workers and Labor Code violations</li> </ul>

<ul style="list-style-type: none"> <li>• Sexual harassment</li> </ul>
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Constitution of Mongolia <ul style="list-style-type: none"> <li>- Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>• Mongolian Civil Code <ul style="list-style-type: none"> <li>- Requires providing office space, tools and equipment necessary to ensure employees' health.</li> </ul> </li> <li>• Mongolian Law on Gender Equality <ul style="list-style-type: none"> <li>- Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>• Mongolian Law on Labor <ul style="list-style-type: none"> <li>- Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>- Prohibits employing children under the age of 16 or under 18 in dangerous industries, including construction</li> </ul> </li> <li>• Mongolian Law on Minimum Wage <ul style="list-style-type: none"> <li>- Minimum wage is fixed by National Tripartite Committee on Labor and Social Consensus representatives.</li> </ul> </li> <li>• Mongolian Law on the Protection of the Rights of the Child <ul style="list-style-type: none"> <li>- Prohibits employing children in any work that is likely to harm their health or morale, and exploiting or paying unjust wages to children</li> </ul> </li> <li>• Mongolian Law on Social Protection of Disabled Persons <ul style="list-style-type: none"> <li>- Prohibits building any buildings and facilities that do not meet needs and requirements of persons with disabilities.</li> </ul> </li> <li>• Mongolian Law on Combating Human Trafficking <ul style="list-style-type: none"> <li>- Requires regulating the workplace to ensure the implementation of the legislation on combating human trafficking, and if it is not specified, it shall be obliged to comply with the instructions, recommendations, statements and instructions given by the competent authorities and officials.</li> </ul> </li> <li>• Mongolian Law on Sending Labor Force Abroad and Receiving Labor Force and Specialists from Abroad <ul style="list-style-type: none"> <li>- Regulates relations with respect to employment of a Mongolian citizen abroad and a foreign citizen in Mongolia, and protection of their rights and interests.</li> <li>- Reinforces provisions of the Constitution of Mongolia, Labor Law, Social Insurance Law, and other related legal acts, and legal status of a foreign citizen.</li> </ul> </li> <li>• IFC Performance Standard 2 <ul style="list-style-type: none"> <li>- Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.</li> <li>- Contractor will adopt and implement human resources policies and procedures appropriate to its size and workforce that set out its approach to managing workers consistent with the requirements of this performance standard and national law.</li> <li>- Contractor will provide workers with documented information that is clear and understandable regarding their rights under national labor and employment law and any applicable collective agreements, including their rights related to hours of work, wages, overtime, compensation, and benefits upon beginning the working relationship and when any material changes occur.</li> <li>- Contractor will not make employment decisions on the basis of personal characteristics unrelated to inherent job requirements. Contractor will base the employment relationship on the principle of equal opportunity and fair treatment, and will not discriminate with respect to</li> </ul> </li> </ul>

<p>any aspects of the employment relationship, such as recruitment and hiring, compensation (including wages and benefits), working conditions and terms of employment, access to training, job assignment, promotion, termination of employment or retirement, and disciplinary practices. Contractor will take measures to prevent and address harassment, intimidation, and/or exploitation, especially in regard to women. The principles of non-discrimination apply to migrant workers.</p> <ul style="list-style-type: none"> <li>- Prohibits employment of child labor.</li> <li>• Millennium Challenge Corporation Counter-Trafficking in Persons Policy (C-TIP Policy) <ul style="list-style-type: none"> <li>- Requires contractors to take a zero-tolerance policy with regard to human trafficking and to actively manage employment conditions to prevent exploitation of trafficking in persons and related activities workers by employers and specifies remedies that the MCA-Entity may take in response to confirmed cases of TIP.</li> </ul> </li> <li>• Millennium Challenge Account Social and Gender Integration Plan (SGIP) <ul style="list-style-type: none"> <li>- Sets out guidelines for Contractors related to social risk mitigation measures in infrastructure, including making working conditions suitable for both male and female employees</li> <li>- Requires developing and implementing an employment plan that prioritizes using local labor particularly from the Area of Influence of the project</li> <li>- Sets a target to encourage contractors to employ as workers at least 30% women of all workers at each skill/occupational level</li> <li>- Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates.</li> </ul> </li> <li>• Millennium Challenge Corporation Guidance Note to MCAs on Sexual Harassment <ul style="list-style-type: none"> <li>- Requires that contractors are well-informed about existing anti-sexual harassment policies and procedures, and that contractors meet the requirements in the standard bidding documents.</li> </ul> </li> <li>• Ministry of Construction and Urban Design (MCUD) Gender Responsiveness Policy <ul style="list-style-type: none"> <li>- Calls for gender targets in employment via “international and domestic tenders, so that one gender should not be lower than 15 percent among workers, and 25 percent among decision makers.”</li> </ul> </li> <li>• Ministry of Labor and Social Welfare Order (2016) <ul style="list-style-type: none"> <li>- Expanded the types of hazardous work prohibited for children under the age of 18 to include construction</li> </ul> </li> <li>• International Labor Organization fundamental conventions, and International Human Rights instruments and conventions</li> </ul>	<div style="background-color: #e0f0ff; padding: 2px;"><b>OBJECTIVES</b></div> <p>The Labor Management Plan ensures that contractors and their workers have clear expectations about the behaviors and conditions expected of the Contractor and all workers.</p> <ul style="list-style-type: none"> <li>• Promote fair treatment, non-discrimination, and equal opportunity of workers</li> <li>• Promote local labor opportunities and procurement from local suppliers</li> <li>• Target women’s employment as 30% of all labor at each skill/occupational level</li> <li>• Establish and maintain and improve a constructive worker-management relationship</li> <li>• Protect workers, including “vulnerable” categories of workers such as children, migrant workers, workers engaged by third parties, and workers in the supply chain</li> <li>• Avoid the use of forced labor or trafficked labor</li> <li>• Maximize the beneficial impact of the project on the affected communities</li> </ul> <div style="background-color: #e0f0ff; padding: 2px;"><b>MANAGEMENT MEASURE</b></div> <div style="background-color: #e0f0ff; padding: 2px;"><b>Labor Management</b></div> <p>The MCA-Mongolia or its representative’s Social Safeguards Team (SST) will:</p> <ul style="list-style-type: none"> <li>• Encourage Contractor to employ local unskilled and semi-skilled labor, particularly youth and women, and to procure goods and services from local businesses and entrepreneurs</li> </ul>
---	---

- Facilitate the Contractor's cooperation with the local District Labor Offices
- Facilitate the Contractor's publication of vacancies and procurements within affected communities
- Facilitate the Contractor's holding of job fairs and procurement workshops within affected communities to support local applicants to apply for jobs and local businesses and entrepreneurs to bid
- Support local job applicants to apply, and local businesses and entrepreneurs to bid
- Gather names of interested workers from project affected households and through community information programs and consultation meetings
- Share the names of interested workers with Contractor and District and khoroo Labor Offices
- Encourage Contractor to employ women at a rate of at least 30% of personnel at each skill/occupational level
- Facilitate Contractors' engagement with relevant university engineering programs, technical and vocational education and training (TVET), and professional associations to 1) identify and recruit qualified job applicants and 2) establish internships and apprenticeships
- Encourage Contractor to employ socially excluded and vulnerable people

The Contractor will:

- Fully comply with the requirements of this management measure and related contract clauses
- Perform the work in accordance with relevant sections of the ESMP

#### *Access to Employment*

The Contractor will:

- Publish vacancies (listing the required qualifications for all categories of employment) within project-affected communities and at District and khoroo offices and provide such information to the Engineer and during each community meeting. Ensure the exchange of information between Contractor and the local population on employment opportunities
- Publish and communicate employment opportunities listing the required qualifications for all categories of employment city-wide, and beyond in Mongolia, if the vacancies cannot be filled from local communities
- Ensure that a staff person responds to questions from the local population regarding employment and procurement opportunities
- Develop an employment forecast and a written recruitment strategy to 1) encourage the employment of qualified individuals among the local population(s) in project construction and ancillary activities in all phases, with particular focus on women and, youth, and disadvantaged groups, 2) target achieving women's employment as at least 30% of personnel at each skill/occupational level, and 3) provide training for local construction brigades on how to be effective contractors for local construction brigades
- Through the Contractor's Social Safeguards Officer, liaise with the MCA-Mongolia or its representative's SST and local labor offices to provide support with the job application process, encourage local employment (including women's employment), implement and publicize a job fair, consistent and transparent recruitment process
- In disseminating information on potential employment opportunities, take steps to consider ways in which to maximize outreach, using all forms of media that may be appropriate
- Ensure that all staff have written employment contracts specifying fair employment conditions and equal pay for equal work to men and women, and fulfilling all conditions specified under the Mongolian Law on Labor defining the contracts
- The Contractor is encouraged to:
  - Create pay bands for each category of worker to help ensure equal pay for equal work

As feasible, the Contractor will:

- Develop and submit a plan for providing on-the-job training and skills transfer opportunities to the local labor force
- Engage with training, education, and professional organizations—such as Technical and Vocational Education and Training, Implementing Agency of the Ministry of Labor and Social Protections, Mongolian University of Science and Technology, and the Mongolian Builder's

Association—to recruit qualified applicants, and provide apprenticeships and internships for students who study water engineering and relevant subjects at university  
The Contractor shall note contract clauses on “Gender,” “Engagement of Staff and Labor,” “Foreign Personnel,” “Prohibition of Forced or Compulsory Labor,” “Prohibition of Harmful Child Labor,” “Employment Records of Workers,” and “Non-Discrimination and Equal Opportunity.”

#### *Local Procurement*

The Contractor will:

- Proactively procure goods and services from local businesses and entrepreneurs in Khan-Uul and Songinokhairkhan Districts and Ulaanbaatar, and members of targeted disadvantaged groups (e.g., women, people with disabilities), achieved through:
  - Publicizing procurements within the targeted geographical area or targeted group, for example at the District and khoroo offices and via notice boards, print media (newspapers, etc.), recruitment agencies, or job and career fairs
  - Publicizing and holding procurement workshops within the targeted geographical area or targeted group
  - Adding priority criteria for businesses and entrepreneurs in the targeted geographical area or members of the targeted group to the selection procedure
- In disseminating information on potential service procurement opportunities, take steps to maximize outreach, using all forms of media that may be appropriate

#### *Workplace Environment*

The Contractor will:

- Establish, execute, and enforce a Worker Behavior Code of Conduct on which all employees will be briefed, that all employees are required to sign, and that mandates immediate dismissal for serious offences including sexual harassment, violence, or confirmed cases of engagement in trafficking in persons. The Code will specify:
  - Expectations of worker behavior, and penalties for transgression
  - MCC and Mongolian legal definitions of trafficking in persons (TIP), zero-tolerance for TIP, and remedies that the MCA Entity may take in response to confirmed cases of engagement of trafficking in persons
  - Zero-tolerance for gender-based violence
  - Compliance with the Contractor’s Anti-Sexual Harassment Policy and notification of the Contractor’s Sexual Harassment Incident Reporting and Referral Plan
  - Rights of employees to a grievance mechanism, holidays, and cultural and festival access
  - Conditions for work camps, shelter, water and sanitation, food, and security
  - The responsibility of all workers, regardless of their role or duration of employment, will be expected to review and acknowledge the Workers’ Code of Conduct by signing the code sheet
  - The requirement to respect local customs and practices
- Establish and execute a workers’ grievance redress procedure that:
  - Formalizes a system for receiving and managing internal complaints of sexual harassment, gender-based violence, or issues of trafficking persons (including engaging in commercial for sex with a person under 18 years of age)
  - Guarantees confidentiality to makers of allegations
  - Designates the Contractor’s Social Safeguards Officer or other officer as responsible for collaborating with the human resources department on the grievance redress procedures
  - Refers to the Contractor’s Sexual Harassment Incident Reporting and Referral Plan for allegations of sexual harassment
  - Specifies that the Contractor’s zero-tolerance for gender-based violence addresses any complaints of gender-based violence against its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
  - In cases of discrimination against women or of allegations of sexual harassment or violence, requires that the Contractor’s Social Safeguards Officer contact the MCA-Mongolia or its representative’s SST to include them in the investigation and appoint a third party—such as a representative from an NGO such as the Centre for Gender Equality or equivalently qualified, experienced organization—to lead the investigation

- The Contractor shall note the contract clause on “Prohibition of Sexual Harassment”
- The Contractor shall note the contract clause on “Facilities for Staff and Labor” and provide suitable gender-segregated facilities to enable the safe employment of both men and women – e.g. Toilet facilities, changing facilities on all sites and enabling physical access to office accommodation for people with disabilities.

### *Training*

The Contractor will:

- Provide training to enhance the skills of employees using on-the-job training, internships, apprenticeships, secondment to training programs such as Technical and Vocational Education and Training, etc.
- Mandate for all employees, before each worker starts work on the site, induction packages that include:
  - Employment rights and conditions, including non-discrimination and equal opportunity
  - The Contractor’s responsibility to “adopt recruitment, hiring and retention practices that support the employment of women and staff from diverse backgrounds” per the contract clause on “Engagement of Staff and Labor,” the Contractor’s employment forecast and recruitment strategy, and the Contractor’s Gender Integration and Social Inclusion Plan (described below)
  - Gender-based violence
  - Contractor’s Anti-Sexual Harassment Policy – including awareness of what constitutes sexual harassment, exploitation, and abuse and the Contractor’s Sexual Harassment Incident Reporting and Referral Plan
  - Using the internal Grievance Mechanism for allegations of gender-based discrimination
  - Rights to have access to local festivals
  - Cultural sensitivities, and social norms and practices in each area
  - Expectations on avoiding poor relations between employees and local communities caused by behavior relating to alcohol, gambling, prostitution, illegal drug use, violence and sexual abuse of women, minors and lesbian, gay, bisexual, transgender, queer, and others (LGBTQ+) persons
  - Countering the Trafficking in Persons Response Plan – awareness of responsibilities to counter the trafficking of people around the project area, the remedies that the Contractor and the MCA Entity may apply, and mechanisms for reporting suspected instances of TIP with the Contractor’s TIP Response Plan
  - Awareness of the possibilities of the transmission of HIV/AIDS and communicable illnesses and how to prevent HIV/AIDS transmission
- Undertake a series of employment and social plan inductions and employee awareness programs that:
  - All employees must attend at the commencement of employment and over the employment period twice yearly
  - Incorporate toolbox talks that include reinforcement of all training programs
- Commission training modules on gender integration and social inclusion topics for all employees at intervals agreed with the MCA-Mongolia or its representative’s SST
- Require that the Social Safeguards Officer, together with the MCA-Mongolia or its representative’s SST Community Liaison Officers, conduct awareness raising with workers on child labor issues in the local community as part of an ongoing community awareness program on social issues
  - These toolbox talks will include ways that workers can report suspected child labor to the District Children, Youth and Family Offices, and the MCA-Mongolia or its representative’s Social Manager

### *Site-specific Labor Management Plan*

The Contractor will prepare and submit for the Engineer’s written approval a site-specific Labor Management Plan that:

- Affirms and executes the Contractor’s comprehensive commitment to the standards and requirements listed above and specified in the plan
- Includes the Contractor’s Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan and the Workers’ Code of Conduct

<ul style="list-style-type: none"> <li>Is consistent and compliant with: <ul style="list-style-type: none"> <li>Mongolian Law on Labor</li> <li>Relevant aspects of the Conditions of Contract, as well MCC Gender Policy and the MCA-Mongolia Social and Gender Integration Plan</li> <li>The MCC Policy on Counter-Trafficking in Persons</li> </ul> </li> <li>Assigns roles and responsibilities for labor management</li> </ul>
<p><b>LOCATIONS:</b></p> <p>All construction sites and temporary construction facilities</p>

## Management Measure AWPP - 2: Gender Integration and Social Inclusion (GSI)

POTENTIAL IMPACT
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Increased short-term employment and improved conditions of employment for women</li> <li>Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> <li></li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of forced labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Millennium Challenge Account Social and Gender Integration Plan (SGIP) <ul style="list-style-type: none"> <li>Encourages contractors to prioritize using local labor, particularly workers from the project affected area</li> <li>Encourages contractors to employ women as at least 30% of workers</li> <li>Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates.</li> </ul> </li> <li>Millennium Challenge Corporation Gender Policy <ul style="list-style-type: none"> <li>The MCC Gender Policy states that countries will ensure that both women and men have opportunities for meaningful participation throughout the consultative processes related to a Compact program.</li> </ul> </li> <li>IFC Performance Standard 1 <ul style="list-style-type: none"> <li>Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> </ul> </li> <li>IFC Performance Standard 2 <ul style="list-style-type: none"> <li>Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.</li> </ul> </li> <li>Constitution of Mongolia <ul style="list-style-type: none"> <li>Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>Mongolian Law on Gender Equality <ul style="list-style-type: none"> <li>Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>Mongolian Law on Labor <ul style="list-style-type: none"> <li>Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>Prohibits employing children under the age of 16 – under 18 in dangerous industries e.g. construction</li> </ul> </li> </ul>
OBJECTIVES
<p>The Gender Integration and Social Inclusion (GSI) Plan complements the Labor Management Plan and provides additional management steps to address GSI considerations with respect to workers and local communities.</p> <ul style="list-style-type: none"> <li>To promote the fair treatment, non-discrimination, and equal opportunity of workers.</li> </ul>

<ul style="list-style-type: none"> <li>• To encourage the employment of women as at least 30% of the Contractor's workforce, calculated over full and part time positions as a percentage of total number of staff hired in the life of the contract, at each skill/occupation level</li> <li>• To enable local people, particularly youth and people in project-affected districts/khoroos to gain short-term employment and training opportunities</li> <li>• Maximize the perceived beneficial impacts of the BWSE project on the project affected communities</li> </ul>
<b>MANAGEMENT MEASURE</b>
<b>Gender Integration and Social Inclusion</b>
<ul style="list-style-type: none"> <li>• Under the Gender Integration and Social Inclusion Plan, the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure the widest exchange of information between the Contractor and the local population and District and khoroo Labor Offices on planned and continuing works and employment opportunities through a program of community consultations and participatory meetings.</li> <li>• The Contractor will prepare and submit for the Engineer's written approval a Contractor's Gender Integration and Social Inclusion Plan, which will be: <ul style="list-style-type: none"> <li>○ Consistent with the Mongolian Law on Labor</li> <li>○ Consistent with the MCC Gender Policy's emphasis on community consultation and participation</li> <li>○ Consistent with IFC Performance Standard 1: Assessment and Management of Environmental and Social Risks and Impacts</li> <li>○ Agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer</li> </ul> </li> <li>- <i>Community engagement</i></li> <li>• The Contractor will hold at least one meeting in each project-affected District and khoroo office prior to construction to inform community members of the expected conduct of workers and the contents of the Labor Management Plan, and thereafter monthly, minimally covering the following: <ul style="list-style-type: none"> <li>○ Efforts to hire local labor and the Contractor's employment forecast</li> <li>○ Efforts to maximize women's employment</li> <li>○ Efforts to maximize local procurement and the Contractor's procurement forecast</li> <li>○ Prohibitions against child labor and forced labor in supply chains</li> <li>○ Zero-tolerance of trafficking in persons, MCC and Mongolian legal definition of trafficking in persons, and Contractors' Counter-Trafficking in Persons Response Plan</li> <li>○ Zero-tolerance of gender-based violence</li> <li>○ Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan</li> </ul> </li> <li>- <i>Expanding Short-term Employment Opportunities</i></li> <li>• The Contractor will actively consider working with the existing construction brigades to enable local labor currently organized into brigades to gain employment. The brigades may require additional training to enable them to work on this large scale project – training in: <ul style="list-style-type: none"> <li>○ Modern tools and techniques where needed</li> <li>○ Brigade internal labor management, accounting, and estimation techniques</li> </ul> </li> <li>• As referenced in the Labor Management Plan and its recruitment strategy, the Contractor will encourage the employment of qualified individuals among the local population(s) in project activities, with particular focus on women, youth, and disadvantaged groups. This may include small-scale supply contracts or services, with announcement of jobs published on project information boards, in District and khoroo Labor Offices and with information on employment disseminated by the Contractor's Social Safeguards Officer, the MCA or its representative or other means approved by the Engineer.</li> <li>• Where appropriate, the Contractor will provide training to enhance the skills of employees and local people using on-site apprenticeships and internships. As referenced in the Labor Management Section above, the Contractor is encouraged to cooperate with secondment to training programs such as Technical and Vocational Education and Training Centers and</li> </ul>

<p>professional associations and to draw workers from among their graduates and members, etc..</p> <p>-</p> <p><i>Local Procurement</i></p> <ul style="list-style-type: none"> <li>The Contractor will develop and submit a procurement forecast of all goods and services that could be procured locally. The MCA-Mongolia or its representative's Social Safeguards Team will assist in disseminating this information to local communities with the Contractor's Social Safeguards Officer.</li> <li>The Contractor will develop and submit for review and approval by the Engineer, a procurement strategy to inform local communities and businesses of opportunities to provide goods and services to the Contractor and to project workers, particularly targeting small businesses and those owned by women.</li> <li>The Contractor Social Safeguards Officer and MCA-Mongolia or its representative's Social Safeguards Team will hold community meetings to inform people about the procurement processes and include District and khoroo offices, community organizations and the media.</li> </ul>
LOCATIONS:
All construction sites and temporary construction facilities and project affected communities
<b>MONITORING</b>
<p>MCA-Mongolia or its representative's SST:</p> <ul style="list-style-type: none"> <li>Monitor Contractor Gender Integration and Social Inclusion Plan</li> <li>Monitor Contractor employment recruitment strategies and assist Contractor to reach potential women, youth and other excluded groups</li> <li>Monitor participation by all parties in the Contractor's internal and external project Grievance Redress Mechanisms</li> <li>Document Contractor performance in Gender Integration and Social Inclusion Plan</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>Record results of Contractor's Gender Integration and Social Inclusion responsibilities</li> <li>Document all grievance redress activities under the Contractor's internal grievance process and external Grievance Redress Mechanism</li> </ul>

### Management Measure AWPP -3: Counter Trafficking in Persons, Gender-Based Violence, and Sexual Harassment

<b>POTENTIAL IMPACT</b>
<p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Sexual harassment on construction sites and in temporary construction facilities and project-affected communities</li> <li>Trafficking in persons within and outside the project</li> <li>Gender-based violence on construction sites and in temporary construction facilities and project-affected communities</li> </ul>
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b>

Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:

- **MCC Counter-Trafficking in Persons Policy (C-TIP Policy)**
  - States, “Trafficking in Persons” means (a) Sex trafficking in which a commercial sex act is induced by force, fraud, or coercion, or in which the person induced to perform such act has not attained 18 years of age; (b) The recruitment, harboring, transportation, provision, or obtaining of a person for labor or services, through the use of force, fraud, or coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery.”
  - Adopts “a zero-tolerance policy to TIP and prohibits “The Contractor, the Contractor’s Personnel, any Subcontractor or supplier, or any of their respective personnel, or any agent or affiliate of any of the foregoing shall not engage in any form of Trafficking in Persons during the period of performance of any contract...”
  - Requires each Contractor to “acknowledge that engaging in such activities is cause for suspension or termination of employment or of the Contract” and specifies remedies that the MCA Entity will apply once a TIP incident has been confirmed.
- **Mongolian Law on Promotion of Gender Equality**
  - Requires the employer to incorporate into the organization’s internal procedures, specific norms for prevention of sexual harassment in a workplace and the redress of such complaints. It also requires that the organization design and conduct a program of training and retraining geared toward creating a working environment free from sexual harassment, and report on its impact in a transparent manner.
- **Mongolian Law to Combat Human Trafficking**
  - The law regulates relations with respect to the prevention and suppression of trafficking in persons, elimination of the causes of trafficking, and protection of victims’ rights.

## OBJECTIVES

- To prevent incidence of trafficking of persons for sex by project employees
- To ensure that the Contractor and its Sub-Contractors do not employ trafficked labor and to minimize the risks of trafficking of foreign workers to project sites
- To prevent sexual harassment at all construction sites and temporary construction facilities
- To prevent Contractor and worker involvement in sexual harassment in project-affected communities and among members of stakeholder organizations in the workplace
- To prevent incidences of gender-based violence involving workers

## MANAGEMENT MEASURE

### Counter-Trafficking in Persons, Gender-Based Violence and Sexual Harassment

The Contractor shall ensure that foreign workers on work sites or in labor camps are aware 1) of the risks of cultural conflict and of becoming victims of gender-based violence, sexual harassment and abuse, discrimination, trafficking in persons and 2) the legal and contractual remedies against such behavior. This information shall be provided in workers’ induction packages, by holding an orientation before workers start on site, and by delivering a training twice a year.

#### *Counter-Trafficking in Persons (C-TIP)*

- The Contractor shall prepare and submit for the Engineer’s written approval a Counter-Trafficking in Persons Response Plan (TIP Response Plan), and the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure all employees are informed of expectations of behavior as per the Worker Behavior Code of Conduct and the penalties for proven infringements.
  - The Counter-Trafficking in Persons Response Plan shall Address the specific TIP risks identified in the ESIA, including withholding of foreign workers’ passports and commercial sex with minors,
  - Designate a single responsible person who will notify the Engineer and MCA-Mongolia within 24 hours of an alleged incident and implement any investigation.

- Specify when to contact legal authorities, list UB city officials, national government offices, and NGO organizations that address TIP, and state how the Contractor will deal with them in the case of a TIP incident.
  - Include mechanisms to ensure confidentiality of any TIP survivors and to refer them to law enforcement and/or supportive services if they wish.
- The Contractor shall develop, as part of its TIP Response Plan, an anonymous mechanism for workers and community members to report suspected TIP incidents to the Engineer and to MCA-Mongolia, and this must be separate from the project grievance mechanism.
- The Counter-Trafficking in Persons Response Plan shall be:
  - Consistent with the Mongolian Law on Labor, Promotion of Gender Equality, and combatting Human Trafficking
  - Compliant with the MCC Counter-Trafficking in Persons Policy
  - Coordinated and agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer
- The Counter-Trafficking in Persons Response Plan shall specifically prohibit:
  - Procuring minors for sex
  - Transporting non-employee individuals in company vehicles
- The Contractor is strongly encouraged to engage the Centre for Gender Equality or other similarly qualified and experienced organization to develop its TIP Response Plan, its anonymous reporting mechanism, its worker training, and its C-TIP content for community meetings
- The Contractor shall design and deliver twice yearly C-TIP training modules to all staff, sub-contractors, and service providers on the prevention of TIP and the Contractor's TIP Response Plan, following minimum content in MCA-Mongolia's Social and Gender Integration Plan (SGIP).
  - C-TIP training sessions must be delivered to all employees within one month of starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Information about the Contractor's zero-tolerance policy and TIP Response Plan shall be included in all community meetings and the Plan shall be provided in Mongolian, in whole, to project-affected khoroo and District governments.

#### *Gender-Based Violence*

- The Contractor shall adopt a policy of zero-tolerance for gender-based violence and address any complaints of gender-based violence against its workers or committed by its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
- The Contractor shall notify the Engineer and MCA-Mongolia within 24 hours of any alleged incident of gender-based violence
- The Contractor shall deliver a gender-based violence prevention training to all staff, sub-contractors, and service providers prior to all workers beginning on-site and thereafter at least twice each year.
  - The Contractor is strongly encouraged to engage a local, qualified, and experienced organization to develop the training.
  - The training shall minimally identify behavior that constitutes gender-based violence, address attitudes towards violence against women and lesbian, gay, bisexual, transgender, and queer people (LGBTQ), and identify relevant Mongolian laws and organizations addressing gender-based violence.
  - It shall also explain the workings and protections in the Contractor's grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ persons.
- Include in all community meetings information about the Contractor's zero-tolerance policy toward gender-based violence committed by or against its workers and procedures for reporting it and communicate this information in writing to project-affected khoroo and District governments.

#### *Sexual Harassment*

- The Contractor shall develop and submit to the Engineer an Anti-Sexual Harassment Policy

<p>prohibiting sexual harassment directed at Compact beneficiaries, partners, or stakeholders, MCA Entity employees, MCA Entity consultants, MCC personnel, or MCC consultants and including an Incident Reporting and Referral Plan.</p> <ul style="list-style-type: none"> <li>○ The Policy and Plan must be in form and substance satisfactory to the MCA and MCC.</li> <li>○ The Incident Reporting and Referral Plan shall include a confidential mechanism for workers and community members to report sexual harassment to the Engineer and to MCA-Mongolia, separately from the Grievance Redress Mechanism.</li> </ul> <ul style="list-style-type: none"> <li>• Employers are required to have a protocol in their Workplace Grievance mechanism in which persons alleging harassment or violence will be protected from identification and from pressure from the Contactor or other workers to dismiss the complaint.</li> <li>• The Contractor's grievance manager must notify the MCA-Mongolia or its representative's Social Safeguards Team and the Contractor's Social Safeguards Officer within 24 hours of any allegation of sexual harassment.</li> <li>• The Contractor must have a contract with a suitably experienced organization, such as the Centre for Gender Equality, to provide an investigation leader to manage the investigation of complaints of sexual harassment.</li> <li>• The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction.</li> <li>• The Contractor shall design and deliver a sexual harassment prevention training to all staff, sub-contractors, and service providers, in accordance with the Contractor's Anti-Sexual Harassment Policy, recognizing MCC's Guidance to MCAs on Sexual Harassment. <ul style="list-style-type: none"> <li>○ Training shall be conducted within one month of workers starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.</li> <li>○ Training shall address <ul style="list-style-type: none"> <li>▪ Attitudes to and prevention of sexual harassment in the workplace</li> <li>▪ Workings and protections in the Contractor's internal grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ+ persons</li> <li>▪ Additional requirements for minimum training content can be found in MCA-Mongolia's Social and Gender Integration Plan (SGIP)</li> </ul> </li> </ul> </li> <li>• Information about the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral plan shall be included in all community meetings and the Policy and Plan shall be communicated in Mongolian, in whole, to project-affected khoroo and District governments.</li> <li>•</li> </ul>	<div style="background-color: #e0f0ff; padding: 5px;"><b>LOCATIONS:</b></div> <p>All construction sites and temporary construction facilities and project affected communities</p> <div style="background-color: #e0f0ff; padding: 5px;"><b>MONITORING</b></div> <p>MCA-Mongolia or its representative's SST:</p> <ul style="list-style-type: none"> <li>• Monitor Contractor Counter-Trafficking in Persons Response Plan</li> <li>• Monitor Contractor performance related to gender-based violence requirements</li> <li>• Monitor Contractor's development and adherence to its Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> <li>• Participate in the Contractor's internal Grievance Redress Mechanisms in relation to any on allegations of sexual harassment and gender-based violence and monitor and document the process and outcomes, maintaining confidentiality of those reporting and victims and witnesses</li> <li>•</li> </ul> <p>Contractor:</p>
--	---

<ul style="list-style-type: none"> <li>• Maintain copies of all contracts or other agreements with organizations that provide services related to the development of C-TIP, GBV prevention, or prevention of sexual harassment policy, plans, training, or reporting mechanisms</li> <li>• Maintain records of workers' participation in required trainings, including the dates of trainings and which workers participated</li> <li>• Maintain records of all community meetings at which C-TIP, gender-based violence, and sexual harassment are addressed, including the dates and locations and a record of all questions, comments, and Contractor responses</li> <li>• Document all implementation of the results of Contractor's Counter-Trafficking in Persons Response Plan responsibilities</li> <li>• Document all complaints of sexual harassment and gender-based violence, maintaining confidentiality of witnesses and victims, and all implementation of the Sexual Harassment Incident Reporting and Referral Plan and interactions with law enforcement and other relevant response institutions and organizations</li> <li>• Grievance redress activities under the Contractor's internal grievance process</li> </ul>
LOCATIONS:
All construction sites and temporary construction facilities and project affected communities
INDICATORS AND SUCCESS CRITERIA:
<p>Indicators:</p> <ul style="list-style-type: none"> <li>• Content of the Contractor's TIP Response Plan</li> <li>• Content of the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> <li>• Number and content of trainings for all staff</li> <li>• Number of community meetings at which information presented covers the Contractor's policies on C-TIP, GBV, and sexual harassment and how to report suspected cases compared to the total number of Contractor-organized community meetings, disaggregated by location</li> <li>• Numbers of complaints and grievances brought alleging sexual harassment, gender-based violence or trafficking in persons</li> <li>• Number of required notifications of suspected TIP, GBV, and sexual harassment incidents compared to the number of complaints</li> <li>• Contracts or other agreements with specialized organizations to develop and deliver plans, policies, and training</li> </ul> <p>Success Criteria:</p> <p><i>Counter-trafficking in persons</i></p> <ul style="list-style-type: none"> <li>• Anonymous reporting mechanism for trafficking in persons is established prior to initiation of construction and functioning effectively for the duration of the construction</li> <li>• The Contractor's TIP Response Plan is thorough, references the MCC C-TIP Policy and any guidance, provides a path to involve NGOs and specialized government staff, and includes clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.</li> <li>• 100% of reported or suspected cases of TIP are dealt with in a timely, survivor centered manner, according to the TIP Response Plan.</li> <li>• Effective reporting and management measures are developed are implemented and information about the measures are introduced to the employees and sub-contractors in toolbox sessions and by other means</li> <li>• 100% of community meetings include reference to the zero-tolerance policy against TIP and to the Contractor's TIP Response Plan</li> </ul> <p><i>Gender-based violence</i></p> <ul style="list-style-type: none"> <li>• Culture of unacceptability of gender-based violence and assaults on women and LGBTQ+ persons established via:</li> </ul>

## 2.5 Health and Safety Management

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## 2.6 Education, Training, Community Outreach and Grievance Redress

Incorporated in various management measures are requirements for education, training, and outreach. The overall goals of these requirements are to provide project employees with an understanding of the commitments included in those management measures and inherent in associated laws, regulations, and policies, and to provide the employees with an appreciation of their own accountability for maintaining mutually supportive relationships with local communities. All required training is to be provided as part of induction training (to provide general awareness) and job-specific training as necessary.

In addition to the management measure under this heading, the following management measures also specify training and community outreach requirements:

- Management Measure AWPP - 1: Labor Management
- Management Measure AWPP - 2: Gender Integration and Social Inclusion (GSI)
- Management Measure AWPP - 3: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment

Together, these management measures comprise the Education, Training, and Community Outreach Plan.

### Management Measure AWPP - 4: Stakeholder Engagement, Community Consultation, and Grievance Redress

POTENTIAL IMPACT
Delays, increased grievances, political interference, and unnecessary pressure from uninformed groups resulting from lack of information and discussion/consultation
<p>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• IFC Performance Standard 1 <ul style="list-style-type: none"> <li>- Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> <li>- Requires establishment of a grievance mechanism to receive and facilitate resolution of affected communities' concerns and grievances about environmental and social performance, and scaled to the risks and adverse impacts of the project and with the affected communities as its primary user.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• Inform and involve all stakeholders</li> <li>• Have in place a defined policy for dealing with external parties</li> <li>• Foster positive relations and effective partnerships with local communities throughout project construction and operation</li> <li>• Maximize the beneficial impact of the BWSE project on the affected communities</li> </ul>
MANAGEMENT MEASURE
<p><b>Stakeholder Engagement, Community Consultation, and Grievance Redress</b></p> <p>The stakeholders and affected communities are to be informed of the construction activities, including implementation timeline and grievance redress procedure.</p> <p><b>Stakeholder Engagement</b></p> <ul style="list-style-type: none"> <li>• The Contractor will prepare and submit for the Engineer's written approval a Contractor's Stakeholder Engagement Plan, based on requirement described in Annex B of the ESMP</li> </ul>

- At a minimum, the Contractor's Stakeholder Engagement Plan will document and specify:
  - Contractor's responsibilities and participation in community consultation, specifying:
  - A standard operating procedure agreed with MCA-Mongolia that governs how the Contractor will interact with local communities
  - How contacts with the communities are to be made and recorded, and reported to the SST for documenting in the Stakeholder Engagement Matrix
  - How information is to be shared with the communities and other project partners
  - Protocols for conducting, recording, and disseminating the results of community consultation
- The Contractor will prepare and submit for the Engineer's written approval a project specific Grievance Redress Mechanism (GRM) based on requirement described in Annex A of the ESMP

### **Community Consultation**

- The MCA-Mongolia or its representative will:
  - Introduce Contractor's officers to communities
  - Monitor and supervise Contractor contacts with communities and other stakeholders
  - Ensure that gender and social inclusion measures implemented by the Contractor are taken when planning meetings, and that thereby all sections of the community are equally informed and consulted
- In coordination with MCA-Mongolia or its representative, the Contractor will:
  - Undertake community information dissemination, consultation, and outreach addressing the influx of migrant workers and the associated risks to the affected communities, the Grievance Redress Mechanism, and other issues that arise during consultation
  - Actively promote awareness and disclose information in affected communities on the following:
    - Purpose, nature, and scale of the project
    - Duration of proposed project activities
  - Record results of Contractor's community consultation activities
  - Document all community consultation activities in the Stakeholder Engagement Matrix

### **Grievance Redress**

- The MCA-Mongolia or its representative will:
  - Supervise, and monitor participation by all parties
- The Contractor will:
  - Develop and implement the Grievance Redress Mechanism consistent with Annex A
  - Designate the Contractor's Social Safeguards Officer or other officer as responsible for collaborating with the project Grievance Redress Mechanism
  - Document all grievance redress actions
  - Report on the Grievance Redress Mechanism to the Engineer

#### **LOCATIONS:**

All construction sites and temporary construction facilities and project affected areas

### **MONITORING**

#### **MCA-Mongolia or its representative**

- Monitor Contractor contacts with stakeholders and communities
- Monitor participation by all parties in Grievance Redress Mechanism

#### **Contractor**

- Document all Contractor's stakeholder engagement and consultation activities
- Document all grievance redress activities under the Grievance Redress Mechanism

#### **LOCATIONS:**

All construction sites and temporary construction facilities and project affected areas

INDICATORS AND SUCCESS CRITERIA:	
<p>Indicators:</p> <ul style="list-style-type: none"> <li>Number, content, and outcome of: <ul style="list-style-type: none"> <li>Stakeholder engagement activities</li> <li>Community consultation activities</li> <li>Grievance redress actions</li> </ul> </li> </ul> <p>Success Criteria:</p> <ul style="list-style-type: none"> <li>Successful outcome of: <ul style="list-style-type: none"> <li>Stakeholder engagement activities</li> <li>Community consultation activities</li> </ul> </li> <li>Resolution of grievances</li> </ul>	
REPORTING:	
<ul style="list-style-type: none"> <li>Update project Stakeholder Engagement Matrix</li> <li>Summarize other activities undertaken during reporting period</li> <li>Specify any material deviations or non-compliances to this management measure, and any other issues of concern</li> <li>Define activities planned during next reporting period</li> </ul>

MANAGEMENT MEASURE:	MONITORING:
<p><i>Implementation:</i> Contractor</p> <p><i>Oversight:</i> MCA-Mongolia or its representative</p>	<p><i>Implementation:</i> Contractor</p> <p><i>Reporting:</i> Contractor</p> <p><i>Oversight:</i> MCA-Mongolia or its representative</p>

## 2.7 Risk Control and Emergency Response

The Risk Control and Emergency Response Plan references procedures specified in the management measures in the preceding plans that are pertinent to 1) controlling risks and 2) responding to emergencies. Such risks and emergencies include, for example, fuel spills and encountering previously unidentified cultural heritage resources, as well as incidents involving sexual harassment, human trafficking, and gender-based violence.

Due to the broad scope of the Risk Control and Emergency Response Plan, effectively the plan incorporates by reference the procedures specified in the management measures in all preceding plans for this project phase.

## 2.8 Monitoring and Verification, and Maintenance Actions

This Monitoring and Verification, and Maintenance Actions Plan scopes the use of an adaptive approach to:

3. Verify that the management measures in the preceding plans are implemented, and that they are effective and sufficient
4. Revise those management measures that prove ineffective or insufficient

This approach acknowledges the risk and uncertainty of environmental and social management and fosters targeted modification of management measures to correct performance and outcomes. It will be executed as a continuous, iterative process by which the consequences of all management actions are systematically evaluated and, as needed, specific measures are modified in response to a determination that their forecasted outcomes will not meet requirements. As needed, this process of systematically evaluating the performance of the management measures and modifying the management measures to achieve the required outcomes, as well as the respective responsibilities of MCA-Mongolia or its representative and the Contractor, will extend into the construction phase.

In the preceding plans, indicators and success criteria are designated for each management measure. For each management measure, MCA-Mongolia or its representative, in its oversight capacity, will determine whether progress toward the designated success criteria is sufficient and will document its determination. If progress decidedly fails to meet iterative requirements, MCA-Mongolia or its representative will inform the Contractor of the need to formulate a management measure-specific adaptive maintenance action to implement midcourse corrections. In coordination with the Contractor, MCA-Mongolia or its representative will reformulate the management measure to foster meeting the success criteria, incorporating as applicable operational or structural changes, and considering the cost effectiveness of incorporating the changes. The scope of most management measures likely will remain fairly stable; whereas, it is expected that some methods will be added, modified, or dropped over the implementation timeline of some management measures.

With the prior approval of MCA-Mongolia, the Contractor will implement and monitor the revised management measure, and MCA-Mongolia or its representative will provide oversight.

## 3 Construction Phase

### 3.1 Responsibilities During Construction

#### 3.1.1 MCA-Mongolia

MCA-Mongolia or its representative and the Engineer will be responsible for oversight of the construction-related management measures and monitoring specified in the ESMP. Oversight will be accomplished by MCA-Mongolia or its representative via a combination of regular visits to the construction sites and on-site supervision of management and monitoring activities. MCA-Mongolia or its representative will inform and coordinate with all applicable stakeholders regarding their corresponding mandates under or in relation to the ESMP. MCA-Mongolia or its representative will establish a Social Safeguards Team (SST) to coordinate with the Contractor during the construction phases in implementing, supervising, reporting, and follow-up actions with regard to the ESMP.

#### 3.1.2 Contractor

Unless otherwise specified for individual management measures, the construction contracting firm performing the work, the **Contractor**, will be fully responsible for implementing and monitoring all construction-related management measures specified in the ESMP—together with the conditions and procedures specified in Section V, Works Requirements of the Construction Contract Documents. The Contractor will read the ESMP, consider it in its entirety, and comply with all aspects of the ESMP that pertain to implementing and monitoring construction-related environmental and social management.

The Contractor will abide by the requirements of this ESMP, which is appended to and is a part of the Contract. The Contractor will take all necessary measures and precautions to ensure that the execution of the works and all associated operations on site or off site are carried out in conformity with statutory and regulatory environmental and social requirements of the Government of Mongolia, the MCC Environmental Guidelines, the IFC Performance Standards, and the technical specifications, where the more stringent will apply. The Contractor will take all measures and precautions to avoid any nuisance or disturbance arising from the execution of project activities. Wherever possible, this will be achieved by avoidance of the impact at the source rather than mitigating an impact after it has been expressed.

The Contractor will designate an Environmental and Social Performance Manager. This individual(s) will have knowledge of relevant Mongolian, IFC, and Millennium Challenge Corporation standards and regulations, and knowledge of environmental and social issues that include, but are not limited to, environmental management, waste management, gender and social inclusion, cultural resources, and health and safety management.

This individual(s) will be responsible to:

- Work closely with MCA-Mongolia or its representative to guide the Contractor's thorough understanding of the mitigation and monitoring requirements
- Lead the Contractor's work related to implementing environmental and social management measures and associated reporting requirements
- Work closely with MCA-Mongolia or its representative to incorporate or modify management measures and monitoring actions to reflect on-site field conditions, as needed, with the approval of the Engineer

The Contractor, while in possession of the construction sites, will be responsible for the safety measures undertaken in accordance with the Technical Specifications to protect the workforce of the Contractor's own staff as well as the Engineer's and MCA-Mongolia or its representative's supervision staff. The Contractor will conduct in this respect safety induction courses for all personnel involved with the works and who are required to supervise any activity prior to their attending any part of the works. Additional training is required to meet MCC social policy requirements as per the:

- Labor Management Plan
- Gender Integration and Social Inclusion Plan
- Counter-Trafficking in Persons Response Plan
- Stakeholder Engagement Plan
- Construction Camp and Temporary Facilities Management Plan
- Cultural Heritage Training Plan
- Managing external grievances as part of the project GRM

The Contractor will act responsibly to provide notification of the Contractor's schedule to enable MCA-Mongolia or its representative to carry out its responsibilities. The Contractor will be required to provide verbal and written updates to MCA-Mongolia or its representative on a regular basis indicating percent achievement of the construction-related management measures specified in the ESMP. On a monthly basis, as part of the Contractor's monthly progress report, the Contractor will submit a CESMP update that will report the status of all environmental and social compliance activities and actions taken by the Contractor.

## 3.2 Environmental Management

### Management Measure AWPP -5: Emergency Preparedness and Response

#### POTENTIAL IMPACT

Accidents, natural disaster, or sabotage that occur during construction and risk jeopardizing worker and public health and safety, and the environment
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b>
Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>• Mongolian Law on Environmental Protection <ul style="list-style-type: none"> <li>- Requires business entities eliminating or suspending their activities if they adversely affect the environment in breach of environmental legislation, standards and permissible maximum levels.</li> </ul> </li> <li>• Mongolian Law on Disaster Protection <ul style="list-style-type: none"> <li>- Requires establishing management for disaster protection service, staff and specialized unit and to organize their training and preparedness.</li> </ul> </li> <li>• Mongolian Law on Fire Safety <ul style="list-style-type: none"> <li>- Requires ensuring the readiness of fire protection equipment and training their employees.</li> </ul> </li> <li>• Mongolian Law on Environmental Impact Assessment <ul style="list-style-type: none"> <li>- Requires preparing a report presenting the findings of the detailed environmental impact assessment and develop an environmental management plan.</li> </ul> </li> <li>• Mongolian Law on Labor Safety and Hygiene <ul style="list-style-type: none"> <li>- Requires employees attending short term training on labor safety and hygiene in compliance with procedures approved by the state central administrative organization in charge of labor issues and acquire knowledge and training.</li> </ul> </li> <li>• Mongolian Criminal Code <ul style="list-style-type: none"> <li>- Requires providing an emergency aid to the injured, to report to the relevant authority or official after having caused.</li> </ul> </li> <li>• IFC Performance Standards 1, 3, and 4 <ul style="list-style-type: none"> <li>- Requires that emergency preparedness and response activities will be periodically reviewed and revised, as necessary, to reflect changing conditions.</li> </ul> </li> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning <ul style="list-style-type: none"> <li>- Provides guidance on cleanup of spill and releases of oil, fuel, lubricants, hydraulic fluids.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>• Avoid, minimize, and effectively respond to emergency situations and resulting adverse impacts to the environment and communities associated with accidents, natural disasters, or sabotage</li> <li>• Effectively and efficiently respond to hazardous material spills so as to minimize their human health, safety, and environmental impacts</li> </ul>
<b>MANAGEMENT MEASURE</b>
<b>Emergency Preparedness and Response</b> The Contractor will: <ul style="list-style-type: none"> <li>• Fully comply with the requirements of this management measure</li> <li>• Provide emergency preparedness and response training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the Contractor’s site-specific Emergency Preparedness and Response Plan, to all employees and subcontractors at the time of their induction and annually thereafter</li> <li>• Prepare and submit for the Engineer’s written approval a site-specific Emergency Preparedness and Response Plan that specifies preventive measures and response strategies the Contractor will implement in case of accidents, natural disasters, or sabotage to protect worker and public health and safety, and the environment. The requirements of the Plan are detailed below.</li> </ul> <b>Hazardous Materials Management</b> <ul style="list-style-type: none"> <li>• Obtain from the appropriate Mongolian authorities all permits for the use and handling of hazardous materials</li> </ul>

- Develop prioritized material-specific handling procedures and training requirements as necessary according to risk
- Assign an officer to manage and advise on hazardous materials management

#### *Handling*

- Nominate all equipment used to transfer hazardous materials for approval by the Engineer to assess that control measures are sufficient
- Provide spill kits, protective equipment, and other necessary equipment wherever hazardous materials are stored or used in significant quantities
- Provide and require use of personal protective equipment (PPE) and fire protection equipment at all times when handling hazardous materials, as specified in the relevant material safety data sheets (MSDS)
- Avoid handling and do not store hazardous materials in close proximity to drainage systems, waterways, or wells

#### *Transport*

- Nominate all haulers used to transport hazardous materials for approval by the Engineer to assess that they are appropriately qualified to transport and handle hazardous materials
- Nominate all containers used to transport hazardous materials for approval by the Engineer to assess that control measures are sufficient
- Provide and require use of fire extinguishers, fire prevention materials, and spill prevention materials appropriate for the hazardous materials being transported
- Properly secure containers containing hazardous materials prior to transport
- Properly mark, label, and placard containers and trucks in accordance with the MSDS
- Maintain chemical manifests in accordance with Mongolian regulations

#### *Equipment Use and Maintenance*

- Maintain oil-filled electrical appliances in good and fire-resistant condition
- Undertake all planned equipment, plant, and vehicle maintenance in designated service areas with suitable containment to prevent contamination of the environment
- Place drip trays under all stationary equipment that use fuel, oil, or lubricants that are not self-contained (including, but not limited to, generators, mobile lighting towers, pumps)
- Equip tanks and machinery with measurement devices and overflow protection (e.g., flow and level meters, relief valves, overflow protection valves, and emergency shutoff)

### **Spill Response Procedure**

- Contractor employees are responsible for verbally reporting all spills to their immediate supervisor.
- Supervisors will then coordinate the spill response process and report the spill as an environmental incident to the Engineer.

#### *Spill Response Kits*

- Supervisors will clearly label and store spill response kits in locations that will facilitate a prompt response to spills
- Spill response kits in all work areas will contain the following equipment:
  - Shovel
  - 2 x respiratory masks
  - Absorbent material (pads and socks)
  - 2 x goggles
  - 60-liter sealable container
  - 2 x PVC gloves
  - Jug granular absorbent
  - Red wheelie bin
- Spill response kits will be carried in mobile machinery where a significant spill risk is identified with its operation. The contents of these spill kits will be specific to the risks presented from the mobile machinery and will be adequate and appropriate for the materials being transported.

- Where there are significant spill risks apparent outside of workshops or designated hazardous material storage areas, spill response equipment will be specific to the risks posed.

#### *Control of Hazardous Material Spills*

- The health and safety of employees, subcontractors, and bystanders will be considered prior to initiating the spill response process.
- Personnel considered at risk of harm in the event of a spill will be evacuated from the spill impact area by the supervisor in charge of the work area.
- If the spill presents an emergency risk to bystanders or the environment, the site emergency response team will be notified immediately of this situation by the individual who identifies the risk.
- If safe to do so, trained individuals will attempt to control the spill at the source and remove all sources of heat and ignition.
- Spills will then be reported verbally to the immediate supervisor, who will arrange for spill containment and cleanup to occur.
- The supervisor will notify the Engineer of the spill details to enable advice to be provided and statutory reporting processes to be initiated.

#### *Containment and Clean Up of Hydrocarbons*

- Contain the extent of the spill by using absorbent material around the perimeter of the spill or earthen bunds if outside of designated workshops or storage areas.
- Excess hydrocarbons may be soaked up using absorbent materials, including dirt, or removed by use of a vacuum truck if the spill is present as free product or is on water.
- Prevent hydrocarbons entering drainage systems and waterways. If hydrocarbons do enter drainage systems or waterways, these should be dammed or have booms placed in them to minimize the spread of hydrocarbons.
- Waste material will be disposed of appropriately:
  - Absorbent material, booms, etc. will be placed into designated bins.
  - Contaminated soil and water will be removed and stored in a designated area as advised by the Engineer.

#### *Containment and Clean Up of Sewage*

- Contain the spill with sand or earth to prevent it entering drainage systems and waterways.
- Calcium hypochlorite powder will be spread around the site for spills likely to be encountered by personnel.
- Any wastewater that enters waterways or drainage systems will be disinfected with the use of calcium hypochlorite powder.
- Wastewater then will be removed by use of a vacuum truck and taken to a waste treatment facility.
- Remaining water and solids will be disinfected using calcium hypochlorite powder.

#### *Containment and Clean Up of Chemicals*

- Contain the extent of the spill using sand, earth, sawdust, or other inert material to prevent it entering drainage systems and waterways.
- Chemicals clean up may vary depending on the chemical type.
- General purpose spill kit supplies, instead of oil-absorbent supplies, will be used.
- Collect recoverable product, if possible, and dispose of at an approved disposal site or facility in accordance with guidance provided by the Engineer.

#### *Containment and Clean Up of Battery Acid*

- Contain the spill and neutralize with a basic substance such as sodium bicarbonate in accordance with guidance provided by the Engineer.
- Collect recoverable product and neutralize with sodium bicarbonate in accordance with guidance provided by the Engineer.
- Dispose of with process water on site.

#### *Follow-up Sampling, Storage, and Treatment*

- For spills rated as significant risk on incident reporting, quality of cleanup work will be determined by follow-up sampling of contamination-receiving environment and compared against the Mongolian environmental standards on permissible levels of pollutants in air, water, and soil.
- If any exceedance of pollutant permissible levels is noted, cleanup work will be considered as inadequate and further cleanup will be required.
- Follow-up sampling will be carried for all spills to evaluate reporting requirements to the Engineer.
- Hydrocarbon contaminated soils will be excavated and placed within a dedicated area for storage and treatment.

### **Emergency Preparedness and Response Plan**

Prepare and submit for the Engineer's written approval a site-specific Emergency Preparedness and Response Plan and associated procedures that, as a minimum:

- Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
- Complies with Construction Contract Documents Section V, Works Requirements, Section 01030 Special Requirements, Paragraph 1.04.D Emergency Action Plan
- Specifies:
  - Site-specific preventive measures and response strategies the Contractor will implement in case of accidents, natural disasters, or sabotage to protect worker and public health and safety, and the environment
  - Potential emergencies and key areas prone to emergency situations
  - Existing emergency response structures and capacities in the respective project areas—i.e., police, fire brigades, paramedics / ambulances, hospitals, etc.
  - Actions to be taken prior to an emergency—i.e., preventive and preparatory measures
  - Actions to be taken during an emergency—i.e., response measures
  - Actions to be taken after an emergency—i.e., recovery and assessment measures
  - Contact lists for emergency situations
  - Description of collaboration mechanisms of the project's emergency preparedness and response teams with existing emergency response structures in the respective project areas
  - Assigns roles and responsibilities for emergency preparedness and response
- Post copies of the Plan and the list of emergency contact numbers in highly visible locations within the construction sites and temporary facilities
- In case of any accidents, the Contractor will immediately undertake the procedures contained within the Plan that complies with From IFB sub clause 4.8 safety procedures: "The Contractor shall notify the Engineer, the Employer, and MCC within 24 hours or as soon as reasonably possible after the occurrence of any accident which has resulted in damage or loss of property, disability or loss of human life, or which has or which could reasonably be foreseen to have a material impact on the environment and shall submit to the Engineer, the Employer, and MCC no later than 7 days after the occurrence of such an event, a summary report thereof

#### **LOCATIONS:**

All construction sites and temporary construction facilities

#### **MONITORING**

Document submission and approval of plan

#### **LOCATIONS:**

All construction sites and temporary construction facilities

#### **INDICATORS AND SUCCESS CRITERIA:**

Indicators:

- Submission of plan

Success Criteria:

- Plan approval

#### **REPORTING:**

<ul style="list-style-type: none"> <li>Report communications and written approval of Engineer of site-specific Emergency Preparedness and Response Plan</li> <li>Summarize activities undertaken during reporting period</li> <li>Specify any material deviations or non-compliances to this management measure, and any other issues of concern</li> <li>Define activities planned during next reporting period</li> </ul>	
<b>SCHEDULE</b>

### Management Measure AWPP -6: Mongolian Marmot Protection and Habitat Restoration

<b>POTENTIAL IMPACT</b>
Disturbance of endangered Mongolia marmot ( <i>Marmota sibirica</i> ) and loss and disturbance of marmot habitat
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b> <ul style="list-style-type: none"> <li>Mongolian Law on Environmental Protection               <ul style="list-style-type: none"> <li>Requires researching and establishing the potential for State and regional development, the restoration, breeding and raising of endangered animals, protection of soil, water, and air, and for humans to live in a healthy.</li> </ul> </li> <li>Mongolian Law on Fauna               <ul style="list-style-type: none"> <li>Requires the approval of the government based on the conclusions of an environmental impact assessment of the construction of industrial plants, power stations within the territory of extremely rare fauna.</li> </ul> </li> <li>IFC Performance Standard 6               <ul style="list-style-type: none"> <li>Prohibits implementing any activities that leads to a net reduction in the national/regional population of any Critically Endangered or Endangered species over a reasonable period.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>Minimize disturbance of Mongolian marmots</li> <li>Habitat restoration to achieve a net gain in Mongolian marmot habitat</li> </ul>
<b>MANAGEMENT MEASURE</b>
<b>Mongolian Marmot Protection and Habitat Restoration</b>  <b>Protection and Habitat Restoration</b> MCA-Mongolia will, with reference to the figure below: <ul style="list-style-type: none"> <li>Designate construction-phase marmot protection zone extending a minimum of 200 meters from the outermost flight burrows</li> <li>Prohibit the operation of any motorized vehicles, including cars and all-terrain vehicles, and restrict foot traffic within construction-phase marmot protection zone by MCA-Mongolia, Engineer, Contractor, and subcontractor project personnel</li> </ul>

- Develop and implement marmot protection training to be required of all construction-phase MCA-Mongolia, Engineer, Contractor, and subcontractor project personnel and visitors to project facilities and construction sites in the vicinity of the AWPP.

The Contractor will be responsible for:

- Design and construction of the following:
  - Approximately 500-meter long, 2-meter high earthen berm between existing marmot burrow clusters and the proposed AWPP, located no closer than 100 meters from the flight burrows and planted with native shrubs and perennial plants, to limit disturbance of marmots
  - Approximately 25-meter long, 1-meter high permeable rock berm across intermittent, seasonal stream that divides the existing marmot habitat to arrest gully
  - Plant native shrubs and perennial plants in an approximately 25,000-square meter Mongolian marmot habitat restoration area
  - Install Mongolian marmot warning and interpretive signs to be placed at the natural car parking facility

MCA-Mongolia will employ or contract an experienced biodiversity specialist to develop and implement the following Mongolian marmot construction-phase monitoring and long-term protection program

### **Construction-Phase Monitoring and Long-term Protection**

Prepare, submit, and implement Mongolian Marmot Monitoring and Evaluation Plan for the Engineer's written approval, to monitor and evaluate Mongolian marmot population density and structure, reproduction, and mortality in the vicinity of the proposed AWPP and replacement access road and pedestrian path to the Monument to Terror Victims, and existing and proposed walking trail to the sacred ovoo on Songinokhairkhan Mountain. The plan will specify roles and responsibilities for marmot monitoring and evaluation.

The plan may include but not be limited to the following, as determined by the biodiversity specialist and approved by the Engineer:

#### *Mapping*

- Burrow clusters
- Family and individual home ranges
- Vegetation
- BWSE-related and other human encroachment

#### *Monitoring activities*

- Use of drone equipped with thermal imaging camera
- Direct observation aided by binoculars and spotting scopes
- Use of automatic camera trap
- Capture with or without marking

#### *Monitoring parameters*

- Burrow cluster population
- Age of individuals
- Sex of individuals
- Home range size
- Number of families
- Family composition
- Number of pups
- Activity/Behavior
- Predation
- Survival and mortality
- Total population
- Age and sex distribution of population

Observations are to be repeated during the morning and evening active periods.

Monitoring data for the selected parameters will be evaluated as construction, and operation and maintenance progress for changes attributed to loss of marmot habitat or disturbance of marmots. The

monitoring and evaluation plan will specify impact indicators and impact criteria determined by the biodiversity specialist and approved by the Engineer.

Exceedance of any of the impact criteria will trigger, ***independent of this management measure***, preparing, submitting, and implementing protective actions, in addition to those specified above, formulated to avoid, minimize, or offset the observed adverse impact.

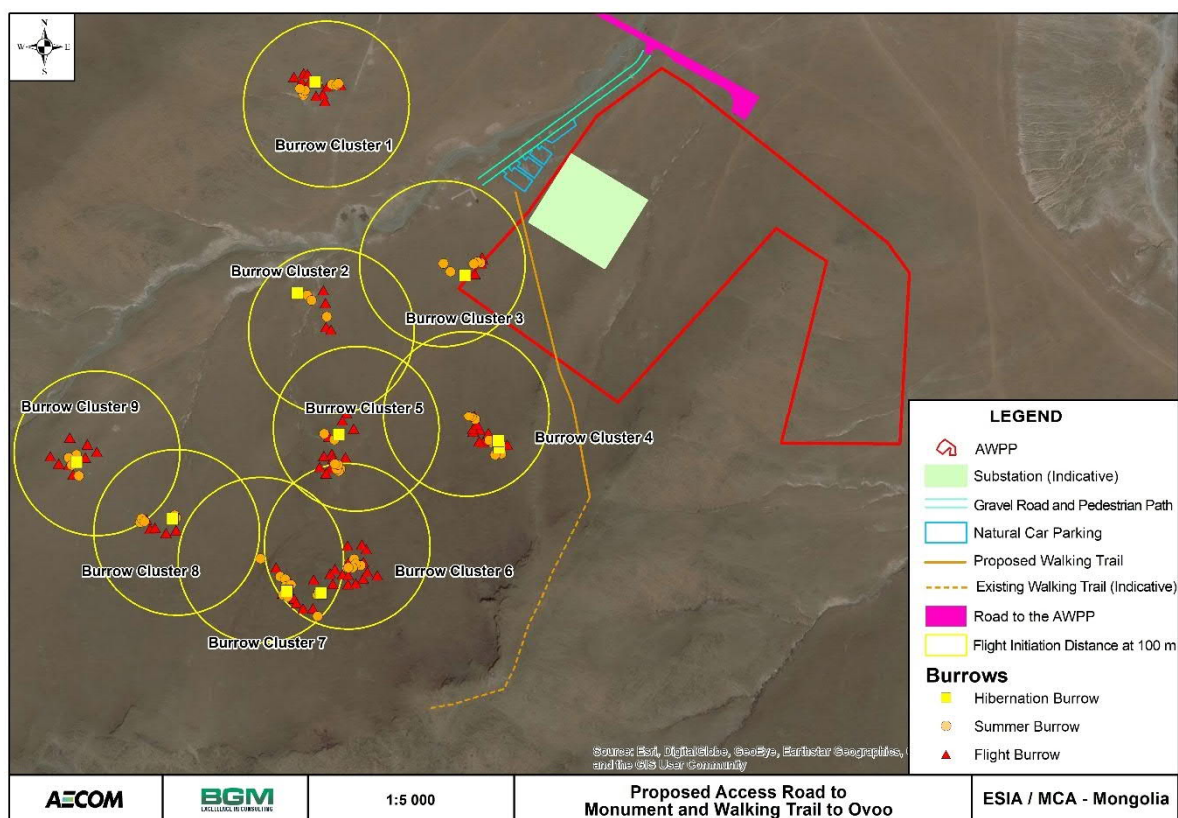

Such actions may include the following, as well as other measures recommended by the biodiversity specialist:

- Constructed buffers; e.g., vegetated earth berms
- Rock piles where marmots can watch for predators, thermoregulate, and dig burrows
- Spill protection measures
- Permanent Mongolian marmot protection zone
- Driving restrictions; e.g., prohibit or control off-road driving, set speed limits, restrict non-essential traffic to daytime
- Marmot protection and avoidance training
- Warning and interpretive signage
- Supplemental feeding to increase reproduction and survival, and attract marmots away from roads

The Contractor will be requested to provide a quotation to implement such actions identified by the biodiversity specialists, should the impact criteria be triggered.

#### LOCATIONS:

Observed Mongolian marmot burrow clusters in the vicinity of the proposed AWPP and replacement access road and sidewalk to the Monument to Terror Victims and sacred ovoo on Songinokhairkhan Mountain, as located on the following figure, and associated, nearby habitat supporting foraging, including pup-weaning, and dispersal of sub-adults including pup-weaning, and dispersal of sub-adults:

#### MONITORING

Document submission and approval of plan

#### LOCATIONS:

Observed Mongolian marmot burrow clusters in the vicinity of the proposed AWPP and replacement access road and sidewalk to the Monument to Terror Victims and sacred ovoos on Songinokhairkhan Mountain, as located on the above figure, and associated, nearby habitat supporting foraging, including pup-weaning, and dispersal of sub-adults including pup-weaning, and dispersal of sub-adults

#### INDICATORS AND SUCCESS CRITERIA:

##### Indicators:

- Submission of construction-phase monitoring and long-term protection plan
- Collection and evaluation of Mongolian marmot population density and structure, reproduction, and mortality data
- Specific impact criteria and indicators specified in approved plan

##### Success Criteria:

- Monitoring and protection plan approval
- Identification of and timely response to changes attributed to loss of marmot habitat or disturbance of marmots

#### REPORTING:

- Report communications and written approval of Engineer of Construction-Phase Monitoring and Long-Term Protection Plan
- Report monitoring activities and data evaluation findings
- Report impact criteria exceedances and recommended protective actions to be implemented
- Summarize other activities undertaken during reporting period
- Specify any material deviations or non-compliances to this management measure, and any other issues of concern
- Define activities planned during next reporting period

#### SCHEDULE

##### MANAGEMENT MEASURE:

##### Implementation:

- Annual, beginning prior to construction mobilization and continuing throughout construction, commissioning, and contract operations period Year 1 and Year 2
- Late March to late September monitoring season, comprising four monitoring periods:
  - Late March/early April (post hibernation)
  - Late June/early July (pups feeding outside burrows)
  - Mid-August (newborn survival and mortality)
  - Late September (pre hibernation)

##### MONITORING:

##### Implementation:

- Document communications and written approval of Engineer as they occur

##### Reporting:

- Monthly in CESMP update

#### RESPONSIBILITY

##### MANAGEMENT MEASURE:

**Implementation:** MCA-Mongolia and Biodiversity specialist employed by or contracted to MCA-Mongolia; construction by Contractor  
**Oversight:** MCA-Mongolia or its representative

##### MONITORING:

**Implementation:** Biodiversity specialist  
**Reporting:** Biodiversity specialist and Contractor  
**Oversight:** MCA-Mongolia or its representative

## 3.3 Waste Management

### Management Measure Waste -7: Waste Management

#### POTENTIAL IMPACT

Risks and adverse impacts of handling, storing, treating, and disposing of waste
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Mongolian Law on Hazardous and Toxic Chemicals <ul style="list-style-type: none"> <li>◦ Requires depositing the waste based on conclusion of the related professional organization to the place determined by the district governor.</li> </ul> </li> <li>• Mongolian Law on Sanitation <ul style="list-style-type: none"> <li>◦ Prohibits disposing waste in the places other than the specified points.</li> </ul> </li> <li>• Mongolian Law on Waste <ul style="list-style-type: none"> <li>◦ Prohibits establishing centralized waste disposal sites in urban settlement areas, water sanitary and protection zones and mining areas.</li> </ul> </li> <li>• Government of Mongolia Resolution No. 135 of 2002 addressing the procedures of the classification, collection, packaging, transportation, treatment, storage, and disposal of hazardous waste</li> <li>• Government of Mongolia Resolution No. 116 of 2018 addressing Articles 7.1.2 and 7.1.3 of the Law on Waste (repealed Government Resolution No. 135 of 2002).</li> <li>• Joint Order No. A-320/305 of Minister of Nature, Environment and Tourism and Minister of Health of 2011 addressing the procedures of the disposal of medical wastes <ul style="list-style-type: none"> <li>◦ Requires providing personal protective equipment to the organization's waste management officer.</li> </ul> </li> <li>• Minister's Order No. 404 of 2006 of Ministry of Nature, Environment and Tourism addressing the procedure of the disposal and landfill of waste</li> <li>• Minister's Order No. A/443 of 2018 addressing Articles 4.4.1, 4.4.2, 4.4.3 of the Law on Hygiene (repealed Minister's Order No. 404 of 2006).</li> <li>• IFC Performance Standards 3 and 4 <ul style="list-style-type: none"> <li>◦ Encourages recovering and reusing waste in a manner that is safe for human health and the environment.</li> </ul> </li> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning <ul style="list-style-type: none"> <li>◦ Provides guidance on management of non-hazardous solid waste generated at construction sites and associated facilities, hazardous materials, and wastewater discharges.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• Effectively manage waste by minimizing waste generation and safely handling, storing, treating, and disposing of generated wastes</li> </ul>
MANAGEMENT MEASURE
<p><b>Waste Management</b></p> <p>The Contractor will:</p> <ul style="list-style-type: none"> <li>• Comply with Construction Contract Documents Section V, Works Requirements, Section 01030 Special Requirements: <ul style="list-style-type: none"> <li>• Paragraph 1.04.E Hazardous Waste Management Plan</li> <li>• Paragraph 1.14 Disposal of Excess Material</li> <li>• Paragraph 1.21 Disposal of Debris</li> </ul> </li> <li>• Comply with Construction Contract Documents Section V, Works Requirements, Section 01110 Environmental Protection Procedures: <ul style="list-style-type: none"> <li>• Paragraph 3.04.I, requiring the disposal of all debris and excess material outside wetland or floodplain areas in an environmentally sound manner</li> <li>• Paragraph 3.05.A, prohibiting the use of burning at the project site for the disposal of refuse and debris</li> </ul> </li> <li>• Comply with Construction Contract Documents Section V, Works Requirements, Section 01610 Delivery, Storage and Handling: <ul style="list-style-type: none"> <li>• Paragraph 1.05.C Storage and Protection</li> </ul> </li> </ul>

- Comply with Construction Contract Documents Section V, Works Requirements, Section 02100 Site Preparation:
  - Paragraph 1.07.D, requiring the legal disposal of all waste and surplus material
  - Paragraph 3.03 Disposal of Waste Materials
- Comply with Construction Contract Documents Section V, Works Requirements, Section 02210 Earth Excavation, Backfill, Fill and Grading:
  - Paragraph 3.11 Reuse and Disposal of Surplus Excavated Materials
- Fully comply with the requirements of this management measure
- Provide in storage locations and principle points of use material safety data sheets (MSDSs) for all stored materials in Mongolian, English, and any other languages as appropriate
- Provide 110%-capacity secondary containment or 25% of the capacity of all the total volume of the stored individual containers within the bund, whichever is larger, for all storage of liquid hazardous materials, including, but not limited to, waste oil and solvents
- Do not store waste oils for extended periods in underground sumps
- Empty and inspect regularly tanks and sumps for any signs of cracks or holes
  - Record findings of inspections
  - Repair any cracks or holes
  - Record any repairs conducted
- Make available on site spill kits, protective equipment, and other necessary equipment where hazardous materials are handled, to clean and mitigate spills
- Locate appropriate first aid close to hazardous material storage areas, including, but not limited to, eye-wash, showers, and first aid kits
- Only transport hazardous materials using operators licensed and approved by the Engineer for the specific material
- Implement the following waste management hierarchy, in the following order of preference:
  - Waste avoidance and reduction at source
  - Waste reuse and recycling
  - Waste storage, treatment, and disposal to local, Mongolian, and international standards
- Classify all wastes according to the following and based on internationally accepted regulations, guidelines, definitions, and methodologies:
  - Mineral waste
  - Non-hazardous waste, including domestic waste and inert waste
  - Hazardous waste, including medical waste
  - Wastewater
- Segregate, securely contain, and monitor waste at the source of generation pending treatment, transport, or disposal
- Prohibit open burning of non-hazardous and hazardous solid waste
- Transfer recyclable wastes only to facilities operated by licensed recycling contractors, subject to assessment by the Engineer of the contractors and facilities
- Transfer non-hazardous waste, other than recyclable wastes, only to waste disposal facilities licensed in accordance with applicable Mongolian laws and regulations
- Sterilize medical waste by autoclave in 121°C for at least 20 minutes prior to transfer to disposal and a licensed facility
- Properly store on site all hazardous wastes for which there is not an engineered and approved treatment or disposal method available until a treatment and/or disposal route becomes available
- Maintain an inventory by location, specifying quantity per month and cumulative total, and detailing:
  - Wastes generated
  - Wastes sent for off-site recycling
  - Wastes subject to hazardous waste treatment
  - Wastes subject to non-hazardous waste disposal
  - Unrecyclable hazardous wastes stored
- Provide waste management training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the Contractor's site-specific Waste Management Plan, to all employees and subcontractors at the time of their induction and annually thereafter

<ul style="list-style-type: none"> <li>The Contractor will prepare and submit for the Engineer's written approval a site-specific Waste Management Plan and associated procedures that, as a minimum: <ul style="list-style-type: none"> <li>Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan</li> <li>Assigns roles and responsibilities for waste management</li> <li>Disposition of hazardous wastes for which no engineered and approved treatment or disposal method is available</li> </ul> </li> </ul>
<p><b>LOCATIONS:</b></p> <p>All construction sites, construction camps, and temporary facilities where waste is generated, stored, treated, or disposed of</p>
<p><b>MONITORING</b></p>
<p>Document:</p> <ul style="list-style-type: none"> <li>Provision, maintenance, and/or updating of: <ul style="list-style-type: none"> <li>MSDSs</li> <li>Secondary containment capacity for all storage of liquid hazardous materials</li> <li>Tanks and sumps inspection records</li> <li>Spill kits</li> <li>First aid</li> <li>Waste inventory</li> <li>Waste management training</li> </ul> </li> <li>Submission and approval of site-specific Waste Management Plan</li> </ul>
<p><b>LOCATIONS:</b></p> <p>All construction sites, construction camps, and temporary facilities where waste is generated, stored, treated, or disposed of</p>

## 3.4 Social and Gender Inclusion

### Management Measure AWPP -8: Labor Management

<b>POTENTIAL IMPACT</b>
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Professional management and conditions of labor</li> <li>Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> <li>Women's short-term employment in construction and engineering-related work</li> <li>Potential alleviation of poverty in local area</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of forced labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b>  <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Constitution of Mongolia               <ul style="list-style-type: none"> <li>Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>Mongolian Civil Code               <ul style="list-style-type: none"> <li>Requires providing office space, tools and equipment necessary to ensure employees' health.</li> </ul> </li> <li>Mongolian Law on Gender Equality               <ul style="list-style-type: none"> <li>Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> </ul>

- Mongolian Law on Labor
  - Prohibits discriminating against race, social origin or status, wealth, religion, or ideology
  - Prohibits employing children under the age of 16 or under 18 in dangerous industries, including construction
- Mongolian Law on Minimum Wage
  - Minimum wage is fixed by National Tripartite Committee on Labor and Social Consensus representatives.
- Mongolian Law on the Protection of the Rights of the Child
  - Prohibits employing children in any work that is likely to harm their health or morale, and exploiting or paying unjust wages to children
- Mongolian Law on Social Protection of Disabled Persons
  - Prohibits building any buildings and facilities that do not meet needs and requirements of persons with disabilities.
- Mongolian Law on Combating Human Trafficking
  - Requires regulating the workplace to ensure the implementation of the legislation on combating human trafficking, and if it is not specified, it shall be obliged to comply with the instructions, recommendations, statements and instructions given by the competent authorities and officials.
- Mongolian Law on Sending Labor Force Abroad and Receiving Labor Force and Specialists from Abroad
  - Regulates relations with respect to employment of a Mongolian citizen abroad and a foreign citizen in Mongolia, and protection of their rights and interests.
  - Reinforces provisions of the Constitution of Mongolia, Labor Law, Social Insurance Law, and other related legal acts, and legal status of a foreign citizen.
- IFC Performance Standard 2
  - Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.
  - Contractor will adopt and implement human resources policies and procedures appropriate to its size and workforce that set out its approach to managing workers consistent with the requirements of this performance standard and national law.
  - Contractor will provide workers with documented information that is clear and understandable regarding their rights under national labor and employment law and any applicable collective agreements, including their rights related to hours of work, wages, overtime, compensation, and benefits upon beginning the working relationship and when any material changes occur.
  - Contractor will not make employment decisions on the basis of personal characteristics unrelated to inherent job requirements. Contractor will base the employment relationship on the principle of equal opportunity and fair treatment, and will not discriminate with respect to any aspects of the employment relationship, such as recruitment and hiring, compensation (including wages and benefits), working conditions and terms of employment, access to training, job assignment, promotion, termination of employment or retirement, and disciplinary practices. Contractor will take measures to prevent and address harassment, intimidation, and/or exploitation, especially in regard to women. The principles of non-discrimination apply to migrant workers.
  - Prohibits employment of child labor.
- Millennium Challenge Corporation Counter-Trafficking in Persons Policy (C-TIP Policy)
  - Requires contractors to take a zero-tolerance policy with regard to human trafficking and to actively manage employment conditions to prevent trafficking in persons and related activities and specifies remedies that the MCA-Entity may take in response to confirmed cases of TIP..
- Millennium Challenge Account Social and Gender Integration Plan (SGIP)

- Sets out guidelines for Contractors related to social risk mitigation measures in infrastructure, including making working conditions suitable for both male and female employees
- Requires developing and implementing an employment plan that prioritizes using local labor particularly from the Area of Influence of the project
- Sets a target to encourage contractors to employ as workers at least 30% women of all workers at each skill/occupational level
- Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates.
- Millennium Challenge Corporation Guidance Note to MCAs on Sexual Harassment
  - Requires that contractors are well-informed about existing anti-sexual harassment policies and procedures, and that contractors meet the requirements in the standard bidding documents.
- Ministry of Construction and Urban Design (MCUD) Gender Responsiveness Policy
  - Calls for gender targets in employment via “international and domestic tenders, so that one gender should not be lower than 15 percent among workers, and 25 percent among decision makers.”
- Ministry of Labor and Social Welfare Order (2016)
  - Expanded the types of hazardous work prohibited for children under the age of 18 to include construction
- International Labor Organization fundamental conventions, and International Human Rights instruments and conventions

## OBJECTIVES

The Labor Management Plan ensures that contractors and their workers have clear expectations about the behaviors and conditions expected of the Contractor and all workers.

- Promote fair treatment, non-discrimination, and equal opportunity of workers
- Promote local labor opportunities
- Achieve a target of women’s employment as 30% of all labor at each skill/occupational level
- Establish and maintain, a constructive worker-management relationship
- Protect workers, including “vulnerable” categories of workers such as children, migrant workers, workers engaged by third parties, and workers in the supply chain
- Avoid the use of forced labor
- Maximize the beneficial impact of the project on the affected communities

## MANAGEMENT MEASURE

### Labor Management

The MCA-Mongolia or its representative’s Social Safeguards Team (SST) will:

- Encourage Contractor to employ local unskilled and semi-skilled labor, particularly youth and women, and to procure goods and services from local businesses and entrepreneurs
- Facilitate the Contractor’s cooperation with the local District Labor Offices
- Facilitate the publication of vacancies and procurements within affected communities
- Facilitate the holding of job fairs and procurement workshops within affected communities to support local applicants to apply for jobs and local business and entrepreneurs to bid
- Gather names of interested workers from project affected households and through community information programs and consultation meetings
- Share the names of interested workers with Contractor and District and khoroo Labor Offices
- Encourage Contractor to employ women at a rate of at least 30% of personnel at each skill/occupational level
- Facilitate Contractors’ engagement with relevant university engineering programs, technical and vocational education and training (TVET), and professional associations to 1) identify and recruit qualified job applicants and 2) establish internships and apprenticeships

The Contractor will:

- Fully comply with the requirements of this management measure
- Perform the work in accordance with relevant sections of the ESMP

### Access to Employment

The Contractor will:

- Publish vacancies (listing the required qualifications for all categories of employment) within project-affected communities and at District and khoroo offices and provide such information to the Engineer and during each community meeting
- Publish and communicate employment opportunities listing the required qualifications for all categories of employment city-wide, and beyond in Mongolia, if the vacancies cannot be filled from local communities
- Ensure that a staff person responds to questions from the local population regarding employment and procurement opportunities
- Develop an employment forecast and a written recruitment strategy to: 1) encourage the employment of qualified individuals among the local population(s) in project construction and ancillary activities in all phases, with particular focus on women and youth; 2) achieve a target of women's employment at least 30% of personnel at each skill/occupational level; and 3) provide training for local construction brigades on how to be effective contractors
- Through the Contractor's Social Safeguards Officer, liaise with the MCA-Mongolia or its representative's SST and local labor offices to provide support with the job application process, encourage local employment (including women's employment), and publicize a fair, consistent and transparent recruitment process
- In disseminating information on potential employment opportunities, take steps to maximize outreach, using all forms of media that may be appropriate
- Ensure that all staff have written employment contracts specifying fair employment conditions for equal work to men and women, and fulfilling all conditions specified under the Mongolian Law on Labor defining the contracts

The Contractor is encouraged to:

- Create pay bands for each category of worker to ensure equal pay for equal work

As feasible, the Contractor will:

- Develop and submit a plan for providing on-the-job training and skills transfer opportunities to the local labor force
- Engage with training, education, and professional organizations—such as Technical and Vocational Education and Training, Implementing Agency of the Ministry of Labor and Social Protections, Mongolian University of Science and Technology, and the Mongolian Builder's Association—to recruit qualified applicants, and provide apprenticeships and internships for students who study water engineering and relevant subjects at university
- The Contractor shall note contract clauses on "Gender," "Engagement of Staff and Labor," "Foreign Personnel," "Prohibition of Forced or Compulsory Labor," "Prohibition of Harmful Child Labor," "Employment Records of Workers," and "Non-Discrimination and Equal Opportunity."

#### *Local Procurement*

The Contractor will:

- Proactively procure goods and services from local businesses and entrepreneurs in Khan-Uul and Songinokhairkhan Districts and Ulaanbaatar, and members of targeted disadvantaged groups (e.g., women, people with disabilities), achieved through:
  - Publicizing procurements within the targeted geographical area or targeted group, for example at the District and khoroo offices and via notice boards, print media (newspapers, etc.), recruitment agencies, or job and career fairs
  - Publicizing and hold procurement workshops within the targeted geographical area or targeted group
  - Adding priority criteria for businesses and entrepreneurs in the targeted geographical area or members of the targeted group to the selection procedure
- In disseminating information on potential service procurement opportunities, take steps to maximize outreach, using all forms of media that may be appropriate

#### *Workplace Environment*

The Contractor will:

- Establish, execute, and enforce a Worker Behavior Code of Conduct on which all employees will be briefed, that all employees are required to sign, and that mandates immediate dismissal for serious offences including sexual harassment, violence, or confirmed cases of engagement in trafficking in persons. The Code will specify:
  - Expectations of worker behavior, and penalties for transgression
  - MCC and Mongolian legal definitions of trafficking in persons (TIP), zero-tolerance for TIP, and remedies that the MCA Entity may take in response to confirmed cases of engagement of trafficking in persons
  - Zero-tolerance for gender-based violence
  - Compliance with the Contractor's Anti-Sexual Harassment Policy and notification of the Contractor's Sexual Harassment Incident Reporting and Referral Plan
  - Rights of employees to a grievance mechanism, holidays, and cultural and festival access
  - Conditions for work camps, shelter, water and sanitation, food, and security
  - The responsibility of all workers, regardless of their role or duration of employment, to review and acknowledge the Workers' Code of Conduct by signing the code sheet
  - The requirement to respect local customs and practices
- Establish and execute a grievance redress procedure that:
  - Formalizes a system for receiving and managing internal complaints of sexual harassment, gender-based violence, or issues of trafficking persons (including engaging in commercial sex with a person under 18 years of age)
  - Guarantees confidentiality to makers of allegations
  - Designates the Contractor's Social Safeguards Officer or other officer as responsible for collaborating with the human resources department on the grievance redress procedures
  - Refers to the Contractor's Sexual Harassment Incident Reporting and Referral Plan for allegations of sexual harassment
  - Specifies that the Contractor's zero-tolerance for gender-based violence addresses any complaints of gender-based violence against its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism
  - In cases of discrimination against women or of allegations of sexual harassment or violence, requires that the Contractor's Social Safeguards Officer contact the MCA-Mongolia or its representative's SST to include them in the investigation and appoint a third party—such as a representative from an NGO such as the Centre for Gender Equality or equivalently qualified, experienced organization—to lead the investigation
  -
- The Contractor shall note the contract clause on “Prohibition of Sexual Harassment”
- The Contractor shall note the contract clause on “Facilities for Staff and Labor” and provide suitable gender-segregated facilities to enable the safe employment of both men and women – e.g. Toilet facilities, changing facilities on all sites and enabling physical access to office accommodation for people with disabilities

### *Training*

The Contractor will:

- Provide training to enhance the skills of employees using on-the-job training, internships, and apprenticeships
- Mandate for all employees, before each worker starts work on the site, induction packages that include:
  - Employment rights and conditions, including non-discrimination and equal opportunity
  - The Contractor's responsibility to “adopt recruitment, hiring and retention practices that support the employment of women and staff from diverse backgrounds” per the contract clause on “Engagement of Staff and Labor,” the Contractor's employment forecast and recruitment strategy, and the Contractor's Gender Integration and Social Inclusion Plan (described below)

- Gender-based violence
- Contractor's Anti-Sexual Harassment Policy – including awareness of what constitutes sexual harassment, exploitation, and abuse and the Contractor's Sexual Harassment Incident Reporting and Referral Plan
- Using the internal Grievance Mechanism for allegations of gender-based discrimination
- Rights to have access to local festivals
- Cultural sensitivities, and social norms and practices in each area
- Expectations on avoiding poor relations between employees and local communities caused by behavior relating to alcohol, gambling, prostitution, illegal drug use, violence and sexual abuse of women, minors and lesbian, gay, bisexual, transgender, queer, and others (LGBTQ+) persons
- Countering the Trafficking in Persons Response Plan – awareness of responsibilities to counter the trafficking of people around the project area, the remedies that the Contractor and the MCA Entity may apply, and mechanisms for reporting suspected instances of TIP with the Contractor's TIP Response Plan
- Awareness of the possibilities of the transmission of HIV/AIDS and communicable illnesses and how to prevent HIV/AIDS transmission
- Undertake a series of employment and social plan inductions and employee awareness programs that:
  - All employees must attend at the commencement of employment and over the employment period twice yearly
  - Incorporate toolbox talks that include reinforcement of all training programs
- Commission training modules on gender integration and social inclusion topics for all employees at intervals agreed with the MCA-Mongolia or its representative's SST
- Require that the Social Safeguards Officer, together with the MCA-Mongolia or its representative's SST Community Liaison Officers, conduct awareness raising with workers on child labor issues in the local community as part of an ongoing community awareness program on social issues.
- These toolbox talks will include ways that workers can report suspected child labor to the District Children, Youth and Family Offices, and the MCA-Mongolia or its representative's Social Manager

#### *Site-specific Labor Management Plan*

The Contractor will prepare and submit for the Engineer's written approval a site-specific Labor Management Plan that:

- Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
- Includes the Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan and the Workers' Code of Conduct
- Is consistent and compliant with:
  - Mongolian Law on Labor
  - Relevant aspects of the MCC Gender Policy coordinated and agreed with the MCA-Mongolia or its representative's SST and operated by the Contractor's Social Safeguards Officer
  - The MCC Policy on Counter-Trafficking in Persons
- Assigns roles and responsibilities for labor management

#### LOCATIONS:

All construction sites and temporary construction facilities

#### **MONITORING**

MCA-Mongolia or its representative's SST:

- Monitor implementation of the Contractor's Labor Management Plan and Worker Behavior Code of Conduct, including prohibitions against trafficking in persons, gender-based violence, sexual harassment, and child labor
- Monitor implementation of the Contractor's employment recruitment strategies and assist Contractor to reach potential workers among local women, youth, and people from disadvantaged groups

<ul style="list-style-type: none"> <li>Monitor participation by all parties in the Contractor's internal grievance redress procedure and external project Grievance Redress Mechanisms</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>Record results of Contractor's labor management responsibilities, with all data and statistics disaggregated by age and gender, following, at a minimum, the contract clause on "Employment Records of Workers" and recording, for each worker hiring and leaving dates, along with duration (days) of employment and skills/occupational category and home location of workers (project-affected district/khoroos, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia)</li> <li>Document implementation of the requirements above for the Labor Management Plan, including all recruitment activities</li> <li>Document Worker Behavior Code of Conduct infringements and outcomes, and internal grievance redress activities under the Contractor's internal grievance process</li> </ul>

### Management Measure AWPP - 9: Gender Integration and Social Inclusion (GSI)

<p><b>POTENTIAL IMPACT</b></p>
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Increased short-term employment for women Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of forced labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p>

Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:

- Millennium Challenge Account Social and Gender Integration Plan (SGIP)
  - Encourages contractors to prioritize using local labor, particularly workers from the project affected areas and encourages contractors to employ women workers as at least 30%
- Millennium Challenge Corporation Gender Policy
  - The MCC Gender Policy states that countries will ensure that both women and men have opportunities for meaningful participation throughout the consultative processes related to a Compact program.
- IFC Performance Standard 1
  - Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities
- IFC Performance Standard 2
  - Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.
- Constitution of Mongolia
  - Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.
- Mongolian Law on Gender Equality
  - Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.
- Mongolian Law on Labor
  - Prohibits discriminating against race, social origin or status, wealth, religion, or ideology
  - Prohibits employing children under the age of 16 – under 18 in dangerous industries e.g. construction

## OBJECTIVES

The Gender Integration and Social Inclusion (GSI) Plan complements the Labor Management Plan and provides additional management steps to address GSI considerations with respect to workers and local communities.

- To promote the fair treatment, non-discrimination, and equal opportunity of workers.
- To encourage the employment of women as at least 30% of the Contractor's workforce, calculated over full and part time positions as a percentage of total number of staff hired in the life of the contract at each skill/occupation level
- To enable local people, particularly youth and people in project-affected districts/khoroos to gain short-term employment and training opportunities
- Maximize the perceived beneficial impacts of the BWSE project on the project affected communities

## MANAGEMENT MEASURE

### Gender Integration and Social Inclusion

- Under the Gender Integration and Social Inclusion Plan, the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure the widest exchange of information between the Contractor and the local population and Labor Offices on planned and continuing works and employment opportunities through a program of community consultations and participatory meetings.
- The Contractor will prepare and submit for the Engineer's written approval a Contractor's Gender Integration and Social Inclusion Plan, which will be:
  - Consistent with the Mongolian Law on Labor and
  - Consistent with the MCC Gender Policy's emphasis on community consultation and participation
  - Consistent with IFC Performance Standard 1: Assessment and Management of Environmental and Social Risk and Impacts
  - Agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer

<p>-</p> <p>- <i>Community Engagement</i></p> <ul style="list-style-type: none"> <li>o The Contractor will hold at least one meeting in each project-affected District and khoroo office prior to construction to inform community members of the expected conduct of workers and the contents of the Labor Management Plan, and thereafter monthly, minimally covering the following: <ul style="list-style-type: none"> <li>o Efforts to hire local labor and the Contractor's employment forecast</li> <li>o Efforts to maximize women's employment</li> <li>o Efforts to maximize local procurement and the Contractor's procurement forecast</li> <li>o Prohibitions against child labor and forced labor in supply chains</li> <li>o Zero-tolerance of trafficking in persons, MCC and Mongolian legal definition of trafficking in persons, and Contractors' Counter-Trafficking in Persons Response Plan</li> <li>o Zero-tolerance of gender-based violence</li> <li>o Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan</li> </ul> </li> </ul> <p><i>Expanding Short-Term Employment Opportunities</i></p> <ul style="list-style-type: none"> <li>• The Contractor will actively consider working with the existing construction brigades to enable local labor currently organized into brigades to gain employment. The brigades may require additional training to enable them to work on this large scale project – training in: <ul style="list-style-type: none"> <li>o Modern tools and techniques where needed</li> <li>o Brigade internal labor management, accounting, and estimation techniques</li> </ul> </li> <li>• As referenced in the Labor Management Plan and its recruitment strategy, the Contractor will encourage the employment of qualified individuals among the local population(s) in project activities, with particular focus on women, youth, and disadvantaged groups. This may include small-scale supply contracts or services, with announcement of jobs published on project information boards, in District and khoroo Labor Offices and with information on employment disseminated by the Contractor's Social Safeguards Officer, the MCA or its representative, or other means approved by the Engineer.</li> <li>• Where appropriate, the Contractor will provide training to enhance the skills of local people using on-site apprenticeships and internships</li> <li>• As referenced in the Labor Management Section above, the Contractor is encouraged to cooperate with Technical and Vocational Education and Training Centers and professional associations and to draw workers from among their graduate and members</li> </ul> <p>-</p> <p>- <i>Local Procurement</i></p> <ul style="list-style-type: none"> <li>• The Contractor will develop and submit a procurement forecast of all goods and services that could be procured locally. The MCA-Mongolia or its representative's Social Safeguards Team will assist in disseminating this information to local communities with the Contractor's Social Safeguards Officer.</li> <li>• The Contractor will develop and submit for review and approval by the PMC, a procurement strategy to inform local communities and businesses of opportunities to provide goods and services to the Contractor and to project workers, particularly targeting small businesses and those owned by women.</li> <li>• The Contractor Social Safeguards Officer and MCA-Mongolia or its representative's Social Safeguards Team will hold community meetings to inform people about the procurement processes and include District and khoroo offices, community organizations and the media.</li> </ul> <p>-</p>	<p>LOCATIONS:</p> <p>All construction sites and temporary construction facilities and project affected communities</p> <p><b>MONITORING</b></p> <p>MCA-Mongolia or its representative's SST:</p> <ul style="list-style-type: none"> <li>• Monitor Contractor Gender Integration and Social Inclusion Plan</li> </ul>
---	--

<ul style="list-style-type: none"> <li>• Monitor Contractor employment recruitment strategies and assist Contractor to reach potential women, youth and other excluded groups</li> <li>• Monitor participation by all parties in the Contractor's internal and external project Grievance Redress Mechanisms</li> <li>• Document Contractor performance in Gender Integration and Social Inclusion Plan</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>• Record results of Contractor's Gender Integration and Social Inclusion responsibilities</li> <li>• Document all grievance redress activities under the Contractor's internal grievance process and external Grievance Redress Mechanism</li> </ul>

### Management Measure AWPP -10: Counter-Trafficking in Persons, Gender-Based Violence and Sexual Harassment

POTENTIAL IMPACT
Adverse impacts to be avoided or minimized: <ul style="list-style-type: none"> <li>Sexual harassment on construction sites and in temporary construction facilities and project-affected communities</li> <li>Trafficking in persons within and outside the project</li> <li>Gender-based violence on construction sites and in temporary construction facilities and project-affected communities</li> </ul>
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>MCC Counter-Trafficking in Persons Policy (C-TIP Policy)               <ul style="list-style-type: none"> <li>States, "Trafficking in Persons" means (a) Sex trafficking in which a commercial sex act is induced by force, fraud, or coercion, or in which the person induced to perform such act has not attained 18 years of age; (b) The recruitment, harboring, transportation, provision, or obtaining of a person for labor or services, through the use of force, fraud, or coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery."</li> <li>Adopts "a zero-tolerance policy to TIP and prohibits "The Contractor, the Contractor's Personnel, any Subcontractor or supplier, or any of their respective personnel, or any agent or affiliate of any of the forgoing shall not engage in any form of Trafficking in Persons during the period of performance of any contract..."</li> <li>Requires each Contractor to "acknowledge that engaging in such activities is cause for suspension or termination of employment or of the Contract" and specifies remedies that the MCA Entity will apply once a TIP incident has been confirmed.</li> </ul> </li> <li>Mongolian Law on Promotion of Gender Equality               <ul style="list-style-type: none"> <li>Requires the employer to incorporate into the organization's internal procedures, specific norms for prevention of sexual harassment in a workplace and the redress of such complaints. It also requires that the organization design and conduct a program of training and retraining geared toward creating a working environment free from sexual harassment, and report on its impact in a transparent manner.</li> </ul> </li> <li>Mongolian Law to Combat Human Trafficking</li> </ul>

<ul style="list-style-type: none"> <li>○ The law regulates relations with respect to the prevention and suppression of trafficking in persons, elimination of the causes of trafficking, and protection of victims' rights.</li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>• To prevent incidence of trafficking of persons for sex by project employees</li> <li>• To ensure that the Contractor and its Sub-Contractors do not employ trafficked labor and to minimize the risks of trafficking of foreign workers to project sites</li> <li>• To prevent sexual harassment at all construction sites and temporary construction facilities</li> <li>• To prevent Contractor and worker involvement in sexual harassment in project-affected communities and among members of stakeholder organizations in the workplace</li> <li>• To prevent incidences of gender-based violence involving workers</li> </ul>
<b>MANAGEMENT MEASURE</b>
<b>Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment</b>
<p>The Contractor shall ensure that foreign workers on work sites or in labor camps are aware 1) of the risks of cultural conflict and of becoming victims of gender-based violence, sexual harassment and abuse, discrimination, trafficking in persons and 2) the legal and contractual remedies against such behavior. This information shall be provided in workers' induction packages, by holding an orientation before workers start on site, and by delivering a training twice a year.</p> <p><i>Counter-Trafficking in Persons (C-TIP)</i></p> <ul style="list-style-type: none"> <li>• The Contractor shall prepare and submit for the Engineer's written approval a Counter-Trafficking in Persons Response Plan (TIP Response Plan), and the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure all employees are informed of expectations of behavior as per the Worker Behavior Code of Conduct and the penalties for proven infringements..             <ul style="list-style-type: none"> <li>○ The Counter-Trafficking in Persons Response Plan shall Address the specific TIP risks identified in the ESIA, including withholding of foreign workers' passports and commercial sex with minors,</li> <li>○ Designate a single responsible person who will notify the Engineer and MCA-Mongolia within 24 hours of an alleged incident and implement any investigation.</li> <li>○ Specify when to contact legal authorities, list UB city officials, national government offices, and NGO organizations that address TIP, and state how the Contractor will deal with them in the case of a TIP incident.</li> <li>○ Include mechanisms to ensure confidentiality of any TIP survivors and to refer them to law enforcement and/or supportive services if they wish.</li> </ul> </li> <li>• The Contractor shall develop, as part of its TIP Response Plan, an anonymous mechanism for workers and community members to report suspected TIP incidents to the Engineer and to MCA-Mongolia, and this must be separate from the project grievance mechanism.</li> <li>• The Counter-Trafficking in Persons Response Plan shall be:             <ul style="list-style-type: none"> <li>○ Consistent with the Mongolian Law on Labor, Promotion of Gender Equality, and combatting Human Trafficking</li> <li>○ Compliant with the MCC Counter-Trafficking in Persons Policy</li> <li>○ Coordinated and agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer</li> </ul> </li> <li>• The Counter-Trafficking in Persons Response Plan shall specifically prohibit:             <ul style="list-style-type: none"> <li>○ Procuring minors for sex</li> <li>○ Transporting non-employee individuals in company vehicles</li> </ul> </li> <li>• The Contractor is strongly encouraged to engage the Centre for Gender Equality or other similarly qualified and experienced organization to develop its TIP Response Plan, its anonymous reporting mechanism, its worker training, and its C-TIP content for community meetings</li> <li>• The Contractor shall design and deliver twice yearly C-TIP training modules to all staff, sub-contractors, and service providers on the prevention of TIP and the Contractor's TIP</li> </ul>

Response Plan, following minimum content in MCA-Mongolia's Social and Gender Integration Plan (SGIP).

- C-TIP training sessions must be delivered to all employees within one month of starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
- Information about the Contractor's zero-tolerance policy and TIP Response Plan shall be included in all community meetings and the Plan shall be provided in Mongolian, in whole, to project-affected khoroo and District governments.

#### *Gender-Based Violence*

- The Contractor shall adopt a policy of zero-tolerance for gender-based violence and address any complaints of gender-based violence against its workers or committed by its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
- The Contractor shall notify the Engineer and MCA-Mongolia within 24 hours of any alleged incident of gender-based violence
- The Contractor shall deliver a gender-based violence prevention training to all staff, sub-contractors, and service providers prior to all workers beginning on-site and thereafter at least twice each year.
  - The Contractor is strongly encouraged to engage a local, qualified, and experienced organization to develop the training.
  - The training shall minimally identify behavior that constitutes gender-based violence, address attitudes towards violence against women and lesbian, gay, bisexual, transgender, and queer people (LGBTQ), and identify relevant Mongolian laws and organizations addressing gender-based violence.
  - It shall also explain the workings and protections in the Contractor's grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ persons.
- Include in all community meetings information about the Contractor's zero-tolerance policy toward gender-based violence committed by or against its workers and procedures for reporting it and communicate this information in writing to project-affected khoroo and District governments.

#### *Sexual Harassment*

- The Contractor shall develop and submit to the Engineer an Anti-Sexual Harassment Policy prohibiting sexual harassment directed at Compact beneficiaries, partners, or stakeholders, MCA Entity employees, MCA Entity consultants, MCC personnel, or MCC consultants and including an Incident Reporting and Referral Plan.
  - The Policy and Plan must be in form and substance satisfactory to the MCA and MCC.
  - The Incident Reporting and Referral Plan shall include a confidential mechanism for workers and community members to report sexual harassment to the Engineer and to MCA-Mongolia, separately from the Grievance Redress Mechanism.
- Employers are required to have a protocol in their Workplace Grievance mechanism in which persons alleging harassment or violence will be protected from identification and from pressure from the Contractor or other workers to dismiss the complaint.
- The Contractor's grievance manager must notify the MCA-Mongolia or its representative's Social Safeguards Team and the Contractor's Social Safeguards Officer within 24 hours of any allegation of sexual harassment.
- The Contractor must have a contract with a suitably experienced organization, such as the Centre for Gender Equality, to provide an investigation leader to manage the investigation of complaints of sexual harassment.
- The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction.
- The Contractor shall design and deliver a sexual harassment prevention training to all staff, sub-contractors, and service providers, in accordance with the Contractor's Anti-Sexual Harassment Policy, recognizing MCC's Guidance to MCAs on Sexual

<p>Harassment.</p> <ul style="list-style-type: none"> <li>○ Training shall be conducted within one month of workers starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.</li> <li>○ Training shall address <ul style="list-style-type: none"> <li>▪ Attitudes to and prevention of sexual harassment in the workplace</li> <li>▪ Workings and protections in the Contractor's internal grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ+ persons</li> <li>▪ Additional requirements for minimum training content can be found in MCA-Mongolia's Social and Gender Integration Plan (SGIP)</li> </ul> </li> <li>• Information about the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral plan shall be included in all community meetings and the Policy and Plan shall be communicated in Mongolian, in whole, to project-affected khoroo and District governments.</li> </ul>
LOCATIONS:

<b>MONITORING</b>
<p>MCA-Mongolia or its representative's SST:</p> <ul style="list-style-type: none"> <li>• Monitor Contractor Counter-Trafficking in Persons Response Plan</li> <li>• Monitor Contractor performance related to gender-based violence requirements</li> <li>• Monitor Contractor's development and adherence to its Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> <li>• Participate in the Contractor's internal Grievance Redress Mechanisms in relation to any on allegations of sexual harassment and gender-based violence and monitor and document the process and outcomes, maintaining confidentiality of those reporting and victims and witnesses</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>• Maintain copies of all contracts or other agreements with organizations that provide services related to the development of C-TIP, GBV prevention, or prevention of sexual harassment policy, plans, training, or reporting mechanisms</li> <li>• Maintain records of workers' participation in required trainings, including the dates of trainings and which workers participated</li> <li>• Maintain records of all community meetings at which C-TIP, gender-based violence, and sexual harassment are addressed, including the dates and locations and a record of all questions, comments, and Contractor responses</li> <li>• Document all implementation of the results of Contractor's Counter-Ttrafficking in Persons Response Plan responsibilities</li> <li>• Document all complaints of sexual harassment and gender-based violence, maintaining confidentiality of witnesses and victims, and all implementation of the Sexual Harassment Incident Reporting and Referral Plan and interactions with law enforcement and other relevant response institutions and organizations</li> <li>• Grievance redress activities under the Contractor's internal grievance process</li> </ul>
LOCATIONS:
All construction sites and temporary construction facilities and project affected communities
INDICATORS AND SUCCESS CRITERIA:
<p>Indicators:</p> <ul style="list-style-type: none"> <li>• Content of the Contractor's TIP Response Plan</li> <li>• Content of the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan</li> <li>• Number and content of trainings for all staff</li> <li>• Number of community meetings at which information presented covers the Contractor's policies on C-TIP, GBV, and sexual harassment and how to report suspected cases</li> </ul>

compared to the total number of Contractor-organized community meetings, disaggregated by location

- Numbers of complaints and grievances brought alleging sexual harassment, gender-based violence or trafficking in persons
- Number of required notifications of suspected TIP, GBV, and sexual harassment incidents compared to the number of complaints
- Contracts or other agreements with specialized organizations to develop and deliver plans, policies, and training

Success Criteria:

*Counter-trafficking in persons*

- Anonymous reporting mechanism for trafficking in persons is established prior to initiation of construction and functioning effectively for the duration of the construction
- The Contractor's TIP Response Plan is thorough, references the MCC C-TIP Policy and any guidance, provides a path to involve NGOs and specialized government staff, and includes clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.
- 100% of reported or suspected cases of TIP are dealt with in a timely, survivor centered manner, according to the TIP Response Plan.
- Effective reporting and management measures are developed are implemented and information about the measures are introduced to the employees and sub-contractors in toolbox sessions and by other means
- 100% of community meetings include reference to the zero-tolerance policy against TIP and to the Contractor's TIP Response Plan

*Gender-based violence*

- Culture of unacceptability of gender-based violence and assaults on women and LGBTQ+ persons established via:
  - 100% of workers having participated in gender-based violence prevention training prior to beginning work on-site
  - The Contractor notifying the Engineer and MCA-Mongolia within 24 hours of 100% of any alleged incident of gender-based violence
  - Timely, confidential, and thorough dealing with complaints of gender-based violence and 100% implementation of zero-tolerance policy in confirmed cases
  - 100% of community meetings including reference to the zero-tolerance policy against gender-based violence and procedures for reporting it

*Sexual harassment*

- The Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan are thorough, reference the Contract, aspects of the MCC Guidance to MCAs on Sexual Harassment, and Mongolian Law; provide a path to involve NGOs and specialized government staff; and include clear procedures for various actors to follow. The Plan prioritizes survivors' wellbeing, confidentiality, and preferences for how to handle each case.
- 100% of employees and sub-contractors have taken the sexual harassment prevention training prior to on-site work
- All worker and community complaints about sexual harassment are
  - addressed confidentially
  - addressed in a timely manner and
  - resolved following the procedures in the Contractor's Sexual Harassment Incident Referral and Reporting plan
- After investigation, appropriate measures are taken against perpetrators of sexual harassment on the job site, in temporary facilities, and in surrounding communities

**REPORTING:**

- Reports on measures to prevent and address counter-trafficking in persons, gender-based violence, and sexual harassment shall be included in project monthly reports

<ul style="list-style-type: none"> <li>Summarize activities related to counter-trafficking in persons, gender-based violence, and sexual harassment undertaken during each reporting period</li> <li>Specify any material deviations or non-compliances to this management measure, and any other issues of concern,</li> <li>Define activities planned during next reporting period</li> </ul>

### Management Measure AWPP - 12: Cultural Heritage Protection

<b>POTENTIAL IMPACT</b>
<ul style="list-style-type: none"> <li>• Chance finds of and potential inadvertent excavation or damage of tangible cultural heritage</li> <li>• Disturbance of the cultural and sacred landscape and places of religious or spiritual significance</li> </ul>

<ul style="list-style-type: none"> <li>Loss of the continuity of spiritual, religious, and traditional activities</li> </ul>
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Mongolian Law on Protection of Cultural Heritage <ul style="list-style-type: none"> <li>If tangible cultural heritage is discovered during excavation, requires halting work and immediately notifying the <i>soum</i> and <i>duureg</i> [capital city municipal district] governors, police, and concerned authorities.</li> <li>Prohibits building infrastructure facilities in historical and cultural monuments and their activity zones, to engage in mining and agriculture. Governors of all levels have the duty to protect the intangible cultural heritage.</li> </ul> </li> <li>IFC Performance Standard 8 <ul style="list-style-type: none"> <li>Prohibits removing, significantly altering, or damaging critical cultural heritage.</li> <li>Requires designing and implementing a chance find procedure when the proposed location of a project is in areas where cultural heritage is expected to be found, either during construction or operations.</li> </ul> </li> </ul>
<p><b>OBJECTIVES</b></p> <ul style="list-style-type: none"> <li>Protect tangible cultural heritage from inadvertent excavation or damage</li> <li>Enable and foster the continuity of spiritual, religious, and traditional activities in consideration of the unavoidable disturbance of the cultural and sacred landscape and places of religious or spiritual significance</li> </ul>
<p><b>MANAGEMENT MEASURE</b></p> <p><b>Cultural Heritage Protection</b></p> <p><b>Chance Find Procedure</b></p> <p>As unknown features/objects could be encountered during works, in particular earthworks, a chance finds procedure will be in place to stop works in case of such findings, and require investigation by an archaeologist and involvement of relevant government entities.</p> <p>Should any unexpected tangible cultural heritage be discovered:</p> <ul style="list-style-type: none"> <li>Cease all work in the immediate area and do not disturb the chance find further, including: <ul style="list-style-type: none"> <li>Establishing a 30-meter buffer around the chance find</li> <li>Leaving buffer undisturbed until competent cultural heritage specialist assesses the site</li> <li>Protecting the chance find area, for example with signs for prohibition of entry, barrier tape, etc.</li> </ul> </li> <li>Work may continue at other locations providing there is a buffer zone between the chance find area and the construction area</li> <li>Immediately notify the Engineer and the concerned government agencies, specifically the: <ul style="list-style-type: none"> <li>Office of the governor of the capital city</li> <li>Office of governor of the respective Khan-Uul District or Songinokhairkhan District</li> <li>Local police</li> <li>Institute of Archeology, Mongolian Academy of Sciences</li> <li>Institute of History and Ethnography, Mongolian Academy of Sciences</li> </ul> </li> <li>Provide the following information to the Engineer and government agencies: <ul style="list-style-type: none"> <li>Cultural heritage site type—description and photograph(s)</li> <li>Location—description and GPS coordinates</li> <li>Date, time, and details of find</li> <li>Nature of work that led to exposure of or locating the find</li> </ul> </li> <li>Coordinate with the Engineer and the concerned government agencies to consult a cultural heritage professional on site to assess the cultural heritage and recommend mitigation</li> <li>Follow instructions of the concerned government agencies and cultural heritage professional for the protection of the tangible cultural heritage</li> <li>Restart work only upon written direction from the Engineer</li> </ul> <p><b>Cultural and Sacred Landscape and Places</b></p>

- SST will conduct enhanced stakeholder engagement with religious and spiritual leaders to assess the intangible cultural impact of construction on cultural and sacred landscape and places.
- Contractor will coordinate with the SST Community Liaison Officers and the Engineer, and as directed by the Engineer accommodate the performance of periodic spiritual, religious, and traditional ceremonies and rituals on or adjacent to project sites. The ceremonies and rituals may be integrated with or, if independent, their scale may be similar to groundbreaking ceremonies.

### **Training**

The effective protection of cultural heritage is based on an understanding of the key issues, appropriate assessment, and correct action to minimize possible damage or loss.

The Contractor will:

- Prepare and submit for the Engineer's written approval a site-specific Cultural Heritage Training Plan and associated procedures that, as a minimum:
  - Specifies how the Contractor will educate and train personnel on requirements, procedures, and reporting in response to chance finds of tangible cultural heritage, in accordance with the requirements listed above
  - Specifies how the Contractor will educate and train personnel on requirements, procedures, and reporting to enable and foster the continuity of spiritual, religious, and traditional activities
  - Assigns roles and responsibilities for training
- Educate and train all Contractor personnel and provide enhanced training to key Contractor personnel—including on-site environmental staff, safety staff, construction engineers, and unit supervisors—in accordance with approved Cultural Heritage Training Plan.

#### **LOCATIONS:**

- All work sites
- Cultural and sacred landscape and places throughout project area, as all land and the landscape throughout Mongolia and the project area is sacred

### **MONITORING**

Monitor throughout construction

#### *Chance Find Procedure*

- Construction work sites during excavation or other ground disturbance

#### *Cultural and Sacred Landscape and Places*

- Communications SST Community Liaison Officers and Engineer
- Written directions of Engineer
- Actions to accommodate spiritual, religious, and traditional ceremonies and rituals
- Performance of spiritual, religious, and traditional ceremonies and rituals

#### *Training*

- Document submission and approval of training plan
- Document training of personnel as specified in approved plan

#### **LOCATIONS:**

- All work sites

#### **INDICATORS AND SUCCESS CRITERIA:**

Indicators:

#### *Chance Find Procedure*

- Chance find of tangible cultural heritage
- Excavation or damage of tangible cultural heritage
- Cease work decision
- Protection of chance find area and tangible cultural heritage

#### *Cultural and Sacred Landscape and Places*

- Performance of spiritual, religious, and traditional ceremonies and rituals

<p><i>Training</i></p> <ul style="list-style-type: none"> <li>• Submission of training plan</li> <li>• Date and location of training sessions, or as specified in approved plan</li> <li>• Personnel start date, training completion date, and initial construction field date, or as specified in approved plan</li> </ul> <p>Success criteria:</p> <p><i>Chance Find Procedure</i></p> <ul style="list-style-type: none"> <li>• No excavation or damage of tangible cultural heritage</li> </ul> <p><i>Cultural and Sacred Landscape and Places</i></p> <ul style="list-style-type: none"> <li>• No loss of continuity of spiritual, religious, and traditional activities due to inability to perform ceremonies and rituals</li> </ul> <p><i>Training</i></p> <ul style="list-style-type: none"> <li>• Training plan approval</li> <li>• All personnel trained prior to initial construction field date, or as specified in approved plan</li> </ul>

### 3.5 Health and Safety Management

In addition to the management measure under this heading, the following management measures also specify health and safety management requirements:

- Management Measure AWPP - 5: Emergency Preparedness and Response
- Management Measure AWPP - 7: Waste Management
- Management Measure AWPP - 11: Construction Camp and Temporary Facilities Management

#### Management Measure AWPP -13: Health and Safety Management

<b>POTENTIAL IMPACT</b>
Health and safety risks and impacts on work sites and in construction camps, and in the community
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Mongolian Law on Hygiene               <ul style="list-style-type: none"> <li>Requires introducing labor safety and hygiene management for protecting employees from accidents, damages, diseases which could occur during the operation.</li> </ul> </li> <li>Mongolian Law on Waste               <ul style="list-style-type: none"> <li>Requires providing relevant knowledge to their staff on waste sorting and comply with safety standards in their operation.</li> </ul> </li> <li>IFC Performance Standard 4               <ul style="list-style-type: none"> <li>Requires evaluating the risks and impacts to the health and safety of the affected communities during the project life cycle and establishing preventive and control measures consistent with good international industry practice.</li> <li>Requires avoiding or minimizing transmission of communicable diseases that may be associated with the influx of temporary or permanent project labor.</li> </ul> </li> <li>IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning               <ul style="list-style-type: none"> <li>Provides guidance on occupational health and safety and community health and safety.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>Identify, assess, manage, and record and communicate all health and safety hazards, and ensure:               <ul style="list-style-type: none"> <li>Resulting risks to people, property, assets, and the environment are evaluated</li> </ul> </li> </ul>

- Risks are managed in accordance with the recommended hierarchy of controls to achieve levels that are as low as reasonably practical
- Any requirements to mitigate risks are implemented
- Risks and actions to manage them are reported and communicated

## MANAGEMENT MEASURE

### Health and Safety Management

The Contractor will ensure, as far as practicable, that the health, safety, and welfare of employees and all other persons on site are secured and are protected from hazards created by the project.

The Contractor will:

- Fully comply with the requirements of this management measure
- Comply with the IFC Environmental, Health, and Safety Guidelines<sup>1</sup>
- Comply with the health and safety requirements in Contract Documents Section V, Works Requirements, including but not limited to:
  - Section 01030 Special Requirements, Paragraph 1.04.C Health and Safety Plan
  - Section 01046 Control of Work, Paragraph 3.05 Open Excavations
  - Section 01046 Control of Work, Paragraph 3.07 Interference with and Protection of Streets
  - Section 01063 Miscellaneous Requirements, Paragraph 1.03 Traffic Control
  - Protect drinking water sources, whether public or private, at all times
- Prepare and implement a traffic control plan for accessing the site, approved by Engineer
- Implement all reasonable precautions to protect the health and safety of workers
- Avoid or minimize the occurrence and transmission of communicable diseases, including surveillance, and active screening and treatment of workers
- Avoid or minimize potential hazards posed to project personnel and the public while accessing project facilities
- Undertake hazard analysis to identify opportunities to reduce the consequences of a failure or accident
- Control access to operational areas through physical barriers and demarcation, regular patrols of controlled areas, and engagement with communities
- Avoid or minimize traffic accidents and promote traffic safety by all project personnel
- Comply with local laws and international requirements applicable to the transportation of hazardous materials, and establish procedures for preventing or minimizing the consequences of releases of hazardous materials
- Inform and regularly update affected communities, including herders and vulnerable groups, and government agencies about potential project hazards and changes to project activities that may have environmental, health, or safety impacts, as well as the proposed prevention, mitigation, and emergency response measures
- Ensure that health, safety, and rescue matters are given a high degree of publicity to all persons regularly or occasionally on the project sites, as stipulated by Mongolia laws on occupational safety and health, by prominently displaying posters drawing attention to the relevant regulations in areas where Contractor and subcontractor personnel, Engineer's staff, MCA-Mongolia or its representative's staff, and site visitors will take notice
- Provide Health and Safety Management training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the site-specific Health and Safety Management Plan, to all employees and subcontractors at the time of their induction and annually thereafter

The Contractor will prepare and submit for the Engineer's written approval a site-specific Health and Safety Management Plan and associated procedures that, as a minimum:

- Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
- Adhere to the MCC Health and Safety Policy (2012) and ensure the health and safety of all workers employed during the construction phase of the project

<ul style="list-style-type: none"> <li>Complies with applicable Government of Mongolia regulations and international good practice, where the more stringent will apply</li> <li>Specifies: <ul style="list-style-type: none"> <li>Site security, including securing of excavations, hazardous materials, etc.</li> <li>Confined space safety procedures</li> <li>Excavation and trenching safety measures</li> <li>First aid facilities, equipment, and materials</li> <li>Protective clothing and safety equipment</li> <li>HIV/AIDS awareness program</li> <li>Covid-19 awareness program</li> <li>Counter-trafficking in persons program</li> <li>Health and Safety management monitoring and reporting</li> </ul> </li> <li>Assigns roles and responsibilities for health and safety management</li> </ul>

## 3.6 Education, Training, and Community Outreach

Incorporated in various management measures are requirements for education, training, and outreach. The overall goals of these requirements are to provide project employees with an understanding of the commitments included in those management measures and inherent in associated laws, regulations, and policies, and to provide the employees with an appreciation of their own accountability for maintaining mutually supportive relationships with local communities. All required training is to be provided as part of induction training (to provide general awareness) and job-specific training as necessary.

In addition to the management measure under this heading, the following management measures specify training requirements:

- Management Measure AWPP - 5: Emergency Preparedness and Response
- Management Measure AWPP - 6: Mongolian Marmot Protection and Habitat Restoration
- Management Measure AWPP - 7: Waste Management
- Management Measure AWPP - 8: Labor Management
- Management Measure AWPP - 9: Gender Integration and Social Inclusion (GSI)
- Management Measure AWPP - 10: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment
- Management Measure AWPP - 11: Construction Camp and Temporary Facilities Management
- Management Measure AWPP - 12: Cultural Heritage Protection
- Management Measure AWPP - 13: Health and Safety Management

Together, these management measures will be part of the Education, Training, and Community Outreach Plan.

#### **Management Measure AWPP - 14: Stakeholder Engagement, Community Consultation, and Grievance Redress**

<b>POTENTIAL IMPACT</b>
Delays, increased grievances, political interference, and unnecessary pressure from uninformed groups resulting from lack of information and discussion/consultation
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b>
Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>• IFC Performance Standard 1 <ul style="list-style-type: none"> <li>○ Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> <li>○ Requires establishment of a grievance mechanism to receive and facilitate resolution of affected communities' concerns and grievances about environmental and social performance, and scaled to the risks and adverse impacts of the project and with the affected communities as its primary user.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>• Inform and involve all stakeholders</li> <li>• Have in place a defined policy for dealing with external parties</li> <li>• Foster positive relations and effective partnerships with local communities throughout project construction and operation</li> <li>• Maximize the beneficial impact of the BWSE project on the affected communities</li> </ul>
<b>MANAGEMENT MEASURE</b>
<b>Stakeholder Engagement, Community Consultation, and Grievance Redress</b>

The stakeholders and affected communities are to be informed of the construction activities, including implementation timeline and grievance redress procedure.

### **Stakeholder Engagement**

- The Contractor will:
  - Maintain, revise, and update the Stakeholder Engagement Plan for the project consistent with the MCA-Mongolia Stakeholder Engagement Framework
  - Maintain, revise, and update the project Stakeholder Engagement Matrix
  - Document all stakeholder engagement activities in the Stakeholder Engagement Matrix

### **Community Consultation**

- The MCA-Mongolia or its representative will:
  - Introduce Contractor's officers to communities
  - Monitor and supervise Contractor contacts with communities and other stakeholders
  - Ensure that gender and social inclusion measures implemented by the Contractor are taken when planning meetings, and that thereby all sections of the community are equally informed and consulted
- In coordination with the MCA-Mongolia or its representative, the Contractor will:
  - Undertake community information dissemination, consultation, and outreach addressing the influx of migrant workers and the associated risks to the affected communities, the MCA- Mongolia Grievance Redress Mechanism, and other issues that arise during consultation
  - Document all community consultation activities in the Stakeholder Engagement Matrix

### **Grievance Redress**

- The MCA-Mongolia or its representative will supervise, and monitor participation by all parties
- The Contractor will:
  - Implement the Grievance Redress Mechanism consistent with Annex A
  - Designate the Contractor's staff for collaborating with the project Grievance Redress Mechanism
  - Document all grievance redress actions in the Stakeholder Engagement Matrix
  - Report on the Grievance Redress Mechanism to MCA-Mongolia and the Engineer

#### **LOCATIONS:**

All construction sites and temporary construction facilities

#### **MONITORING**

##### **MCA-Mongolia or its representative**

- Monitor Contractor contacts with stakeholders and communities
- Monitor participation by all parties in Grievance Redress Mechanism

##### **Contractor**

- Document all stakeholder engagement activities
- Document all community consultation activities
- Record results of Contractor's community consultation activities
- Document all grievance redress activities under the Grievance Redress Mechanism

#### **LOCATIONS:**

All construction sites and temporary construction facilities

#### **INDICATORS AND SUCCESS CRITERIA:**

<b>Indicators:</b> <ul style="list-style-type: none"> <li>Number, content, and outcome of: <ul style="list-style-type: none"> <li>Stakeholder engagement activities</li> <li>Community consultation activities</li> <li>Grievance redress actions</li> </ul> </li> </ul> <b>Success Criteria:</b> <ul style="list-style-type: none"> <li>Successful outcome of: <ul style="list-style-type: none"> <li>Stakeholder engagement activities</li> <li>Community consultation activities</li> </ul> </li> <li>Resolution of grievances</li> </ul>	
<b>REPORTING:</b> <ul style="list-style-type: none"> <li>Update project Stakeholder Engagement Matrix</li> <li>Summarize other activities undertaken during reporting period</li> <li>Specify any material deviations or non-compliances to this management measure, and any other issues of concern</li> <li>Define activities planned during next reporting period</li> </ul>

### 3.7 Risk Control and Emergency Response

The Risk Control and Emergency Response Plan references procedures specified in the management measures in the preceding plans that are pertinent to 1) controlling risks and 2) responding to emergencies. Such risks and emergencies include, for example, fuel spills and encountering previously unidentified cultural heritage resources, as well as incidents involving sexual harassment, human trafficking, and gender-based violence.

Due to the broad scope of the Risk Control and Emergency Response Plan, effectively the plan incorporates by reference the procedures specified in the management measures in all preceding plans for this project phase.

### 3.8 Monitoring and Verification, and Maintenance Actions

This Monitoring and Verification, and Maintenance Actions Plan scopes the use of an adaptive approach to:

5. Verify that the management measures in the preceding plans are implemented, and that they are effective and sufficient
6. Revise those management measures that prove ineffective or insufficient

This approach acknowledges the risk and uncertainty of environmental and social management and fosters targeted modification of management measures to correct performance and outcomes. It will be executed as a continuous, iterative process by which the consequences of all management actions are systematically evaluated and, as needed, specific measures are modified in response to a determination that their forecasted outcomes will not meet requirements.

In the preceding plans, indicators and success criteria are designated for each management measure. For each management measure, MCA-Mongolia or its representative, in its oversight capacity, will determine whether progress toward the designated success criteria is sufficient and will document its determination in its regular updates and progress reports to MCA-Mongolia. If progress decidedly fails to meet iterative requirements, MCA-Mongolia or its representative will inform the Contractor of the need to formulate a management measure-specific adaptive maintenance action to implement midcourse corrections. In coordination with the Contractor, MCA-Mongolia or its representative will reformulate the management measure to foster meeting the success criteria, incorporating as applicable operational or structural changes, and considering the cost effectiveness of incorporating the changes. The scope of most management measures likely will remain fairly stable; whereas, it is expected that some methods will be added, modified, or dropped over the implementation timeline of some management measures.

With the prior approval of MCA-Mongolia, the Contractor will implement and monitor the revised management measure, and MCA-Mongolia or its representative will provide oversight.

## 4 Implementation Work Plan and Schedule

The majority of the management measures in the preceding pre-construction phase and construction phase plans require that the Contractor prepare and submit for the Engineer's written approval plans that detail the Contractor's commitment and approach to fulfilling the requirements of the management measure. Therefore, an implementation work plan and schedule cannot be specified in this ESMP.

The Contractor is required to incorporate in the Contractor's ESMP a detailed Contract Work Plan and Schedule to facilitate implementing the Contractor's ESMP as an integral component of executing and supervising the construction work.

---

## Annex A – Grievance Resolution Mechanism

---

The Contractor shall develop and implement a grievance redress mechanism that shall be applied in the case of a complaint or grievance that is related to or results from implementation of the project activities. A well-implemented grievance redress management system shall demonstrate that the project is concerned about community members and their well-being, building trust, respect, and productive relationships. As with the broader process of stakeholder engagement, it is important that management stays informed and involved in the management of grievances so that decisive action can be taken when needed to avoid escalation of disputes.

Under the GRM all persons shall be clearly entitled to make a complaint by any means – personal contact, office visit, telephone, letter, email, website enquiry, and directly to MCA-Mongolia or its representative. There should be a dedicated free call line for complaints. The GRM must make it easy to make a complaint and for that to be addressed easily and speedily. The system shall require that any member of any company associated with the project is aware of the requirement that they must receive and transfer on any complaint submitted to them in whatever form to their Grievance Officer who then follows the protocol for resolution.

All project partners shall accept the GRM process, agree to participate, train all contractor personnel to use the protocols to report grievances, participate in grievance resolution and reporting. The requirement to collaborate with the GRM will be mandated in construction contracts which will also require the designation of a responsible officer, usually the Contractor's Social Safeguards Officer.

The project grievance redress mechanism shall compliment traditional local-level mechanisms<sup>92</sup> for complaint resolution and legal administrative approaches to complaint resolution at all levels. It shall also document complaints or grievances from the public or other stakeholders (external communications with affected communities), and how these are resolved.

The grievance redress mechanism is intended to assist in resolving grievances or complaints raised regarding environmental and/or social issues arising from the projects/investments, and does not apply to the following complaints even if they are related to project activities:

3. Procurement and contractual complaints between MCA-Mongolia and its vendors or contractors which are normally handled by the MCA-Mongolia General Counsel Office,
4. Lawsuits which fall under the mandate of the General Counsel.

The Grievance Redress Mechanism (GRM) shall be compliant with the requirements of the IFC Performance Standard 5 (2012) and the MCC RPF for Western Wellfields (2018)<sup>93</sup>, and considers MUB GRM good practices that have been implemented for development projects in Ulaanbaatar city.<sup>94</sup> References available upon request to MCA.

---

<sup>92</sup> The GSI Director will carefully consider the extent to which traditional mechanisms to resolve conflict are used, to ensure that these are not disadvantageous to women villagers, indigenous peoples, or other disadvantaged groups. A thorough assessment should be conducted to ensure that certain non-formal justice mechanism will assist women and other disadvantaged groups in accessing justice.

<sup>93</sup> Mongolia II Bulk Water Supply, Resettlement Policy Framework, Western Wellfields, MCC Feasibility Study, 2018

<sup>94</sup> Land Acquisition and Resettlement Plan for Selbe and Bayankhoshuu Subcenters: Heating Station, Kindergarten, Business Incubator and Training Center; UB Urban Services and Ger Areas Development Investment Program – Tranche 1, 2017

The MCA-Mongolia or its representative will supervise and monitor the GRM. The Contractor shall keep the Contractor shall have a grievance redress matrix that records every complaint and communication, the dates of each action and correspondence, how it is investigated and the outcome. The contracting company shall have an internal and external grievance policy and mechanism. The Contractor shall have a designated Grievance Officer to manage complaints according to the company policy. They must have a grievance policy for dealing with external complaints that is fully compliant with and integrated with their Engineer approved project GRM. The Contractor must also have an internal grievance management system.

MCA-Mongolia or its representative will monitor and supervise the contractors' Social Safeguards Officer. MCA oversight will be especially important when dealing with complaints related to sexual harassment, gender-based violence and sex trafficking complaints which require additional investigative expertise. MCA shall review, approve and be invited to attend training for contractors' personnel on roles and responsibilities for grievance management at both senior management levels and also to all members of the workforce. It is vital that all employees understand that they all can be receptors of grievances and they need to know how to deal with a complaint.

## 1.1 Complaint Resolution Procedure

The complaint resolution process shall be generally in accordance with the following. These complaint resolution procedures are compliant with Mongolian Law.

### Tier 1

- Step 1 – All contractors, staff, workers are responsible for receiving grievances and ensuring that the complainant is treated respectfully, and that the grievance is written down on the correct form and forwarded to the designated Grievance Officer in their organization.
- Step 2 - Receive and Register Complaint: The project designated person shall receive the completed complaint form, and he/she is responsible for documenting and recording the complaint in the log-in system/matrix for recording the grievance and processes to resolution. This person is also responsible for reporting as required to senior management on the grievances received and steps taken to resolve.
- Step 3 – Screening and Preliminary Assessment: An initial classification of the complaint will be conducted by the Grievance Officer who will assign the complaint to the relevant persons to resolve. The Grievance Officer is responsible for managing the response and reporting back to the project officer. The officer designated to resolve the issue is responsible for notifying the Grievance Manager or SST and sending information for inclusion in the project grievance matrix.
- Step 4 - Response to the Complaint: After consulting with the relevant personnel, the Grievance Officer contacts the complainant to acknowledge the complaint and provide information as to the expected steps and timeframe for resolution of the complaint. This communication is to be provided within 48 hours of receipt of complaint.
- Step 5 - Investigate and Resolve: This step investigates the complaint, including the underlying cause(s) of the complaint and develops actions needed to resolve the current issue and to prevent recurrence of a similar complaint. Resolution at local level can be a) rejecting the complaint with reasons or b) resolving the complaint and taking action to remedy as appropriate. The Designated Person reports the outcome to the Grievance Officer. Either way, the Grievance Designated Officer is responsible for communicating the decision to the complainant within **14 days** and to the Grievance Manager or SST for recording in the grievance matrix. The Designated Officer is responsible for implementing any works or payments or directives to subcontractors to remedy the source of the complaint, track it and document in the company and MCA-Mongolia records.
- Step 6 - If a local and immediate Tier 1 solution is not appropriate, then the receiving officer has to escalate the complaint to the next tier of grievance resolution,
- Step 7 - If the complaint cannot be resolved then the receiving officer must revise the selection or implementation of approaches.
- Step 8 - Close-out: After implementing mitigating actions or resolving the issue, a letter describing the response and outcome is sent to the complainant, signed by a project head.
- Step 9 - Follow-up: Based on the complainant satisfaction level, the response shall be archived or transferred for further investigation.

If resolution cannot be achieved the process is escalated to Tier 2.

**Tier 2:** If the complaint cannot be solved in Tier 1, the Designated Officer will assess the eligibility of the complaint and address to relevant divisions/offices of the district and its resolution is recommended to the district Governor for approval and resolved within 30 days. The Designated Officer will record its deliberations and inform the concerned parties orally or by telephone and in writing, as appropriate. If the solution is agreed by the complainant, the contractor or implementing entities will implement the solution. Written records will be made of all stages and outcomes.

During this second review process either another formal written response will be provided to the grievant in **30 days** or it may be decided to hold a meeting with contractor representatives and the grievant. If complaint is ineligible (i.e., not a project related impact), it will be recorded and passed to the relevant authorities and the complainant will be informed of the decision and reasons for rejection within 30 days according to the Law on Handling Grievances of Citizens Addressed to Government Authority and Government Officials.

**Tier 3:** If the grievance is not resolved within 30 days from its lodging at Tier 2 and/or the complainant is not satisfied with the recommended solution, the grievance will be submitted to the related divisions/offices of the MUB and its resolution is recommended to the MUB Governor for approval and action within 30 more days. If necessary, the MUB Governor will organize stakeholder meetings and/or Working Group meetings. A solution acceptable to all shall be identified including clear steps. The contractors and implementing entities will immediately implement the agreed solution. Written records will be made of all stages and outcomes.

**Tier 4:** Failing resolution at Tier 3, the complainant has recourse to the Courts which should be regarded only as a last resort. With specific regard to land disputes, in accordance with the Law on Land (Article 60, "Settlement of Land Related Disputes"), these will be settled by the relevant khoroo governor. Where this is unsuccessful, the dispute shall be settled by a higher-level authority, or in court. Alternatively, residents may also go directly to the District Land Officer.

This system is depicted in the following figure.

## Flow Chart of the GRM

## 1.2 Approaches to Locally Based Grievance Resolution

The following approaches are required for grievance resolution:

- Dissemination of information to communities on how to make a complaint
- Dissemination of information on the GRM and how to make a complaint is made to all contractors and employees so that they understand their role in receiving and transmitting on all complaints. Ensure that all employees can assist complainants to fill in forms.
- Ensure all project partners offices have complaint forms available at reception areas and instructions on the process. Ensure that visitors can approach the Grievance Officer directly.
- Include information on grievances in information bulletins and community meetings so as to maintain trust in the process.
- Use a grievance log to monitor cases and improve the organization. In addition to resolving individual or community disputes, the grievance mechanism is an opportunity to promote improvements in the project and trigger policy and practice changes
- Evaluate and improve the system. The MCA-Mongolia or its representative shall be allowed to periodically conduct an assessment of the GRM to evaluate and improve its effectiveness and the Contractor shall comply with the outcomes and recommendations of those reviews. The evaluation will include: general awareness of the mechanism; whether it is used and by whom; the types of issues addressed; the ability of the mechanism to resolve conflicts early and constructively; the actual outcomes (impacts on project operations, management systems, and benefits for communities); its efficiency; and, most fundamentally, the ability to accomplish its stated purpose and goals. The MCA-Mongolia will solicit and include the views of stakeholder representatives to see how the mechanism is proving effective in practice.

## 1.3 The Grievance Form

The Grievance Form (GF) developed by the Contractor will at minimum contain the following:

- Basic information about the affected entity (name, address, contact number)
- Category of grievance filed (legal, technical/engineering, social, financial)
- Detailed description of grievance including time, date of incident and of recording, location etc.
- Type of action(s) taken (resolved at the local level or referred to higher authorities)

As a grievance is addressed, the type of action(s) taken will also be recorded on the GF, in order to document how the grievance was resolved.

The complainant enjoys the right to use the Governmental grievance redress procedures in accordance with the Law on Handling Grievances of Citizens Addressed to Government Authority and Government Officials. This governs grievance and complaints of citizens regarding the decisions and conduct of government authority or officials, and access to the judicial system, i.e., go to the courts, at any time, if they feel their grievance or concern is not being adequately addressed through the project GRM.

## 1.4 Grievance Mechanisms for Contractor's Internal Process

Each contractor is required to have an internal grievance policy and process for employees to raise issues about conditions of contact and behavior. The usual process is run by the human resources officers with the support of the Social Safeguards Officer. However, the treatment of allegations of sexual harassment, of gender-based violence and trafficking of persons needs external assistance to undertake effective investigation into allegations.

The Contractor must have an **anonymous** mechanism for reporting suspected TIP incidents that can be used by workers and communities. The Contractor has to develop a TIP response plan covering these issues: this TIP response plan will designate the SSO to manage the investigation including an external investigation lead from the Centre for Gender Equality, ensure a response within 24 hours and an effective resolution as soon as possible. This will also include contacting the legal authorities and qualified NGOs.

It is required that investigations into these issues are conducted with both a MCA Mongolia representative present and an external investigator drawn from a suitably qualified organization such as the Centre for Gender Equity who will chair the enquiry.

MCA Mongolia shall be able to work with the human resources department of the contractor to monitor contractor internal grievance mechanisms to ensure that allegations of sexual harassment, of gender-based violence and trafficking of persons are properly investigated with confidentiality protected and participate to ensure the investigation is properly undertaken. Appointing an independent but well-informed chair ensures effective investigation. Full documentation and recording is required.

Toolbox talks by the Contractor on anti-sexual harassment are required monthly. Contractors are required to mandate and enforce a policy refusing the transportation of non-project workers in company vehicles.

---

# **Annex B – Public Consultation and Stakeholder Engagement Plan for BWSE**

---

## **1.1 Introduction**

Good communication of the project with the public is vital for successful relations with all stakeholders and enhances the opportunities offered by successful projects. The risks associated with poor stakeholder relations are now better understood by all stakeholders. The concept of “stakeholder engagement” is emerging as a means of describing a broader, more inclusive, and continuous process between a project and those potentially impacted that encompasses a range of activities and approaches, and spans the entire life of a project. Increasingly, the recognition that reputational risks that come from poor stakeholder relations, place a growing emphasis on corporate social responsibility and transparency and reporting. In this context, good stakeholder relations are a prerequisite for good risk management. The focus of this SEP is on interactions with stakeholder groups “external” to the core operation of the project, such as affected communities, local government authorities, non-governmental and other civil society organizations, local institutions and other interested or affected parties.

Stakeholder engagement is an umbrella term encompassing a range of activities and interactions over the life of a project. Not all stakeholders in a particular group or sub-group will necessarily share the same concerns or have unified opinions or priorities as stakeholders come in all sorts of groupings, interests and formats. Stakeholders are persons or groups who are directly or indirectly affected by a project, as well as those who may have interests in a project and/or the ability to influence its outcome, either positively or negatively. Stakeholders may include locally affected communities or individuals and their formal and informal representatives, national or local government authorities, politicians, religious leaders, civil society organizations and groups with special interests, the academic community, or other businesses. Interactions with all these groups require a SEP.

## **1.2 Stakeholder Engagement Plan**

This section describes the elements of the Stakeholder Engagement Plan to take forward the BWSE project.

The Stakeholder Engagement Plan covers nine components:

10. Staffing and resources
11. Stakeholder Identification and Analysis
12. Information Disclosure
13. Stakeholder Consultation
14. Partnerships
15. Grievance Management
16. Stakeholder Involvement in Project Monitoring
17. Reporting to Stakeholders
18. Management Functions

## **1.3 Staffing and Resources**

There are numerous stakeholder groups with potentially conflicting interests and influence in the project and these need careful and consistent management to gain and maintain a social licence to operate. Stakeholder Engagement for the BWSE requires substantial inputs of time to develop and to operate effectively. The most effective and integrated management location for the SEP team is under the MCA-Mongolia or its representative, under a trained and experienced Social Safeguards Specialist or Manager.

The SST requires a dedicated office with a small community meeting space, desks etc, filing capability, computer facilities, internet and telephones. The SST needs at least two Community Liaison Officers at field level to ensure good communication within affected communities.

The first task of the SST is to write an SEP with associated Standard Operating Procedures (SOPs) for each of the above sections to manage stakeholder interactions – this is to be regularly reviewed and updated.

## **1.4 Stakeholder Identification Analysis**

The ESIA process identified and consulted many potential stakeholders in the project. This work must be consolidated into a project wide stakeholder engagement matrix (SEM) listing each stakeholder, areas of interests and influence, contact person, contact details and add a line in the matrix for each meeting, consultation, email or telephone call etc. and the response made.

The SST must write an SOP for the management of the SEM.

The project is not static, stakeholders change interests, legislation and regulations change and institutional responsibilities mutate so that the stakeholder engagement process has to maintain and record and respond to stakeholders as they interact with the project and as they change over time. The SEP requires regular interaction with stakeholders to update and exchange information alongside the progression of the projects. To this end, the SEP is a live process, requiring regular monitoring and updating.

## **1.5 Information Disclosure**

The exchange of appropriate information with the right groups of people in an appropriate media and appropriate text and at the right time is fundamental to the success of the project. Information Disclosure must be planned and executed effectively to ensure project progress. The SST will have to plan in advance:

1. What information needs to be disseminated and when, broken down into individual messages by audience by project phase.
2. What language and wording is appropriate for each message and each audience. Will a translation be necessary?
3. Which media is suitable for each message and audience – meetings, letter, telephone call, radio broadcast, newspaper, social media etc.
4. Commission and maintain a project website to display information and enable communication from outside. This should enable complaints to be received and support the grievance redress mechanism. Members of the SST should have cards to hand out to enable people to know who they are and how to contact them.
5. Write an SOP to manage each message design and dissemination stating responsibilities and actions

6. Derive a budget for information dissemination activities over all project phases.

## **1.6 Stakeholder Consultation**

Information needs for the BWSE are not one way – not only do stakeholders need to receive project information but there needs to be a formal system of stakeholder consultation to enable external views to be heard and to enable discussion of project elements. This requires a system of consultations of stakeholders over the life of the project. The SST needs to examine the SEM and identify ways of regular consultation at appropriate intervals – some stakeholders need more frequent consultation than others at various times.

The SST needs to define a schedule of consultations, define suitable consultation intervals over the project life and draw up a calendar of consultations. These then need to be allocated to a consultation type, e.g. large physical meeting, small physical meeting, zoom/ skype call, allocated to where the meeting should/ could take place and allocate frequency, allowing for a margin of additional meetings in response to currently unknown circumstance. Resources and staffing can then be budgeted for consultations.

Regardless of the very small resettlement impacts under BWSE, special consideration needs to be made for families affected by landtake to ensure their interests are protected. The optimum consultation technique for this in BWSE, is the inclusion of two Community Liaison Officers in the SST (one per District) who will keep in contact with affected community members.

Consultation meetings need an organizer to make arrangements and distribute invitations to meetings, a meeting leader to lead the discussion and a recording assistant. It is best practice to make recordings of meetings and make a transcription as meeting notes. Copies of the meeting notes are distributed to meeting participants.

The SST needs an SOP on meeting protocol defining responsibility for arrangements, invitations, recording of meetings, distribution of minutes and integration into the SEM and data storage.

## **1.7 Partnerships**

Non-governmental organizations (NGOs) and community-based organizations (CBOs), particularly those who represent communities directly affected by a project, can be important stakeholders for companies to identify and engage on a proactive basis. NGOs may have expertise valuable to effective stakeholder engagement. For example, they can be sources of local knowledge, sounding boards for project design and mitigation, conduits for consulting with sensitive groups, and partners in planning, implementing and monitoring various project-related programs.

It is important to carry out initial research regarding the local power dynamics and existence of special interest groups to ensure that any intermediary organizations, such as NGOs, are truly representative of and accountable to the community interests they claim to support and represent. If there is NGO opposition to the project, engaging early to try and understand the concerns or critiques being raised can offer an opportunity to manage these issues before they escalate or find another outlet for expression.

Occasionally, projects require partnerships with other organizations in order to achieve some element. In BWSE, this may involve an NGO like Centre for Gender Equality, who may be needed to assist with training programs on gender and social inclusion, C-Tip training etc. and on assisting internal grievance procedures over cases alleging sexual harassment or gender based

violence within contractors. The SST needs to have an allocation in its budget for additional small levels of expenditure procuring additional partner services to meet the MCC Policies on Gender and Social Inclusion, C-TIP, HIV/ AIDS, etc. that need to be supplied externally from the MCA-Mongolia or its representative.

The SST must review potential partner organizations and explore possibilities for partnering with the MCA-Mongolia or its representative, and record communication in the SEP. An SOP on agreements and negotiations with third party partners is required.

## **1.8 Grievance Management**

The Grievance Redress Mechanism is discussed in detail in Annex A. It is vital that the mechanism is integrated into the SEP as it is the major channel of negative comment and complaint and needs effective management to resolve grievances and be reported to wider project management. Ideally, the responsibility for receiving and resolving grievances in BWSE would be of the MCA-Mongolia or its representative's SST. The SST needs sufficient staffing to manage community investigations and allegations of grievances.

The GRM requires a grievance matrix (GM) to record the incidence of each grievance and the process of investigation and response, The GM data must form part of the SST monthly reporting process.

## **1.9 Stakeholder Involvement in Project Monitoring**

One way to help satisfy stakeholder concerns and promote transparency is to involve project-affected stakeholders in monitoring the implementation of mitigation measures or other environmental and social programs. Such participation, and the flow of information generated through this process, can also encourage local stakeholders to take a greater degree of responsibility for their environment and welfare in relation to the project, and to feel empowered that they can do something practical to address issues that affect their lives. Participatory monitoring also tends to strengthen relationships between the project and its stakeholder.

Participatory monitoring goes beyond the project consulting with affected stakeholders on environmental and social monitoring data. It requires the physical presence of affected individuals at the time that monitoring takes place and involves data collection methods and indicators meaningful to the stakeholders concerned.

Participatory monitoring might include, for example:

5. Involvement of affected stakeholders in scientific sampling methods, questionnaires and analysis,
6. Observations by affected parties, triangulated to strengthen validation,
7. Group discussions on the success of mitigation or benefit measures and/or on how to manage new issues that have arisen
8. The adaptation of conventional participatory techniques to the purpose of assessing changes in the physical and socio-economic environment over time, such as a seasonal calendar, daily/weekly schedules, resource and land-use maps, and wealth ranking.

External monitoring of a company's environmental and social commitments can strengthen stakeholder engagement processes by increasing transparency and promoting trust between the project and its key stakeholders. Projects benefit by receiving an objective assessment of their environmental and social performance, which can help defuse external criticism and strengthen

support from local stakeholders. An external monitor can also help increase both the accountability of the project and the credibility of the monitoring results in the eyes of affected communities and civil society groups by serving as an independent and objective source of information and reporting. External monitors may be NGOs, government regulators, academics and scientists, community representatives, technical experts, or eminent persons.

Planning to include stakeholders in monitoring, whether internally or externally, need to be anticipated and included in the SEP and project monitoring plans. SOPs for managing these interactions are useful, particularly if they are drawn up in consultation of the stakeholder groups.

## **1.10 Reporting to Stakeholders**

Once consultations have taken place, stakeholders need to know which of their suggestions have been taken on board, what risk or impact mitigation measures will be put in place to address their concerns, and how, for example, project impacts are being monitored. In addition to reporting back to project-affected groups and other stakeholders as part of the consultation process, there are other types of reporting that target a different set of stakeholders. Sustainability reporting, for example, provides projects with an opportunity to communicate information to a much wider range of stakeholders about the environmental, social, economic, and governance performance of the project. It also offers a platform to report back on the process of stakeholder engagement itself, such as who has been consulted, on what topics, and with what results. Consequently, a number of international codes and standards for reporting now include requirements for implementing and reporting on stakeholder engagement, e.g. IFC Performance Standards.

Under this heading, the SST needs to:

7. Determine what information needs to be reported to which stakeholders, by what method and how frequently, add to the SEP budget lines.
  8. Regularly update the commitments register where promises have been made to stakeholders in response to complaints or external pressure
  9. and disclose progress to affected and interested parties. In particular, publicize any material changes to commitments or implementation actions that vary from publicly disclosed documents.
  10. Make monitoring results publicly available, especially reports of any external monitors.
  11. Regularly report on the process of stakeholder engagement as a whole, both to those stakeholders who are directly engaged, and to other interested parties.
  12. Derive an SOP for reporting to stakeholders.
- 51.

## **1.11 Management Functions**

Increasingly, good practice points to incorporating stakeholder engagement activities into a project's environmental and social management system. In practice this means making its management systematic by integrating it with core activities. To achieve this, the MCA-Mongolia or its representative will need to identify critical points in the life of the project where stakeholder engagement will be needed, and determine who will deliver these actions and how they can be integrated with core project functions. This involves trying to work out how best to deliver and integrate a number of different aspects of engagement and reporting as discussed in the previous sections, including:

8. Ongoing stakeholder analysis and the assessment of stakeholder concerns from a “risk” perspective
9. The hiring and training of community liaison officers
10. Consultation processes designed to meet the Project’s own policies and/or compliance requirements of funders and regulators
11. Input and suggestions received from stakeholders on project design and proposed mitigation measures
12. Grievance mechanisms that capture and respond to stakeholder concerns
13. The involvement of local stakeholders in project monitoring
14. Reporting information to stakeholders.

Most importantly, stakeholder engagement should be managed as one would manage any other project function — with clearly defined objectives and targets, professional, dedicated staff, established timelines and budget, and senior management responsibility and oversight.

Some good practice principles for managing stakeholder engagement processes are given below.

- Coordinate activities and assign overall responsibility: Over the life of the project, affected communities and other interested parties will likely interact with a variety of representatives from within the project and its contractors. It is essential that this diverse set of engagement activities be coordinated.
- Consistency of information: Consistency of information conveyed to stakeholders by different teams or business units within the MCA-Mongolia and its representative is important, as is keeping track of such activities in order to reduce inefficiencies, confusion, and conflicting messages or commitments. This is usually best achieved by giving a senior Social Manager overall responsibility for stakeholder engagement. This high-level oversight not only helps to underscore the importance of the function but is needed in order to effectively implement the strategy and coordinate the various activities across the project.
- Hire, train, and deploy the right personnel: Initial stakeholder analysis will provide a sense of the type of stakeholder groups the project will need to engage during different phases of the project cycle. Engaging different types of stakeholders requires different skills and staffing considerations. For example, engaging with local communities requires one or more field-based community liaison officers, whereas engagement with government officials or local, national, and international organizations will likely require different skill sets and more direct involvement of the senior Social Manager. The project should consider bringing in social advisors or other expert staff to help design and facilitate the process and assist with participatory methodologies and other specialized techniques. When hiring community liaison staff, consider people who will be able to develop and maintain good working relationships with the local communities. Since their job will involve listening and responding to local concerns and suggestions, qualities to look for include:
  - Good people and communication skills
  - A good understanding of the local language and community/cultural dynamics
  - Open-mindedness and respect for the views of others
  - A solution-oriented approach
  - A high integrity/degree of trustworthiness
  - A genuine commitment to the position and its goals

52.

- Create clear reporting lines between the community liaison function and senior management: In order to be effective, Community Liaison Officers need to have the authority to negotiate on behalf of the project. This requires a clear reporting structure and clarification as to which decisions they can take unilaterally, and which are to be passed on to higher levels within the MCA-Mongolia and its representative. Direct reporting lines also enable senior managers to control risks by being kept informed of this type of field- level information in a timely manner. The more likely it is that the concerns of local stakeholders might pose a risk or reputational issue for the project, the more important it is for Community Liaison Officers to have a direct channel to senior managers.
  
- Communicate the strategy internally: If stakeholder engagement is to be effectively integrated into day-to-day project operations, the concept needs to be “owned” by all staff. Every project unit needs to be aware of the strategy and understand why the company is committing time and resources to the SEP. Too often, stakeholder engagement programs are compartmentalized within the project and regarded as a “soft concept” that is the domain of a few community liaison staff. By clarifying the links between stakeholder engagement and environmental and social performance – as well as its potential to impact on reputation and project outcomes –stakeholder relations becomes a collective responsibility.

## J.3 CP-3: Raw and Finished Water Conveyance

### 1. Introduction

This environmental and social management plan (ESMP) specifies management measures to avoid, minimize, or offset potential significant adverse environmental and social impacts, or reinforce or enhance potential beneficial impacts of construction contract package CP-3: Raw and Finished Water Conveyance of the proposed Ulaanbaatar (UB) Bulk Water Supply Expansion (BWSE). Consistent with International Finance Corporation (IFC) Performance Standards on Environmental and Social Sustainability (Performance Standards), this ESMP adopts “a mitigation hierarchy to anticipate and avoid, or where avoidance is not possible, minimize, and, where residual impacts remain, compensate/offset for risks and impacts to workers, Affected Communities, and the environment.”<sup>95</sup>

Management measures and, as necessary, compensation are specified for the following project phases:

- Preconstruction – i.e., actions that need to occur prior to construction; however, not including land acquisition and involuntary resettlement, which are addressed in detail in the BWSE resettlement action plan (RAP), and not including construction mobilization
- Construction, including construction mobilization and demobilization
- Operation and Maintenance, which will be conducted by others and is not included in the version of this ESMP which is being issued for construction bidding

Construction mobilization is scheduled to begin within several months of issuing this ESMP and the preconstruction phase then will have been completed. As preconstruction activities currently are underway and soon will be concluding, the associated management measures specified in the ESMP are few and predominantly reference management measures otherwise specified for the construction phase.

For each management measure, as appropriate for each phase of the project, the ESMP details:

- Potential Impact – Potential adverse or beneficial effect that the measure is designed to address, and target locations, resources, or communities
- Standard / Requirement Triggered – Mongolian or international standard or requirement triggered by the potential impact
- Management Measure – Specific, implementable, verifiable, and cost-effective action to be taken
- Monitoring – Monitoring activity to be undertaken
- Locations – Locations where the management measure and monitoring are to be implemented
- Indicators and Success Criteria – Indicators and criteria to be used to verify that the management measure is being implemented, and that it is effective and sufficient
- Reporting – Monitoring reporting requirement
- Schedule – Timing and frequency of implementing the management measure, monitoring, and reporting
- Responsibility – Delineation of responsibilities for implementing the management measure, monitoring, reporting, and oversight

---

<sup>95</sup> Performance Standard 1, Assessment and Management of Environmental and Social Risks and Impacts. International Finance Corporation. 2012. *Performance Standards on Environmental and Social Sustainability*. World Bank Group, January 1, 2012.

The management measures and monitoring specified in this ESMP will be implemented, as applicable, together with the conditions, procedures, and best engineering practices specified in the design of the BWSE project prior to or irrespective of its evaluation in the ESIA. For purposes of the ESMP, best engineering practices and management measures are distinguished as follows:

- *Best engineering practices* are actions typically taken by the project proponent, construction contractor, or operator to avoid or minimize potential adverse environmental and social impacts but are not implemented in response to the impact findings of the ESIA.
- *Management measures* specified in the ESMP differ from best engineering practices in that they will be implemented specifically in response to the impact findings described in the ESIA.

In other words, best engineering practices are inherently part of the BWSE and are not additional management measures specified as a result of the impact assessment process. With respect to the construction phase, they are practices that typically are within the scope of services of the construction contracting firm performing the work. Their implementation is assumed in the impact analysis presented in the ESIA.

The best engineering practices are detailed as Technical Specifications and are set forth in Section V, Works Requirements of the Construction Contract Documents. Those technical specifications that the ESIA team assumed would be taken by the project proponent, construction contractor, or operator, and would avoid or minimize potential adverse environmental and social impacts are organized into Division 1 – General Requirements and Division 2 – Site Work, and in turn into sections. The relevant issues are addressed by technical specifications in the respective sections indicated in the two following Technical Specification text boxes.

If the best engineering practices in place avoid or sufficiently reduce the impact of activities evaluated in the ESIA below the level at which the impact would be significant, additional avoidance or minimization of potential adverse impacts may not be needed. Conversely, management measures specified in the ESMP have been developed to avoid, minimize, or offset adverse impacts; or to reinforce or enhance beneficial impacts.

### **Technical Specifications, Division 1 – General Requirements**

#### **Section 01030, Special Requirements**

- Site-specific health and safety plan
- Site-specific emergency action plan
- Site-specific hazardous waste management plan
- Backfilling operations following pipe laying
- Application of clean water to control dust
- Removal and legal disposal of unsuitable material and excess material
- Disposal of debris
- Preconstruction Video Recording of Entire Site
- Detours and Road Accessibility
- Owner Obtained Permits

#### **Section 01046, Control of Work**

- Hours of Construction
- Safeguarding of Open Excavations
- Occupying Private Land
- Protection of Streets
- Care and Protection of Property

#### **Section 01063, Miscellaneous Requirements**

- Traffic Control
- Maintain Flows of Existing Utilities

#### **Section 01110, Environmental Protection Procedures**

- Protection of Existing Structures and Utilities
- Cleanup and Disposal of Excess Material
- Prevention of Environmental Pollution
- Erosion Control
- Protection of Streams, Wetlands and Surface Water
- Protection of Land Resources
- Protection of Air Quality
- Noise Control

#### **Section 01500, Temporary Facilities**

- Field Offices
- Visitor Center
- Internet Service
- Telephone Service
- Temporary Perimeter Fence
- Potable Water for Construction and Domestic Purposes
- Temporary Electrical
- Temporary Sanitary Conveniences
- Barricades
- Temporary Heat
- Shelter and Protection of Materials
- Site Security

#### **Section 01568, Erosion Control, Sedimentation & Containment of Construction Materials**

- Erosion Control

#### **Section 01610, Delivery, Storage and Handling**

- Storage and Handling of Hazardous Materials

#### **Section 01700, Contract Closeout**

- Final Cleaning

#### **Section 01710, Cleaning Up**

- Cleaning Up Project Site

### **Technical Specifications, Division 2 – Site Work**

#### **Section 02100, Site Preparation**

- Special Requirements
- Contractor shall repair or replace any structures that are damaged
- Disposal of waste/surplus materials
- Inform Owner if there were archeological findings during site preparation
- Clearing, Grubbing, Tree & Stump Removal
- Disposal of Waste Materials
- Sediment and Erosion Control

#### **Section 02140, Dewatering**

- Dewatering

#### **Section 02210, Earth Excavation, Backfill, Fill and Grading**

- Excavation
- Separation of Excavated Material for Reuse
- Trench Excavation
- Reuse and Disposal of Surplus Excavated Materials
- Care and Restoration of Property
- Backfilling

#### **Section 02230, Site Clearing**

- Clearing and Grubbing

#### **Section 02268, Erosion Control Barrier**

- Erosion Control Barrier

#### **Section 02480, Landscaping**

- Plants
- Loam and Seed
- Planting
- Maintenance of Seeded Areas and Planting

#### **Section 02483, Planting Operations**

- Planting and Maintenance of Trees, Shrubs and Ground Cover

#### **Section 02485, Loaming and Seeding**

- Loaming and Seeding of disturbed area
- Wetland Seed Mixture
- Straw for Erosion Control

As appropriate for each of the subject project phases or the overall ESMP, the ESMP organizes and summarizes the management measures into the following constituent plans and schedules:

- Environmental Management
- Waste Management
- Social and Gender Inclusion
- Health and Safety Management
- Education, Training, and Community Outreach
- Risk Control and Emergency Response
- Monitoring and Verification, and Maintenance Actions
- Implementation Work Plan and Schedule

The first four plans/schedules listed above detail specific management measures to mitigate adverse environmental and social impacts or reinforce potential beneficial impacts. Each management measure is detailed in a table that is specific to that measure. The remaining plans/schedules provide procedures, as appropriate referencing the management measures in the preceding plans, to address specific concerns and issues, or summarize the measure-specific procedures, timetables, and schedule for implementing the ESMP.

## 2. Pre-Construction Phase

### 2.1 Responsibilities During Pre-Construction

#### 2.1.1 MCA-Mongolia

MCA-Mongolia or its representative will be responsible for oversight of the pre-construction-related management measures and monitoring specified in the ESMP. MCA-Mongolia or its representative will inform and coordinate with all applicable stakeholders regarding their corresponding mandates under or in relation to the ESMP. MCA-Mongolia or its representative will establish a Social Safeguards Team (SST) and coordinate with the Contractor during the pre-construction and construction phases in implementing, supervising, reporting, and follow-up actions with regard to the ESMP.

#### 2.1.2 Contractor

The construction contracting firm performing the work, the **Contractor**, will be fully responsible for implementing and monitoring all pre-construction-related management measures specified in the ESMP—together with the conditions and procedures specified in Section V, Works Requirements of the Construction Contract Documents. The Contractor will read the ESMP, consider it in its entirety, and comply with all aspects of the ESMP that pertain to implementing and monitoring of pre-construction-related environmental and social management.

The Contractor will abide by the requirements of this ESMP, which is appended to and is a part of the Contract. Following construction contract award, the Contractor will develop a site-specific Contractor's Environmental and Social Management Plan (CESMP), as further described below, for approval by the Engineer prior to start of the construction works. The Contractor will prepare the site-specific CESMP based on the contents of Section V, Works Requirements and this ESMP. The Contractor will submit the detailed, site-specific CESMP to the Engineer within 28 days after receiving the Letter of Acceptance. The CESMP must be approved by the Engineer prior to commencement of the execution of the Works.

The Contractor is advised that all sites where the Contractor will establish temporary construction facilities will be subject to environmental and social impact assessments and must be covered by

an acceptable CESMP and must be permitted in accordance with all applicable permitting requirements. The Contractor will need to negotiate with and potentially compensate landowners for temporary use of land.. These temporary facilities may be co-located and potentially would comprise the following:

- Construction camps
- Laydown, staging, and storage sites
- Concrete batch plants
- Site offices
- Fuel storage
- Parking areas

The Contractor will take all necessary measures and precautions to ensure that the execution of the works and all associated operations on site or off site are carried out in conformity with statutory and regulatory environmental and social requirements of the Government of Mongolia and the technical specifications, where the more stringent will apply. The Contractor will take all measures and precautions to avoid any nuisance or disturbance arising from the execution of project activities. Wherever possible, this will be achieved by avoidance of the impact at the source rather than mitigating an impact after it has been expressed.

The Contractor will develop a grievance redress mechanism (GRM) based on guidance provided in Annex A of the ESMP.

The Contractor will designate an Environmental and Social Performance Manager as a key staff. This individual will have knowledge of relevant Mongolian, IFC, and Millennium Challenge Corporation standards and regulations, and knowledge of environmental, social, and gender issues that include, but are not limited to, environmental management, waste management, gender and social inclusion, cultural resources, and health and safety management.

This individual(s) will be responsible to:

- Work closely with MCA-Mongolia or its representative to guide the Contractor's thorough understanding of the mitigation and monitoring requirements
- Lead the Contractor's work related to implementing environmental and social management measures and relevant monitoring requirements
- Work closely with MCA-Mongolia or its representative to incorporate or modify management measures and monitoring actions proposed by the Contractor, as needed, to reflect field conditions with the approval of the Engineer.

The Contractor, while in possession of the construction sites, will be responsible for the safety measures undertaken in accordance with the Technical Specifications to protect the workforce of the Contractor's own staff as well as the Engineer's and MCA-Mongolia or its representative's supervision staff. The Contractor will conduct in this respect safety induction courses for all personnel involved with the works and who are required to supervise any activity prior to their attending any part of the works.

Additional training is required to meet MCC social policy requirements as per the:

- Labor Management Plan
- Gender Integration and Social Inclusion Plan
- Counter-Trafficking in Persons Response Plan and Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan
- Stakeholder Engagement Plan

- Construction Camp and Temporary Facilities Management Plan
- Cultural Heritage Training Plan
- Managing external grievances as part of the project GRM

The Contractor will act responsibly to provide notification of the Contractor's schedule to enable MCA-Mongolia or its representative to carry out its responsibilities. The Contractor will be required to provide verbal and written updates to MCA-Mongolia or its representative on a regular basis indicating percent achievement of the pre-construction-related management measures specified in the ESMP. On a monthly basis, as part of the Contractor's monthly progress report, the Contractor will submit an ESMP update that will report the status of all environmental and social compliance activities and actions taken by the Contractor.

### **2.1.3 Contractor's Environmental and Social Management Plan (CESMP)**

The site-specific CESMP is required for construction activities and will provide the implementation vehicle of specific management activities applicable for the construction sites. At the direction of the Engineer, the Contractor is required to update the CESMP, including constituent plans and procedures, during the construction works as part of its obligations under its contract. The CESMP is required to strictly follow and comply with the environmental, social, health and safety requirements of the Millennium Challenge Corporation (MCC) and national legislation, as well as this ESMP, its constituent plans, and other applicable documents and regulations.

The site-specific CESMP will provide identified site-specific management measures, and refine organizational and operational procedures for the implementation of those measures, including implementation timeline and specific reporting requirements. The CESMP will detail the plans and procedures constituent to the CESMP and elaborate complimentary environmental, social, and health and safety management measures and training, and indicate the responsibility for implementation, technical details, and how implementation will be monitored. The CESMP, at a minimum, shall include the following plans:

- Environmental Management Plan
- Waste Management Plan
- Social and Gender Inclusion Plan
- Health and Safety Management Plan
- Education, Training, and Community Outreach Plan
- Risk Control and Emergency Response Plan
- Monitoring and Verification, and Maintenance Actions Plan

#### **2.1.3.1 Objectives of the CESMP**

The Contractor will prepare the site-specific CESMP in order to properly manage its construction activities in accordance with Section V, Works Requirements and this ESMP, and in compliance with requirements of MCC and Mongolian legislation. This includes requirements on community engagement and gender integration incorporated into the ESMP, the Employer's Social and Gender Integration Plan, and Counter-Trafficking in Persons requirements of MCC, and the laws and regulations of Mongolia.

The site-specific CESMP will be prepared with the following objectives:

- Provide the environmental and social policy of the Contractor
- Provide operational and emergency procedures, developed to address the environmental aspects and risks associated with the construction activities
- Provide details on approaches and measures and appropriate personal protective equipment (PPE) and other equipment for handling hazardous waste generated on each site

- Provide details on communication and reporting, as well as contacts of site supervisors nominated to control and guide works involving disturbance of hazardous materials and waste
- Clarify the implementation and operation of the site-specific CESMP to ensure that structure and responsibilities are assigned, workers are trained, aware, and competent, and that there is proper communication, documentation, operational control, and emergency preparedness and response
- Provide organizational and technical procedures for implementation of the CESMP to ensure that construction activities associated with potential environmental and social impacts are carried out in a controlled and responsible way
- Provide checking and corrective action through monitoring and measurement
- Provide mechanisms for maintaining adequate records of corrective actions to allow effective monitoring
- Provide mechanisms for maintaining effective two-way communication between the Contractor and the community and stakeholders
- Provide full compliance with Mongolian Law on Labor, Law on Promotion of Gender Equality, and other relevant employment laws. Ensure each employee has a written contract and is made aware of and signs the Worker Code of Conduct, and ensure compliance with the Labor Management Plan
- Provide training on and awareness in accordance with the following management measures:
  - Emergency Preparedness and Response
  - Waste Management
  - Labor Management
  - Gender Integration and Social Inclusion
  - Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment
  - Stakeholder Engagement, Community Consultation, and Grievance Redress
  - Construction Camp and Temporary Facilities Management
  - Cultural Heritage Protection
  - Health and Safety Management

When preparing the site-specific CESMP, it will include the following:

- Management Acknowledgements
- Organization and Staffing
- Communications and Reporting
- Environmental, Social, and Health and Safety Provisions

The Contractor will prepare and submit for the Engineer's approval the site-specific CESMP, including constituent plans and procedures, within 28 days after receiving the notice of contract award. The Engineer may require periodic reviews, including updating of the CESMP during the construction works.

### **2.1.3.2 Management Acknowledgements**

#### **9) Certification and Commitment**

The site-specific CESMP submitted by the Contractor will provide a signed statement from the Contractor's Project Director attesting to a commitment that all environmental and social protection, safety, and occupational health and safety aspects of the contract will be given highest priority in the discharge of contractual obligations and certifying a commitment to the provisions

in the ESMP, its constituent plans, environmental and social requirements of the contract, as well as the approved site-specific CESMP.

#### 10) Statutory Understanding and Compliance

The site-specific CESMP will provide a statement attesting the Contractor's understanding of, and means of ensuring due compliance with, the statutory regulations relating to construction work in Mongolia, specifically regarding compliance with:

a) All current environmental laws and regulations, related to, but not limited to, the following:

- Noise
- Vibration
- Air pollution
- Water contamination
- Solid and hazardous waste disposal
- Waste disposal
- Sanitary conditions (water supply, sewerage, wastewater disposal, etc.)
- Use of explosives;
- Protection of public traffic
- Historical, cultural, and archaeological monuments/sites
- Resettlement, land acquisition, servitude, temporary use of land and compensation, etc.

b) All current labor laws and laws related to, but not limited to, the following:

- Contract of employment and labor disputes
- Working conditions
- Management, monitoring, and supervision
- Gender-based discrimination in employment
- Child labor
- Trafficking in persons
- Gender-based violence
- Sexual harassment

c) All occupational health and safety legislation including, without limitation, the rules and regulations of Mongolia and the authorities having jurisdiction. These provisions will be included and regulated through the Health and Safety Management Plan.

#### 11) Availability of Documents

The site-specific CESMP will state where copies of environmental and social regulations and documents will be available on the construction sites and verify that all regulations and documents have been or will be made available.

#### 12) Management of Subcontractors

The requirements of this and related sections and obligations therein will be included in implementation of parts of the construction activities by the approved subcontractors, while the Contractor will:

- a) Provide subcontractors with copies of the site-specific CESMP, the ESMP, the constituent plans, and other relevant environmental and social policies, plans, documents, and regulations, while incorporating such provisions into all subcontracts and ensuring compliance with such plans under the Contract.

- b) Require all subcontractors to appoint an environmental representative, social representative, and health and safety representative, who will be available on the sites throughout the operational period of the respective subcontract and ensure as far as is practically possible that staff and employees of subcontractor(s) are conversant with appropriate parts of the site-specific CESMP and the relevant environmental and social documents and regulations.

### **2.1.3.3 Organization and Staffing**

#### **7) Organization Chart**

The site-specific CESMP will include an organization chart identifying, by job title and by the name of the individual, the personnel to be engaged solely for environmental protection, social and gender, and health and safety control. The chart and the supporting text will identify participants and their contact details.

#### **8) Identification of Responsibilities**

The site-specific CESMP will provide descriptions of the responsibilities of the Environmental and Social Performance Manager, Social and Gender Manager, and Health and Safety Manager appearing on the organization chart. Additionally, the CESMP will provide a description of the responsibilities of the Contractor's Social Safeguards Officer or Social Safeguards Team.

##### **a) Environmental and Social Performance Manager**

The Environmental and Social Performance Manager, qualified in ESMP and resettlement implementation, throughout the construction period will be primarily responsible for daily inspection and monitoring of ESMP implementation. The Environmental and Social Manager will prepare monthly and as-needed incident reports and submit them to the Engineer. MCA-Mongolia will report to MCC and send feedback to the Contractor through the Engineer or directly when urgent action is required. Monitoring and reporting on the implementation of follow-up action will also be part of the Environmental and Social Manager's duties.

The Environmental and Social Performance Manager additionally will be responsible for environmental management of the construction sites and day-to-day management of environmental issues. The Environmental and Social Manager will be empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements of the site-specific CESMP or relevant environmental documents and regulations.

The Environmental and Social Performance Manager will maintain a daily site diary/record-book comprehensively recording all relevant matters concerning the construction sites' environmental management, safety, and traffic control, inspections, and audits, related incidents and the like. The site diary will be available at all times for inspection by the Engineer.

##### **b) Social and Gender Manager**

The Social and Gender Manager will be responsible for day-to-day management of social issues for the duration of construction works. The Social and Gender Manager will be empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices

or other infringements of the site-specific CESMP or relevant social documents and regulations. The Social and Gender Manager will be responsible for overall stakeholder engagement and consultation process, ensuring proper labor contracting and working conditions, issues related to trafficking in persons, and organizing and delivering trainings, appropriate communication, and reporting.

Additionally, the Social and Gender Manager will monitor the internal grievance mechanism. In case of sexual harassment or violence, will liaise with the MCA-Mongolia or its representative's Social Safeguards Team and engage an independent third party such as the Centre for Gender Equality to manage investigations of allegations.

With input from site supervisors, the Social and Gender Manager will maintain a diary/record-book comprehensively recording all relevant matters concerning site social issues management, inspections and monitoring, incidents and emergencies, as well as other relevant issues. The diary will be available at all times for inspection by the Engineer.

c) Health and Safety Manager

The Health and Safety Manager will be responsible for day-to-day management of health and safety issues for the duration of construction works, including HIV/AIDS and Covid-19 related issues. The Health and Safety Manager will be empowered to instruct employees of the Contractor and subcontractor(s) to cease operations and will take the appropriate action as is necessary and within his/her limits of delegation by informing others as may be appropriate to prevent unsafe working practices or other infringements of the Health and Safety Management Plan or requirements of health and safety documents and regulations.

The Health and Safety Manager through input from site supervisors will maintain a health and safety diary/record-book comprehensively recording all relevant matters concerning site health and safety management, inspections, and monitoring, incidents and emergencies, as well as other relevant issues. The diary will be available at all times for inspection by the Engineer.

d) Social Safeguards Officer / Social Safeguards Team

The Contractor's Social Safeguards Officer or Social Safeguards Team, under the Social and Gender Manager, will be appointed to manage the contractual obligations specified in the construction contract. Depending on the size of the company, the Contractor designate at least Social Safeguards Officer; more if the number of employees exceed 50. Additionally, a Contractor Community Liaison Officer may be needed to work with local labor.

The responsibilities of the Social Safeguards Officer or Social Safeguards Team are the following:

- Coordinate with the MCA-Mongolia or its representative regarding the protocols for community contact
- Maintain records of all community contacts and integrate with the project Stakeholder Matrix
- Liaise with the MCA-Mongolia or its representative over community contacts
- Liaise with the MCA-Mongolia or its representative to implement and assist in resolution of grievances
- Inform the MCA-Mongolia or its representative of employment vacancies and recruit through the Ministry of Labor offices and process

- Monitor and promote the employment of women to achieve the recommended target of 30 percent or more
- Plan and ensure delivery of the contractually required employee awareness training and information programs
- Liaise with training organizations and experienced NGOs to find those able to design training courses on aspects of employee behavior, sexual harassment and gender based violence, gender equity, HIV/AIDS, conflicts over employment opportunities and foreign workers, cultural awareness, and chance finds processes
- Support complainants to the Contractor's internal grievance system, particularly those alleging sexual harassment or gender-based violence
- Assist the Contractor's personnel department to manage the internal employee grievance mechanism for reporting grievances
- Manage the Contractor's responsibilities with the project GRM; documenting, reporting, and taking part in finding solutions

## 9) Appointments

The Contractor will include the CV of the following proposed personnel in the bidding package and submit to MCA-Mongolia for approval the names and details (full CVs) of these proposed personnel within 14 days after the notification of contract award:

- Environmental and Social Performance Manager
- Social and Gender Manager
- Health and Safety Manager
- 

The proposed personnel will hold the attestation/proof of professional qualification required from the relevant government authorities to perform and submit pertinent studies and documentation to relevant Government agencies, with an advanced post graduate degree in a relevant discipline or as a certified consulting engineer, and relevant post-graduate experience in Mongolia.

The Contractor will obtain approval and appoint the Environmental and Social Performance Manager, Social and Gender Manager, Health and Safety Manager, and Social Safeguards Officer prior to commencement of construction works, unless otherwise, in exceptional circumstances, it is agreed in writing with the Engineer. Key personnel identified in Section IV, the Environmental and Social Performance Manager, Social and Gender Manager, and Health and Safety Manager, will not be removed from the construction works without written permission of the Engineer. Within 14 days of any such removal or notice of intent of removal, a replacement for the respective personnel will be nominated by the Contractor for approval by the Engineer and MCA-Mongolia (MCA-Mongolia will approve any key staff).

### **2.1.3.4 Communications and Reporting**

The site-specific CESMP will explain the proposed interaction and communication procedures between construction personnel and environmental, social and gender, and health and safety staff, including:

- Communication facilities
- Routine communication and reporting systems
- Stakeholder engagement and consultation activities

## 7) Environmental, Social and Gender, and Health and Safety Reports

The Contractor will submit the environmental, social and gender, and health and safety reports shown in Table 1.

**Table 1 Summary of Report Requirements**

Report	Submission Schedule	Content
<b>Site-specific CESMP</b>	One time during mobilization, within 28 days after the Letter of Acceptance	<p>The Contractor will carry out an assessment of environmental, social and gender, and health and safety conditions at the work sites to define site-specific impacts and adequate mitigation measures. The Contractor will also develop constituent plans and procedures required as a part of CESMP.</p> <p>The site-specific CESMP must be approved by the Engineer prior to commencement of construction activities.</p>
<b>Training and Orientation Report</b>	<p>One time during mobilization, before commencement of works</p> <p>Monthly updates during implementation of works</p>	<p>The Contractor will summarize information regarding training and orientation mandated under each plan, carried out before involvement of the labor in construction activities and during toolbox talks. Toolbox talks on each plan topic must be delivered monthly.</p> <p>The Contractor will provide copies of the Training and Orientation Reports to the Engineer. The Contractor will provide monthly updates of training and orientation activities during implementation of works in the Monthly Progress Reports.</p>
<b>Regular Weekly Environmental, Social and Gender, and Health and Safety Reports</b>	Weekly during implementation of works	<p>The Contractor will undertake environmental, social and gender, health and safety inspections and report weekly, and will provide copies of such reports to the Engineer each month for the duration of contract.</p> <p>The weekly environmental reports will include:</p> <ul style="list-style-type: none"> <li>• Environmental and health and safety management actions / measures taken, including approvals sought from local or national authorities</li> <li>• Observations and concerns raised and/or decisions taken with regard to environmental and gender, and health and safety management during site meetings</li> <li>• Problems encountered in relation to environmental and health and safety aspects (including delays, incidents, damages and cost consequences, emergencies, etc.)</li> <li>• Lack of compliance with this ESMP and the technical specifications in relation to environmental, and health and safety requirements on the part of the Contractor and/or subcontractor(s)</li> </ul> <p>The social and gender reporting will include sections on issues arising in the fields of:</p> <ul style="list-style-type: none"> <li>• Recruitment strategy, employment of men and women, and prohibition of child labor</li> <li>• Implementation of the Worker Behavior Code of Conduct and outcomes</li> <li>• Gender related grievances and investigations</li> </ul>

Report	Submission Schedule	Content
		<ul style="list-style-type: none"> <li>• Training on employee behavior, gender, social inclusion, counter-trafficking in persons, gender-based violence, and sexual harassment, health education, cultural awareness, and feedback from employees</li> </ul>
<b>Monthly Progress Reports</b>	Monthly during implementation of works	<p>Summaries of these reports (including information on environmental and social activities undertaken, permits and agreements obtained, etc.) will be included in the monthly progress reports to be submitted to Engineer for review and approval. It is expected that monthly progress reports will include information on:</p> <ul style="list-style-type: none"> <li>• Employment records of workers (used to track participation in training and progress toward women's employment targets and local labor targets)</li> <li>• Training and orientation activities</li> <li>• Environmental, social and gender, and health and safety management actions / measures taken, including approvals sought from local or national authorities</li> <li>• Observations and concerns raised and/or decisions taken with regard to environmental, social and gender, and health and safety management during site meetings</li> <li>• Problems encountered in relation to environmental, social and gender, and health and safety aspects (including delays, incidents, damages and cost consequences, emergencies, etc.)</li> <li>• Investigations into the contractor internal grievance redress mechanism with outcomes</li> <li>• Lack of compliance with this ESMP and the technical specifications in relation to environmental, social and gender, and health and safety requirements on the part of the Contractor and/or subcontractor(s)</li> <li>• Changes of assumptions, conditions, measures, designs, and actual works in relation to environmental, social and gender, and health and safety requirements</li> <li>• Chance historical, cultural, and archaeological finds</li> <li>• Follow-up on incident investigation</li> <li>• Follow-up on the status of measures and/or corrective actions identified (including remedial measures) and their efficacy, to eliminate and minimize lack of compliance with contract requirements</li> <li>• Stakeholder engagement and consultation activities carried out during reporting period, grievances registered and resolved</li> <li>• Grievances registered and resolved.</li> </ul>

## 8) Notification of Incidents and Changes

The site-specific CESMP will verify that provisions have been made to ensure that the Contractor notifies relevant parties in accordance with Section VIII Particular Conditions of Contract, Sub-Clause 4.8 after the following incidents and changes:

- Occurrence of any incident that has resulted, or could reasonably be foreseen to result, in lack of compliance with this ESMP and the technical specifications in relation to environmental, social and gender, especially internal complaints related to sexual harassment, gender-based violence and trafficking in persons for sex, and health and safety requirements
- Changes of assumptions, conditions, measures, designs, and actual works in relation to environmental, social and gender, and health and safety requirements
- Chance historical, cultural, and archaeological finds

In addition to the initial written notification, the Contractor will submit a preliminary report on incident investigation within 7 days after the incident, as well as final report on incident investigation within 14 days after the incident. All incidents should be investigated by the competent professional (relevant independent professionals can also be involved, as needed). The final report on the incident investigation will include information on the investigation's objectives, methodology applied, analysis and tests carried out, findings, conclusions, and recommendations.

Allegations against staff of sexual harassment or gender-based violence, or involvement in trafficking in persons inside the Contractor's organization require reporting to the MCA-Mongolia or its representative's Social Safeguards Team. The Contractor's Social and Gender Manager will liaise with the MCA or its representative and other relevant parties, and arrange for a third party investigator to lead the enquiry into allegations together with the Contractor's human resources representative. Proven harassment or violence offences in contravention of the Worker Behavior Code of Conduct must result in the immediate firing of the perpetrator and reporting through the project system.

Allegations of trafficking in persons must be dealt with according to the Section VIII Particular Conditions of Contract Sub-Clause 6.16, "Combatting Trafficking in Persons", which summarizes the Contractor's reporting requirements and specifies remedies that the MCA Entity will apply to confirmed cases.

Section VIII Particular Conditions of Contract Sub-Clause 6.17, "Prohibition of Sexual Harassment", specifies that "The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction."

## 9) Communication with Subcontractor(s)

The site-specific CESMP will specify:

- How environmental, social and gender, and health and safety requirements will be communicated to subcontractor(s) at all levels and how their compliance with the CESMP and all relevant regulations will be ensured.
- Subcontractor(s) will be supplied with copies of the CESMP and other environmental and social documents developed for the project (which will be deemed part of the subcontract), and will attend and report on all relevant training and orientation sessions prior to commencement of their work and will continue covering the same topics in toolbox talks.

- The procedures for reviewing and monitoring compliance with the site-specific CESMP and environmental and social regulations. This could include, for example, the monitoring of performance against environmental and safety criteria as a part the daily and/or weekly site inspections.

### 2.1.3.5 Environmental, Social and Gender, and Health and Safety Provisions

The site-specific CESMP, including constituent plans and procedures, will include at a minimum acknowledgement of the requirements to meet the CESMP standards, the methodology and resources to meet the requirements of the management measures prescribed in the following sections of this ESMP, as well as the environmental, social and gender, and health and safety provisions of Section V, Works Requirements.

In accordance with MCC Environmental Guidelines and IFC Performance Standards, the Contractor is obliged to implement all reasonable measures with regard to soil erosion, water and air quality, noise and vibration, solid waste, hazardous materials, wastewater discharges, health and safety hazards, labor and working conditions. In a similar way, the Contractor is obliged to implement risk management strategies to protect the beneficiary communities from 1) physical, chemical, or other hazards associated with sites under construction, 2) hazards associated with increased traffic and rerouting of vehicles, and 3) communicable and vector-borne diseases associated with the population of workers.

Parallel plans and policies will be developed by the Contractor as a part of CESMP to implement mitigation measures specific for each construction site and ensure compliance with environmental, and social and gender, and health and safety requirements.

## 2.2 Environmental Management

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## 2.3 Waste Management

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## 2.4 Social and Gender Inclusion

### Management Measure Conveyance - 1: Labor Management

POTENTIAL IMPACT
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>• Professional management and conditions of labor</li> <li>• Opportunities for local labor and supply of goods and services, and provision of local jobs with fair and competitive wages</li> <li>• Women's short-term employment in construction and engineering-related work</li> <li>• Potential alleviation of poverty in local area</li> <li>• Reduction in child labor</li> <li>• Improved grievance management in employment</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>• Discrimination against women</li> <li>• Increased foreign labor, reducing local employment opportunities</li> <li>• Use of child labor</li> <li>• Use of forced labor</li> <li>• Use of trafficked labor</li> <li>• Exploitation of workers and Labor Code violations</li> </ul>

<ul style="list-style-type: none"> <li>• Sexual harassment</li> </ul>
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Constitution of Mongolia <ul style="list-style-type: none"> <li>- Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>• Mongolian Civil Code <ul style="list-style-type: none"> <li>- Requires providing office space, tools and equipment necessary to ensure employees' health.</li> </ul> </li> <li>• Mongolian Law on Gender Equality <ul style="list-style-type: none"> <li>- Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>• Mongolian Law on Labor <ul style="list-style-type: none"> <li>- Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>- Prohibits employing children under the age of 16 or under 18 in dangerous industries, including construction</li> </ul> </li> <li>• Mongolian Law on Minimum Wage <ul style="list-style-type: none"> <li>- Minimum wage is fixed by National Tripartite Committee on Labor and Social Consensus representatives.</li> </ul> </li> <li>• Mongolian Law on the Protection of the Rights of the Child <ul style="list-style-type: none"> <li>- Prohibits employing children in any work that is likely to harm their health or morale, and exploiting or paying unjust wages to children</li> </ul> </li> <li>• Mongolian Law on Social Protection of Disabled Persons <ul style="list-style-type: none"> <li>- Prohibits building any buildings and facilities that do not meet needs and requirements of persons with disabilities.</li> </ul> </li> <li>• Mongolian Law on Combating Human Trafficking <ul style="list-style-type: none"> <li>- Requires regulating the workplace to ensure the implementation of the legislation on combating human trafficking, and if it is not specified, it shall be obliged to comply with the instructions, recommendations, statements and instructions given by the competent authorities and officials.</li> </ul> </li> <li>• Mongolian Law on Sending Labor Force Abroad and Receiving Labor Force and Specialists from Abroad <ul style="list-style-type: none"> <li>- Regulates relations with respect to employment of a Mongolian citizen abroad and a foreign citizen in Mongolia, and protection of their rights and interests.</li> <li>- Reinforces provisions of the Constitution of Mongolia, Labor Law, Social Insurance Law, and other related legal acts, and legal status of a foreign citizen.</li> </ul> </li> <li>• IFC Performance Standard 2 <ul style="list-style-type: none"> <li>- Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.</li> <li>- Contractor will adopt and implement human resources policies and procedures appropriate to its size and workforce that set out its approach to managing workers consistent with the requirements of this performance standard and national law.</li> <li>- Contractor will provide workers with documented information that is clear and understandable regarding their rights under national labor and employment law and any applicable collective agreements, including their rights related to hours of work, wages, overtime, compensation, and benefits upon beginning the working relationship and when any material changes occur.</li> <li>- Contractor will not make employment decisions on the basis of personal characteristics unrelated to inherent job requirements. Contractor will base the employment relationship on the principle of equal opportunity and fair treatment, and will not discriminate with respect to</li> </ul> </li> </ul>

<p>any aspects of the employment relationship, such as recruitment and hiring, compensation (including wages and benefits), working conditions and terms of employment, access to training, job assignment, promotion, termination of employment or retirement, and disciplinary practices. Contractor will take measures to prevent and address harassment, intimidation, and/or exploitation, especially in regard to women. The principles of non-discrimination apply to migrant workers.</p> <ul style="list-style-type: none"> <li>- Prohibits employment of child labor.</li> </ul> <ul style="list-style-type: none"> <li>• Millennium Challenge Corporation Counter-Trafficking in Persons Policy (C-TIP Policy) <ul style="list-style-type: none"> <li>- Requires contractors to take a zero-tolerance policy with regard to human trafficking and to actively manage employment conditions to prevent exploitation of trafficking in persons and related activities workers by employers and specifies remedies that the MCA-Entity may take in response to confirmed cases of TIP.</li> </ul> </li> <li>• Millennium Challenge Account Social and Gender Integration Plan (SGIP) <ul style="list-style-type: none"> <li>- Sets out guidelines for Contractors related to social risk mitigation measures in infrastructure, including making working conditions suitable for both male and female employees</li> <li>- Requires developing and implementing an employment plan that prioritizes using local labor particularly from the Area of Influence of the project</li> <li>- Sets a target to encourage contractors to employ as workers at least 30% women of all workers at each skill/occupational level</li> <li>- Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates.</li> </ul> </li> <li>• Millennium Challenge Corporation Guidance Note to MCAs on Sexual Harassment <ul style="list-style-type: none"> <li>- Requires that contractors are well-informed about existing anti-sexual harassment policies and procedures, and that contractors meet the requirements in the standard bidding documents.</li> </ul> </li> <li>• Ministry of Construction and Urban Design (MCUD) Gender Responsiveness Policy <ul style="list-style-type: none"> <li>- Calls for gender targets in employment via “international and domestic tenders, so that one gender should not be lower than 15 percent among workers, and 25 percent among decision makers.”</li> </ul> </li> <li>• Ministry of Labor and Social Welfare Order (2016) <ul style="list-style-type: none"> <li>- Expanded the types of hazardous work prohibited for children under the age of 18 to include construction</li> </ul> </li> <li>• International Labor Organization fundamental conventions, and International Human Rights instruments and conventions</li> </ul>	<div style="background-color: #e0f0ff; padding: 5px;"><b>OBJECTIVES</b></div> <p>The Labor Management Plan ensures that contractors and their workers have clear expectations about the behaviors and conditions expected of the Contractor and all workers.</p> <ul style="list-style-type: none"> <li>• Promote fair treatment, non-discrimination, and equal opportunity of workers</li> <li>• Promote local labor opportunities and procurement from local suppliers</li> <li>• Target women’s employment as 30% of all labor at each skill/occupational level</li> <li>• Establish and maintain and improve a constructive worker-management relationship</li> <li>• Protect workers, including vulnerable categories of workers such as children, migrant workers, workers engaged by third parties, and workers in the supply chain</li> <li>• Avoid the use of forced labor or trafficked labor</li> <li>• Maximize the beneficial impact of the project on the affected communities</li> </ul> <div style="background-color: #e0f0ff; padding: 5px;"><b>MANAGEMENT MEASURE</b></div> <div style="background-color: #e0f0ff; padding: 5px;"><b>Labor Management</b></div> <p>The MCA-Mongolia or its representative’s Social Safeguards Team (SST) will:</p> <ul style="list-style-type: none"> <li>• Encourage Contractor to employ local unskilled and semi-skilled labor, particularly youth and women, and to procure goods and services from local businesses and entrepreneurs</li> </ul>
--	---

- Facilitate the Contractor's cooperation with the local District Labor Offices
- Facilitate the Contractor's publication of vacancies and procurements within affected communities
- Facilitate the Contractor's holding of job fairs and procurement workshops within affected communities to support local applicants to apply for jobs and local businesses and entrepreneurs to bid
- Support local job applicants to apply, and local businesses and entrepreneurs to bid
- Gather names of interested workers from project affected households and through community information programs and consultation meetings
- Share the names of interested workers with Contractor, and District and khoroo Labor Offices
- Encourage Contractor to employ women at a rate of at least 30% of personnel at each skill/occupational level
- Facilitate Contractors' engagement with relevant university engineering programs, technical and vocational education and training (TVET), and professional associations to 1) identify and recruit qualified job applicants and 2) establish internships and apprenticeships
- Encourage Contractor to employ socially excluded and vulnerable people

The Contractor will:

- Fully comply with the requirements of this management measure and related contract clauses
- Perform the work in accordance with relevant sections of the ESMP

#### *Access to Employment*

The Contractor will:

- Publish vacancies (listing the required qualifications for all categories of employment) within project-affected communities and at District and khoroo offices and provide such information to the Engineer and during each community meeting. Ensure the exchange of information between Contractor and the local population on employment opportunities
- Publish and communicate employment opportunities listing the required qualifications for all categories of employment city-wide, and beyond in Mongolia, if the vacancies cannot be filled from local communities
- Ensure that a staff person responds to questions from the local population regarding employment and procurement opportunities
- Develop an employment forecast and a written recruitment strategy to 1) encourage the employment of qualified individuals among the local population(s) in project construction and ancillary activities in all phases, with particular focus on women and, youth, and disadvantaged groups, 2) target achieving women's employment as at least 30% of personnel at each skill/occupational level, and 3) provide training for local construction brigades on how to be effective contractors for local construction brigades
- Through the Contractor's Social Safeguards Officer, liaise with the MCA-Mongolia or its representative's SST and local labor offices to provide support with the job application process, encourage local employment (including women's employment), implement and publicize a job fair, consistent and transparent recruitment process
- In disseminating information on potential employment opportunities, take steps to consider ways in which to maximize outreach, using all forms of media that may be appropriate
- Ensure that all staff have written employment contracts specifying fair employment conditions and equal pay for equal work to men and women, and fulfilling all conditions specified under the Mongolian Law on Labor defining the contracts

The Contractor is encouraged to:

- Create pay bands for each category of worker to help ensure equal pay for equal work

As feasible, the Contractor will:

- Develop and submit a plan for providing on-the-job training and skills transfer opportunities to the local labor force
- Engage with training, education, and professional organizations—such as Technical and Vocational Education and Training, Implementing Agency of the Ministry of Labor and Social Protections, Mongolian University of Science and Technology, and the Mongolian Builder's

Association—to recruit qualified applicants, and provide apprenticeships and internships for students who study water engineering and relevant subjects at university

The Contractor shall note contract clauses on “Gender,” “Engagement of Staff and Labor,” “Foreign Personnel,” “Prohibition of Forced or Compulsory Labor,” “Prohibition of Harmful Child Labor,” “Employment Records of Workers,” and “Non-Discrimination and Equal Opportunity.”

#### *Local Procurement*

The Contractor will:

- Proactively procure goods and services from local businesses and entrepreneurs in Khan-Uul and Songinokhairkhan Districts and Ulaanbaatar, and members of targeted disadvantaged groups (e.g., women, people with disabilities), achieved through:
  - Publicizing procurements within the targeted geographical area or targeted group, for example at the District and khoroo offices and via notice boards, print media (newspapers, etc.), recruitment agencies, or job and career fairs
  - Publicizing and holding procurement workshops within the targeted geographical area or targeted group
  - Adding priority criteria for businesses and entrepreneurs in the targeted geographical area or members of the targeted group to the selection procedure
- In disseminating information on potential service procurement opportunities, take steps to maximize outreach, using all forms of media that may be appropriate

#### *Workplace Environment*

The Contractor will:

- Establish, execute, and enforce a Worker Behavior Code of Conduct on which all employees will be briefed, that all employees are required to sign, and that mandates immediate dismissal for serious offences including sexual harassment, violence, or confirmed cases of engagement in trafficking in persons. The Code will specify:
  - Expectations of worker behavior, and penalties for transgression
  - MCC and Mongolian legal definitions of trafficking in persons (TIP), zero-tolerance for TIP, and remedies that the MCA Entity may take in response to confirmed cases of engagement of trafficking in persons
  - Zero-tolerance for gender-based violence
  - Compliance with the Contractor’s Anti-Sexual Harassment Policy and notification of the Contractor’s Sexual Harassment Incident Reporting and Referral Plan
  - Rights of employees to a grievance mechanism, holidays, and cultural and festival access
  - Conditions for work camps, shelter, water and sanitation, food, and security
  - The responsibility of all workers, regardless of their role or duration of employment, will be expected to review and acknowledge the Workers’ Code of Conduct by signing the code sheet
  - The requirement to respect local customs and practices
- Establish and execute a workers’ grievance redress procedure that:
  - Formalizes a system for receiving and managing internal complaints of sexual harassment, gender-based violence, or issues of trafficking persons (including engaging in commercial for sex with a person under 18 years of age)
  - Guarantees confidentiality to makers of allegations
  - Designates the Contractor’s Social Safeguards Officer or other officer as responsible for collaborating with the human resources department on the grievance redress procedures
  - Refers to the Contractor’s Sexual Harassment Incident Reporting and Referral Plan for allegations of sexual harassment
  - Specifies that the Contractor’s zero-tolerance for gender-based violence addresses any complaints of gender-based violence against its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
  - In cases of discrimination against women or of allegations of sexual harassment or violence, requires that the Contractor’s Social Safeguards Officer contact the MCA-Mongolia or its representative’s SST to include them in the investigation and appoint a third party—such as a representative from an NGO such as the Centre for Gender Equality or equivalently qualified, experienced organization—to lead the investigation

- The Contractor shall note the contract clause on “Prohibition of Sexual Harassment”
- The Contractor shall note the contract clause on “Facilities for Staff and Labor” and provide suitable gender-segregated facilities to enable the safe employment of both men and women – e.g. Toilet facilities, changing facilities on all sites and enabling physical access to office accommodation for people with disabilities.

### *Training*

The Contractor will:

- Provide training to enhance the skills of employees using on-the-job training, internships, apprenticeships, secondment to training programs such as Technical and Vocational Education and Training, etc.
- Mandate for all employees, before each worker starts work on the site, induction packages that include:
  - Employment rights and conditions, including non-discrimination and equal opportunity
  - The Contractor’s responsibility to “adopt recruitment, hiring and retention practices that support the employment of women and staff from diverse backgrounds” per the contract clause on “Engagement of Staff and Labor,” the Contractor’s employment forecast and recruitment strategy, and the Contractor’s Gender Integration and Social Inclusion Plan (described below)
  - Gender-based violence
  - Contractor’s Anti-Sexual Harassment Policy – including awareness of what constitutes sexual harassment, exploitation, and abuse and the Contractor’s Sexual Harassment Incident Reporting and Referral Plan
  - Using the internal Grievance Mechanism for allegations of gender-based discrimination
  - Rights to have access to local festivals
  - Cultural sensitivities, and social norms and practices in each area
  - Expectations on avoiding poor relations between employees and local communities caused by behavior relating to alcohol, gambling, prostitution, illegal drug use, violence and sexual abuse of women, minors and lesbian, gay, bisexual, transgender, queer, and others (LGBTQ+) persons
  - Countering the Trafficking in Persons Response Plan – awareness of responsibilities to counter the trafficking of people around the project area, the remedies that the Contractor and the MCA Entity may apply, and mechanisms for reporting suspected instances of TIP with the Contractor’s TIP Response Plan
  - Awareness of the possibilities of the transmission of HIV/AIDS and communicable illnesses and how to prevent HIV/AIDS transmission
- Undertake a series of employment and social plan inductions and employee awareness programs that:
  - All employees must attend at the commencement of employment and over the employment period twice yearly
  - Incorporate toolbox talks that include reinforcement of all training programs
- Commission training modules on gender integration and social inclusion topics for all employees at intervals agreed with the MCA-Mongolia or its representative’s SST
- Require that the Social Safeguards Officer, together with the MCA-Mongolia or its representative’s SST Community Liaison Officers, conduct awareness raising with workers on child labor issues in the local community as part of an ongoing community awareness program on social issues. These toolbox talks will include ways that workers can report suspected child labor to the District Children, Youth and Family Offices, and the MCA-Mongolia or its representative’s Social Manager

### *Site-specific Labor Management Plan*

The Contractor will prepare and submit for the Engineer’s written approval a site-specific Labor Management Plan that:

- Affirms and executes the Contractor’s comprehensive commitment to the standards and requirements listed above and specified in the plan
- Includes the Contractor’s Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan and the Workers’ Code of Conduct
- Is consistent and compliant with:

<ul style="list-style-type: none"> <li>○ Mongolian Law on Labor</li> <li>○ Relevant aspects of the Conditions of Contract, as well MCC Gender Policy and the MCA-Mongolia Social and Gender Integration Plan</li> <li>○ The MCC Policy on Counter-Trafficking in Persons</li> <li>● Assigns roles and responsibilities for labor management</li> </ul>
<p>LOCATIONS:</p> <p>All construction sites and temporary construction facilities</p>
<p><b>MONITORING</b></p>
<p>MCA-Mongolia or its representative:</p> <ul style="list-style-type: none"> <li>● Monitor implementation of the Contractor's Labor Management Plan and Worker Behavior Code of Conduct, including prohibitions against trafficking in persons, gender-based violence, sexual harassment, and child labor</li> <li>● Monitor implementation of the Contractor's employment recruitment strategies and assist Contractor to reach potential workers among local women, youth, and people from disadvantaged and other excluded groups</li> <li>● Monitor participation by all parties in the Contractor's internal grievance redress procedure and external project Grievance Redress Mechanisms</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>● Record results of Contractor's labor management responsibilities, with all data and statistics gender disaggregated by age and gender, following, at a minimum, the contract clause on "Employment Records of Workers" and recording, for each worker hiring and leaving dates, along with duration (days) of employment and skills/occupational category and home location of workers (project-affected district/khoroos, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia)</li> <li>● Document implementation of the requirements above for the Labor Management Plan, including all recruitment activities</li> <li>● Document Worker Behavior Code of Conduct infringements and outcomes, and internal grievance redress activities under the Contractor's internal grievance process</li> </ul>
<p>LOCATIONS:</p> <p>All construction sites and temporary construction facilities</p>
<p>INDICATORS AND SUCCESS CRITERIA:</p>

## Management Measure Conveyance -2: Gender Integration and Social Inclusion (GSI)

POTENTIAL IMPACT
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>• Increased short-term employment and improved conditions of employment for women</li> <li>• Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>• Discrimination against women</li> <li>• Increased foreign labor, reducing local employment opportunities</li> <li>• Use of child labor</li> <li>• Use of forced labor</li> <li>• Use of trafficked labor</li> <li>• Exploitation of workers and Labor Code violations</li> <li>• Sexual harassment</li> </ul>
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Millennium Challenge Account Social and Gender Integration Plan (SGIP) <ul style="list-style-type: none"> <li>- Encourages contractors to prioritize using local labor, particularly workers from the project affected area</li> <li>- Encourages contractors to employ women as at least 30% of workers</li> <li>- Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates.</li> </ul> </li> <li>• Millennium Challenge Corporation Gender Policy <ul style="list-style-type: none"> <li>- The MCC Gender Policy states that countries will ensure that both women and men have opportunities for meaningful participation throughout the consultative processes related to a Compact program.</li> </ul> </li> <li>• IFC Performance Standard 1 <ul style="list-style-type: none"> <li>- Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> </ul> </li> <li>• IFC Performance Standard 2 <ul style="list-style-type: none"> <li>- Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.</li> </ul> </li> <li>• Constitution of Mongolia <ul style="list-style-type: none"> <li>- Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>• Mongolian Law on Gender Equality <ul style="list-style-type: none"> <li>- Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>• Mongolian Law on Labor <ul style="list-style-type: none"> <li>- Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>- Prohibits employing children under the age of 16 – under 18 in dangerous industries e.g. construction</li> </ul> </li> </ul>
OBJECTIVES
<p>The Gender Integration and Social Inclusion (GSI) Plan complements the Labor Management Plan and provides additional management steps to address GSI considerations with respect to workers and local communities.</p> <ul style="list-style-type: none"> <li>• To promote the fair treatment, non-discrimination, and equal opportunity of workers.</li> <li>• To encourage the employment of women as at least 30% of the Contractor's workforce, calculated over full and part time positions as a percentage of total number of staff hired in the life of the contract, at each skill/occupation level</li> </ul>

- To enable local people, particularly youth and people in project-affected districts/khoroos to gain short-term employment and training opportunities
- Maximize the perceived beneficial impacts of the BWSE project on the project affected communities

## MANAGEMENT MEASURE

### Gender Integration and Social Inclusion

- Under the Gender Integration and Social Inclusion Plan, the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure the widest exchange of information between the Contractor and the local population and District and khoroo Labor Offices on planned and continuing works and employment opportunities through a program of community consultations and participatory meetings.
- The Contractor will prepare and submit for the Engineer's written approval a Contractor's Gender Integration and Social Inclusion Plan, which will be:
  - Consistent with the Mongolian Law on Labor
  - Consistent with the MCC Gender Policy's emphasis on community consultation and participation
  - Consistent with IFC Performance Standard 1: Assessment and Management of Environmental and Social Risks and Impacts
  - Agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer
- *Community engagement*
- The Contractor will hold at least one meeting in each project-affected District and khoroo office prior to construction to inform community members of the expected conduct of workers and the contents of the Labor Management Plan, and thereafter monthly, minimally covering the following:
  - Efforts to hire local labor and the Contractor's employment forecast
  - Efforts to maximize women's employment
  - Efforts to maximize local procurement and the Contractor's procurement forecast
  - Prohibitions against child labor and forced labor in supply chains
  - Zero-tolerance of trafficking in persons, MCC and Mongolian legal definition of trafficking in persons, and Contractors' Counter-Trafficking in Persons Response Plan
  - Zero-tolerance of gender-based violence
  - Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan
- *Expanding Short-term Employment Opportunities*
- The Contractor will actively consider working with the existing construction brigades to enable local labor currently organized into brigades to gain employment. The brigades may require additional training to enable them to work on this large scale project – training in:
  - Modern tools and techniques where needed
  - Brigade internal labor management, accounting, and estimation techniques
- As referenced in the Labor Management Plan and its recruitment strategy, the Contractor will encourage the employment of qualified individuals among the local population(s) in project activities, with particular focus on women, youth, and disadvantaged groups. This may include small-scale supply contracts or services, with announcement of jobs published on project information boards, in District and khoroo Labor Offices and with information on employment disseminated by the Contractor's Social Safeguards Officer, the MCA or its representative or other means approved by the Engineer.
- Where appropriate, the Contractor will provide training to enhance the skills of employees and local people using on-site apprenticeships and internships. As referenced in the Labor Management Section above, the Contractor is encouraged to cooperate with secondment to training programs such as Technical and Vocational Education and Training Centers and professional associations and to draw workers from among their graduates and members, etc..

### Local Procurement

<ul style="list-style-type: none"> <li>The Contractor will develop and submit a procurement forecast of all goods and services that could be procured locally. The MCA-Mongolia or its representative's Social Safeguards Team will assist in disseminating this information to local communities with the Contractor's Social Safeguards Officer.</li> <li>The Contractor will develop and submit for review and approval by the Engineer, a procurement strategy to inform local communities and businesses of opportunities to provide goods and services to the Contractor and to project workers, particularly targeting small businesses and those owned by women.</li> <li>The Contractor Social Safeguards Officer and MCA-Mongolia or its representative's Social Safeguards Team will hold community meetings to inform people about the procurement processes and include District and khoroo offices, community organizations and the media.</li> </ul>
LOCATIONS:
All construction sites and temporary construction facilities and project affected communities
<b>MONITORING</b>
<p>MCA-Mongolia or its representative's SST:</p> <ul style="list-style-type: none"> <li>Monitor Contractor Gender Integration and Social Inclusion Plan</li> <li>Monitor Contractor employment recruitment strategies and assist Contractor to reach potential women, youth and other excluded groups</li> <li>Monitor participation by all parties in the Contractor's internal and external project Grievance Redress Mechanisms</li> <li>Document Contractor performance in Gender Integration and Social Inclusion Plan</li> </ul> <p>Contractor:</p> <ul style="list-style-type: none"> <li>Record results of Contractor's Gender Integration and Social Inclusion responsibilities</li> <li>Document all grievance redress activities under the Contractor's internal grievance process and external Grievance Redress Mechanism</li> </ul>

### Management Measure Conveyance -3: Counter Trafficking in Persons, Gender-Based Violence, and Sexual Harassment

<b>POTENTIAL IMPACT</b>
<p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>• Sexual harassment on construction sites and in temporary construction facilities and project-affected communities</li> <li>• Trafficking in persons within and outside the project</li> <li>• Gender-based violence on construction sites and in temporary construction facilities and project-affected communities</li> </ul>
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b>
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• MCC Counter-Trafficking in Persons Policy (C-TIP Policy) <ul style="list-style-type: none"> <li>○ States, "Trafficking in Persons" means (a) Sex trafficking in which a commercial sex act is induced by force, fraud, or coercion, or in which the person induced to</li> </ul> </li> </ul>

	<p>perform such act has not attained 18 years of age; (b) The recruitment, harboring, transportation, provision, or obtaining of a person for labor or services, through the use of force, fraud, or coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery.”</p> <ul style="list-style-type: none"> <li>○ Adopts “a zero-tolerance policy to TIP and prohibits “The Contractor, the Contractor’s Personnel, any Subcontractor or supplier, or any of their respective personnel, or any agent or affiliate of any of the forgoing shall not engage in any form of Trafficking in Persons during the period of performance of any contract...”</li> <li>○ Requires each Contractor to “acknowledge that engaging in such activities is cause for suspension or termination of employment or of the Contract” and specifies remedies that the MCA Entity will apply once a TIP incident has been confirmed.</li> </ul> <ul style="list-style-type: none"> <li>• Mongolian Law on Promotion of Gender Equality <ul style="list-style-type: none"> <li>○ Requires the employer to incorporate into the organization’s internal procedures, specific norms for prevention of sexual harassment in a workplace and the redress of such complaints. It also requires that the organization design and conduct a program of training and retraining geared toward creating a working environment free from sexual harassment, and report on its impact in a transparent manner.</li> </ul> </li> <li>• Mongolian Law to Combat Human Trafficking <ul style="list-style-type: none"> <li>○ The law regulates relations with respect to the prevention and suppression of trafficking in persons, elimination of the causes of trafficking, and protection of victims’ rights.</li> </ul> </li> </ul>
--	--

#### OBJECTIVES

- To prevent incidence of trafficking of persons for sex by project employees
- To ensure that the Contractor and its Sub-Contractors do not employ trafficked labor and to minimize the risks of trafficking of foreign workers to project sites
- To prevent sexual harassment at all construction sites and temporary construction facilities
- To prevent Contractor and worker involvement in sexual harassment in project-affected communities and among members of stakeholder organizations in the workplace
- To prevent incidences of gender-based violence involving workers

#### MANAGEMENT MEASURE

##### Counter-Trafficking in Persons, Gender-Based Violence and Sexual Harassment

The Contractor shall ensure that foreign workers on work sites or in labor camps are aware 1) of the risks of cultural conflict and of becoming victims of gender-based violence, sexual harassment and abuse, discrimination, trafficking in persons and 2) the legal and contractual remedies against such behavior. This information shall be provided in workers’ induction packages, by holding an orientation before workers start on site, and by delivering a training twice a year.

##### *Counter-Trafficking in Persons (C-TIP)*

- The Contractor shall prepare and submit for the Engineer’s written approval a Counter-Trafficking in Persons Response Plan (TIP Response Plan), and the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure all employees are informed of expectations of behavior as per the Worker Behavior Code of Conduct and the penalties for proven infringements.
  - The Counter-Trafficking in Persons Response Plan shall Address the specific TIP risks identified in the ESIA, including withholding of foreign workers’ passports and commercial sex with minors,
  - Designate a single responsible person who will notify the Engineer and MCA-Mongolia within 24 hours of an alleged incident and implement any investigation.
  - Specify when to contact legal authorities, list UB city officials, national government offices, and NGO organizations that address TIP, and state how the Contractor will deal with them in the case of a TIP incident.
  - Include mechanisms to ensure confidentiality of any TIP survivors and to refer them to law enforcement and/or supportive services if they wish.

- The Contractor shall develop, as part of its TIP Response Plan, an anonymous mechanism for workers and community members to report suspected TIP incidents to the Engineer and to MCA-Mongolia, and this must be separate from the project grievance mechanism.
- The Counter-Trafficking in Persons Response Plan shall be:
  - Consistent with the Mongolian Law on Labor, Promotion of Gender Equality, and combatting Human Trafficking
  - Compliant with the MCC Counter-Trafficking in Persons Policy
  - Coordinated and agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer
- The Counter-Trafficking in Persons Response Plan shall specifically prohibit:
  - Procuring minors for sex
  - Transporting non-employee individuals in company vehicles
- The Contractor is strongly encouraged to engage the Centre for Gender Equality or other similarly qualified and experienced organization to develop its TIP Response Plan, its anonymous reporting mechanism, its worker training, and its C-TIP content for community meetings
- The Contractor shall design and deliver twice yearly C-TIP training modules to all staff, sub-contractors, and service providers on the prevention of TIP and the Contractor's TIP Response Plan, following minimum content in MCA-Mongolia's Social and Gender Integration Plan (SGIP).
  - C-TIP training sessions must be delivered to all employees within one month of starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Information about the Contractor's zero-tolerance policy and TIP Response Plan shall be included in all community meetings and the Plan shall be provided in Mongolian, in whole, to project-affected khoroo and District governments.

#### *Gender-Based Violence*

- The Contractor shall adopt a policy of zero-tolerance for gender-based violence and address any complaints of gender-based violence against its workers or committed by its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
- The Contractor shall notify the Engineer and MCA-Mongolia within 24 hours of any alleged incident of gender-based violence
- The Contractor shall deliver a gender-based violence prevention training to all staff, sub-contractors, and service providers prior to all workers beginning on-site and thereafter at least twice each year.
  - The Contractor is strongly encouraged to engage a local, qualified, and experienced organization to develop the training.
  - The training shall minimally identify behavior that constitutes gender-based violence, address attitudes towards violence against women and lesbian, gay, bisexual, transgender, and queer people (LGBTQ), and identify relevant Mongolian laws and organizations addressing gender-based violence.
  - It shall also explain the workings and protections in the Contractor's grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ persons.
- Include in all community meetings information about the Contractor's zero-tolerance policy toward gender-based violence committed by or against its workers and procedures for reporting it and communicate this information in writing to project-affected khoroo and District governments.

#### *Sexual Harassment*

- The Contractor shall develop and submit to the Engineer an Anti-Sexual Harassment Policy prohibiting sexual harassment directed at Compact beneficiaries, partners, or stakeholders, MCA Entity employees, MCA Entity consultants, MCC personnel, or MCC consultants and including an Incident Reporting and Referral Plan.
  - The Policy and Plan must be in form and substance satisfactory to the MCA and MCC.
  - The Incident Reporting and Referral Plan shall include a confidential mechanism for workers and community members to report sexual harassment to the Engineer and to

MCA-Mongolia, separately from the Grievance Redress Mechanism.

- Employers are required to have a protocol in their Workplace Grievance mechanism in which persons alleging harassment or violence will be protected from identification and from pressure from the Contactor or other workers to dismiss the complaint.
- The Contractor's grievance manager must notify the MCA-Mongolia or its representative's Social Safeguards Team and the Contractor's Social Safeguards Officer within 24 hours of any allegation of sexual harassment.
- The Contractor must have a contract with a suitably experienced organization, such as the Centre for Gender Equality, to provide an investigation leader to manage the investigation of complaints of sexual harassment.
- The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction.
- The Contractor shall design and deliver a sexual harassment prevention training to all staff, sub-contractors, and service providers, in accordance with the Contractor's Anti-Sexual Harassment Policy, recognizing MCC's Guidance to MCAs on Sexual Harassment.
  - Training shall be conducted within one month of workers starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Training shall address
    - Attitudes to and prevention of sexual harassment in the workplace
    - Workings and protections in the Contractor's internal grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ+ persons
    - Additional requirements for minimum training content can be found in MCA-Mongolia's Social and Gender Integration Plan (SGIP)
- Information about the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral plan shall be included in all community meetings and the Policy and Plan shall be communicated in Mongolian, in whole, to project-affected khoroo and District governments.

#### LOCATIONS:

All construction sites and temporary construction facilities and project affected communities

#### MONITORING

MCA-Mongolia or its representative's SST:

- Monitor Contractor Counter-Trafficking in Persons Response Plan
- Monitor Contractor performance related to gender-based violence requirements
- Monitor Contractor's development and adherence to its Anti-Sexual Harassment Policy and Incident Reporting and Referral Plan
- Participate in the Contractor's internal Grievance Redress Mechanisms in relation to any on allegations of sexual harassment and gender-based violence and monitor and document the process and outcomes, maintaining confidentiality of those reporting and victims and witnesses

Contractor:

- Maintain copies of all contracts or other agreements with organizations that provide services related to the development of C-TIP, GBV prevention, or prevention of sexual harassment policy, plans, training, or reporting mechanisms
- Maintain records of workers' participation in required trainings, including the dates of trainings and which workers participated

<ul style="list-style-type: none"> <li>• Maintain records of all community meetings at which C-TIP, gender-based violence, and sexual harassment are addressed, including the dates and locations and a record of all questions, comments, and Contractor responses</li> <li>• Document all implementation of the results of Contractor's Counter-Trafficking in Persons Response Plan responsibilities</li> <li>• Document all complaints of sexual harassment and gender-based violence, maintaining confidentiality of witnesses and victims, and all implementation of the Sexual Harassment Incident Reporting and Referral Plan and interactions with law enforcement and other relevant response institutions and organizations</li> <li>• Grievance redress activities under the Contractor's internal grievance process</li> </ul>

## 2.5 Health and Safety Management

Based on ESIA impact determinations of low or negligible impact significance, no management measure is required for this project phase.

## 2.6 Education, Training, Community Outreach and Grievance Redress

Incorporated in various management measures are requirements for education, training, and outreach. The overall goals of these requirements are to provide project employees with an understanding of the commitments included in those management measures and inherent in associated laws, regulations, and policies, and to provide the employees with an appreciation of their own accountability for maintaining mutually supportive relationships with local communities. All

required training is to be provided as part of induction training (to provide general awareness) and job-specific training as necessary.

In addition to the management measure under this heading, the following management measures also specify training requirements:

- Management Measure Conveyance - 1: Labor Management
- Management Measure Conveyance - 2: Gender Integration and Social Inclusion (GSI)
- Management Measure Conveyance - 3: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment

Together, these management measures comprise the Education, Training, and Community Outreach Plan.

#### **Management Measure Conveyance -4: Stakeholder Engagement, Community Consultation, and Grievance Redress**

<b>POTENTIAL IMPACT</b>
Delays, increased grievances, political interference, and unnecessary pressure from uninformed groups resulting from lack of information and discussion/consultation
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b>
Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>• IFC Performance Standard 1 <ul style="list-style-type: none"> <li>- Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> <li>- Requires establishment of a grievance mechanism to receive and facilitate resolution of affected communities' concerns and grievances about environmental and social performance, and scaled to the risks and adverse impacts of the project and with the affected communities as its primary user.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>• Inform and involve all stakeholders</li> <li>• Have in place a defined policy for dealing with external parties</li> <li>• Foster positive relations and effective partnerships with local communities throughout project construction and operation</li> <li>• Maximize the beneficial impact of the BWSE project on the affected communities</li> </ul>
<b>MANAGEMENT MEASURE</b>
<p><b>Stakeholder Engagement, Community Consultation, and Grievance Redress</b></p> <p>The stakeholders and affected communities are to be informed of the construction activities, including implementation timeline and grievance redress procedure.</p> <p><b>Stakeholder Engagement</b></p> <ul style="list-style-type: none"> <li>• The Contractor will prepare and submit for the Engineer's written approval a Contractor's Stakeholder Engagement Plan, based on requirement described in Annex B of the ESMP</li> <li>• At a minimum, the Contractor's Stakeholder Engagement Plan will document and specify: <ul style="list-style-type: none"> <li>➤ Contractor's responsibilities and participation in community consultation, specifying:</li> <li>➤ A standard operating procedure agreed with MCA-Mongolia that governs how the Contractor will interact with local communities</li> <li>➤ How contacts with the communities are to be made and recorded, and reported to the SST for documenting in the Stakeholder Engagement Matrix</li> </ul> </li> </ul>

<ul style="list-style-type: none"> <li>➤ How information is to be shared with the communities and other project partners</li> <li>➤ Protocols for conducting, recording, and disseminating the results of community consultation</li> <li>• The Contractor will prepare and submit for the Engineer's written approval a project specific Grievance Redress Mechanism (GRM) based on requirement described in Annex A of the ESMP</li> </ul> <p><b>Community Consultation</b></p> <ul style="list-style-type: none"> <li>• The MCA-Mongolia or its representative will: <ul style="list-style-type: none"> <li>○ Introduce Contractor's officers to communities</li> <li>○ Monitor and supervise Contractor contacts with communities and other stakeholders</li> <li>○ Ensure that gender and social inclusion measures implemented by the Contractor are taken when planning meetings, and that thereby all sections of the community are equally informed and consulted</li> </ul> </li> <li>• In coordination with MCA-Mongolia or its representative, the Contractor will: <ul style="list-style-type: none"> <li>○ Undertake community information dissemination, consultation, and outreach addressing the influx of migrant workers and the associated risks to the affected communities, the Grievance Redress Mechanism, and other issues that arise during consultation</li> <li>○ Actively promote awareness and disclose information in affected communities on the following: <ul style="list-style-type: none"> <li>▪ Purpose, nature, and scale of the project</li> <li>▪ Duration of proposed project activities</li> </ul> </li> <li>○ Record results of Contractor's community consultation activities</li> <li>○ Document all community consultation activities in the Stakeholder Engagement Matrix</li> </ul> </li> </ul> <p>-</p> <p><b>Grievance Redress</b></p> <ul style="list-style-type: none"> <li>• The MCA-Mongolia or its representative will: <ul style="list-style-type: none"> <li>○ Supervise, and monitor participation by all parties</li> </ul> </li> <li>• The Contractor will: <ul style="list-style-type: none"> <li>○ Develop and implement the Grievance Redress Mechanism consistent with Annex A</li> <li>○ Designate the Contractor's Social Safeguards Officer or other officer as responsible for collaborating with the project Grievance Redress Mechanism</li> <li>○ Document all grievance redress actions</li> <li>○ Report on the Grievance Redress Mechanism to the Engineer</li> </ul> </li> </ul> <p>-</p>
<p><b>LOCATIONS:</b></p>
<p>All construction sites and temporary construction facilities and project affected areas</p>
<p><b>MONITORING</b></p>
<p><b>MCA-Mongolia or its representative</b></p> <ul style="list-style-type: none"> <li>• Monitor Contractor contacts with stakeholders and communities</li> <li>• Monitor participation by all parties in Grievance Redress Mechanism</li> </ul> <p><b>Contractor</b></p> <ul style="list-style-type: none"> <li>• Document all Contractor's stakeholder engagement and consultation activities</li> <li>• Document all grievance redress activities under the Grievance Redress Mechanism</li> </ul>
<p><b>LOCATIONS:</b></p>
<p>All construction sites and temporary construction facilities and project affected areas</p>
<p><b>INDICATORS AND SUCCESS CRITERIA:</b></p>
<p>Indicators:</p> <ul style="list-style-type: none"> <li>• Number, content, and outcome of: <ul style="list-style-type: none"> <li>- Stakeholder engagement activities</li> <li>- Community consultation activities</li> <li>- Grievance redress actions</li> </ul> </li> </ul>

<b>Success Criteria:</b> <ul style="list-style-type: none"> <li>• Successful outcome of: <ul style="list-style-type: none"> <li>- Stakeholder engagement activities</li> <li>- Community consultation activities</li> <li>• Resolution of grievances</li> </ul> </li> </ul>	
<b>REPORTING:</b> <ul style="list-style-type: none"> <li>• Update project Stakeholder Engagement Matrix</li> <li>• Summarize other activities undertaken during reporting period</li> <li>• Specify any material deviations or non-compliances to this management measure, and any other issues of concern</li> <li>• Define activities planned during next reporting period</li> </ul>	
<b>SCHEDULE</b>	
<b>MANAGEMENT MEASURE:</b>  <i>Implementation:</i> <ul style="list-style-type: none"> <li>• Initiated during pre-construction prior to starting any construction activities and throughout pre-construction and construction</li> </ul>	<b>MONITORING:</b>  <i>Implementation:</i> <ul style="list-style-type: none"> <li>• Update project Stakeholder Engagement Matrix as stakeholder engagement and community consultation activities, and grievance redress actions occur</li> </ul> <i>Reporting:</i> <ul style="list-style-type: none"> <li>• Monthly in ESMP update</li> </ul>
<b>RESPONSIBILITY</b>	
<b>MANAGEMENT MEASURE:</b>  <i>Implementation:</i> Contractor <i>Oversight:</i> MCA-Mongolia or its representative	<b>MONITORING:</b>  <i>Implementation:</i> Contractor <i>Reporting:</i> Contractor <i>Oversight:</i> MCA-Mongolia or its representative

## 2.7 Risk Control and Emergency Response

The Risk Control and Emergency Response Plan references procedures specified in the management measures in the preceding plans that are pertinent to 1) controlling risks and 2) responding to emergencies. Such risks and emergencies include, for example, fuel spills and encountering previously unidentified cultural heritage resources, as well as incidents involving sexual harassment, human trafficking, and gender-based violence.

Due to the broad scope of the Risk Control and Emergency Response Plan, effectively the plan incorporates by reference the procedures specified in the management measures in all preceding plans for this project phase.

## 2.8 Monitoring and Verification, and Maintenance Actions

This Monitoring and Verification, and Maintenance Actions Plan scopes the use of an adaptive approach to:

7. Verify that the management measures in the preceding plans are implemented, and that they are effective and sufficient
8. Revise those management measures that prove ineffective or insufficient

This approach acknowledges the risk and uncertainty of environmental and social management and fosters targeted modification of management measures to correct performance and outcomes. It will

be executed as a continuous, iterative process by which the consequences of all management actions are systematically evaluated and, as needed, specific measures are modified in response to a determination that their forecasted outcomes will not meet requirements. As needed, this process of systematically evaluating the performance of the management measures and modifying the management measures to achieve the required outcomes, as well as the respective responsibilities of MCA-Mongolia or its representative and the Contractor, will extend into the construction phase.

In the preceding plans, indicators and success criteria are designated for each management measure. For each management measure, MCA-Mongolia or its representative, in its oversight capacity, will determine whether progress toward the designated success criteria is sufficient and will document its determination. If progress decidedly fails to meet iterative requirements, MCA-Mongolia or its representative will inform the Contractor of the need to formulate a management measure-specific adaptive maintenance action to implement midcourse corrections. In coordination with the Contractor, MCA-Mongolia or its representative will reformulate the management measure to foster meeting the success criteria, incorporating as applicable operational or structural changes, and considering the cost effectiveness of incorporating the changes. The scope of most management measures likely will remain fairly stable; whereas, it is expected that some methods will be added, modified, or dropped over the implementation timeline of some management measures.

With the prior approval of MCA-Mongolia, the Contractor will implement and monitor the revised management measure, and MCA-Mongolia or its representative will provide oversight.

## 3 Construction Phase

### 3.1 Responsibilities During Construction

#### 3.1.1 MCA-Mongolia

MCA-Mongolia or its representative and the Engineer will be responsible for oversight of the construction-related management measures and monitoring specified in the ESMP. Oversight will be accomplished by MCA-Mongolia or its representative via a combination of regular visits to the construction sites and on-site supervision of management and monitoring activities. MCA-Mongolia or its representative will inform and coordinate with all applicable stakeholders regarding their corresponding mandates under or in relation to the ESMP. MCA-Mongolia or its representative will establish a Social Safeguards Team (SST) to coordinate with the Contractor during the construction phases in implementing, supervising, reporting, and follow-up actions with regard to the ESMP.

#### 3.1.2 Contractor

Unless otherwise specified for individual management measures, the construction contracting firm performing the work, the **Contractor**, will be fully responsible for implementing and monitoring all construction-related management measures specified in the ESMP—together with the conditions and procedures specified in Section V, Works Requirements of the Construction Contract Documents. The Contractor will read the ESMP, consider it in its entirety, and comply with all aspects of the ESMP that pertain to implementing and monitoring construction-related environmental and social management.

The Contractor will abide by the requirements of this ESMP, which is appended to and is a part of the Contract. The Contractor will take all necessary measures and precautions to ensure that the execution of the works and all associated operations on site or off site are carried out in conformity with statutory and regulatory environmental and social requirements of the Government of Mongolia, the MCC Environmental Guidelines, the IFC Performance Standards, and the technical specifications, where the more stringent will apply. The Contractor will take all measures and precautions to avoid any nuisance or disturbance arising from the execution of project activities.

Wherever possible, this will be achieved by avoidance of the impact at the source rather than mitigating an impact after it has been expressed.

The Contractor will designate an Environmental and Social Performance Manager. This individual(s) will have knowledge of relevant Mongolian, IFC, and Millennium Challenge Corporation standards and regulations, and knowledge of environmental and social issues that include, but are not limited to, environmental management, waste management, gender and social inclusion, cultural resources, and health and safety management.

This individual(s) will be responsible to:

- Work closely with MCA-Mongolia or its representative to guide the Contractor's thorough understanding of the mitigation and monitoring requirements
- Lead the Contractor's work related to implementing environmental and social management measures and associated reporting requirements
- Work closely with MCA-Mongolia or its representative to incorporate or modify management measures and monitoring actions to reflect on-site field conditions, as needed, with the approval of the Engineer

The Contractor, while in possession of the construction sites, will be responsible for the safety measures undertaken in accordance with the Technical Specifications to protect the workforce of the Contractor's own staff as well as the Engineer's and MCA-Mongolia or its representative's supervision staff. The Contractor will conduct in this respect safety induction courses for all personnel involved with the works and who are required to supervise any activity prior to their attending any part of the works. Additional training is required to meet MCC social policy requirements as per the:

- Labor Management Plan
- Gender Integration and Social Inclusion Plan
- Counter-Trafficking in Persons Response Plan
- Stakeholder Engagement Plan
- Construction Camp and Temporary Facilities Management Plan
- Cultural Heritage Training Plan
- Managing external grievances as part of the project GRM

The Contractor will act responsibly to provide notification of the Contractor's schedule to enable MCA-Mongolia or its representative to carry out its responsibilities. The Contractor will be required to provide verbal and written updates to MCA-Mongolia or its representative on a regular basis indicating percent achievement of the construction-related management measures specified in the ESMP. On a monthly basis, as part of the Contractor's monthly progress report, the Contractor will submit a CESMP update that will report the status of all environmental and social compliance activities and actions taken by the Contractor.

## 3.2 Environmental Management

### Management Measure Conveyance -5: Emergency Preparedness and Response

POTENTIAL IMPACT
Accidents, natural disaster, or sabotage that occur during construction and risk jeopardizing worker and public health and safety, and the environment
<p>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Mongolian Law on Environmental Protection</li> </ul>

<ul style="list-style-type: none"> <li>- Requires business entities eliminating or suspending their activities if they adversely affect the environment in breach of environmental legislation, standards and permissible maximum levels.</li> <li>• Mongolian Law on Disaster Protection <ul style="list-style-type: none"> <li>- Requires establishing management for disaster protection service, staff and specialized unit and to organize their training and preparedness.</li> </ul> </li> <li>• Mongolian Law on Fire Safety <ul style="list-style-type: none"> <li>- Requires ensuring the readiness of fire protection equipment and training their employees.</li> </ul> </li> <li>• Mongolian Law on Environmental Impact Assessment <ul style="list-style-type: none"> <li>- Requires preparing a report presenting the findings of the detailed environmental impact assessment and develop an environmental management plan.</li> </ul> </li> <li>• Mongolian Law on Labor Safety and Hygiene <ul style="list-style-type: none"> <li>- Requires employees attending short term training on labor safety and hygiene in compliance with procedures approved by the state central administrative organization in charge of labor issues and acquire knowledge and training.</li> </ul> </li> <li>• Mongolian Criminal Code <ul style="list-style-type: none"> <li>- Requires providing an emergency aid to the injured, to report to the relevant authority or official after having caused.</li> </ul> </li> <li>• IFC Performance Standards 1, 3, and 4 <ul style="list-style-type: none"> <li>- Requires that emergency preparedness and response activities will be periodically reviewed and revised, as necessary, to reflect changing conditions.</li> </ul> </li> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning <ul style="list-style-type: none"> <li>- Provides guidance on cleanup of spill and releases of oil, fuel, lubricants, hydraulic fluids.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>• Avoid, minimize, and effectively respond to emergency situations and resulting adverse impacts to the environment and communities associated with accidents, natural disasters, or sabotage</li> <li>• Effectively and efficiently respond to hazardous material spills so as to minimize their human health, safety, and environmental impacts</li> </ul>
<b>MANAGEMENT MEASURE</b>
<p><b>Emergency Preparedness and Response</b></p> <p>The Contractor will:</p> <ul style="list-style-type: none"> <li>• Fully comply with the requirements of this management measure</li> <li>• Provide emergency preparedness and response training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the Contractor’s site-specific Emergency Preparedness and Response Plan, to all employees and subcontractors at the time of their induction and annually thereafter</li> <li>• Prepare and submit for the Engineer’s written approval a site-specific Emergency Preparedness and Response Plan that specifies preventive measures and response strategies the Contractor will implement in case of accidents, natural disasters, or sabotage to protect worker and public health and safety, and the environment. The requirements of the Plan are detailed below.</li> </ul> <p><b>Hazardous Materials Management</b></p> <ul style="list-style-type: none"> <li>• Obtain from the appropriate Mongolian authorities all permits for the use and handling of hazardous materials</li> <li>• Develop prioritized material-specific handling procedures and training requirements as necessary according to risk</li> <li>• Assign an officer to manage and advise on hazardous materials management</li> </ul> <p><i>Handling</i></p> <ul style="list-style-type: none"> <li>• Nominate all equipment used to transfer hazardous materials for approval by the Engineer to assess that control measures are sufficient</li> </ul>

- Provide spill kits, protective equipment, and other necessary equipment wherever hazardous materials are stored or used in significant quantities
- Provide and require use of personal protective equipment (PPE) and fire protection equipment at all times when handling hazardous materials, as specified in the relevant material safety data sheets (MSDS)
- Avoid handling and do not store hazardous materials in close proximity to drainage systems, waterways, or wells

#### *Transport*

- Nominate all haulers used to transport hazardous materials for approval by the Engineer to assess that they are appropriately qualified to transport and handle hazardous materials
- Nominate all containers used to transport hazardous materials for approval by the Engineer to assess that control measures are sufficient
- Provide and require use of fire extinguishers, fire prevention materials, and spill prevention materials appropriate for the hazardous materials being transported
- Properly secure containers containing hazardous materials prior to transport
- Properly mark, label, and placard containers and trucks in accordance with the MSDS
- Maintain chemical manifests in accordance with Mongolian regulations

#### *Equipment Use and Maintenance*

- Maintain oil-filled electrical appliances in good and fire-resistant condition
- Undertake all planned equipment, plant, and vehicle maintenance in designated service areas with suitable containment to prevent contamination of the environment
- Place drip trays under all stationary equipment that use fuel, oil, or lubricants that are not self-contained (including, but not limited to, generators, mobile lighting towers, pumps)
- Equip tanks and machinery with measurement devices and overflow protection (e.g., flow and level meters, relief valves, overflow protection valves, and emergency shutoff)

#### **Spill Response Procedure**

- Contractor employees are responsible for verbally reporting all spills to their immediate supervisor.
- Supervisors will then coordinate the spill response process and report the spill as an environmental incident to the Engineer.

#### *Spill Response Kits*

- Supervisors will clearly label and store spill response kits in locations that will facilitate a prompt response to spills
- Spill response kits in all work areas will contain the following equipment:
  - Shovel
  - 2 x respiratory masks
  - Absorbent material (pads and socks)
  - 2 x goggles
  - 60-liter sealable container
  - 2 x PVC gloves
  - Jug granular absorbent
  - Red wheelie bin
- Spill response kits will be carried in mobile machinery where a significant spill risk is identified with its operation. The contents of these spill kits will be specific to the risks presented from the mobile machinery and will be adequate and appropriate for the materials being transported.
- Where there are significant spill risks apparent outside of workshops or designated hazardous material storage areas, spill response equipment will be specific to the risks posed.

#### *Control of Hazardous Material Spills*

- The health and safety of employees, subcontractors, and bystanders will be considered prior to initiating the spill response process.
- Personnel considered at risk of harm in the event of a spill will be evacuated from the spill impact area by the supervisor in charge of the work area.

- If the spill presents an emergency risk to bystanders or the environment, the site emergency response team will be notified immediately of this situation by the individual who identifies the risk.
- If safe to do so, trained individuals will attempt to control the spill at the source and remove all sources of heat and ignition.
- Spills will then be reported verbally to the immediate supervisor, who will arrange for spill containment and cleanup to occur.
- The supervisor will notify the Engineer of the spill details to enable advice to be provided and statutory reporting processes to be initiated.

#### *Containment and Clean Up of Hydrocarbons*

- Contain the extent of the spill by using absorbent material around the perimeter of the spill or earthen bunds if outside of designated workshops or storage areas.
- Excess hydrocarbons may be soaked up using absorbent materials, including dirt, or removed by use of a vacuum truck if the spill is present as free product or is on water.
- Prevent hydrocarbons entering drainage systems and waterways. If hydrocarbons do enter drainage systems or waterways, these should be dammed or have booms placed in them to minimize the spread of hydrocarbons.
- Waste material will be disposed of appropriately:
  - Absorbent material, booms, etc. will be placed into designated bins.
  - Contaminated soil and water will be removed and stored in a designated area as advised by the Engineer.

#### *Containment and Clean Up of Sewage*

- Contain the spill with sand or earth to prevent it entering drainage systems and waterways.
- Calcium hypochlorite powder will be spread around the site for spills likely to be encountered by personnel.
- Any wastewater that enters waterways or drainage systems will be disinfected with the use of calcium hypochlorite powder.
- Wastewater then will be removed by use of a vacuum truck and taken to a waste treatment facility.
- Remaining water and solids will be disinfected using calcium hypochlorite powder.

#### *Containment and Clean Up of Chemicals*

- Contain the extent of the spill using sand, earth, sawdust, or other inert material to prevent it entering drainage systems and waterways.
- Chemicals clean up may vary depending on the chemical type.
- General purpose spill kit supplies, instead of oil-absorbent supplies, will be used.
- Collect recoverable product, if possible, and dispose of at an approved disposal site or facility in accordance with guidance provided by the Engineer.

#### *Containment and Clean Up of Battery Acid*

- Contain the spill and neutralize with a basic substance such as sodium bicarbonate in accordance with guidance provided by the Engineer.
- Collect recoverable product and neutralize with sodium bicarbonate in accordance with guidance provided by the Engineer.
- Dispose of with process water on site.

#### *Follow-up Sampling, Storage, and Treatment*

- For spills rated as significant risk on incident reporting, quality of cleanup work will be determined by follow-up sampling of contamination-receiving environment and compared against the Mongolian environmental standards on permissible levels of pollutants in air, water, and soil.
- If any exceedance of pollutant permissible levels is noted, cleanup work will be considered as inadequate and further cleanup will be required.
- Follow-up sampling will be carried for all spills to evaluate reporting requirements to the Engineer.
- Hydrocarbon contaminated soils will be excavated and placed within a dedicated area for storage and treatment.

## Emergency Preparedness and Response Plan

- Prepare and submit for the Engineer's written approval a site-specific Emergency Preparedness and Response Plan and associated procedures that, as a minimum:
  - Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
  - Complies with Construction Contract Documents Section V, Works Requirements, Section 01030 Special Requirements, Paragraph 1.04.D Emergency Action Plan
  - Specifies:
    - Site-specific preventive measures and response strategies the Contractor will implement in case of accidents, natural disasters, or sabotage to protect worker and public health and safety, and the environment
    - Potential emergencies and key areas prone to emergency situations
    - Existing emergency response structures and capacities in the respective project areas—i.e., police, fire brigades, paramedics / ambulances, hospitals, etc.
    - Actions to be taken prior to an emergency—i.e., preventive and preparatory measures
    - Actions to be taken during an emergency—i.e., response measures
    - Actions to be taken after an emergency—i.e., recovery and assessment measures
    - Contact lists for emergency situations
    - Description of collaboration mechanisms of the project's emergency preparedness and response teams with existing emergency response structures in the respective project areas
  - Assigns roles and responsibilities for emergency preparedness and response
- Post copies of the Plan and the list of emergency contact numbers in highly visible locations within the construction sites and temporary facilities
- In case of any accidents, the Contractor will immediately undertake the procedures contained within the Plan that complies with From IFB sub clause 4.8 safety procedures: "The Contractor shall notify the Engineer, the Employer, and MCC within 24 hours or as soon as reasonably possible after the occurrence of any accident which has resulted in damage or loss of property, disability or loss of human life, or which has or which could reasonably be foreseen to have a material impact on the environment and shall submit to the Engineer, the Employer, and MCC no later than 7 days after the occurrence of such an event, a summary report thereof

### LOCATIONS:

Specifications</li> </ul> </li> </ul> </li> <li>Mongolian Law on Environmental Impact Assessment               <ul style="list-style-type: none"> <li>Requires preparing a report presenting the findings of the detailed environmental impact assessment and develop an environmental management plan.</li> </ul> </li> <li>IFC Performance Standard 6               <ul style="list-style-type: none"> <li>Requires that impacts to biodiversity be offset.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>Relocation of affected trees and revegetation of disturbed soils</li> </ul>
<b>MANAGEMENT MEASURE</b>
<b>Tree Relocation and Revegetation</b> The removal of trees and other vegetation will be kept to the minimum necessary to accommodate the permanent works that are indicated by the project drawings. The Contractor will prepare, submit, and implement a Tree Replanting and Revegetation Plan for the Engineer's written approval. The plan will include but not be limited to the following:

- Follow all applicable ESMP mitigation measures and Contract documents.
- Replant all removed trees at locations where they will not interfere with safety or proposed project assets.
- The existing trees in the protection zone of the pipeline will be removed and replanted, rather than replaced, whenever possible. If a tree is damaged during removal it will be replaced.
- In concurrence with the Engineer, trees outside of the protection zone that hinder or obstruct work, or interfere with project assets will be removed and replanted, rather than replaced, whenever possible. If a tree is damaged during removal it will be replaced.
- The existing trees will be replanted next to the protection zone if there is room available; where there is no room, they will be replanted in a different location based on discussion with the local authority and concurrence of the Engineer.
- Replanted and replaced trees that die within 1 year of planting will be replaced by the Contractor.
- Ensure that any exposed surfaces are revegetated at the completion of works and in accordance with instructions of the Engineer.
- A replanting and revegetation schedule.
- A monitoring plan and schedule to ensure success in the first year of replanting and revegetation

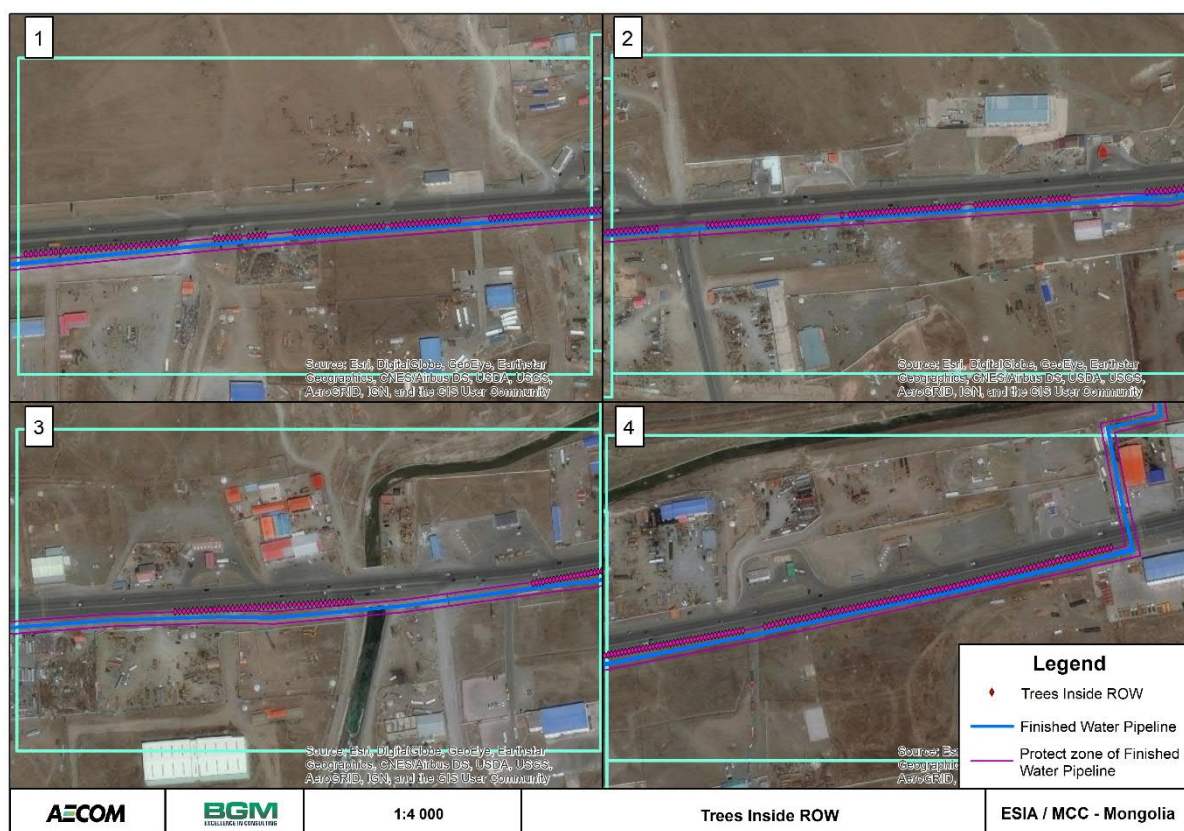

Trees along the finished water pipeline are cared for by the local authority. After replanting, in concurrence of the Engineer, the Contractor will provide formal notice to local authority to resume plant care.

#### LOCATIONS:

As indicated in the following figures, there are 879 trees along the AH3 Highway, parallel to the route of the finished water pipeline; of these 397 are within the protection zone of the pipeline and will need to be removed and relocated. In concurrence with the Engineer, the Contractor may identify trees outside of the protection zone requiring removal as they hinder or obstruct works, or interfere with project assets.

## MONITORING

### Document submission and approval of plan

#### LOCATIONS:

As indicated in the above figures, there are 879 trees along the AH3 Highway, parallel to the route of the finished water pipeline; of these 397 are within the protection zone of the pipeline and will need to be removed and relocated. In concurrence with the Engineer, the Contractor may identify trees outside of the protection zone requiring removal as they hinder or obstruct works, or interfere with project assets.

#### INDICATORS AND SUCCESS CRITERIA:

##### Indicators:

- Implementation of tree replanting and revegetation measures
- Submission of construction-phase Tree Planting and Revegetation Plan
- Specific impact criteria and indicators specified in approved plan
- Number of trees removed from along the AH3 highway
- Number of trees replanted next to the projection zone
- Number of trees replanted in different locations
- Number of trees replaced
- Hectares of exposed surfaces revegetated

##### Success Criteria:

- Tree replanting plan approval
- All removed trees replanted or replaced
- All replanted or replaced trees survive 1 year or replaced
- All exposed surfaces revegetated within 1 year

#### REPORTING:

- Report communications and written approval of Engineer of the Tree Replanting and Revegetation Plan
- Report monitoring activities and data evaluation findings
- Report impact criteria exceedances and recommended protective actions to be implemented
- Summarize other activities undertaken during reporting period

### Management Measure Conveyance -7: Mongolian Marmot Protection and Habitat Restoration

<b>POTENTIAL IMPACT</b>
Disturbance of endangered Mongolia marmot ( <i>Marmota sibirica</i> ) and loss and disturbance of marmot habitat
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b> <ul style="list-style-type: none"> <li>Mongolian Law on Environmental Protection               <ul style="list-style-type: none"> <li>Requires researching and establishing the potential for State and regional development, the restoration, breeding and raising of endangered animals, protection of soil, water, and air, and for humans to live in a healthy.</li> </ul> </li> <li>Mongolian Law on Fauna               <ul style="list-style-type: none"> <li>Requires the approval of the government based on the conclusions of an environmental impact assessment of the construction of industrial plants, power stations within the territory of extremely rare fauna.</li> </ul> </li> <li>IFC Performance Standard 6               <ul style="list-style-type: none"> <li>Prohibits implementing any activities that leads to a net reduction in the national/regional population of any Critically Endangered or Endangered species over a reasonable period.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>Minimize disturbance of Mongolian marmots</li> <li>Habitat restoration to achieve a net gain in Mongolian marmot habitat</li> </ul>
<b>MANAGEMENT MEASURE</b>
<b>Mongolian Marmot Protection and Habitat Restoration</b> <b>Protection and Habitat Restoration</b> MCA-Mongolia will, with reference to the figure below: <ul style="list-style-type: none"> <li>Designate construction-phase marmot protection zone extending a minimum of 200 meters from the outermost flight burrows</li> <li>Prohibit the operation of any motorized vehicles, including cars and all-terrain vehicles, and restrict foot traffic within construction-phase marmot protection zone by MCA-Mongolia, Engineer, Contractor, and subcontractor project personnel</li> <li>Develop and implement marmot protection training to be required of all construction-phase MCA-Mongolia, Engineer, Contractor, and subcontractor project personnel and visitors to project facilities and construction sites in the vicinity of the AWPP.</li> </ul>

MCA-Mongolia will employ or contract an experienced biodiversity specialist to develop and implement the following Mongolian marmot construction-phase monitoring and long-term protection program

### **Construction-Phase Monitoring and Long-term Protection**

Prepare, submit, and implement Mongolian Marmot Monitoring and Evaluation Plan for the Engineer's written approval, to monitor and evaluate Mongolian marmot population density and structure, reproduction, and mortality in the vicinity of the proposed AWPP and replacement access road and pedestrian path to the Monument to Terror Victims, and existing and proposed walking trail to the sacred ovoo on Songinokhairkhan Mountain. The plan will specify roles and responsibilities for marmot monitoring and evaluation.

The plan may include but not be limited to the following, as determined by the biodiversity specialist and approved by the Engineer:

#### *Mapping*

- Burrow clusters
- Family and individual home ranges
- Vegetation
- BWSE-related and other human encroachment

#### *Monitoring activities*

- Use of drone equipped with thermal imaging camera
- Direct observation aided by binoculars and spotting scopes
- Use of automatic camera trap
- Capture with or without marking

#### *Monitoring parameters*

- Burrow cluster population
- Age of individuals
- Sex of individuals
- Home range size
- Number of families
- Family composition
- Number of pups
- Activity/Behavior
- Predation
- Survival and mortality
- Total population
- Age and sex distribution of population

Observations are to be repeated during the morning and evening active periods.

Monitoring data for the selected parameters will be evaluated as construction, and operation and maintenance progress for changes attributed to loss of marmot habitat or disturbance of marmots. The monitoring and evaluation plan will specify impact indicators and impact criteria determined by the biodiversity specialist and approved by the Engineer.

Exceedance of any of the impact criteria will trigger, ***independent of this management measure***, preparing, submitting, and implementing protective actions, in addition to those specified above, formulated to avoid, minimize, or offset the observed adverse impact.

Such actions may include the following, as well as other measures recommended by the biodiversity specialist:

- Constructed buffers; e.g., vegetated earth berms
- Rock piles where marmots can watch for predators, thermoregulate, and dig burrows
- Spill protection measures
- Permanent Mongolian marmot protection zone
- Driving restrictions; e.g., prohibit or control off-road driving, set speed limits, restrict non-essential traffic to daytime
- Marmot protection and avoidance training
- Warning and interpretive signage

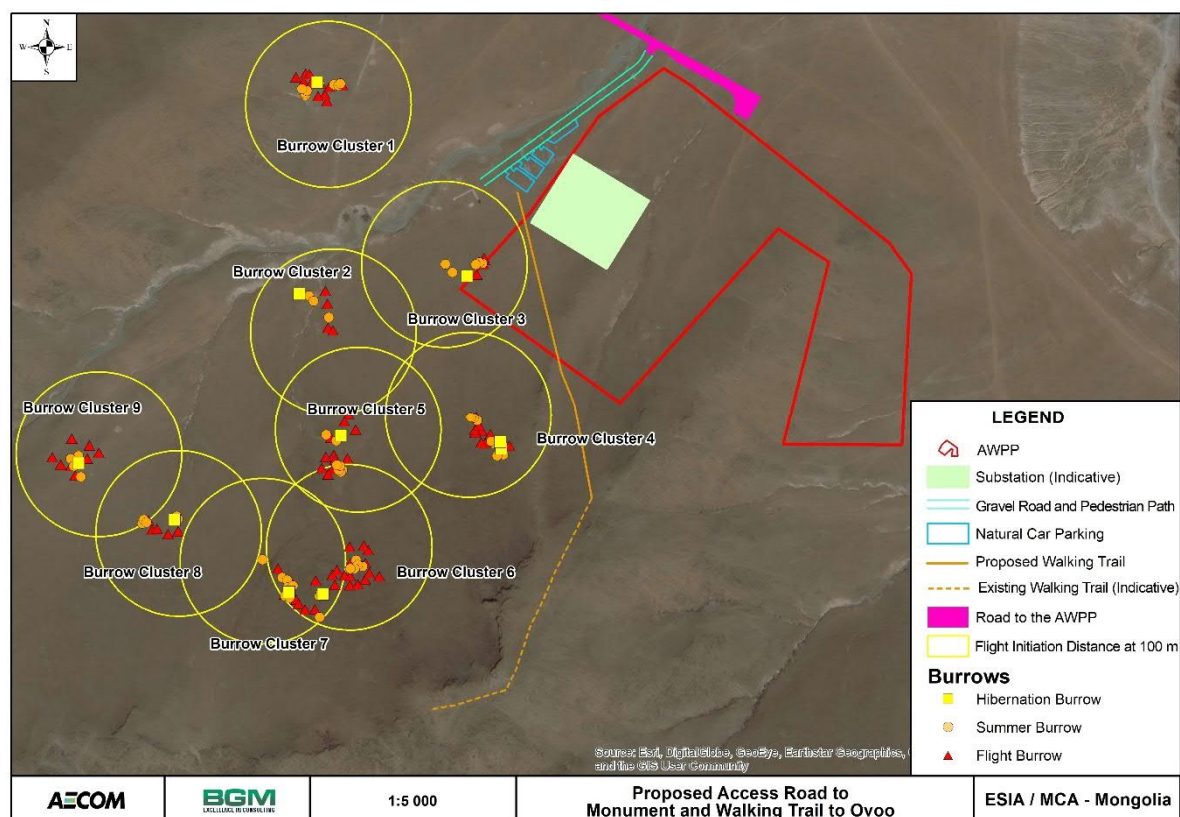

- Supplemental feeding to increase reproduction and survival, and attract marmots away from roads

The Contractor will be requested to provide a quotation to implement such actions identified by the biodiversity specialists, should the impact criteria be triggered.

#### LOCATIONS:

Observed Mongolian marmot burrow clusters in the vicinity of the proposed AWPP and replacement access road and sidewalk to the Monument to Terror Victims and sacred ovoo on Songinokhairkhan Mountain, as located on the following figure, and associated, nearby habitat supporting foraging, including pup-weaning, and dispersal of sub-adults including pup-weaning, and dispersal of sub-adults:

#### MONITORING

Document submission and approval of plan

#### LOCATIONS:

Observed Mongolian marmot burrow clusters in the vicinity of the proposed AWPP and replacement access road and sidewalk to the Monument to Terror Victims and sacred ovoo on Songinokhairkhan Mountain, as located on the above figure, and associated, nearby habitat supporting foraging, including pup-weaning, and dispersal of sub-adults including pup-weaning, and dispersal of sub-adults

#### INDICATORS AND SUCCESS CRITERIA:

Indicators:

- Submission of construction-phase monitoring and long-term protection plan
- Collection and evaluation of Mongolian marmot population density and structure, reproduction, and mortality data
- Specific impact criteria and indicators specified in approved plan

Success Criteria:

- Monitoring and protection plan approval
- Identification of and timely response to changes attributed to loss of marmot habitat or disturbance of marmots

#### REPORTING:

<ul style="list-style-type: none"> <li>Report communications and written approval of Engineer of Construction-Phase Monitoring and Long-Term Protection Plan</li> <li>Report monitoring activities and data evaluation findings</li> <li>Report impact criteria exceedances and recommended protective actions to be implemented</li> <li>Summarize other activities undertaken during reporting period</li> <li>Specify any material deviations or non-compliances to this management measure, and any other issues of concern</li> <li>Define activities planned during next reporting period</li> </ul>

### 3.3 Waste Management

#### Management Measure Conveyance -8: Waste Management

<b>POTENTIAL IMPACT</b>
Risks and adverse impacts of handling, storing, treating, and disposing of waste
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b> Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>Mongolian Law on Hazardous and Toxic Chemicals <ul style="list-style-type: none"> <li>Requires depositing the waste based on conclusion of the related professional organization to the place determined by the district governor.</li> </ul> </li> <li>Mongolian Law on Sanitation <ul style="list-style-type: none"> <li>Prohibits disposing waste in the places other than the specified points.</li> </ul> </li> <li>Mongolian Law on Waste <ul style="list-style-type: none"> <li>Prohibits establishing centralized waste disposal sites in urban settlement areas, water sanitary and protection zones and mining areas.</li> </ul> </li> </ul>

- Government of Mongolia Resolution No. 135 of 2002 addressing the procedures of the classification, collection, packaging, transportation, treatment, storage, and disposal of hazardous waste
- Government of Mongolia Resolution No. 116 of 2018 addressing Articles 7.1.2 and 7.1.3 of the Law on Waste (repealed Government Resolution No. 135 of 2002).
- Joint Order No. A-320/305 of Minister of Nature, Environment and Tourism and Minister of Health of 2011 addressing the procedures of the disposal of medical wastes
  - Requires providing personal protective equipment to the organization's waste management officer.
- Minister's Order No. 404 of 2006 of Ministry of Nature, Environment and Tourism addressing the procedure of the disposal and landfill of waste
- Minister's Order No. A/443 of 2018 addressing Articles 4.4.1, 4.4.2, 4.4.3 of the Law on Hygiene (repealed Minister's Order No. 404 of 2006).
- IFC Performance Standards 3 and 4
  - Encourages recovering and reusing waste in a manner that is safe for human health and the environment.
- IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning
  - Provides guidance on management of non-hazardous solid waste generated at construction sites and associated facilities, hazardous materials, and wastewater discharges.

#### OBJECTIVES

- Effectively manage waste by minimizing waste generation and safely handling, storing, treating, and disposing of generated wastes

#### MANAGEMENT MEASURE

##### Waste Management

The Contractor will:

- Comply with Construction Contract Documents Section V, Works Requirements, Section 01030 Special Requirements:
  - Paragraph 1.04.E Hazardous Waste Management Plan
  - Paragraph 1.14 Disposal of Excess Material
  - Paragraph 1.21 Disposal of Debris
- Comply with Construction Contract Documents Section V, Works Requirements, Section 01110 Environmental Protection Procedures:
  - Paragraph 3.04.I, requiring the disposal of all debris and excess material outside wetland or floodplain areas in an environmentally sound manner
  - Paragraph 3.05.A, prohibiting the use of burning at the project site for the disposal of refuse and debris
- Comply with Construction Contract Documents Section V, Works Requirements, Section 01610 Delivery, Storage and Handling:
  - Paragraph 1.05.C Storage and Protection
- Comply with Construction Contract Documents Section V, Works Requirements, Section 02100 Site Preparation:
  - Paragraph 1.07.D, requiring the legal disposal of all waste and surplus material
  - Paragraph 3.03 Disposal of Waste Materials
- Comply with Construction Contract Documents Section V, Works Requirements, Section 02210 Earth Excavation, Backfill, Fill and Grading:
  - Paragraph 3.11 Reuse and Disposal of Surplus Excavated Materials
- Fully comply with the requirements of this management measure
- Provide in storage locations and principle points of use material safety data sheets (MSDSs) for all stored materials in Mongolian, English, and any other languages as appropriate
- Provide 110%-capacity secondary containment or 25% of the capacity of all the total volume of the stored individual containers within the bund, whichever is larger, for all storage of liquid hazardous materials, including, but not limited to, waste oil and solvents
- Do not store waste oils for extended periods in underground sumps

- Empty and inspect regularly tanks and sumps for any signs of cracks or holes
  - Record findings of inspections
  - Repair any cracks or holes
  - Record any repairs conducted
- Make available on site spill kits, protective equipment, and other necessary equipment where hazardous materials are handled, to clean and mitigate spills
- Locate appropriate first aid close to hazardous material storage areas, including, but not limited to, eye-wash, showers, and first aid kits
- Only transport hazardous materials using operators licensed and approved by the Engineer for the specific material
- Implement the following waste management hierarchy, in the following order of preference:
  - Waste avoidance and reduction at source
  - Waste reuse and recycling
  - Waste storage, treatment, and disposal to local, Mongolian, and international standards
- Classify all wastes according to the following and based on internationally accepted regulations, guidelines, definitions, and methodologies:
  - Mineral waste
  - Non-hazardous waste, including domestic waste and inert waste
  - Hazardous waste, including medical waste
  - Wastewater
- Segregate, securely contain, and monitor waste at the source of generation pending treatment, transport, or disposal
- Prohibit open burning of non-hazardous and hazardous solid waste
- Transfer recyclable wastes only to facilities operated by licensed recycling contractors, subject to assessment by the Engineer of the contractors and facilities
- Transfer non-hazardous waste, other than recyclable wastes, only to waste disposal facilities licensed in accordance with applicable Mongolian laws and regulations
- Sterilize medical waste by autoclave in 121°C for at least 20 minutes prior to transfer to disposal and a licensed facility
- Properly store on site all hazardous wastes for which there is not an engineered and approved treatment or disposal method available until a treatment and/or disposal route becomes available
- Maintain an inventory by location, specifying quantity per month and cumulative total, and detailing:
  - Wastes generated
  - Wastes sent for off-site recycling
  - Wastes subject to hazardous waste treatment
  - Wastes subject to non-hazardous waste disposal
  - Unrecyclable hazardous wastes stored
- Provide waste management training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the Contractor's site-specific Waste Management Plan, to all employees and subcontractors at the time of their induction and annually thereafter
- The Contractor will prepare and submit for the Engineer's written approval a site-specific Waste Management Plan and associated procedures that, as a minimum:
  - Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
  - Assigns roles and responsibilities for waste management
  - Disposition of hazardous wastes for which no engineered and approved treatment or disposal method is available

#### LOCATIONS:

All construction sites, construction camps, and temporary facilities where waste is generated, stored, treated, or disposed of

#### MONITORING

Document:

## 3.4 Social and Gender Inclusion

### Management Measure Conveyance -9: Labor Management

POTENTIAL IMPACT
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Professional management and conditions of labor</li> <li>Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> <li>Women's short-term employment in construction and engineering-related work</li> <li>Potential alleviation of poverty in local area</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of forced labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
<p>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Constitution of Mongolia             <ul style="list-style-type: none"> <li>Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>Mongolian Civil Code             <ul style="list-style-type: none"> <li>Requires providing office space, tools and equipment necessary to ensure employees' health.</li> </ul> </li> <li>Mongolian Law on Gender Equality             <ul style="list-style-type: none"> <li>Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>Mongolian Law on Labor             <ul style="list-style-type: none"> <li>Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>Prohibits employing children under the age of 16 or under 18 in dangerous industries, including construction</li> </ul> </li> <li>Mongolian Law on Minimum Wage             <ul style="list-style-type: none"> <li>Minimum wage is fixed by National Tripartite Committee on Labor and Social Consensus representatives.</li> </ul> </li> <li>Mongolian Law on the Protection of the Rights of the Child             <ul style="list-style-type: none"> <li>Prohibits employing children in any work that is likely to harm their health or morale, and exploiting or paying unjust wages to children</li> </ul> </li> <li>Mongolian Law on Social Protection of Disabled Persons</li> </ul>

- Prohibits building any buildings and facilities that do not meet needs and requirements of persons with disabilities.
- **Mongolian Law on Combating Human Trafficking**
  - Requires regulating the workplace to ensure the implementation of the legislation on combating human trafficking, and if it is not specified, it shall be obliged to comply with the instructions, recommendations, statements and instructions given by the competent authorities and officials.
- **Mongolian Law on Sending Labor Force Abroad and Receiving Labor Force and Specialists from Abroad**
  - Regulates relations with respect to employment of a Mongolian citizen abroad and a foreign citizen in Mongolia, and protection of their rights and interests.
  - Reinforces provisions of the Constitution of Mongolia, Labor Law, Social Insurance Law, and other related legal acts, and legal status of a foreign citizen.
- **IFC Performance Standard 2**
  - Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.
  - Contractor will adopt and implement human resources policies and procedures appropriate to its size and workforce that set out its approach to managing workers consistent with the requirements of this performance standard and national law.
  - Contractor will provide workers with documented information that is clear and understandable regarding their rights under national labor and employment law and any applicable collective agreements, including their rights related to hours of work, wages, overtime, compensation, and benefits upon beginning the working relationship and when any material changes occur.
  - Contractor will not make employment decisions on the basis of personal characteristics unrelated to inherent job requirements. Contractor will base the employment relationship on the principle of equal opportunity and fair treatment, and will not discriminate with respect to any aspects of the employment relationship, such as recruitment and hiring, compensation (including wages and benefits), working conditions and terms of employment, access to training, job assignment, promotion, termination of employment or retirement, and disciplinary practices. Contractor will take measures to prevent and address harassment, intimidation, and/or exploitation, especially in regard to women. The principles of non-discrimination apply to migrant workers.
  - Prohibits employment of child labor.
- **Millennium Challenge Corporation Counter-Trafficking in Persons Policy (C-TIP Policy)**
  - Requires contractors to take a zero-tolerance policy with regard to human trafficking and to actively manage employment conditions to prevent trafficking in persons and related activities and specifies remedies that the MCA-Entity may take in response to confirmed cases of TIP..
- **Millennium Challenge Account Social and Gender Integration Plan (SGIP)**
  - Sets out guidelines for Contractors related to social risk mitigation measures in infrastructure, including making working conditions suitable for both male and female employees
  - Requires developing and implementing an employment plan that prioritizes using local labor particularly from the Area of Influence of the project
  - Sets a target to encourage contractors to employ as workers at least 30% women of all workers at each skill/occupational level
  - Encourages Contractors to cooperate with technical and vocational education (TVET) centers and professional associations to hire TVET graduates.
- **Millennium Challenge Corporation Guidance Note to MCAs on Sexual Harassment**
  - Requires that contractors are well-informed about existing anti-sexual harassment policies and procedures, and that contractors meet the requirements in the standard bidding documents.
- **Ministry of Construction and Urban Design (MCUD) Gender Responsiveness Policy**

- Calls for gender targets in employment via “international and domestic tenders, so that one gender should not be lower than 15 percent among workers, and 25 percent among decision makers.”
- Ministry of Labor and Social Welfare Order (2016)
  - Expanded the types of hazardous work prohibited for children under the age of 18 to include construction
- International Labor Organization fundamental conventions, and International Human Rights instruments and conventions

## OBJECTIVES

The Labor Management Plan ensures that contractors and their workers have clear expectations about the behaviors and conditions expected of the Contractor and all workers.

- Promote fair treatment, non-discrimination, and equal opportunity of workers
- Promote local labor opportunities
- Achieve a target of women's employment as 30% of all labor at each skill/occupational level
- Establish and maintain, a constructive worker-management relationship
- Protect workers, including “vulnerable” categories of workers such as children, migrant workers, workers engaged by third parties, and workers in the supply chain
- Avoid the use of forced labor
- Maximize the beneficial impact of the project on the affected communities

## MANAGEMENT MEASURE

### Labor Management

The MCA-Mongolia or its representative's Social Safeguards Team (SST) will:

- Encourage Contractor to employ local unskilled and semi-skilled labor, particularly youth and women, and to procure goods and services from local businesses and entrepreneurs
- Facilitate the Contractor's cooperation with the local District Labor Offices
- Facilitate the publication of vacancies and procurements within affected communities
- Facilitate the holding of job fairs and procurement workshops within affected communities to support local applicants to apply for jobs and local business and entrepreneurs to bid
- Gather names of interested workers from project affected households and through community information programs and consultation meetings
- Share the names of interested workers with Contractor and District and khoroo Labor Offices
- Encourage Contractor to employ women at a rate of at least 30% of personnel at each skill/occupational level
- Facilitate Contractors' engagement with relevant university engineering programs, technical and vocational education and training (TVET), and professional associations to 1) identify and recruit qualified job applicants and 2) establish internships and apprenticeships

The Contractor will:

- Fully comply with the requirements of this management measure
- Perform the work in accordance with relevant sections of the ESMP

#### *Access to Employment*

The Contractor will:

- Publish vacancies (listing the required qualifications for all categories of employment) within project-affected communities and at District and khoroo offices and provide such information to the Engineer and during each community meeting
- Publish and communicate employment opportunities listing the required qualifications for all categories of employment city-wide, and beyond in Mongolia, if the vacancies cannot be filled from local communities
- Ensure that a staff person responds to questions from the local population regarding employment and procurement opportunities
- Develop an employment forecast and a written recruitment strategy to: 1) encourage the employment of qualified individuals among the local population(s) in project construction and ancillary activities in all phases, with particular focus on women and youth; 2) achieve a target of

women's employment at least 30% of personnel at each skill/occupational level; and 3) provide training for local construction brigades on how to be effective contractors

- Through the Contractor's Social Safeguards Officer, liaise with the MCA-Mongolia or its representative's SST and local labor offices to provide support with the job application process, encourage local employment (including women's employment), and publicize a fair, consistent and transparent recruitment process
- In disseminating information on potential employment opportunities, take steps to maximize outreach, using all forms of media that may be appropriate
- Ensure that all staff have written employment contracts specifying fair employment conditions for equal work to men and women, and fulfilling all conditions specified under the Mongolian Law on Labor defining the contracts

The Contractor is encouraged to:

- Create pay bands for each category of worker to ensure equal pay for equal work

As feasible, the Contractor will:

- Develop and submit a plan for providing on-the-job training and skills transfer opportunities to the local labor force
- Engage with training, education, and professional organizations—such as Technical and Vocational Education and Training, Implementing Agency of the Ministry of Labor and Social Protections, Mongolian University of Science and Technology, and the Mongolian Builder's Association—to recruit qualified applicants, and provide apprenticeships and internships for students who study water engineering and relevant subjects at university
- The Contractor shall note contract clauses on "Gender," "Engagement of Staff and Labor," "Foreign Personnel," "Prohibition of Forced or Compulsory Labor," "Prohibition of Harmful Child Labor," "Employment Records of Workers," and "Non-Discrimination and Equal Opportunity."

#### *Local Procurement*

The Contractor will:

- Proactively procure goods and services from local businesses and entrepreneurs in Khan-Uul and Songinokhairkhan Districts and Ulaanbaatar, and members of targeted disadvantaged groups (e.g., women, people with disabilities), achieved through:
  - Publicizing procurements within the targeted geographical area or targeted group, for example at the District and khoroo offices and via notice boards, print media (newspapers, etc.), recruitment agencies, or job and career fairs
  - Publicizing and hold procurement workshops within the targeted geographical area or targeted group
  - Adding priority criteria for businesses and entrepreneurs in the targeted geographical area or members of the targeted group to the selection procedure
- In disseminating information on potential service procurement opportunities, take steps to maximize outreach, using all forms of media that may be appropriate

#### *Workplace Environment*

The Contractor will:

- Establish, execute, and enforce a Worker Behavior Code of Conduct on which all employees will be briefed, that all employees are required to sign, and that mandates immediate dismissal for serious offences including sexual harassment, violence, or confirmed cases of engagement in trafficking in persons. The Code will specify:
  - Expectations of worker behavior, and penalties for transgression
  - MCC and Mongolian legal definitions of trafficking in persons (TIP), zero-tolerance for TIP, and remedies that the MCA Entity may take in response to confirmed cases of engagement of trafficking in persons
  - Zero-tolerance for gender-based violence
  - Compliance with the Contractor's Anti-Sexual Harassment Policy and notification of the Contractor's Sexual Harassment Incident Reporting and Referral Plan
  - Rights of employees to a grievance mechanism, holidays, and cultural and festival access
  - Conditions for work camps, shelter, water and sanitation, food, and security

- The responsibility of all workers, regardless of their role or duration of employment, to review and acknowledge the Workers' Code of Conduct by signing the code sheet
  - The requirement to respect local customs and practices
- Establish and execute a grievance redress procedure that:
  - Formalizes a system for receiving and managing internal complaints of sexual harassment, gender-based violence, or issues of trafficking persons (including engaging in commercial sex with a person under 18 years of age)
  - Guarantees confidentiality to makers of allegations
  - Designates the Contractor's Social Safeguards Officer or other officer as responsible for collaborating with the human resources department on the grievance redress procedures
  - Refers to the Contractor's Sexual Harassment Incident Reporting and Referral Plan for allegations of sexual harassment
  - Specifies that the Contractor's zero-tolerance for gender-based violence addresses any complaints of gender-based violence against its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism
  - In cases of discrimination against women or of allegations of sexual harassment or violence, requires that the Contractor's Social Safeguards Officer contact the MCA-Mongolia or its representative's SST to include them in the investigation and appoint a third party—such as a representative from an NGO such as the Centre for Gender Equality or equivalently qualified, experienced organization—to lead the investigation
- The Contractor shall note the contract clause on "Prohibition of Sexual Harassment"
- The Contractor shall note the contract clause on "Facilities for Staff and Labor" and provide suitable gender-segregated facilities to enable the safe employment of both men and women – e.g. Toilet facilities, changing facilities on all sites and enabling physical access to office accommodation for people with disabilities

### *Training*

The Contractor will:

- Provide training to enhance the skills of employees using on-the-job training, internships, and apprenticeships.
- Mandate for all employees, before each worker starts work on the site, induction packages that include:
  - Employment rights and conditions, including non-discrimination and equal opportunity
  - The Contractor's responsibility to "adopt recruitment, hiring and retention practices that support the employment of women and staff from diverse backgrounds" per the contract clause on "Engagement of Staff and Labor," the Contractor's employment forecast and recruitment strategy, and the Contractor's Gender Integration and Social Inclusion Plan (described below)
  - Gender-based violence
  - Contractor's Anti-Sexual Harassment Policy – including awareness of what constitutes sexual harassment, exploitation, and abuse and the Contractor's Sexual Harassment Incident Reporting and Referral Plan
  - Using the internal Grievance Mechanism for allegations of gender-based discrimination
  - Rights to have access to local festivals
  - Cultural sensitivities, and social norms and practices in each area
  - Expectations on avoiding poor relations between employees and local communities caused by behavior relating to alcohol, gambling, prostitution, illegal drug use, violence and sexual abuse of women, minors and lesbian, gay, bisexual, transgender, queer, and others (LGBTQ+) persons
  - Countering the Trafficking in Persons Response Plan – awareness of responsibilities to counter the trafficking of people around the project area, the remedies that the Contractor and the MCA Entity may apply, and mechanisms for reporting suspected instances of TIP with the Contractor's TIP Response Plan

- Awareness of the possibilities of the transmission of HIV/AIDS and communicable illnesses and how to prevent HIV/AIDS transmission
- Undertake a series of employment and social plan inductions and employee awareness programs that:
  - All employees must attend at the commencement of employment and over the employment period twice yearly
  - Incorporate toolbox talks that include reinforcement of all training programs
- Commission training modules on gender integration and social inclusion topics for all employees at intervals agreed with the MCA-Mongolia or its representative's SST
- Require that the Social Safeguards Officer, together with the MCA-Mongolia or its representative's SST Community Liaison Officers, conduct awareness raising with workers on child labor issues in the local community as part of an ongoing community awareness program on social issues
- These toolbox talks will include ways that workers can report suspected child labor to the District Children, Youth and Family Offices, and the MCA-Mongolia or its representative's Social Manager

#### *Site-specific Labor Management Plan*

The Contractor will prepare and submit for the Engineer's written approval a site-specific Labor Management Plan that:

- Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
- Includes the Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan and the Workers' Code of Conduct
- Is consistent and compliant with:
  - Mongolian Law on Labor
  - Relevant aspects of the MCC Gender Policy coordinated and agreed with the MCA-Mongolia or its representative's SST and operated by the Contractor's Social Safeguards Officer
  - The MCC Policy on Counter-Trafficking in Persons
- Assigns roles and responsibilities for labor management

#### LOCATIONS:

All construction sites and temporary construction facilities

#### **MONITORING**

MCA-Mongolia or its representative's SST:

- Monitor implementation of the Contractor's Labor Management Plan and Worker Behavior Code of Conduct, including prohibitions against trafficking in persons, gender-based violence, sexual harassment, and child labor
- Monitor implementation of the Contractor's employment recruitment strategies and assist Contractor to reach potential workers among local women, youth, and people from disadvantaged groups
- Monitor participation by all parties in the Contractor's internal grievance redress procedure and external project Grievance Redress Mechanisms

Contractor:

- Record results of Contractor's labor management responsibilities, with all data and statistics disaggregated by age and gender, following, at a minimum, the contract clause on "Employment Records of Workers" and recording, for each worker hiring and leaving dates, along with duration (days) of employment and skills/occupational category and home location of workers (project-affected district/khoroov, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia)
- Document implementation of the requirements above for the Labor Management Plan, including all recruitment activities
- Document Worker Behavior Code of Conduct infringements and outcomes, and internal grievance redress activities under the Contractor's internal grievance process

#### LOCATIONS:

All construction sites and temporary construction facilities
<p><b>INDICATORS AND SUCCESS CRITERIA:</b></p> <p>Indicators:</p> <ul style="list-style-type: none"> <li>• Required plans written, approved, and implemented</li> <li>• Number, content, and outcome of employment against home location (project-affected district/khoroos, elsewhere in Ulaanbaatar or Mongolia, outside of Mongolia), gender, age brackets (under 30, 30 to 49, 50 and over), and total days of employment for each individual worker</li> <li>• Use of written contracts with defined pay scales by employment activity</li> <li>• Employment recruitment activities, and interactions with local employment offices and communities, professional associations, TVET centers</li> <li>• Percent of all employees that are workers from project-affected districts/khoroos and elsewhere in UB/Mongolia</li> <li>• Percent of all employees that are women, disaggregated by skill/occupational level</li> <li>• Records of attendance and dates of all trainings and toolbox talks delivered on social and gender topics</li> <li>• Number of grievance redress actions, the number of days necessary to resolve them, and their outcomes</li> <li>• Number of apprenticeship and internships established and complete</li> </ul> <p>Success Criteria:</p> <ul style="list-style-type: none"> <li>• Successful outcome of: <ul style="list-style-type: none"> <li>○ 100% of contractor and employees have attended the child labor toolbox session on identifying and reporting child labor incidents</li> <li>○ Zero tolerance of child labor – no child labor on site <ul style="list-style-type: none"> <li>▪ Any cases of child or forced labor are reported and dealt with in a timely, manner, with respect for the child(ren) and families affected</li> </ul> </li> <li>○ Maximization of local labor, such that percentage of all labor exceeds a minimum target percentage to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)</li> <li>○ Achievement of 30% or more employment of women as a percentage of all staff, in each skill/occupational category</li> <li>○ Employment of young people and "vulnerable" and excluded groups at a target to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguard Team (SST) <ul style="list-style-type: none"> <li>▪ Apprenticeships and internships established and completed for each construction season</li> </ul> </li> <li>○ All worker and community complaints about sexual harassment are: a) addressed in a timely manner; and b) resolved through the Contractor's Sexual Harassment Incident Referral and Reporting Plan</li> <li>○ 100% of employees and sub-contractors sign the worker Code of Conduct</li> <li>○ Resolution of 100% internal grievances within a duration to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)</li> </ul> </li> </ul>

### Management Measure Conveyance -10: Gender Integration and Social Inclusion (GSI)

POTENTIAL IMPACT
<p>Beneficial impacts to be enhanced:</p> <ul style="list-style-type: none"> <li>Increased short-term employment for women Opportunities for local labor and supply of goods and services, and provision of jobs with fair and competitive wages</li> </ul> <p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>Discrimination against women</li> <li>Increased foreign labor, reducing local employment opportunities</li> <li>Use of child labor</li> <li>Use of forced labor</li> <li>Use of trafficked labor</li> <li>Exploitation of workers and Labor Code violations</li> <li>Sexual harassment</li> </ul>
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>Millennium Challenge Account Social and Gender Integration Plan (SGIP)             <ul style="list-style-type: none"> <li>Encourages contractors to prioritize using local labor, particularly workers from the project affected areas and encourages contractors to employ women workers as at least 30% ,</li> </ul> </li> <li>Millennium Challenge Corporation Gender Policy             <ul style="list-style-type: none"> <li>The MCC Gender Policy states that countries will ensure that both women and men have opportunities for meaningful participation throughout the consultative processes related to a Compact program.</li> </ul> </li> <li>IFC Performance Standard 1             <ul style="list-style-type: none"> <li>Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> </ul> </li> <li>IFC Performance Standard 2             <ul style="list-style-type: none"> <li>Pursuit of economic growth through employment creation and income generation accompanied by protection of the fundamental rights of workers.</li> </ul> </li> </ul>

<ul style="list-style-type: none"> <li>• Constitution of Mongolia <ul style="list-style-type: none"> <li>○ Citizen has the right to free choice of employment, favorable conditions of work, remuneration, rest, and private enterprise.</li> </ul> </li> <li>• Mongolian Law on Gender Equality <ul style="list-style-type: none"> <li>○ Prohibits discriminating against gender, sex, pregnancy, or family status in employment and labor relations.</li> </ul> </li> <li>• Mongolian Law on Labor <ul style="list-style-type: none"> <li>○ Prohibits discriminating against race, social origin or status, wealth, religion, or ideology</li> <li>○ Prohibits employing children under the age of 16 – under 18 in dangerous industries e.g. construction</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<p>The Gender Integration and Social Inclusion (GSI) Plan complements the Labor Management Plan and provides additional management steps to address GSI considerations with respect to workers and local communities.</p> <ul style="list-style-type: none"> <li>• To promote the fair treatment, non-discrimination, and equal opportunity of workers.</li> <li>• To encourage the employment of women as at least 30% of the Contractor's workforce, calculated over full and part time positions as a percentage of total number of staff hired in the life of the contract at each skill/occupation level</li> <li>• To enable local people, particularly youth and people in project-affected districts/khoroos to gain short-term employment and training opportunities</li> <li>• Maximize the perceived beneficial impacts of the BWSE project on the project affected communities</li> </ul>
<b>MANAGEMENT MEASURE</b>
<b>Gender Integration and Social Inclusion</b>
<ul style="list-style-type: none"> <li>• Under the Gender Integration and Social Inclusion Plan, the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure the widest exchange of information between the Contractor and the local population and Labor Offices on planned and continuing works and employment opportunities through a program of community consultations and participatory meetings.</li> <li>• The Contractor will prepare and submit for the Engineer's written approval a Contractor's Gender Integration and Social Inclusion Plan, which will be: <ul style="list-style-type: none"> <li>○ Consistent with the Mongolian Law on Labor and</li> <li>○ Consistent with the MCC Gender Policy's emphasis on community consultation and participation</li> <li>○ Consistent with IFC Performance Standard 1: Assessment and Management of Environmental and Social Risk and Impacts</li> <li>○ Agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer</li> </ul> </li> <li>-</li> <li>- <i>Community Engagement</i> <ul style="list-style-type: none"> <li>○ The Contractor will hold at least one meeting in each project-affected District and khoroo office prior to construction to inform community members of the expected conduct of workers and the contents of the Labor Management Plan, and thereafter monthly, minimally covering the following: <ul style="list-style-type: none"> <li>○ Efforts to hire local labor and the Contractor's employment forecast</li> <li>○ Efforts to maximize women's employment</li> <li>○ Efforts to maximize local procurement and the Contractor's procurement forecast</li> <li>○ Prohibitions against child labor and forced labor in supply chains</li> <li>○ Zero-tolerance of trafficking in persons, MCC and Mongolian legal definition of trafficking in persons, and Contractors' Counter-Trafficking in Persons Response Plan</li> <li>○ Zero-tolerance of gender-based violence</li> <li>○ Contractor's Anti-Sexual Harassment Policy and Sexual Harassment Incident Reporting and Referral Plan</li> </ul> </li> </ul> </li> </ul>

### *Expanding Short-Term Employment Opportunities*

- The Contractor will actively consider working with the existing construction brigades to enable local labor currently organized into brigades to gain employment. The brigades may require additional training to enable them to work on this large scale project – training in:
  - Modern tools and techniques where needed
  - Brigade internal labor management, accounting, and estimation techniques
- As referenced in the Labor Management Plan and its recruitment strategy, the Contractor will encourage the employment of qualified individuals among the local population(s) in project activities, with particular focus on women, youth, and disadvantaged groups. This may include small-scale supply contracts or services, with announcement of jobs published on project information boards, in District and khoroo Labor Offices and with information on employment disseminated by the Contractor's Social Safeguards Officer, the MCA or its representative, or other means approved by the Engineer.
- Where appropriate, the Contractor will provide training to enhance the skills of local people using on-site apprenticeships and internships
- As referenced in the Labor Management Section above, the Contractor is encouraged to cooperate with Technical and Vocational Education and Training Centers and professional associations and to draw workers from among their graduate and members

#### *- Local Procurement*

- The Contractor will develop and submit a procurement forecast of all goods and services that could be procured locally. The MCA-Mongolia or its representative's Social Safeguards Team will assist in disseminating this information to local communities with the Contractor's Social Safeguards Officer.
- The Contractor will develop and submit for review and approval by the PMC, a procurement strategy to inform local communities and businesses of opportunities to provide goods and services to the Contractor and to project workers, particularly targeting small businesses and those owned by women.
- The Contractor Social Safeguards Officer and MCA-Mongolia or its representative's Social Safeguards Team will hold community meetings to inform people about the procurement processes and include District and khoroo offices, community organizations and the media.

#### LOCATIONS:

All construction sites and temporary construction facilities and project affected communities

#### **MONITORING**

MCA-Mongolia or its representative's SST:

- Monitor Contractor Gender Integration and Social Inclusion Plan
- Monitor Contractor employment recruitment strategies and assist Contractor to reach potential women, youth and other excluded groups
- Monitor participation by all parties in the Contractor's internal and external project Grievance Redress Mechanisms
- Document Contractor performance in Gender Integration and Social Inclusion Plan

Contractor:

- Record results of Contractor's Gender Integration and Social Inclusion responsibilities
- Document all grievance redress activities under the Contractor's internal grievance process and external Grievance Redress Mechanism

#### LOCATIONS:

All construction sites and temporary construction facilities and project affected communities

#### INDICATORS AND SUCCESS CRITERIA:

Indicators:

- Employment recruitment activities
- Employment records of workers

<ul style="list-style-type: none"> <li>• Number, dates, and locations of community engagement meetings</li> <li>• Community related grievance redress actions and outcomes</li> <li>• Number of purchase orders signed each year with UB businesses disaggregated by those in Khan-Uul and Songinokhairkhan Districts and those in the rest of UB, indicated as a number and as percent of the total number of purchase orders signed</li> <li>• Total annual dollar amount of procurements from UB, disaggregated by those in Khan-Uul and Songinokhairkhan Districts and those in the rest of UB, indicated as a number and as percent of the total number of purchase orders signed</li> <li>• Number, percentage, and dollar amount of purchase orders signed with women-owned businesses each year against the total number and dollar amount of purchase orders.</li> </ul> <p>Success Criteria:</p> <ul style="list-style-type: none"> <li>• 100% of required community meetings are held, with all topics covered</li> <li>• Maximization of local labor, such that percentage of all labor exceeds a minimum target percentage to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)</li> <li>• Achievement of 30% employment of women as a percentage of all staff, in each skill/occupational category</li> <li>• Employment of young people and "vulnerable" groups at a target to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST)</li> <li>• Apprenticeships and internships established and completed for each construction season</li> <li>• Contractor enters into and maintains an agreement with at least one TVET center and employs TVET graduates at a target to be determined between the Contractor and MCA-Mongolia</li> <li>• Contracts and purchase orders with local business and service providers, including women-owned businesses and service providers, reach targets to be determined between the Contractor and MCA-Mongolia or its representative's Social Safeguards Team (SST) <ul style="list-style-type: none"> <li>○ Targets to be expressed as a number, as a percentage of all contracts and purchase orders, and as a dollar amount (USD)</li> <li>○ Targets to be set for all locally owned business, for businesses in the two project-affected districts, and for women-owned businesses</li> </ul> </li> </ul>

## Management Measure Conveyance -11: Counter-Trafficking in Persons, Gender-Based Violence and Sexual Harassment

POTENTIAL IMPACT
<p>Adverse impacts to be avoided or minimized:</p> <ul style="list-style-type: none"> <li>• Sexual harassment on construction sites and in temporary construction facilities and project-affected communities</li> <li>• Trafficking in persons within and outside the project</li> <li>• Gender-based violence on construction sites and in temporary construction facilities and project-affected communities</li> </ul>
STANDARD(S) / REQUIREMENT(S) TRIGGERED:
<p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• MCC Counter-Trafficking in Persons Policy (C-TIP Policy) <ul style="list-style-type: none"> <li>○ States, "Trafficking in Persons" means (a) Sex trafficking in which a commercial sex act is induced by force, fraud, or coercion, or in which the person induced to perform such act has not attained 18 years of age; (b) The recruitment, harboring, transportation, provision, or obtaining of a person for labor or services, through the use of force, fraud, or coercion for the purpose of subjection to involuntary servitude, peonage, debt bondage, or slavery."</li> <li>○ Adopts "a zero-tolerance policy to TIP and prohibits "The Contractor, the Contractor's Personnel, any Subcontractor or supplier, or any of their respective personnel, or any agent or affiliate of any of the forgoing shall not engage in any form of Trafficking in Persons during the period of performance of any contract..."</li> <li>○ Requires each Contractor to "acknowledge that engaging in such activities is cause for suspension or termination of employment or of the Contract" and specifies remedies that the MCA Entity will apply once a TIP incident has been confirmed.</li> </ul> </li> <li>• Mongolian Law on Promotion of Gender Equality <ul style="list-style-type: none"> <li>○ Requires the employer to incorporate into the organization's internal procedures, specific norms for prevention of sexual harassment in a workplace and the redress of such complaints. It also requires that the organization design and conduct a program of training and retraining geared toward creating a working environment free from sexual harassment, and report on its impact in a transparent manner.</li> </ul> </li> <li>• Mongolian Law to Combat Human Trafficking <ul style="list-style-type: none"> <li>○ The law regulates relations with respect to the prevention and suppression of trafficking in persons, elimination of the causes of trafficking, and protection of victims' rights.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• To prevent incidence of trafficking of persons for sex by project employees</li> <li>• To ensure that the Contractor and its Sub-Contractors do not employ trafficked labor and to minimize the risks of trafficking of foreign workers to project sites</li> <li>• To prevent sexual harassment at all construction sites and temporary construction facilities</li> <li>• To prevent Contractor and worker involvement in sexual harassment in project-affected communities and among members of stakeholder organizations in the workplace</li> <li>• To prevent incidences of gender-based violence involving workers</li> </ul>
MANAGEMENT MEASURE
Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment
<p>The Contractor shall ensure that foreign workers on work sites or in labor camps are aware 1) of the risks of cultural conflict and of becoming victims of gender-based violence, sexual harassment and abuse, discrimination, trafficking in persons and 2) the legal and contractual remedies against such</p>

behavior. This information shall be provided in workers' induction packages, by holding an orientation before workers start on site, and by delivering a training twice a year.

*Counter-Trafficking in Persons (C-TIP)*

- The Contractor shall prepare and submit for the Engineer's written approval a Counter-Trafficking in Persons Response Plan (TIP Response Plan), and the Contractor will perform the work in accordance with relevant sections of the ESMP. The Contractor will ensure all employees are informed of expectations of behavior as per the Worker Behavior Code of Conduct and the penalties for proven infringements..
  - The Counter-Trafficking in Persons Response Plan shall Address the specific TIP risks identified in the ESIA, including withholding of foreign workers' passports and commercial sex with minors,
  - Designate a single responsible person who will notify the Engineer and MCA-Mongolia within 24 hours of an alleged incident and implement any investigation.
  - Specify when to contact legal authorities, list UB city officials, national government offices, and NGO organizations that address TIP, and state how the Contractor will deal with them in the case of a TIP incident.
  - Include mechanisms to ensure confidentiality of any TIP survivors and to refer them to law enforcement and/or supportive services if they wish.
- The Contractor shall develop, as part of its TIP Response Plan, an anonymous mechanism for workers and community members to report suspected TIP incidents to the Engineer and to MCA-Mongolia, and this must be separate from the project grievance mechanism.
- The Counter-Trafficking in Persons Response Plan shall be:
  - Consistent with the Mongolian Law on Labor, Promotion of Gender Equality, and combatting Human Trafficking
  - Compliant with the MCC Counter-Trafficking in Persons Policy
  - Coordinated and agreed with the MCA-Mongolia or its representative's Social Safeguards Team and operated by the Contractor's Social Safeguards Officer
- The Counter-Trafficking in Persons Response Plan shall specifically prohibit:
  - Procuring minors for sex
  - Transporting non-employee individuals in company vehicles
- The Contractor is strongly encouraged to engage the Centre for Gender Equality or other similarly qualified and experienced organization to develop its TIP Response Plan, its anonymous reporting mechanism, its worker training, and its C-TIP content for community meetings
- The Contractor shall design and deliver twice yearly C-TIP training modules to all staff, sub-contractors, and service providers on the prevention of TIP and the Contractor's TIP Response Plan, following minimum content in MCA-Mongolia's Social and Gender Integration Plan (SGIP).
  - C-TIP training sessions must be delivered to all employees within one month of starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Information about the Contractor's zero-tolerance policy and TIP Response Plan shall be included in all community meetings and the Plan shall be provided in Mongolian, in whole, to project-affected khoroo and District governments.

*Gender-Based Violence*

- The Contractor shall adopt a policy of zero-tolerance for gender-based violence and address any complaints of gender-based violence against its workers or committed by its workers as complaints of a potential crime, separately from the Grievance Redress Mechanism.
- The Contractor shall notify the Engineer and MCA-Mongolia within 24 hours of any alleged incident of gender-based violence
- The Contractor shall deliver a gender-based violence prevention training to all staff, sub-contractors, and service providers prior to all workers beginning on-site and thereafter at least twice each year.
  - The Contractor is strongly encouraged to engage a local, qualified, and experienced

- organization to develop the training.
  - The training shall minimally identify behavior that constitutes gender-based violence, address attitudes towards violence against women and lesbian, gay, bisexual, transgender, and queer people (LGBTQ), and identify relevant Mongolian laws and organizations addressing gender-based violence.
  - It shall also explain the workings and protections in the Contractor's grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ persons.
- Include in all community meetings information about the Contractor's zero-tolerance policy toward gender-based violence committed by or against its workers and procedures for reporting it and communicate this information in writing to project-affected khoroo and District governments.

#### *Sexual Harassment*

- The Contractor shall develop and submit to the Engineer an Anti-Sexual Harassment Policy prohibiting sexual harassment directed at Compact beneficiaries, partners, or stakeholders, MCA Entity employees, MCA Entity consultants, MCC personnel, or MCC consultants and including an Incident Reporting and Referral Plan.
  - The Policy and Plan must be in form and substance satisfactory to the MCA and MCC.
  - The Incident Reporting and Referral Plan shall include a confidential mechanism for workers and community members to report sexual harassment to the Engineer and to MCA-Mongolia, separately from the Grievance Redress Mechanism.
- Employers are required to have a protocol in their Workplace Grievance mechanism in which persons alleging harassment or violence will be protected from identification and from pressure from the Contractor or other workers to dismiss the complaint.
- The Contractor's grievance manager must notify the MCA-Mongolia or its representative's Social Safeguards Team and the Contractor's Social Safeguards Officer within 24 hours of any allegation of sexual harassment.
- The Contractor must have a contract with a suitably experienced organization, such as the Centre for Gender Equality, to provide an investigation leader to manage the investigation of complaints of sexual harassment.
- The MCA Entity may investigate (either directly or through a third party) allegations of sexual harassment as it determines appropriate. The Contractor shall fully cooperate with any investigation conducted by the MCA Entity regarding breach of this provision. The Contractor will ensure that any incident of sexual harassment investigated by the MCA Entity has been resolved to the MCA Entity and MCC's satisfaction.
- The Contractor shall design and deliver a sexual harassment prevention training to all staff, sub-contractors, and service providers, in accordance with the Contractor's Anti-Sexual Harassment Policy, recognizing MCC's Guidance to MCAs on Sexual Harassment.
  - Training shall be conducted within one month of workers starting work on site, and twice a year while employed. The training must be reinforced during toolbox talks each month.
  - Training shall address
    - Attitudes to and prevention of sexual harassment in the workplace
    - Workings and protections in the Contractor's internal grievance mechanism when dealing with allegations of harassment, abuse or violence towards women and LGBTQ+ persons
    - Additional requirements for minimum training content can be found in MCA-Mongolia's Social and Gender Integration Plan (SGIP)
- Information about the Contractor's Anti-Sexual Harassment Policy and Incident Reporting and Referral plan shall be included in all community meetings and the Policy and Plan shall be communicated in Mongolian, in whole, to project-affected khoroo and District governments.

### Management Measure Conveyance -13: Cultural Heritage Protection

<p><b>POTENTIAL IMPACT</b></p> <ul style="list-style-type: none"> <li>• Chance finds of and potential inadvertent excavation or damage of tangible cultural heritage</li> <li>• Disturbance of the cultural and sacred landscape and places of religious or spiritual significance</li> <li>• Loss of the continuity of spiritual, religious, and traditional activities</li> </ul>
<p><b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b></p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Mongolian Law on Protection of Cultural Heritage <ul style="list-style-type: none"> <li>○ If tangible cultural heritage is discovered during excavation, requires halting work and immediately notifying the <i>soum</i> and <i>duureg</i> [capital city municipal district] governors, police, and concerned authorities.</li> <li>○ Prohibits building infrastructure facilities in historical and cultural monuments and their activity zones, to engage in mining and agriculture. Governors of all levels have the duty to protection the intangible cultural heritage.</li> </ul> </li> <li>• IFC Performance Standard 8 <ul style="list-style-type: none"> <li>○ Prohibits removing, significantly altering, or damaging critical cultural heritage.</li> </ul> </li> </ul>

- Requires designing and implementing a chance find procedure when the proposed location of a project is in areas where cultural heritage is expected to be found, either during construction or operations.

## OBJECTIVES

- Protect tangible cultural heritage from inadvertent excavation or damage
- Enable and foster the continuity of spiritual, religious, and traditional activities in consideration of the unavoidable disturbance of the cultural and sacred landscape and places of religious or spiritual significance

## MANAGEMENT MEASURE

### Cultural Heritage Protection

#### Chance Find Procedure

As unknown features/objects could be encountered during works, in particular earthworks, a chance finds procedure will be in place to stop works in case of such findings, and require investigation by an archaeologist and involvement of relevant government entities.

Should any unexpected tangible cultural heritage be discovered:

- Cease all work in the immediate area and do not disturb the chance find further, including:
  - Establishing a 30-meter buffer around the chance find
  - Leaving buffer undisturbed until competent cultural heritage specialist assesses the site
  - Protecting the chance find area, for example with signs for prohibition of entry, barrier tape, etc.
- Work may continue at other locations providing there is a buffer zone between the chance find area and the construction area
- Immediately notify the Engineer and the concerned government agencies, specifically the:
  - Office of the governor of the capital city
  - Office of governor of the respective Khan-Uul District or Songinokhairkhan District
  - Local police
  - Institute of Archeology, Mongolian Academy of Sciences
  - Institute of History and Ethnography, Mongolian Academy of Sciences
- Provide the following information to the Engineer and government agencies:
  - Cultural heritage site type—description and photograph(s)
  - Location—description and GPS coordinates
  - Date, time, and details of find
  - Nature of work that led to exposure of or locating the find
- Coordinate with the Engineer and the concerned government agencies to consult a cultural heritage professional on site to assess the cultural heritage and recommend mitigation
- Follow instructions of the concerned government agencies and cultural heritage professional for the protection of the tangible cultural heritage
- Restart work only upon written direction from the Engineer

#### Cultural and Sacred Landscape and Places

- SST will conduct enhanced stakeholder engagement with religious and spiritual leaders to assess the intangible cultural impact of construction on cultural and sacred landscape and places.
- Contractor will coordinate with the SST Community Liaison Officers and the Engineer, and as directed by the Engineer accommodate the performance of periodic spiritual, religious, and traditional ceremonies and rituals on or adjacent to project sites. The ceremonies and rituals may be integrated with or, if independent, their scale may be similar to groundbreaking ceremonies.

#### Training

The effective protection of cultural heritage is based on an understanding of the key issues, appropriate assessment, and correct action to minimize possible damage or loss.

The Contractor will:

<ul style="list-style-type: none"> <li>• Prepare and submit for the Engineer's written approval a site-specific Cultural Heritage Training Plan and associated procedures that, as a minimum: <ul style="list-style-type: none"> <li>○ Specifies how the Contractor will educate and train personnel on requirements, procedures, and reporting in response to chance finds of tangible cultural heritage, in accordance with the requirements listed above</li> <li>○ Specifies how the Contractor will educate and train personnel on requirements, procedures, and reporting to enable and foster the continuity of spiritual, religious, and traditional activities</li> <li>○ Assigns roles and responsibilities for training</li> </ul> </li> <li>• Educate and train all Contractor personnel and provide enhanced training to key Contractor personnel—including on-site environmental staff, safety staff, construction engineers, and unit supervisors—in accordance with approved Cultural Heritage Training Plan.</li> </ul>
<p><b>LOCATIONS:</b></p> <ul style="list-style-type: none"> <li>• All work sites</li> <li>• Cultural and sacred landscape and places throughout project area, as all land and the landscape throughout Mongolia and the project area is sacred</li> </ul>
<p><b>MONITORING</b></p>
<p>Monitor throughout construction</p> <p><i>Chance Find Procedure</i></p> <ul style="list-style-type: none"> <li>• Construction work sites during excavation or other ground disturbance</li> </ul> <p><i>Cultural and Sacred Landscape and Places</i></p> <ul style="list-style-type: none"> <li>• Communications SST Community Liaison Officers and Engineer</li> <li>• Written directions of Engineer</li> <li>• Actions to accommodate spiritual, religious, and traditional ceremonies and rituals</li> <li>• Performance of spiritual, religious, and traditional ceremonies and rituals</li> </ul> <p><i>Training</i></p> <ul style="list-style-type: none"> <li>• Document submission and approval of training plan</li> <li>• Document training of personnel as specified in approved plan</li> </ul>
<p><b>LOCATIONS:</b></p> <ul style="list-style-type: none"> <li>• All work sites</li> </ul>
<p><b>INDICATORS AND SUCCESS CRITERIA:</b></p>
<p>Indicators:</p> <p><i>Chance Find Procedure</i></p> <ul style="list-style-type: none"> <li>• Chance find of tangible cultural heritage</li> <li>• Excavation or damage of tangible cultural heritage</li> <li>• Cease work decision</li> <li>• Protection of chance find area and tangible cultural heritage</li> </ul> <p><i>Cultural and Sacred Landscape and Places</i></p> <ul style="list-style-type: none"> <li>• Performance of spiritual, religious, and traditional ceremonies and rituals</li> </ul> <p><i>Training</i></p> <ul style="list-style-type: none"> <li>• Submission of training plan</li> <li>• Date and location of training sessions, or as specified in approved plan</li> <li>• Personnel start date, training completion date, and initial construction field date, or as specified in approved plan</li> </ul> <p>Success criteria:</p> <p><i>Chance Find Procedure</i></p> <ul style="list-style-type: none"> <li>• No excavation or damage of tangible cultural heritage</li> </ul> <p><i>Cultural and Sacred Landscape and Places</i></p> <ul style="list-style-type: none"> <li>• No loss of continuity of spiritual, religious, and traditional activities due to inability to perform ceremonies and rituals</li> </ul>

<p><i>Training</i></p> <ul style="list-style-type: none"> <li>• Training plan approval</li> <li>• All personnel trained prior to initial construction field date, or as specified in approved plan</li> </ul>

## 3.5 Health and Safety Management

In addition to the management measure under this heading, the following management measures also specify health and safety management requirements:

- Management Measure Conveyance - 5: Emergency Preparedness and Response
- Management Measure Conveyance - 8: Waste Management
- Management Measure Conveyance - 12: Construction Camp and Temporary Facilities Management

### Management Measure Conveyance -14: Health and Safety Management

POTENTIAL IMPACT
Health and safety risks and impacts on work sites and in construction camps, and in the community
<p>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</p> <p>Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following:</p> <ul style="list-style-type: none"> <li>• Mongolian Law on Hygiene <ul style="list-style-type: none"> <li>◦ Requires introducing labor safety and hygiene management for protecting employees from accidents, damages, diseases which could occur during the operation.</li> </ul> </li> <li>• Mongolian Law on Waste <ul style="list-style-type: none"> <li>◦ Requires providing relevant knowledge to their staff on waste sorting and comply with safety standards in their operation.</li> </ul> </li> <li>• IFC Performance Standard 4 <ul style="list-style-type: none"> <li>◦ Requires evaluating the risks and impacts to the health and safety of the affected communities during the project life cycle and establishing preventive and control measures consistent with good international industry practice.</li> <li>◦ Requires avoiding or minimizing transmission of communicable diseases that may be associated with the influx of temporary or permanent project labor.</li> </ul> </li> <li>• IFC Environmental, Health, and Safety (EHS) Guidelines: Construction and Decommissioning <ul style="list-style-type: none"> <li>◦ Provides guidance on occupational health and safety and community health and safety.</li> </ul> </li> </ul>
OBJECTIVES
<ul style="list-style-type: none"> <li>• Identify, assess, manage, and record and communicate all health and safety hazards, and ensure: <ul style="list-style-type: none"> <li>◦ Resulting risks to people, property, assets, and the environment are evaluated</li> <li>◦ Risks are managed in accordance with the recommended hierarchy of controls to achieve levels that are as low as reasonably practical</li> <li>◦ Any requirements to mitigate risks are implemented</li> <li>◦ Risks and actions to manage them are reported and communicated</li> </ul> </li> </ul>
MANAGEMENT MEASURE
<p><b>Health and Safety Management</b></p> <p>The Contractor will ensure, as far as practicable, that the health, safety, and welfare of employees and all other persons on site are secured and are protected from hazards created by the project.</p> <p>The Contractor will:</p> <ul style="list-style-type: none"> <li>• Fully comply with the requirements of this management measure</li> <li>• Comply with the IFC Environmental, Health, and Safety Guidelines<sup>1</sup></li> <li>• Comply with the health and safety requirements in Contract Documents Section V, Works Requirements, including but not limited to: <ul style="list-style-type: none"> <li>◦ Section 01030 Special Requirements, Paragraph 1.04.C Health and Safety Plan</li> </ul> </li> </ul>

- Section 01046 Control of Work, Paragraph 3.05 Open Excavations
- Section 01046 Control of Work, Paragraph 3.07 Interference with and Protection of Streets
- Section 01063 Miscellaneous Requirements, Paragraph 1.03 Traffic Control
- Protect drinking water sources, whether public or private, at all times
- Prepare and implement a traffic control plan for accessing the site, approved by Engineer
- Implement all reasonable precautions to protect the health and safety of workers
- Avoid or minimize the occurrence and transmission of communicable diseases, including surveillance, and active screening and treatment of workers
- Avoid or minimize potential hazards posed to project personnel and the public while accessing project facilities
- Undertake hazard analysis to identify opportunities to reduce the consequences of a failure or accident
- Control access to operational areas through physical barriers and demarcation, regular patrols of controlled areas, and engagement with communities
- Avoid or minimize traffic accidents and promote traffic safety by all project personnel
- Comply with local laws and international requirements applicable to the transportation of hazardous materials, and establish procedures for preventing or minimizing the consequences of releases of hazardous materials
- Inform and regularly update affected communities, including herders and vulnerable groups, and government agencies about potential project hazards and changes to project activities that may have environmental, health, or safety impacts, as well as the proposed prevention, mitigation, and emergency response measures
- Ensure that health, safety, and rescue matters are given a high degree of publicity to all persons regularly or occasionally on the project sites, as stipulated by Mongolia laws on occupational safety and health, by prominently displaying posters drawing attention to the relevant regulations in areas where Contractor and subcontractor personnel, Engineer's staff, MCA-Mongolia or its representative's staff, and site visitors will take notice
- Provide Health and Safety Management training—information and awareness sessions, and job category-specific specialized training—consistent with the requirements of this management measure and the site-specific Health and Safety Management Plan, to all employees and subcontractors at the time of their induction and annually thereafter

The Contractor will prepare and submit for the Engineer's written approval a site-specific Health and Safety Management Plan and associated procedures that, as a minimum:

- Affirms and executes the Contractor's comprehensive commitment to the standards and requirements listed above and specified in the plan
- Adhere to the MCC Health and Safety Policy (2012) and ensure the health and safety of all workers employed during the construction phase of the project
- Complies with applicable Government of Mongolia regulations and international good practice, where the more stringent will apply
- Specifies:
  - Site security, including securing of excavations, hazardous materials, etc.
  - Confined space safety procedures
  - Excavation and trenching safety measures
  - First aid facilities, equipment, and materials
  - Protective clothing and safety equipment
  - HIV/AIDS awareness program
  - Covid-19 awareness program
  - Counter-trafficking in persons program
  - Health and Safety management monitoring and reporting
- Assigns roles and responsibilities for health and safety management

## 3.6 Education, Training, and Community Outreach

Incorporated in various management measures are requirements for education, training, and outreach. The overall goals of these requirements are to provide project employees with an understanding of the commitments included in those management measures and inherent in associated laws, regulations, and policies, and to provide the employees with an appreciation of their own accountability for maintaining mutually supportive relationships with local communities. All required training is to be provided as part of induction training (to provide general awareness) and job-specific training as necessary.

In addition to the management measure under this heading, the following management measures specify training requirements:

- Management Measure Conveyance - 5: Emergency Preparedness and Response
- Management Measure Conveyance - 7: Mongolian Marmot Protection and Habitat Restoration
- Management Measure Conveyance - 8: Waste Management
- Management Measure Conveyance - 9: Labor Management
- Management Measure Conveyance - 10: Gender Integration and Social Inclusion (GSI)

- Management Measure Conveyance - 11: Counter-Trafficking in Persons, Gender-Based Violence, and Sexual Harassment
- Management Measure Conveyance - 12: Construction Camp and Temporary Facilities Management
- Management Measure Conveyance - 13: Cultural Heritage Protection
- Management Measure Conveyance - 14: Health and Safety Management

Together, these management measures comprise the Education, Training, and Community Outreach Plan.

### **Management Measure Conveyance -15: Stakeholder Engagement, Community Consultation, and Grievance Redress**

<b>POTENTIAL IMPACT</b>
Delays, increased grievances, political interference, and unnecessary pressure from uninformed groups resulting from lack of information and discussion/consultation
<b>STANDARD(S) / REQUIREMENT(S) TRIGGERED:</b>
Standards and requirements that may be triggered by the potential impact include, but are not limited to, the following: <ul style="list-style-type: none"> <li>• IFC Performance Standard 1 <ul style="list-style-type: none"> <li>○ Requires developing and implementing a stakeholder engagement plan that is scaled to the project risks and impacts and development stage, and tailored to the characteristics and interests of the affected communities</li> <li>○ Requires establishment of a grievance mechanism to receive and facilitate resolution of affected communities' concerns and grievances about environmental and social performance, and scaled to the risks and adverse impacts of the project and with the affected communities as its primary user.</li> </ul> </li> </ul>
<b>OBJECTIVES</b>
<ul style="list-style-type: none"> <li>• Inform and involve all stakeholders</li> <li>• Have in place a defined policy for dealing with external parties</li> <li>• Foster positive relations and effective partnerships with local communities throughout project construction and operation</li> <li>• Maximize the beneficial impact of the BWSE project on the affected communities</li> </ul>
<b>MANAGEMENT MEASURE</b>
<b>Stakeholder Engagement, Community Consultation, and Grievance Redress</b> The stakeholders and affected communities are to be informed of the construction activities, including implementation timeline and grievance redress procedure. <b>Stakeholder Engagement</b> <ul style="list-style-type: none"> <li>• The Contractor will: <ul style="list-style-type: none"> <li>➢ Maintain, revise, and update the Stakeholder Engagement Plan for the project consistent with the MCA-Mongolia Stakeholder Engagement Framework</li> <li>➢ Maintain, revise, and update the project Stakeholder Engagement Matrix</li> <li>➢ Document all stakeholder engagement activities in the Stakeholder Engagement Matrix</li> </ul> </li> </ul> <b>Community Consultation</b> <ul style="list-style-type: none"> <li>• The MCA-Mongolia or its representative will <ul style="list-style-type: none"> <li>➢ Introduce Contractor's officers to communities</li> <li>➢ Monitor and supervise Contractor contacts with communities and other stakeholders</li> </ul> </li> </ul>

<ul style="list-style-type: none"> <li>➤ Ensure that gender and social inclusion measures implemented by the Contractor are taken when planning meetings, and that thereby all sections of the community are equally informed and consulted</li> <li>• In coordination with the MCA-Mongolia or its representative, the Contractor will: <ul style="list-style-type: none"> <li>➤ Undertake community information dissemination, consultation, and outreach addressing the influx of migrant workers and the associated risks to the affected communities, the MCA-Mongolia Grievance Redress Mechanism, and other issues that arise during consultation</li> <li>➤ Document all community consultation activities in the Stakeholder Engagement Matrix</li> </ul> </li> </ul> <p><b>Grievance Redress</b></p> <ul style="list-style-type: none"> <li>• The MCA-Mongolia or its representative will supervise, and monitor participation by all parties <ul style="list-style-type: none"> <li>➤</li> </ul> </li> <li>• The Contractor will: <ul style="list-style-type: none"> <li>➤ Implement the Grievance Redress Mechanism consistent with Annex A</li> <li>➤ Designate the Contractor's staff for collaborating with the project Grievance Redress Mechanism</li> <li>➤ Document all grievance redress actions in the Stakeholder Engagement Matrix</li> <li>➤ Report on the Grievance Redress Mechanism to MCA-Mongolia and the Engineer</li> <li>➤</li> </ul> </li> </ul>
LOCATIONS:
All construction sites and temporary construction facilities
<b>MONITORING</b>
<p><b>MCA-Mongolia or its representative</b></p> <ul style="list-style-type: none"> <li>• Monitor Contractor contacts with stakeholders and communities</li> <li>• Monitor participation by all parties in Grievance Redress Mechanism</li> </ul> <p><b>Contractor</b></p> <ul style="list-style-type: none"> <li>• Document all stakeholder engagement activities</li> <li>• Document all community consultation activities</li> <li>• Record results of Contractor's community consultation activities</li> <li>• Document all grievance redress activities under the Grievance Redress Mechanism</li> </ul>
LOCATIONS:
All construction sites and temporary construction facilities
INDICATORS AND SUCCESS CRITERIA:
<p>Indicators:</p> <ul style="list-style-type: none"> <li>• Number, content, and outcome of: <ul style="list-style-type: none"> <li>○ Stakeholder engagement activities</li> <li>○ Community consultation activities</li> <li>○ Grievance redress actions</li> </ul> </li> </ul> <p>Success Criteria:</p> <ul style="list-style-type: none"> <li>• Successful outcome of: <ul style="list-style-type: none"> <li>○ Stakeholder engagement activities</li> <li>○ Community consultation activities</li> </ul> </li> <li>• Resolution of grievances</li> </ul>
REPORTING:
<ul style="list-style-type: none"> <li>• Update project Stakeholder Engagement Matrix</li> <li>• Summarize other activities undertaken during reporting period</li> </ul>

<ul style="list-style-type: none"> <li>Specify any material deviations or non-compliances to this management measure, and any other issues of concern</li> <li>Define activities planned during next reporting period</li> </ul>

### 3.7 Risk Control and Emergency Response

The Risk Control and Emergency Response Plan references procedures specified in the management measures in the preceding plans that are pertinent to 1) controlling risks and 2) responding to emergencies. Such risks and emergencies include, for example, fuel spills and encountering previously unidentified cultural heritage resources, as well as incidents involving sexual harassment, human trafficking, and gender-based violence.

Due to the broad scope of the Risk Control and Emergency Response Plan, effectively the plan incorporates by reference the procedures specified in the management measures in all preceding plans for this project phase.

### 3.8 Monitoring and Verification, and Maintenance Actions

This Monitoring and Verification, and Maintenance Actions Plan scopes the use of an adaptive approach to:

9. Verify that the management measures in the preceding plans are implemented, and that they are effective and sufficient
10. Revise those management measures that prove ineffective or insufficient

This approach acknowledges the risk and uncertainty of environmental and social management and fosters targeted modification of management measures to correct performance and outcomes. It will be executed as a continuous, iterative process by which the consequences of all management actions are systematically evaluated and, as needed, specific measures are modified in response to a determination that their forecasted outcomes will not meet requirements.

In the preceding plans, indicators and success criteria are designated for each management measure. For each management measure, MCA-Mongolia or its representative, in its oversight capacity, will determine whether progress toward the designated success criteria is sufficient and will document its determination in its regular updates and progress reports to MCA-Mongolia. If progress decidedly fails to meet iterative requirements, MCA-Mongolia or its representative will

inform the Contractor of the need to formulate a management measure-specific adaptive maintenance action to implement midcourse corrections. In coordination with the Contractor, MCA-Mongolia or its representative will reformulate the management measure to foster meeting the success criteria, incorporating as applicable operational or structural changes, and considering the cost effectiveness of incorporating the changes. The scope of most management measures likely will remain fairly stable; whereas, it is expected that some methods will be added, modified, or dropped over the implementation timeline of some management measures.

With the prior approval of MCA-Mongolia, the Contractor will implement and monitor the revised management measure, and MCA-Mongolia or its representative will provide oversight.

## **4 Implementation Work Plan and Schedule**

The majority of the management measures in the preceding pre-construction phase and construction phase plans require that the Contractor prepare and submit for the Engineer's written approval plans that detail the Contractor's commitment and approach to fulfilling the requirements of the management measure. Therefore, an implementation work plan and schedule cannot be specified in this ESMP.

The Contractor is required to incorporate in the Contractor's ESMP a detailed Contract Work Plan and Schedule to facilitate implementing the Contractor's ESMP as an integral component of executing and supervising the construction work.

---

## Annex A – Grievance Resolution Mechanism

---

The Contractor shall develop and implement a grievance redress mechanism that shall be applied in the case of a complaint or grievance that is related to or results from implementation of the project activities. A well-implemented grievance redress management system shall demonstrate that the project is concerned about community members and their well-being, building trust, respect, and productive relationships. As with the broader process of stakeholder engagement, it is important that management stays informed and involved in the management of grievances so that decisive action can be taken when needed to avoid escalation of disputes.

Under the GRM all persons shall be clearly entitled to make a complaint by any means – personal contact, office visit, telephone, letter, email, website enquiry, and directly to MCA-Mongolia or its representative. There should be a dedicated free call line for complaints. The GRM must make it easy to make a complaint and for that to be addressed easily and speedily. The system shall require that any member of any company associated with the project is aware of the requirement that they must receive and transfer on any complaint submitted to them in whatever form to their Grievance Officer who then follows the protocol for resolution.

All project partners shall accept the GRM process, agree to participate, train all contractor personnel to use the protocols to report grievances, participate in grievance resolution and reporting. The requirement to collaborate with the GRM will be mandated in construction contracts which will also require the designation of a responsible officer, usually the Contractor's Social Safeguards Officer.

The project grievance redress mechanism shall compliment traditional local-level mechanisms<sup>96</sup> for complaint resolution and legal administrative approaches to complaint resolution at all levels. It shall also document complaints or grievances from the public or other stakeholders (external communications with affected communities), and how these are resolved.

The grievance redress mechanism is intended to assist in resolving grievances or complaints raised regarding environmental and/or social issues arising from the projects/investments, and does not apply to the following complaints even if they are related to project activities:

5. Procurement and contractual complaints between MCA-Mongolia and its vendors or contractors which are normally handled by the MCA-Mongolia General Counsel Office,
6. Lawsuits which fall under the mandate of the General Counsel.

The Grievance Redress Mechanism (GRM) shall be compliant with the requirements of the IFC Performance Standard 5 (2012) and the MCC RPF for Western Wellfields (2018)<sup>97</sup>, and considers MUB GRM good practices that have been implemented for development projects in Ulaanbaatar city.<sup>98</sup> References available upon request to MCA.

---

<sup>96</sup> The GSI Director will carefully consider the extent to which traditional mechanisms to resolve conflict are used, to ensure that these are not disadvantageous to women villagers, indigenous peoples, or other disadvantaged groups. A thorough assessment should be conducted to ensure that certain non-formal justice mechanism will assist women and other disadvantaged groups in accessing justice.

<sup>97</sup> Mongolia II Bulk Water Supply, Resettlement Policy Framework, Western Wellfields, MCC Feasibility Study, 2018

<sup>98</sup> Land Acquisition and Resettlement Plan for Selbe and Bayankhoshuu Subcenters: Heating Station, Kindergarten, Business Incubator and Training Center; UB Urban Services and Ger Areas Development Investment Program – Tranche 1, 2017

The MCA-Mongolia or its representative will supervise and monitor the GRM. The Contractor shall keep the Contractor shall have a grievance redress matrix that records every complaint and communication, the dates of each action and correspondence, how it is investigated and the outcome. The contracting company shall have an internal and external grievance policy and mechanism. The Contractor shall have a designated Grievance Officer to manage complaints according to the company policy. They must have a grievance policy for dealing with external complaints that is fully compliant with and integrated with their Engineer approved project GRM. The Contractor must also have an internal grievance management system.

MCA-Mongolia or its representative will monitor and supervise the contractors' Social Safeguards Officer. MCA oversight will be especially important when dealing with complaints related to sexual harassment, gender-based violence and sex trafficking complaints which require additional investigative expertise. MCA shall review, approve and be invited to attend training for contractors' personnel on roles and responsibilities for grievance management at both senior management levels and also to all members of the workforce. It is vital that all employees understand that they all can be receptors of grievances and they need to know how to deal with a complaint.

## 1.1 Complaint Resolution Procedure

The complaint resolution process shall be generally in accordance with the following. These complaint resolution procedures are compliant with Mongolian Law.

### Tier 1

- Step 1 – All contractors, staff, workers are responsible for receiving grievances and ensuring that the complainant is treated respectfully, and that the grievance is written down on the correct form and forwarded to the designated Grievance Officer in their organization.
- Step 2 - Receive and Register Complaint: The project designated person shall receive the completed complaint form, and he/she is responsible for documenting and recording the complaint in the log-in system/matrix for recording the grievance and processes to resolution. This person is also responsible for reporting as required to senior management on the grievances received and steps taken to resolve.
- Step 3 – Screening and Preliminary Assessment: An initial classification of the complaint will be conducted by the Grievance Officer who will assign the complaint to the relevant persons to resolve. The Grievance Officer is responsible for managing the response and reporting back to the project officer. The officer designated to resolve the issue is responsible for notifying the Grievance Manager or SST and sending information for inclusion in the project grievance matrix.
- Step 4 - Response to the Complaint: After consulting with the relevant personnel, the Grievance Officer contacts the complainant to acknowledge the complaint and provide information as to the expected steps and timeframe for resolution of the complaint. This communication is to be provided within 48 hours of receipt of complaint.
- Step 5 - Investigate and Resolve: This step investigates the complaint, including the underlying cause(s) of the complaint and develops actions needed to resolve the current issue and to prevent recurrence of a similar complaint. Resolution at local level can be a) rejecting the complaint with reasons or b) resolving the complaint and taking action to remedy as appropriate. The Designated Person reports the outcome to the Grievance Officer. Either way, the Grievance Designated Officer is responsible for communicating the decision to the complainant within **14 days** and to the Grievance Manager or SST for recording in the grievance matrix. The Designated Officer is responsible for implementing any works or payments or directives to subcontractors to remedy the source of the complaint, track it and document in the company and MCA-Mongolia records.
- Step 6 - If a local and immediate Tier 1 solution is not appropriate, then the receiving officer has to escalate the complaint to the next tier of grievance resolution,
- Step 7 - If the complaint cannot be resolved then the receiving officer must revise the selection or implementation of approaches.
- Step 8 - Close-out: After implementing mitigating actions or resolving the issue, a letter describing the response and outcome is sent to the complainant, signed by a project head.
- Step 9 - Follow-up: Based on the complainant satisfaction level, the response shall be archived or transferred for further investigation.

If resolution cannot be achieved the process is escalated to Tier 2.

**Tier 2:** If the complaint cannot be solved in Tier 1, the Designated Officer will assess the eligibility of the complaint and address to relevant divisions/offices of the district and its resolution is recommended to the district Governor for approval and resolved within 30 days. The Designated Officer will record its deliberations and inform the concerned parties orally or by telephone and in writing, as appropriate. If the solution is agreed by the complainant, the contractor or implementing entities will implement the solution. Written records will be made of all stages and outcomes.

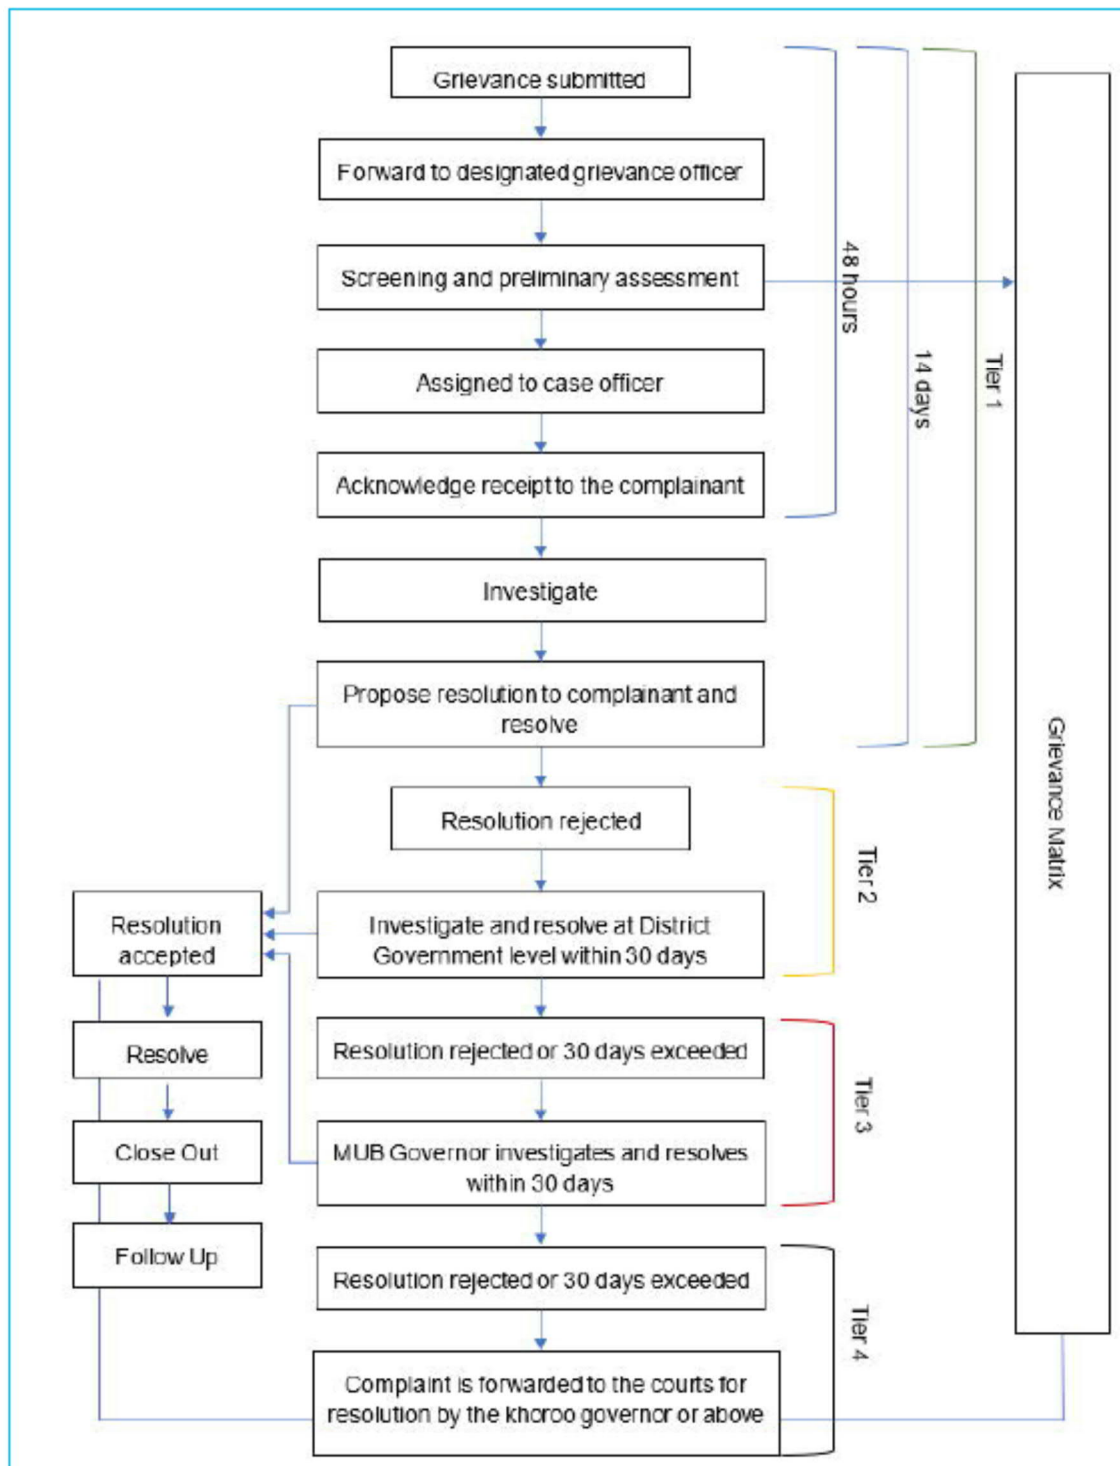

During this second review process either another formal written response will be provided to the grievant in **30 days** or it may be decided to hold a meeting with contractor representatives and the grievant. If complaint is ineligible (i.e., not a project related impact), it will be recorded and passed to the relevant authorities and the complainant will be informed of the decision and reasons for rejection within 30 days according to the Law on Handling Grievances of Citizens Addressed to Government Authority and Government Officials.

**Tier 3:** If the grievance is not resolved within 30 days from its lodging at Tier 2 and/or the complainant is not satisfied with the recommended solution, the grievance will be submitted to the related divisions/offices of the MUB and its resolution is recommended to the MUB Governor for approval and action within 30 more days. If necessary, the MUB Governor will organize stakeholder meetings and/or Working Group meetings. A solution acceptable to all shall be identified including clear steps. The contractors and implementing entities will immediately implement the agreed solution. Written records will be made of all stages and outcomes.

**Tier 4:** Failing resolution at Tier 3, the complainant has recourse to the Courts which should be regarded only as a last resort. With specific regard to land disputes, in accordance with the Law on Land (Article 60, "Settlement of Land Related Disputes"), these will be settled by the relevant khoroo governor. Where this is unsuccessful, the dispute shall be settled by a higher-level authority, or in court. Alternatively, residents may also go directly to the District Land Officer.

This system is depicted in the following figure.

## Flow Chart of the GRM

## 1.2 Approaches to Locally Based Grievance Resolution

The following approaches are required for grievance resolution:

- Dissemination of information to communities on how to make a complaint
- Dissemination of information on the GRM and how to make a complaint is made to all contractors and employees so that they understand their role in receiving and transmitting on all complaints. Ensure that all employees can assist complainants to fill in forms.
- Ensure all project partners offices have complaint forms available at reception areas and instructions on the process. Ensure that visitors can approach the Grievance Officer directly.
- Include information on grievances in information bulletins and community meetings so as to maintain trust in the process.
- Use a grievance log to monitor cases and improve the organization. In addition to resolving individual or community disputes, the grievance mechanism is an opportunity to promote improvements in the project and trigger policy and practice changes
- Evaluate and improve the system. The MCA-Mongolia or its representative shall be allowed to periodically conduct an assessment of the GRM to evaluate and improve its effectiveness and the Contractor shall comply with the outcomes and recommendations of those reviews. The evaluation will include: general awareness of the mechanism; whether it is used and by whom; the types of issues addressed; the ability of the mechanism to resolve conflicts early and constructively; the actual outcomes (impacts on project operations, management systems, and benefits for communities); its efficiency; and, most fundamentally, the ability to accomplish its stated purpose and goals. The MCA-Mongolia will solicit and include the views of stakeholder representatives to see how the mechanism is proving effective in practice.

## 1.3 The Grievance Form

The Grievance Form (GF) developed by the Contractor will at minimum contain the following:

- Basic information about the affected entity (name, address, contact number)
- Category of grievance filed (legal, technical/engineering, social, financial)
- Detailed description of grievance including time, date of incident and of recording, location etc.
- Type of action(s) taken (resolved at the local level or referred to higher authorities)

As a grievance is addressed, the type of action(s) taken will also be recorded on the GF, in order to document how the grievance was resolved.

The complainant enjoys the right to use the Governmental grievance redress procedures in accordance with the Law on Handling Grievances of Citizens Addressed to Government Authority and Government Officials. This governs grievance and complaints of citizens regarding the decisions and conduct of government authority or officials, and access to the judicial system, i.e., go to the courts, at any time, if they feel their grievance or concern is not being adequately addressed through the project GRM.

## 1.4 Grievance Mechanisms for Contractor's Internal Process

Each contractor is required to have an internal grievance policy and process for employees to raise issues about conditions of contact and behavior. The usual process is run by the human resources officers with the support of the Social Safeguards Officer. However, the treatment of allegations of sexual harassment, of gender-based violence and trafficking of persons needs external assistance to undertake effective investigation into allegations.

The Contractor must have an **anonymous** mechanism for reporting suspected TIP incidents that can be used by workers and communities. The Contractor has to develop a TIP response plan covering these issues: this TIP response plan will designate the SSO to manage the investigation including an external investigation lead from the Centre for Gender Equality, ensure a response within 24 hours and an effective resolution as soon as possible. This will also include contacting the legal authorities and qualified NGOs.

It is required that investigations into these issues are conducted with both a MCA Mongolia representative present and an external investigator drawn from a suitably qualified organization such as the Centre for Gender Equity who will chair the enquiry.

MCA Mongolia shall be able to work with the human resources department of the contractor to monitor contractor internal grievance mechanisms to ensure that allegations of sexual harassment, of gender-based violence and trafficking of persons are properly investigated with confidentiality protected and participate to ensure the investigation is properly undertaken. Appointing an independent but well-informed chair ensures effective investigation. Full documentation and recording is required.

Toolbox talks by the Contractor on anti-sexual harassment are required monthly. Contractors are required to mandate and enforce a policy refusing the transportation of non-project workers in company vehicles.

---

# **Annex B – Public Consultation and Stakeholder Engagement Plan for BWSE**

---

## **1.1 Introduction**

Good communication of the project with the public is vital for successful relations with all stakeholders and enhances the opportunities offered by successful projects. The risks associated with poor stakeholder relations are now better understood by all stakeholders. The concept of “stakeholder engagement” is emerging as a means of describing a broader, more inclusive, and continuous process between a project and those potentially impacted that encompasses a range of activities and approaches, and spans the entire life of a project. Increasingly, the recognition that reputational risks that come from poor stakeholder relations, place a growing emphasis on corporate social responsibility and transparency and reporting. In this context, good stakeholder relations are a prerequisite for good risk management. The focus of this SEP is on interactions with stakeholder groups “external” to the core operation of the project, such as affected communities, local government authorities, non-governmental and other civil society organizations, local institutions and other interested or affected parties.

Stakeholder engagement is an umbrella term encompassing a range of activities and interactions over the life of a project. Not all stakeholders in a particular group or sub-group will necessarily share the same concerns or have unified opinions or priorities as stakeholders come in all sorts of groupings, interests and formats. Stakeholders are persons or groups who are directly or indirectly affected by a project, as well as those who may have interests in a project and/or the ability to influence its outcome, either positively or negatively. Stakeholders may include locally affected communities or individuals and their formal and informal representatives, national or local government authorities, politicians, religious leaders, civil society organizations and groups with special interests, the academic community, or other businesses. Interactions with all these groups require a SEP.

## **1.2 Stakeholder Engagement Plan**

This section describes the elements of the Stakeholder Engagement Plan to take forward the BWSE project.

The Stakeholder Engagement Plan covers nine components:

19. Staffing and resources
20. Stakeholder Identification and Analysis
21. Information Disclosure
22. Stakeholder Consultation
23. Partnerships
24. Grievance Management
25. Stakeholder Involvement in Project Monitoring
26. Reporting to Stakeholders
27. Management Functions

## **1.3 Staffing and Resources**

There are numerous stakeholder groups with potentially conflicting interests and influence in the project and these need careful and consistent management to gain and maintain a social licence to operate. Stakeholder Engagement for the BWSE requires substantial inputs of time to develop and to operate effectively. The most effective and integrated management location for the SEP team is under the MCA-Mongolia or its representative, under a trained and experienced Social Safeguards Specialist or Manager.

The SST requires a dedicated office with a small community meeting space, desks etc, filing capability, computer facilities, internet and telephones. The SST needs at least two Community Liaison Officers at field level to ensure good communication within affected communities.

The first task of the SST is to write an SEP with associated Standard Operating Procedures (SOPs) for each of the above sections to manage stakeholder interactions – this is to be regularly reviewed and updated.

## **1.4 Stakeholder Identification Analysis**

The ESIA process identified and consulted many potential stakeholders in the project. This work must be consolidated into a project wide stakeholder engagement matrix (SEM) listing each stakeholder, areas of interests and influence, contact person, contact details and add a line in the matrix for each meeting, consultation, email or telephone call etc. and the response made.

The SST must write an SOP for the management of the SEM.

The project is not static, stakeholders change interests, legislation and regulations change and institutional responsibilities mutate so that the stakeholder engagement process has to maintain and record and respond to stakeholders as they interact with the project and as they change over time. The SEP requires regular interaction with stakeholders to update and exchange information alongside the progression of the projects. To this end, the SEP is a live process, requiring regular monitoring and updating.

## **1.5 Information Disclosure**

The exchange of appropriate information with the right groups of people in an appropriate media and appropriate text and at the right time is fundamental to the success of the project. Information Disclosure must be planned and executed effectively to ensure project progress. The SST will have to plan in advance:

1. What information needs to be disseminated and when, broken down into individual messages by audience by project phase.
2. What language and wording is appropriate for each message and each audience. Will a translation be necessary?
3. Which media is suitable for each message and audience – meetings, letter, telephone call, radio broadcast, newspaper, social media etc.
4. Commission and maintain a project website to display information and enable communication from outside. This should enable complaints to be received and support the grievance redress mechanism. Members of the SST should have cards to hand out to enable people to know who they are and how to contact them.
5. Write an SOP to manage each message design and dissemination stating responsibilities and actions

6. Derive a budget for information dissemination activities over all project phases.

## **1.6 Stakeholder Consultation**

Information needs for the BWSE are not one way – not only do stakeholders need to receive project information but there needs to be a formal system of stakeholder consultation to enable external views to be heard and to enable discussion of project elements. This requires a system of consultations of stakeholders over the life of the project. The SST needs to examine the SEM and identify ways of regular consultation at appropriate intervals – some stakeholders need more frequent consultation than others at various times.

The SST needs to define a schedule of consultations, define suitable consultation intervals over the project life and draw up a calendar of consultations. These then need to be allocated to a consultation type, e.g. large physical meeting, small physical meeting, zoom/ skype call, allocated to where the meeting should/ could take place and allocate frequency, allowing for a margin of additional meetings in response to currently unknown circumstance. Resources and staffing can then be budgeted for consultations.

Regardless of the very small resettlement impacts under BWSE, special consideration needs to be made for families affected by landtake to ensure their interests are protected. The optimum consultation technique for this in BWSE, is the inclusion of two Community Liaison Officers in the SST (one per District) who will keep in contact with affected community members.

Consultation meetings need an organizer to make arrangements and distribute invitations to meetings, a meeting leader to lead the discussion and a recording assistant. It is best practice to make recordings of meetings and make a transcription as meeting notes. Copies of the meeting notes are distributed to meeting participants.

The SST needs an SOP on meeting protocol defining responsibility for arrangements, invitations, recording of meetings, distribution of minutes and integration into the SEM and data storage.

## **1.7 Partnerships**

Non-governmental organizations (NGOs) and community-based organizations (CBOs), particularly those who represent communities directly affected by a project, can be important stakeholders for companies to identify and engage on a proactive basis. NGOs may have expertise valuable to effective stakeholder engagement. For example, they can be sources of local knowledge, sounding boards for project design and mitigation, conduits for consulting with sensitive groups, and partners in planning, implementing and monitoring various project-related programs.

It is important to carry out initial research regarding the local power dynamics and existence of special interest groups to ensure that any intermediary organizations, such as NGOs, are truly representative of and accountable to the community interests they claim to support and represent. If there is NGO opposition to the project, engaging early to try and understand the concerns or critiques being raised can offer an opportunity to manage these issues before they escalate or find another outlet for expression.

Occasionally, projects require partnerships with other organizations in order to achieve some element. In BWSE, this may involve an NGO like Centre for Gender Equality, who may be needed to assist with training programs on gender and social inclusion, C-Tip training etc. and on assisting internal grievance procedures over cases alleging sexual harassment or gender based

violence within contractors. The SST needs to have an allocation in its budget for additional small levels of expenditure procuring additional partner services to meet the MCC Policies on Gender and Social Inclusion, C-TIP, HIV/ AIDS, etc. that need to be supplied externally from the MCA-Mongolia or its representative.

The SST must review potential partner organizations and explore possibilities for partnering with the MCA-Mongolia or its representative, and record communication in the SEP. An SOP on agreements and negotiations with third party partners is required.

## **1.8 Grievance Management**

The Grievance Redress Mechanism is discussed in detail in Annex A. It is vital that the mechanism is integrated into the SEP as it is the major channel of negative comment and complaint and needs effective management to resolve grievances and be reported to wider project management. Ideally, the responsibility for receiving and resolving grievances in BWSE would be of the MCA-Mongolia or its representative's SST. The SST needs sufficient staffing to manage community investigations and allegations of grievances.

The GRM requires a grievance matrix (GM) to record the incidence of each grievance and the process of investigation and response, The GM data must form part of the SST monthly reporting process.

## **1.9 Stakeholder Involvement in Project Monitoring**

One way to help satisfy stakeholder concerns and promote transparency is to involve project-affected stakeholders in monitoring the implementation of mitigation measures or other environmental and social programs. Such participation, and the flow of information generated through this process, can also encourage local stakeholders to take a greater degree of responsibility for their environment and welfare in relation to the project, and to feel empowered that they can do something practical to address issues that affect their lives. Participatory monitoring also tends to strengthen relationships between the project and its stakeholder.

Participatory monitoring goes beyond the project consulting with affected stakeholders on environmental and social monitoring data. It requires the physical presence of affected individuals at the time that monitoring takes place and involves data collection methods and indicators meaningful to the stakeholders concerned.

Participatory monitoring might include, for example:

9. Involvement of affected stakeholders in scientific sampling methods, questionnaires and analysis,
10. Observations by affected parties, triangulated to strengthen validation,
11. Group discussions on the success of mitigation or benefit measures and/or on how to manage new issues that have arisen
12. The adaptation of conventional participatory techniques to the purpose of assessing changes in the physical and socio-economic environment over time, such as a seasonal calendar, daily/weekly schedules, resource and land-use maps, and wealth ranking.

External monitoring of a company's environmental and social commitments can strengthen stakeholder engagement processes by increasing transparency and promoting trust between the project and its key stakeholders. Projects benefit by receiving an objective assessment of their environmental and social performance, which can help defuse external criticism and strengthen

support from local stakeholders. An external monitor can also help increase both the accountability of the project and the credibility of the monitoring results in the eyes of affected communities and civil society groups by serving as an independent and objective source of information and reporting. External monitors may be NGOs, government regulators, academics and scientists, community representatives, technical experts, or eminent persons.

Planning to include stakeholders in monitoring, whether internally or externally, need to be anticipated and included in the SEP and project monitoring plans. SOPs for managing these interactions are useful, particularly if they are drawn up in consultation of the stakeholder groups.

## **1.10 Reporting to Stakeholders**

Once consultations have taken place, stakeholders need to know which of their suggestions have been taken on board, what risk or impact mitigation measures will be put in place to address their concerns, and how, for example, project impacts are being monitored. In addition to reporting back to project-affected groups and other stakeholders as part of the consultation process, there are other types of reporting that target a different set of stakeholders. Sustainability reporting, for example, provides projects with an opportunity to communicate information to a much wider range of stakeholders about the environmental, social, economic, and governance performance of the project. It also offers a platform to report back on the process of stakeholder engagement itself, such as who has been consulted, on what topics, and with what results. Consequently, a number of international codes and standards for reporting now include requirements for implementing and reporting on stakeholder engagement, e.g. IFC Performance Standards.

Under this heading, the SST needs to:

13. Determine what information needs to be reported to which stakeholders, by what method and how frequently, add to the SEP budget lines.
  14. Regularly update the commitments register where promises have been made to stakeholders in response to complaints or external pressure
  15. and disclose progress to affected and interested parties. In particular, publicize any material changes to commitments or implementation actions that vary from publicly disclosed documents.
  16. Make monitoring results publicly available, especially reports of any external monitors.
  17. Regularly report on the process of stakeholder engagement as a whole, both to those stakeholders who are directly engaged, and to other interested parties.
  18. Derive an SOP for reporting to stakeholders.
- 53.

## **1.11 Management Functions**

Increasingly, good practice points to incorporating stakeholder engagement activities into a project's environmental and social management system. In practice this means making its management systematic by integrating it with core activities. To achieve this, the MCA-Mongolia or its representative will need to identify critical points in the life of the project where stakeholder engagement will be needed, and determine who will deliver these actions and how they can be integrated with core project functions. This involves trying to work out how best to deliver and integrate a number of different aspects of engagement and reporting as discussed in the previous sections, including:

15. Ongoing stakeholder analysis and the assessment of stakeholder concerns from a “risk” perspective
16. The hiring and training of community liaison officers
17. Consultation processes designed to meet the Project’s own policies and/or compliance requirements of funders and regulators
18. Input and suggestions received from stakeholders on project design and proposed mitigation measures
19. Grievance mechanisms that capture and respond to stakeholder concerns
20. The involvement of local stakeholders in project monitoring
21. Reporting information to stakeholders.

Most importantly, stakeholder engagement should be managed as one would manage any other project function — with clearly defined objectives and targets, professional, dedicated staff, established timelines and budget, and senior management responsibility and oversight.

Some good practice principles for managing stakeholder engagement processes are given below.

- Coordinate activities and assign overall responsibility: Over the life of the project, affected communities and other interested parties will likely interact with a variety of representatives from within the project and its contractors. It is essential that this diverse set of engagement activities be coordinated.
- Consistency of information: Consistency of information conveyed to stakeholders by different teams or business units within the MCA-Mongolia and its representative is important, as is keeping track of such activities in order to reduce inefficiencies, confusion, and conflicting messages or commitments. This is usually best achieved by giving a senior Social Manager overall responsibility for stakeholder engagement. This high-level oversight not only helps to underscore the importance of the function but is needed in order to effectively implement the strategy and coordinate the various activities across the project.
- Hire, train, and deploy the right personnel: Initial stakeholder analysis will provide a sense of the type of stakeholder groups the project will need to engage during different phases of the project cycle. Engaging different types of stakeholders requires different skills and staffing considerations. For example, engaging with local communities requires one or more field-based community liaison officers, whereas engagement with government officials or local, national, and international organizations will likely require different skill sets and more direct involvement of the senior Social Manager. The project should consider bringing in social advisors or other expert staff to help design and facilitate the process and assist with participatory methodologies and other specialized techniques. When hiring community liaison staff, consider people who will be able to develop and maintain good working relationships with the local communities. Since their job will involve listening and responding to local concerns and suggestions, qualities to look for include:
  - Good people and communication skills
  - A good understanding of the local language and community/cultural dynamics
  - Open-mindedness and respect for the views of others
  - A solution-oriented approach
  - A high integrity/degree of trustworthiness
  - A genuine commitment to the position and its goals

54.

- Create clear reporting lines between the community liaison function and senior management: In order to be effective, Community Liaison Officers need to have the authority to negotiate on behalf of the project. This requires a clear reporting structure and clarification as to which decisions they can take unilaterally, and which are to be passed on to higher levels within the MCA-Mongolia and its representative. Direct reporting lines also enable senior managers to control risks by being kept informed of this type of field-level information in a timely manner. The more likely it is that the concerns of local stakeholders might pose a risk or reputational issue for the project, the more important it is for Community Liaison Officers to have a direct channel to senior managers.
  
- Communicate the strategy internally: If stakeholder engagement is to be effectively integrated into day-to-day project operations, the concept needs to be “owned” by all staff. Every project unit needs to be aware of the strategy and understand why the company is committing time and resources to the SEP. Too often, stakeholder engagement programs are compartmentalized within the project and regarded as a “soft concept” that is the domain of a few community liaison staff. By clarifying the links between stakeholder engagement and environmental and social performance – as well as its potential to impact on reputation and project outcomes – stakeholder relations becomes a collective responsibility.

## Appendix L Technical Specifications Comprising the BWSE Environmental Design Basis

---

The Sections of Technical Specifications contained in this Appendix have been extracted from the complete sets of Technical Specifications being prepared as part of detailed design for each of the three Contract Packages: CP-1, CP-2, and CP-3. They are not necessarily the latest version. The Sections here presented are for information purposes only - the definitive version of all Sections is in the relevant detailed design package that will form part of the Contract Documents for each CP.

Not all Sections of Technical Specifications are required for all CPs, nor are all Sections immutable across CPs - there are some modifications in recognition of the different contractual work required. To facilitate understanding of the Sections outside the context of their Design Package, in this Appendix the Section titles have been modified to show to which CP they refer.

## SECTION 01030 (CP-1)

## SPECIAL REQUIREMENTS

## PART 1 - GENERAL

## 1.01 SCOPE:

- A. The Work of this section includes the furnishing of all labor, materials, tools and equipment required to perform Special Requirements as specified herein.
- B. Attention is directed to the SECTION VI – GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT:

- A. Measurement and payment for Work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT and as follows:
  - 1. All costs associated with the legal disposal of excess materials shall be borne by the Contractor.
  - 2. All costs associated with meeting the requirements of all permits shall be borne by the Contractor and shall be included for payment under the applicable items included in PART I – BIDDING PROCEDURES.

## 1.03 DEFINITIONS:

- A. Definitions shall be as specified in PART I – BIDDING PROCEDURES.

## 1.04 SUBMITTALS:

- A. Submit to the Engineer for approval, shop drawings, certificates of compliance and/or catalog cuts for all items to be furnished under this Contract. All submittals shall be provided in accordance with SECTION VI, GENERAL CONDITIONS OF CONTRACT and SECTION 01300, SUBMITTALS. **Contractor shall submit his qualifications to construct and test water-supply wells of the type specified WITH HIS BID. Reference SECTION 02672, Paragraph 1.04.A. for specific qualification materials that shall be submitted.**
- B. Digital Videodisc Recording
  - 1. Prior to the start of construction, video record, in color, the entire Project site(s) in the presence of the Engineer. Video recordings shall be in digital videodisc (DVD) format. Particular attention shall be made to the existing condition of roadway surfaces, curbing, berms, sidewalks, driveways, property bounds, landscaped areas, and any other items that might be affected by the Work.
  - 2. Video recordings shall be of excellent quality including clear and concise audio descriptions of the existing site(s) conditions. A copy of the first completed video

recording shall be furnished to the Engineer, prior to the start of construction, in order to establish the requirement for visual and audio quality. Two (2) copies of all video recordings shall be provided to the Engineer. Any recordings furnished which, in the opinion of the Engineer, are of poor quality or incomplete, shall be redone at no additional cost to the Owner.

3. Video recordings shall be made by the Contractor in the presence of the Owner/Engineer.
4. No construction activities shall commence until the video recordings have been completed, submitted to the Engineer and approved by the Engineer.

#### C. Health and Safety Plan

1. Prior to the start of construction, prepare and submit a site-specific Health and Safety Plan which includes consideration of all known and potential hazards at the site. Work may not proceed at the project site until the Contractor's Health and Safety Plan has been received by the Engineer.
2. Contractor shall be cognizant of the minimum standards norms set forth as follows:
  - a. MNS 4990:2015 Labour Safety. Labour Environment. Hygiene requirements.
  - b. MNS 5002:2000 Occupational safety and health. Noise. Requirement for general safety.
  - c. MNS 6654:2017 Occupational safety and health. Personal protective clothing. General requirements for selection and use of respiratory protection equipment.
  - d. MNS 4931:2000 Protective means. General requirement, classification.
  - e. MNS 6769:2019 Occupational safety and hygiene. Mechanical vibration. General requirements for measurement of human exposure to hand-transmitted vibration and its occupational exposure limit.
  - f. MNS 6770:2019 Occupational safety and hygiene. Mechanical vibration. Requirements for whole body vibration measurement and occupational exposure limit at workplace.
  - g. MNS ISO 45001:2019 Occupational health and safety management systems – Requirements with guidance for use.
  - h. MNS OSHAS 18002:2015 Occupational health and safety management systems. Guidelines for the implementation of OSHAS 18001.
  - i. MNS OSHAS 18001:2012 Occupational Health and Safety Management System.
  - j. MNS ISO 7708:2016 Air quality. Particle size fraction definition for health-related sampling.
  - k. MNS Labor Safety and Sanitary. General Requirements for Industrial operation.

- l. CCM 12-03-04 Regulation on occupational safety in construction manufacturing. Part One: General Requirements.
  - m. CCM-04-06 Regulation on occupational safety in construction manufacturing. Part Two: Regulation on Technical Operational Safety
  - n. CR12 101-05 Sample instruction on occupational safety during construction work.
  - o. Labor code of Mongolia
  - p. Law of Mongolia on Toxic Hazardous Chemicals
3. The Health and Safety Plan shall include, but not be limited to the following:
- a. Identification of Contractor's Site Safety Officer.
  - b. Identification of hazards and risks associated with the Project.
  - c. Contractor's standard operating procedures, including personnel training and field orientation.
  - d. Respiratory protection training requirements.
  - e. Levels of protection and selection of equipment procedures.
  - f. Type of medical surveillance program.
  - g. Personal of hygiene requirements and guidelines.
  - h. Zone delineation of the Project site.
  - i. Site security and entry control procedures.
  - j. Field monitoring of site contaminants.
  - k. Contingency and emergency procedures.
  - l. Listing of emergency contacts.
4. The personal protective equipment required to provide the appropriate level of dermal and respiratory protection shall be determined based on the results of continuous air monitoring performed by the Contractor and the standards set forth in the Contractor's Health and Safety Plan.

D. Utilize the Shop Drawing Transmittal Forms supplied by the Engineer for all required submittals.

#### 1.05 PRODUCT HANDLING:

- A. All materials and equipment shall be shipped, stored, handled and installed according to the manufacturer's written recommendations.
- B. The materials and equipment shall be stored on a flat, clean, dry surface to prevent damage

and shall be covered to prevent exposure to adverse conditions prior to installation.

**1.06 DESIGN CRITERIA:**

- A. The materials specified are intended to be standard materials of demonstrated successful performance, as manufactured by reputable concerns. Materials shall be designed and manufactured in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the materials.
- B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

**1.07 SPECIFICATIONS AND DRAWINGS:**

- A. All Work shall conform to these specifications and the accompanying drawings entitled:

**MCA MONGOLIA**

**DETAILED DESIGN FOR BULK WATER SYSTEM EXPANSION**

**WELL DRILLING AND CONSTRUCTION**

**CONTRACT NO. CP-1**

Dated ## consisting of 32 sheets, all made by the Engineer, on file with the Owner, and any changes, drawings, plans, and directions that may be furnished from time to time by the Engineer.

**1.08 COMMENCEMENT AND PROGRESS OF WORK:**

- A. Prior to the start of construction, the Owner and the Contractor shall obtain a permit for the commencement and execution of the work from the Urban Planning and Development Department.
- B. Promptly start and continue actual construction Work under this Contract with the necessary equipment to properly execute and complete the Work in the specified time. No cessation of construction activities will be allowed without the written approval of the Owner.
- C. Furnish to the Engineer a progress schedule for the Work prior to the start of construction.

**1.09 DETOURS AND ROAD ACCESSIBILITY:**

- A. Contact the responsible heads of the Municipality Road Development Department of Municipality Ulaanbaatar City in order to obtain all necessary permits and determine the requirements with regards to traffic control.

**1.10 CHANGE IN AMOUNT OF WORK:**

- A. The Owner reserves the right to increase or decrease the amount of any item of the Work listed as may be found desirable or necessary during the carrying out of this Contract and the

unit prices included in PART I – BIDDING PROCEDURES shall apply without change to such variation in the quantity of each of the Bid items to the extent provided by law.

- B. Based on the actual work required, the increase or decrease in the quantity of any bid item of the Work included in PART I – BIDDING PROCEDURES shall apply without changes to the unit prices.

#### 1.11 SCOPE OF WORK AND SEQUENCE OF CONSTRUCTION:

- A. The Work to be done under this Contract consists of the construction of water-supply wells as specified and/or as shown on the Contract Drawings. Refer to SECTION 01010, SUMMARY OF WORK.
- B. For the protection of life and property, insure that no excavation is left open, unguarded, or water filled during any period of time when Work is not actually in progress. It is the purpose and intent that all excavations and backfill, including consolidation operations, and temporary surfacing within an area be accomplished expeditiously before proceeding to other Work areas.
- C. The Owner reserves the right to schedule the Work at any location within the Project area. At the same time the Owner may schedule the suspension of Work at any location.
- D. The Work of this Contract may require existing utilities to be bypassed, removed and relaid. The Contractor shall pay for all costs associated with this Work at no additional cost to the Owner except as specified in SECTION 01025, MEASUREMENT AND PAYMENT.
- E. The Owner has obtained various permits for this Project, which are included as APPENDIX B. Meet all requirements/conditions of these permits during the construction of this Project. All costs associated with this Work shall be borne by the Contractor and included in the prices bid under the applicable items of PART I – BIDDING PROCEDURE.
- F. All damage to existing utilities, roadways, and the like shall be repaired and/or replaced by the Contractor as approved by the utility company and shall be borne by the Contractor.
- G. The control of dust shall be accomplished by the application of clean water. Water required for the control of dust shall be provided by the Contractor at no additional cost to the Owner. All necessary piping, hoses, fittings, and the like shall be provided by the Contractor and the costs shall be borne by the Contractor. The use of calcium chloride to control dust is not allowed.
- H. No construction activity shall be allowed on the Project for two working days prior to the following dates:

- New Year's Day - January 1
  - Tsagan Sar – Defined day in February, usually the 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup> day of spring month under lunar calendar.
  - International Womans' Day – March 8
  - Buddha Day- Fifteenth Day of first summer month under lunar calendar
  - Childrens' Day – June 1
  - National Naadam Holiday – July 11 - 15
  - Great Chingis Khaan Birthday – First day of first winter month under Lunar calendar.
  - State Proclamation Day – November 26
  - Independence Day – November 29
- I. The Contractor shall secure use of space that they have legal access to for the temporary buildings specified under SECTION 01500, TEMPORARY FACILITIES. The temporary buildings shall not be placed along the edge of roadways. The Contractor shall be responsible for clearing, grubbing, grading, providing of grading materials, permits, and full restoration of the temporary building location(s).

#### 1.12 EXISTING UTILITIES: NOT USED

#### 1.13 VISITS TO THE SITE(S):

- A. Before submitting a Bid, visit the site(s) to examine existing conditions and become thoroughly acquainted with the effort required to perform the Work.
- B. Study the Contract Documents and compare the same with the information gathered during examination of the site(s), as no extra compensation will be authorized for extra Work caused by unfamiliarity with the site(s) and/or Contract Documents or the conditions peculiar to this Project.

#### 1.14 DISPOSAL OF EXCESS MATERIAL:

- A. All pavement road base, surplus suitable material removed from the excavations, loam not required for re-use in the Work shall be legally disposed of by the Contractor.
- B. Legally dispose of all unsuitable material removed as part of the Work.

#### 1.15 TECHNICAL SPECIFICATIONS:

- A. Where reference is made to MNS, ISO, MNS ASTM, MNS AASHTO, MNS EN, CCfFSU (SNIP), CCM (BNbD), CR BD, ASTM, AWWA and AASHTO specifications or other associations, it is understood that the latest revisions as of the date of the Contract Documents shall apply.

#### 1.16 PERMITS, FEES AND BONDS:

- A. Obtain and comply with all required permits, pay all fees and provide all bonds necessary to complete the Work as specified. Be solely responsible for performing any necessary acts and providing any materials required in order to comply with any and all terms and conditions set forth in any permits and licenses. Refer to APPENDIX B for all permits, which have been

obtained for the Project. The Owner has not obtained all permits and licenses required for this Project. The Contractor shall obtain and pay for any other permits required to complete the Project including but not limited to Road Opening Permit, Blasting, and Phase II General Stormwater Permit for small construction projects.

#### 1.17 NOTIFICATION OF CONSTRUCTION:

- A. At least 5 business days prior to initiating excavation Work, notify the following entities, whose facility is located in the excavation zone, in writing, of where and when excavation(s) are scheduled and request their engineer to be present at the site during excavation.
  - 1. Municipality Road Development Department
  - 2. USUG
  - 3. Communication Companies
  - 4. Power Companies

#### 1.18 BOUNDS AND PROPERTY MARKERS:

- A. Prior to initiating construction, engage an independent Registered Land Surveyor (in the State where the Project is located) to provide permanent reference points for all bounds and property markers along the line of the Work that may be disturbed during construction. Submit copies of all ties to the bounds and property markers to the Engineer prior to excavation at the site(s).
- B. Any bounds or markers disturbed shall be replaced utilizing the services of a Professional Land Surveyor in the State where the Project is located. The cost of replacing markers disturbed by the Contractor's operations shall be at the Contractor's expense.

#### 1.19 TWENTY-FOUR HOUR EMERGENCY SERVICE:

- A. Maintain a 24-hour, 7-day a week telephone service. The Contractor's emergency personnel and equipment shall be within 30 minutes travel time to the Project site(s) in order to handle emergency requirements relating to the Contractor's Work. A list of the personnel and their telephone numbers, pager numbers, and cell phone numbers, shall be submitted to the Engineer, the Owner and to the local Police and Fire Departments.
- B. This requirement shall apply for the duration of the Project and shall be updated as necessary. This list shall be submitted on the Contractor's letterhead and shall state that should an emergency arise during the implementation of the Project, these people are to be contacted. Submit this letter to the Engineer prior to initiating construction.

#### 1.20 HOURS OF OPERATION:

- A. The Contractor, including all subcontractors, materialmen, and all other relating to this Project, shall conform to the following Work schedule.
  - 1. Certain aspects of the Work will require round-the-clock work operations, i.e., 24-hours per day, seven-days per week.

2. Contractor shall arrange with the Owner and Engineer regarding normal work hours, i.e., for those aspects of the work that do not require round-the-clock operations.

#### 1.21 DISPOSAL OF DEBRIS:

- A. During the prosecution of the Work, maintain the Project site(s) and adjoining areas in a neat and orderly manner and eliminate the accumulation of construction debris. A rubbish container shall be kept at the Project site(s) at all times and be emptied as required to prevent odors and vermin.
- B. Store and remove all debris from the Project site(s) and legally dispose of the debris in accordance with federal/state/local regulations. Should the Contractor neglect or refuse to maintain the Project site(s) free of accumulated debris, the Owner reserves the right to have the service performed by others and cost thereof deducted from monthly progress payment requests.
- C. At the conclusion of the Work, remove and legally dispose of any surplus excavation, broken pavement, lumber, equipment, temporary structures, and any other refuse remaining from construction operations, and leave the entire Project site(s) of the Work in a neat and orderly condition.

#### 1.22 RECORD DRAWINGS:

- A. Throughout the course of completing the Work, continually maintain a set of record drawings that incorporate all approved changes made by the Contractor and all subcontractors to the Drawings included in the executed Contract between the Owner and the Contractor. Clearly and concisely mark up the individual Drawings and/or incorporate sketches that show approved changes made during the execution of the Work. Following completion of the Work, incorporate all approved changes electronically into one (1) complete set of record drawings. Record drawings shall be complete in every way and shall show the full extent of the executed Work. Special attention shall be given to concealed Work.
- B. Change Orders, Addenda items and field changes shall be included where applicable. Additional specific requirements relative to record drawings may be called for in the individual sections of the Specifications. Submit a review copy to the Engineer for approval and make any revisions required by the Engineer in order to make the record drawings complete. After acceptance by the Engineer, deliver a full scale reproducible hard copy and a compact disk with Auto Cad files of the record drawings to the Engineer.
- C. An electronic copy of the Engineer's Auto Cad files shall be made available to the Contractor for the purpose of completing the required computer drafted record drawings.

#### 1.23 INITIAL OPERATION OF NEW FACILITIES: NOT USED

#### 1.24 CONTINUOUS OPERATING CRITERIA: NOT USED

#### 1.25 SCHEDULE OF VALUES:

- A. Submit a schedule of values for use in preparing the monthly progress payments described in the SECTION VI GENERAL CONDITIONS OF CONTRACT.

- B. The schedule of values shall be submitted to the Engineer for review and approval at least 30 calendar days prior to the first progress payment request. The acceptable schedule of values shall be used for the duration of the Project.

#### 1.26 OPERATION AND MAINTENANCE MANUALS: NOT USED

#### 1.27 MANUFACTURER'S SERVICES: NOT USED

- A. Provide as specified in 01730 and herein.

- B. Installation and Start-up

1. Make arrangements with each equipment supplier or manufacturer to furnish the services of a factory-trained service engineer who is specifically trained on the type of equipment being furnished for the sole purpose and use of the Owner and Engineer to assist during installation and start-up of all equipment and systems furnished by that supplier or manufacturer.
2. Minimum length of time specified for this service shall be exclusive of travel time and of correction of defects, testing, and training.
3. The manufacturer's engineer will verify, in writing, that the equipment has been installed and serviced so as to be acceptable to the equipment manufacturer in order that it will provide safe and efficient operation as intended by the Engineer and the manufacturer. The Engineer will provide a form entitled "Certification of Proper Equipment Installation" which is to be signed by the manufacturer's representative and the Contractor's representative for each piece of equipment.

- C. Correction of Defects

1. Nothing specified herein shall provide relief of the responsibility of providing sufficient service to place all equipment or systems into satisfactory operation.
2. All time and materials needed to correct defective equipment shall be provided at no cost to the Owner.

- D. Testing

1. Prior to testing, each equipment supplier or manufacturer shall furnish a written certification that the equipment is ready for operation. A copy of this certification shall be furnished to the Engineer.
2. Furnish the labor, tools, equipment, power, and clean water necessary to perform field-testing to determine that the supplied equipment including controls and alarms meets hydraulic, electric, mechanical and performance requirements. All tests shall be performed in the presence of the Engineer.

- E. Training

1. Wherever called for in the Specifications, have each equipment supplier or manufacturer furnish the services of a fully qualified field service engineer to provide operator training

in the complete operation and maintenance of all equipment furnished by that supplier or manufacturer.

2. The minimum length of time specified for this service shall be exclusive of travel time and shall follow and be exclusive of installation and start-up, correction of defects and testing.
3. Schedule training sessions in conjunction with and as approved by the Engineer. This training will be witnessed and verified by a representative appointed by the Engineer. The Engineer has the right to reject the training by the equipment supplier or manufacturer and to require additional training. The items addressed by the training session shall include, but not be limited to, system description, system operation, system disassembly and reassembly, lubrication, routine maintenance, corrective maintenance, use of operation and maintenance manual, system troubleshooting and ordering of spare parts.
4. The Engineer will provide a form entitled "Verification of Manufacturer's Equipment Training" which is to be signed by all parties at the completion of each training session.

1.28 SPARE PARTS: NOT USED

1.29 SPECIALTY TOOLS: NOT USED

1.30 STATUTORY REQUIREMENTS IN GENERAL:

- A. Owner and Contractor recognize that other rights, duties, and obligations with respect to public construction contracts are also provided by statute, notwithstanding the fact that they may not be specifically enumerated herein. Accordingly, any provisions required by statute to be included in this contract shall be deemed to be so included as though fully set forth herein. However, compliance with a statute does not diminish the Contractor's responsibilities hereunder.
- B. Contractor shall keep fully informed of all existing and future State and Federal Laws and municipal ordinances and regulations in any manner affecting those engaged or employed in the Work, or the materials used or employed in the Work, or in any way affecting the conduct of the Work, and of all such orders and decrees of bodies or tribunals having any jurisdiction or authority over the same and of all provisions required by law to be made a part of this Contract, all of which provisions are hereby incorporated by reference and made a part thereof.
- C. If any discrepancy or inconsistency is discovered in the Contract Documents for this Work in relation to any such law, ordinance, regulation, order or decree, report the same to the Engineer in writing. Contractor shall, at all times, observe and comply with, and cause all agents and employees to observe and comply with all such existing and future laws, ordinances, regulations, orders and decrees; and shall protect and indemnify the Owner and Engineer and all of its and their officers, agents, and servants against any claim or liability arising from or based on the violation of any such law, ordinance, regulation, order or decree, whether by itself or its employees or subcontractors.
- D. All materials furnished and Work done shall comply with all State and Federal laws and regulations.

1.31 RELATION OF SEWER MAINS TO WATER LINES: NOT USED

1.32 UTILITY COORDINATION: NOT USED

PART 2 - PRODUCTS – Not Used

PART 3 - EXECUTION – Not Used

END OF SECTION

SEE FOLLOWING FORMS

1. Verification of Manufacturer's Equipment Training
2. Operation and Maintenance Manual Review Checklist
3. Spare Parts Inventory
4. Certification of Proper Equipment Installation

## SECTION 01030 (CP-2)

## SPECIAL REQUIREMENTS

## PART 1 - GENERAL

## 1.01 SCOPE:

- A. The Work of this section includes the furnishing of all labor, materials, tools and equipment required to perform Special Requirements as specified herein.
- B. Attention is directed to the SECTION VI – GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.
- C. Environmental and Social Management Plans (ESMP) are included in Appendix C of the Specifications. The appended ESMPs have the full weight of the Technical Specifications and must be adhered to by the Contractor.

## 1.02 MEASUREMENT AND PAYMENT:

- A. Measurement and payment for Work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT and as follows:
  - 1. All costs associated with locating, maintaining location marks, excavation, refilling, compaction, repairing utilities broken due to the Contractor's operations, time delays relative to existing utilities and all other Work associated with utilities shall be included for payment under the applicable pipe laying item included in PART I – BIDDING PROCEDURES.
  - 2. All costs associated with the legal disposal of excess materials shall be borne by the Contractor.
  - 3. No additional payment will be made for corrective work associated with furnishing and installing bedding materials for refill of excavations carried to grades lower than specified. If inadequate dewatering methods cause softening of subgrade areas, then remove the unsuitable material and replace with common fill at the Contractors cost.
  - 4. No payment will be made for temporary shoring of trench walls utilizing trench boxes and/or steel plates. Where timber or steel sheeting is used and is not specified to be paid for separately and ordered left in place by the Engineer, the Contractor has the option of leaving it in or removing it after it has been cut off 300 mm (1 ft) above the top of the pipe.
  - 5. Pay all fees for permits associated with blasting operations. Unauthorized excavations in rock, or excavations made beyond or below the specified limits shall be refilled and compacted with common fill and shall be borne by the Contractor. Perform blasting operation(s) in such a manner that no existing utilities are disturbed. All damage to existing utilities or roadway surfaces outside the trench limits caused by the Work of the

Contractor or its Subcontractor(s) shall be repaired and/or replaced immediately and shall be borne by the Contractor.

6. No additional payment will be made for the relocation and/or support of any obstruction encountered along the line of Work.
7. Testing, and jetting of trenches utilizing the Owner's (USUG's) water system may be available, however the Owner (USUG) does not guarantee that its water supply will be available at any time during the duration of the Project. Contractor is responsible for making all arrangements and gathering necessary permissions from the Owner's (USUG's) water district for use of water. Use of water shall be at the Contractor's expense. All necessary piping, hoses, fittings, and the like shall be provided by the Contractor and shall be borne by the Contractor. All water shall be metered, and the use of backflow prevention device(s) shall be required as approved by the Owner.
8. Provide detailed plan(s) to the Owner and/or the Road Development Department of Municipality of Ulaanbaatar City for all proposed detours and/or partial roadway closings made necessary by the Work. Obtain written approval for all proposed detours and/or partial roadway closings prior to the start of Work. No payment will be made for Work performed in areas of the Project that require an approved traffic management plan until it has been secured.
9. All costs associated with repairing settlement of trenches shall be borne by the Contractor.
10. All costs associated with meeting the requirements of all permits shall be borne by the Contractor and shall be included for payment under the applicable items included in PART I – BIDDING PROCEDURES.

### 1.03 DEFINITIONS:

A. Definitions shall be as specified in PART I – BIDDING PROCEDURES.

B. As used in this section, the following terms are understood to have the following meanings:

1. "Furnish" shall mean purchase and deliver to the Project Site, complete with every necessary appurtenance and support.
2. "Install" shall mean unload at the delivery point at the Project Site and perform all Work necessary to establish proper location, secure mounting and operation in the Project.
3. "Provide" shall mean furnish and install.
4. "Work" shall mean all labor, materials, equipment, apparatus, controls, accessories, and all other items required for a proper and complete installation.
5. "Piping" shall mean, in addition to pipe or tubing all backfilling and bedding, fittings, flanges, unions, valves, strainers, specialties, drains, hangers and supports, and all other accessories relative to such pipe or tubing.
6. "Concealed" shall mean hidden from sight in chases, furred spaces, shafts, crawl spaces, embedded in construction, buried, and/or similar conditions.

7. "Exposed" shall mean not concealed as defined above.
8. "Furnished by others" shall mean materials or equipment purchased and set in place under other sections of the Contract and connected to the systems covered by this section of the Specifications by this trade Contractor.
9. "Coordinate" shall mean all Work provided under this section shall be correlated with the Work of other trades.

#### 1.04 SUBMITTALS:

A. Submit to the Engineer for approval, shop drawings, certificates of compliance and/or catalog cuts for all items to be furnished under this Contract. All submittals shall be provided in accordance with SECTION VI, GENERAL CONDITIONS OF CONTRACT and SECTION 01300, SUBMITTALS.

#### B. Digital Videodisc Recording

1. Prior to the start of construction, video record, in color, the entire Project site(s) in the presence of the Engineer. Video recordings shall be in digital videodisc (DVD) format. Particular attention shall be made to the existing condition of roadway surfaces, curbing, berms, sidewalks, driveways, property bounds, landscaped areas, and any other items that might be affected by the Work.
2. Video recordings shall be of excellent quality including clear and concise audio descriptions of the existing site(s) conditions. A copy of the first completed video recording shall be furnished to the Engineer, prior to the start of construction, in order to establish the requirement for visual and audio quality. Two (2) copies of all video recordings shall be provided to the Engineer. Any recordings furnished which, in the opinion of the Engineer, are of poor quality or incomplete, shall be redone at no additional cost to the Owner.
3. Video recordings shall be made by the Contractor in the presence of the Owner/Engineer.
4. No construction activities shall commence until the video recordings have been completed, submitted to the Engineer and approved by the Engineer.

#### C. Health and Safety Plan

1. Prior to the start of construction, prepare and submit a site-specific Health and Safety Plan which includes consideration of all known and potential hazards at the site and the requirements of Article 6.7 of the General Conditions. Work may not proceed at the project site until the Contractor's Health and Safety Plan has been received by the Engineer.
2. Contractor shall be cognizant of the minimum standards norms set forth as follows:
  - a. MNS 4990:2015 Labour Safety. Labour Environment. Hygiene requirements.
  - b. MNS 5002:2000 Labor Safety, General Requirements for noise normative and safety operation.

- c. MNS 12.1.06:1988 Labor Safety Standard System. Extreme high noise. General Requirements for safety operation.
  - d. MNS 4931:2000 Protective means. General requirement, classification.
  - e. MNS 4968:2000 Occupational Safety and Health. Production processing general requirements
  - f. MNS 4969:2000 Labor Safety and Sanitary. Training Organization, basic regulation.
  - g. BNbD 12-01-04 Regulation of Labor Safety for Construction Industry. Part I. General Requirements
  - h. BNbD 12-04-06 Regulation of Labor Safety for Construction Industry. Part I. Safety for Technical Sa
  - i. BD 12-10-05 Safety guidelines to be followed for construction and installation works.
  - j. MNS OSHAS 18001:2012 Occupational Health and Safety Management System.
  - k. Labour code of Mongolia
  - l. Law of Mongolia on Toxic Hazardous Chemicals
3. The Health and Safety Plan shall include, but not be limited to the following:
- a. Identification of Contractor's Site Safety Officer and Accident Prevention Officer.
  - b. Identification of hazards and risks associated with the Project.
  - c. Contractor's standard operating procedures, including personnel training and field orientation.
  - d. Respiratory protection training requirements.
  - e. Levels of protection and selection of equipment procedures.
  - f. Type of medical surveillance program.
  - g. Personal of hygiene requirements and guidelines.
  - h. Zone delineation of the Project site.
  - i. Site security and entry control procedures.
  - j. Field monitoring of site contaminants.
  - k. Contingency and emergency procedures.
  - l. Listing of emergency contacts.

4. The personal protective equipment required to provide the appropriate level of dermal and respiratory protection shall be determined based on the results of continuous air monitoring performed by the Contractor and the standards set forth in the Contractor's Health and Safety Plan.
5. All Employees shall be provided with personal protective equipment (PPE) that meets the standards on accordance with the Mongolian safety and health law.
6. The contractor shall notify the Owner, Engineer and MCC within 24 hours or as soon as reasonably possible after the occurrence of any accident which has resulted in damage or loss of property, disability or loss of human life, or which could be reasonably foreseen to have a material impact on the environment and shall submit a report to the Owner, Engineer, and MCC no later than 7 days after the occurrence of such an event.

#### D. Emergency Action Plan

1. Prior to the start of construction, prepare and submit a site-specific Emergency Action Plan which includes consideration of all known and potential accidents, spills and leaks of pollutants and hazards at the site. Work may not proceed at the project site until the Contractor's Emergency Action Plan has been received by the Engineer.
2. The Emergency Action Plan shall include, but not be limited to the following:
  - a. Identification of hazards and risks associated with the Project.
  - b. Identify preventative measures to be taken to avoid accidents and spillage of petroleum products and other pollutants. In the event of any spillage, identify remedial action to be taken in accordance with a contingency action drawing or plan approved by the Engineer.
  - c. Contractor's standard operating procedures, including personnel training and field orientation.
  - d. Levels of protection and selection of equipment procedures.
  - e. Field monitoring of petroleum products and potential pollutants.
  - f. Contingency and emergency procedures.
  - g. Listing of emergency contacts.

#### E. Hazardous Waste Management Plan

1. The Contractor shall obtain all information necessary to be fully aware of all potential exposures to hazardous waste materials and physical or biological agents in the performance of the Work. Prior to the start of construction, prepare and submit to the Engineer a site-specific Hazardous Waste Management Plan. The Contractor shall provide to its employees, Subcontractors and Third Parties, all information and training on the nature of these potential hazards as required by Local Laws or Regulations, regardless of the source of such hazards.

2. Certain chemical and physical agents (*i.e.*, asbestos, PCB's, radiation sources, etc.), are specifically regulated by Mongolian and/or Local agencies. When the Work involves a potential exposure to any such hazards, the Contractor shall assure compliance with all of those specific regulations. If spills, releases, disposal or exposure occur which may require reporting to regulator agencies, the Contractor shall notify the Owner immediately of the nature of the incident.
3. The Contractor's Hazardous Waste Management Plan must include as a minimum, specific provisions relative to:
  - a. The location of potential hazards.
  - b. The potential adverse health effects posted by such hazards.
  - c. Proper safe work practices to prevent or reduce potential exposure.
  - d. Proper protective measures and equipment required.
  - e. Proper use of protective equipment.
  - f. Proper response to exposure incidents.
  - g. Proper disposal of hazardous materials.
4. The Contractor shall provide all personal protective equipment to its employees required by the nature of the hazard. Such protective equipment must include at least the following items:
  - a. NIOSH-approved respirator protection equipment (for dusts, mists, fumes, gasses, etc.).
  - b. Hearing protection (plugs, muffs, etc.).
  - c. Protective clothing (chemical goggles, gloves, resistant clothing, etc.).

- F. Utilize the Shop Drawing Transmittal Forms supplied by the Engineer for all required submittals.

#### 1.05 PRODUCT HANDLING:

- A. All materials and equipment shall be shipped, stored, handled and installed according to the manufacturer's written recommendations.
- B. The materials and equipment shall be stored on a flat, clean, dry surface to prevent damage and shall be covered to prevent exposure to adverse conditions prior to installation.

#### 1.06 DESIGN CRITERIA:

- A. The materials specified are intended to be standard materials of demonstrated successful performance, as manufactured by reputable concerns. Materials shall be designed and manufactured in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents.

The specifications call attention to certain features but do not purport to cover all details entering into the construction of the materials.

- B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

#### 1.07 SPECIFICATIONS AND DRAWINGS:

- A. All Work shall conform to these specifications and the accompanying drawings entitled:

### **MCA MONGOLIA**

### **BULK WATER SYSTEM EXPANSION**

Dated ## consisting of ## sheets, all made by the Engineer, on file with the Owner, and any changes, drawings, plans, and directions that may be furnished from time to time by the Engineer.

#### 1.08 COMMENCEMENT AND PROGRESS OF WORK:

- A. Prior to the start of construction, the Owner and the Contractor shall obtain a permit for the commencement and execution of the work from the Urban Planning and Development Department.
- B. Promptly start and continue actual construction Work under this Contract with the necessary equipment to properly execute and complete the Work in the specified time. No cessation of construction activities will be allowed without the written approval of the Owner.
- C. Furnish to the Engineer a progress schedule for the Work prior to the start of construction.

#### 1.09 DETOURS AND ROAD ACCESSIBILITY:

- A. Contact the responsible heads of the Municipality Road Development Department of Municipality Ulaanbaatar City in order to obtain all necessary permits and determine the requirements with regards to traffic control.
- B. There are no guarantees that total roadway closures will be permitted. Incorporate into the construction schedule the ability to maintain one (1) lane of traffic at all times during the execution of the Work and complete the Work within the Completion date. Where the roadway under construction is the only means of vehicular access to a particular area provide continual access to the area for residents and emergency vehicles.
- C. Wherever detours are permitted, the size, construction and location of signs shall conform to local and state requirements and/or standards. Detour routes shall be adequately posted to assist the motorist to return to the normal route of travel for the duration of the Work and for a minimum of two (2) weeks prior to the start of construction in the areas of the Project affected by the Work.

#### 1.10 CHANGE IN AMOUNT OF WORK:

- A. The Owner reserves the right to increase or decrease the amount of any item of the Work listed as may be found desirable or necessary during the carrying out of this Contract and the

unit prices included in PART I – BIDDING PROCEDURES shall apply without change to such variation in the quantity of each of the Bid items to the extent provided by law.

- B. Based on the actual work required, the increase or decrease in the quantity of any bid item of the Work included in PART I – BIDDING PROCEDURES shall apply without changes to the unit prices.

#### 1.11 SCOPE OF WORK AND SEQUENCE OF CONSTRUCTION:

- A. The Work to be done under this Contract consists of the construction of the Advanced Water Purification Plant (AWPP) as specified and/or as shown on the Contract Drawings. Refer to SECTION 01010, SUMMARY OF WORK.
- B. For the protection of life and property all backfilling operations shall follow closely behind pipe laying. Insure that no excavation is left open, unguarded, or water filled during any period of time when Work is not actually in progress. It is the purpose and intent that all excavations and backfill, including consolidation operations, and temporary surfacing within an area be accomplished expeditiously before proceeding to other Work areas.
- C. The Owner reserves the right to schedule the Work at any location within the Project area. At the same time the Owner may schedule the suspension of Work at any location.
- D. The Work of this Contract may require existing utilities to be bypassed, removed and relaid. If required, the Contractor shall obtain Owners prior approval of a not-to-exceed Time and Materials proposal including but not limited to Contractors cost, profit, insurance, overhead and other cost that are required to complete the works. Contractor shall include the complete cost back-up information to the Owner for the Owners review and approval prior to commencing the work
- E. The Owner has obtained various permits for this Project, which are included as APPENDIX B Meet all requirements/conditions of these permits during the construction of this Project. All costs associated with this Work shall be borne by the Contractor and included in the prices bid under the applicable items of PART I – BIDDING PROCEUDRES
- F. Pre-blasting of ledge is not allowed on this Project. No payment will be made for ledge removal on this Project in areas where pre-blasting has occurred.
- G. All damage to existing utilities, roadways, and the like shall be repaired and/or replaced by the Contractor as approved by the utility company and shall be borne by the Contractor.
- H. The control of dust shall be accomplished by the application of clean water. The Contractor is responsible for making all arrangements and gaining necessary permissions from the Owner to utilize the Owner's (USUG's) water system. However, the Owner does not guarantee that water will be available at any time during the duration of the Project. Water required for the control of dust shall be provided by the Contractor at no additional cost to the Owner. All necessary piping, hoses, fittings, and the like shall be provided by the Contractor and the costs shall be borne by the Contractor. All water shall be metered, and the use of backflow prevention device(s) shall be required as approved by the Owner. The use of calcium chloride to control dust is not allowed.

- I. The compaction of trenches shall be accomplished by mechanical compaction and/or jetting. The Contractor is responsible for making all arrangements and gaining necessary permissions from the Owner to utilize the Owner's (USUG's) water system. However, the Owner does not guarantee that water will be available at any time during the duration of the Project. Water required for the jetting of trenches shall be provided by the Contractor at no additional cost to the Owner. All necessary piping, hoses, fittings, and the like shall be provided by the Contractor and the costs shall be borne by the Contractor. All water shall be metered, and the use of backflow prevention device(s) shall be required as approved by the Owner.
- J. The testing of tanks and/or pipelines shall be accomplished by using clean water. The Contractor is responsible for making all arrangements and gaining necessary permissions from the Owner to utilize the Owner's (USUG's) water system. However, the Owner does not guarantee that water will be available at any time during the duration of the Project. Water required for the testing of tanks and/or pipelines shall be provided by the Contractor at no additional cost to the Owner. All necessary piping, hoses, fittings, and the like shall be provided by the Contractor and the costs shall be borne by the Contractor. All water shall be metered, and the use of backflow prevention device(s) shall be required as approved by the Owner.
- K. Except for an emergency condition as approved by the Owner in writing, premium wages will not be paid for Work performed on Sunday, holiday or workdays longer than eight (8) hours. All costs incurred by the Owner caused by the Contractor's Work performed on Sunday, holiday or workdays longer than eight (8) hours shall be borne by the Contractor which will be deducted from monthly payment requests.
- L. No construction activity shall be allowed on the Project for two working days prior to the following dates:

- |   |  |
|---|--|
| • New Year's Day - January 1  | • National Naadam Holiday – July 11 - 15   |
| • Tsagan Sar – Defined day in February, usually the 1 <sup>st</sup> , 2 <sup>nd</sup> , 3 <sup>rd</sup> day of spring month under lunar calendar. | • Great Chingis Khaan Birthday – First day of first winter month under Lunar calendar. |
| • International Womans' Day – March 8   | • State Proclamation Day – November 26   |
| • Buddha Day- Fifteenth Day of first summer month under lunar calendar  | • Independence Day – November 29   |
| • Childrens' Day – June 1   |  |

All construction equipment and materials not incorporated in the Work to date shall be removed from the Work areas where construction activity is ceased. All excavations shall be backfilled and paved as specified and/or directed by the Engineer. Incorporate this requirement into the Project Schedule. Failure to comply with this requirement will result in no payment for work performed.

- M. The Contractor shall secure use of space that they have legal access to for the temporary buildings specified under SECTION 01500, TEMPORARY FACILITIES. The temporary buildings shall not be placed along the edge of roadways. The Contractor shall be

responsible for clearing, grubbing, grading, providing of grading materials, permits, and full restoration of the temporary building location(s).

#### 1.12 EXISTING UTILITIES:

- A. The location and size of existing sewers, drains, culverts, water mains, gas mains, cables, service pipes, and other utilities shown on the Contract Drawings, were obtained from the results of surveys and existing records and are shown as approximate only, to guide the Bidders in the preparation of their Bid. The various utility companies will determine the location and depth of existing utilities by marking them out upon the ground and by experimental excavations by the Contractor prior to and as the Work progresses. The Contract Drawings do not show the exact location and depth of all utilities, nor do they show all utilities or the number of lines for each utility that may be encountered.
- B. Assume that there are existing utility connections to each and every building or structure along the line of Work, whether they appear on the Contract Drawings or not. Notify the proper utility companies and obtain and preserve the marked location(s) of all existing utilities that may be encountered along the line of Work, until such time as such markings are no longer required.
- C. Experimental trench excavations are to be made prior to commencing pipe laying operations. Excavate by hand as necessary in advance of the trenching equipment to determine the exact location and depth of each utility that may be encountered. Excavation equipment shall not be used within three (3) feet of the utility to be crossed. Continue to excavate by hand around these utilities after ascertaining their exact location and depth.
- D. All utilities interfered with or damaged shall be replaced and/or repaired immediately. Carefully bed, tamp and fully consolidate refill material around and under all existing utilities encountered or crossed unless otherwise specified as approved by the Engineer.
- E. Protection of all existing utilities in the vicinity of the Work and the assurance of uninterrupted service from existing utilities throughout construction is the responsibility of the Contractor.
- F. In the event that the Contractor's Work results in damages to existing utilities, provide all necessary materials, equipment and labor necessary to satisfactorily repair damaged utilities immediately at no cost to the Owner.
- G. Notify the Water Utility 24 hours prior to connecting to and/or bypassing any existing water main, or as required by the utility. Do not operate any existing water system valves. All such operations shall be coordinated with and performed by Water Utility personnel.

#### 1.13 VISITS TO THE SITE(S):

- A. Before submitting a Bid, visit the site(s) to examine existing conditions and become thoroughly acquainted with the effort required to perform the Work.
- B. Study the Contract Documents and compare the same with the information gathered during examination of the site(s), as no extra compensation will be authorized for extra Work caused by unfamiliarity with the site(s) and/or Contract Documents or the conditions peculiar to this Project.

**1.14 DISPOSAL OF EXCESS MATERIAL:**

- A. All pavement road base, surplus suitable material removed from the excavations, loam not required for re-use in the Work shall be legally disposed of by the Contractor.
- B. Legally dispose of all unsuitable material removed as part of the Work.

**1.15 TECHNICAL SPECIFICATIONS:**

- A. Where reference is made to MNS, ISO, MNS ASTM, MNS AASHTO, MNS EN, CCfFSU (SNIP), CCM (BNbD), CR BD, ASTM, AWWA and AASHTO specifications or other associations, it is understood that the latest revisions as of the date of the Contract Documents shall apply.

**1.16 PERMITS, FEES AND BONDS:**

- A. Obtain and comply with all required permits, pay all fees and provide all bonds necessary to complete the Work as specified. Be solely responsible for performing any necessary acts and providing any materials required in order to comply with any and all terms and conditions set forth in any permits and licenses. Refer to APPENDIX B for all permits, which have been obtained for the Project. The Owner has not obtained all permits and licenses required for this Project. The Contractor shall obtain and pay for any other permits required to complete the Project including but not limited to Road Opening Permit, Blasting, and Phase II General Stormwater Permit for small construction projects.

**1.17 NOTIFICATION OF CONSTRUCTION:**

- A. At least 5 business days prior to initiating excavation Work, notify the following entities, whose facility is located in the excavation zone, in writing, of where and when excavation(s) are scheduled and request their engineer to be present at the site during excavation.
  - 1. Municipality Road Development Department
  - 2. USUG
  - 3. Communication Companies
  - 4. Power Companies

**1.18 BOUNDS AND PROPERTY MARKERS:**

- A. Prior to initiating construction, engage an independent Registered Land Surveyor (in the State where the Project is located) to provide permanent reference points for all bounds and property markers along the line of the Work that may be disturbed during construction. Submit copies of all ties to the bounds and property markers to the Engineer prior to excavation at the site(s).
- B. Any bounds or markers disturbed shall be replaced utilizing the services of a Professional Land Surveyor in the State where the Project is located. The cost of replacing markers disturbed by the Contractor's operations shall be at the Contractor's expense.

**1.19 TWENTY-FOUR HOUR EMERGENCY SERVICE:**

- A. Maintain a 24-hour, 7-day a week telephone service. The Contractor's emergency personnel and equipment shall be within 30 minutes travel time to the Project site(s) in order to handle emergency requirements such as, but not limited to, settled trenches, clogged drains, and rain damage and/or any other emergency situation relating to the Contractor's Work. A list of the personnel and their telephone numbers, pager numbers, and cell phone numbers, shall be submitted to the Engineer, the Owner and to the local Police and Fire Departments.
- B. This requirement shall apply for the duration of the Project and shall be updated as necessary. This list shall be submitted on the Contractor's letterhead and shall state that should an emergency arise during the implementation of the Project, these people are to be contacted. Submit this letter to the Engineer prior to initiating construction.

**1.20 HOURS OF OPERATION:**

- A. The Contractor, including all subcontractors, materialmen, and all other relating to this Project, shall conform to the following Work schedule.
  - 1. No outdoor activity on or adjacent to the site will be permitted before 7:00 a.m. or after 5:00 p.m., unless other arrangements are made with the Owner.
  - 2. No outdoor activity shall take place on Sundays, legal holidays recognized by the Owner, and the days preceding legal holidays as noted in herein, except for emergency conditions, which, if practical, shall be reviewed and approved by the Owner.

**1.21 DISPOSAL OF DEBRIS:**

- A. During the prosecution of the Work, maintain the Project site(s) and adjoining areas in a neat and orderly manner and eliminate the accumulation of construction debris. A rubbish container shall be kept at the Project site(s) at all times and be emptied as required to prevent odors and vermin.
- B. Store and remove all debris from the Project site(s) and legally dispose of the debris in accordance with federal/state/local regulations. Should the Contractor neglect or refuse to maintain the Project site(s) free of accumulated debris, the Owner reserves the right to have the service performed by others and cost thereof deducted from monthly progress payment requests.
- C. At the conclusion of the Work, remove and legally dispose of any surplus excavation, broken pavement, lumber, equipment, temporary structures, and any other refuse remaining from construction operations, and leave the entire Project site(s) of the Work in a neat and orderly condition.

**1.22 INITIAL OPERATION OF NEW FACILITIES:**

- A. Operation and maintenance manuals shall be submitted to the Engineer in accordance with SECTION VI GENERAL CONDITIONS OF CONTRACT at least one (1) month prior to the scheduling of any manufacturers training.

- B. Refer to Specification 01650 Testing and Start-up Requirements for operation of new facilities. Section 01650 shall supersede all other start-up, testing, and commissioning procedures that may be described elsewhere in the project documents including the General Conditions of the Contract.

#### 1.23 CONTINUOUS OPERATING CRITERIA:

- A. Conduct operations in such a manner and sequence that shall neither result in a disruption of the amenities, nor interfere with the functional organization and workings of existing facilities.
- B. Furnish, install and operate any piping, equipment and appurtenances necessary to provide the temporary services, facilities, and bypasses required during construction including, but not limited to, bypass pumping, flow barriers and diversions.
- C. The Owner will operate and maintain all existing systems and equipment. Notify and coordinate with the Owner all temporary modifications to existing facilities operations required for construction within, or interfacing with, the existing facilities. Operate and maintain all proposed facilities until such time as the Owner accepts them.
- D. A carefully planned and detailed construction schedule must be submitted to the Engineer for approval before any construction starts, showing the proposed sequences of operation and the methods to be used for maintaining continued operations of existing facilities.
- E. Refer to SECTION 01500, TEMPORARY FACILITIES for additional requirements.

#### 1.24 SCHEDULE OF VALUES

- A. Submit a schedule of values for use in preparing the monthly progress payments described in the SECTION VI GENERAL CONDITIONS OF CONTRACT.
- B. An unpriced summary of the Engineer's tabulation of quantities – organized by site, major structure, and specification Division – is included as Appendix D to the contract documents. This is provided as a general guidance document for purposes of facilitating the distribution of the Contractor's lump sum pricing as presented in section 01025 in the development of the Schedule of Values.
- C. The schedule of values shall be prepared in conformance with the following format:
  - 1. General Condition
    - a. Subheadings
  - 2. All Structures
    - a. Subheadings by specification division and section
  - 3. General Site Work
    - a. Subheadings by specification division and section
  - 4. Unit Prices by Individual Items

5. Change orders by individual items shall be added as an approved by the Employer.

D. In addition to the above, each equipment line item in the schedule of values shall include the following breakdown (please note where percentages are indicated in the following that such percentages are merely to facilitate processing of payments and are not reflective of the precise value of the item).

1. Shop Drawings (10 percent of equipment value)

2. Equipment

3. Installation

4. Manufacturers' Checkout and Startup Assistance (2 percent of equipment value)

5. Equipment testing (10 percent of equipment value)

6. Manufacturers' Training of Contract Operations and Owner Personnel – including training materials preparation and Mongolian Translation (1 percent of equipment value)

7. Spare Parts (1 percent of equipment value)

8. Operation and Maintenance Manuals (1 percent of equipment value)

E. The schedule of values shall be submitted to the Engineer for review and approval at least 30 calendar days prior to the first progress payment request. The acceptable schedule of values shall be used for the duration of the Project.

F. Refer to SECTION 01025, MEASUREMENT AND PAYMENT for related information.

#### 1.25 OPERATION AND MAINTENANCE MANUALS:

A. Provide as specified in Section 01730 and herein.

#### 1.26 MANUFACTURER'S SERVICES:

A. Provide as specified in 01730 and herein.

B. Installation and Start-up

1. Make arrangements with each equipment supplier or manufacturer to furnish the services of a factory-trained service engineer who is specifically trained on the type of equipment being furnished for the sole purpose and use of the Owner and Engineer to assist during installation and start-up of all equipment and systems furnished by that supplier or manufacturer.

2. Minimum length of time specified for this service shall be exclusive of travel time and of correction of defects, testing, and training.

3. The manufacturer's engineer will verify, in writing, that the equipment has been installed and serviced so as to be acceptable to the equipment manufacturer in order that it will provide safe and efficient operation as intended by the Engineer and the manufacturer. The Engineer will provide a form entitled "Certification of Proper Equipment Installation" which is to be signed by the manufacturer's representative and the Contractor's representative for each piece of equipment.

C. Correction of Defects

1. Nothing specified herein shall provide relief of the responsibility of providing sufficient service to place all equipment or systems into satisfactory operation.
2. All time and materials needed to correct defective equipment shall be provided at no cost to the Owner.

D. Testing

1. Prior to testing, each equipment supplier or manufacturer shall furnish a written certification that the equipment is ready for operation. A copy of this certification shall be furnished to the Engineer.
2. Furnish the labor, tools, equipment, power, and clean water necessary to perform field-testing to determine that the supplied equipment including controls and alarms meets hydraulic, electric, mechanical and performance requirements. All tests shall be performed in the presence of the Engineer.

E. Training

1. Wherever called for in the Specifications, have each equipment supplier or manufacturer furnish the services of a fully qualified field service engineer to provide operator training in the complete operation and maintenance of all equipment furnished by that supplier or manufacturer.
2. The minimum length of time specified for this service shall be exclusive of travel time and shall follow and be exclusive of installation and start-up, correction of defects and testing.
3. Schedule training sessions in conjunction with and as approved by the Engineer. This training will be witnessed and verified by a representative appointed by the Engineer. The Engineer has the right to reject the training by the equipment supplier or manufacturer and to require additional training. The items addressed by the training session shall include, but not be limited to, system description, system operation, system disassembly and reassembly, lubrication, routine maintenance, corrective maintenance, use of operation and maintenance manual, system troubleshooting and ordering of spare parts.
4. The Engineer will provide a form entitled "Verification of Manufacturer's Equipment Training" which is to be signed by all parties at the completion of each training session.

### 1.27 SPARE PARTS:

- A. Provide as specified in 01730 and herein.
- B. Spare parts for all equipment shall be supplied to the Owner as specified. Spare parts shall be individually protected and packaged in a suitable container for long-term storage with the contents therein properly identified on the outside of the container.
- C. The Engineer will provide a form entitled "Spare Parts Inventory" which is to be fully completed and submitted to the Engineer for each piece of equipment requiring spare parts.

### 1.28 SPECIALTY TOOLS:

- A. Provide as specified in 01730 and herein.
- B. Any specialty tools required for the adjustment, operation and/or maintenance of any equipment included in the Work shall be furnished with the respective equipment.

### 1.29 STATUTORY REQUIREMENTS IN GENERAL:

- A. Owner and Contractor recognize that other rights, duties, and obligations with respect to public construction contracts are also provided by statute, notwithstanding the fact that they may not be specifically enumerated herein. Accordingly, any provisions required by statute to be included in this contract shall be deemed to be so included as though fully set forth herein. However, compliance with a statute does not diminish the Contractor's responsibilities hereunder.
- B. Contractor shall keep fully informed of all existing and future State and Federal Laws and municipal ordinances and regulations in any manner affecting those engaged or employed in the Work, or the materials used or employed in the Work, or in any way affecting the conduct of the Work, and of all such orders and decrees of bodies or tribunals having any jurisdiction or authority over the same and of all provisions required by law to be made a part of this Contract, all of which provisions are hereby incorporated by reference and made a part thereof.
- C. If any discrepancy or inconsistency is discovered in the Contract Documents for this Work in relation to any such law, ordinance, regulation, order or decree, report the same to the Engineer in writing. Contractor shall, at all times, observe and comply with, and cause all agents and employees to observe and comply with all such existing and future laws, ordinances, regulations, orders and decrees; and shall protect and indemnify the Owner and Engineer and all of its and their officers, agents, and servants against any claim or liability arising from or based on the violation of any such law, ordinance, regulation, order or decree, whether by itself or its employees or subcontractors.
- D. All materials furnished, and Work done shall comply with all State and Federal laws and regulations.

### 1.30 RELATION OF SEWER MAINS TO WATER LINES:

- A. Horizontal Separation

1. Whenever possible, sewers should be laid at least 300 cm (10 ft), horizontally, from any existing or proposed water mains.
2. Should local conditions prevent a lateral separation of 300 cm (10 ft), a sewer may be laid closer than (10 ft) to a water main if:
  - a) It is laid in a separate trench;
  - b) It is laid in the same trench with the water mains located at one side on a bench of undisturbed earth; and
  - c) In either case the elevation of the crown of the sewer is at least 18 inches below the invert of the water main.

#### B. Vertical Separation

1. Whenever sewers must cross under water mains, the sewer shall be laid at such elevation that the top of the sewer is at least 5.5m (18 in) below the bottom of the water main. When the elevation of the sewer cannot be buried to meet the above requirement, the water main shall be relocated to provide this separation or reconstruction with slip-on or mechanical-joint cast-iron pipe, or prestressed concrete cylinder pipe for a distance of 10 feet on each side of the sewer. One full length of water main shall be centered over the sewer so that both joints will be as far from the sewer as possible.
2. When a sewer crosses above a water main, the following measures will be taken:
  - a) Both pipes will be encased in concrete for a distance of 300 cm (10 ft) on either side of the crossing; or
  - b) The sewer will be encased in concrete and the water main will be constructed of mechanical joint ductile iron pipe for a distance of 300 cm (10 ft) on either side of the crossing.

#### C. Special Conditions

1. When it is impossible to obtain proper horizontal and vertical separation as stipulated above, the water main shall be constructed of slip-on or mechanical-joint cast-iron pipe or prestressed concrete cylinder pipe and the sewer constructed of mechanical-joint cast-iron pipe and both services shall be pressure tested to assure water tightness.

### 1.31 UTILITY COORDINATION:

- A. Contractor shall be responsible for contacting and coordinating with utility companies prior to commencing work in the area of utilities.
- B. Special requirements may be necessary for work in the vicinity of some utilities and easements. Requirements may include but are not limited to the following; surface marking of crossings and easements, temporary fencing, temporary pipe support, additional padding or steel plates for heavy equipment, and coordination with utility field personnel.

PART 2 - PRODUCTS – Not Used

## SECTION 01030 (CP-3)

## SPECIAL REQUIREMENTS

## PART 1 - GENERAL

## 1.01 SCOPE:

- A. The Work of this section includes the furnishing of all labor, materials, tools and equipment required to perform Special Requirements as specified herein.
- B. Attention is directed to the SECTION VI – GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT:

- A. Measurement and payment for Work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT and as follows:
  - 1. All costs associated with locating, maintaining location marks, excavation, refilling, compaction, repairing utilities broken due to the Contractor's operations, time delays relative to existing utilities and all other Work associated with utilities shall be included for payment under the applicable pipe laying item included in PART I – BIDDING PROCEDURES.
  - 2. All costs associated with the legal disposal of excess materials shall be borne by the Contractor.
  - 3. No additional payment will be made for corrective work associated with furnishing and installing bedding materials for refill of excavations carried to grades lower than specified. If inadequate dewatering methods cause softening of subgrade areas, then remove the unsuitable material and replace with common fill at the Contractors cost.
  - 4. No payment will be made for temporary shoring of trench walls utilizing trench boxes and/or steel plates. Where timber or steel sheeting is used and is not specified to be paid for separately and ordered left in place by the Engineer, the Contractor has the option of leaving it in or removing it after it has been cut off 300 mm (1 ft) above the top of the pipe.
  - 5. Pay all fees for permits associated with blasting operations. Unauthorized excavations in rock, or excavations made beyond or below the specified limits shall be refilled and compacted with common fill and shall be borne by the Contractor. Perform blasting operation(s) in such a manner that no existing utilities are disturbed. All damage to existing utilities or roadway surfaces outside the trench limits caused by the Work of the Contractor or its Subcontractor(s) shall be repaired and/or replaced immediately and shall be borne by the Contractor.
  - 6. No additional payment will be made for the relocation and/or support of any obstruction encountered along the line of Work.

7. Testing, and jetting of trenches utilizing the Owner's (USUG's) water system may be available, however the Owner (USUG) does not guarantee that its water supply will be available at any time during the duration of the Project. Contractor is responsible for making all arrangements and gathering necessary permissions from the Owner's (USUG's) water district for use of water. Use of water shall be at the Contractor's expense. All necessary piping, hoses, fittings, and the like shall be provided by the Contractor and shall be borne by the Contractor. All water shall be metered, and the use of backflow prevention device(s) shall be required as approved by the Owner.
8. Provide detailed plan(s) to the Owner and/or the Road Development Department of Municipality of Ulaanbaatar City for all proposed detours and/or partial roadway closings made necessary by the Work. Obtain written approval for all proposed detours and/or partial roadway closings prior to the start of Work. No payment will be made for Work performed in areas of the Project that require an approved traffic management plan until it has been secured.
9. All costs associated with repairing settlement of trenches shall be borne by the Contractor.
10. All costs associated with meeting the requirements of all permits shall be borne by the Contractor and shall be included for payment under the applicable items included in PART I – BIDDING PROCEDURES.

#### 1.03 DEFINITIONS:

- A. Definitions shall be as specified in PART I – BIDDING PROCEDURES.

#### 1.04 SUBMITTALS:

- A. Submit to the Engineer for approval, shop drawings, certificates of compliance and/or catalog cuts for all items to be furnished under this Contract. All submittals shall be provided in accordance with SECTION VI, GENERAL CONDITIONS OF CONTRACT and SECTION 01300, SUBMITTALS.
- B. Digital Videodisc Recording
  1. Prior to the start of construction, video record, in color, the entire Project site(s) in the presence of the Engineer. Video recordings shall be in digital videodisc (DVD) format. Particular attention shall be made to the existing condition of roadway surfaces, curbing, berms, sidewalks, driveways, property bounds, landscaped areas, and any other items that might be affected by the Work.
  2. Video recordings shall be of excellent quality including clear and concise audio descriptions of the existing site(s) conditions. A copy of the first completed video recording shall be furnished to the Engineer, prior to the start of construction, in order to establish the requirement for visual and audio quality. Two (2) copies of all video recordings shall be provided to the Engineer. Any recordings furnished which, in the opinion of the Engineer, are of poor quality or incomplete, shall be redone at no additional cost to the Owner.

3. Video recordings shall be made by the Contractor in the presence of the Owner/Engineer.
4. No construction activities shall commence until the video recordings have been completed, submitted to the Engineer and approved by the Engineer.

C. Health and Safety Plan

1. Prior to the start of construction, prepare and submit a site-specific Health and Safety Plan which includes consideration of all known and potential hazards at the site and the requirements of Article 6.7 of the General Conditions. Work may not proceed at the project site until the Contractor's Health and Safety Plan has been received by the Engineer.
2. Contractor shall be cognizant of the minimum standards norms set forth as follows:
  - a. MNS 4990:2015 Labour Safety. Labour Environment. Hygiene requirements.
  - b. MNS 5002:2000 Labor Safety, General Requirements for noise normative and safety operation.
  - c. MNS 12.1.06:1988 Labor Safety Standard System. Extreme high noise. General Requirements for safety operation.
  - d. MNS 4931:2000 Protective means. General requirement, classification.
  - e. MNS 4968:2000 Occupational Safety and Health. Production processing general requirements.
  - f. MNS 4969:2000 Labor Safety and Sanitary. Training Organization, basic regulation.
  - g. BNbD 12-01-04 Regulation of Labor Safety for Construction Industry. Part I. General Requirements
  - h. BNbD 12-04-06 Regulation of Labor Safety for Construction Industry. Part I. Safety for Technical Sa
  - i. BD 12-10-05 Safety guidelines to be followed for construction and installation works.
  - j. MNS OSHAS 18001:2012 Occupational Health and Safety Management System.
  - k. Labour code of Mongolia
  - l. Law of Mongolia on Toxic Hazardous Chemicals
  - m. IFC Environmental, Health and Safety Guidelines
3. The Health and Safety Plan shall include, but not be limited to the following:

- a. Identification of Contractor's Site Safety Officer and Accident Prevention Officer.
  - b. Identification of hazards and risks associated with the Project.
  - c. Contractor's standard operating procedures, including personnel training and field orientation.
  - d. Respiratory protection training requirements.
  - e. Levels of protection and selection of equipment procedures.
  - f. Type of medical surveillance program.
  - g. Personal of hygiene requirements and guidelines.
  - h. Zone delineation of the Project site.
  - i. Site security and entry control procedures.
  - j. Field monitoring of site contaminants.
  - k. Contingency and emergency procedures.
  - l. Listing of emergency contacts.
4. The personal protective equipment required to provide the appropriate level of dermal and respiratory protection shall be determined based on the results of continuous air monitoring performed by the Contractor and the standards set forth in the Contractor's Health and Safety Plan.
  5. All Employees shall be provided with personal protective equipment (PPE) that meets the standards on accordance with the Mongolian safety and health law.
  6. The contractor shall notify the Owner, Engineer and MCC within 24 hours or as soon as reasonably possible after the occurrence of any accident which has resulted in damage or loss or property, disability or loss of human life, or which could be reasonably foreseen to have a material impact on the environment and shall submit a report to the Owner, Engineer, and MCC no later than 7 days after the occurrence of such an event.

#### D. Emergency Action Plan

1. Prior to the start of construction, prepare and submit a site-specific Emergency Action Plan which includes consideration of all known and potential accidents, spills and leaks of pollutants and hazards at the site. Work may not proceed at the project site until the Contractor's Emergency Action Plan has been received by the Engineer.
2. The Emergency Action Plan shall include, but not be limited to the following:
  - a. Identification of hazards and risks associated with the Project.
  - b. Identify preventative measures to be taken to avoid accidents and spillage of petroleum products and other pollutants. In the event of any spillage, identify

remedial action to be taken in accordance with a contingency action drawing or plan approved by the Engineer.

- c. Contractor's standard operating procedures, including personnel training and field orientation.
- d. Levels of protection and selection of equipment procedures.
- e. Field monitoring of petroleum products and potential pollutants.
- f. Contingency and emergency procedures.
- g. Listing of emergency contacts.

#### E. Hazardous Waste Management Plan

1. The Contractor shall obtain all information necessary to be fully aware of all potential exposures to hazardous waste materials and physical or biological agents in the performance of the Work. Prior to the start of construction, prepare and submit to the Engineer a site-specific Hazardous Waste Management Plan. The Contractor shall provide to its employees, Subcontractors and Third Parties, all information and training on the nature of these potential hazards as required by Local Laws or Regulations, regardless of the source of such hazards.
2. Certain chemical and physical agents (*i.e.*, asbestos, PCB's, radiation sources, etc.), are specifically regulated by Mongolian and/or Local agencies. When the Work involves a potential exposure to any such hazards, the Contractor shall assure compliance with all of those specific regulations. If spills, releases, disposal or exposure occur which may require reporting to regulator agencies, the Contractor shall notify the Owner immediately of the nature of the incident.
3. The Contractor's Hazardous Waste Management Plan must include as a minimum, specific provisions relative to:
  - a. The location of potential hazards.
  - b. The potential adverse health effects posted by such hazards.
  - c. Proper safe work practices to prevent or reduce potential exposure.
  - d. Proper protective measures and equipment required.
  - e. Proper use of protective equipment.
  - f. Proper response to exposure incidents.
  - g. Proper disposal of hazardous materials.
4. The Contractor shall provide all personal protective equipment to its employees required by the nature of the hazard. Such protective equipment must include at least the following items:

- a. NIOSH-approved respirator protection equipment (for dusts, mists, fumes, gasses, etc.).
- b. Hearing protection (plugs, muffs, etc.).
- c. Protective clothing (chemical goggles, gloves, resistant clothing, etc.).

F. Utilize the Shop Drawing Transmittal Forms supplied by the Engineer for all required submittals.

#### 1.05 PRODUCT HANDLING:

- A. All materials and equipment shall be shipped, stored, handled and installed according to the manufacturer's written recommendations.
- B. The materials and equipment shall be stored on a flat, clean, dry surface to prevent damage and shall be covered to prevent exposure to adverse conditions prior to installation.

#### 1.06 DESIGN CRITERIA:

- A. The materials specified are intended to be standard materials of demonstrated successful performance, as manufactured by reputable concerns. Materials shall be designed and manufactured in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the materials.
- B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

#### 1.07 SPECIFICATIONS AND DRAWINGS:

- A. All Work shall conform to these specifications and the accompanying drawings entitled:

### **MCA MONGOLIA**

### **BULK WATER SYSTEM EXPANSION**

Dated ## consisting of ## sheets, all made by the Engineer, on file with the Owner, and any changes, drawings, plans, and directions that may be furnished from time to time by the Engineer.

#### 1.08 COMMENCEMENT AND PROGRESS OF WORK:

- A. Prior to the start of construction, the Owner and the Contractor shall obtain a permit for the commencement and execution of the work from the Urban Planning and Development Department.
- B. Promptly start and continue actual construction Work under this Contract with the necessary equipment to properly execute and complete the Work in the specified time. No cessation of construction activities will be allowed without the written approval of the Owner.

- C. Furnish to the Engineer a progress schedule for the Work prior to the start of construction.

#### 1.09 DETOURS AND ROAD ACCESSIBILITY:

- A. Contact the responsible heads of the Municipality Road Development Department of Municipality Ulaanbaatar City in order to obtain all necessary permits and determine the requirements with regards to traffic control.
- B. There are no guarantees that total roadway closures will be permitted. Incorporate into the construction schedule the ability to maintain one (1) lane of traffic at all times during the execution of the Work and complete the Work within the Completion date. Where the roadway under construction is the only means of vehicular access to a particular area provide continual access to the area for residents and emergency vehicles.
- C. Wherever detours are permitted, the size, construction and location of signs shall conform to local and state requirements and/or standards. Detour routes shall be adequately posted to assist the motorist to return to the normal route of travel for the duration of the Work and for a minimum of two (2) weeks prior to the start of construction in the areas of the Project affected by the Work.

#### 1.10 CHANGE IN AMOUNT OF WORK:

- A. The Owner reserves the right to increase or decrease the amount of any item of the Work listed as may be found desirable or necessary during the carrying out of this Contract and the unit prices included in PART I – BIDDING PROCEDURES shall apply without change to such variation in the quantity of each of the Bid items to the extent provided by law.
- B. Based on the actual work required, the increase or decrease in the quantity of any bid item of the Work included in PART I – BIDDING PROCEDURES shall apply without changes to the unit prices.

#### 1.11 SCOPE OF WORK AND SEQUENCE OF CONSTRUCTION:

- A. The Work to be done under this Contract consists of the construction of the Conveyance Facilities as specified and/or as shown on the Contract Drawings. Refer to SECTION 01010, SUMMARY OF WORK.
- B. For the protection of life and property all backfilling operations shall follow closely behind pipe laying. Insure that no excavation is left open, unguarded, or water filled during any period of time when Work is not actually in progress. It is the purpose and intent that all excavations and backfill, including consolidation operations, and temporary surfacing within an area be accomplished expeditiously before proceeding to other Work areas.
- C. The Owner reserves the right to schedule the Work at any location within the Project area. At the same time the Owner may schedule the suspension of Work at any location.
- D. The Work of this Contract may require existing utilities to be bypassed, removed and relaid. The Contractor shall pay for all costs associated with this Work at no additional cost to the Owner except as specified in SECTION 01025, MEASUREMENT AND PAYMENT.

- E. The Owner has obtained various permits for this Project, which are included as APPENDIX C Meet all requirements/conditions of these permits during the construction of this Project. All costs associated with this Work shall be borne by the Contractor and included in the prices bid under the applicable items of PART I – BIDDING PROCEEDURES
- F. Pre-blasting of ledge is not allowed on this Project. No payment will be made for ledge removal on this Project in areas where pre-blasting has occurred.
- G. All damage to existing utilities, roadways, and the like shall be repaired and/or replaced by the Contractor as approved by the utility company and shall be borne by the Contractor.
- H. The control of dust shall be accomplished by the application of clean water. The Contractor is responsible for making all arrangements and gaining necessary permissions from the Owner to utilize the Owner's (USUG's) water system. However, the Owner does not guarantee that water will be available at any time during the duration of the Project. Water required for the control of dust shall be provided by the Contractor at no additional cost to the Owner. All necessary piping, hoses, fittings, and the like shall be provided by the Contractor and the costs shall be borne by the Contractor. All water shall be metered, and the use of backflow prevention device(s) shall be required as approved by the Owner. The use of calcium chloride to control dust is not allowed.
- I. The compaction of trenches shall be accomplished by mechanical compaction and/or jetting. The Contractor is responsible for making all arrangements and gaining necessary permissions from the Owner to utilize the Owner's (USUG's) water system. However, the Owner does not guarantee that water will be available at any time during the duration of the Project. Water required for jetting of trenches shall be provided by the Contractor at no additional cost to the Owner. All necessary piping, hoses, fittings, and the like shall be provided by the Contractor and the costs shall be borne by the Contractor. All water shall be metered, and the use of backflow prevention device(s) shall be required as approved by the Owner.
- J. The testing of tanks and/or pipelines shall be accomplished by using clean water. The Contractor is responsible for making all arrangements and gaining necessary permissions from the Owner to utilize the Owner's (USUG's) water system. However, the Owner does not guarantee that water will be available at any time during the duration of the Project. Water required for the testing of tanks and/or pipelines shall be provided by the Contractor at no additional cost to the Owner. All necessary piping, hoses, fittings, and the like shall be provided by the Contractor and the costs shall be borne by the Contractor. All water shall be metered, and the use of backflow prevention device(s) shall be required as approved by the Owner.
- K. Except for an emergency condition as approved by the Owner in writing, premium wages will not be paid for Work performed on Sunday, holiday or workdays longer than eight (8) hours. All costs incurred by the Owner caused by the Contractor's Work performed on Sunday, holiday or workdays longer than eight (8) hours shall be borne by the Contractor which will be deducted from monthly payment requests.
- L. No construction activity shall be allowed on the Project for two working days prior to the following dates:

- New Year's Day - January 1
- Tsagan Sar – Defined day in February, usually the 1<sup>st</sup>, 2<sup>nd</sup>, 3<sup>rd</sup> day of spring month under lunar calendar.
- International Womans' Day – March 8
- Buddha Day- Fifteenth Day of first summer month under lunar calendar
- Childrens' Day – June 1
- National Naadam Holiday – July 11 - 15
- Great Chingis Khaan Birthday – First day of first winter month under Lunar calendar.
- State Proclamation Day – November 26
- Independence Day – November 29

All construction equipment and materials not incorporated in the Work to date shall be removed from the Work areas where construction activity is ceased. All excavations shall be backfilled and paved as specified and/or directed by the Engineer. Incorporate this requirement into the Project Schedule. Failure to comply with this requirement will result in no payment for work performed.

- M. The Contractor shall secure use of space that they have legal access to for the temporary buildings specified under SECTION 01500, TEMPORARY FACILITIES. The temporary buildings shall not be placed along the edge of roadways. The Contractor shall be responsible for clearing, grubbing, grading, providing of grading materials, permits, and full restoration of the temporary building location(s).

#### 1.12 EXISTING UTILITIES:

- A. The location and size of existing sewers, drains, culverts, water mains, gas mains, cables, service pipes, and other utilities shown on the Contract Drawings, were obtained from the results of surveys and existing records and are shown as approximate only, to guide the Bidders in the preparation of their Bid. The various utility companies will determine the location and depth of existing utilities by marking them out upon the ground and by experimental excavations by the Contractor prior to and as the Work progresses. The Contract Drawings do not show the exact location and depth of all utilities, nor do they show all utilities or the number of lines for each utility that may be encountered.
- B. Assume that there are existing utility connections to each and every building or structure along the line of Work, whether they appear on the Contract Drawings or not. Notify the proper utility companies and obtain and preserve the marked location(s) of all existing utilities that may be encountered along the line of Work, until such time as such markings are no longer required.
- C. Experimental trench excavations are to be made prior to commencing pipe laying operations. Excavate by hand as necessary in advance of the trenching equipment to determine the exact location and depth of each utility that may be encountered. Excavation equipment shall not be used within three (3) feet of the utility to be crossed. Continue to excavate by hand around these utilities after ascertaining their exact location and depth.

- D. All utilities interfered with or damaged shall be replaced and/or repaired immediately. Carefully bed, tamp and fully consolidate refill material around and under all existing utilities encountered or crossed unless otherwise specified as approved by the Engineer.
- E. Protection of all existing utilities in the vicinity of the Work and the assurance of uninterrupted service from existing utilities throughout construction is the responsibility of the Contractor.
- F. In the event that the Contractor's Work results in damages to existing utilities, provide all necessary materials, equipment and labor necessary to satisfactorily repair damaged utilities immediately at no cost to the Owner.
- G. Notify the Water Utility 24 hours prior to connecting to and/or bypassing any existing water main, or as required by the utility. Do not operate any existing water system valves. All such operations shall be coordinated with and performed by Water Utility personnel.

#### 1.13 VISITS TO THE SITE(S):

- A. Before submitting a Bid, visit the site(s) to examine existing conditions and become thoroughly acquainted with the effort required to perform the Work.
- B. Study the Contract Documents and compare the same with the information gathered during examination of the site(s), as no extra compensation will be authorized for extra Work caused by unfamiliarity with the site(s) and/or Contract Documents or the conditions peculiar to this Project.

#### 1.14 DISPOSAL OF EXCESS MATERIAL:

- A. All pavement road base, surplus suitable material removed from the excavations, loam not required for re-use in the Work shall be legally disposed of by the Contractor.
- B. Legally dispose of all unsuitable material removed as part of the Work.

#### 1.15 TECHNICAL SPECIFICATIONS:

- A. Where reference is made to MNS, ISO, MNS ASTM, MNS AASHTO, MNS EN, CCfFSU (SNIP), CCM (BNbD), CR BD, ASTM, AWWA and AASHTO specifications or other associations, it is understood that the latest revisions as of the date of the Contract Documents shall apply.

#### 1.16 PERMITS, FEES AND BONDS:

- A. Obtain and comply with all required permits, pay all fees and provide all bonds necessary to complete the Work as specified. Be solely responsible for performing any necessary acts and providing any materials required in order to comply with any and all terms and conditions set forth in any permits and licenses. Refer to APPENDIX C for all permits, which have been obtained for the Project. The Owner has not obtained all permits and licenses required for this Project. The Contractor shall obtain and pay for any other permits required to complete the Project including but not limited to Road Opening Permit, Blasting, and Phase II General Stormwater Permit for small construction projects.

#### 1.17 NOTIFICATION OF CONSTRUCTION:

- A. At least 5 business days prior to initiating excavation Work, notify the following entities, whose facility is located in the excavation zone, in writing, of where and when excavation(s) are scheduled and request their engineer to be present at the site during excavation.
  - 1. Municipality Road Development Department
  - 2. USUG
  - 3. Communication Companies
  - 4. Power Companies

#### 1.18 BOUNDS AND PROPERTY MARKERS:

- A. Prior to initiating construction, engage an independent Registered Land Surveyor (in the State where the Project is located) to provide permanent reference points for all bounds and property markers along the line of the Work that may be disturbed during construction. Submit copies of all ties to the bounds and property markers to the Engineer prior to excavation at the site(s).
- B. Any bounds or markers disturbed shall be replaced utilizing the services of a Professional Land Surveyor in the State where the Project is located. The cost of replacing markers disturbed by the Contractor's operations shall be at the Contractor's expense.

#### 1.19 TWENTY-FOUR HOUR EMERGENCY SERVICE:

- A. Maintain a 24-hour, 7-day a week telephone service. The Contractor's emergency personnel and equipment shall be within 30 minutes travel time to the Project site(s) in order to handle emergency requirements such as, but not limited to, settled trenches, clogged drains, and rain damage and/or any other emergency situation relating to the Contractor's Work. A list of the personnel and their telephone numbers, pager numbers, and cell phone numbers, shall be submitted to the Engineer, the Owner and to the local Police and Fire Departments.
- B. This requirement shall apply for the duration of the Project and shall be updated as necessary. This list shall be submitted on the Contractor's letterhead and shall state that should an emergency arise during the implementation of the Project, these people are to be contacted. Submit this letter to the Engineer prior to initiating construction.

#### 1.20 HOURS OF OPERATION:

- A. The Contractor, including all subcontractors, materialmen, and all other relating to this Project, shall conform to the following Work schedule.
  - 1. No outdoor activity on or adjacent to the site will be permitted before 7:00 a.m. or after 5:00 p.m., unless other arrangements are made with the Owner.
  - 2. No outdoor activity shall take place on Sundays, legal holidays recognized by the Owner, and the days preceding legal holidays as noted in herein, except for emergency conditions, which, if practical, shall be reviewed and approved by the Owner.

### 1.21 DISPOSAL OF DEBRIS:

- A. During the prosecution of the Work, maintain the Project site(s) and adjoining areas in a neat and orderly manner and eliminate the accumulation of construction debris. A rubbish container shall be kept at the Project site(s) at all times and be emptied as required to prevent odors and vermin.
- B. Store and remove all debris from the Project site(s) and legally dispose of the debris in accordance with federal/state/local regulations. Should the Contractor neglect or refuse to maintain the Project site(s) free of accumulated debris, the Owner reserves the right to have the service performed by others and cost thereof deducted from monthly progress payment requests.
- C. At the conclusion of the Work, remove and legally dispose of any surplus excavation, broken pavement, lumber, equipment, temporary structures, and any other refuse remaining from construction operations, and leave the entire Project site(s) of the Work in a neat and orderly condition.

### 1.22 RECORD DRAWINGS:

- A. Throughout the course of completing the Work, continually maintain a set of record drawings that incorporate all approved changes made by the Contractor and all subcontractors to the Drawings included in the executed Contract between the Owner and the Contractor. Clearly and concisely mark up the individual Drawings and/or incorporate sketches that show approved changes made during the execution of the Work. Following completion of the Work, incorporate all approved changes electronically into one (1) complete set of record drawings. Record drawings shall be complete in every way and shall show the full extent of the executed Work. Special attention shall be given to concealed Work.
- B. Change Orders, Addenda items and field changes shall be included where applicable. Additional specific requirements relative to record drawings may be called for in the individual sections of the Specifications. Submit a review copy to the Engineer for approval and make any revisions required by the Engineer in order to make the record drawings complete. After acceptance by the Engineer, deliver a full scale reproducible hard copy and a compact disk with Auto Cad files of the record drawings to the Engineer.
- C. Tie cards 22 cm x 28 cm (8 ½ inches by 11 inches) of all exterior buried utilities such as but not limited to piping, tubing, conduits, wye/tee connections, fittings, cleanouts, and valves, shall be fully dimensioned both horizontally and vertically, so that the exterior buried utilities can be located in the field. A minimum of three (3) ties shall be provided for each item requiring a tie. Submit the tie cards on a weekly basis or as directed by the Engineer. If, in the opinion of the Owner and/or Engineer, insufficient data is provided to properly locate the exterior buried utilities, uncover the buried utilities and perform the necessary measurements and provide updated tie cards at no additional cost to the Owner.
- D. An electronic copy of the Engineer's Auto Cad files shall be made available to the Contractor for the purpose of completing the required computer drafted record drawings.

### 1.23 INITIAL OPERATION OF NEW FACILITIES:

- A. Operation and maintenance manuals shall be submitted to the Engineer in accordance with SECTION VI GENERAL CONDITIONS OF CONTRACT at least one (1) month prior to the scheduling of any manufacturers training.
- B. Perform pressure and/or leakage testing of all pipelines, storage tanks and basins prior to prestart-up testing of all equipment and/or systems. Provide the initial filling of all pipelines, storage tanks and basins with potable water as necessary for start-up of individual systems throughout the facility.
- C. Initial start-up of new equipment and/or systems shall not commence until all of the manufacturers services, checkout, and training have been completed as approved by the Engineer.
- D. Perform an 8 hour or less, if approved by the Engineer, prestart-up test of all individual equipment prior to incorporating equipment into their appropriate systems.
- E. Perform an 8 hour or less, if approved by the Engineer, prestart-up test of all systems prior to conducting the performance test of the facility.
- F. Provide all labor, power, chemicals, operations and maintenance from the initial start-up of the individual equipment and systems until the final performance test of the facility is accepted by the Owner as substantially complete at no additional cost to the Owner.

### 1.25 CONTINUOUS OPERATING CRITERIA:

- A. Conduct operations in such a manner and sequence that shall neither result in a disruption of the amenities, nor interfere with the functional organization and workings of existing facilities.
- B. Furnish, install and operate any piping, equipment and appurtenances necessary to provide the temporary services, facilities, and bypasses required during construction including, but not limited to, bypass pumping, flow barriers and diversions.
- C. The Owner will operate and maintain all existing systems and equipment. Notify and coordinate with the Owner all temporary modifications to existing facilities operations required for construction within, or interfacing with, the existing facilities. Operate and maintain all proposed facilities until such time as the Owner accepts them.
- D. A carefully planned and detailed construction schedule must be submitted to the Engineer for approval before any construction starts, showing the proposed sequences of operation and the methods to be used for maintaining continued operations of existing facilities.
- E. Refer to SECTION 01500, TEMPORARY FACILITIES for additional requirements.

### 1.26 OPERATION AND MAINTENANCE MANUALS:

- A. Provide as specified in Section 01730 and herein.
- B. All elements and components of the equipment or system shall be included in the Manuals.

1. Any malfunction of, or damage to the equipment or system resulting from incomplete or incorrect instructions in the Manuals for the guarantee period specified elsewhere in this specification shall be repaired and/or replaced at no additional cost to the Owner.
  2. Any and all capabilities for specified future modification; alteration or reconfiguration shall be completely indicated and described within the Manual.
  3. The manuals shall contain the name, address, business telephone numbers and service telephone numbers for the manufacturer and its local distributor/representative.
  4. Each Manual for each item of equipment or system shall be bound separately in a permanent binder.
- C. The form entitled "Operation and Maintenance Manual Review checklist" shall be utilized and submitted for each specification section to insure completeness of the manual. The form is attached to the end of this section.
- D. The Engineer has the right to reject the Manuals submitted as being unsatisfactory or to require the submittal of additional information. The new Manuals or additional information shall be submitted no later than 30 days following notification by the Engineer.

#### 1.27 MANUFACTURER'S SERVICES:

A. Provide as specified in 01730 and herein.

##### B. Installation and Start-up

1. Make arrangements with each equipment supplier or manufacturer to furnish the services of a factory-trained service engineer who is specifically trained on the type of equipment being furnished for the sole purpose and use of the Owner and Engineer to assist during installation and start-up of all equipment and systems furnished by that supplier or manufacturer.
2. Minimum length of time specified for this service shall be exclusive of travel time and of correction of defects, testing, and training.
3. The manufacturer's engineer will verify, in writing, that the equipment has been installed and serviced so as to be acceptable to the equipment manufacturer in order that it will provide safe and efficient operation as intended by the Engineer and the manufacturer. The Engineer will provide a form entitled "Certification of Proper Equipment Installation" which is to be signed by the manufacturer's representative and the Contractor's representative for each piece of equipment.

##### C. Correction of Defects

1. Nothing specified herein shall provide relief of the responsibility of providing sufficient service to place all equipment or systems into satisfactory operation.
2. All time and materials needed to correct defective equipment shall be provided at no cost to the Owner.

##### D. Testing

1. Prior to testing, each equipment supplier or manufacturer shall furnish a written certification that the equipment is ready for operation. A copy of this certification shall be furnished to the Engineer.
2. Furnish the labor, tools, equipment, power, and clean water necessary to perform field-testing to determine that the supplied equipment including controls and alarms meets hydraulic, electric, mechanical and performance requirements. All tests shall be performed in the presence of the Engineer.

E. Training

1. Wherever called for in the Specifications, have each equipment supplier or manufacturer furnish the services of a fully qualified field service engineer to provide operator training in the complete operation and maintenance of all equipment furnished by that supplier or manufacturer.
2. The minimum length of time specified for this service shall be exclusive of travel time and shall follow and be exclusive of installation and start-up, correction of defects and testing.
3. Schedule training sessions in conjunction with and as approved by the Engineer. This training will be witnessed and verified by a representative appointed by the Engineer. The Engineer has the right to reject the training by the equipment supplier or manufacturer and to require additional training. The items addressed by the training session shall include, but not be limited to, system description, system operation, system disassembly and reassembly, lubrication, routine maintenance, corrective maintenance, use of operation and maintenance manual, system troubleshooting and ordering of spare parts.
4. The Engineer will provide a form entitled "Verification of Manufacturer's Equipment Training" which is to be signed by all parties at the completion of each training session.

1.28 SPARE PARTS:

- A. Provide as specified in 01730 and herein.
- B. Spare parts for all equipment shall be supplied to the Owner as specified. Spare parts shall be individually protected and packaged in a suitable container for long-term storage with the contents therein properly identified on the outside of the container.
- C. The Engineer will provide a form entitled "Spare Parts Inventory" which is to be fully completed and submitted to the Engineer for each piece of equipment requiring spare parts.

1.29 SPECIALTY TOOLS:

- A. Provide as specified in 01730 and herein.
- B. Any specialty tools required for the adjustment, operation and/or maintenance of any equipment included in the Work shall be furnished with the respective equipment.

### 1.30 STATUTORY REQUIREMENTS IN GENERAL:

- A. Owner and Contractor recognize that other rights, duties, and obligations with respect to public construction contracts are also provided by statute, notwithstanding the fact that they may not be specifically enumerated herein. Accordingly, any provisions required by statute to be included in this contract shall be deemed to be so included as though fully set forth herein. However, compliance with a statute does not diminish the Contractor's responsibilities hereunder.
- B. Contractor shall keep fully informed of all existing and future State and Federal Laws and municipal ordinances and regulations in any manner affecting those engaged or employed in the Work, or the materials used or employed in the Work, or in any way affecting the conduct of the Work, and of all such orders and decrees of bodies or tribunals having any jurisdiction or authority over the same and of all provisions required by law to be made a part of this Contract, all of which provisions are hereby incorporated by reference and made a part thereof.
- C. If any discrepancy or inconsistency is discovered in the Contract Documents for this Work in relation to any such law, ordinance, regulation, order or decree, report the same to the Engineer in writing. Contractor shall, at all times, observe and comply with, and cause all agents and employees to observe and comply with all such existing and future laws, ordinances, regulations, orders and decrees; and shall protect and indemnify the Owner and Engineer and all of its and their officers, agents, and servants against any claim or liability arising from or based on the violation of any such law, ordinance, regulation, order or decree, whether by itself or its employees or subcontractors.
- D. All materials furnished, and Work done shall comply with all State and Federal laws and regulations.

### 1.31 RELATION OF SEWER MAINS TO WATER LINES:

#### A. Horizontal Separation

- 1. Whenever possible, sewers should be laid at least 300 cm (10 ft), horizontally, from any existing or proposed water mains.
- 2. Should local conditions prevent a lateral separation of 300 cm (10 ft), a sewer may be laid closer than (10 ft) to a water main if:
  - a) It is laid in a separate trench;
  - b) It is laid in the same trench with the water mains located at one side on a bench of undisturbed earth; and
  - c) In either case the elevation of the crown of the sewer is at least 18 inches below the invert of the water main.

#### B. Vertical Separation

- 1. Whenever sewers must cross under water mains, the sewer shall be laid at such elevation that the top of the sewer is at least 5.5m (18 in) below the bottom of the water main.

When the elevation of the sewer cannot be buried to meet the above requirement, the water main shall be relocated to provide this separation or reconstruction with slip-on or mechanical-joint cast-iron pipe, or prestressed concrete cylinder pipe for a distance of 10 feet on each side of the sewer. One full length of water main shall be centered over the sewer so that both joints will be as far from the sewer as possible.

2. When a sewer crosses above a water main, the following measures will be taken:
  - a) Both pipes will be encased in concrete for a distance of 300 cm (10 ft) on either side of the crossing; or
  - b) The sewer will be encased in concrete and the water main will be constructed of mechanical joint ductile iron pipe for a distance of 300 cm (10 ft) on either side of the crossing.

C. Special Conditions

1. When it is impossible to obtain proper horizontal and vertical separation as stipulated above, the water main shall be constructed of slip-on or mechanical-joint cast-iron pipe or prestressed concrete cylinder pipe and the sewer constructed of mechanical-joint cast-iron pipe and both services shall be pressure tested to assure water tightness.

1.32 UTILITY COORDINATION:

- A. Contractor shall be responsible for contacting and coordinating with utility companies prior to commencing work in the area of utilities.
- B. Special requirements may be necessary for work in the vicinity of some utilities and easements. Requirements may include but are not limited to the following; surface marking of crossings and easements, temporary fencing, temporary pipe support, additional padding or steel plates for heavy equipment, and coordination with utility field personnel.

## SECTION 01046 (ALL CPs)

## CONTROL OF WORK

## PART 1 - GENERAL

## 1.01 SCOPE:

- A. The Work of this section includes all labor, equipment, tools, and materials necessary for the implementation of the Control of Work during the construction of the facilities.
- B. Attention is directed to the SECTION VII – GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT:

- A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 DEFINITIONS:

- A. Definitions shall be as specified in PART I – BIDDING PROCEDURES.

## 1.04 SUBMITTALS – Not Used

## 1.05 DESIGN CRITERIA – Not Used

## 1.06 REFERENCED STANDARDS – Not Used

## PART 2 - PRODUCTS AND SERVICES – Not Used

## PART 3 - EXECUTION

## 3.01 FACILITY AND HOURS OF CONSTRUCTION:

- A. Furnish facility and equipment which will be efficient, appropriate, and large enough to secure a satisfactory quality of work and a rate of progress which will insure the completion of the work within the Contract Time. If at any time such facility appears to the Engineer to be inefficient, inappropriate, or insufficient for securing the quality of work required or for producing the rate of progress aforesaid, he may order the Contractor to increase the efficiency, change the character, or increase the facility equipment, and the Contractor shall conform to such order. Failure of the Engineer to give such order shall in no way relieve the Contractor of his obligations to secure the quality of the work and rate of progress required.
- B. Normal construction activity shall take place only between the hours of 7:00 a.m. to 6:00 p.m., excluding Saturdays, Sundays, and legal holidays. Work outside the above time periods will be permitted only on an emergency basis and only with the approval of the Owner.

### 3.02 OCCUPYING PRIVATE LAND:

- A. The Contractor shall not (except after written consent from the proper parties) enter or occupy with workers, tools, materials, or equipment any land outside the rights of way or property of the Owner. A copy of the written consent shall be given to the Engineer.

### 3.03 PIPE LOCATIONS:

- A. Exterior pipelines will be located substantially as indicated on the Drawings, but the right is reserved to the Owner, acting through the Engineer, to make such modifications in location as may be found desirable to avoid interference with existing structures or for other reasons. Where fittings, etc., are noted on the Drawings, such notation is for the Contractor's convenience and does not relieve him from laying and jointing different or additional items where required.
- B. Small interior piping is indicated diagrammatically on the Drawings, and the exact location is to be determined in the field. Piping shall be arranged in a neat, compact, and workmanlike manner, with a minimum of crossing and interlacing, so as not to interfere with equipment or access ways, and, in general, without diagonal runs.

### 3.04 DIMENSION OF EXISTING STRUCTURES:

- A. Where the dimensions and locations of existing structures are of importance in the installation or connection of any part of the Work, the Contractor shall verify such dimensions and locations in the field before the fabrication of any material or equipment which is dependent on the correctness of such information.

### 3.05 OPEN EXCAVATIONS:

- A. All open excavations shall be adequately safeguarded by providing temporary barricades, fencing, caution signs, lights, and other means to prevent accidents to persons and damage to property. The Contractor shall, at his own expense, provide suitable and safe bridges and other crossings for accommodating travel by pedestrians and workmen. Bridges provided for access during construction shall be removed when no longer required. The length or size of excavation will be controlled by the particular surrounding conditions, but shall always be confined to the limits prescribed by the Engineer. If the excavation becomes a hazard, or if it excessively restricts traffic at any point, the Engineer may require special construction procedures such as limiting the length of the open trench, prohibiting stacking excavated material in the street, and requiring that the trench shall not remain open overnight.
- B. The Contractor shall take precautions to prevent injury to the public due to open trenches. All trenches, excavated material, equipment, or other obstacles which could be dangerous to the public shall be well lighted at night.
- C. The Contractor shall take precautions and provide barricades and fences to prevent animals from falling into open excavations. Monitor open excavations regularly and remove animals that may enter excavation daily.

### 3.06 TEST PITS:

- A. Test pits for the purpose of locating underground pipeline or structures in advance of the construction shall be excavated and backfilled by the Contractor at the direction of the Engineer. Test pits shall be backfilled immediately after their purpose has been satisfied and the surface restored and maintained in a manner satisfactory to the Engineer.

### 3.07 INTERFERENCE WITH AND PROTECTION OF STREETS:

- A. The Contractor shall not close or obstruct any portion of a street, road, or private way including unimproved access ways without obtaining permits therefor from the proper authorities. If any street, road or private way including unimproved access ways shall be rendered unsafe by the Contractor's operations, it shall make such repairs or provide such temporary ways or guards as shall be acceptable to the proper authorities.
- B. Streets, roads, private ways, and walks not closed shall be maintained passable and safe by the Contractor, who shall assume and have full responsibility for the adequacy and safety of provisions made therefor.
- C. The Contractor shall, at least 24 hours in advance, notify the Traffic Police, Fire Department and City Road Department in writing, with a copy to the Engineer, if the closure of a street or road is necessary. Contractor shall cooperate with the Traffic Police Department in the establishment of alternate routes and shall provide adequate detour signs, plainly marked and well lighted, in order to minimize confusion.

### 3.08 CARE AND PROTECTION OF PROPERTY:

- A. The Contractor shall be responsible for the preservation of all public and private property, religious hillock, and monuments and shall use every precaution necessary to prevent damage thereto. If any direct or indirect damage is done to public or private property by or on account of any act, omission, neglect, or misconduct in the execution of the work on the part of the Contractor, such property shall be restored by the Contractor, at his expense, to a condition similar or equal to that existing before the damage was done, or he shall make good the damage in other manner acceptable to the Engineer.

### 3.09 PROTECTION AND RELOCATION OF EXISTING STRUCTURES AND UTILITIES:

- A. The Contractor shall assume full responsibility for the protection of all buildings, structures, and utilities, public or private, including poles, signs, services to buildings, utilities in the street, gas pipes, water pipes, hydrants, sewers, drains, and electric and telephone cables, whether or not they are shown on the Drawings. The Contractor shall carefully support and protect all such structures and utilities from injury of any kind. Any damage resulting from the Contractor's operations shall be repaired using its forces and at its expense.
- B. Assistance will be given the Contractor in determining the location of existing services. The Contractor, however, shall bear full responsibility for obtaining all locations of underground structures and utilities (including existing water services, drain lines, and sewers). Services to buildings shall be maintained, and all costs or charges resulting from damage thereto shall be paid by the Contractor.

- C. Protection and temporary removal and replacement of existing utilities and structures as described in this Section shall be a part of the work under the Contract and all costs in connection therewith shall be included in the Total Price Bid in the Letter of Bid.
- D. If, in the opinion of the Engineer, permanent relocation of a Owner's utility is required, he may direct the Contractor, in writing, to perform the work. Work so ordered will be paid at the Contract unit prices, if applicable, or as extra work. If relocation of a privately owned utility is required, the Owner will notify the Utility to perform the work as expeditiously as possible. The Contractor shall fully cooperate with the Owner and Utility, and shall have no claim for delay due to such relocation. The Contractor shall notify all utility companies in writing at least 72 hours (excluding Saturdays, Sundays, and Legal holidays) before excavating in any public way. The Contractor shall coordinate the removal and replacement of traffic loops and signals, if required for the performance of the work, at no additional cost to the Owner.

### 3.10 INSPECTION OF WORK AWAY FROM THE SITE:

- A. If work to be done away from the construction site is to be inspected on behalf of the Owner during its fabrication, manufacture, or testing, or before shipment, the Contractor shall give notice to the Engineer of the place and time where such fabrication, manufacture, testing, or shipping is to be done. Such notice shall be in writing and delivered to the Engineer in ample time so that the necessary arrangements for the inspection can be made.

### 3.11 COOPERATION WITHIN THIS CONTRACT:

- A. All firms or persons authorized to perform any work under this Contract shall cooperate with General Contractor and its Subcontractors or trades, and shall assist in incorporating the work of other trades where necessary or required.
- B. Cutting and patching, drilling and fitting shall be carried out where required by the trade or subcontractor having jurisdiction, unless otherwise indicated herein or directed by the Engineer.

### 3.12 CLEANUP AND DISPOSAL OF EXCESS MATERIAL:

- A. During the course of the work, the Contractor shall keep the site of its operations in as clean and as neat a condition as is possible. The Contractor shall dispose of all residue resulting from the construction work and, at the conclusion of the work, he shall remove and haul away any surplus excavation, broken pavement, lumber, equipment, temporary structures, and any other refuse remaining from the construction operations, and shall leave the entire site of the work in a neat and orderly condition.
- B. In order to prevent environmental pollution arising from the construction activities related to the performance of this Contract, the Contractor and its subcontractors shall comply with all applicable national and local laws, and regulations concerning waste material disposal, as well as the specific requirements stated in this Section and elsewhere in the Specifications.
- C. The Contractor is advised that the disposal of excess excavated material in wetlands, stream corridors, and plains is strictly prohibited even if the permission of the property owner is obtained. Any violation of this restriction by the Contractor or any person employed by the Contractor, will be brought to the immediate attention of the responsible regulatory agencies, with a request that appropriate action be taken against the offending parties. Therefore, the Contractor will be required to remove the fill at its own expense and restore the area impacted.

3.13 CONTRACT CLOSEOUT:

- A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT and GENERAL CONDITIONS ARTICLE 10, EMPLOYERS TAKING OVER.

END OF SECTION

This Page Intentionally Left Blank.

## SECTION 01063 (CP-1)

## MISCELLANEOUS REQUIREMENTS

## PART 1 - GENERAL

## 1.01 SCOPE OF WORK:

- A. The Contractor shall conform to all miscellaneous requirements as herein specified.
- B. Attention is directed to the SECTION VI – GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT

- A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 TRAFFIC CONTROL:

- A. For control of moderate traffic, the Contractor shall provide an adequate number of flagpersons employed at its own expense.
- B. Whenever and wherever, in the opinion of the Engineer, traffic is sufficiently congested or public safety is endangered, the Contractor shall inform the Road Development Department of Municipality of Ulaanbaatar City, to direct traffic and to keep traffic off the highway area affected by his construction operations. Such officers shall be in addition to the watchmen required under other provisions of the contract.
- C. The employment or presence of traffic flagpersons, special officers, or police shall in no way relieve the Contractor of its responsibility or liability under the contract.

## 1.04 INTERFERENCE WITH EXISTING WORKS:

- A. The Contractor shall at all times conduct its operations so as to interfere as little as possible with existing works. The Contractor shall develop a program, in cooperation with the Engineer and interested officials, which shall provide for the construction and putting into service of the new works in the most orderly manner possible. This program shall be adhered to except as deviations therefrom are expressly permitted. All work of connecting with, cutting into, and reconstructing existing pipes or structures shall be planned to interfere with the operation of the existing facilities for the shortest possible time when the demands on the facilities best permit such interference, even though it may be necessary to work outside of normal working hours to meet these requirements. Before starting work, which will interfere with the operation of existing facilities, the Contractor shall do all possible preparatory work and shall see that all tools, materials, and equipment are made ready and at hand.

- B. The Contractor shall make such minor modifications in the work relating to existing structures as may be necessary, without additional compensation.
- C. The Contractor shall have no claim for additional compensation by reason of delay or inconvenience in adapting its operations to meet the above requirements.

#### 1.05 MAINTAINING FLOWS:

- A. It is essential to the operation of all existing utilities that there be no interruption in the service. To this end, the Contractor shall at his own expense, provide, maintain, and operate all temporary facilities such as necessary to maintain such services.
- B. The Contractor shall at his own cost, provide for the flow of sewers, drains and water courses interrupted during the progress of the work, and shall immediately cart away and removal all offensive matter. The entire procedure of maintaining existing flow shall be fully discussed with the Engineer well in advance of the interruption of any flow.

#### 1.06 PRELOADING AND LEAKAGE TESTING OF TANKS – Not Used

#### 1.07 BACKFILLING AGAINST STRUCTURES:

- A. Backfill shall not be placed against foundation walls until all interior floors have been placed and the concrete has attained design strength. This includes the floor level at grade or the next level above grade if no floor is within 610 mm (2 feet) of finished grade.
- B. Backfill shall not be placed against cantilever walls until the concrete has attained design strength.

#### 1.08 HYDRAULIC UPLIFT OF STRUCTURES:

- A. The Contractor shall be responsible for the protection of all structures against hydraulic uplift until such structures have been accepted finally by the Owner.
- B. In this regard, the Contractor is advised that all tanks when completed are designed to resist hydraulic uplift from groundwater up to the elevation indicated on the structural drawings when the structure is completed. The concrete slab bottoms shall be placed in the dry, with the use of wellpoints or other dewatering means to keep the water elevation sufficiently low to carry on the work.
- C. Buildings with basements are designed to resist hydraulic uplift from groundwater up to the elevation indicated on the structural drawings against the weight of the completed structure, including all masonry, structural steel frames and cladding.

#### 1.09 PRECAUTIONS AGAINST HYDROSTATIC UPLIFT DURING CONSTRUCTION:

- A. The Contractor shall maintain a low groundwater elevation in the vicinity of the structures until they are complete. In case of extremely high water during

construction of the structures, it may be necessary to flood the structures to maintain stable conditions.

#### 1.10 BURIED UTILITY WARNING AND IDENTIFICATION TAPE:

- A. Provide detectable aluminum foil plastic backed tape or detectable magnetic plastic tape manufactured specifically for warning and identification of buried piping. Tape shall be detectable by an electronic detection instrument. Provide tape in rolls, 75 mm (3 inches) minimum width, color coded for the utility involved with warning and identification imprinted in bold black letters continuously and repeatedly over entire tape length. Warning and identification shall be CAUTION BURIED WATER PIPING BELOW (in both English and Mongolian) or similar. Use permanent code and letter coloring unaffected by moisture and other substances contained in trench backfill material. Bury tape with the printed side up at a depth of 300 mm (12 inches) below the top surface of earth or the top surface of the subgrade under pavements.

#### 1.11 PROTECTION AGAINST ELECTROLYSIS:

- A. Where dissimilar metals are used in conjunction with each other, suitable insulation shall be provided between adjoining surfaces so as to eliminate direct contact and any resultant electrolysis. In areas not in contact with raw or potable water the insulation shall be bituminous impregnated felt, heavy bituminous coatings, nonmetallic separators or washers, or other acceptable materials.

END OF SECTION

This Page Intentionally Left Blank

## SECTION 01063 (CP-2, CP-3)

## MISCELLANEOUS REQUIREMENTS

## PART 1 - GENERAL

## 1.01 SCOPE OF WORK:

- A. The Contractor shall conform to all miscellaneous requirements as herein specified.
- B. Attention is directed to the SECTION VI – GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT

- A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 TRAFFIC CONTROL:

- A. For control of moderate traffic, the Contractor shall provide an adequate number of flagpersons employed at its own expense.
- B. Whenever and wherever, in the opinion of the Engineer, traffic is sufficiently congested or public safety is endangered, the Contractor shall inform the Road Development Department of Municipality of Ulaanbaatar City, to direct traffic and to keep traffic off the highway area affected by his construction operations. Such officers shall be in addition to the watchmen required under other provisions of the contract.
- C. The employment or presence of traffic flagpersons, special officers, or police shall in no way relieve the Contractor of its responsibility or liability under the contract.

## 1.04 INTERFERENCE WITH EXISTING WORKS:

- A. The Contractor shall at all times conduct its operations so as to interfere as little as possible with existing works. The Contractor shall develop a program, in cooperation with the Engineer and interested officials, which shall provide for the construction and putting into service of the new works in the most orderly manner possible. This program shall be adhered to except as deviations therefrom are expressly permitted. All work of connecting with, cutting into, and reconstructing existing pipes or structures shall be planned to interfere with the operation of the existing facilities for the shortest possible time when the demands on the facilities best permit such interference, even though it may be necessary to work outside of normal working hours to meet these requirements. Before starting work, which will interfere with the operation of existing facilities, the Contractor shall do all possible preparatory work and shall see that all tools, materials, and equipment are made ready and at hand.

- B. The Contractor shall make such minor modifications in the work relating to existing structures as may be necessary, without additional compensation.
- C. The Contractor shall have no claim for additional compensation by reason of delay or inconvenience in adapting its operations to meet the above requirements.

#### 1.05 MAINTAINING FLOWS:

- A. It is essential to the operation of all existing utilities that there be no interruption in the service. To this end, the Contractor shall at his own expense, provide, maintain, and operate all temporary facilities such as necessary to maintain such services.
- B. The Contractor shall at his own cost, provide for the flow of sewers, drains and water courses interrupted during the progress of the work, and shall immediately cart away and removal all offensive matter. The entire procedure of maintaining existing flow shall be fully discussed with the Engineer well in advance of the interruption of any flow.

#### 1.06 PRELOADING AND LEAKAGE TESTING OF TANKS:

- A. Conduct preloading and leakage testing in accordance with section 03800.

#### 1.07 BACKFILLING AGAINST STRUCTURES:

- A. Backfill shall not be placed against foundation walls until all interior floors have been placed and the concrete has attained design strength. This includes the floor level at grade or the next level above grade if no floor is within 610 mm (2 feet) of finished grade.
- B. Backfill shall not be placed against cantilever walls until the concrete has attained design strength.

#### 1.08 HYDRAULIC UPLIFT OF STRUCTURES:

- A. The Contractor shall be responsible for the protection of all structures against hydraulic uplift until such structures have been accepted finally by the Owner.
- B. In this regard, the Contractor is advised that all tanks when completed are designed to resist hydraulic uplift from groundwater up to the elevation indicated on the structural drawings when the structure is completed. The concrete slab bottoms shall be placed in the dry, with the use of wellpoints or other dewatering means to keep the water elevation sufficiently low to carry on the work.
- C. Buildings with basements are designed to resist hydraulic uplift from groundwater up to the elevation indicated on the structural drawings against the weight of the completed structure, including all masonry, structural steel frames and cladding.

#### 1.09 PRECAUTIONS AGAINST HYDROSTATIC UPLIFT DURING CONSTRUCTION:

- A. The Contractor shall maintain a low groundwater elevation in the vicinity of the structures until they are complete. In case of extremely high water during construction of the structures, it may be necessary to flood the structures to maintain stable conditions.

#### 1.10 BURIED UTILITY WARNING AND IDENTIFICATION TAPE:

- A. Provide detectable aluminum foil plastic backed tape or detectable magnetic plastic tape manufactured specifically for warning and identification of buried piping. Tape shall be detectable by an electronic detection instrument. Provide tape in rolls, 75 mm (3 inches) minimum width, color coded for the utility involved with warning and identification imprinted in bold black letters continuously and repeatedly over entire tape length. Warning and identification shall be CAUTION BURIED WATER PIPING BELOW (in both English and Mongolian) or similar. Use permanent code and letter coloring unaffected by moisture and other substances contained in trench backfill material. Bury tape with the printed side up at a depth of 300 mm (12 inches) below the top surface of earth or the top surface of the subgrade under pavements.

#### 1.11 PROTECTION AGAINST ELECTROLYSIS:

- A. Where dissimilar metals are used in conjunction with each other, suitable insulation shall be provided between adjoining surfaces so as to eliminate direct contact and any resultant electrolysis. In areas not in contact with raw or potable water the insulation shall be bituminous impregnated felt, heavy bituminous coatings, nonmetallic separators or washers, or other acceptable materials.

END OF SECTION

This Page Intentionally Left Blank

## SECTION 01110 (ALL CPs)

## ENVIRONMENTAL PROTECTION PROCEDURES

## PART 1 - GENERAL

## 1.01 SCOPE:

- A. Provide and compact bank-run gravel as indicated and specified.
- B. The work covered by this Section consists of furnishing all labor materials and equipment and performing all work required for the prevention of environmental pollution in conformance with applicable laws and regulations, during and as the result of construction operations under this Contract. For the purpose of this Specification, environmental pollution is defined as the presence of chemical, physical, or biological elements or agents which adversely affect human health or welfare; unfavorably alter ecological balances of importance to human life; affect other species of importance to man; or degrade the utility of the environment for aesthetic and/or recreational purposes.
- C. The control of environmental pollution requires consideration of air, water, and land, and involves management of noise and solid waste, as well as other pollutants.
- D. Schedule and conduct all work in a manner that will minimize the erosion of soils in the area of the work. Provide erosion control measures such as diversion channels, sedimentation or filtration systems, berms, staked hay bales, seeding, mulching, or other special surface treatments as are required to prevent silting and muddying of streams, rivers, impoundments, lakes, etc. All erosion control measures shall be in place in an area prior to any construction activity in that area. Specific requirements for erosion and sedimentation controls are specified in SECTION 01568, EROSION CONTROL, SEDIMENTATION AND CONTAINMENT OF CONSTRUCTION MATERIALS.
- E. These Specifications are intended to ensure that construction is achieved with a minimum of disturbance to the existing ecological balance between a water resource and its surroundings. These are general guidelines. It is the Contractor's responsibility to determine the specific construction techniques to meet these guidelines.
- F. Schedule and conduct all work in a manner that will minimize the level of noise escaping the site, especially at night and on weekends.
- G. Attention is directed to the SECTION VII – GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT:

- A. Measurement and payment for work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 DEFINITIONS:

- A. Definitions shall be as specified in PART I – BIDDING PROCEDURES.

#### 1.04 SUBMITTALS – Not Used

#### 1.05 PRODUCT HANDLING – Not Used

#### 1.06 DESIGN CRITERIA:

- A. Comply with all applicable Government of Mongolia (GoM) laws and regulations concerning environmental pollution control and abatement.
- B. The Engineer will notify the Contractor in writing of any non-compliance with the foregoing provisions or of any environmentally objectional acts and corrective action to be taken. Government of Mongolia (GoM) agencies responsible for verification of certain aspects of the environmental protection requirements shall notify the Contractor in writing, through the Engineer, of any non-compliance with Government of Mongolia (GoM) requirements. The Contractor shall, after receipt of such notice from the Engineer or from the regulatory agency through the Engineer, immediately take corrective action. Such notice, when delivered to the Contractor or his authorized representative at the site of the work, shall be deemed sufficient for the purpose. If the Contractor fails or refuses to comply promptly, the Owner may issue an order stopping all or part of the work until satisfactory corrective action has been taken. No part of the time lost due to any such stop orders shall be made the subject of a claim for extension of time or for excess costs or damages by the Contractor unless it is later determined that the Contractor was in compliance.

#### PART 2 - PRODUCTS – Not Used

#### PART 3 - EXECUTION

##### 3.01 IMPLEMENTATION:

- A. Prior to commencement of the work, meet with the Engineer to develop mutual understandings relative to compliance with this provision and administration of the environmental pollution control program.
- B. Remove temporary environmental control features, when approved by the Engineer, and incorporate permanent control features into the project at the earliest practicable time.

##### 3.02 EROSION CONTROL:

- A. Provide positive means of erosion control such as shallow ditches around construction to carry off surface water. Erosion control measures such as siltation basins, hay check dams, mulching, jute netting, and other equivalent techniques shall be used as appropriate. Offsite surface water shall be diverted around the site to a downstream channel ahead of siltation barriers. Flow of surface water into excavated areas shall be prevented. Ditches around construction area shall also be used to carry away water resulting from dewatering of excavated areas. At the completion of the work, ditches shall be backfilled and the ground surface restored to original condition.

##### 3.03 PROTECTION OF STREAMS, WETLANDS, AND SURFACE WATER:

- A. Care shall be taken to prevent or reduce to a minimum any damage to any stream, drainage ditch, storm drain or sewer from pollution by debris, sediment, or other material, or from the

manipulation of equipment and/or materials in or near such streams. Water that has been used for washing or processing, or that contains oils or sediments that will reduce the quality of the water in the stream, shall not be directly returned to the stream. Such water will be diverted through a settling basin or filter before being directed into the streams.

- B. The Contractor shall not discharge water from dewatering operations directly into any live or intermittent stream, channel, wetlands, surface water, or any storm sewer. Water from dewatering operations shall be treated by filtration, settling basins, or other approved method to reduce the amount of sediment contained in the water to allowable levels.
- C. All preventative measures shall be taken to avoid spillage of petroleum products and other pollutants. In the event of any spillage, prompt remedial action shall be taken in accordance with a contingency action drawing or plan previously approved by the Metropolitan Professional Inspection Department. Contractor shall submit two copies of approved contingency drawings or plans to the Engineer.
- D. Water being flushed from structures or pipelines after disinfection, with a Cl<sub>2</sub> residue of 2 mg/l or greater, shall be treated with a dechlorination solution, in a method approved by the Engineer, prior to discharge.

#### 3.04 PROTECTION OF LAND RESOURCES:

- A. Land resources within the project boundaries and outside the limits of permanent work shall be restored to a condition, after completion of construction, that will appear to be natural and not detract from the appearance of the project. Confine all construction activities to areas approved in the Construction Permit.
- B. Outside of areas requiring earthwork for the construction of the new facilities, the Contractor shall not deface, injure, or destroy trees or shrubs, nor remove or cut them without prior approval. No ropes, cables, or guys shall be fastened to or attached to any existing nearby trees for anchorage unless specifically authorized by the Engineer. Where such special emergency use is permitted, first wrap the trunk with a sufficient thickness of burlap or rags over which softwood cleats shall be tied before any rope, cable, or wire is placed. The Contractor shall in any event be responsible for any damage resulting from such use.
- C. Where trees may possibly be defaced, bruised, injured, or otherwise damaged by the Contractor's equipment, dumping or other operations, protect such trees by placing boards, planks, or poles around them. Monuments and markers shall be protected similarly before beginning operations near them.
- D. Any trees or other landscape feature scarred or damaged by the Contractor's equipment or operations shall be restored as nearly as possible to its original condition. The Engineer will decide what method of restoration shall be used and whether damaged trees shall be treated and healed or removed and disposed of. Removed trees shall be replaced as directed by the Engineer.
- E. All scars made on trees by equipment, construction operations, or by the removal of limbs larger than 25mm (1-in) in diameter shall be coated as soon as possible with an approved tree wound dressing. All trimming or pruning shall be performed in an approved manner by experienced workmen with saws or pruning shears. Tree trimming with axes will not be permitted.

- F. Climbing ropes shall be used where necessary for safety. Trees that are to remain, either within or outside established clearing limits, that are subsequently damaged by the Contractor and are beyond saving in the opinion of the Engineer, shall be immediately removed and replaced.
- G. The locations of the Contractor's storage, and other construction building, required temporarily in the performance of the work, shall be cleared portions of the job site or areas to be cleared as shown on the Drawings and shall require written approval of the Engineer and shall not be within wetlands. Where the Works will be in floodplains, the Contractor shall take into consideration the rainy season period and take such measures as necessary to provide safe access to storage and temporary facilities. The preservation of the landscape shall be an imperative consideration in the selection of all sites and in the construction of buildings. Drawings showing storage facilities shall be submitted for approval of the Engineer.
- H. Remove all signs of temporary construction facilities such as haul roads, work areas, structures, foundations of temporary structures, stockpiles of excess of waste materials, or any other vestiges of construction as directed by the Engineer. It is anticipated that excavation, filling, and plowing of roadways will be required to restore the area to near natural conditions which will permit the growth of vegetation thereon. The disturbed areas shall be prepared and seeded as described in SECTION 01568 EROSION CONTROL, SEDIMENTATION AND CONTAINMENT OF CONSTRUCTION MATERIALS or as approved by the Engineer.
- I. All debris and excess material will be disposed of outside wetland or floodplain areas in an environmentally sound manner.

### 3.05 PROTECTION OF AIR QUALITY:

- A. Burning. The use of burning at the project site for the disposal of refuse and debris will not be permitted.
- B. Dust Control. The Contractor will be required to maintain all excavations, embankments, stockpiles, access roads, plant sites, waste areas, borrow areas, and all other work areas within or without the project boundaries free from dust which could cause the parameters for air pollution to exceed MNS 4585-2016 and other relevant standards, and which would cause a hazard or nuisance to others.
- C. An approved method of stabilization consisting of sprinkling or other similar methods will be permitted to control dust. The use of chlorides may be permitted with approval from the Engineer.
- D. Sprinkling, to be approved, must be repeated at such intervals as to keep all parts of the disturbed area at least damp at all times, and the Contractor must have sufficient competent equipment on the job to accomplish this if sprinkling is used. Dust control shall be performed as the work proceeds and whenever a dust nuisance or hazard occurs, as determined by the Engineer.
- E. All construction vehicles used for the completion of the work shall meet Government of Mongolia air quality emissions standards.

3.06 MAINTENANCE OF POLLUTION CONTROL FACILITIES DURING CONSTRUCTION:

- A. During the life of this Contract, maintain all facilities constructed for pollution control as long as the operations creating the particular pollutant are being carried out or until the material concerned has become stabilized to the extent that pollution is no longer being created.

3.07 NOISE CONTROL:

- A. The Contractor shall make every effort to minimize noises caused by his operations. Equipment shall be equipped with silencers or mufflers designed to operate with the least possible noise in compliance with MNS 4585-2016 and other GoM regulations and US OSHA regulations.

3.08 CONTRACT CLOSEOUT:

- A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

END OF SECTION

This Page Intentionally Left Blank

## SECTION 01500 (CP-1)

## TEMPORARY FACILITIES

## PART 1 - GENERAL

## 1.01 SCOPE

- A. The Work of this section includes the furnishing of all labor, tools, equipment and materials, performing all operations necessary to provide temporary facilities as specified herein and as directed by the Engineer.
- B. Specification Section 01500 covers the Field Office, equipment, and services provided by the Contractor for Engineer and Owner's use during the implementation of Work. Engineer and Owner shall return the Field Office, equipment, and supplies to Contractor at the completion of Contract, in used condition, wear and tear included. The Field Office shall be designed and constructed in accordance with the best practice of the industry and shall be installed in accordance with the manufacturer's recommendations.
- C. The Contractor shall pay for all costs of the Field Office, equipment, and services supplied under this Section.
- D. Contractor shall take full possession and control of the Field Office, equipment, and supplies after completion of this Contract.
- E. Temporary roadways and drilling platforms are covered in SECTION 02672, WATER-SUPPLY WELL CONSTRUCTION, Paragraph 3.04 D. See also SECTIONs 02224 and 02225 regarding materials of construction. The materials shall be standard materials of proven quality as manufactured by reputable concerns. Temporary roadways and drilling platforms shall be designed and constructed in accordance with the best practice of the industry and shall be installed and maintained for durability
- F. Attention is directed to SECTION VI GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT

- A. Measurement and payment for the Work described in this section shall be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 DEFINITIONS

- A. Definitions shall be as specified in PART I BIDDING PROCEDURES.

#### 1.04 SUBMITTALS

- A. The Contractor shall submit in the Well Installation Plan (see Specification SECTION 026729) a detailed layout of the Field Office including the proposed location for the office. Final proposed locations shall be subject to the Engineer's approval.
- B. For manufactured mobile trailers, prior to beginning of manufacture, the Contractor shall submit complete floor plans, assembly, flooring, and electrical drawings, together with detailed specifications and data covering materials used and all accessories and related equipment, in accordance with Section 01300.

#### 1.05 PRODUCT HANDLING

- A. All materials and equipment shall be shipped, stored, handled and installed according to the manufacturer's written recommendations.
- B. The materials and equipment shall be stored on a flat, clean, dry surface to prevent damage and shall be covered to prevent exposure to adverse conditions prior to installation.

#### 1.06 DESIGN CRITERIA

- A. The materials specified are intended to be standard materials of demonstrated successful performance, as manufactured by reputable concerns. Materials shall be designed and manufactured in accordance with industry standards and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the materials.

### PART 2 - PRODUCTS

#### 2.01 TEMPORARY FIELD OFFICE

- A. Furnish a temporary Field Office as required and obtain all necessary applicable permits and/or approvals required for their use. Such facilities shall be located as required and as to not interfere with the Work of the project and shall be completely removed at the completion of the Work.
- B. The Field Office, equipped as indicated herein, shall be provided and ready for use within 30 days after the NTP and shall be maintained in full operation until completion of the Work.
- C. Furnish the Field Office with heating, air conditioning, light, sanitary facilities, water for drinking, windows for natural lighting. The Field Office shall be well ventilated, and locks with keys turned over to Engineer.
- D. The Field Office shall be provided with parking spaces reserved exclusively for Engineer and Owner vehicles.
- E. Provide weather-surfaced road, at least 3 meters wide, to the Field Office.
- F. The Field Office

1. Provide a Field Office for the use of the Engineer. The office shall be of approximately 19 m<sup>2</sup> (200 ft<sup>2</sup>). Legally dispose of sanitary wastes. The office and rooms shall be constructed in a manner, and of materials, satisfactory to the Engineer. Office shall be weathertight with a minimum of six windows and two exterior doors. The office shall be adequately lighted for detailed working conditions, heated and air conditioned during the appropriate seasons. Thoroughly clean and mop the trailer on a weekly basis and restock all paper products such as but not limited to cups, towels, toilet paper, office copy paper, printer paper and plastic liners for waste baskets.
  - a. Furniture, furnishings and equipment subject to approval of the Engineer, shall be provided as follows:
    - 1 - Executive desk
    - 2 - Executive chairs
    - 1 - Bookcase 180 cm high x 92 cm wide (6' high x 3' wide)
    - 2 - 4 drawer steel files (locking, legal size)
    - 1 - Waste basket
    - 1 - Table 76cm x 180 cm (2'-6 x 6'-0)
    - 1 - Plan table 91 cm x 122cm (3'-0" x 4'-0")
    - 3 - Folding metal chairs
    - 1 - Water Cooler/Heater with 20L (5-gal) supply containers
    - 1 - 0.07 cubic meter (2.5 cubic foot) refrigerator
    - 1 - Small microwave oven
    - 1 - Black and White and Color copy machine, self-feeding, with 26cm x 28cm (8-1/2" x 11") and 28cm x 43 cm (11" x 17") printing capability, enlargement/reduction capability and scanning capability; provide cartridges, toner, paper, etc., for the project duration
    - 1 - Wi-Fi service
    - 1 - Push broom and dustpan
    - 1 - First aid kit
    - 1 - Fire extinguisher
2. Space shall be provided with crushed stone base for vehicles adjacent to the office for the exclusive use of the Engineer and visitors. Remove snow, mud, and control dust in the parking area adjacent to the office.

- G. Provide labor and material to locate and level the Field Office with access stairs, ramps and platforms as necessary to facilitate access.
- H. Operate and maintain facilities and associated equipment at own expense.
- I. Furnish janitorial services for the field office at least once a week. Service to include replenishing paper cups, paper towels, liquid soap, and toilet paper.
- J. Provide required utilities to facilities.
  - 1. Metered electric service.
  - 2. Thermostatically controlled heating unit or system of adequate capacity to maintain a minimum temperature of not less than 20 degrees C under all cold weather conditions. The Contractor shall provide all fuel used and service necessary.
  - 3. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
  - 4. Thermostatically controlled, refrigerant type, air conditioner of adequate capacity to maintain a maximum temperature of not more than 22 degrees C. under all hot weather conditions. Contractor shall provide all service necessary and provide all power used.
  - 5. Adequate lighting and at least ten (10) duplex electrical receptacles.
  - 6. High speed internet service with wireless access. The Contractor shall be responsible for connection and paying all fees associated with providing this service for the duration of the Contract.
- K. Upon completion of the Work and written approval of Engineer, disconnect utilities from facilities, remove off-site, and restore area.
- L. Carry insurance coverage to protect losses of Contractor, Engineer's and the Owner's property on and in the trailers.

## 2.02 INTERNET SERVICE

- A. The Contractor shall provide separate internet lines for access from the Engineer's Field Office, based on the following:
  - 1. A connection of 8Mbps,
  - 2. A dedicated Microwave internet connection equivalent to a fiber connection of 8 Mbps.
  - 3. A 30 Mbps ADSL connection or a 16 Mbps dedicated corporate.

The Internet Service Provider (ISP) service shall be for the exclusive use of the Engineer and Owner's personnel and shall be separate and in addition to internet service used by the Contractor. In such cases where there is no required cable internet service available, the Contractor shall provide an equivalent. Contractor will be responsible for renewal costs and all associated fees until the Engineer deems the Work complete. Contractor shall obtain and

pay for a service and repair contract with a local representative of the internet services dealer or manufacturer for weekly on-site visit.

## 2.03 TEMPORARY FENCE

### A. Temporary Perimeter Fencing

1. Temporary perimeter fencing is to be supplied and installed by the General Contractor, to enclose and secure the Field Office, while providing screening of construction activities.
2. Temporary fence shall be 2.4 meters (8 feet) above grade. All fence panels shall align with adjacent panels along top.
3. Fencing metals to be low sheen black finish, 60 mm (2 3/8") galvanized posts with 11 gauge chain link fencing, 41 mm (1 5/8") top and bottom rail. All fencing is to have screening fabric, attached with galvanized metal heavy gauge wire clips, black color.
4. Screening fabric shall be knitted polyethylene cloth, with reinforced band and grommets along top and sides for secure anchoring to chain link panels.
5. Embed fence posts securely a minimum of 0.6 meter (2 feet) into ground whenever possible to avoid tipping from wind load. Posts to be installed at 2.4 meters (8 feet) on center. Fence posts may be installed on concrete blocks if frequent relocation is anticipated, and if approved by the Engineer. Pull fabric tight and smooth, overlap grommets and clip together if fence fabric ends between posts. Metal wire clips to be used in all grommets, crimped tight.

## PART 3 - EXECUTION

### 3.01 POTABLE WATER

- A. A new freestanding self-contained bottled water cooler shall be provided in the Field Office. The unit shall accept a 20 liter or equivalent "bottled water" bottle or equivalent to be furnished and serviced by the Contractor.
- B. Two additional 20-liter bottles of water shall be stockpiled on site, and additional bottles of water shall be provided so that the supply is uninterrupted throughout the Work.

### 3.02 ELECTRICITY

- A. Arrange for, furnish and maintain all expenses for all electricity required for proper lighting, heating, cooling and powering of the Field Office to the time of final acceptance of the Work. Contractor shall be responsible for payment of electric power utility use charges over the period between startup of utility service and final acceptance of the Work.
- B. Power shall be obtained directly from power company lines.
- C. Temporary connections for electricity shall be subject to approval of the power company representative and shall be removed in like manner at the Contractor's expense prior to final acceptance of the Work.

- D. Wiring for temporary electric light and power shall be properly installed and maintained and shall be securely fastened in place. Electrical facilities shall conform to the requirements of local electric utility providers.

### 3.03 SANITARY CONVENIENCES

- A. Provide sanitary conveniences for the duration of the project for the use of all persons employed on the project, including all other contractors and subcontractors.
- B. Sanitary conveniences shall be properly screened from public observation, provided in sufficient numbers, and in such manner and at such points as shall be approved by the Engineer and/or Owner. The contents shall be removed and legally disposed of at a frequency acceptable to the public health agency having jurisdiction or as required.

### 3.04 PROJECT SIGNS

- A. Contractor shall provide Project Sign(s) in accordance with MCA Requirements.

### 3.05 BARRICADES AND GUARD LIGHTS

- A. Barricades, signs, fences and similar safety and warning devices shall be provided as required, in order to ensure the protection of employees and others concerned with their duties and presence on the premises at the project site.
- B. Provide and maintain guard lights at all barricades, obstructions in plant ways, and at all trenches and pits adjacent to traveled ways.

### 3.06 TEMPORARY HEAT

- A. During the months of October through April, provide heat, fuel and services necessary to protect the Field Office against injury from dampness and cold and to maintain temperature above 13 °C (55 °F).

### 3.07 SHELTER AND PROTECTION OF MATERIALS

- A. Provide adequate storage facilities for all materials required for the Work. The facilities shall be enclosed, heated and provided with moisture control, as required to provide adequate protection and shall be satisfactory to the Engineer.

### 3.08 SECURITY

- A. Contractor shall be responsible for protection of the Site, and all Work, materials, equipment, and existing facilities thereon, against vandals and other unauthorized persons.
- B. No Claim shall be made against Owner by reason of any act of an employee or trespasser, and Contractor shall make good all damage to Owner's property resulting from Contractor's failure to provide security measures as specified.
- C. Security measures shall include security fencing, barricades, lighting, and other measures as required to protect the Site. Additionally, the Contractor shall engage a guard service to furnish uniformed watchmen at the Site during all non-working hours twenty-four hours a day, seven days a week.

- D. The Contractor shall do the following for Site entry control: restrict entry of unauthorized persons and vehicles into Site and existing facilities; allow entry only to authorized persons with proper identification; maintain log of workmen and visitors and make log available to Owner on request; coordinate access of Owner's personnel to Site.

END OF SECTION

This Page Intentionally Left Blank

## SECTION 01500 (CP-2)

## TEMPORARY FACILITIES

## PART 1 - GENERAL

## 1.01 SCOPE

- A. The work of this section includes the furnishing of all labor, tools, equipment and materials, performing all operations necessary to provide temporary facilities as specified herein and as directed by the Engineer.
- B. This Section covers the Field Offices, Construction Visitor Center, equipment, and services provided by the Contractor for Engineer and Owner's use during the implementation of Work. Engineer and Owner shall return Field Offices, Construction Visitor Center, equipment, and supplies to Contractor at the completion of Contract, in used condition, wear and tear included.
- C. The Contractor shall pay for all costs of offices, visitor center, equipment, and services supplied under this Section.
- D. The Contractor shall pay for all operation and maintenance costs, to include materials, wages, utility fees and all other costs needed for the full operation of all temporary facilities specified under this section during the whole contract period and as directed by the Engineer.
- E. Contractor shall take full possession and control of the facilities, equipment, and supplies after completion of this Contract.
- F. The materials covered by this specification are intended to be standard materials of proven ability as manufactured by reputable concerns. Materials shall be designed and constructed in accordance with the best practice of the industry and shall be installed in accordance with the manufacturer's recommendations. The specifications call attention to certain features but do not purport to cover all details entering into the construction.
- G. Attention is directed to SECTION VII GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT

- A. Measurement and payment for the Work described in this section shall be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 DEFINITIONS

- A. Definitions shall be as specified in PART I BIDDING PROCEDURES.

## 1.04 SUBMITTALS

- A. Within 14 days after the Commencement of the Works, the Contractor shall submit a detailed layout of the field offices and construction visitor center including proposed locations for the

offices.

- B. For manufactured mobile trailers, prior to beginning of manufacture, the Contractor shall submit complete floor plans, assembly, flooring, and electrical drawings, together with detailed specifications and data covering materials used and all accessories and related equipment, in accordance with Section 01300.

#### 1.05 PRODUCT HANDLING

- A. All materials and equipment shall be shipped, stored, handled and installed according to the manufacturer's written recommendations.
- B. The materials and equipment shall be stored on a flat, clean, dry surface to prevent damage and shall be covered to prevent exposure to adverse conditions prior to installation.

#### 1.06 DESIGN CRITERIA

- A. The materials specified are intended to be standard materials of demonstrated successful performance, as manufactured by reputable concerns. Materials shall be designed and manufactured in accordance with industry standards and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the materials.
- B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

### PART 2 - PRODUCTS

#### 2.01 TEMPORARY FIELD OFFICES

- A. Furnish temporary offices, storage and fabrication facilities as required and obtain all necessary applicable permits and/or approvals required for their use. Such facilities shall be located as required and as to not interfere with the work of the project and shall be completely removed at the completion of the work.
- B. Field Offices and Construction Visitor Center, equipped as indicated herein, shall be provided and ready for use within 30 days after the Commencement of the Works and shall be maintained in full operation for a period of 14 days after the Defect Notification Period commences in a reduced number of facilities agreed by the Engineer.
- C. Field offices and visitor center shall be located at the construction site as noted on the Construction Drawings. Final proposed locations shall be submitted to the Engineer for approval.
- D. Furnish field offices and construction visitor center with heating, air conditioning, light, toilet facilities including lavatory, water for drinking, windows for natural lighting, be well ventilated, and locks with keys turned over to Engineer.
- E. Field offices and visitor center shall be provided with a minimum of 20 parking spaces reserved exclusively for Engineer, Owner and Visitor vehicles.

F. Provide weather-surfaced road, at least 3 meters wide, to the Field Office and Visitor Center.

G. FIELD OFFICE

1. Provide at the start of the work and for the duration of the project, unless otherwise directed, a field office for the use of the Engineer. The office and rooms shall be constructed in a manner, and of materials, satisfactory to the Engineer, and shall include unencumbered emergency egress. Office shall be weathertight with sufficient windows and exterior doors. The office shall be adequately lighted for detailed working conditions, heated and air conditioned during the appropriate seasons (each room to be individually controlled).
2. Thoroughly clean and mop the trailer on a daily basis and restock all paper products such as but not limited to cups, towels, toilet paper, office copy paper, printer paper and plastic liners for waste baskets.
3. The following table provides an overview of the office, including size and equipment. The Contractor shall submit to the Engineer for approval, no later than 14 days after commencement date, layout drawings with the corresponding entries and designations.

Room	Size	Furniture
Meeting Room 1 No	$\geq 30 \text{ m}^2$	10 conference tables each 1,20 m x 0,80m 20 armchairs 10 chairs 1 white board, 1,50 m x 1,00 m 4 bookshelves, 1 m x 2 m, 30 cm deep 2 coat racks 2 waste baskets
Office 1 3 No	$\geq 12 \text{ m}^2$	Each: 1 desk $\geq 4 \text{ m}^2$ , with file drawer and drawers, all lockable incl. keys 1 low table $\approx 1 \text{ m}^2$ 1 chair with rolling casters 2 swivel chairs 2 bookshelves, 1 m x 2 m, 30 cm deep 1 coat rack 1 waste basket
Office 2 4 No	$\geq 16 \text{ m}^2$	Each: 2 desks $\geq 3 \text{ m}^2$ , with file drawer and drawers, all lockable incl. keys 1 low table $\approx 1 \text{ m}^2$ 2 desk chairs 2 office chairs 2 bookshelves, 1 m x 2 m, 30 cm deep 1 coat rack 2 waste baskets
Office 3 AutoCAD and Video Control 1 No 1	$\geq 12 \text{ m}^2$	2 Desk $\geq 3 \text{ m}^2$ , with file drawer and drawers, all lockable incl. keys 1 low table $\approx 1 \text{ m}^2$ 2 desk chairs 2 office chairs 2 bookshelves, 1 m x 2 m, 30 cm deep 1 coat rack 2 waste baskets
Kitchen	$\geq 6 \text{ m}^2$	1 sideboard

Room	Size	Furniture
1 No		2 cupboards 0.8x0.6x0.3 m 2 boilerplates 1 electrical water boiler 1 refrigerator/freezer combination volume min. 270 l. 1 waste bucket 1 coffee machine, Espresso 2 Hot/cold water dispenser cups, saucers, plates, knives, forks and spoons, teapot all to serve 12 persons
Toilet 2 No	3 m <sup>2</sup>	Each: western W.C suite toilet roll holder wash hand basin mirror towel rail soap dispenser
Shower room 1No	3m <sup>2</sup>	standard shower towel rail soap dispenser mirror
Hall 1 No		2 fire extinguishers, wall mounted 4 first aid kits

#### 4. Office Equipment Specification

Desk	Desk board 25 mm thick covered with MDF Table depth: throughout 1000 mm Work height: 750 mm Units locked shelf covered by natural MDF with 2 drawers could be placed under the table The feet shall be chromium coating
Desk Chair	Min 6 pieces swivel chairs Pneumatic Seat Height Adjustment 360° Swivel Tilt Tension Adjustment Tilt Lock Mechanism Seat board shall have minimum 10 cm thickness Backboard shall be concave polypropylene to meet body ergonomic
Office Chair	Min. 4 pieces swivel chairs Pneumatic Seat Height Adjustment 360° Swivel Tilt Tension Adjustment Backboard shall be meet body ergonomic
Bookshelf	Bookshelf min. 25 mm thick covered with MDF Dimensions 1 m x 2 m, 30 cm deep Min 3 open and 3 lockable shelves
Sideboard	Min. 25 mm thick covered with MDF Dimensions 2.0x0.8x0.6 m with tap + sink upper side of kitchen working

## 5. Fire Extinguisher

- i. Wall mounted hand operated fire extinguishers shall be of the all-purpose, nitrogen pressured, dry chemical type. Fire extinguishers shall be provided at each site during construction. The fire extinguishers shall meet international industrial standards and shall be 10 kg and the color of the shell shall be red. Wall mounting brackets shall be furnished. Two fire extinguishers shall be installed in the Engineer's field offices to be used for this Contract.

## 6. First Aid

- a. The Contractor shall provide and maintain at own expense on the Site, adequate and easily accessible first-aid kits and facilities for treatment of accidents during the execution of the Works under the Contract and such outfits as may be required under any relevant laws, bylaws, ordinances and regulations in force. The places where these items are kept shall be prominently marked.
- b. Contractor staff shall include employees trained and fully qualified in the use of first aid, duly identified and designated and made known to all employees by posting their names and first aid qualifications in a prominent location at the Site. The Contractor shall ensure that a person trained in first aid is available at the Works sites, at Temporary Facilities, and at the Engineer's office.
- c. Any order from the Engineer to renew first aid materials, extend the supply of first aid materials and kits, or increase the number of first aid trained staff, shall be promptly carried out.
- d. First aid kits shall be required at Temporary Facilities, Field offices and in each vehicle.

## 7. Heating and Cooling

- a. The Contractor shall provide electrical heating and cooling system for all rooms and halls. The system must be capable of maintaining reasonable office temperature during the coldest winter months.

## 8. Office and Field Equipment

- a. The Contractor shall provide, equip, and maintain on site the following for the sole use of the Engineer and the Employer until the end of the contract:

Notebook, 15,6" FHD IPS, Intel i7-8565U latest generation, 32GB RAM, 1000 GB SSD + 1TB HDD, MX250, Win10 latest version, MS 365	6 No
External Solid-State Drive, 1 TB, USB 3.1	4 No
Multifunction Color Laser Printers (Printer, Fax, Photocopy, Scanner)	2 No
Projector - Full HD, 4000 ANSI Lumen, 10.000:1 Contrast, WLAN, HDMI	1 No
Digital Camera, not less than 20 MP	2 No
Tablet, Weatherproof, anti-shock, 10-inch, 64 GB, Cellular + WIFI	6 No
Video Camera for surveillance, higher than 4MP, night vision, weatherproof, movable, zooming function, to be installed in the locations approved by the Engineer to provide an overview of the complete construction site and temporary facilities with internet connection, fully controlled remotely by the Engineer, local storage capacity for recording of all cameras for 24hours/day for at least 30 days. Emergency power supply (UPS) suitable for supplying the surveillance system for at least 12 hours in case of power loss.	10 No

- b. Latest versions of MS Office, Anti-Virus Software with automatic update subscription software package will be provided for each computer.
- c. All above equipment shall be provided in the still sealed manufacturer's packaging and the Engineer shall retain exclusive admin rights for the duration of the project.
- d. The Contractor shall provide and maintain the following for the exclusive use of the Employer and Engineer's Representative and his staff for checking the setting-out and levels of the work:

Survey Instrument set (Electronic distance meter) and accessories	1 No
Theodolite	1 No
Total Station	1 No
30 m steel measuring tapes graduated in millimeters and centimeters	3 No
5 m steel measuring tapes	3 No
Surveying supplies as needed including pegs, steel rods and angles, ranging rods, concrete, paint etc.	As needed

## 9. Personal Protection Equipment

- a. The Contractor shall provide the following clothing for the exclusive use of the Employer and Engineer and his staff:

Safety helmets	15 No
High Visibility Vests	15 No
Waterproof coats color yellow in assorted sizes (to be specified) complete with belt, over trousers and hat, separate winter warm liners,	15 No

obtained from an approved supplier.	
Pairs of rubber safety wellingtons in assorted sizes (to be specified)	15 No
Pairs of safety boots in assorted sizes (to be specified)	15 No

## 10. Miscellaneous Requirements

### a. Consumables

The Contractor shall supply fax/photocopy paper (A4 and A3 sizes), ink and toner replacements, DVD's and CD's, towels, soap, toilet paper, disinfectant, cleaning materials and required maintenance consumables.

### b. Ownership

The Employer and Engineer's field office shall be new and shall remain the permanent property of the Contractor. The contents of the Field Office including all specified furniture, service fittings and equipment shall be new and shall be returned to the Contractor on termination or completion of the Contract.

### c. Governing Standards

The field office shall be designed, built, and installed in compliance with all applicable plumbing, electrical, structural, etc., codes in effect for Mongolia.

### d. Handling

All electronic equipment and office furnishings shall be handled in a manner that will prevent damage. Any damaged item found after receipt and prior to the Employer and Engineer's acceptance of the item will be replaced or repaired by the Contractor as recommended by the Engineer.

### e. Equipment Warranty

All equipment shall be provided with the manufacturer's standard warranty.

### f. Maintenance

The Contractor shall make any required and scheduled (as recommended by the manufacturer) maintenance and repairs to the field office and its contents during the period of this Contract.

The Contractor shall clean the field office at least daily, unless directed by the Engineer that cleaning is required more frequently, and all trash shall be collected and removed daily to a proper disposal point.

### g. Acceptable Manufacture

The Contractor shall provide a detailed layout of the field office to be approved by the Engineer prior to fabrication.

#### h. Installation

The field office and all equipment shall be set up at a location indicated by the Employer and the Engineer and in accordance with the manufacturers' recommendations and local codes. The Employer and Engineer's field office shall be at a location adjacent to the site of the Contractor's office, nominated by the Contractor and approved by the Employer and Engineer. If not already existing, all-weather roads to the field office shall be provided by the Contractor. Adjacent to the field office, a graveled parking area with car parking suitable for at least 20 vehicles in all-weather shall be provided and maintained by the Contractor

#### i. Communications Systems

The Contractor shall make all necessary arrangements and pay all installation charges for telephone lines in offices at the Site and 2 separate telephone lines in the office of the Employer and Engineer and shall provide a self-answering fax and a switchboard suitable for 5 separate extensions together with an extension and telephone instrument for each room as registered consumer. The telephone service and instruments in the Employer and Engineer's office shall be a touch tone system if locally available. In addition to the office telephone system the Contractor shall provide 5 no. mobile telephones for the Employer and Engineer including line and machine. The telephone and fax services shall be in the name of Contractor, and all charges, including calls and maintenance after installation shall be billed to and paid by the Contractor. Also, wireless connection will be available for Employer, Engineer, and other personnel in temporary facilities

#### j. Temporary Sanitary Facilities

The Contractor shall provide, furnish, and maintain temporary sanitary facilities at the site, as provided herein, for the needs of all construction workers and others performing work on site.

### H. CONSTRUCTION VISITOR CENTER

1. Furnish field office facilities for use as a visitor's center during the construction period within 30 days after having cleared the selected trailer site, and a maximum 60 days after Notice to Proceed. The location of the visitor center shall be adjacent to the Engineer's site offices and shall be approved by Engineer.
2. Construction visitor center: New or like new trailer containing not less than 55 m<sup>2</sup>.
3. Office layout: Approved by Engineer and the facility shall be partitioned so as to provide a reception/administration area, audio visual storage closet, Personal Protective Equipment (PPE) storage closet, large conference room/briefing room, and bathroom facilities.
4. Lease, with maintenance agreement for the term of construction contract and install new furniture and equipment for the exclusive use of the Visitors Center.

1 - Folding Conference Table, 3.65 m by 1.2 m (12 feet by 4 feet) with 24 padded folding chairs.

- 1 - Desk, 1524 mm by 762 mm (60 inches by 30 inches) with lock.
- 1 - Chair, Rotary with arms, upholstered.
- 1 - Bookcase, 2133 mm by 762 mm wide (84 inches high by 30 inches).
- 1 - Four-drawer Filing Cabinet, fireproof, legal size locks.
- 1 - Storage Cabinet with lock.
- 1 - Fluorescent Lamps, Desk.
- 1 - Water Cooler, Electric – refrigerated.
- 1 - Fire Extinguisher.
- Portable or pull-down projection screen.
- LCD Projector.
- 1 - Coat Rack or closet.
- 2 - Tack boards, 610 mm by 965 mm (24 inches by 38 inches).
- 3 - Wastebaskets.
- 1 - Venetian Blind at each window.
- 1 - Electric coffee maker.
- 1 – 0.03 cubic meter (1CF) Microwave Oven.
- 1 – 0.17 cubic meter (6CF) Refrigerator.
- 1 - Fax machine.
- Telephones for each desk, with speaker option.
- Telephone answering machine or private voicemail service.
- Broom and dustpan.
- 40 hard hats and 40 pair of safety glasses.

5. Provide one copying machine with supplies and service. Machine shall be capable of copying A3 and A4 paper sizes. Copy rate shall be at least 20 copies per minute for A4 paper size.
6. Provide two laptop computers with the following specification: Notebook, 15.6” FJD IPS, Intel i7-856U latest generation, 32GB RAM, 1000GB SSD + 1TB HDD, MX250, Win10 latest version, MS 365.

7. Printer, HP Laser Jet series 3600N or equal; and peripherals necessary to make a complete and operable system. Provide an uninterruptible power supply system consisting of APC model 200 or equal.
- I. Provide labor and material to locate and level Field Office and Visitors Center with access stairs, ramps and platforms as necessary to facilitate access.
- J. Operate and maintain facilities and associated equipment at own expense.
- K. Furnish janitorial services at least once a week. Service to include replenishing paper cups, paper towels, liquid soap, and toilet paper.
- L. Provide required utilities to facilities.
  1. Metered electric service.
  2. Thermostatically controlled heating unit or system of adequate capacity to maintain a minimum temperature of not less than 20 degrees C under all cold weather conditions. The Contractor shall provide all fuel used and service necessary.
  3. Use of gasoline-burning space heaters, open-flame heaters, or salamander-type heating units is prohibited.
  4. Thermostatically controlled, refrigerant type, air conditioner of adequate capacity to maintain a maximum temperature of not more than 22 degrees C. under all hot weather conditions. Contractor shall provide all service necessary and provide all power used.
  5. Adequate lighting and duplex receptacles.
  6. Telephone service of 8 twisted pair cable to the office.
  7. High speed internet service with wireless access. The Contractor shall be responsible for connection and paying all fees associated with providing this service for the duration of the Contract.
- M. Upon completion of the Work and written approval of Engineer, disconnect utilities from facilities, remove off-site, and restore area.
- N. Carry insurance coverage to protect losses of Contractor, Engineer's and the Owner's property on and in the trailers.

## 2.02. VEHICLES FOR EMPLOYER AND ENGINEER

### A. General

1. Within 30 days after Effective Date, the Contractor shall provide two vehicles and the Employer will allocate them for the exclusive use of this work for the duration of the Contract. All costs incurred for supply and maintenance of these vehicles will be reimbursed under the Contract.

2. In the event of failure to supply vehicles within the time specified, the Employer reserves the right to provide such vehicles as are necessary until such time as the specified vehicles are made available. Cost incurred for provision and maintenance of these vehicles will be deducted from monies due or to become due to the Contractor.
3. The vehicles will be subjected to severe operating conditions in climate ranging from hot to extreme cold environment.
4. The Contractor shall submit for review, technical literature, and specifications in sufficient detail to identify and describe the vehicles and all options proposed.
5. The vehicles shall be new and shall be either leased or purchased. Upon completion or termination of the Contract, the vehicles shall be returned to the Contractor. The vehicles shall be suitable for the Mongolian climate and use locally available fuel.
6. The Contractor shall provide for all operating and maintenance costs required to ensure that all vehicles are in good, safe and legal operating condition including taxes, comprehensive insurances to cover use at all times, and driving by drivers provided by the Contractor, and the Employer, the Engineer, other Employer's Representatives and staff and any other drivers designated, licenses, fuel, spare parts, lubricants, preventative maintenance, and repairs. In the event of a breakdown or accident, the Contractor shall furnish a replacement vehicle within 24 hours.
7. The Contractor shall provide approved competent, licensed drivers for those vehicles designated by the Employer for his use during working hours, for any duration, and including any overtime or weekend work when required by the Employer, to all places related to the Work as directed by the Employer. The drivers will generally be required to work site hours, or other times when work is being carried out on site.

#### B. Vehicle Types

- 1 The vehicles to be provided for the Engineer shall be: 2 No, 4WD vehicles.

#### C. Vehicles General Description

- 1 The vehicles (SUV type) and accessory equipment installed or furnished shall be the latest locally available improved models in current production at time of delivery. They shall be the standard production models offered to commercial firms and shall be of new manufacture, including all parts, components, and accessory items.
2. Parts and components not specifically mentioned in this specification, but which are required to provide a complete vehicle or to comply with any Mongolian Law, shall be included as a part of the equipment to be furnished.
3. Vehicles shall include project-specific signage as well as safety flags, to readily identify these as vehicles authorized on the site of Works, and for operators of heavy equipment to readily identify the presence of a passenger vehicle.
4. Vehicles Additional Requirements
  - a. The vehicles shall have differential, brakes, suspension, wheels, tires, and other component parts necessary to give maximum performance, service, life, and

safety, and not merely meet minimum requirements of the Specification. The engine capacity shall be minimum 2500 cc.

- b. The vehicles shall have ABS Brakes Air Conditioning, Central Locking, Electric Windows, Inertia reel seatbelts, airbags.
- c. Vehicles shall be equipped with spare tire with wheel, snow chains, jack, jack handle, lug wrench and other tools required for emergency maintenance, and operations manual.

## 2.03 INTERNET SERVICE

- A. The Contractor shall provide separate internet lines for access from the Engineer's Field Office and Construction Visitor Center, based on the following:

- 1. A fiber connection of 8Mbps,
- 2. A dedicated Microwave internet connection equivalent to a fiber connection of 8 Mbps.
- 3. A 30 Mbps ADSL connection or a 16 Mbps dedicated corporate.

The Internet Service Provider (ISP) service shall be for the exclusive use of the Engineer and Owner's personnel and shall be separate and in addition to internet service used by the Contractor. The line shall also be separate and in addition to the telephone service line specified herein. In such cases where there is no required cable internet service available, the Contractor shall provide an equivalent. Contractor will be responsible for renewal costs and all associated fees until issuance of Taking-Over Certificate Final Acceptance Certificate. Contractor shall obtain and pay for a service and repair contract with a local representative of the internet services dealer or manufacturer for weekly on-site visit.

## 2.04 TELEPHONE SERVICE

- A. Within 30 days after the date of the Notice to Proceed, the Contractor shall provide in the Field Offices and Construction Visitor Center a telephone system, in good working order, at the conference desk for the use of the Engineer's and Owner's employees in connection with the Works. The telephone system shall have wide band HD voice quality speaker sound output, and one wireless handset shall be kept at the Construction Visitor Center for business communication. The line shall be separate and in addition to the telephone service used by the Contractor. Contractor will be responsible for renewal.
- B. All telephone service charges shall be paid by the Contractor for the duration of the Contract.
- C. Service Contract: The Contractor shall obtain and pay for a service and repair contract with a local representative of the telephone services dealer or manufacturer for weekly on-site visit.

## 2.05 OTHER

- A. Attendance Upon the Employer and Engineer

1. The Contractor shall provide qualified personnel to assist the Employer and Engineer in conducting all field tests. The Contractor shall provide for such labor as is reasonably necessary to attend to the office requirements, clean the instruments and assist the Employer and Engineer in measuring, supervising, checking, testing, examining or setting out the Contractor's Work in any way whatsoever at any time of day and night. All assistance shall be provided under the direct supervision of the Engineer.

#### B. Nameboards

1. The Contractor shall provide, erect and maintain until completion of the Contract nameboards at the entrance to each Site bearing the Employer's and Engineer's names, the name of the project, the Contractor's name and such other names and information as the Employer and the Engineer may direct. The Contractor shall submit the design of the nameboards for the Employer and Engineer's approval prior to fabrication and erection. The nameboards are to be not less than 3m x 2m and written in the English and Mongolian languages.

#### C. Bilingual Secretary and Supporting Staff

1. The Contractor shall employ for the exclusive use of the Employer and Engineer an approved bilingual (English-Mongolian) typist/secretary to work in the Engineer's field office on a full-time basis. The primary role of the secretary will be to coordinate and facilitate the work between Employer/Engineer and the Contractor, including organizing inspection dates for the Contractor and coordinate with Contractor during inspections by the Engineer.
2. The Contractor shall provide qualified personnel to assist the Employer and the Engineer in conducting all field tests. The Contractor shall provide for such labor as is reasonably necessary to attend to the office requirements, clean the instruments and assist the Employer and Engineer in measuring, supervising, checking, testing, examining or setting out the Contractor's Work in any way whatsoever at any time of day and night. All assistance shall be provided under the direct supervision of the Engineer.

#### 2.06 TEMPORARY FENCE

- A. Embed fence posts securely a minimum of 0.6 meter (2 feet) into ground whenever possible to avoid tipping from wind load. Posts to be installed at 2.4 meters (8 feet) on center. Fence posts may be installed on concrete blocks if frequent relocation is anticipated, and if approved by the Engineer. Pull fabric tight and smooth, overlap grommets and clip together if fence fabric ends between posts. Metal wire clips to be used in all grommets, crimped tight.

### PART 3 - EXECUTION

#### 3.01 TELEPHONE SERVICES

- A. Not applicable

#### 3.02 WATER

- A. All water required for and in connection with the Work to be performed and for any specified

tests of piping, equipment or tanks, thru the milestone date for CP-3 shall be provided by and at the expense of Contractor. No separate payment for water used or required will be made and all costs in connection therewith shall be included in the Bid. The Contractor shall provide facilities necessary to convey water from the source to the points of use in accordance with the requirements of the Contract Documents.

Water service to the Engineer's Field Office and Construction Visitor Center shall be supplied by the Contractor. The Contractor shall provide sufficient potable drinking water from an acceptable source to all of the Contractor's employees and Engineer's staff.

- B. Water used for domestic purposes shall be free of contamination and shall conform to the requirements of the local authorities for potable water. The Contractor shall be solely responsible for the adequate functioning of its water supply system and shall be solely liable for any claims arising from the use of same, including discharge or waste of water there from.
- C. Contractor shall provide adequately against waste and needless use of water.
- D. A new freestanding self-contained bottled water cooler shall be provided in the field offices and construction visitor center. The unit shall accept a 20 liter or equivalent "bottled water" bottle or equivalent to be furnished and serviced by the Contractor.
- E. The Contractor shall not make connection to or draw water from any fire hydrant or pipeline without first obtaining permission of the authority having jurisdiction over the use of said fire hydrant or pipeline and from the agency owning the affected water system. For each such connection made, the Contractor shall first attach to the fire hydrant or pipeline a valve and a meter, if required by the said authority, of a size and type acceptable to said authority and agency. The Contractor shall pay permit and water charges.

### 3.03 ELECTRICITY

- A. Arrange for, furnish and maintain all expenses for all electricity required for proper lighting, the use of power tools, for temporary heat for construction operations and for the field offices and construction visitor center up to the time of final acceptance of the project. Contractor shall be responsible for payment of electric power utility use charges over the period between startup of utility service and final acceptance of the project.
- B. Furnish all wiring, fixtures, lamps and other accessories required for his or his subcontractors' work, and for proper lighting, the use of power tools and for temporary heat for construction operations up to the time of final acceptance. Power shall be obtained directly from power company lines or from portable, gasoline or diesel driven generator sets.
- C. Temporary connections for electricity shall be subject to approval of the power company representative and shall be removed in like manner at the Contractor's expense prior to final acceptance of the Work.
- D. Wiring for temporary electric light and power shall be properly installed and maintained and shall be securely fastened in place. Electrical facilities shall conform to the requirements of local electric utility providers

### 3.04 SANITARY CONVENIENCES

- A. Provide sanitary conveniences for the duration of the project for the use of all persons employed on the project, including all other contractors and subcontractors. Separate facilities shall be provided for male and female employees.
- B. Sanitary conveniences shall be properly screened from public observation, provided in sufficient numbers, and in such manner and at such points as shall be approved by the Engineer and/or Owner. The contents shall be removed and legally disposed of at a frequency acceptable to the public health agency having jurisdiction or as required.

### 3.05 PROJECT SIGNS

- A. Contractor shall provide Project Sign(s) in accordance with MCA Requirements.

### 3.06 BARRICADES AND GUARD LIGHTS

- A. Barricades, signs, fences and similar safety and warning devices shall be provided as required, in order to ensure the protection of employees and others concerned with their duties and presence on the premises at the project site.
- B. Provide and maintain guard lights at all barricades, obstructions in plant ways, and at all trenches and pits adjacent to traveled ways.

### 3.07 TEMPORARY HEAT

- A. During the months of October through April, provide heat, fuel and services necessary to protect all of the work and materials against injury from dampness and cold and to maintain temperature above 13 °C (55 °F) in all enclosed portions of the project. Provide temporary heating devices, electrical power, adequate and proper fuel, fire enclosures, and the like, as required for the work of all trades, and shall have watchmen constantly in attendance when fires are burning. Only approved equipment specifically designed for the purpose shall be used. Open salamanders will not be allowed.
- B. The permanent heating system may be used for temporary heat prior to the occupancy of the buildings by the Owner, or as otherwise approved by the Engineer, however, the use of permanent equipment for temporary heat purposes shall not affect the guarantee period stated elsewhere in these specifications. Operate and maintain the temporary heating system (including fuel) and the equipment used for temporary heat until final completion of the project, and repair and replace all items damaged during temporary use. Clean all of the permanent heating equipment if it is used for temporary heat before turning the system over to the Owner. Contractor shall be responsible for payment of the district hot water utility use charges over the period between startup of utility service and final acceptance of the project.

### 3.08 TEMPORARY CLOSURES

- A. Temporary doors and closures for all openings shall be furnished and installed to keep out inclement weather and intruders until the permanent units are installed. Any loss or damage caused by failure to comply with the above provisions shall be replaced and/or repaired at no additional cost to the Owner.

### 3.09 SCAFFOLDING

- A. Furnish, erect, maintain in a safe condition and remove all scaffolding required for the execution of the work not specified as being furnished under other sections herein.
- B. Neither the Engineer nor the Owner will act as an arbitrator on questions of whether the Contractor or any of his subcontractors shall furnish or remove scaffolding required for any portion of the work.

### 3.10 SHELTER AND PROTECTION OF MATERIALS

- A. Provide adequate storage facilities for all materials required for the work. The facilities shall be enclosed, heated and provided with moisture control, as required to provide adequate protection and shall be satisfactory to the Engineer.

### 3.11 BRACING, SHORING AND SHEETING

- A. Provide all bracing, shoring and sheeting as required for safety and for the proper execution of work. Unless otherwise ordered by the Engineer, all bracing, shoring, and sheeting shall be removed when work is completed.

### 3.12 SECURITY

- A. Contractor shall be responsible for protection of the Site, and all Work, materials, equipment, and existing facilities thereon, against vandals and other unauthorized persons. Contractor's effort shall include provision of staff and dedicated temporary facilities (office, guardhouse, bathroom/lavatory facilities etc.) The Contractor shall initiate program in coordination with Owner's existing security system at mobilization and maintain program throughout construction period until Owner's occupancy.
- B. No Claim shall be made against Owner by reason of any act of an employee or trespasser, and Contractor shall make good all damage to Owner's property resulting from Contractor's failure to provide security measures as specified.
- C. Security measures shall include security fencing, barricades, lighting, and other measures as required to protect the Site. Additionally, the Contractor shall engage a guard service to furnish uniformed watchmen at each Site during all non-working hours twenty-four hours a day, seven days a week until Owner's guard is permanently assigned to the site.
- D. The Contractor shall do the following for Site entry control: restrict entry of unauthorized persons and vehicles into Site and existing facilities; allow entry only to authorized persons with proper identification; maintain log of workmen and visitors and make log available to Owner on request; coordinate access of Owner's personnel to Site.

### 3.13 CLEANING AND JANITORIAL SERVICES

- A. Provide janitorial services to include thorough cleaning of all interior floors and furniture, including kitchen, bathrooms, and entrance areas, through the regular working hours.

- B. Empty and clean all trash and garbage containers, dispose of all waste at a designated and approved disposal site.
- C. Maintain all equipment and systems as required.

This Page Intentionally Left Blank

## SECTION 01500 (CP-3) – Working Draft

## TEMPORARY FACILITIES

## PART 1 - GENERAL

## 1.01 SCOPE

- A. The Work of this section includes the furnishing of all labor, tools, equipment and materials, performing all operations necessary to provide temporary facilities as specified herein and as directed by the Engineer.
- B. This Section covers the Field Offices, equipment, structures, facilities, and services provided by the Contractor for Engineer and Owner's use during the implementation of Work. Engineer and Owner shall return Field Offices, equipment, and supplies to Contractor at the completion of Contract, in used condition, wear and tear included. Field Offices shall be designed and constructed in accordance with the best practice of the industry and shall be installed in accordance with the manufacturer's recommendations.
- C. The Contractor shall pay for all costs of Field Offices, equipment, and services supplied under this Section.
- D. The Contractor shall pay for all operation and maintenance costs, to include materials, wages, utility fees and all other costs needed for the full operation of all temporary facilities specified under this Section during the whole contract period and as directed by the Engineer.
- E. Contractor shall take full possession and control of the Field Offices, equipment, and supplies after completion of this Contract.
- E. The materials covered by this specification shall be standard materials of proven quality as furnished by reputable companies. Materials and facilities shall be designed and constructed in accordance with the best practice of the industry and shall be installed and maintained for durability. Temporary roadways are covered in SECTIONs 02224 and 02225 regarding materials of construction. The specifications call attention to certain features but do not purport to cover all details entering into the construction.
- F. Attention is directed to SECTION VII GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT

- A. Measurement and payment for the Work described in this section shall be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 DEFINITIONS

- A. Definitions shall be as specified in PART I BIDDING PROCEDURES.

#### 1.04 SUBMITTALS

- A. Within 14 days after the Commencement of the Works, the Contractor shall submit a detailed layout of the field offices including proposed locations for the offices. One field office shall be located at the Shuvuun Well Field, a separate office located at the Biokombinat Well Field, and a third office at a central location along the Finished Water Transmission Pipeline. Final proposed locations shall be subject to the Engineer's approval.
- B. For manufactured mobile trailers, prior to beginning of manufacture, the Contractor shall submit complete floor plans, assembly, insulation, wall and roof sections, flooring, and electrical drawings, together with detailed specifications and data covering materials used and all accessories and related equipment, in accordance with Section 01300.

#### 1.05 PRODUCT HANDLING

- A. All materials and equipment shall be shipped, stored, handled and installed according to the manufacturer's written recommendations.
- B. The materials and equipment shall be stored on a flat, clean, dry surface to prevent damage and shall be covered to prevent exposure to adverse conditions prior to installation.

#### 1.06 DESIGN CRITERIA

- A. The materials specified are intended to be standard materials of demonstrated successful performance, as manufactured by reputable concerns. Materials shall be designed and manufactured in accordance with industry standards and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the materials.
- B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

### PART 2 - PRODUCTS

#### 2.01 TEMPORARY FIELD OFFICES

- A. Furnish temporary offices, storage and fabrication facilities as required and obtain all necessary applicable permits and/or approvals required for their use. Such facilities shall be located as required and as to not interfere with the Work of the project and shall be completely removed at the completion of the Work.
- B. Field Offices, equipped as indicated herein, shall be provided and ready for use within 30 days after the Commencement of Works and shall be maintained in full operation for a period of 30 days after commissioning, startup and acceptance of the CP-3 Conveyance facilities in a reduced number of facilities agreed by the Engineer.
- C. Furnish field offices with heating, air conditioning, lighting, sanitary facilities, water for drinking, windows for natural lighting. Offices shall be well ventilated, and locks with keys turned over to Engineer.

- D. Field offices shall be provided with parking spaces reserved exclusively for Engineer and Owner vehicles.
- E. Provide weather-surfaced road, at least 3 meters wide, to each Field Office.
- F. Field Offices
1. Provide three Field Offices for the use of the Engineer. Legally dispose of sanitary wastes. The office and rooms shall be constructed in a manner, and of materials, satisfactory to the Engineer and shall include unencumbered emergency egress. Office shall be weathertight with sufficient windows and exterior doors. The office shall be adequately lighted for detailed working conditions, heated and air conditioned during the appropriate seasons.
  2. Thoroughly clean and mop the trailer on a daily basis and restock all paper products such as but not limited to cups, towels, toilet paper, office copy paper, printer paper and plastic liners for waste baskets.
  3. The following table provides an overview of office facilities, including size and equipment, that will together comprise the three separate field offices. The Contractor shall submit to the Engineer for approval, no later than 14 days after commencement date, layout drawings with the corresponding entries and designations.

Room	Size	Furniture
Meeting Room 1 No.	$\geq 30 \text{ m}^2$	10 conference tables each 1,20 m x 0,80m 20 armchairs 10 chairs 1 white board, 1,50 m x 1,00 m 4 bookshelves, 1 m x 2 m, 30 cm deep 2 coat racks 2 waste baskets
Office Type 1 3 No.	$\geq 12 \text{ m}^2$	Each: 1 desk $\geq 4 \text{ m}^2$ , with file drawer and drawers, all lockable incl. keys 1 low table $\approx 1 \text{ m}^2$ 1 chair with rolling casters 2 swivel chairs 2 bookshelves, 1 m x 2 m, 30 cm deep 1 coat rack 1 waste basket
Office Type 2 3 No.	$\geq 16 \text{ m}^2$	Each: 2 desks $\geq 3 \text{ m}^2$ , with file drawer and drawers, all lockable incl. keys 1 low table $\approx 1 \text{ m}^2$ 2 desk chairs 2 office chairs 2 bookshelves, 1 m x 2 m, 30 cm deep 1 coat rack 2 waste baskets
Office Type 3 AutoCAD	$\geq 12 \text{ m}^2$	2 Desk $\geq 3 \text{ m}^2$ , with file drawer and drawers, all lockable incl. keys 1 low table $\approx 1 \text{ m}^2$ 2 desk chairs

Room	Size	Furniture
and Video Control 1 No.		2 office chairs 2 bookshelves, 1 m x 2 m, 30 cm deep 1 coat rack 2 waste baskets
Kitchen 3 No.	$\geq 6 \text{ m}^2$	1 sideboard 2 cupboards 0.8x0.6x0.3 m 2 boilerplates 1 electrical water boiler 1 refrigerator/freezer combination volume min. 270 l. 1 waste bucket 1 coffee machine, Espresso 2 Hot/cold water dispenser cups, saucers, plates, knives, forks and spoons, teapot all to serve 12 persons
Toilet 6 No.	$3 \text{ m}^2$	Each: western W.C suite toilet roll holder wash hand basin mirror towel rail soap dispenser
Shower room 3 No.	$3 \text{ m}^2$	standard shower towel rail soap dispenser mirror
Hall 3 No.		2 fire extinguishers, wall mounted 4 first aid kits

#### 4. Office Equipment Specifications

Desk	Desk board 25 mm thick covered with MDF Table depth: throughout 1000 mm Work height: 750 mm Units locked shelf covered by natural MDF with 2 drawers could be placed under the table The feet shall be chromium coating
Desk Chair	Pneumatic Seat Height Adjustment 360° Swivel Tilt Tension Adjustment Tilt Lock Mechanism Seat board shall have minimum 10 cm thickness Backboard shall be concave polypropylene to meet body ergonomic
Office Chair	Pneumatic Seat Height Adjustment 360° Swivel Tilt Tension Adjustment Backboard shall meet body ergonomic
Bookshelf	Bookshelf min. 25 mm thick covered with MDF Dimensions 1 m x 2 m, 30 cm deep Min 3 open and 3 lockable shelves
Sideboard	Min. 25 mm thick covered with MDF Dimensions 2.0x0.8x0.6 m with tap + sink upper side of kitchen working

#### 5. Fire Extinguishers

- a. Wall mounted hand operated fire extinguishers shall be of the all-purpose, nitrogen pressured, dry chemical type. Fire extinguishers shall be provided at each site during construction. The fire extinguishers shall meet international industrial standards and shall be 10 kg and the color of the shell shall be red. Wall mounting brackets shall be furnished. Two fire extinguishers shall be installed in the Engineer's field offices to be used for this Contract.

## 6. First Aid

- a. The Contractor shall provide and maintain at own expense at the Sites, adequate and easily accessible first-aid kits and facilities for treatment of accidents during the execution of the Works under the Contract and such outfits as may be required under any relevant laws, bylaws, ordinances and regulations in force. The places where these items are kept shall be prominently marked.
- b. Contractor staff shall include employees trained and fully qualified in the use of first aid, duly identified and designated and made known to all employees by posting their names and first aid qualifications in a prominent location at the Sites. The Contractor shall ensure that a person trained in first aid is available at the Works sites, at Temporary Facilities, and at the Engineer's offices.
- c. Any order from the Engineer to renew first aid materials, extend the supply of first aid materials and kits, or increase the number of first aid trained staff, shall be promptly carried out.
- d. First aid kits shall be required at Temporary Facilities, Field offices and in each vehicle.

## 7. Heating and Cooling

- a. The Contractor shall provide electrical heating and cooling system for all rooms and halls. The system must be capable of maintaining reasonable office temperature during the coldest winter months.

## 8. Office and Field Equipment

- a. The Contractor shall provide, equip, and maintain on site the following for the sole use of the Engineer and the Employer until the end of the contract:

Notebook, 15,6" FHD IPS, Intel i7-8565U latest generation, 32GB RAM, 1000 GB SSD + 1TB HDD, MX250, Win10 latest version, MS 365	6 No
External Solid-State Drive, 1 TB, USB 3.1	4 No
Multifunction Color Laser Printers (Printer, Fax, Photocopy, Scanner)	2 No
Projector - Full HD, 4000 ANSI Lumen, 10.000:1 Contrast, WLAN, HDMI	1 No
Digital Camera, not less than 20 MP	2 No
Tablet, Weatherproof, anti-shock, 10-inch, 64 GB, Cellular + WIFI	6 No
Video Camera for surveillance, higher than 4MP, night vision, weatherproof, movable, zooming function, to be installed in the locations approved by the Engineer to provide an overview of the complete construction site and temporary facilities with internet connection, fully	10 No

controlled remotely by the Engineer, local storage capacity for recording of all cameras for 24 hours/day for at least 30 days. Emergency power supply (UPS) suitable for supplying the surveillance system for at least 12 hours in case of power loss.	
--	--

- b. Latest versions of MS Office, Anti-Virus Software with automatic update subscription software package will be provided for each computer.
- c. All above equipment shall be provided in the still sealed manufacturer's packaging and the Engineer shall retain exclusive admin rights for the duration of the project.
- d. The Contractor shall provide and maintain the following for the exclusive use of the Employer and Engineer's Representative and his staff for checking the setting-out and levels of the work:

Survey Instrument set (Electronic distance meter) and accessories	3 No
Theodolite	3 No
Total Station	3 No
30 m steel measuring tapes graduated in millimeters and centimeters	9 No
5 m steel measuring tapes	9 No
Surveying supplies as needed including pegs, steel rods and angles, ranging rods, concrete, paint etc.	As needed

#### 9. Personal Protection Equipment

- a. The Contractor shall provide the following clothing for the exclusive use of the Employer and Engineer and his staff:

Safety helmets	15 No
High Visibility Vests	15 No
Waterproof coats color yellow in assorted sizes (to be specified) complete with belt, over trousers and hat, separate winter warm liners, obtained from an approved supplier.	15 No
Pairs of rubber safety wellingtons in assorted sizes (to be specified)	15 No
Pairs of safety boots in assorted sizes (to be specified)	15 No

#### 10. Miscellaneous Requirements

- a. Consumables – the Contractor shall supply fax/photocopy paper (A4 and A3 sizes), ink and toner replacements, DVD's and CD's, towels, soap, toilet paper, disinfectant, cleaning materials and required maintenance consumables.
- b. Ownership – the Employer and Engineer's field offices shall be new and shall remain the permanent property of the Contractor. The contents of the Field Offices including all specified furniture, service fittings and equipment shall be new and shall be returned to the Contractor on termination or completion of the Contract.

- c. Governing Standards – the field offices shall be designed, built, and installed in compliance with all applicable plumbing, electrical, structural, etc., codes in effect for Mongolia.
  - d. Handling – all electronic equipment and office furnishings shall be handled in a manner that will prevent damage. Any damaged item found after receipt and prior to the Employer and Engineer's acceptance of the item will be replaced or repaired by the Contractor as recommended by the Engineer.
  - e. Equipment Warranty – all equipment shall be provided with the manufacturer's standard warranty.
  - f. Maintenance – the Contractor shall make any required and scheduled (as recommended by the manufacturer) maintenance and repairs to the field offices and their contents during the period of this Contract. The Contractor shall clean the field offices at least daily, unless directed by the Engineer that cleaning is required more frequently, and all trash shall be collected and removed daily to a proper disposal point.
  - g. Acceptable Manufacture – the Contractor shall provide a detailed layout of the field offices to be approved by the Engineer prior to fabrication.
  - h. Installation – the field offices and all equipment shall be set up at locations indicated by the Employer and the Engineer and in accordance with the manufacturers' recommendations and local codes. The Employer and Engineer's field offices shall be at locations adjacent to the site of the Contractor's offices, nominated by the Contractor and approved by the Employer and Engineer. If not already existing, all-weather roads to the field offices shall be provided by the Contractor. Adjacent to the field offices, a graveled parking area with car parking suitable for at least 8 vehicles in all-weather shall be provided and maintained by the Contractor
  - i. Communications Systems - the Contractor shall make all necessary arrangements and pay all installation charges for telephone lines in offices at the Sites and 2 separate telephone lines in the offices of the Employer and Engineer and shall provide a self-answering fax and a switchboard suitable for 5 separate extensions together with an extension and telephone instrument for each room as registered consumer. The telephone service and instruments in the Employer and Engineer's office shall be a touch tone system if locally available. In addition to the office telephone system the Contractor shall provide 5 no. mobile telephones for the Employer and Engineer including line and machine. The telephone and fax services shall be in the name of Contractor, and all charges, including calls and maintenance after installation shall be billed to and paid by the Contractor. Also, wireless connection will be available for Employer, Engineer, and other personnel in temporary facilities
  - j. Temporary Sanitary Facilities – the Contractor shall provide, furnish, and maintain temporary sanitary facilities at the site, as provided herein, for the needs of all construction workers and others performing work on site.
5. Vehicles for the Employer and Engineer
- a. General

- i. Within 30 days after Effective Date, the Contractor shall provide two vehicles and the Employer will allocate them for the exclusive use of this work for the duration of the Contract. All costs incurred for supply and maintenance of these vehicles will be reimbursed under the Contract.
  - ii. In the event of failure to supply vehicles within the time specified, the Employer reserves the right to provide such vehicles as are necessary until such time as the specified vehicles are made available. Cost incurred for provision and maintenance of these vehicles will be deducted from monies due or to become due to the Contractor.
  - iii. The vehicles will be subjected to severe operating conditions in climate ranging from hot to extreme cold environment.
  - iv. The Contractor shall submit for review, technical literature, and specifications in sufficient detail to identify and describe the vehicles and all options proposed.
  - v. The vehicles shall be new and shall be either leased or purchased. Upon completion or termination of the Contract, the vehicles shall be returned to the Contractor. The vehicles shall be suitable for the Mongolian climate and use locally available fuel.
  - vi. The Contractor shall provide for all operating and maintenance costs required to ensure that all vehicles are in good, safe and legal operating condition including taxes, comprehensive insurances to cover use at all times, and driving by drivers provided by the Contractor, and the Employer, the Engineer, other Employer's Representatives and staff and any other drivers designated, licenses, fuel, spare parts, lubricants, preventative maintenance, and repairs. In the event of a breakdown or accident, the Contractor shall furnish a replacement vehicle within 24 hours.
  - vii. The Contractor shall provide approved competent, licensed drivers for those vehicles designated by the Employer for his use during working hours, for any duration, and including any overtime or weekend work when required by the Employer, to all places related to the Work as directed by the Employer. The drivers will generally be required to work site hours, or other times when work is being carried out on site.
- b. Vehicle Types
- i. The vehicles to be provided for the Engineer shall be: 2 No, 4WD vehicles.
- c. Vehicles General Description
- i. The vehicles (SUV type) and accessory equipment installed or furnished shall be the latest locally available improved models in current production at time of delivery. They shall be the standard production models offered to commercial firms and shall be of new manufacture, including all parts, components, and accessory items.

- ii. Parts and components not specifically mentioned in this specification, but which are required to provide a complete vehicle or to comply with any Mongolian Law, shall be included as a part of the equipment to be furnished.
  - iii. Vehicles shall include project-specific signage as well as safety flags, to readily identify these as vehicles authorized on the site of Works, and for operators of heavy equipment to readily identify the presence of a passenger vehicle.
- d. Vehicles Additional Requirements
- i. The vehicles shall have differential, brakes, suspension, wheels, tires, and other component parts necessary to give maximum performance, service, life, and safety, and not merely meet minimum requirements of the Specification. The engine capacity shall be minimum 2500 cc.
  - ii. The vehicles shall have ABS Brakes Air Conditioning, Central Locking, Electric Windows, Inertia reel seatbelts, airbags.
  - iii. Vehicles shall be equipped with spare tire with wheel, snow chains, jack, jack handle, lug wrench and other tools required for emergency maintenance, and operations manual.
- a.

## 2.02 INTERNET SERVICE

- A. The Contractor shall provide separate internet lines for access from the Engineer's Field Offices, based on the following:
- 1. A connection of 8Mbps,
  - 2. A dedicated Microwave internet connection equivalent to a fiber connection of 8 Mbps.
  - 3. A 30 Mbps ADSL connection or a 16 Mbps dedicated corporate.

The Internet Service Provider (ISP) service shall be for the exclusive use of the Engineer and Owner's personnel and shall be separate and in addition to internet service used by the Contractor. The line shall also be separate and in addition to the telephone service line specified herein. In such cases where there is no required cable internet service available, the Contractor shall provide an equivalent. Contractor will be responsible for renewal costs and all associated fees until issuance of Taking-Over Certificate Final Acceptance Certificate. Contractor shall obtain and pay for a service and repair contract with a local representative of the internet services dealer or manufacturer for weekly on-site visit.

## 2.03 TELEPHONE SERVICE

- A. Within 30 days after the date of the Notice to Proceed, the Contractor shall provide in all Field Offices a telephone system, in good working order, at the conference desk for the use of the Engineer's and Owner's employees in connection with the Works. The line shall be separate and in addition to the telephone service used by the Contractor. Contractor will be responsible for renewal.
- B. All telephone service charges shall be paid by the Contractor for the duration of the Contract.

- C. Service Contract: The Contractor shall obtain and pay for a service and repair contract with a local representative of the telephone services dealer or manufacturer for weekly on-site visit.

## 2.04 OTHER

### A. Attendance Upon the Employer and Engineer's Representative:

- 1. The Contractor shall provide qualified personnel to assist the Employer and Engineer in conducting all field tests. The Contractor shall provide for such labor as is reasonably necessary to attend to the office requirements, clean the instruments and assist the Employer and Engineer in measuring, supervising, checking, testing, examining or setting out the Contractor's Work in any way whatsoever at any time of day and night. All assistance shall be provided under the direct supervision of the Engineer.

### B. Nameboards

- 1. The Contractor shall provide, erect and maintain until completion of the Contract nameboards at the entrance to each Site bearing the Employer's and Engineer's names, the name of the project, the Contractor's name and such other names and information as the Employer and the Engineer may direct. The Contractor shall submit the design of the nameboards for the Employer and Engineer's approval prior to fabrication and erection. The nameboards are to be not less than 3m x 2m and written in the English and Mongolian languages.

### C. Bilingual Secretary and Supporting Staff

- 1. The Contractor shall employ for the exclusive use of the Employer and Engineer an approved bilingual (English-Mongolian) typist/secretary to work in the Engineer's field office on a full-time basis. The primary role of the secretary will be to coordinate and facilitate the work between Employer/Engineer and the Contractor, including organizing inspection dates for the Contractor and coordinate with Contractor during inspections by the Engineer.
- 2. The Contractor shall provide qualified personnel to assist the Employer and the Engineer in conducting all field tests. The Contractor shall provide for such labor as is reasonably necessary to attend to the office requirements, clean the instruments and assist the Employer and Engineer in measuring, supervising, checking, testing, examining or setting out the Contractor's Work in any way whatsoever at any time of day and night. All assistance shall be provided under the direct supervision of the Engineer.

## 2.05 TEMPORARY FENCE

### A. Temporary Perimeter Fencing

- 1. Temporary perimeter fencing is to be supplied and installed by the General Contractor, to enclose and secure the field offices, while providing screening of construction activities.
- 2. Temporary fence shall be 2.4 meters (8 feet) above grade. All fence panels shall align with adjacent panels along top.

3. Fencing metals to be low sheen black finish, 60 mm (2 3/8") galvanized posts with 11 gauge chain link fencing, 41 mm (1 5/8") top and bottom rail. All fencing is to have screening fabric, attached with galvanized metal heavy gauge wire clips, black color.
4. Screening fabric shall be knitted polyethylene cloth, with reinforced band and grommets along top and sides for secure anchoring to chain link panels.
5. Embed fence posts securely a minimum of 0.6 meter (2 feet) into ground whenever possible to avoid tipping from wind load. Posts to be installed at 2.4 meters (8 feet) on center. Fence posts may be installed on concrete blocks if frequent relocation is anticipated, and if approved by the Engineer. Pull fabric tight and smooth, overlap grommets and clip together if fence fabric ends between posts. Metal wire clips to be used in all grommets, crimped tight.

## PART 3 - EXECUTION

### 3.01 POTABLE WATER

- A. A new freestanding self-contained bottled water cooler shall be provided in the field offices. The unit shall accept a 20 liter or equivalent "bottled water" bottle or equivalent to be furnished and serviced by the Contractor.
- B. Two additional 20-liter bottles of water shall be stockpiled on site, and additional bottles of water shall be provided so that the supply is uninterrupted throughout the Work.

### 3.02 ELECTRICITY

- A. Arrange for, furnish and maintain all expenses for all electricity required for proper lighting, heating, cooling and powering of the field offices to the time of final acceptance of the Work. Contractor shall be responsible for payment of electric power utility use charges over the period between start-up of utility service and final acceptance of the Work.
- B. Furnish all wiring, fixtures, lamps and other accessories required for his or his subcontractors' work, and for proper lighting, the use of power tools and for temporary heat for construction operations up to the time of final acceptance. Power shall be obtained directly from power company lines or from portable, gasoline or diesel driven generator sets.
- C. Temporary connections for electricity shall be subject to approval of the power company representative and shall be removed in like manner at the Contractor's expense prior to final acceptance of the Work.
- D. Wiring for temporary electric light and power shall be properly installed and maintained and shall be securely fastened in place. Electrical facilities shall conform to the requirements of local electric utility providers.

### 3.03 SANITARY CONVENIENCES

- A. Provide sanitary conveniences for the duration of the project for the use of all persons employed on the project, including all other contractors and subcontractors. Separate facilities shall be provided for male and female employees.

- B. Sanitary conveniences shall be properly screened from public observation, provided in sufficient numbers, and in such manner and at such points as shall be approved by the Engineer and/or Owner. The contents shall be removed and legally disposed of at a frequency acceptable to the public health agency having jurisdiction or as required.

#### 3.04 PROJECT SIGNS

- A. Contractor shall provide Project Sign(s) in accordance with MCA Requirements.

#### 3.05 BARRICADES AND GUARD LIGHTS

- A. Barricades, signs, fences and similar safety and warning devices shall be provided as required, in order to ensure the protection of employees and others concerned with their duties and presence on the premises at the project site.
- B. Provide and maintain guard lights at all barricades, obstructions in plant ways, and at all trenches and pits adjacent to traveled ways.

#### 3.06 TEMPORARY HEAT

- A. During the months of October through April, provide heat, fuel and services necessary to protect the field offices against damaged from dampness and cold and to maintain temperature above 13 °C (55 °F). Only approved equipment specifically designed for the purpose shall be used. Open salamanders will not be allowed.
- B. The permanent heating system may be used for temporary heat prior to the occupancy of the Well Pump Houses by the Owner, or as otherwise approved by the Engineer, however, the use of permanent equipment for temporary heat purposes shall not affect the guarantee period stated elsewhere in these specifications. Operate and maintain the temporary heating system (including fuel) and the equipment used for temporary heat until final completion of the project, and repair and replace all items damaged during temporary use. Clean all of the permanent heating equipment if it is used for temporary heat before turning the system over to the Owner. Contractor shall be responsible for payment of the district hot water utility use charges over the period between start up of utility service and final acceptance of the project.

#### 3.07 TEMPORARY CLOSURES

- A. Temporary doors and closures for all openings shall be furnished and installed to keep out inclement weather and intruders until the permanent units are installed. Any loss or damage caused by failure to comply with the above provisions shall be replaced and/or repaired at no additional cost to the Owner.

#### 3.08 SHELTER AND PROTECTION OF MATERIALS

- A. Provide adequate storage facilities for all materials required for the Work. The facilities shall be enclosed, heated and provided with moisture control, as required to provide adequate protection and shall be satisfactory to the Engineer.

#### 3.09 SECURITY

- A. Contractor shall be responsible for protection of the Site, and all Work, materials, equipment, and existing facilities thereon, against vandals and other unauthorized persons.

- B. No Claim shall be made against Owner by reason of any act of an employee or trespasser, and Contractor shall make good all damage to Owner's property resulting from Contractor's failure to provide security measures as specified.
- C. Security measures shall include security fencing, barricades, lighting, and other measures as required to protect the Site. Additionally, the Contractor shall engage a guard service to furnish uniformed watchmen at each Site during all non-working hours twenty-four hours a day, seven days a week.
- D. The Contractor shall do the following for Site entry control: restrict entry of unauthorized persons and vehicles into Site and existing facilities; allow entry only to authorized persons with proper identification; maintain log of workmen and visitors and make log available to Owner on request; coordinate access of Owner's personnel to Site.

END OF SECTION

## SECTION 01568 (CP-1)

EROSION CONTROL, SEDIMENTATION AND  
CONTAINMENT OF CONSTRUCTION MATERIALS

## PART 1 – GENERAL

## 1.01 DESCRIPTION:

- A. Provide all work and take all measures necessary to control soil erosion resulting from construction operations, prevent flow of sediment from construction site, and contain construction materials (including excavation and backfill) within protected working area as to prevent damage to any stream or wetlands.
- B. Attention is directed to the SECTION VII GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT

- A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 REFERENCE:

- A. "Guide-lines for Erosion and Sediment Control, Planning and Implementation" and "Processes, Procedures and Methods to Control Pollution Resulting from all Construction Activity", published by the United States Environmental Protection Agency.

## 1.04 SUBMITTALS:

- A. Two weeks prior to the start of the work, submit to Engineer, for review, a plan with detailed sketches showing the proposed methods to be used for controlling erosion during construction.

## 1.05 QUALITY ASSURANCE:

- A. All work shall be performed in accordance with all applicable Government and Local regulations and permits associated with the project.
- B. Sedimentation and erosion control best management practices shall be installed, at a minimum, as approved by Engineer, and prior to the start of any clearing of vegetation or excavation of materials, to protect waterbodies or wetlands in the vicinity of the project.
- C. Additional erosion control shall be implemented as necessary in the event that the erosion and sedimentation control system as shown on the plans is not sufficient

enough to protect erosion or sedimentation to nearby wetlands as a result of contractors means and methods for restoration activities.

- D. The sedimentation and erosion control system shall be maintained fully functional and shall not be removed until disturbed areas are stabilized by seeding, natural establishment or other means necessary as directed by the Engineer.
- E. All stockpiled materials shall be located in designated upland portions of the site and shall not impact waterbodies and wetlands in the vicinity of the project.
- F. Use acceptable procedures, including use of water diversion structures, diversion ditches, settling basins, and sediment traps.
- G. Operations restricted to areas of work indicated on drawings and area which must be entered for construction of temporary or permanent facilities.
- H. If construction materials are washed away during construction, remove materials from fouled areas.
- I. Stabilize diversion outlets by means acceptable to Engineer.
- J. Engineer has authority to limit surface area of erodible earth material exposed by clearing and grubbing, excavation, borrow and fill operations and to direct immediate permanent or temporary pollution control measures to prevent contamination of any stream or wetlands, including construction of temporary berms, dikes, dams, sediment basins, sediment traps, slope drains, and use of temporary mulches, mats, or other control devices or methods as necessary to control erosion.

## PART 2 – PRODUCTS

### 2.01 BALES:

- A. Straw or other suitable material acceptable to Engineer.

### 2.02 WOOD STAKES:

- A. 50 mm x 50 mm x 0.9 m (2 in. by 2 in. by 3 ft).

### 2.03 SYNTHETIC FILTER FABRIC:

- A. Synthetic filter fabric to be a pervious sheet of propylene, nylon, polyester or ethylene filaments and shall be certified by the manufacturer or supplier as conforming to the following requirements:

<u>Physical Property</u>	<u>Requirements</u>
Filtering Efficiency	75% (min.)
Tensile Strength at 20% (max.) Elongation	Extra Strength – 900 kg/m minimum (50 lbs./lin. In).

Standard Strength –  
540 kg/m minimum (30 lbs./lin. in.)

Flow Rate 12 L/m<sup>2</sup>/min minimum (0.3 gal./sq. ft./min)

- B. Burlap to be 340 gram/m<sup>2</sup> fabric (10 ounce per square yard).
- C. Posts or stakes for filter fences either 50mm x 50mm or 50mm x 76mm or 50mm x 102mm (2 x 2 or 2 x 3 or 2 x 4 inch) studs or 0.74 kg (minimum) per linear meter (0.5 pounds (minimum) per linear foot).

#### 2.04 FILTERING DEVICE:

- A. Filtering device as approved by the Engineer, shall meet the following minimum specifications:

<u>Physical Property</u>	<u>Requirements</u>
Total Suspended Solids Removal	78%
Tensile Strength	180 kPa (26 psi)
Flow Rate	140 l/min/m (11.3 gal/min/ft)
Density	48 kg/m (32 lbs/ft)

Compost media shall not contain noxious non-native weed seeds or other invasive plant parts (roots, rhizomes, etc.). For areas where filtering device is proposed to remain permanently, device may be seeded at the time of installation with a seed mix approved by the Engineer.

#### 2.05 CATCH BASIN SEDIMENTATION CONTROL:

- A. Provide and maintain filtering device, or equivalent product as approved by the Engineer, at each existing and newly installed catch basin throughout duration of construction.

#### 2.06 FENCING

- A. Woven wire fabric fencing shall be galvanized, mesh spacing of 150 millimeters, maximum 1.62-millimeter diameter wire, at least 800 millimeters tall.

#### 2.07 FASTNERS

- A. Fasteners to wood posts shall be steel, at least 40 mm long.

### PART 3 – EXECUTION

### 3.01 GENERAL:

- A. Do not discharge chemicals, fuels, lubricants, bitumen, raw sewage and other harmful waste into or alongside any body of water or into natural or man-made channels.
- B. Soil and sedimentation control measures consisting of silt fence and filtering device or equivalent approved by the Engineer shall be placed in areas as directed by Engineer. Modifications to the location of perimeter filtering devices shall be approved by the Engineer. Filtering devices shall be installed prior to ground disturbance. Erosion and sediment controls to be placed surrounding the base of all deposits of stored and/or excavated materials and topsoil.

Following work in an area, disturbed ground shall be stabilized as soon as practicable. In areas of the site where construction activities have temporarily or permanently ceased, stabilization measures shall be initiated within 7 days.

### 3.02 INSTALLATION:

- A. Install sediment and erosion controls in all locations as directed, surrounding base of all deposits of stored excavated material outside of disturbed area, and where directed by the Engineer.
- B. Install checks immediately before site is cleared and before trench excavation. Locate checks, surrounding stored material, approximately 2m (6 ft.) from material.
- C. Hold silt socks in place with two 50 mm by 50 mm by 1 m (2 in. by 2 in. by 3 ft.) stakes so that each bale is butted tightly against adjoining bale thereby precluding shortcircuiting of erosion check.
- D. Construct earth berms or diversions to intercept and divert runoff water from critical areas.
- E. Discharge silt-laden water from excavations onto filter fabric mat and/or baled hay or straw sediment traps to ensure that only filtered water is returned to watercourses.
- F. Do not place excavated soil material adjacent to water-course in manner that will cause it to wash away by high water or runoff.
- G. Prevent damage to vegetation by excessive watering or silt accumulation in the discharge area.
- H. Do not dump spoiled material into any streams, wetlands, surface waters, or unspecified locations.
- I. Prevent indiscriminate, arbitrary, or capricious operation of equipment in streams, wetlands or surface waters.
- J. Do not pump silt-laden water into surface waters, streams, wetlands, or natural or man-made channels leading thereto.

- K. Prevent damage to vegetation adjacent to or outside of construction area limits.
- L. Do not dispose of trees, brush, debris, paints, chemicals, asphalt products, concrete curing compounds, fuels, lubricants, insecticides, washwater from concrete trucks or hydroseeders, or any other pollutant in streams, wetlands, surface waters, or natural or man-made channels leading thereto, or unspecified locations.
- M. Do not alter flow line of any stream unless indicated or specified.

END OF SECTION

This Page Intentionally Left Blank

## SECTION 01568 (CP-2, CP-3)

EROSION CONTROL, SEDIMENTATION AND  
CONTAINMENT OF CONSTRUCTION MATERIALS

## PART 1 – GENERAL

## 1.01 DESCRIPTION:

- A. Provide all work and take all measures necessary to control soil erosion resulting from construction operations, prevent flow of sediment from construction site, and contain construction materials (including excavation and backfill) within protected working area as to prevent damage to any stream or wetlands.
- B. Attention is directed to the SECTION VII GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT

- A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 REFERENCE:

- A. "Guide-lines for Erosion and Sediment Control, Planning and Implementation" and "Processes, Procedures and Methods to Control Pollution Resulting from all Construction Activity", published by the United States Environmental Protection Agency.

## 1.04 SUBMITTALS:

- A. Two weeks prior to the start of the work, submit to Engineer, for review, a plan with detailed sketches showing the proposed methods to be used for controlling erosion during construction.

## 1.05 QUALITY ASSURANCE:

- A. All work shall be performed in accordance with all applicable Government and Local regulations and permits associated with the project.
- B. Sedimentation and erosion control best management practices shall be installed, at a minimum, as approved by the Engineer and as shown on the Drawings, and prior to the start of any clearing of vegetation or excavation of materials, to protect waterbodies or wetlands in the vicinity of the project.
- C. Additional erosion control shall be implemented as necessary in the event that the erosion and sedimentation control system as shown on the plans is not sufficient

enough to protect erosion or sedimentation to nearby wetlands as a result of contractors means and methods for restoration activities.

- D. The sedimentation and erosion control system shall be maintained fully functional and shall not be removed until disturbed areas are stabilized by seeding, natural establishment or other means necessary as directed by the Engineer.
- E. All stockpiled materials shall be located in portions of the site approved by the Engineer and shall not impact waterbodies and wetlands in the vicinity of the project.
- F. Use acceptable procedures, including use of water diversion structures, diversion ditches, settling basins, and sediment traps.
- G. Operations restricted to areas of work indicated on drawings and area which must be entered for construction of temporary or permanent facilities.
- H. If construction materials are washed away during construction, remove materials from fouled areas.
- I. Stabilize diversion outlets by means acceptable to Engineer.
- J. Engineer has authority to limit surface area of erodible earth material exposed by clearing and grubbing, excavation, borrow and fill operations and to direct immediate permanent or temporary pollution control measures to prevent contamination of any stream or wetlands, including construction of temporary berms, dikes, dams, sediment basins, sediment traps, slope drains, and use of temporary mulches, mats, or other control devices or methods as necessary to control erosion.

## PART 2 – PRODUCTS

### 2.01 BALES:

- A. Straw or other suitable material acceptable to Engineer.

### 2.02 WOOD STAKES:

- A. 50 mm x 50 mm x 0.9 m (2 in. by 2 in. by 3 ft).

### 2.03 SYNTHETIC FILTER FABRIC:

- A. Synthetic filter fabric to be a pervious sheet of propylene, nylon, polyester or ethylene filaments and shall be certified by the manufacturer or supplier as conforming to the following requirements:

<u>Physical Property</u>	<u>Requirements</u>
Filtering Efficiency	75% (min.)
Tensile Strength at 20% (max.) Elongation	Extra Strength – 900 kg/m minimum (50 lbs./lin. In).

Standard Strength –  
540 kg/m minimum (30 lbs./lin. in.)

Flow Rate 12 L/m<sup>2</sup>/min minimum (0.3 gal./sq. ft./min)

- B. Burlap to be 340 gram/m<sup>2</sup> fabric (10 ounce per square yard).
- C. Posts or stakes for filter fences either 50mm x 50mm or 50mm x 76mm or 50mm x 102mm (2 x 2 or 2 x 3 or 2 x 4 inch) studs or 0.74 kg (minimum) per linear meter (0.5 pounds (minimum) per linear foot).

#### 2.04 FILTERING DEVICE:

- A. Filtering device as approved by the Engineer, shall meet the following minimum specifications:

<u>Physical Property</u>	<u>Requirements</u>
Total Suspended Solids Removal	78%
Tensile Strength	180 kPa (26 psi)
Flow Rate	140 l/min/m (11.3 gal/min/ft)
Density	48 kg/m (32 lbs/ft)

Compost media shall not contain noxious non-native weed seeds or other invasive plant parts (roots, rhizomes, etc.). For areas where filtering device is proposed to remain permanently, device may be seeded at the time of installation with a seed mix approved by the Engineer.

#### 2.05 CATCH BASIN SEDIMENTATION CONTROL:

- A. Provide and maintain filtering device, or equivalent product as approved by the Engineer, at each existing and newly installed catch basin throughout duration of construction.

#### 2.06 FENCING

- A. Woven wire fabric fencing shall be galvanized, mesh spacing of 150 millimeters, maximum 1.62-millimeter diameter wire, at least 800 millimeters tall.

#### 2.07 FASTNERS

- A. Fasteners to wood posts shall be steel, at least 40 mm long.

### PART 3 – EXECUTION

### 3.01 GENERAL:

- A. Do not discharge chemicals, fuels, lubricants, bitumen, raw sewage and other harmful waste into or alongside any body of water or into natural or man-made channels.
- B. Soil and sedimentation control measures consisting of silt fence and filtering device or equivalent approved by the Engineer shall be placed in areas as depicted on Drawings. Modifications to the location of perimeter filtering devices shall be approved by the Engineer. Filtering devices shall be installed prior to ground disturbance. Erosion and sediment controls to be placed surrounding the base of all deposits of stored and/or excavated materials and topsoil.

Following work in an area, disturbed ground shall be stabilized as soon as practicable. In areas of the site where construction activities have temporarily or permanently ceased, stabilization measures shall be initiated within 7 days.

### 3.02 INSTALLATION:

- A. Install sediment and erosion controls in all locations as directed, surrounding base of all deposits of stored excavated material outside of disturbed area, and where directed by the Engineer.
- B. Install checks immediately before site is cleared and before trench excavation. Locate checks, surrounding stored material, approximately 2m (6 ft.) from material.
- C. Hold silt socks in place with two 50 mm by 50 mm by 1 m (2 in. by 2 in. by 3 ft.) stakes so that each bale is butted tightly against adjoining bale thereby precluding shortcircuiting of erosion check.
- D. Construct earth berms or diversions to intercept and divert runoff water from critical areas.
- E. Discharge silt-laden water from excavations onto filter fabric mat and/or baled hay or straw sediment traps to ensure that only filtered water is returned to watercourses.
- F. Do not place excavated soil material adjacent to water-course in manner that will cause it to wash away by high water or runoff.
- G. Prevent damage to vegetation by excessive watering or silt accumulation in the discharge area.
- H. Do not dump spoiled material into any streams, wetlands, surface waters, or unspecified locations.
- I. Prevent indiscriminate, arbitrary, or capricious operation of equipment in streams, wetlands or surface waters.
- J. Do not pump silt-laden water from trenches or excavations into surface waters, streams, wetlands, or natural or man-made channels leading thereto.

- K. Prevent damage to vegetation adjacent to or outside of construction area limits.
- L. Do not dispose of trees, brush, debris, paints, chemicals, asphalt products, concrete curing compounds, fuels, lubricants, insecticides, washwater from concrete trucks or hydroseeders, or any other pollutant in streams, wetlands, surface waters, or natural or man-made channels leading thereto, or unspecified locations.
- M. Do not alter flow line of any stream unless indicated or specified.

## SECTION 01610 (CP-1)

## DELIVERY, STORAGE AND HANDLING

## PART 1 - GENERAL

## 1.01 SCOPE:

- A. This Section specifies the general requirements for the delivery handling, storage and protection for all items required in the construction of the Work. Additional specific requirements, if any, are specified with the related item.

## 1.02 MEASUREMENT AND PAYMENT:

- A. Measurement and payment for the Work described in this section shall be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 DEFINITIONS:

- A. Definitions shall be as specified in PART I – BIDDING PROCEDURES.

## 1.04 SUBMITTALS – Not Used

## 1.05 PRODUCT HANDLING:

## A. Transportation and Delivery

1. Transport, handle and store (prior to incorporation into the Work) items in accordance with manufacturer's printed instructions.
2. Schedule delivery to reduce long term on-site storage prior to installation and/or operation.
3. Coordinate delivery with installation to ensure minimum holding time for items that are easily damaged or sensitive to deterioration.
4. Deliver products to the site in manufacturer's original sealed containers or other packing systems, complete with instructions for handling, storing, unpacking, protecting and installing.
5. All items delivered to the site shall be unloaded by the Contractor and placed in a manner which will not hamper the Contractor's normal construction operation or those of subcontractors and other contractors and will not interfere with the flow of necessary traffic. The Owner shall not offload any materials or equipment at the site.
6. Provide equipment and personnel to unload all items delivered to the site.

## B. Engineer's Inspection

1. Contractor shall promptly inspect shipments to assure that products comply with requirements, quantities are correct, and items are undamaged.

2. Contractor shall notify Engineer verbally, and in writing, immediately upon arrival of all products.
3. Engineer, with assistance of Contractor, shall inspect all well materials (well screen, well casing, pipe connections, centralizers, manufactured glass beads, processed sand for transition pack, and cement-grout well seal).
4. At a minimum, Engineer will inspect the following: condition and size (diameter) of glass beads; condition, roundness, straightness and wall thickness of well casing and well screen; condition, roundness and diameter of pipe connections; condition and size of centralizers; uniformity and size of transition pack; and weight of cement-grout.
5. Well materials that are damaged, or do not meet the specifications for size, diameter, thickness, weight, roundness, straightness, length, etc. shall not be approved by Engineer and shall not be used in well construction. Unapproved materials shall be replaced with materials that do meet Engineer's approval.

#### C. Storage and Protection

1. Store and protect products and equipment in accordance with the manufacturer's instructions, with seals and labels intact and legible. Storage instruction shall be studied by the Contractor and reviewed with the Engineer. Instructions shall be carefully followed and a written record of this kept by the Contractor for each product and pieces of equipment.
2. Arrange storage of products and equipment to permit access for periodic inspection. Periodically inspect to make sure products and equipment are undamaged and are maintained under specified conditions.
3. Provide protective maintenance during storage consisting of inspecting surfaces for signs or corrosion or other damage, applying any coatings as recommended by the manufacturer and all other precautions to assure proper protection of all products stored and for compliance with manufacturers' requirements related to warranties.
4. Store loose granular materials on solid flat surface in a well-drained area. Prevent mixing with foreign matter.
5. Comply with the requirements of SECTION 02672, Paragraph 1.10, DELIVERY, STORAGE AND HANDLING.

#### 1.06 DESIGN CRITERIA – Not Used

#### PART 2 – PRODUCTS – Not Used

#### PART 3 – EXECUTION – Not Used

END OF SECTION

## SECTION 01610 (CP-2, CP-3)

## DELIVERY, STORAGE AND HANDLING

## PART 1 - GENERAL

## 1.01 SCOPE:

- A. This Section specifies the general requirements for the delivery handling, storage and protection for all items required in the construction of the work. Additional specific requirements, if any, are specified with the related item.
- B. Attention is directed to the SECTION VI GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT:

- A. Measurement and payment for the Work described in this section shall be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 DEFINITIONS:

- A. Definitions shall be as specified in PART I – BIDDING PROCEDURES.

## 1.04 SUBMITTALS – Not Used

## 1.05 PRODUCT HANDLING:

- A. Transportation and Delivery
  - 1. Transport, handle and store (prior to incorporation into the work) items in accordance with manufacturer's printed instructions.
  - 2. Schedule delivery to reduce long term on-site storage prior to installation and/or operation.
  - 3. Coordinate delivery with installation to ensure minimum holding time for items that are hazardous, flammable, easily damaged or sensitive to deterioration.
  - 4. Deliver products to the site in manufacturer's original sealed containers or other packing systems, complete with instructions for handling, storing, unpacking, protecting and installing.
  - 5. All items delivered to the site shall be unloaded by the Contractor and placed in a manner which will not hamper the Contractor's normal construction operation or those of subcontractors and other contractors and will not interfere with the flow of necessary traffic. The Owner shall not offload any materials or equipment at the site.
  - 6. Provide equipment and personnel to unload all items delivered to the site.

7. Promptly inspect shipment to assure that products comply with requirements, quantities are correct, and items are undamaged. For items furnished by others (i.e. Owner, other Contractors), perform inspection in the presence of the Engineer. Notify Engineer verbally, and in writing, of any problems.

B. Storage and Protection

1. Store and protect products and equipment in accordance with the manufacturer's instructions, with seals and labels intact and legible. Storage instruction shall be studied by the Contractor and reviewed with the Engineer. Instructions shall be carefully followed and a written record of this kept by the Contractor for each product and pieces of equipment.
2. Arrange storage of products and equipment to permit access for inspection. Periodically inspect to make sure products and equipment are undamaged and are maintained under specified conditions.
3. Provide protective maintenance during storage consisting of manually exercising equipment, inspecting mechanical surfaces for signs or corrosion or other damage, lubricating, applying any coatings as recommended by the equipment manufacturer necessary for its protection and all other precautions to assure proper protection of all equipment stored and for compliance with manufacturers' requirements related to warranties.
4. Store loose granular materials on solid flat surface in a well-drained area. Prevent mixing with foreign matter.
5. Cement and lime shall be stored under a roof and off the ground and shall be kept completely dry at all times. All structural, miscellaneous and reinforcing steel shall be stored off the ground or otherwise to prevent accumulation of dirt or grease, and in a position to prevent accumulations of standing water and to minimize rusting. Beams shall be stored with the webs vertical. Precast concrete shall be handled and stored in a manner to prevent accumulations of dirt, standing water, staining, chipping or cracking. Brick, block and similar masonry products shall be handled and stored in manner to reduce breakage, cracking and spalling to a minimum.
6. All mechanical and electrical equipment and instruments shall be covered with canvas and stored in a weathertight building to prevent injury. The building may be a temporary structure on the site or elsewhere, but it shall be satisfactory to the Engineer. Building shall be provided with adequate ventilation to prevent condensation. Maintain temperature and humidity within range required by manufacturer and to prevent condensation on the equipment being stored.
  - a. All equipment shall be stored fully lubricated with oil, grease and other lubricants unless otherwise instructed by the manufacturer.
  - b. Moving parts shall be rotated a minimum of once weekly to insure proper lubrication and to avoid metal-to-metal "welding".

- c. Upon installation of the equipment, the Contractor shall start the equipment, at least half load, once weekly for an adequate period of time to ensure that the equipment does not deteriorate from lack of use.
- d. Lubricants shall be changed upon completion of installation and as frequently as required thereafter during the period between installation and acceptance. New lubricants shall be put into the equipment at the time of acceptance.
- e. For electrical equipment (including switchgear, switchboards, motor control centers, and variable frequency drives) installed in areas where temperature and humidity are not controlled for, provide temporary heaters in accordance with manufacturer's recommendations to prevent condensation prior to energization of equipment.
- f. Prior to acceptance of the equipment, the Contractor shall have the manufacturer inspect the equipment and certify that its condition has not been detrimentally affected by the long storage period. Such certifications by the manufacturer shall be deemed to mean that the equipment is judged by the manufacturer to be in a condition equal to that of equipment that has been shipped, installed, tested and accepted in a minimum time period. As such, the manufacturer will guaranty the equipment equally in both instances. If such a certification is not given, the equipment shall be judged to be defective. It shall be removed and replaced at the Contractor's expense.

#### C. Storage and Handling of Hazardous Materials

- 1. The Contractor shall construct and use a separate storage area for hazardous materials used in constructing the Work.
  - a. For the purpose of this paragraph, hazardous materials to be stored in the separate area are products labeled with any of the following terms:

Warning, Caution, Poisonous, Toxic, Flammable, Corrosive, Reactive, or Explosive. In addition, whether or not so labeled, the following materials shall be stored in the separate area: Diesel fuel, gasoline, new and used motor oil, hydraulic fluid, cement, paints and paint thinners, 2 part epoxy coatings, sealants, asphaltic products, glues, solvents, wood preservatives, sand blast materials, and spill absorbent.
  - b. Hazardous materials shall be stored in groupings according to the Material Safety Data Sheets.
  - c. The Contractor shall develop and submit to the Engineer a plan for storing and disposing of the materials above.
  - d. The separate storage area shall be inspected by the Engineer and the local authority prior to construction of the area, upon completion of construction of the area, and upon cleanup and removal of the area.

2. Hazardous materials that are delivered in containers shall be stored in the original containers until use. Hazardous materials delivered in bulk shall be stored in containers which meet the requirements of authorities having jurisdiction.

PART 2 – PRODUCTS – Not Used

PART 3 – EXECUTION – Not Used

END OF SECTION

## SECTION 01700 (CP-1)

## CONTRACT CLOSEOUT

## PART 1 - GENERAL

## 1.01 SCOPE OF WORK:

- A. This Section specifies administrative and procedural requirements for project closeout, including but not limited to:
  - 1. Closeout procedures.
  - 2. Final cleaning.
  - 3. Adjusting.
- B. Attention is directed to the SECTION VI GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT

- A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 RELATED WORK:

- A. Warranties and Bonds are included in Section 01740.

## 1.04 CLOSEOUT PROCEDURES:

- A. Submit written certification that Contract Documents have been reviewed, Work has been inspected, and that Work is complete in accordance with Contract Documents and ready for Engineer's inspection.
- B. Provide submittals to Engineer that are required by governing or other authorities.
- C. Submit final Application for Payment identifying total adjusted Contract Sum, previous payment, and sum remaining due.
- D. Apply for Taking-Over Certificate after Final Acceptance of Commissioning in accordance with the contract

## 1.05 FINAL CLEANING:

- A. Complete the following cleaning operations before requesting inspection for Certification of Substantial Completion.

1. Remove labels that are not permanent labels.
2. Clean exposed exterior and interior hard-surfaced finishes to a dust-free condition, free of stains, films and similar foreign substances. Restore reflective surfaces to their original reflective condition. Leave concrete floors broom clean.
3. The installing Subcontractor shall wipe surface of mechanical and electrical equipment. Remove excess lubrication and other substances. Clean plumbing fixtures to a sanitary condition. Clean light fixtures and lamps.
4. Clean the site, including landscape development areas, of rubbish, litter and other foreign substances. Sweep paved areas broom clean; remove stains, spills and other foreign deposits. Rake grounds that are neither paved nor planted, to a smooth even-textured surface.

1.06 ADJUSTING:

- A. Adjust operating products and equipment to ensure smooth and unhindered operation.

END OF SECTION

## SECTION 01700 (CP-2, CP-3)

## CONTRACT CLOSEOUT

## PART 1 - GENERAL

## 1.01 SCOPE OF WORK:

- A. This Section specifies administrative and procedural requirements for project closeout, including but not limited to:

  - 2. Final cleaning.
  - 3. Adjusting.
- B. Attention is directed to the SECTION VI GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT

- A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 RELATED WORK:

- A. Operation and Maintenance Data are included in Section 01730.
- B. Warranties and Bonds are included in Section 01740.

## 1.04 CLOSEOUT PROCEDURES:

- A. Submit written certification that Contract Documents have been reviewed, Work has been inspected, and that Work is complete in accordance with Contract Documents and ready for Engineer's inspection.
- B. Provide submittals to Engineer that are required by governing or other authorities.
- C. Submit final Application for Payment identifying total adjusted Contract Sum, previous payment, and sum remaining due.
- D. Apply for Taking-Over Certificate after Final Acceptance of Commissioning in accordance with the FIDIC contract, clause 10.1 and 10.2.

**1.05 FINAL CLEANING:**

- A. Complete the following cleaning operations before requesting inspection for Certification of Substantial Completion.
  - 1. Remove labels that are not permanent labels.
  - 2. Clean exposed exterior and interior hard-surfaced finishes to a dust-free condition, free of stains, films and similar foreign substances. Restore reflective surfaces to their original reflective condition. Leave concrete floors broom clean.
  - 3. The installing Subcontractor shall wipe surface of mechanical and electrical equipment. Remove excess lubrication and other substances. Clean plumbing fixtures to a sanitary condition. Clean light fixtures and lamps.
  - 4. Clean the site, including landscape development areas, of rubbish, litter and other foreign substances. Sweep paved areas broom clean; remove stains, spills and other foreign deposits. Rake grounds that are neither paved nor planted, to a smooth even-textured surface. Ensure that no hazardous material or waste remain on the site.

**1.06 ADJUSTING:**

- A. Adjust operating products and equipment to ensure smooth and unhindered operation.

END OF SECTION

## SECTION 01710 (CP-2, CP-3)

## CLEANING

## UP

## PART 1 - GENERAL

## 1.01 SCOPE:

- A. The work of this section includes all labor, equipment, tools, and materials necessary for the performance of all cleaning up the project sites, as specified herein, and as shown on the drawings.
1. During its progress, the work and the adjacent areas affected thereby shall be cleaned up and all rubbish, surplus materials, and unneeded construction equipment shall be removed and all damage repaired so that the public and property owners will be inconvenienced as little as possible.
  2. Where material or debris has washed or flowed into or been placed in existing watercourses, ditches, gutters, drains, pipes structures, work done under this contract, or elsewhere during the course of the Contractor's operations, such material or debris shall be entirely removed and satisfactorily disposed of during the progress of the work, and the ditches, channels, drains, pipes, structures, and work, etc., shall, upon completion of the work, be left in a clean and neat condition.
  3. On or before the completion of the work, the Contractor shall, unless otherwise especially directed or permitted in writing, tear down and remove all temporary buildings and structures built by the Contractor; shall remove all temporary works, tools, and machinery or other construction equipment furnished by the Contractor; shall remove, acceptably disinfect, and cover all organic matter and material containing organic matter in, under, and around privies, houses, and other buildings used by the Contractor; shall remove all rubbish from any grounds which it has occupied; and shall leave the roads and all parts of the premises and adjacent property affected by its operations in a neat and satisfactory condition.
  4. The Contractor shall thoroughly clean all materials and equipment installed by the Contractor and its sub-contractors, and on completion of the work shall deliver it undamaged and in fresh and new-appearing condition. All mechanical equipment shall be left fully charged with lubricant and ready for operation.
  5. The Contractor shall restore or replace, when and as directed, any public or private property damaged by his work, equipment, or employees, to a condition at least equal to that existing immediately prior to the beginning of operations. To this end the Contractor shall do as required all necessary highway or driveway, walk, and landscaping work. Suitable materials, equipment, and methods shall be used for such restoration. The restoration of existing property or structures shall be done as promptly as practicable as work progresses and shall not be left until the end of the contract period.
  6. Ensure that all hazardous material and waste has been removed from the project site.

- B. Attention is directed to the SECTION VI GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

#### 1.02 MEASUREMENT AND PAYMENT:

- A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

#### 1.03 DEFINITIONS:

- A. Definitions shall be as specified in PART I – BIDDING PROCEDURES.

#### 1.04 DESIGN CRITERIA:

- A. The materials specified are intended to be standard materials of demonstrated successful performance, as manufactured by reputable concerns. Materials shall be designed and manufactured in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the materials.
- B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

### PART 2 - PRODUCTS – Not Used

### PART 3 - EXECUTION

#### 3.01 CONTRACT CLOSEOUT:

- A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

END OF SECTION

## SECTION 02100 (CP-2, CP-3)

## SITE PREPARATION

## PART 1 - GENERAL

## 1.01 SCOPE:

- A. The work of this section includes all labor, equipment, tools, and materials necessary for the performance of all operations in connection with clearing and grubbing, and the removal of pavement, curbing and all incidental and appurtenant work pertaining thereto, as specified herein, and as shown on the drawings.
- B. Attention is directed to SECTION VI GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT:

- A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 DESIGN CRITERIA:

- A. The materials specified are intended to be standard materials of demonstrated successful performance, as manufactured by reputable concerns. Materials shall be designed and manufactured in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the materials.
- B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

## 1.04 SPECIAL REQUIREMENTS:

- A. Prior to the performance of any work of this section or any related work required by other sections of the specifications, the Limit of Work Line shall be laid out and staked in the field by the Contractor, according to the drawings. The Contractor shall be responsible for maintaining the Limit of Work Line during the construction operation.
- B. At all times throughout the duration of this contract, the Contractor shall be responsible for the appearance and condition of the area within and surrounding the project site. The Contractor shall repair or replace, at no additional expense to the Owner, any structures, either natural or man-made such, as but not limited to, utilities, trees, plants, water bodies, and pavements that are damaged or destroyed by any actions or sequences of events related to the Contractor's operations.
- C. Any existing plant materials designated to be saved, protected and/or undisturbed, that are cut or damaged without prior approval of the Engineer, shall be replaced in kind and size

by the Contractor, at no expense to the Owner. If the Engineer agrees that tree replacement is impossible or impractical, the Contractor shall pay the Owner damages of equivalent amount in MNT established by District Landscaping Service Department for such cases.

- D. Disposal of waste/surplus materials may involve securing permits, licenses, or approvals, which may vary according to the type of material to be disposed of prior to the start of construction. The Contractor shall apply for these, as they may be required by the various governing agencies and pay all required fees. The Contractor shall have sole responsibility for the legal disposal of all waste surplus material of this project. The Contractor shall be responsible for any and all fines due to any illegal activity with regards to the disposal of waste/surplus materials.
- E. Contractor must inform the Owner if there were any archeological findings found during site preparation and stop the work immediately.

## PART 2 - PRODUCTS – Not Used

## PART 3 - EXECUTION

### 3.01 GENERAL REQUIREMENTS:

- A. All graded areas, and all areas within the Limit of Work Line on which proposed work is to be installed, shall be cleared and grubbed as indicated on the drawings.
- B. The Contractor shall be careful to note any areas that may be designated on the drawings to receive only selective clearing and thinning.

### 3.02 CLEARING, GRUBBING, TREE AND STUMP REMOVAL:

#### A. Trees

1. Preparation of the site shall include the complete removal of all trees within the Limit of Work Line, except in those areas where selective clearing and thinning is required. Any trees within the Limit of Work Line not to be removed shall be protected from damage during clearing and construction operations by barriers or by such other methods as conditions may require. No construction materials or debris shall be stored or stockpiled, or vehicles parked or operated within the limits of the branch spread of the trees to be saved.
2. Clearing operations shall be performed in a manner which will prevent damage by falling trees to trees left standing or to structures under construction, and by methods which will provide for the safety of employees and other persons.
3. Limited clearing and thinning shall be performed in areas identified on the drawings, as required or as directed by the Engineer. This work will involve the removal of brush, small trees, dead, damaged and/or diseased trees. The Engineer will tag or otherwise mark and designate trees and brush to be saved. Where branches of trees which are to be saved interfere with the work, limbs and branches shall be trimmed off neatly and cleanly close to the bole of the tree or to main branches. Cut surfaces shall be painted with a tree wound paint. Pruning shall be done in accordance with

the District Landscaping and Servicing Department liason and only by persons experienced with this work. The Contractor shall legally dispose of all branches and limbs off site.

4. All trees, above a four-inch caliper, which are designated to be removed shall become the property of the Contractor to be disposed of by sale or otherwise, provided that such material shall be removed from the property of the Owner before the completion of the site clearance work. The Owner assumes no responsibility for the protection and safekeeping of such materials. The Contractor shall be responsible for all taxes, if any, incurred in the sale of materials.
- B. Grubbing shall consist of the grubbing up, removal and disposal of all stumps, roots larger than 36 mm (1-1/2 inches) in diameter, and matted root formations from the designated areas. All rocks or boulders near the existing surface grade, which may interfere with planned construction operations, shall be removed and disposed of as surplus/waste material, or used as fill, where specifically permitted by the Engineer.
  - C. All fossils, coins, articles of value or antiquity, and structures and other remains or items of geological or archaeological interest found on the Site shall be placed under the care and authority of the Employer. The Contractor shall take reasonable precautions to prevent Contractor's Personnel or other persons from removing or damaging any of these findings.

The Contractor shall, upon discovery of any such finding, promptly give notice to the Engineer, who shall issue instructions for dealing with it.

### 3.03 DISPOSAL OF WASTE MATERIALS:

- A. All cleared and grubbed materials shall be legally disposed of off-site by the Contractor. Burning of cleared and grubbed materials is not permitted.
- B. All waste materials shall be legally disposed of off-site by the Contractor.

### 3.04 SEDIMENT AND EROSION CONTROL:

- A. The Contractor shall take such actions as may be required to ensure that his construction activities do not interfere with or adversely impact the hydraulic characteristics or aesthetic qualities of any natural or manmade watercourse or drain.
- B. The Contractor shall provide acceptable siltation control devices such as straw bales and/or straw wattles sediment control devices; control basins for the settling and filtering of fine sands, silts and clay resulting from rainfall runoff or dewatering operations. Any natural areas or manmade structures which have been affected by siltation or erosion due to construction activities shall be restored to their pre-construction condition by the Contractor at no additional cost to the Owner.
- C. For more specific requirements for control of erosion and siltation, refer to SECTION 01110, ENVIRONMENTAL PROTECTION PROCEDURES.

3.05 CONTRACT CLOSEOUT:

- A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

END OF SECTION

## SECTION 02140 (CP-2, CP-3)

## DEWATERING

## PART 1 - GENERAL

## 1.01 DESCRIPTION:

- A. Design, furnish, operate, maintain, and remove temporary dewatering systems to control groundwater and surface water to maintain stable, undisturbed subgrades, and permit work to be performed under dry and stable conditions. Work to be done as part of dewatering includes, but is not limited to:
  - 1. Lower the groundwater level.
  - 2. Lower hydrostatic pressure.
  - 3. Prevent surface water from entering the excavation during construction.
  - 4. Implement erosion control measures for disposing of discharge water.
  - 5. Provide and monitor observation wells and geotechnical instrumentation as specified.
- B. Groundwater within the excavation area shall be lowered to at least 60 cm below the lowest excavation levels as specified and as indicated.
- C. Common dewatering methods include, but are not limited to, sump pumping, deep wells, well points, vacuum well points or any combinations thereof.
- D. The discharge shall be released in accordance with all applicable regional, municipal, and local regulations. The Contractor shall be solely responsible for any claims arising from the discharge.

## 1.02 RELATED WORK:

- A. Section 01568: Erosion Control, Sedimentation and Containment of Construction Materials.
- B. Section 02160: Excavation Support Systems
- C. Section 02210: Earth Excavation, Backfill, Fill, and Grading
- D. Section 02223: Screened Gravel
- E. Section 02435: Crushed Stone
- F. Section 02273: Geotextile Fabric

### 1.03 SUBMITTALS:

#### A. Submit the following in accordance with Section 01300:

1. Qualification of the Contractor's dewatering specialist's or firm's qualifications a minimum of four (4) weeks prior to execution of any dewatering. The submittal shall include, but not be limited to:
  - a. Qualifications of specialist's or firm's Dewatering Design Engineer as specified in Paragraph 1.04.B.
  - b. Qualifications of specialist's or firm's field representative, as specified in Paragraph 1.04.B, who shall oversee the installation, operation and maintenance of the dewatering system.
2. Submit a dewatering plan at least two weeks prior to start of any dewatering operation. Do not submit design calculations. The review will be only for the information of the Owner and third parties for an overall understanding of the project relating to access, maintenance of existing facilities and proper utilization of the site. The Contractor shall remain responsible for the adequacy and safety of the means, methods and sequencing of construction. The plan shall include the following items as a minimum:
  - a. Dewatering and surface water control plan and details stamped and signed by a qualified Engineer.
  - b. Certificate of Delegated Design Services: Refer to Section 01300.
  - c. A list of equipment including, but not limited to, pumps, prime movers, and standby equipment.
  - d. Detailed description of dewatering, maintenance, and system removal procedures.
  - e. Monitoring plan and details, including, but not limited to, number and locations of observation wells, and geotechnical instruments such as settlement markers and piezometers, and frequency of reading the monitoring devices.
  - f. Erosion/sedimentation control measures, and methods of disposal of pumped water.
  - g. List of all applicable laws, regulations, rules, and codes to which dewatering design conforms.

- h. List of assumptions made for design of dewatering, including but not limited to groundwater levels, soil profile, permeabilities, and duration of pumping.
- 3. Measurement records consisting of observation well groundwater records and the geotechnical instrumentation readings within one day of monitoring.
- 4. A modified dewatering plan within 24 hours, if open pumping from sumps and ditches results in boils, loss of fines or softening of the ground.

#### 1.04 QUALITY ASSURANCE:

- A. Comply with the requirements specified in Section 01400.
- B. Employ the services of a dewatering specialist or firm having the following qualifications:
  - 1. Have completed at least three (3) successful dewatering projects of equal size and complexity and with equal systems.
  - 2. Retain the services of a qualified Dewatering Design Engineer having a minimum of five (5) years' experience in the design of well points, deep wells, recharge systems, or equal systems.
  - 3. Retain the services of a field representative having a minimum of five (5) years' experience in installation of well points, deep wells, recharge systems, or equal systems.
- C. If subgrade soils are disturbed or become unstable due to dewatering operation or an inadequate dewatering system, notify the Engineer, stabilize the subgrade, and modify system to perform as specified at no additional cost to the Owner.
- D. Notify the Engineer immediately if any settlement or movement is detected on structures. If the settlement or movement is deemed by the Engineer to be related to the dewatering, take actions to protect the adjacent structures and submit a modified dewatering plan to the Engineer within 24 hours. Implement the modified plan and repair any damage incurred to the adjacent structures at no additional cost to the Owner.
- E. If oil and/or other hazardous materials are encountered after dewatering begins, immediately notify the Engineer.

#### 1.05 DELIVERY, STORAGE AND HANDLING:

- A. Comply with the requirements specified in Section 01610.

#### 1.06 PROJECT/SITE CONDITIONS:

- A. Subsurface Conditions: Refer to Appendix A – Geotechnical Investigation Report.

## PART 2 - PRODUCTS

### 2.01 MATERIALS:

- A. Provide settlement markers, observation wells, piezometers and/or any other geotechnical instruments in accordance with the submitted dewatering plan or as specified.
- B. Provide casings, well screens, piping, fittings, pumps, power and other items required for dewatering system.
- C. Provide sand and gravel filter around the well screen. Wrapping geotextile fabric directly around the well screen shall not be allowed.
- D. When deep wells, well points, or vacuum well points are used, provide pumping units capable of maintaining high vacuum and handling large volumes of air and water at the same time.
- E. Provide and store auxiliary dewatering equipment, consisting of pumps and hoses on the site in the event of breakdown, at least one (1) pump for every five (5) used.
- F. Provide and maintain erosion/sedimentation control devices as indicated or specified and in accordance with the dewatering plan.
- G. Provide temporary pipes, hoses, flumes, or channels for the transport of discharge water to the discharge location.
- H. Provide cement grout having a water cement ratio of 1 to 1 by volume.

## PART 3 - EXECUTION

### 3.01 EXECUTION:

- A. Execution of any earth excavation, installing earth retention systems, and dewatering shall not commence until the related submittals have been reviewed by the Engineer with all Engineer's comments satisfactorily addressed and the geotechnical instrumentation has been installed.
- B. The Contractor is responsible for investigating and becoming familiar with all site conditions that may affect the Work including surface water, potential flooding conditions, level of groundwater and the time of year the work is to be done.

- C. Furnish, install and maintain dewatering system in accordance with the dewatering plan.
- D. Carry out dewatering program in such a manner as to prevent undermining or disturbing foundations of existing structures or of work ongoing or previously completed.
- E. At no time during construction shall the Contractor affect existing surface or subsurface drainage patterns of adjacent property. Any damage to adjacent property resulting from the Contractor's alteration of surface or subsurface drainage patterns shall be repaired by the Contractor at no additional cost to the Owner.
- F. Do not excavate until the dewatering system is operational.
- G. Unless otherwise specified, continue dewatering uninterrupted until all structures, pipes, and appurtenances below groundwater level have been completed such that they will not be floated or otherwise damaged by an increase in groundwater elevation.
- H. Discontinue open pumping from sumps and ditches, if such pumping is resulting in boils, loss of fines, softening of the ground, or instability of the slopes. Modify dewatering plan by the Contractor's Dewatering Design Engineer and submit to the Engineer at no additional cost to the Owner.
- I. Where subgrade materials are disturbed or become unstable due to dewatering operations, remove and replace the materials in accordance with Section 02210 at no additional cost to the Owner.
- J. Dewatering Discharge:
  - 1. Install sand and gravel filters in conjunction with well points and deep wells to prevent the migration of fines from the existing soil during the dewatering operation.
  - 2. Transport pumped or drained water to discharge location without interference to other work, damage to pavement, other surfaces, or property.
  - 3. Provide separately controllable pumping lines.
  - 4. The Engineer reserves the right to sample discharge water at any time.
  - 5. Immediately notify the Engineer if suspected contaminated groundwater is encountered. Do not pump water found to be contaminated with oil or other hazardous material to the discharge locations.
- K. Monitoring Devices and Records:

1. Install, maintain, monitor and take readings from the observation wells and geotechnical instruments in accordance with the dewatering plan.
  2. Install settlement markers on structures within the zone of influence for dewatering a distance equal to twice the depth of the excavation, from the closest edge of the excavation. Conduct and report settlement surveys to 0.1 cm.
  3. For large rectangular, square or circular mass excavations the zone of influence shall be defined by the actual cone of watering influence corresponding to a 10% increase in effective vertical stress.
- L. Install and maintain erosion/sedimentation control devices at the point of discharge as indicated or specified and in accordance with the dewatering plan.
- M. Removal:
1. Do not remove dewatering system without written approval from the Engineer.
  2. Backfill and compact sumps or ditches with screened gravel or crushed stone wrapped with geotextile fabric in accordance with Section 02210.
  3. All dewatering wells shall be abandoned upon completion of the work, and completely backfilled with cement grout.
- 3.02 CONTRACT CLOSEOUT:
- A. Provide in accordance with Section 01700.

END OF SECTION

Note that the primary standards referenced herein are ASTM. Subject to acceptance by the Engineer, alternative standards may be used in lieu of ASTM provided the proposed alternative is an internationally recognized standard (e.g., British Standard (BS) or local MNS Standard) that are considered similarly effective in terms of material quality and performance of the constructed product.

## SECTION 02210 (CP-1)

### EARTH EXCAVATION, BACKFILL, FILL AND GRADING

#### PART 1 - GENERAL

##### 1.01 DESCRIPTION:

- A. Perform the following earth excavation, backfill, fill and grading as indicated or specified:
  - 1. Make excavations to accommodate piping, conduits, foundations and other structures.
  - 2. Provide materials for backfilling excavations and constructing embankments and fills as indicated and specified.
  - 3. Construct embankments of compacted materials.
  - 4. Grade surfaces to meet finished grades indicated.
  - 5. Immediately notify the Engineer if suspected hazardous materials are encountered and cease operations in that part of work.
  - 6. Remove boulders within the excavation limits.

##### 1.02 RELATED WORK:

- A. Section 01568: Erosion Control, Sedimentation and Containment of Construction Materials
- B. Section 02224: Bank-run Gravel
- C. Section 02225: Select Borrow

##### 1.03 REFERENCES:

- A. American Society for Testing and Materials (ASTM) Publications:
  - 1. C33: Specification for Concrete Aggregates.
  - 2. C136: Sieve Analysis of Fine and Coarse Aggregates.

3. D421: Practice for Dry Preparation of Soil Samples for Particle Size Analysis and Determination of Soil Constants.
4. D1140: Test Method for Amount of Material in Soils Finer than the No. 200 (75  $\mu\text{m}$ ) Sieve.
5. D1556: Test Method for Density and Unit Weight of Soil in Place by the Sand-Cone Method.
6. D1557: Test Method for Laboratory Compaction Characteristics of Soil Using Modified Effort (600  $\text{kN}\cdot\text{m}/\text{m}^3$ ).
7. D2167: Test Method for Density and Unit Weight of Soil in Place by the Rubber Balloon Method.
8. D4318: Test Method for Liquid Limit, Plastic Limit and Plasticity Index of Soils.
9. D4718: Practice for Correction of Unit Weight and Water Content for Soils Containing Oversized Particles.
10. D4944: Test Method for Field Determination of Water (Moisture) Content of Soil by the Calcium Carbide Pressure Tester Method.
11. D4959: Test Method for Field Determination of Water (Moisture) Content of Soil by Direct Heating Method.
12. D5080: Test Method for Rapid Determination of Percent Compaction.
13. D6913: Standard Test Methods for Particle-Size Distribution (Gradation) of Soils Using Sieve Analysis
14. D6938: Standard Test method for In-Place Density and Water Content of Soil and Soil-Aggregate by nuclear Methods (Shallow Depth)
15. D7928: Standard Test Methods for Particle-Size Distribution (Gradation) of Fine-Grained Soils Using the Sedimentation (Hydrometer) Analysis
16. CCM 3.02.01-90: Earthwork, Footing and Foundation Work for Construction.

#### 1.04 DEFINITIONS:

- A. Percentage of compaction is defined as the ratio of the field dry density, as determined by ASTM D1556 to the maximum dry density determined by ASTM D1557 Procedure C, multiplied by 100.
- B. Proof Roll: Compaction with a minimum of 4 passes of a vibratory steel drum or rubber tire roller. Vibratory plate compactors shall be used in small areas where vibratory steel drum or rubber tire roller cannot be used. Should comply with the trial test requirement per Annex 4 of CCM 3.02.01-90.

- C. **Acceptable Material:** Material which does not contain organic silt or organic clay, peat, vegetation, wood or roots, stones or rock fragments over 15 cm in diameter, porous biodegradable matter, loose or soft fill, excavated pavement, construction debris, or refuse. Stones or rock fragments shall not exceed 40 percent by weight of the backfill material.
- D. **Unacceptable Materials:** Materials that do not comply with the requirements for the acceptable material or which cannot be compacted to the specified or indicated density.

#### 1.05 SUBMITTALS:

- A. Submit the following in accordance with Section 01300:
  - 1. Qualifications of the Contractor's Independent Testing Laboratory as specified in Paragraph 1.06.H, four (4) weeks prior to the execution of any earth excavation, backfilling, filling, or compaction process.
  - 2. Submit an excavation, backfilling, and filling plan at least two weeks prior to start of any earth moving activities. The review will be only for the information of the Owner and third parties for an overall understanding of the project relating to access, maintenance of existing facilities and proper utilization of the site. The Contractor shall remain responsible for the adequacy and safety of the means, methods and sequencing of construction. The plan shall include, but not be limited to the following items:
    - a. Detailed sequence of work.
    - b. General description of construction methods.
    - c. Numbers, types, and sizes of equipment proposed to perform excavation and compaction.
    - d. Details of dust control measures.
    - e. Proposed locations of stockpiled excavation and/or backfill materials.
    - f. Proposed surplus excavated material off-site disposal areas and required permits.
    - g. Details of erosion and sedimentation control measures which will prevent erosion and sedimentation during the earth moving activities.
  - 3. The following material submittals shall be submitted to the Engineer prior to backfilling and filling:
    - a. Bank-run Gravel: As specified in Section 02224.
    - b. Select Borrow: As specified in Section 02225.

- c. Other Acceptable Materials: Laboratory testing results of gradation and moisture-density relationship. Submittal shall include specific location of the source and the date when sample was taken.
- 4. During Construction, submit written confirmation of fill lift thickness, in-place soil moisture content, and percentage of compaction to the Engineer before placing the next lift or constructing foundations.

#### 1.06 QUALITY ASSURANCE AND CONTROL:

- A. Comply with the requirements specified in Section 01400 and annexes 1,2 and 3 of CCM 3.02.01-90.
- B. Excavations shall be performed in the dry, and kept free from water, snow and ice during construction. Bedding and backfill material shall not be placed in water. Water shall not be allowed to rise upon or flow over the bedding and backfill material.
- C. The Contractor shall be solely responsible for making all excavations in a safe manner. All excavation, trenching, and related sheeting, bracing, etc. shall comply with the local regulation requirements.
- D. Do not excavate, construct embankments, or fill until all the required submittals have been reviewed by the Engineer.
- E. Formulate excavation, backfilling, and filling schedule and procedures to eliminate possibility of undermining or disturbing foundations of partially and completed structures, pipelines and embankments or existing structures and pipelines.
- F. Employ an independent testing laboratory to perform particle size and gradation analyses in accordance with ASTM D6913 and D7928, and to determine compactibility in accordance with ASTM D1557 for all the proposed backfill and fill materials, and monitoring field compaction operations. The Contractor's independent testing laboratory shall have the following qualifications:
  - 1. Have three (3) years of experience in sampling, testing and analysis of soil and aggregates, and monitoring field compaction operations.
  - 2. Able to provide three (3) references from previous work.
- G. Field Testing and Inspections:
  - 1. By Contractor's independent testing laboratory, acceptable to the Engineer, at Contractor's expense as specified in Paragraph 1.06.K.
  - 2. Location of tests mutually acceptable to testing laboratory and the Engineer or as directed by the Engineer.
  - 3. In the event compacted material does not meet specified in-place density, recompact material and retest this area until specified results are obtained at no additional to the Owner.

4. Contractor's testing laboratory to perform inspection at least once daily to confirm lift thickness and compaction effort for entire fill area.

H. Methods of Field Testing:

1. In-Place Density: ASTM D1556, ASTM D2167, or ASTM D6938.
2. In-Place Moisture Content: ASTM D6938, ASTM D4944, or ASTM D4959.

I. Material Testing Frequency: The following testing frequencies are minimum required for all structural and non-structural fill, grading and embankment.

1. Field In-Place Density and Moisture Content - Screened gravel and crushed stone shall be compacted as specified and indicated. For other backfill and fill materials, minimum test frequency shall be as follows, and no less than one test per:
  - a. Trenches under structures foundation preparation or roadways subbase: Every 300 m per lift.
  - b. Trenches in areas without structures or roadways: Every 300 m per alternate lift.
  - c. Paved Roadways: Every 60 m per lift.
  - d. Paved Areas: 350 sq. m. per lift.
  - e. Under Structure: 100 sq. m. per lift.
  - f. Around Structures: 150 sq. m. per lift.
  - g. Embankment Fills: 1,000 sq. m. per lift.
  - h. Frequency of testing is to comply with the requirements given in Table 17 of CCM 3.02.01-90.
2. Moisture Density - One per source, except for screened gravel and crushed stone. Repeat the moisture density test for every 3,825 cubic meters of material use, and whenever visual inspection indicates a change in material gradation as determined by the Engineer.
3. Gradation Analysis - A minimum of one per source and for each moisture density test and whenever visual inspection indicates a change in material gradation.
4. Liquid Limit, Plastic Limit and Plasticity Index - Minimum of one test per 3,825 cubic meters of soil for use as fill material and whenever classification of material is in doubt as determined by the Engineer.

J. Construction Tolerances:

1. Construct finished surfaces to plus or minus 2.5 cm of the elevations indicated.
  2. Grade cut and fill areas to plus or minus 6 cm of the grades indicated.
  3. Complete embankment edges to plus or minus 15 cm of the slope lines indicated.
  4. Provide the Engineer with adequate survey information to verify compliance with above tolerances.
- K. Cut pavement with a saw or pneumatic tools to prevent damage to remaining pavement without extra compensation. Where pavement is removed in large pieces, dispose of pieces before proceeding with excavation.
- L. Pipes, drains, and other utilities may exist in certain locations not indicated on the Drawings. No attempt has been made to show all services. Completeness or accuracy of information given is not guaranteed.
- M. Dig test pits considered as incidental to the normal excavation as indicated and specified in this Section, at no additional compensation.
- N. Carefully support and protect from damage, existing pipes, poles, wires, fences, curbs, property line markers, and other structures, which the Engineer determines must be preserved in place without being temporarily or permanently relocated. Should such items be damaged, restore without compensation therefore, to at least as good condition as that in which they were found immediately before the work was begun.
- O. Whenever certain existing structures, as described below, are encountered, and the Engineer so directs, change the location, remove and later restore, or replace such structures, or assist the Owner in doing so. Such work to be paid for under applicable items of work, otherwise as Extra Work.
- P. In removing existing pipes or other structures, include for payment only those new materials which are necessary to replace those unavoidably damaged as determined by the Engineer.
- Q. The preceding two paragraphs apply to pipes, wires, and other structures which meet the following: (a) are not indicated on the drawings or otherwise provided for, (b) encroach upon or are encountered near and substantially parallel to the edge of the excavation, and (c) in the opinion of the Engineer, will impede progress to such an extent that satisfactory construction cannot proceed until they have been changed in location, removed (to be later restored), or replaced.
- R. Restore existing property or structures as promptly as practicable.
- S. If material unacceptable for foundation (in the opinion of the Engineer) is found at or below the grade to which excavation would normally be carried in accordance with the drawings and/or specifications, remove such material to the required width and depth as directed by the Engineer and replace it with screened gravel, select borrow, or concrete.

- T. Do not remove excavation materials from the site of the work or dispose of except as directed or permitted by the Engineer.
- U. Haul away and dispose of surplus excavated materials at locations in accordance with all Federal, State and local requirements at no additional cost to the Owner.
- V. During progress of work, conduct earth moving operations and maintain work site so as to minimize the creation and dispersion of dust. Furnish and spread calcium chloride if the Engineer decides that it is necessary for more effective dust control.
- W. Provide suitable and safe bridges and other crossings where required for accommodation of travel, and to provide access to private property during construction, and remove said structures thereafter.

#### 1.07 SITE CONDITIONS:

- A. Subsurface Conditions: Refer to Section 02672, Appendix A, Geotechnical Report.

### PART 2 - PRODUCTS

#### 2.01 GENERAL:

- A. Use only acceptable materials from excavations or borrows.
- B. Provide 10 MPa concrete, screened gravel, bank-run gravel, fine aggregate, select borrow, and crushed stone.
- C. Provide Fine Aggregate conforming to ASTM C33.

#### 2.02 EQUIPMENT:

- A. The compaction equipment shall be selected by the Contractor and shall be capable of consistently achieving the specified compaction requirements. The selected compaction equipment shall meet the following minimum requirements:
  - 1. Manually operated vibratory plate compactors weighing no less than 90 kg with vibration frequency no less than 1600 cycles per minute.
  - 2. Vibratory steel drum or rubber tire roller weighing at least 5,450 kg.

### PART 3 - EXECUTION

#### 3.01 SITE MAINTENANCE:

- A. Roadway and Site Leveling: Grade roadway and site as to maintain them in a level unrutted condition and to eliminate puddling of surface and subsurface water.

#### 3.02 EXCAVATION:

- A. Execution of any earth excavation shall not commence until the related dewatering, excavation support systems, and backfill and fill materials submittals are reviewed by the Engineer and all Engineer's comments satisfactorily addressed.
- B. Carry out program of excavation, dewatering, and excavation support systems to eliminate possibility of undermining or disturbing foundations of existing structures or of work previously completed under this contract.
- C. Excavate to widths that give suitable room for building structures or laying and jointing piping.
- D. Do not plow, scrape or dig by machinery near to finished subgrade in a manner that would result in disturbance of subgrade.
- E. Excavate to lines and grades indicated in an orderly and continuous program.
- F. Establish limits of excavation to allow adequate working space for installing forms and for safety of personnel.
- G. Excavate to elevations indicated, or deeper, as directed by the Engineer, to remove unacceptable bottom material.
- H. Exercise care to preserve material below and beyond the lines of excavations.
- I. Place excavated material at the approved stockpile locations and in no case closer than 90 cm from edge of excavations to prevent cave-ins of bank slides.
- J. Regard small, less than one cubic yard, boulders, rock fragments, and concrete encountered during excavation as a normal part of in-place soils and not included for payment as rock.

### 3.03 SEPARATION OF EXCAVATED MATERIALS FOR REUSE:

- A. Remove only existing pavement that is necessary for prosecution of work.
- B. Carefully remove loam and topsoil from excavated areas. Store separately for further use or furnish equivalent loam and topsoil as directed.
- C. Carefully remove acceptable material from excavated areas and store separately for further use as backfill material.

### 3.04 TRENCH EXCAVATION:

- A. When pipe is to be laid in gravel bedding or concrete cradle, excavate trench by machinery to, or just below designated subgrade. If material remaining at bottom of trench is disturbed, recompaction shall be required.
- B. When pipe is to be laid directly on bottom of trench, do not excavate lower part of trenches by machinery to subgrade. Remove remainder of material to be excavated just before placing of pipe by use of hand tools. Form a flat or shaped bottom, true to grade, so pipe will have a uniform and continuous bearing. Support on firm and

undisturbed material between joints, except for limited areas where use of pipe slings have disturbed bottom.

**3.05 DEPTH OF TRENCH:**

- A. Excavate trenches to depths to permit pipe to be laid at elevations, slopes, or depths of cover indicated on drawings, and at uniform slopes between indicated elevations.

**3.06 WIDTH OF TRENCH:**

- A. Make pipe trenches as narrow as practicable and do not widen by scraping or loosening materials from the sides. Make every effort to maintain sides of trenches firm and undisturbed until backfilling has been placed and compacted.
- B. Excavate trenches with approximately vertical sides between springline of pipe and elevation 30 cm above top of pipe.

**3.07 TRENCH EXCAVATION IN FILL:**

- A. Place and compact material to top of fill or to a minimum height of 30 cm above top of pipe, whichever is less, when pipe is to be laid in embankment or other recently filled material. Take particular care to ensure maximum consolidation of material under pipe location. Excavate pipe trench as though in undisturbed material.

**3.08 EXCAVATION NEAR EXISTING STRUCTURES:**

- A. Discontinue digging by machinery when excavation approaches pipes, conduits, or other underground structures. Continue excavation by use of hand tools. Include such manual excavation in work to be done when incidental to normal excavation and under items involving normal excavation.
- B. Excavate test pits when determination of exact location of pipe or other underground structure is necessary for doing work properly.

**3.09 REMOVAL OF SUBSURFACE OBSTRUCTIONS:**

- A. Remove indicated subsurface structures and related obstructions to extent shown.
- B. Promptly notify the Engineer when any unexpected subsurface facilities are encountered during excavation such as utility lines and appurtenances, walls and foundations.

**3.10 UNAUTHORIZED EXCAVATION:**

- A. When the bottom of any excavation for structures is taken out beyond limits indicated or specified, backfill, with screened gravel and crushed stone wrapped with non-woven geotextile fabric or with 10 MPa concrete.

**3.11 REUSE AND DISPOSAL OF SURPLUS EXCAVATED MATERIALS:**

- A. Reuse surplus acceptable excavated materials for backfill in areas where structural backfill is not required; deposit neatly and grade so as to make or widen fills, flatten side slopes, or fill depressions; or legally dispose off-site; all as directed or permitted and without additional compensation. See Appendix A for soil sampling previously completed.
- B. Surplus excavated material shall not be used in locations where structural backfill is required.

### 3.12 SUBGRADE PREPARATION AND PROTECTION:

- A. Remove loam and topsoil, loose vegetable matter, stumps and large roots from areas upon which embankments will be built or material will be placed for grading. Shape subgrade as indicated on drawings, and prepare by forking, furrowing, or plowing so that the first layer of new material placed thereon will be well bonded to it.
- B. As directed by the Engineer, overexcavate unacceptable materials below the foundation subgrade. Backfill the overexcavation with compacted screened gravel or crushed stone wrapped with nonwoven geotextile fabric. In no case shall the screened gravel be placed directly on the exposed subgrade prior to placing the geotextile fabric.
- C. Proof roll the foundation subgrade prior to backfilling and filling operations or placing foundation concrete.
- D. Proof roll the pipe trench foundation subgrade prior to backfilling and filling operations or placing a soil-supported pipeline.

### 3.13 CARE AND RESTORATION OF PROPERTY:

- A. Enclose uncut tree trunks adjacent to work in wooden boxes of such height as may be necessary for protection from injury from piled material, equipment, operations, or otherwise due to work. Operate excavating machinery and cranes of suitable type with care to prevent injury to trees not to be cut and particularly to overhanging branches and limbs.
- B. Cut all branches, limbs, and roots smoothly and neatly without splitting or crushing. Neatly trim, cut the injured portions and cover with an application of grafting wax or tree healing paint as directed.
- C. Protect cultivated hedges, shrubs, and plants which might be injured by the Contractor's operations by suitable means or dig up and temporarily replant and maintain. After construction operations have been substantially completed, replant in original positions and care for until growth is reestablished. If cultivated hedges, shrubs, and plants are injured to such a degree as to affect their growth or diminish in their beauty or usefulness, replace by items of equal kind and quality existing at the start of the work.
- D. Do not use or operate tractors, bulldozers, or other power-operated equipment on paved surfaces when their treads or wheels of which are so shaped as to cut or otherwise damage such surfaces.

- E. Restore surfaces damaged by the Contractor's operations to a condition at least equal to that in which they were found immediately before work commenced. Use suitable materials and methods for such restoration.

### 3.14 BACKFILLING - GENERAL:

- A. Do not place frozen materials in backfill or place backfill upon frozen material. Remove previously frozen material or treat before new backfill is placed.
- B. Do not place frost susceptible material with fines content more than 5% underneath pavement, structures, and other facilities.
- C. Do not place, spread, roll or compact fill material during unfavorable weather conditions. If interrupted by heavy rain or other unfavorable conditions, do not resume until ascertaining that the moisture content and density of the previously placed soil are as specified.
- D. Do not use puddling, ponding or flooding as a means of compaction.

### 3.15 MATERIAL PLACEMENT AND COMPACTION REQUIREMENTS:

- A. Select Borrow, and Fine Aggregate:
  - 1. Dump and spread in layers not to exceed 20 cm uncompacted thickness.
  - 2. Compact, fill and backfill under structure and bedding for pipes (from below pipe to spring line) as indicated but to not less than 95 percent. Compact to not less than 90 percent in other areas unless otherwise indicated.
- B. Screened Gravel and Crushed Stone:
  - 1. Dump and spread in layers not to exceed 20 cm uncompacted thickness.
  - 2. Compact using self propelled vibratory steel drum or rubber tire rollers with a minimum of 4 passes in directions perpendicular to one another in open areas. In small areas, use manually operated vibratory plate compactors with a minimum of 4 passes.
- C. Bank-run Gravel and Acceptable materials for use as non-structural fill:
  - 1. Dump and spread in layers not to exceed 30 cm uncompacted thickness.
  - 2. Compact to not less than 90 percent unless otherwise indicated.
- D. Backfilling and filling operation shall be suspended in areas where tests are being made until tests are completed and the testing laboratory has advised the Engineer that adequate densities are obtained.

### 3.16 STRUCTURAL FILL AND BACKFILL UNDER STRUCTURES:

- A. Compact fill and backfill under structures and pavements with screened gravel, crushed stone, select borrow, or fine aggregate as specified and indicated.
- B. Improvement of foundation soil shall be compliant with the requirements of Clause 13 of CCM 3.02.04-90.

### 3.17 NON-STRUCTURAL BACKFILL AROUND STRUCTURES:

- A. Use acceptable materials for non-structural backfill around structures and compacted as specified and indicated.
- B. Conduct hydraulic testing as soon as practicable after structures are constructed and other necessary work has been done. Start backfilling promptly after completion of tests.
- C. Deposit material evenly around structure to avoid unequal soil pressure.
- D. Do not place backfill against or on structures until they have attained sufficient strength to support the loads (including construction loads) to which they will be subjected, without distortion, cracking, or other damage.

### 3.18 BACKFILLING PIPE TRENCHES:

#### A. General:

- 1. Begin backfilling and proceed until completed after: the pipes and conduits have been laid, joints have acquired maximum degree of hardness, pipelines and conduits have successfully passed tests and inspections as required in the Specifications, and concrete or masonry structures within the trench have reached their design strength to support all loads.
- 2. Backfill and compact indicated material under, around, and above pipes, conduits, and other structures to the indicated or specified compaction density requirement. Utilize compaction devices which will not damage the pipe, conduit, or structure within the trench.
- 3. Do not drop backfill material into trench from a height of more than 150 cm, or in a manner which will damage the pipe, conduit, or other structure within trench.

#### B. Pipe Trenches:

##### 1. Materials:

- a. From below pipe to 30 cm above top of pipe: Use screened gravel, or crushed stone, unless otherwise indicated.
- b. 30 cm above top of pipe to finished grade or to pavement subbase: Use bank-run gravel or acceptable materials, unless otherwise indicated. Frost susceptible materials with more than 5% fines are prohibited

under the pavement.

2. Compacting Around Pipes: Compact material around circumference of pipe and the area between the trench wall and the pipe by hand tamping in 15 cm layers.
3. Compacting Above Pipe: Compact material by hand tamping. If trench width is wide enough to accommodate power tools and the compacted material over the pipe will support the load of the power tools without damage to the pipe, use rollers or other powered compaction equipment able to more readily achieve compaction requirements.

### 3.19 MATERIAL FOR FILLING AND EMBANKMENTS:

- A. Use acceptable materials for filling and building embankments unless otherwise indicated.

### 3.20 PLACING AND COMPACTING EMBANKMENT MATERIAL:

- A. Compact fill material as specified and indicated.
- B. Perform fill operation in an orderly and systematic manner using equipment in proper sequence to meet the specified compaction requirements.
- C. Place fill on surfaces which are free of unacceptable materials.
- D. Begin filling in lowest section of work area. Grade surface of fill approximately horizontal but provide with sufficient longitudinal and transverse slope to allow for runoff of surface water from every point.
- E. Conduct filling so that no obstruction to drainage from other sections of fill area is created at any time.
- F. Install temporary dewatering sumps in low areas during filling operation where excessive amounts of rain runoff collect.
- G. Reduce moisture content of fill material, if necessary, in source area by working it over under warm and dry atmospheric conditions. A large disc harrow with two to three-foot diameter disks may be required for working soil in a drying operation.
- H. Compact uniformly throughout. Keep surfaces of fill reasonably smooth and free from humps and hollows which would prevent proper and uniform compaction. Do not permit hauling equipment to follow a single track on the same layer but direct equipment to spread out to prevent overcompaction in localized areas. Take care in obtaining thorough compaction at edges of fill.
- I. Slightly slope surface of fill to ensure drainage during periods of wet weather. Do not place fill while rain is falling or after a rain-storm until the Engineer considers conditions satisfactory. During such periods and upon suspension of filling operations for any period in excess of 12 hours, roll smooth the surface of fill using a smooth wheel static roller to prevent excessive absorption of rainfall and surface moisture.

Prior to resuming compaction operations, remove muddy material off surface to expose firm, compacted material, as determined by the Engineer.

- J. When fill is placed against an earlier fill or against in-situ material under and around structures, including around piping beneath structures or embankments, slope junction between two sections of fill, 1 vertical to 1.5 horizontal. Bench edge of existing fill 60 cm to form a serrated edge of compact stable material against which to place the new fill. Ensure that rolling extends over junction between fills.
- K. When fill is placed directly upon another older fill, clean surface thoroughly of debris and remove any loose material. Then proof roll the entire old surface.
- L. After spreading each loose lift to the required thickness and adjusting its moisture content as necessary, roll with sufficient number of passes to obtain the required compaction. One pass is defined as the required number of successive trips which by means of sufficient overlap that will insure complete coverage and uniform compaction of an entire lift. Do not make additional passes until previous pass has been completed.
- M. In case material of any fill sinks and weaves under roller or under hauling units and other equipment, required degree of compaction is not being obtained. Reduce the moisture content. If such sinking and weaving produces surface cracks, suspend operations on that part of the embankment until it becomes sufficiently stabilized. Ideal condition in fill is that attained when the entire fill below the surface being rolled is so firm and hard as to show only the slightest weaving and deflection as roller passes. Spread out rolling operations over the maximum practicable area to minimize condition of sinking and weaving.
- N. If because of defective workmanship, compaction obtained over any area is less than that required, remedy condition at no cost to Owner. If additional rolling or other means fail to produce satisfactory results, remove material in that area down to a level of satisfactory density. Perform removal, replacement, and rerolling without additional compensation.

### 3.21 COMPACTION CONTROL OF BACKFILL, FILL, AND EMBANKMENT:

- A. Compact to density specified and indicated for various types of material. Control moisture content of material being placed as specified or if not specified, at a level slightly lower than optimum. Comply with the requirements of Clause 4 and Table 7 of CCM 3.02.01-90.
- B. The soil testing laboratory shall provide inspection during filling or backfilling operations to ensure compaction of screened gravel or crushed stone and record compaction equipment in use.
- C. Moisture control may be required either at the stockpile area, pits, or on embankment or backfill. Increase moisture content when material is too dry by sprinkling or other means of wetting uniformly. Reduce moisture content when material is too wet by using ditches, pumps, drainage wells, or other devices and by exposing the greatest possible area to sun and air in conjunction with disc harrowing, plowing, spreading of material or any other effective methods.

### 3.22 ALLOWANCE FOR SHRINKAGE:

- A. Build embankments or backfill to a height above finished grade which will, in the opinion of the Engineer, allow for the shrinkage or consolidation of material. Initially, provide at all points, an excess of at least one percent of total height of backfill measured from stripped surface to top of finished surface.
- B. Supply specified materials and build up low places as directed, without additional cost if embankment or backfilling settles below the indicated level for proposed finished surface at any time before final acceptance of the work.

### 3.23 CONTRACT CLOSEOUT

- A. Provide in accordance with Section 01700.

END OF SECTION

This Page Intentionally Left Blank.

Note that the primary standards referenced herein are ASTM. Subject to acceptance by the Engineer, alternative standards may be used in lieu of ASTM provided the proposed alternative is an internationally recognized standard (e.g., British Standard (BS) or local MNS Standard) that are considered similarly effective in terms of material quality and performance of the constructed product.

## SECTION 02210 (CP-2, CP-3)

### EARTH EXCAVATION, BACKFILL, FILL AND GRADING

#### PART 1 - GENERAL

##### 1.01 DESCRIPTION:

- A. Perform the following earth excavation, backfill, fill and grading as indicated or specified:
  - 1. Make excavations to accommodate piping, conduits, foundations and other structures.
  - 2. Provide materials for backfilling excavations and constructing embankments and fills as indicated and specified.
  - 3. Construct embankments of compacted materials.
  - 4. Grade surfaces to meet finished grades indicated.
  - 5. Immediately notify the Engineer if suspected hazardous materials are encountered and cease operations in that part of work.
  - 6. Remove boulders within the excavation limits.

##### 1.02 RELATED WORK:

#### 1.04 DEFINITIONS:

- A. Percentage of compaction is defined as the ratio of the field dry density, as determined by ASTM D1556 to the maximum dry density determined by ASTM D1557 Procedure C, multiplied by 100.
- B. Proof Roll: Compaction with a minimum of 4 passes of a vibratory steel drum or rubber tire roller. Vibratory plate compactors shall be used in small areas where vibratory steel drum or rubber tire roller cannot be used. Should comply with the trial test requirement per Annex 4 of CCM 3.02.01-90.
- C. Acceptable Material: Material which does not contain organic silt or organic clay, peat, vegetation, wood or roots, stones or rock fragments over 15 cm in diameter, porous biodegradable matter, loose or soft fill, excavated pavement, construction debris, or refuse. Stones or rock fragments shall not exceed 40 percent by weight of the backfill material.
- D. Unacceptable Materials: Materials that do not comply with the requirements for the acceptable material or which cannot be compacted to the specified or indicated density.

#### 1.05 SUBMITTALS:

- A. Submit the following in accordance with Section 01300:
  1. Qualifications of the Contractor's Independent Testing Laboratory as specified in Paragraph 1.06.H, four (4) weeks prior to the execution of any earth excavation, backfilling, filling, or compaction process.
  2. Submit an excavation, backfilling, and filling plan at least two weeks prior to start of any earth moving activities. The review will be only for the information of the Owner and third parties for an overall understanding of the project relating to access, maintenance of existing facilities and proper utilization of the site. The Contractor shall remain responsible for the adequacy and safety of the means, methods and sequencing of construction. The plan shall include, but not be limited to the following items:
    - a. Detailed sequence of work.
    - b. General description of construction methods.
    - c. Numbers, types, and sizes of equipment proposed to perform excavation and compaction.
    - d. Details of dust control measures.

- e. Proposed locations of stockpiled excavation and/or backfill materials.
  - f. Proposed surplus excavated material off-site disposal areas and required permits.
  - g. Details of erosion and sedimentation control measures which will prevent erosion and sedimentation during the earth moving activities.
3. The following material submittals shall be submitted to the Engineer prior to backfilling and filling:
- a. Screened Gravel: As specified in Section 02223.
  - b. Bank-run Gravel: As specified in Section 02224.
  - c. Select Borrow: As specified in Section 02225.
  - d. Crushed Stone: As specified in Section 02435.
  - e. Other Acceptable Materials: Laboratory testing results of gradation and moisture-density relationship. Submittal shall include specific location of the source and the date when sample was taken.
4. During Construction, submit written confirmation of fill lift thickness, in-place soil moisture content, and percentage of compaction to the Engineer before placing the next lift or constructing foundations.

#### 1.06 QUALITY ASSURANCE AND CONTROL:

- A. Comply with the requirements specified in Section 01400 and annexes 1,2 and 3 of CCM 3.02.01-90.
- B. Dewatering and Surface Runoff Control: Provide and maintain as specified in Section 02140.
- C. Excavations shall be performed in the dry, and kept free from water, snow and ice during construction. Bedding and backfill material shall not be placed in water. Water shall not be allowed to rise upon or flow over the bedding and backfill material.
- D. Excavation Support Systems: Provide and maintain as specified in Section 02160.
- E. The Contractor shall be solely responsible for making all excavations in a safe manner. All excavation, trenching, and related sheeting, bracing, etc. shall comply with the local regulation requirements.
- F. Do not excavate, construct embankments, or fill until all the required submittals have been reviewed by the Engineer.
- G. Formulate excavation, backfilling, and filling schedule and procedures to eliminate possibility of undermining or disturbing foundations of partially and completed structures, pipelines and embankments or existing structures and pipelines.

- H. Employ an independent testing laboratory to perform particle size and gradation analyses in accordance with ASTM D6913 and D7928, and to determine compactibility in accordance with ASTM D1557 for all the proposed backfill and fill materials, and monitoring field compaction operations. The Contractor's independent testing laboratory shall have the following qualifications:
1. Have three (3) years of experience in sampling, testing and analysis of soil and aggregates, and monitoring field compaction operations.
  2. Able to provide three (3) references from previous work.
- I. Field Testing and Inspections:
1. By Contractor's independent testing laboratory, acceptable to the Engineer, at Contractor's expense as specified in Paragraph 1.06.K.
  2. Location of tests mutually acceptable to testing laboratory and the Engineer or as directed by the Engineer.
  3. In the event compacted material does not meet specified in-place density, recompact material and retest this area until specified results are obtained at no additional to the Owner.
  4. Contractor's testing laboratory to perform inspection at least once daily to confirm lift thickness and compaction effort for entire fill area.
- J. Methods of Field Testing:
1. In-Place Density: ASTM D1556, ASTM D2167, or ASTM D6938.
  2. In-Place Moisture Content: ASTM D6938, ASTM D4944, or ASTM D4959.
- K. Material Testing Frequency: The following testing frequencies are minimum required for all structural and non-structural fill, grading and embankment.
1. Field In-Place Density and Moisture Content - Screened gravel and crushed stone shall be compacted as specified and indicated. For other backfill and fill materials, minimum test frequency shall be as follows, and no less than one test per:
    - a. Trenches under structures foundation preparation or roadways subbase: Every 300 m per lift.
    - b. Trenches in areas without structures or roadways: Every 300 m per alternate lift.
    - c. Paved Roadways: Every 60 m per lift.
    - d. Paved Areas: 350 sq. m. per lift.

- e. Under Structure: 100 sq. m. per lift.
  - f. Around Structures: 150 sq. m. per lift.
  - g. Embankment Fills: 1,000 sq. m. per lift.
  - h. Frequency of testing is to comply with the requirements given in Table 17 of CCM 3.02.01-90.
- 2. Moisture Density - One per source, except for screened gravel and crushed stone. Repeat the moisture density test for every 3,825 cubic meters of material use, and whenever visual inspection indicates a change in material gradation as determined by the Engineer.
  - 3. Gradation Analysis - A minimum of one per source and for each moisture density test and whenever visual inspection indicates a change in material gradation.
  - 4. Liquid Limit, Plastic Limit and Plasticity Index - Minimum of one test per 3,825 cubic meters of soil for use as fill material and whenever classification of material is in doubt as determined by the Engineer.
- L. Construction Tolerances:
- 1. Construct finished surfaces to plus or minus 2.5 cm of the elevations indicated.
  - 2. Grade cut and fill areas to plus or minus 6 cm of the grades indicated.
  - 3. Complete embankment edges to plus or minus 15 cm of the slope lines indicated.
  - 4. Provide the Engineer with adequate survey information to verify compliance with above tolerances.
- M. Cut pavement with a saw or pneumatic tools to prevent damage to remaining pavement without extra compensation. Where pavement is removed in large pieces, dispose of pieces before proceeding with excavation.
- N. Pipes, drains, and other utilities may exist in certain locations not indicated on the Drawings. No attempt has been made to show all services. Completeness or accuracy of information given is not guaranteed.
- O. Dig test pits considered as incidental to the normal excavation as indicated and specified in this Section, at no additional compensation.
- P. Carefully support and protect from damage, existing pipes, poles, wires, fences, curbs, property line markers, and other structures, which the Engineer determines must be preserved in place without being temporarily or permanently relocated. Should such items be damaged, restore without compensation therefore, to at least as good condition as that in which they were found immediately before the work was begun.

- Q. Whenever certain existing structures, as described below, are encountered, and the Engineer so directs, change the location, remove and later restore, or replace such structures, or assist the Owner in doing so. Such work to be paid for under applicable items of work, otherwise as Extra Work.
- R. In removing existing pipes or other structures, include for payment only those new materials which are necessary to replace those unavoidably damaged as determined by the Engineer.
- S. The preceding two paragraphs apply to pipes, wires, and other structures which meet the following: (a) are not indicated on the drawings or otherwise provided for, (b) encroach upon or are encountered near and substantially parallel to the edge of the excavation, and (c) in the opinion of the Engineer, will impede progress to such an extent that satisfactory construction cannot proceed until they have been changed in location, removed (to be later restored), or replaced.
- T. Restore existing property or structures as promptly as practicable.
- U. If material unacceptable for foundation (in the opinion of the Engineer) is found at or below the grade to which excavation would normally be carried in accordance with the drawings and/or specifications, remove such material to the required width and depth as directed by the Engineer and replace it with screened gravel, select borrow, or concrete.
- V. Do not remove excavation materials from the site of the work or dispose of except as directed or permitted by the Engineer.
- W. Haul away and dispose of surplus excavated materials at locations in accordance with all Federal, State and local requirements at no additional cost to the Owner.
- X. During progress of work, conduct earth moving operations and maintain work site so as to minimize the creation and dispersion of dust. Furnish and spread calcium chloride if the Engineer decides that it is necessary for more effective dust control.
- Y. Provide suitable and safe bridges and other crossings where required for accommodation of travel, and to provide access to private property during construction, and remove said structures thereafter.

#### 1.07 SITE CONDITIONS:

- A. Subsurface Conditions: Refer to Appendix A Geotechnical Report.

### PART 2 - PRODUCTS

#### 2.01 GENERAL:

- A. Use only acceptable materials from excavations or borrows.
- B. Provide 10 MPa concrete, screened gravel, bank-run gravel, fine aggregate, select borrow, and crushed stone.

- C. Provide Fine Aggregate conforming to ASTM C33.
- D. Provide erosion/sedimentation control devices as indicated, including geotextile fabric in accordance with Section 02273.
- E. Provide geotextile fabric as indicated, meeting the requirements and conforming to Section 02273.

## 2.02 EQUIPMENT:

- A. The compaction equipment shall be selected by the Contractor and shall be capable of consistently achieving the specified compaction requirements. The selected compaction equipment shall meet the following minimum requirements:
  - 1. Manually operated vibratory plate compactors weighing no less than 90 kg with vibration frequency no less than 1600 cycles per minute.
  - 2. Vibratory steel drum or rubber tire roller weighing at least 5,450 kg.

## PART 3 - EXECUTION

### 3.01 SITE MAINTENANCE:

- A. Roadway and Site Leveling: Grade roadway and site as to maintain them in a level unrutted condition and to eliminate puddling of surface and subsurface water.

### 3.02 EXCAVATION:

- A. Execution of any earth excavation shall not commence until the related dewatering, excavation support systems, and backfill and fill materials submittals are reviewed by the Engineer and all Engineer's comments satisfactorily addressed.
- B. Carry out program of excavation, dewatering, and excavation support systems to eliminate possibility of undermining or disturbing foundations of existing structures or of work previously completed under this contract.
- C. Excavate to widths that give suitable room for building structures or laying and jointing piping.
- D. Do not plow, scrape or dig by machinery near to finished subgrade in a manner that would result in disturbance of subgrade.
- E. Excavate to lines and grades indicated in an orderly and continuous program.
- F. Establish limits of excavation to allow adequate working space for installing forms and for safety of personnel.
- G. Excavate to elevations indicated, or deeper, as directed by the Engineer, to remove unacceptable bottom material.

- H. Exercise care to preserve material below and beyond the lines of excavations.
- I. Place excavated material at the approved stockpile locations and in no case closer than 90 cm from edge of excavations to prevent cave-ins of bank slides.
- J. Regard small, less than one cubic yard, boulders, rock fragments, and concrete encountered during excavation as a normal part of in-place soils and not included for payment as rock.
- K. Excavate for depressed foundations, where mat foundations are indicated as depressed. Sheet and shore existing ground so that adjacent sections of foundation mat will rest on undisturbed ground as indicated. Installation of sheeting shall be in accordance with Section 02160.

### 3.03 SEPARATION OF EXCAVATED MATERIALS FOR REUSE:

- A. Remove only existing pavement that is necessary for prosecution of work.
- B. Carefully remove loam and topsoil from excavated areas. Store separately for further use or furnish equivalent loam and topsoil as directed.
- C. Carefully remove acceptable material from excavated areas and store separately for further use as backfill material.

### 3.04 TRENCH EXCAVATION:

- A. When pipe is to be laid in gravel bedding or concrete cradle, excavate trench by machinery to, or just below designated subgrade. If material remaining at bottom of trench is disturbed, recompaction shall be required.
- B. When pipe is to be laid directly on bottom of trench, do not excavate lower part of trenches by machinery to subgrade. Remove remainder of material to be excavated just before placing of pipe by use of hand tools. Form a flat or shaped bottom, true to grade, so pipe will have a uniform and continuous bearing. Support on firm and undisturbed material between joints, except for limited areas where use of pipe slings have disturbed bottom.

### 3.05 DEPTH OF TRENCH:

- A. Excavate trenches to depths to permit pipe to be laid at elevations, slopes, or depths of cover indicated on drawings, and at uniform slopes between indicated elevations.

### 3.06 WIDTH OF TRENCH:

- A. Make pipe trenches as narrow as practicable and do not widen by scraping or loosening materials from the sides. Make every effort to maintain sides of trenches firm and undisturbed until backfilling has been placed and compacted.
- B. Excavate trenches with approximately vertical sides between springline of pipe and elevation 30 cm above top of pipe.

### 3.07 TRENCH EXCAVATION IN FILL:

- A. Place and compact material to top of fill or to a minimum height of 30 cm above top of pipe, whichever is less, when pipe is to be laid in embankment or other recently filled material. Take particular care to ensure maximum consolidation of material under pipe location. Excavate pipe trench as though in undisturbed material.

### 3.08 EXCAVATION NEAR EXISTING STRUCTURES:

- A. Discontinue digging by machinery when excavation approaches pipes, conduits, or other underground structures. Continue excavation by use of hand tools. Include such manual excavation in work to be done when incidental to normal excavation and under items involving normal excavation.
- B. Excavate test pits when determination of exact location of pipe or other underground structure is necessary for doing work properly.

### 3.09 REMOVAL OF SUBSURFACE OBSTRUCTIONS:

- A. Remove indicated subsurface structures and related obstructions to extent shown.
- B. Promptly notify the Engineer when any unexpected subsurface facilities are encountered during excavation such as utility lines and appurtenances, walls and foundations.

### 3.10 UNAUTHORIZED EXCAVATION:

- A. When the bottom of any excavation for structures is taken out beyond limits indicated or specified, backfill, with screened gravel and crushed stone wrapped with non-woven geotextile fabric or with 10 MPa concrete.

### 3.11 REUSE AND DISPOSAL OF SURPLUS EXCAVATED MATERIALS:

- A. Reuse surplus acceptable excavated materials for backfill in areas where structural backfill is not required; deposit neatly and grade so as to make or widen fills, flatten side slopes, or fill depressions; or legally dispose off-site; all as directed or permitted and without additional compensation. See Appendix A for soil sampling previously completed.
- B. Surplus excavated material shall not be used in locations where structural backfill is required.

### 3.12 SUBGRADE PREPARATION AND PROTECTION:

- A. Remove loam and topsoil, loose vegetable matter, stumps and large roots from areas upon which embankments will be built or material will be placed for grading. Shape subgrade as indicated on drawings, and prepare by forking, furrowing, or plowing so that the first layer of new material placed thereon will be well bonded to it.
- B. As directed by the Engineer, overexcavate unacceptable materials below the foundation subgrade. Backfill the overexcavation with compacted screened gravel or

crushed stone wrapped with nonwoven geotextile fabric. In no case shall the screened gravel be placed directly on the exposed subgrade prior to placing the geotextile fabric.

- C. Proof roll the foundation subgrade prior to backfilling and filling operations or placing foundation concrete.
- D. Proof roll the pipe trench foundation subgrade prior to backfilling and filling operations or placing a soil-supported pipeline.

### 3.13 CARE AND RESTORATION OF PROPERTY:

- A. Enclose uncut tree trunks adjacent to work in wooden boxes of such height as may be necessary for protection from injury from piled material, equipment, operations, or otherwise due to work. Operate excavating machinery and cranes of suitable type with care to prevent injury to trees not to be cut and particularly to overhanging branches and limbs.
- B. Cut all branches, limbs, and roots smoothly and neatly without splitting or crushing. Neatly trim, cut the injured portions and cover with an application of grafting wax or tree healing paint as directed.
- C. Protect cultivated hedges, shrubs, and plants which might be injured by the Contractor's operations by suitable means or dig up and temporarily replant and maintain. After construction operations have been substantially completed, replant in original positions and care for until growth is reestablished. If cultivated hedges, shrubs, and plants are injured to such a degree as to affect their growth or diminish in their beauty or usefulness, replace by items of equal kind and quality existing at the start of the work.
- D. Do not use or operate tractors, bulldozers, or other power-operated equipment on paved surfaces when their treads or wheels of which are so shaped as to cut or otherwise damage such surfaces.
- E. Restore surfaces damaged by the Contractor's operations to a condition at least equal to that in which they were found immediately before work commenced. Use suitable materials and methods for such restoration.

### 3.14 BACKFILLING - GENERAL:

- A. Do not place frozen materials in backfill or place backfill upon frozen material. Remove previously frozen material or treat before new backfill is placed.
- B. Do not place frost susceptible material with fines content more than 5% underneath pavement, structures, and other facilities.
- C. Do not place, spread, roll or compact fill material during unfavorable weather conditions. If interrupted by heavy rain or other unfavorable conditions, do not resume until ascertaining that the moisture content and density of the previously placed soil are as specified.

- D. Do not use puddling, ponding or flooding as a means of compaction.

### 3.15 MATERIAL PLACEMENT AND COMPACTION REQUIREMENTS:

- A. Select Borrow, and Fine Aggregate:

1. Dump and spread in layers not to exceed 20 cm uncompacted thickness.
2. Compact, fill and backfill under structure and bedding for pipes (from below pipe to spring line) as indicated but to not less than 95 percent. Compact to not less than 90 percent in other areas unless otherwise indicated.

- B. Screened Gravel and Crushed Stone:

1. Dump and spread in layers not to exceed 20 cm uncompacted thickness.
2. Compact using self propelled vibratory steel drum or rubber tire rollers with a minimum of 4 passes in directions perpendicular to one another in open areas. In small areas, use manually operated vibratory plate compactors with a minimum of 4 passes.

- C. Bank-run Gravel and Acceptable materials for use as non-structural fill:

1. Dump and spread in layers not to exceed 30 cm uncompacted thickness.
2. Compact to not less than 90 percent unless otherwise indicated.

- D. Backfilling and filling operation shall be suspended in areas where tests are being made until tests are completed and the testing laboratory has advised the Engineer that adequate densities are obtained.

### 3.16 STRUCTURAL FILL AND BACKFILL UNDER STRUCTURES:

- A. Compact fill and backfill under structures and pavements with screened gravel, crushed stone, select borrow, or fine aggregate as specified and indicated.
- B. Improvement of foundation soil shall be compliant with the requirements of Clause 13 of CCM 3.02.04-90.

### 3.17 NON-STRUCTURAL BACKFILL AROUND STRUCTURES:

- A. Use acceptable materials for non-structural backfill around structures and compacted as specified and indicated.
- B. Conduct hydraulic testing as soon as practicable after structures are constructed and other necessary work has been done. Start backfilling promptly after completion of tests.
- C. Deposit material evenly around structure to avoid unequal soil pressure.

- D. Do not place backfill against or on structures until they have attained sufficient strength to support the loads (including construction loads) to which they will be subjected, without distortion, cracking, or other damage.

### 3.18 BACKFILLING PIPE TRENCHES:

#### A. General:

1. Begin backfilling and proceed until completed after: the pipes and conduits have been laid, joints have acquired maximum degree of hardness, pipelines and conduits have successfully passed tests and inspections as required in the Specifications, and concrete or masonry structures within the trench have reached their design strength to support all loads.
2. Backfill and compact indicated material under, around, and above pipes, conduits, and other structures to the indicated or specified compaction density requirement. Utilize compaction devices which will not damage the pipe, conduit, or structure within the trench.
3. Do not drop backfill material into trench from a height of more than 150 cm, or in a manner which will damage the pipe, conduit, or other structure within trench.

#### B. Pipe Trenches:

1. Materials:
  - a. From below pipe to 30 cm above top of pipe: Use screened gravel, or crushed stone, unless otherwise indicated.
  - b. 30 cm above top of pipe to finished grade or to pavement subbase: Use bank-run gravel or acceptable materials, unless otherwise indicated. Frost susceptible materials with more than 5% fines are prohibited under the pavement.
2. Compacting Around Pipes: Compact material around circumference of pipe and the area between the trench wall and the pipe by hand tamping in 15 cm layers.
3. Compacting Above Pipe: Compact material by hand tamping. If trench width is wide enough to accommodate power tools and the compacted material over the pipe will support the load of the power tools without damage to the pipe, use rollers or other powered compaction equipment able to more readily achieve compaction requirements.

### 3.19 MATERIAL FOR FILLING AND EMBANKMENTS:

- A. Use acceptable materials for filling and building embankments unless otherwise indicated.

### 3.20 PLACING AND COMPACTING EMBANKMENT MATERIAL:

- A. Compact fill material as specified and indicated.
- B. Perform fill operation in an orderly and systematic manner using equipment in proper sequence to meet the specified compaction requirements.
- C. Place fill on surfaces which are free of unacceptable materials.
- D. Begin filling in lowest section of work area. Grade surface of fill approximately horizontal but provide with sufficient longitudinal and transverse slope to allow for runoff of surface water from every point.
- E. Conduct filling so that no obstruction to drainage from other sections of fill area is created at any time.
- F. Install temporary dewatering sumps in low areas during filling operation where excessive amounts of rain runoff collect.
- G. Reduce moisture content of fill material, if necessary, in source area by working it over under warm and dry atmospheric conditions. A large disc harrow with two to three-foot diameter disks may be required for working soil in a drying operation.
- H. Compact uniformly throughout. Keep surfaces of fill reasonably smooth and free from humps and hollows which would prevent proper and uniform compaction. Do not permit hauling equipment to follow a single track on the same layer but direct equipment to spread out to prevent overcompaction in localized areas. Take care in obtaining thorough compaction at edges of fill.
- I. Slightly slope surface of fill to ensure drainage during periods of wet weather. Do not place fill while rain is falling or after a rain-storm until the Engineer considers conditions satisfactory. During such periods and upon suspension of filling operations for any period in excess of 12 hours, roll smooth the surface of fill using a smooth wheel static roller to prevent excessive absorption of rainfall and surface moisture. Prior to resuming compaction operations, remove muddy material off surface to expose firm, compacted material, as determined by the Engineer.
- J. When fill is placed against an earlier fill or against in-situ material under and around structures, including around piping beneath structures or embankments, slope junction between two sections of fill, 1 vertical to 1.5 horizontal. Bench edge of existing fill 60 cm to form a serrated edge of compact stable material against which to place the new fill. Ensure that rolling extends over junction between fills.
- K. When fill is placed directly upon another older fill, clean surface thoroughly of debris and remove any loose material. Then proof roll the entire old surface.
- L. After spreading each loose lift to the required thickness and adjusting its moisture content as necessary, roll with sufficient number of passes to obtain the required compaction. One pass is defined as the required number of successive trips which by means of sufficient overlap that will insure complete coverage and uniform compaction of an entire lift. Do not make additional passes until previous pass has been completed.

- M. In case material of any fill sinks and weaves under roller or under hauling units and other equipment, required degree of compaction is not being obtained. Reduce the moisture content. If such sinking and weaving produces surface cracks, suspend operations on that part of the embankment until it becomes sufficiently stabilized. Ideal condition in fill is that attained when the entire fill below the surface being rolled is so firm and hard as to show only the slightest weaving and deflection as roller passes. Spread out rolling operations over the maximum practicable area to minimize condition of sinking and weaving.
- N. If because of defective workmanship, compaction obtained over any area is less than that required, remedy condition at no cost to Owner. If additional rolling or other means fail to produce satisfactory results, remove material in that area down to a level of satisfactory density. Perform removal, replacement, and rerolling without additional compensation.

### 3.21 COMPACTION CONTROL OF BACKFILL, FILL, AND EMBANKMENT:

- A. Compact to density specified and indicated for various types of material. Control moisture content of material being placed as specified or if not specified, at a level slightly lower than optimum. Comply with the requirements of Clause 4 and Table 7 of CCM 3.02.01-90.
- B. The soil testing laboratory shall provide inspection during filling or backfilling operations to ensure compaction of screened gravel or crushed stone and record compaction equipment in use.
- C. Moisture control may be required either at the stockpile area, pits, or on embankment or backfill. Increase moisture content when material is too dry by sprinkling or other means of wetting uniformly. Reduce moisture content when material is too wet by using ditches, pumps, drainage wells, or other devices and by exposing the greatest possible area to sun and air in conjunction with disc harrowing, plowing, spreading of material or any other effective methods.

### 3.22 ALLOWANCE FOR SHRINKAGE:

- A. Build embankments or backfill to a height above finished grade which will, in the opinion of the Engineer, allow for the shrinkage or consolidation of material. Initially, provide at all points, an excess of at least one percent of total height of backfill measured from stripped surface to top of finished surface.
- B. Supply specified materials and build up low places as directed, without additional cost if embankment or backfilling settles below the indicated level for proposed finished surface at any time before final acceptance of the work.

### 3.23 CONTRACT CLOSEOUT

- A. Provide in accordance with Section 01700.

END OF SECTION

## SECTION 02230 (CP-1)

## SITE CLEARING

## PART 1 – GENERAL

## 1.01 DESCRIPTION:

- A. This section specifies all materials, equipment, labor and services required for all site temporary clearing work, including all items incidental thereto, as specified herein. All site clearing which may be required shall be limited to the access road and the confines of the water purification plant site, temporary access tracks, and permanent access tracks. No work outside of these areas shall be permitted unless authorized by the Owner.
- B. Attention is directed to SECTION VI GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT

- A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 RELATED WORK:

- A. Section 01046: Control of Work
- B. Section 01110: Environmental Protection Procedures
- C. Section 01568: Erosion Control, Sedimentation & Containment of Construction Materials
- D. Section 02210: Earth Excavation, Backfill, Fill and Grading

## 1.04 REFERENCE:

- A. MNS 5415: System of Building Design Documents, Graphical Symbols and Signs of Elements of Construction Site

## PART 2 – PRODUCTS

NOT USED

## PART 3 – EXECUTION

### 3.01 CLEARING AND GRUBBING:

- A. Clearing shall consist of the cutting and removal of all trees, logs, stumps, brush, roots and other objectionable material as indicated on the drawings.
- B. Protect all areas not otherwise shown to be disturbed. Should these areas be damaged, the Contractor shall restore them to original condition or better at no additional cost to the Owner.
- C. Grubbing shall include the removal and disposal off-site of all stumps and roots to a depth not less than 460 mm below subgrade.
- D. Fill all holes from removal of stumps and roots with clean fill compacted to subgrade.
- E. Remove all debris and rubbish from each site and legally dispose of same. Burning debris will not be permitted.
- F. The Contractor shall comply with all requirements of related Sections and applicable permit conditions.
- G. Site clearing shall start once the Temporary Site Plan is approved by the Owner.
- H. The temporary site plan drawing shall comply with the requirements in MNS 5415.

END OF SECTION

## SECTION 02230 (CP-2, CP-3)

## SITE CLEARING

## PART 1 – GENERAL

## 1.01 DESCRIPTION:

- A. This section specifies all materials, equipment, labor and services required for all site temporary clearing work, including all items incidental thereto, as specified herein. All site clearing which may be required shall be limited to the access road and the confines of the water purification plant site as indicated. No work outside of these areas shall be permitted unless authorized by the Owner.
- B. Attention is directed to SECTION VI GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT

- A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

- E. Remove all debris and rubbish from each site and legally dispose of same. Burning debris will not be permitted.
- F. The Contractor shall comply with all requirements of related Sections and applicable permit conditions.
- G. Site clearing shall start once the Temporary Site Plan is approved by the Owner.
- H. The temporary site plan drawing shall comply with the requirements in MNS 5415.

END OF SECTION

Note that the primary standards referenced herein are ASTM. Subject to acceptance by the Engineer, alternative standards may be used in lieu of ASTM provided the proposed alternative is an internationally recognized standard (e.g., British Standard (BS) and the cited local MNS Standards) that are considered similarly effective in terms of material quality and performance of the constructed product.

## SECTION 02268 (CP-2, CP-3)

### EROSION CONTROL BARRIER

#### PART 1 – GENERAL

##### 1.01 SCOPE:

- A. This section covers the provision of erosion control barriers, their installation, and maintenance.
- B. Attention is directed to SECTION VI GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

##### 1.02 MEASUREMENT AND PAYMENT

- A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

##### 1.03 SUBMITTALS:

- A. Manufacturer's catalog sheets on geotextile fabrics shall be submitted in accordance with the Submittal Procedures section.

#### PART 2 - PRODUCTS

##### 2.01 FABRIC:

- A. Fabric may be woven or non-woven, made from polypropylene, polyethylene, or polyamid, and shall contain sufficient UV inhibitors so that it will last for 2 years in outdoor exposure.
- B. Fabric shall have the following properties:

<u>Parameter</u>	<u>Standard Method</u>	<u>Value</u>
Grab Tensile Strength, N	ASTM D4632	445
Burst Strength, kPa	ASTM D3786	1380
Apparent Opening Size	ASTM D4751	Between 200 and 70 sieve size

**2.02 POSTS:**

- A. Posts shall be wood, at least 50 by 50 millimeters, at least 2 meters long.

**2.03 FENCING:**

- A. Woven wire fabric fencing shall be galvanized, mesh spacing of 150 millimeters, maximum 1.62-millimeter diameter wire, at least 800 millimeters tall.

**2.04 FASTENERS:**

- A. Fasteners to wood posts shall be steel, at least 40 millimeters long.

**PART 3 – EXECUTION****3.01 PREPARATION:**

- A. Provide erosion control barriers at the indicated locations and as required to prevent erosion and silt loss from the Site. Contractor shall not commence clearing, grubbing, earthwork, or other activities which may cause erosion until barriers are in place.

**3.02 INSTALLATION:**

- A. Barrier systems shall be installed in such a manner that surface runoff will percolate through the system in sheet flow fashion and allow sediment to be retained and accumulated.
- B. Attach the woven wire fencing to the posts that are spaced a maximum of 2 meters apart and embedded a minimum of 300 millimeters. Install posts at a slight angle toward the source of the anticipated runoff.
- C. Trench in the toe of the filter fabric barrier with a spade or mechanical trencher so that the downward face of the trench is flat and perpendicular to the direction of flow. Lay fabric along the edges of the trench. Backfill and compact.
- D. Securely fasten the fabric materials to the woven wire fencing with tie wires.
- E. Reinforced fabric barrier shall have a height of 450 millimeters.
- F. Provide the filter fabric in continuous rolls and cut to the length of the fence to minimize the use of joints. When joints are necessary, splice the fabric together only at a support post with a minimum 150 millimeters overlap and seal securely.

**3.03 MAINTENANCE:**

- A. Regularly inspect and repair or replace damaged components of the barrier. Unless otherwise directed, maintain the erosion control system until final acceptance; then remove erosion and sediment control systems promptly.

- B. Remove sediment deposits when silt reaches a depth of 150 millimeters or 1/2 the height of the barrier, whichever is less. Dispose of sediments on the Site, if a location is indicated on the Drawings, or at a site arranged by the Contractor which is not in or adjacent to a stream or floodplain.

END OF SECTION

This Page Intentionally Left Blank

## SECTION 02480 (CP-2, CP-3)

## LANDSCAPING

## PART 1 - GENERAL

## 1.01 DESCRIPTION:

- A. Provide loaming, fertilizing, seeding, planting and related work as indicated and specified.
- B. Attention is directed to SECTION VI GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT

- A. Measurement and payment for the work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 REFERENCE STANDARD:

- A. Mongolian Standard for Agriculture.
  - 1. MNS 5918:2008 Environment. Re-vegetation of destroyed land. General technical requirements.
  - 2. MNS 5973:2009 The size of green facilities (garden) and its distance in construction planning and engineering infrastructure development.
  - 3. MNS 5994:2009 Seeds of trees and shrubs. Sowing characteristics. Specifications.
  - 4. MNS 6139:2010 Seedlings of coniferous trees. Technical requirement.
  - 5. MNS 6140:2020 Seedlings of woody and bushy species. Technical requirement.
  - 6. MNS 6141:2010 Seedlings of deciduous trees. Technical requirement.
  - 7. MNS 6253-1:2011 Preparing seeds of trees and shrubs for planting. General requirements.
  - 8. MNS 6253-2:2011 Planting seeds of trees. General requirement.
  - 9. MNS 6253-3:2011 Caring of trees and shrubs after the planting. General requirement.
  - 10. MNS 6254:2011 Growing seedlings of trees and shrubs. General requirement.
  - 11. MNS 6255:2011 Seedling of shrubs. General requirement.

12. MNS 6258-1:2011 Planting and pitting seedlings hole. General requirement.
13. MNS 6260:2011: Growing seeds, cultivation and nursing in lawn area.
14. MNS 6263:2011 Checking garden objects and accept for use it. General requirement

#### B. LANDSCAPE REFERENCE

1. CCM 81-59-05 Landscaping and other works

#### C. BROAD LEAF TREES

1. MNS 4729:2010 Semi-processed broadleaf timber. Technical requirement
2. MNS 6141:2010 Seedlings of deciduous trees. Technical requirement

#### D. FLOWER BED

1. MNS 6260:2011 Growing seeds, cultivation and nursing in lawn area
2. MNS 6259:2011 Method planting of annual plants

#### E. DECORATIVE WOODY PLANTS

1. According to landscape detailed design contractor need to plant *Populus sibirica*, *Padus asiatica Kom*, *Syringa*, *Caragana arborescens Lam*.

#### F. WOODY PLANTS IN BOXES

1. Woody plants in boxes need to install according to detailed design. Light resistance of varnish acrylic for woody plants in boxes complies with GOST R 52020-2003.

#### G. THE REST AREA COMPONENTS

1. Bench must meet the UCS 1404C:2020 city standard.
2. Trash bin must meet the UCS 1403C:2020 city standard. Bench and trash bin need to install according to detailed design. Light resistance of varnish acrylic for bench and wood canopy complies with GOST R 52020-2003.
3. Paved walkway must meet the UCS 0901B:2020 city standard and MNS EN 1342:2012.

#### 1.04 SUBMITTALS:

##### A. Shop Drawings: Submit the following in accordance with Section 01300 - SUBMITTALS:

1. In Accordance with MNS 6138:2010 provide statement confirming that all seedlings and planting materials are sourced in the project vicinity with similar soil and climatic conditions.

2. Prior to placement of any mulch, deposit, at a location on site suitable to Engineer, 1/2 m<sup>3</sup> sample of mulch for examination. After mulch sample is reviewed by the Engineer, provide mulch conforming to accepted sample.
3. Submit with seed, certificates concerning seed mixture, purity, germinating value, and crop year identification.
4. Submit test samples of loam to a certified soils consultant to determine fertilizer and lime requirements and return two copies of results for implementation.
5. Submit list of plant material to be used and source.
6. Prior to end of maintenance period, furnish two copies of written maintenance, instructions for maintenance and care of installed plants and lawn areas.

#### 1.05 QUALITY ASSURANCE:

A. Conform with minimum requirements of MNS 6140:2020.

B. Ability to Deliver:

1. Investigate sources of supply and make assurances that plants will be supplied as indicated in Schedule of Plant Material in sizes, variety and quality noted and specified before submitting bid.
2. Failure to take this precaution will not relieve responsibility for furnishing and installing plant material in accordance with Contract requirements and without additional expense to OWNER.

C. Inspection:

1. Upon delivery and before planting, Engineer will inspect plants.
2. Inspection and approval by Engineer of plants is for quality, size and variety only and in no way impairs the right of rejection for failure to meet other requirements during progress of work.

D. General:

1. Provide only nursery grown plants having been transplanted at least once and growing in a nursery for at least two years.
2. Allow Engineer to determine fitness of any plant.
3. Provide container grown stock in containers long enough for root system to develop sufficiently to hold soil together firm and whole when removed from container. Use no plants loose in the container.

4. Check plant material prior to commencing of planting operations. Plant no material prior to inspection by Engineer. Notify Engineer at least 48 hours in advance of all planned planting operations and identify specific material and its location.
5. Furnish suitable quantities of water, hose and appurtenances.
6. Use loam, having prior vegetative growth that did not contain toxic amounts of either acid or alkaline elements.
7. Begin maintenance immediately after each portion of lawn is seeded and continue for minimum of 45 days.
8. Repair or replace seeded areas, plants, shrubs, and trees which, in judgment of Engineer, have not survived and grown in a satisfactory manner, for a period of one year after acceptance.
9. Provide as specified seedings or plantings replacements of the same type and size as specified.
10. Dry loam test samples to constant weight at temperature of 110 deg. C, plus or minus 13 degrees.

#### 1.06 DELIVERY, STORAGE AND HANDLING:

A. Provide in accordance with Section 01610.

B. Preparation for Delivery:

1. Balled and Burlapped (B & B) Plants:

- a. Dig and prepare for shipment in manner that will not damage roots, branches, shape, and future development of plant.
- b. B & B Plants: Originate from soil which will hold a good ball and be wrapped with burlap or similar approved material, bound with twine or cord in such manner as to hold balls firm and intact.
- c. Ball Sizes: Not less than standard established by the American Association of Nurserymen for B & B stock.

C. Delivery:

1. Deliver fertilizer to site in original unopened containers bearing manufacturer's guaranteed chemical analysis, name, trade name, trademark, and conformance to state law.
2. Delivery plants with legible identification labels:

- a. Label trees, evergreens, shrubs, and ground cover with waterproof labels which will remain legible for at least 60-days.
  - b. Label with correct plant name and size as indicated in Plant List.
3. Protect plants during delivery to prevent damage to roots or desiccation of leaves.
4. Notify Engineer of delivery schedule in advance so plant material may be inspected at jobsite.

D. Storage:

1. Store plants in ground or other acceptable media if not to be planted within 4-hrs.
2. Protect roots of plant material from drying or other possible injury.
3. Water plants as necessary until planted.

E. Handling:

1. Do not drop plants.
2. Do not pick up container or B & B plants by stem or trunks.

1.07 JOB CONDITIONS:

- A. It is the intent of this specification that existing trees within grading and seeding limits, not disturbed by building operations, be saved and protected, except where specified to be removed. Clear trees required to be removed only after approval by Engineer. Engineer directs variations required in grading on the job.

B. Planting Seasons:

1. Recommended Spring Planting Season: From time soil can be satisfactorily worked until following dates at end of planting season:
  - a. General: Due to geography, climatic conditions of Mongolia planting season of all species of evergreens, trees-coniferous and deciduous species, shrubs, bushes are required to be planted in spring or autumn season as noted below:
    - (1) Spring planting: 20 April~25 May
    - (2) Autumn planting: 25 September~01 November

Specific dates for the various types of plants are noted below.

- b. Evergreens – April 20 to May 25. MNS 6139:2010 Seedlings of coniferous trees. Technical requirement and MNS 6774:2019

- c. Trees and Shrubs – MNS: 6253-2:2011 Planting seeds of trees. General requirement.
    - d. Lawns – May 11 to June 30. MNS 6260:2011 Growing seeds, cultivation and nursing in lawn area.
  - 2. Recommended Fall Planting Season: Commence and terminate at time listed below:
    - a. Evergreens – September 25 to November 01. MNS 6139:2010 Seedlings of coniferous trees. Technical requirement.
    - b. Trees and Shrubs – MNS 6253-2:2011 Planting seeds of trees. General requirements.
    - c. Lawns – May 20 – June 30 MNS 6260:2011 Growing seeds, cultivation and nursing in lawn area.
  - C. Perform actual planting only when weather and soil conditions are suitable in accordance with locally accepted practice.
  - D. Protection:
    - 1. Protect seeded and planted areas against damage by trespass and other causes.
    - 2. Protect work until accepted.
    - 3. Replace, repair, restake, or replant as directed by Engineer, and at own expense, seeding or planting which is damaged.
    - 4. If planting is done after lawn preparation, protect lawn areas, repair damage resulting from planting operations.
  - E. Wherever landscape work must be executed in conjunction with construction of other work, arrange a schedule of procedure that will permit execution of landscape work as specified.
- 1.08 WARRANTY:
- A. Provide in accordance with Section 01740.
  - B. Guarantee new plant material through three full growing seasons after plants are installed.
    - 1. Guarantee plants replaced under this for three full growing seasons from date of replacement.
    - 2. Repair damage to plants or lawns during plant replacement.

- C. Guarantee lawn areas for duration of three full years after seeding to be alive and in satisfactory growth at end of guarantee period.
  - 1. For purpose of establishing an acceptable standard, scattered bare spots, none of which is larger than 930 cm<sup>2</sup> will be allowed up to a maximum of 3% of lawn area.

## PART 2 - PRODUCTS

### 2.01 PLANTS:

- A. Plant Material: Vigorous, healthy, well-formed upper growth and dense, fibrous and large root system, and free of insect or mechanical damage. Grown under climatic conditions similar to those in project locality.
- B. Plants, except those specified as container grown, balled in burlap with root ball formed of firm earth from original and undisturbed soil.
  - 1. Do not accept balled and burlapped plants with broken or loose balls, or of "manufactured" earth or peat humus.

### 2.02 EVERGREENS

- A. In Mongolia distributes four species (*Abies sibirica*-Жодоо, *Pinus sibirica*-Хуш, *Picea obovata*-Гацуур, *Pinus sylvestris*-Нарс) and *Larix sibirica*-Шинэс which is another conifer species, among them three species (*Pinus sylvestris*, *Larix sibirica* and *Picea obovata*) are commonly used and transplanted either by nursery stock or transplanted from natural stands for the purpose of landscape material production. The requirements on the size, quality assessment category, digging, storage, packing, and transporting are stated in MSN 6139:2010 (Seedlings of coniferous species) and MNS 6774:2019 (Transplanting and care of large trees seedlings).

### 2.03 BONE MEAL:

- A. Commercial raw bone meal finely ground and containing a minimum of 1 percent nitrogen and 18 percent phosphoric acid.

### 2.04 STAKES:

- A. Wood stakes, minimum of 50-mm by 50-mm square and 2.5 meters in length, of uniform size, straight, reasonably free from knots, treated with wood preservative and painted green.

### 2.05 WIRE:

- A. Two strands No. 14-gage galvanized soft ferrous wire, twisted, for tree guying.

**2.06 HOSE COLLAR:**

- A. Good quality reinforced rubber hose of minimum 13-mm inside diameter and green in color, for protecting tree bark from supporting wires.

**2.07 TREE WRAP:**

- A. Quality, heavy, waterproof crepe paper manufactured for this purpose. Width of material not less than 15 cm and wrapped from bottom with minimum 50 mm overlap.

**2.08 ANTIDESICCANT:**

- A. Acceptable antidesiccant emulsion which provides a film over plant surfaces permeable enough to permit transpiration.
- B. Applied to evergreen trees, shrubs and all deciduous plant material. Application made prior to transportation from nursery if deciduous trees are leafed out at time of digging. The rate and method of application shall be in accordance with the manufacturer's recommendations.

**2.09 MULCH:**

- A. Shredded pine bark free of wood chips, stones, branches or other deleterious material. Bark shredded in strips not larger than 8 cm in any dimension and aged for period of not less than six months after removal from original logs.

**2.10 LOAM:**

- A. Fertile, friable, natural topsoil typical of locality, without admixture of subsoil, refuse or other foreign materials, and obtained from well-drained arable site. Mixture of sand, silt and clay particles in equal proportions. Free of stumps, roots, heavy or stiff clay, stones larger than 2.5 cm in diameter, lumps, coarse sand, noxious weeds, sticks, brush or other deleterious matter.
- B. Not less than 4 percent nor more than 20 percent organic matter as determined by loss on ignition of oven-dried samples.

**2.11 LIME, FERTILIZER AND SEED:**

- A. Ground agricultural limestone containing not less than 85 percent of total carbonates.
- B. Commercial type, uniform in composition, free flowing, conforming to state and federal laws, and at least 50 percent of nitrogen derived from natural organic sources of ureaform and containing following percentages by weight: Nitrogen 10 percent, Phosphorus 10 percent, Potash 10 percent.
- C. Turf grass seed, clean, high in germinating value and latest year's crop mixture in accordance with reference standard.

- D. Weeds shall not exceed 0.25 percent.

## 2.12 PEAT MOSS:

- A. Shredded, loose, substantially free of mineral and waste matters.
- B. Minimum organic matter by weight on a dry basis: 80 percent.

## PART 3 - EXECUTION

### 3.01 PLANTING PITS:

- A. Excavate with vertical sides and in accordance with following requirements:
  - 1. Excavate tree pits to minimum of 60 cm greater in diameter than root ball of tree and sufficiently deep to allow for 30 cm thick layer of planting soil mixture below root ball.
  - 2. Plant shrubs in pits 30 cm greater in width than diameter of root ball or container and minimum of 45 cm deep below finished grade, or as necessary to properly set plant at finished grade.
- B. Adjust depth of planting beds and pits to provide minimum of 20 cm of planting soil mixtures under roots of all plants.
- C. Set plants in center of pits, plumb and straight and at level that top of root ball is 2.5 cm lower than surrounding finished grade after settlement.
- D. Compact topsoil mixture thoroughly around base of root ball to fill all voids, when plant material is set. Cut all burlap and lacing and remove from top 1/3 of root ball. Do not pull burlap from under any root ball. Backfill tree and shrub pits halfway with planting soil mixture and thoroughly puddle before backfilling tree or shrub pit. Water tree or shrub, again, when each backfill operation is complete.

### 3.02 PLANTING SOIL MIXTURE:

- A. Thoroughly mix all loam used in backfilling planting pits, with peat moss at rate of 2 parts loam to 1 part peat moss, to obtain required planting soil mixture.

### 3.03 PLANTING:

- A. Thoroughly compact topsoil planting mixture around root balls and water. Immediately after plant pit is backfilled, form a shallow saucer slightly larger than pit with ridge of soil to facilitate and contain watering. After planting, cultivate soil in all shrub beds between shrub pits. Grub out sod or other growth and remove from bed area. Rake bed area smooth and neat and outline. Mulch all tree pits and shrub beds with a minimum of 75mm (3 inches) of shredded pine bark mulch as indicated on drawings. Do not use admixture of wood chips in mulch.

### 3.04 SECURING AND PROTECTING:

- A. Install tree guying and staking as indicated in details.
- B. Install hose collars for protecting tree bark.

### 3.05 PRUNING:

- A. Prune each tree and shrub in accordance with MNS 6772:2019 to preserve natural form and character of plant.
- B. Remove all dead wood, suckers and broken or badly bruised branches. In addition, remove 1/4 to 1/3 of remaining wood. Do all pruning with clean, sharp tools by workmen thoroughly familiar with this type of work. Paint cuts in excess of 25mm (1 inch) in diameter with acceptable tree paint. Cover all exposed cambium, as well as other exposed living tissue, with paint. Do not remove leaders.
- C. Apply antidesiccant to all evergreen trees and shrubs and to all deciduous plant materials which are leafed out at time of planting. Follow manufacturer's recommendations regarding rate and method of application.

### 3.06 BARK MULCH SURFACES:

- A. Mulch, with shredded pine bark, all tree pits, shrub pits and beds, and all areas planted with ground cover, immediately after planting operations are completed.
  - 1. For tree and shrub pits and beds, provide a minimum 8 cm of mulch.
  - 2. For ground cover beds, provide a minimum 5 cm of mulch.
- B. Limit mulching for trees and individual shrubs to pit area inside of saucer and for shrub, tree and ground cover beds and panels planted with multiple trees. Define limits of beds in turf areas or where no building wall or curb exists by installed metal edging as indicated.

### 3.07 PLANTING PREPARATION FOR SEEDED AREAS:

- A. Spread loam or locally available sand/manure mixture commercially available in Mongolia for such purpose on areas to be seeded, to required 15 cm depth, fine grade and compact.

### 3.08 LIME, FERTILIZER AND SEEDING:

- A. Apply lime by mechanical means at rate of 22.5 kg per 90 m<sup>2</sup>
- B. Apply commercial grade fertilizer at rate consistent with suppliers' recommendations for specific planting.
- C. Remove weeds or replace loam and reestablish finish grades, if any delays in seeding lawn areas and weeds grow on surface or loam is washed out prior to sowing seed and without

additional compensation. Sow seed at rate of 2 kg per 90 m<sup>2</sup> on calm day, by mechanical means. Do not "Hydro-Seed" unless otherwise permitted or required by Engineer. Sow one-half of seed in one direction, and other half at right angles to original direction. Rake seed lightly into loam, to depth of not more than 6 mm and compact by means of an acceptable lawn roller weighing 45 to 70 kg per linear 0.3 m of width.

- D. Water lawn areas adequately at time of sowing and daily thereafter with fine spray and continue throughout maintenance and protection period.
- E. Loam, lime, fertilize and seed required areas outside of perimeter same as lawn areas. Apply seed at rate of 80 pounds per acre. Rake seed lightly, after sowing, into top 1/4 in. of loam, and compact by suitable rollers weighing 45 to 70 kg per linear 0.3 m of width.

### 3.09 CLEAN-UP:

- A. Remove soil or similar material which has been brought onto paved areas, keeping these areas clean.
- B. Upon completion of planting, remove excess soil, stones and debris which has not previously been cleaned up and legally dispose of off-site.
- C. Prepare lawns and planting areas for final inspection.
- D. Protect slopes and embankments against erosion until work is accepted. Repair eroded portions of seeded or sodded areas by refilling, resodding, remulching and reseeding as required by condition and to satisfaction of Engineer. Protection may be by installation of sod strips or other methods.

### 3.10 MAINTENANCE - SEEDED AREAS AND PLANTING:

- A. Maintain lawn areas and other seed areas at maximum height of 6.5 cm by mowing at least three times. Weed thoroughly once and maintain until time of final acceptance. Reseed and refertilize with original mixtures, watering or whatever is necessary to establish over entire area of lawn and other seeded areas a close stand of grasses specified, and reasonably free of weeds and undesirable coarse native grasses.
- B. Begin maintenance immediately after each planting and continue until final acceptance of work. Water, mulch, weed, prune, spray, fertilize, cultivate and otherwise maintain and protect all plants.
- C. Reset settled plants to proper grade and position and restore planting saucers and remove dead material. Tighten and repair guys. Correct defective work as soon as possible within guarantee period.

END OF SECTION

This Page Intentionally Left Blank

## SECTION 02483 (CP-2, CP-3)

## PLANTING OPERATIONS

## PART 1 - GENERAL

## 1.01 SCOPE

- A. The work of this section includes furnishing all labor, equipment, tools, materials and accessories necessary for the complete planting and maintenance of trees, shrubs and ground cover as may be indicated on the drawings, and as specified herein.
- B. Attention is directed to all sections within BIDDING REQUIREMENTS; all sections within SECTION VI GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT

- A. Measurement and payment for the Work described in this section shall be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 SUBMITTALS

- A. Shop drawings and brochures shall be submitted for all items to be furnished in accordance with provisions of SECTION 01300, SUBMITTALS.
- B. Submittals shall include shop drawings including at least the following:
  - 1. Information about the Landscape Contractor or Arborist.
  - 2. Complete list of all materials to be provided showing the details identified herein.

## 1.04 PRODUCT HANDLING

- A. All materials shall be shipped, stored, handled and installed according to the Mongolia Standard for Agriculture written recommendations.
  - 1. MNS 5994:2009 Seeds of trees and shrubs. Sowing characteristics. Specifications.
  - 2. MNS 6139:2010 Seedlings of coniferous trees. Technical requirement.
  - 3. MNS 6140:2010 Seedlings of woody and bushy species. Technical requirement.
  - 4. MNS 6141:2010 Seedlings of deciduous trees. Technical requirement.
  - 5. MNS 6255:2011 Seedlings of shrubs. General requirement.
  - 6. MNS 6256:2011. Seedlings of bushy species. General requirement
  - 7. MNS 6774:2019. Transplanting and care of large trees seedlings. Technical requirement

## 8. MNS 6257:2011. Poplar seedlings. General requirement

- B. The Contractor shall maintain all plant material and associated work until final acceptance by the Engineer. Maintenance shall include all pruning, spraying, watering, cultivation and weeding of all planted areas, and the repairing or replacement of all staking, wrapping, mulching and edging materials and any other operations necessary until final acceptance.
- C. Water will be furnished by the Contractor. The Contractor shall furnish all necessary hoses and such other accessories as may be required.

## 1.05 DESIGN CRITERIA

- A. Plant material shall be installed by a competent Landscape Contractor or Arborist. Such company shall be certified, or such company must have BA-8.1 special license to perform landscape work issued by the Mongolian National Construction Association (MNCA). The Landscape Contractor or Arborist shall provide references of similar installations. All planting materials shall comply with the Mongolian related standard and all materials shall be adapted to the Mongolian climate.
- B. All plant material shall be inspected and approved by the Engineer prior to planting. Any plant material which does not meet the criteria specified shall be replaced with approved plants at the Contractor's expense.
- C. All plants shall meet the requirements specified on the planting plan.
- D. All plant material shall be nursery grown and shall be shapely, well-grown, healthy, sound, and free of disease, insect pests, eggs or larvae, and shall have a well developed root system.
- E. All trees and shrubs shall be freshly dug; no heeled-in plants or plants from cold storage will be accepted. All plants shall be hardy under climatic conditions similar to those in the locality of the project.
- F. All plants shall be handled so that roots will be adequately protected at all times from drying out and from other injury. All plants shall be covered and braced during transportation.
- G. Each tree or shrub shall be properly identified by name on legible, weatherproof labels securely attached thereto. Balled and burlapped plants shall have firm, natural balls of soil, the diameter and depth of which shall be sufficient to include the roots. The earth ball shall be adequately wrapped and secured with burlap. Container grown shrubs may be substituted for balled and burlapped shrubs.
- H. Container grown plants shall have sufficient roots to hold planting mix in tact after removal from containers without being root bound.
- I. When plants of kinds and sizes specified are not available within a reasonable distance, substitutions may be made upon written approval of the Engineer.
- J. Where a size range is given, at least 40 percent of those plants shall be at or above the average for that size range. Exceptions are as follows: Plants larger than specified in the plant list may be used if approved by the Owner, but use of such plants shall not increase the cost to the Owner.

- K. Prior to planting, all planting pits will be inspected by the Engineer. Planting pits which do not meet the minimum requirements of the details indicated, shall be reshaped as necessary for approval by the Engineer.

## PART 2 - PRODUCTS

### 2.01 MATERIALS FOR GUYING, STAKING AND WRAPPING

- A. Stakes - Stakes for supporting trees shall be of the sound wood of uniform size, reasonably free of knots and capable of standing in the ground at least two years. Stakes shall be 5cm square (2 inches square) and shall not be less than 200 mm (8 ft) in length.
- B. Wire - Wire for tree bracing and guywire shall be pliable No. 12 gauge galvanized soft steel wire.
- C. Hose - Cinch-tie or approved equal hose, if used, shall be two-ply fiber bearing garden hose, not less than 2.5 cm (1 inch) inside diameter.
- D. Webbing - Web straps shall be 75mm (three inches) wide and shall be provided with grommets. Hose shall not be allowed.
- E. Wrapping Material - Wrapping material shall be first quality, heavy waterproof crepe paper manufactured for this purpose.

### 2.02 PLANTING SOIL FOR PLANTING PITS AND PLANTING BEDS

- A. Topsoil shall meet the specifications and shall be analyzed as described in SECTION 02485, LOAMING AND SEEDING.
- B. Prepared planting mixture shall conform to standard planting practices and the following minimum requirements. Any deviations will be subject to the Engineer's approval.
  - 1. Prepared planting mix shall be 1/3 peat and 2/3 topsoil plus fertilizer/additives as required by the Engineer based on recommendations from testing laboratory reports.
  - 2. Ground cover and shrub planting beds shall have 25mm (1-inch) layer of peat plus fertilizer/additives as required spread evenly over beds. Peat/additives shall then be cultivated into the top six inches of soil.
- C. Peat shall be a commercial grade peat meeting the approval of the Engineer.
- D. Fertilizer shall be furnished in manufacturer's standard containers clearly marked with the guaranteed chemical analysis of the product and shall be of the type and formulation specified by the Engineer. The fertilizer shall conform to local and federal regulations.
- E. Limestone shall be standard agricultural ground limestone and shall be delivered in the manufacturer's standard containers with a guaranteed analysis appearing on each container.
- F. Mulch shall be chip or chunk bark. Bark shall be fresh and undecayed, clean and free from weeds, leaves, moss, sticks and any other debris, and be of such a texture to resist washing or blowing. No long strips, decayed material nor sawdust will be permitted.

- G. Wetting agent shall be non-ionic surfactant consisting of a 50 percent polyoxyethylene ether and 50 percent polyoxyethylene ether chemical type, preferably in a granular form for spreader application.
- H. Anti-Transpirant shall be delivered in manufacturer's containers, unopened, with manufacturer's labels attached.

## PART 3 - EXECUTION

### 3.01 SEASONS FOR PLANTING

- A. Seasons for planting shall be as recommended to the Contractor by the nursery supplying the plant materials, relating to site conditions, plant species, and region where planting is to be done.
- B. Planting shall be prohibited in frozen or muddy ground.
- C. Approximate planting dates shall be furnished to the Engineer for approval. Material planted out-of-season shall be given extra care and attention by the Contractor. Any out-of-season planting shall be entirely at the Contractor's risk.

### 3.02 PLANTING OPERATIONS

- A. Locations for planting beds, trees and shrubs shall be staked out by the Contractor as shown on the drawings and approved by the Engineer.
- B. Plant pits shall be excavated with vertical sides in accordance with the details on the drawings. Plant pits shall not be backfilled with prepared topsoil mixture until they have been approved by the Engineer. If pits are prepared and backfilled with topsoil to grade prior to planting, their location shall be marked and recorded on the plans so that when planting proceeds, they can readily be located.
- C. Prepared topsoil mixture for backfill in all planting areas shall have all fertilizer/additives, as specified herein, thoroughly incorporated before backfilling.
- D. Plants shall be set in center of pits plumb and straight and at such a level that after settlement, the crown of the plant will be at the surrounding finished grade.
- E. Backfilling and Watering
  - 1. When balled and burlapped trees are set, topsoil shall be compacted around bases of balls to fill all voids. All burlap, ropes or wires shall be removed from the tops of balls.
  - 2. Planting pit shall be backfilled to its depth. Backfill shall be compacted and pit then filled with water.
  - 3. After two waterings have been completely absorbed, the top half of the pit shall be backfilled and compacted.
  - 4. 0.8kg (1.75 lbs) of granular wetting agent/ 9m<sup>2</sup> (100 square foot) shall be applied to newly planted area. Wetting agent shall be raked lightly into top inch of soil and then soil raked smooth.

5. A shallow saucer larger than pit shall be formed with a 10 cm (4-inch) ridge of soil to facilitate and contain watering.
  6. Immediately after planting, the plant shall be thoroughly watered by completely filling the saucer with water a minimum of two times.
  7. Ground cover beds shall be watered to a minimum depth of 10cm (4 in) immediately after planting (after application of wetting agent).
- F. Tree guying or staking shall be in accordance with the plan detail. Care shall be taken that stakes do not pierce rootballs.

### 3.03 OBSTRUCTIONS BELOW GROUND

- A. In the event that rock, underground construction work or obstructions are encountered in any plant pit excavation work to be done under this contract, alternative locations may be selected by the Engineer.
- B. Where locations cannot be changed, the obstruction shall be removed to a depth of not more than 90cm (3 ft) below grade and no less than 15cm (6 in) below bottom of ball or roots when plant is properly set at the required grade.
- C. The Contractor shall be paid for the removal of such rock or underground obstructions encountered at the Contract rate per cubic yard, under the appropriate item in the proposal. Limits of payment for excavation in rock fill are 300mm (1 ft) outside the plant or tree root ball as shown on the drawings.

### 3.04 UNDERGROUND UTILITIES

- A. The Contractor shall be responsible for obtaining plans and locations of utilities and existing underground structures.

### 3.05 WRAPPING

- A. Wrapping of all trees shall be done immediately after they are planted. The trunks of all trees shall be wrapped spirally from the bottom to top with material as specified and shall be adequately secured. The wrapping shall overlap and entirely cover the trunk from the ground to the height of the second branches and shall be neat and snug. Overlap shall be approximately 5 cm (2 in) apart.

### 3.06 PRUNING, MULCHING AND WATERING

- A. Each tree and shrub shall be pruned in accordance with Mongolian Standard for Agriculture MNS 6258-2:2011 Caring of tree and brush seedlings, to preserve the natural character of the plant and in a manner to meet its particular requirements in the landscape plan.
- B. All dead wood, suckers and all broken or badly bruised branches shall be removed. Leaders shall not be cut back. Container grown plants shall not be thinned.
- C. Pruning shall be done with clean, sharp tools. All cuts are to be made flush and clean.

- D. Cuts over 2.5 cm (1 inch) in diameter shall be painted with an approved tree wound paint. Paint shall cover all exposed cambium as well as other exposed living tissue.
- E. Immediately after planting operations are completed, all tree and shrub pits and ground cover beds shall be covered with a uniform 10cm (4 in) layer of bark mulch as indicated on the drawings. All remaining planting beds and disturbed areas where no grass is specified shall be mulched with a uniform 10cm (4 in) layer of bark mulch which shall extend to edging strips, walks, walls, curbs or other hard surfaces or undisturbed areas.
- F. All plant material shall be watered (by flooding) twice during the first 24-hour period after planting.
- G. If a problem should arise with a planting, an anti-transparent shall be applied as directed by the Engineer.

### 3.07 INSPECTION AND ACCEPTANCE

#### A. Inspection for Provisional Acceptance

- 1. Upon completion of work, the Contractor shall request an inspection for provisional acceptance by the Engineer. The request shall be received at least 10 days prior to the requested date for provisional inspection.
- 2. Upon completion of all repairs and replacements by the Contractor as requested by the Engineer, the Engineer shall issue a dated written order of provisional acceptance.

- B. All plantings shall be guaranteed by the Contractor for one year. Provisional acceptance will be given by the Engineer following inspection to ensure compliance with the drawings, details and specifications.
- C. At the end of the guarantee period, a final inspection of the work shall be made to determine the condition of plant materials. All plants not in a healthy growing condition as determined by the Engineer shall be removed from the site and promptly replaced with plants as specified for the original planting at no expense to the Owner.
- D. Plantings replaced at final inspection shall be subject to all requirements in the specifications for the original work including planting, provisional acceptance, guarantee period and final inspection.

### 3.08 CONTRACT CLOSEOUT

- A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

END OF SECTION

## SECTION 02485 (CP-2, CP-3)

## LOAMING AND SEEDING

## PART 1 - GENERAL

## 1.01 SCOPE

- A. The work of this section includes the furnishing of all labor, materials, tools and equipment required to furnish and install loam and seeding in areas as shown on the drawings, unpaved areas disturbed by the Contractor's operations and work, or any cross-country or lawn areas disturbed by the Contractor's operations during the course of construction.
- B. Attention is directed to SECTION VI GENERAL CONDITIONS OF CONTRACT and all sections within DIVISION 1, GENERAL REQUIREMENTS, which are hereby made a part of this section of the Specifications.

## 1.02 MEASUREMENT AND PAYMENT

- A. Measurement and payment for work described in this section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

## 1.03 REFERENCE STANDARD:

- 1. MNS 6260:2011 Growing seeds, cultivation and nursing in lawn area
- 2. MNS 6263:2011 Checking garden objects and accept for use it. General requirement
- 3. MNS 6265:2011. Phospho-humate mixed fertilizer. Technical requirements
- 4. MNS 6252:3022. Compost and fertilizers for tree nursery
- 5. MNS 5264:2003 "Azofos" bacterial fertilizer. Technical requirement

## 1.04 DEFINITIONS

- A. Definitions shall be as specified in PART I – BIDDING PROCEDURES.

## 1.05 SUBMITTALS

- A. Shop Drawings and/or brochures shall be submitted for all items to be furnished in accordance with the provisions of SECTION 01300, SUBMITTALS.
- B. Submittals required under this section include, but are not limited to the following:
  - 1. Soil test results and recommendations for liming and fertilizing shall be submitted to the Engineer at least 45 days prior to loaming operations.
  - 2. Certification of variety, proportions and percent germination of species in the seed mixture and percentage of crop seeds, weed seeds, noxious weeds and inert matter shall be submitted to the Engineer at least 45 days prior to loaming and seeding operations.

3. Brochures and samples for woven jute mesh netting and erosion control blanket.

#### 1.06 PRODUCT HANDLING

- A. All materials shall be shipped, stored, handled and installed according to MNS 5346:2017 Service of freight and freight forward, written recommendations.

#### 1.07 DESIGN CRITERIA

- A. The materials specified are intended to be standard materials of demonstrated successful performance, as manufactured by reputable concerns. Materials shall be designed and manufactured in accordance with the highest standards of the industry and shall be installed in accordance with the manufacturer's written recommendations and the Contract Documents. The specifications call attention to certain features but do not purport to cover all details entering into the construction of the materials.
- B. If stored for more than two weeks, the materials shall receive all maintenance considerations required by the manufacturer for proper storage of the materials.

#### 1.08 SEASONS FOR PLANTING

- A. Seeding shall take place as soon as possible after each loam area has been prepared, in accordance with the recommendations of the seed supplier relating to the site conditions and region where seeding is to be done. Seeding shall be prohibited during windy or inclement weather, or in frozen or muddy ground; in general, conditions for seeding shall meet with the approval of the Engineer. This does not relieve the Contractor of the responsibility of providing a growth that is full and healthy, in the opinion of the Engineer.

### PART 2 - MATERIALS

#### 2.01 LOAM

- A. Testing
  1. All loam used in the work of this section of the specifications will be tested and approved for use by the Engineer prior to being spread. Stripped material may be used if approved in accordance with the following requirements. Approved material shall be stockpiled so as not to interfere with the other work and other subgrade or fill materials.
  2. All testing shall be done by an independent test laboratory approved by the Engineer. The Contractor shall provide the laboratory with representative soil samples for testing and send test reports directly to the Engineer.
  3. Loam shall be tested for the following: pH, organics, buffer pH, soluble salts (expressed in millimhos), available Nitrogen, Phosphorous, exchangeable Potassium, Magnesium, Calcium and Sodium, Cation Exchange Capacity, percent H base saturation, percent Ca base saturation, percent M base saturation, and available Zinc, Manganese, Copper, Iron, humus content and soil type. All nutrient results shall be expressed in parts per million (ppm).
  4. Test reports shall also contain specific recommendations as to the exact types and times and rates of application of soil additives and fertilizers based upon the soil test results.

These recommendations shall be followed during lawn construction. All Contractors shall note that any and all materials and procedures, with respect to soil additives and fertilizers, contained herein are approximate and are given to assist bidding and that they will be adjusted to comply with test reports.

- B. Loam shall be a "fine sandy loam", or a "sandy loam" determined by mechanical analysis. It shall be of uniform composition, without mixture of subsoil. It shall be free of stones, lumps, plants and their roots, debris and other extraneous matter over 13mm (0.5 in) in diameter or excess quantities of smaller pieces of the same materials as determined by the Engineer. It shall not contain toxic substances harmful to plant growth. It shall be obtained from naturally well drained areas which have never been stripped before.
- C. No more than 10 percent of loam shall be clay, with organic matter comprising not less than 4 percent, nor more than 20 percent of the total weight per load.
- D. Loam shall not be delivered or worked in a frozen or muddy condition.
- E. Soluble salts shall not be higher than 75 parts per million.

## 2.02 LIME

- A. Limestone shall be standard commercial ground limestone and shall be applied at a rate to be determined by the Engineer subsequent to the testing of loam; however, the rate shall not exceed 0.5 kg/m<sup>2</sup> (4,000 lb/acre). Limestone shall not be installed during windy or inclement weather. Limestone in hydro-seeding operations shall be restricted in building areas. Any buildings or structures discolored or damaged from limestone spray shall be the Contractor's responsibility.
- B. The Contractor shall take whatever precautions are deemed necessary to prevent damage by distribution of limestone. Any damage incurred by the Contractor's negligence shall be repaired at no additional cost to the Owner.

## 2.03 COMMERCIAL FERTILIZER

- A. Commercial fertilizer shall be a standard dry granular mixture, delivered in the manufacturer's containers and containing a guaranteed analysis by weight of Nitrogen, Phosphorous and Potash, applied at the rate to be determined by testing. The fertilizer must meet MNS 6265:2011; MNS 6252:3022 standard requirement.
- B. Contractor can use liquid fertilizer. Liquid fertilizer must meet MNS 5264:2003 standard.

## 2.04 SEED

- A. Grass seed shall be fresh, clean new crop seed. It may be mixed by an approved method on the site or may be mixed by the dealer. If mixed on the site, each variety shall be delivered in the original containers which shall bear the dealers analysis. If the seed is mixed by the dealer, the Contractor shall furnish to the Engineer, the dealer's guaranteed statement of the composition of the mixture and the percentage of purity and germination of each variety. Seed shall be adapted to the Mongolian climate and tested here.

- B. The seed shall be furnished and delivered premixed in the proportions specified below. All seed shall comply with MNS 6260:2011 Growing seeds, cultivation and nursing in lawn area, seed laws.
- C. Grass seed shall be the previous year's crop and in no case shall the weed seed content exceed 1 percent by weight.
- D. The seed mixture specified for slopes are for use on slopes graded at the rate of 4:1 and steeper slopes.
- E. A manufacture's certificate of compliance to the specifications shall be submitted to the Engineer by the manufacturers with each shipment of each type of seed. These certificates shall include the guaranteed percentages of purity, weed content and sown until the contractor has submitted the certificates to the Engineer.
- F. Seed Mixture shall conform with standard locally available mix and shall be used for all loamed areas 17 g/m<sup>2</sup> (150 lb/acre). Seed mixture shall be in accordance with the following:  
  
Seed contains mixture of 3 seeds of 2 species of Festuca and sedge (Cyperus).

## 2.05 EROSION CONTROL BLANKET

- A. Erosion control blanket shall be placed on all slopes greater than 3 to 1. Erosion control blanket will be required for the protection of all seed areas or in any area where erosion is a problem.]

## 2.06 WOVEN JUTE MESH NETTING

- A. Woven jute mesh netting shall be placed on all slopes greater than 3 to 1, and all slopes 3 to 1 which are higher than 3 m. Woven Jute Mesh Netting will only be required for the protection of mowable grassed areas or in any other areas where erosion is a problem.

## 2.07 STRAW

- A. Straw for erosion control and moisture retention shall consist of stems or stalks after threshing. Straw shall be kept in place by stakes, netting, pins or liquid coatings as may be required and as approved by the Engineer.

# PART 3 - EXECUTION

## 3.01 SEEDING OPERATIONS

- A. Personnel for lawn work shall be familiar with lawn construction and shall be under the constant supervision of a qualified foreman.
- B. Preparation for Seeding
  - 1. Preparation of Subgrade. After the Engineer has accepted the subgrade, the Contractor shall do whatever additional grading is necessary to bring the subgrade to a true smooth slope, parallel to finish grade or to the level of adjacent existing loam areas. Subgrade

depth for Lawn Areas shall be 150 mm (6 in) while Subgrade depth for Cross Country Areas shall be 100mm (4 in).

2. The top 80 mm (3 in) of the subgrade immediately prior to being covered with loam shall be raked or otherwise loosened and shall be free from stones, rock and other foreign materials 80 mm (3 in) or greater in dimension.
3. Sufficient grade stakes as determined by the Engineer shall be provided to insure correct line and grade of subgrade and of finished grade.
4. Subgrade shall be inspected and approved by Engineer before placing of loam.
5. Loam shall be as specified above and shall be placed and spread over approved areas to a sufficient depth so that after natural settlement and light rolling for lawn areas, the completed work will conform to the lines, grades and elevations indicated.
6. Finish grading. After loam has been spread, it shall be prepared by scarifying or harrowing and hand raking. All large stiff clods, lumps, brush, roots, stumps, litter and other foreign matter, and stones over 25 mm (1 in) in diameter shall be removed from the loam which shall also be free of smaller stones in excessive quantities.
7. The surface for lawn areas shall then be rolled with a hand roller weighing not more than 148.82 kg per meter of width.
8. During the rolling, all depressions caused by settlement of rolling shall be filled with additional loam and the surface shall be regraded and rolled until presenting a smooth and even finish to the required grade.
9. Subsequent to or during raking of the loam and at least 4 days prior to seeding, lime shall be applied and raked into the soil over all loam areas.
10. After the lime has been applied and worked into the loam, the entire area shall receive an application of commercial fertilizer. Fertilizer shall be spread in advance of seeding by approved mechanical spreading devices and lightly taken into the top of the soil.

#### C. Placement of Seed

1. Seed shall be spread at least 4 days after fertilization of the soil by an approved mechanical method and at the rate of 24.41 kg per thousand square meters or as noted with seed mix. Seed shall be lightly raked into the soil to a depth of approximately 3mm (1/8 in) and no greater than 6mm (1/4 in) and the entire seeded area shall be rolled with a lightweight roller.
2. Seeding shall not be done during windy weather.
3. For lawn areas, seeding shall be done in 3 directions, 2 at right angles to each other, and one diagonally.
4. Culti-packer or approved similar equipment may be used to cover the seed and to form the seed bed in one operation. Due to the small size of the seed in the cross-country mix, the Contractor shall increase the bulk prior to seeding by the addition and thorough mixing of sand, Milorganite or other approved materials.

5. Immediately after seeding, all seeded areas shall be watered to a depth of approximately 100mm (4 in) and shall be covered with a loose, uniform layer of straw or hay.

### 3.02 INSTALLATION OF EROSION CONTROL BLANKET

- A. Erosion control blanket shall be installed in accordance with the accepted practices and the manufacturer's instructions and recommendations by personnel experienced with similar installations. All products and/or fastenings shall be as supplied by or recommended by the manufacturer, subject to approval by the Engineer.
- B. Erosion control blanket shall lay loose on the grade and shall not be stretched or tightened in any direction. The blanket shall conform naturally to the contour and grade of the proposed topography.
- C. Anchor slots, butts with structures, walls, curbs, etc., side and junction overlaps and terminal folds shall be made and fastened in accordance with the manufacturer's recommendations or as directed by the Engineer.

### 3.03 INSTALLATION OF MESH NETTING

- A. Mesh netting shall be installed in accordance with accepted practices and the manufacturer's instructions and recommendations by personnel experienced with similar installations. All products and/or fastenings shall be as supplied by or recommended by the manufacturer, subject to approval by the Engineer.
- B. Netting shall lay loose on the grade and shall not be stretched or tightened in any direction. The netting shall conform naturally to the contour and grade of the proposed topography.
- C. Anchor slots, butts with structures, walls, curbs, etc., side and junction overlaps and terminal folds shall be made and fastened in accordance with the manufacturer's recommendations or as directed by the Engineer.

### 3.04 MAINTENANCE AND PROTECTION

- A. Maintenance shall begin immediately after each portion of the lawn is installed.
- B. Lawns shall be maintained for at least 60 days or as much longer as necessary to establish a uniform stand of the specified grasses.
- C. Maintenance and protection of seeded areas shall consist of temporary protective fences, barriers, signs, watering, weeding, cutting, and reseeded as necessary, as well as maintaining the straw or mesh cover in a uniform layer.
- D. The surface layer of soil shall be kept damp at all times during the germination period. In the absence of adequate rainfall, watering shall be performed two or three times daily or as often as necessary during the germination period and in sufficient quantities to maintain moist soil to a depth of at least 4 inches. Watering shall be done during the heat of the day to prevent the soil from drying out.
- E. After first cutting, watering shall be once per week as necessary to supplement natural rain, to the equivalent of 25mm (1 in) per week, or to 100 mm (4 in) in depth. Weekly inspection

shall be made to determine the moisture content of the soil and the approved schedule shall be adjusted to fit conditions.

- F. At the time of the first cutting, when grass is 100mm (4 in) high, mower blades shall be set at 65mm (2.5 in) high. In subsequent mowings, lawn areas shall be cut to a 65mm (2.5 in) height with not more than 40 percent of the grass leaf being removed. Naturalized seed mixture shall be cut only once per year during dormant periods as recommended by the manufacturer.
- G. All clippings shall be removed after each mowing. Mowing shall be done only in dry weather.
- H. The Contractor shall be responsible for providing a second application of commercial fertilizer should lawn work not be accepted within a 90-day period following the first application of fertilizer.
- I. Excessive weeds shall be removed by methods approved by the Engineer.
- J. The Contractor shall, at his own expense, repair bare spots and/or damage resulting from erosion, gulleys, washouts, or other causes by filling with topsoil and reseeding.
- K. In the event that lawn operations are completed too late in the fall for adequate germination and/or growth of grass, maintenance shall continue into the following spring.

### 3.05 INSPECTION AND ACCEPTANCE

- A. The Engineer will inspect the seeded areas upon written request by the Contractor. The request shall be received at least 10 days before the anticipated date of inspection.
- B. Inspection and acceptance of seeded areas may be requested and granted in part, provided the area for which acceptance is requested is relatively substantial in size and reasonably regular in shape with clearly definable boundaries.
- C. An acceptable seeded area shall be one that has a dense, uniform stand of the specified species. It shall be free of ruts, gullies, bare spots, and the grass areas shall be healthy and free of weeds.
- D. Upon acceptance of the work, the Contractor shall be relieved of further responsibility for care or maintenance of accepted lawns.

### 3.06 DAMAGE AFTER ACCEPTANCE

- A. Any lawns damaged after final acceptance of seeded areas and before project acceptance shall be repaired, reseeded, and maintained as specified above with an inspection and formal acceptance required.

### 3.07 CLEANING UP

- A. When any of this work is done while buildings are occupied, pavements shall be kept clear at all times, and broomed clean to prevent tracking dirt into buildings.

- B. After completion of all landscaping work, all debris and excess material shall be disposed of to the satisfaction of the Engineer. All pavements shall be broomed and hosed clean.

### 3.08 CONTRACT CLOSEOUT

- A. Provide in accordance with SECTION 01700, CONTRACT CLOSEOUT.

END OF SECTION

## SECTION 02672 (CP-1)

## WATER-SUPPLY WELL CONSTRUCTION, DEVELOPMENT AND PUMPING TESTS

## PART 1 - GENERAL

This specification was developed using US and Mongolian codes and standards. These standards, as identified within the body of this Section, shall be used as the basis for determining acceptability of proposed locally or internationally procured materials, equipment and services.

All products, parts, materials, systems, installation, testing and other requirements of these specifications reflect a level of quality required for this project and shall be considered "the intent of the specifications." The selections are not intended to limit the Contractor's selection of locally-sourced materials or systems. The Contractor may submit alternate, similarly effective substitutions, along with evidence that the substitutions meet the intent of the specifications.

The Contractor shall clearly identify which standard they are in compliance with for all submittals. For all materials, equipment and services, the Contractor shall include with its submittal, a reference copy of each technical standard used (including an English translation). All materials shall have conformity markings to indicate compliance with those standards for which they were submitted.

## 1.01 GENERALIZED WATER-SUPPLY WELL DESCRIPTION:

A. Contractor is alerted to the following conditions that may require special consideration in planning, scheduling and executing the well-construction Work:

1. Contractor shall be responsible for obtaining all necessary GoM approvals to construct water-supply wells as specified herein. Contractor shall consider the number, type and timing of approvals and their implications on the progress of Work.
2. Contractor may encounter cobbles, boulders and heaving soils during drilling.
3. Contractor's final well design will be based on the outcome of pilot-borehole drilling.
4. The well screen slot-size shall be properly sized for the formation. Should fine-grained layers be encountered in the pilot boreholes, a section of blank stainless-steel well casing may have to be installed (instead of well screen) to block off the fine-grained layer(s).
5. Contractor shall submit to the Engineer a Proposed Final Well Design Report / Well-Construction Diagram for each proposed production well within 21-days of the completion of the pilot-borehole drilling. The submittal shall include, at minimum, copies of the soil boring log, grain-size distribution curves, borehole geophysics report (including the geophysical log(s), data analysis, results and recommendations) and calculations and rationale for screen slot-size selection, screened interval(s), artificial filter pack selection and filter-pack intervals.

Submitted well designs shall be reviewed and approved in writing by the Engineer prior to proceeding with the installation of the production well.

6. Selection of the appropriate well-screen (slot-size) and artificial-filter pack (diameter) are critical to the success of well construction. To this end, Contractor shall employ a water-well design expert with experience in constructing wells using continuous-slot well screens and manufactured glass beads as artificial filter pack.
7. If the Contractor elects to drill 600-mm diameter boreholes using mud-rotary drilling techniques, Contractor must plan the installation of well materials in such a manner and at such a pace as to prevent collapse of the native formation.
8. Pumping-and-surging techniques shall be required to develop the wells to their maximum efficiency. These techniques shall be employed over the entire length of well screen, which could be as long as 45 meters.
9. For each completed production well, Contractor shall submit to the Engineer a Final Report/Well Construction As-Built Drawing including, at a minimum: plumbness/alignment testing records, well-development records, pumping-test records, pumping-test water-quality reports, records of the performance pumping test, final sand and turbidity test results, final well disinfection test results, video inspection, soil boring log, well installation, an as-built drawing of the well, project photographs and drone surveys, final well coordinates and elevation, and all field notes. The report shall be submitted within 14 days of the completion of completion of the well. Submitted final reports shall be reviewed and approved in writing by the Engineer prior to final approval and acceptance of the production well.
10. Certain aspects of the Work will require round-the-clock work operations, i.e., 24-hours per day, seven-days per week.
11. Construct temporary access to each wellfield, as necessary. This Work is to be performed on an as needed basis with the approval of the Engineer. It is expected that access to a majority of the proposed well locations will be through existing dirt tracks and water crossings without having to construct temporary access tracks. The CP-3 contractor is responsible for constructing the permanent access tracks. Clearing along the temporary access tracks shall not exceed a width of 4 meters each side of the temporary access track centerline. Sitework for stream crossings within the proposed access tracks is to be coordinated with and performed by the CP-3 Contractor. Temporary access construction within the proposed permanent access tracks will require close coordination with the CP-3 Contractor.
12. The CP-1 contractor is required to obtain construction permits from regulatory agencies prior to construction. Any environmental or regulatory issues or directives should be described in these permits and submitted to the Engineer prior to construction.
13. Sitework for temporary access to the 30 well sites at two wellfield locations, is to include construction of temporary drilling platforms, temporary access

tracks, and erosion control. Sitework at stream crossings within the proposed access tracks is to be coordinated with and performed by the CP-3 Contractor.

14. Winter working conditions limit the period of outdoor construction. Work must be performed between 1 April and 15 October, unless authorized in writing by the Engineer.

B. Contractor is alerted to the following Attachments included at the end of this section:

1. Attachment 1: Table 1, Design Pumping Rates and Minimum Specific Capacity for Production Wells.
2. Attachment 2: Table 1, List of Water-Quality Testing Analytes for Performance Pumping Tests; Table 2, List of Water-Quality Testing Analytes for Water-Supply for Construction Purposes.
3. Attachment 3: Report titled “Mongolia II – Bulk Water Supply Expansion, Geophysical-Hydrogeological Investigation, Shuvuun and Biokombinat Wellfields Final Report, December 2019”.
4. Attachment 4: Sample Record and Report Forms
5. Attachment 5: Grain-Size Distribution Curves from 2019 Hydrogeological Investigation.

C. Contractor is alerted to the following items included in the Design Drawings:

1. Wellfield Location Plans for the proposed wells in the Biokombinat and Shuvuun wellfields are included in the Design Drawings, Sheets 0-C-101 through 0-C-106.
2. The Proposed Typical Well Design detail in the Design Drawings, Sheet 0-C-301.
3. Proposed Well Locations and Elevations, summarizing well installation details for the individual proposed wells, including elevations (Design Drawings, Sheet 0-C-301). Elevations are based on 2019 test wells drilled at each proposed well location. The final installation elevations and depths may vary somewhat based on actual field conditions.

D. Following is a general description of the proposed water-supply wells to be installed. A description of the overall project can be found in SECTION 01010 SUMMARY OF WORK.

1. The proposed wells shall be installed at the locations indicated on the Wellfield Location Plans, Design Drawings Sheets 0-C-101 through 0-C-106.
2. A pilot borehole of 150- to 200-mm (6- to 8-inch) diameter shall be installed at each proposed well location in advance of well construction. The purpose of the pilot boreholes is to obtain soil samples for grain-size analysis and to conduct borehole geophysical surveys. Final well designs – specifically, the selection of well-screen slot-size(s) and depth interval(s); artificial filter pack (glass bead) diameter and interval(s); and total depth of well – shall be prepared by the Contractor, subject to the approval of the Engineer, based on the information gathered from the pilot boreholes.
3. Each proposed water-supply well shall be up to 60 meters deep. The exact depth shall depend on the aquifer formation and shall be determined in consultation

with the Engineer. At each well location, a 625-mm diameter (minimum) temporary steel surface-casing shall be installed to a depth of 6-meters (minimum) below land surface (bls) and shall extend 0.5 meters above land surface.

4. At each proposed well location, a 600-mm diameter borehole shall be drilled to the bedrock surface or to a maximum depth of 60 meters bls if bedrock is not reached.
5. Once the 600-mm diameter borehole is drilled, a 450-mm diameter stainless steel well will be installed to the depth approved by the Engineer
6. Each proposed well shall consist of approximately 16 meters of 450-mm diameter stainless-steel well casing extending to a depth of approximately 15 meters below the water table (see table shown on Design Drawing Sheet 0-C-301). A one-meter length of the 450-mm diameter stainless-steel casing shall extend above existing ground. In general, the remainder of the well will consist of 450-mm diameter stainless-steel, continuously wound, wire-wrapped well screen extending from the bottom of casing to the total depth of the borehole. However, should fine-grained layers be encountered in the pilot boreholes, a short-section of blank stainless-steel well casing may have to be installed (instead of well screen) to block off the fine-grained layer(s).
7. Once the well screen and casing is installed, a properly sized glass-bead artificial filter pack shall be installed in the annulus between the 450-mm well and the 600-mm borehole wall. The artificial filter pack shall be installed from the bottom of the well screen to 1 to 2 meters inside the temporary casing.. If a short-section of blank well casing is required (see 1.01F, directly above), an alternate filter pack, such as a processed sand, may be required instead of glass beads.
8. A sanitary well seal shall be installed in the annulus between the well casing and the borehole wall extending from the ground surface to approximately 6 meters bls. Approximately one meter of transition pack shall be placed directly below the well seal and directly above the artificial filter pack to prevent infiltration of the well seal into the filter pack. The approximate installation elevations are specified on the table shown on Design Drawing Sheet 0-C-301 .
9. The proposed typical well design detail is included in the Design Drawing Sheet 0-C-301. This detail shall be used with reference to individual well elevations. Fabrication and delivery of the well screen and well casing is expected to take several weeks. Delivery of manufactured glass beads could take several months. Water-supply well construction shall not commence until all materials of construction are on site and inspected and approved in writing by the Engineer. Refer to Sections 01500, 01600 and 01610 for details of materials delivery, storage and handling,

To facilitate construction and avoid delays due to delivery of materials, the Contractor is alerted to the following. Based on the limited grain-size analyses performed during the 2019 Hydrogeologic Investigation, 80-slot well

screens and 5- to 6-mm diameter artificial filter pack may be an adequate design for most of the soils encountered. Refer to Section 02672, Paragraphs 3.06.I.4 and 3.06.K.5.

10. Each well shall be located where directed by the Engineer and be constructed in accordance with these specifications. Drilling operations shall be carried out so as to prevent aquifer contamination. Drilling operations and equipment shall not cause intra- and inter-aquifer contamination, nor vertical seepage of surface water into the borehole, especially the well intake zone. The management of water will be necessary as the site is level and other work and contractors will be working in the area. Furthermore, certain well sites may be subject to periodic flooding. During the 2019 field investigations, flooding occurred in the wellfields limiting access to some of the test well sites, particularly in the Biokombinat Wellfield. Drilling and well construction shall be a continuous process with minimal downtime from start of drilling to completion of the well construction. All construction equipment shall be present on site at the start of drilling and well construction to minimize downtime. It is suggested that the Contractor monitor rainfall and stream gauge stations during construction as this may provide an early indication of flooding conditions.
11. Drilling challenges were encountered during the Hydrogeologic Investigations of 2019. During well installation, Contractor shall expect to encounter cobbles, boulders, and heaving soil below the water table. Refer to the Mongolia II – Bulk Water Supply Expansion, Geophysical-Hydrogeological Investigation, Shuvuun and Biokombinat Wellfields Final Report (December 2019) for a description of subsurface conditions at each location. Copies of the reports as well as other pertinent data are provided in Attachment 3 as part of the specification package.
12. Notification and Permitting. The Contractor shall notify Engineer 14 (fourteen) days prior to commencement of the Work. The Contractor shall prepare and submit the necessary permit applications with the appropriate authorities of the GoM, local government and private parties in writing, and notify these authorities of the type and location of Work to be constructed, the method of construction and anticipated schedule for construction of the Work. **Contractor shall not begin any Work or elements of the Work until all written permissions and/or approvals have been received from authorities of the GoM (Tuul River Basin Authority, or other appropriate agency), local government, private parties and the Engineer. A permit for drilling the final production wells will need to be obtained from the Tuul River Basin Authority.**
13. **Abandonment** of Wells: If the Contractor fails to construct a well of the required capacity, or if the well is abandoned because of loss of tools, unacceptable plumbness/alignment or for any other cause, it is the Contractor's responsibility to notify the appropriate agencies of the well abandonment, as necessary and as reviewed by the Engineer. All well abandonment procedures shall be reviewed by the Engineer and performed by the Contractor at no additional cost to the Owner.

14. **Work Zone:** CP-1 Contractor will have a 100-meter radius work zone around each proposed production site from issuance of the Notice to Proceed until the final production well has been accepted by the Engineer. The CP-3 contractor will not be allowed to access or work within this Work Zone until the final production well has been completed and accepted by the Engineer. Once the final production well has been accepted by the Engineer, the work zone and the completed production well will be handed over to the CP-3 Contractor.
15. **Defects Liability Period:** Once the final production well has been accepted by the Engineer, the CP-1 Contractor's Defects Liability Period for the final production well will begin. Damage to, and repair(s) of, the final production well by the CP-3 Contractor and others will not be the responsibility of the CP-1 Contractor.

1.02 **MEASUREMENT AND PAYMENT:**

- A. Measurement and payment for work described in this Section will be made in accordance with the provisions of SECTION 01025, MEASUREMENT AND PAYMENT.

1.03 **REFERENCES:**

- A. All Work specified herein shall conform to or exceed the requirements of the applicable codes and standards relating to the referenced portions of the following documents only to the extent that the requirements therein are not in conflict with the provisions of this Section. Where such documents have been adopted as a code or ordinance by the public agency having jurisdiction, such a code or ordinance shall take precedence.

#### 1.04 SUBMITTALS:

All Contractor submittals shall conform to the applicable requirements of the Submittals Procedures (SECTION 01300 SUBMITTALS), and the supplementary requirements specified. Each item identified below shall be submitted to the Engineer with a clear explanation or depiction of why or how the requirements, as listed, will be fulfilled by the products or services provided by the Contractor. These items are not considered all-inclusive and may be extended by the Owner, Engineer, or Contractor. The Contractor shall submit the following documentation to the Owner and Engineer within the timeframe noted below. Each submittal shall be accompanied with a Submittal Record detailing what is included in each submittal. All submittals shall be delivered to Engineer in English:

A. Submit the following in accordance with SECTION 01300 SUBMITTALS.

1. The Contractor shall submit a copy of his special license "Borehole drilling, furnishing and restoring" issued by Ministry of Environment and Tourism to install potable water-supply wells and/or certification issued by the GoM. (Refer to Section 02672, Paragraph 1.07 A.1.) – With the Contractor's qualification materials to be submitted with Contractor's BID.

2. Permits to Construct the Water-Supply Wells and other legal requirements (Refer to Section 02672, Paragraph 1.01 D.12 and 1.09) – No less than 14 days before commencement of the Pilot Borehole drilling.
3. Subcontractors List (Refer to Section 02672, Paragraph 1.05) - With the Contractor's qualification materials to be submitted with Contractor's BID.
4. Qualifications (Refer to Section 02672, Paragraph 1.07 A.2, A.3, A.4 and A.5) - With the Contractor's qualification materials to be submitted with Contractor's BID.
5. Well Installation Plan (Refer to Section 02672, Paragraph 1.08) – Within 14 days of the Notice to Proceed.
6. Drilling Fluids Plan (Refer to Section 02672, Paragraph 1.08 C.3 and C.4) – With the Well Installation Plan.
7. Daily Activities Logs (Refer to Section 02672, Paragraph 3.06 F.) – Weekly once Work begins.
8. Proposed Final Well Design Report/Well-Construction Diagram (Refer to Section 02672, Paragraph 3.05 G.)– Within 21 days after completion of the pilot borehole at each well site.
9. Final Report/Well Construction As-Built Drawing (Refer to Section 02672, Paragraph 3.06.N) – Within 5 days after completion of the performance pumping test.

B. Product Data Submittals

1. Stainless Steel Well Screen Product Data from Manufacturer (Refer to Section 02672, Paragraph 2.05) - With the Well Installation Plan
2. Stainless Steel Well Casing Product Data from Manufacturer (Refer to Section 02672, Paragraph 2.04) - With the Well Installation Plan
3. Products Proposed for Joining Sections of Well Casing and Screen (Refer to Section 02672, Paragraph 2.04 and 2.05) – With the Well Installation Plan
4. Artificial Filter Pack (Refer to Section 02672, Paragraph 2.06) - With the Well Installation Plan
5. Transition Pack (Refer to Section 02672, Paragraph 2.07) – With the Well Installation Plan
6. Well Sealant (Refer to Section 02672, Paragraph 2.08) - With the Well Installation Plan
7. Well-Screen Slot-Size Submittal Specifications (Refer to Section 02672, Paragraph 3.05 G.3.) – With the Proposed Well Construction Diagram for each production well.

8. Samples of Proposed Artificial Filter Pack (Refer to Section 02672, Paragraph 2.06) - With the Proposed Well Construction Diagram for each production well.
9. Samples of Transition Pack (Refer to Section 02672, Paragraph 2.07) - With the Proposed Well Construction Diagram for each production well.
10. Drilling Fluids (in Drilling Fluids Plan)

C. Test Reports and Other Documentation

1. Maintain on-site up-to-date copies of all field notes, data and logs (e.g. geologic logs or pumping test records) for review by the Engineer upon demand.
2. Source of Drilling Water – Water-Quality Test Results (Refer to Section 02672, Paragraph 1.16) – Disinfection and sampling to occur no more than one (1) week before use of water. Results reported within three (3) days after collecting water samples.
3. Grain-Size Distribution Curves for native soils shall be submitted to the Engineer for review within 21 days of the soils sampling (Refer to Section 02672, Paragraph 3.05 E.) - With the Proposed Well Construction Diagram for each production well.
4. Borehole Geophysical Report (Refer to Section 02672, Paragraph 3.05 F.) - With the Proposed Well Construction Diagram for each production well.
5. Geologic Logs (Refer to Section 02672, Paragraph 3.05 C.) - With the Proposed Well Construction Diagram for each production well.
6. Plumbness/Alignment Testing Records (Refer to Section 02672, Paragraph 3.06 H and J.) – Within two (2) days after completion of each test.
7. Well-Development Records (Refer to Section 02672, Paragraph 3.12G. Well Development Records)- Within two (2) days after completion of development.
8. Pumping-Test Records (Refer to Section 02672, Paragraph 3.08 A.4.) - Within two (2) days after completion of the pumping test.
9. Pumping-Test Water-Quality Reports (Refer to Section 02672, Paragraph 3.08 B. and Table 1 in Attachment 1) – Within three (3) weeks after completion of each pumping test.
10. Final Sand and Turbidity Test Results (Refer to Section 02672, Paragraphs 3.07.H and 3.08 C.) - Within two (2) days after each test.
11. Final Well Disinfection Test Results (Refer to Section 02672, Paragraph 3.10) - Results reported within three (3) days after collecting water samples.
12. Video Inspection (Refer to Section 02672, Paragraph 3.09) - Within two (2) days after completion of the inspection.

13. Borehole Logs (for Water-Supply Wells) and Well Installation Diagrams (As-Built Drawings) (Refer to Section 02672, Paragraphs 3.12 E and F for specific requirements.) – Within seven (7) days after completion of each well construction.
14. Abandonment Record (Refer to Section 02672, Paragraph 3.12 H.) - Within seven (7) days after completion of abandonment.
15. Project Photographs and Drone Surveys (Refer to SECTION 01380, CONSTRUCTION PHOTOGRAPHS, VIDEO AND DRONE SURVEYS) – Submitted weekly within seven (7) days after completion of well-construction activities of the previous week.
16. Final Well Coordinates and Elevations of Constructed Well Components (Refer to Section 02672, Paragraph 3.06 M) – Submitted with the As-Built Drawings.

D. Blank Forms/Templates

1. See WELL INSTALLATION PLAN, Paragraph 1.08, below.

1.05 SUBCONTRACTORS LIST:

- A. The Contractor shall submit a complete list of all proposed subcontractors to be used in the Work with his qualification's materials. The Contractor may be required to submit additional information or a resume of qualifications for any of the subcontractors proposed.

1.06 COMPLIANCE WITH GOVERNMENTAL REGULATIONS:

- A. The Contractor shall fully inform themselves of all local ordinances, and GoM laws and regulations, and interpretations of these laws, ordinances and regulations by a governmental body or agency which in any manner may affect the Work specified herein.
- B. The Contractor, upon first awareness of a possible conflict, shall notify the Owner and Engineer of inconsistency or incompatibility between the Specifications and local ordinances.
- C. The Contractor shall at all times comply with said ordinances, laws and regulations, and protect and indemnify the Engineer and their officers and agents against any claim or liability arising from or based on the violation of such laws, ordinances, or regulations. All permits, licenses, and inspection fees necessary for protection and completion of the Work shall be secured and paid for by the Contractor unless otherwise specified.
- D. The Contractor shall obtain any other local or GoM drilling permits or occupational licenses and provide notifications to local municipalities and agencies prior to the start of well construction activities.
- E. The Contractor shall also conform to any local ordinances pertaining to noise levels and working hours, etc. to avoid any unnecessary delays.

- F. The Contractor will not receive additional compensation for a delay in the project occurring due to delay of permit acquisition.

1.07 QUALITY ASSURANCE:

- A. Qualifications: To demonstrate his Qualifications to perform the Work specified, the Contractor shall submit the following documentation to Owner and Engineer with his qualification's materials.

1. Contractor License/Certification (to be submitted with Contractor's BID):

- a. The Contractor shall be properly licensed and/or certified by the GoM to install potable water-supply wells of the type specified. The Contractor shall submit a copy of his license and/or certification.

2. Contractor's Health and Safety:

- a. The Contractor's staff shall include appropriate health and safety personnel and planning, as specified in SECTION 01030, SPECIAL REQUIREMENTS.

3. Contractor Experience Record (to be submitted with Contractor's BID):

- a. The Contractor shall submit a complete list of potable water-supply wells he has installed in unconsolidated aquifers in Mongolia and other countries in the last two years, including the site location, the date of installation, the diameter and depth of the well, the well yield, and the type of drilling method. The Contractor shall submit a complete list of pumping tests conducted in the last two years, including the location, the diameter and depth of the well, the length of the pumping test and the pumping rate.

4. Well Driller Experience Record (to be submitted with Contractor's BID):

- a. The Contractor shall submit the name and experience record of each well driller to be employed on this project. Well drillers engaged on the Project shall be experienced in the construction of potable water-supply wells of the type specified having satisfactorily constructed at least three (3) such wells in the last two years. Well drillers engaged on the Project shall be experienced in conducting continuous pumping tests of the type specified herein, having satisfactorily performed at least three (3) such pumping tests in the last two years.

5. Professional Hydrogeologists (to be submitted with Contractor's BID):

- a. The Contractor shall employ a sufficient number of Professional Hydrogeologists licensed by the GoM and experienced in water-well construction. The number of Professional Hydrogeologists shall be based on the number of drilling rigs mobilized simultaneously and the hours of drilling operations. If more than one drilling rig is mobilized or if drilling operations are conducted for more than 12 hours per day, more than one Professional Hydrogeologist will be required. In the drilling of the pilot

boreholes, one Professional Hydrogeologist shall be assigned to each rig on a full-time basis. Under no circumstances shall a Professional Hydrogeologist be assigned to more than one drilling rig during pilot-borehole installation.

- b. The Professional Hydrogeologists shall perform the duties required by the GoM during the drilling and installation of pilot boreholes, the proposed water-supply wells and the pumping tests. After the wells are constructed and the pumping tests are completed, the Professional Hydrogeologists shall prepare and submit the reports and documentation required by the GoM.
- c. The Contractor shall employ, at a minimum, one Professional Hydrogeologist experienced in water-well design and construction in granular, unconsolidated aquifers, who is fluent in both English and the language of the Contractor's well-drilling crew and management staff. All pilot-borehole activities, well-drilling, well-construction, well-development, pumping-test and other project activities shall be done under the direct supervision of the qualified English-speaking Professional Hydrogeologist, on a full-time basis.
- d. The Contractor shall submit the names, experience records and certification of all Professional Hydrogeologists proposed for this project, properly licensed by the GoM (with Contractor's qualifications materials). Each Professional Hydrogeologist shall be approved by the Engineer. The proposed drilling schedule and proposed Professional Hydrogeologist(s) Work schedules shall also be submitted.

#### 1.08 WELL INSTALLATION PLAN:

- A. The Contractor shall submit a Well Installation Plan within 14 days after the Notice to Proceed. The Plan shall contain a description of Contractor's overall approach for the proposed pilot and finished boreholes, and constructing water-supply wells. The Plan shall also include a detailed description of Contractor's proposed means and methods for completing the Work specified herein, including photographs and/or drawings of the proposed equipment, tools, and supplies required to drill, sample, construct, develop, test, pump and inspect the Work.
- B. The Well Installation Plan shall be approved and signed by an experienced Professional Hydrogeologist with expertise in water-well design and construction, and by the Engineer.
- C. The following shall be incorporated into the Contractor's Well Installation Plan and followed in the field. The plan shall include, but shall not be limited to, a discussion of the following:
  - 1. Proposed pilot borehole drilling, including methods of borehole installation, borehole diameter, soil-sampling, grain-size analysis, borehole geophysical surveying and borehole abandonment. It shall also include samples of the proposed report forms (geologic logs, grain-size analysis, borehole geophysical surveys, etc.)

2. Description of proposed well-drilling methods for water-supply well boreholes, including methods to overcome well drilling challenges, well-installation procedures, including temporary casings proposed, well casing and screen installation, placement of artificial filter pack, transition pack and seal materials. It is recommended that the Contractor include a detailed description, including photographs, of the drilling rig and equipment proposed to perform the Work.
3. The Contractor shall prepare a written Drilling Fluids Plan, subject to the review of the Engineer. The Drilling Fluids Plan shall describe the proposed additives to be used in the drilling fluid (for example, soda ash, bentonite, polymer); the proportions of these additives and method of mixing; and the proposed drilling fluid properties (pH, drilling-fluid weight, fluid-loss, viscosity and calcium content). The Drilling Fluids Plan shall also explain how the drilling fluids will work in harmony with the Contractor's drilling equipment with the overall goal of stabilizing the boreholes. The Drilling Fluids Plan shall describe the additives to be used to break down the filter cake once the well screen is installed and well development commences. Finally, the Drilling Fluids Plan shall include the name and experience record of the Drilling Fluids Engineer(s) who will monitor the drilling fluids for optimal performance throughout the drilling and well-construction process. It is recommended that the Contractor include a detailed description, including photographs, of the drilling mud mixing and circulation equipment proposed to perform the Work.
4. In the Drilling Fluids Plan, the Contractor shall submit for review product data and the name of the supplier for the proposed drilling fluids and additives.
5. The Contractor shall submit for approval product data (see PART 2 – PRODUCTS) for: stainless steel well-casing and well-screens, centralizers and the products proposed for joining sections of well casing and screen (e.g., couplings or welding rods); water-supply source; artificial filter pack, transition pack; well sealant to be placed between the well casing and the borehole wall.
6. Description of methods to be used to test for plumbness and alignment., in conformance with Paragraphs 3.06 H and J of this specification.
7. Description of methods and quality control procedures to be used for placement of the artificial filter pack, transition pack and seals in the borehole, including depth measurements.
8. Description of well development methods to be used, in conformance with Paragraphs 3.07 and 3.12G of this specification.
9. Description of performance pumping-test methods, in conformance with Paragraph 3.08 of this specification.
10. Blank Forms/Report Templates, including: Borehole Log form (for water-supply wells); Geologic Log form, Grain-size Distribution Curves, Borehole Geophysical Report form (for pilot boreholes); Final Well Design Report/Proposed Well Construction Diagram Template; Well-installation Diagram Template (As-Built Drawings), Plumbness and Alignment Test Record form; Well-development record form; Water-quality Sampling form;

Pumping-test record form, Sand and Turbidity Testing form; Daily Activities Logs, Well Abandonment record form, and blank forms (paper and electronic spreadsheets) of tally sheets for drill strings, casings, tremie tubing cement, additives, filter pack materials, etc.

11. Description of contamination prevention, and well materials and equipment decontamination procedures.
12. Description of protective cover, surface completion procedures, including any special design criteria/features relating to frost heave prevention. The maximum frost penetration for the site shall be included in this description.
13. Description of water management methods, including any special design criteria/features relating to managing water from well drilling activities as well as pumping tests.
14. List of applicable publications, including GoM and local regulations and standards.
15. List of personnel assignments for this project, and personnel qualifications.
16. Description of well abandonment procedures.
17. Contractor's Health and Safety procedures.
18. Proposed source of water-supply for drilling.
19. Descriptions, materials of construction, drawings and layouts of proposed temporary drilling platforms and temporary access tracks, in conformance with Paragraph 3.04 D of this specification.
20. Floor plans, layouts, and other details related to temporary Field Offices, specified in SECTION 01500, TEMPORARY FACILITIES.
21. Details, descriptions, plans and layouts to be used for erosion and sedimentation control, as specified in SECTION 01568.

#### 1.09 PERMITS:

- A. Submit to Engineer a copy of all permit approvals, licenses, or other legal authorizations necessary to execute the Work. To this end, before beginning Work, the Contractor shall prepare and submit the necessary permit applications with the appropriate authorities of the GoM (Tuul River Basin Authority, or other appropriate agency), local government and private parties in writing, and notify these authorities of the type and location of the Work to be constructed, the method of construction and anticipated schedule for construction of the Work.
- B. Contractor shall not begin any Work or elements of the Work until all written permissions and/or approvals have been received from authorities of the GoM (Tuul River Basin Authority, or other appropriate agency), local government, private parties and the Engineer. A permit for drilling the final production wells will need to be obtained from the Tuul River Basin Authority.**

#### 1.10 DELIVERY, STORAGE AND HANDLING:

- A. Comply with the requirements in SECTION 01610.
- B. Store and maintain well materials in a clean, uncontaminated condition throughout the course of the project.
- C. Well materials shall be stored indoors for inspection by the Engineer until such time as the materials are needed to construct the individual wells.
- D. Once the well materials arrive at a well-construction site, they shall be staged on wooden timbers or beams, shipping pallets or other suitable structures to prevent contact with the ground. Well materials shall be covered with heavy-duty plastic or tarpaulins to keep them from exposure to the elements, i.e., wind, rain, dust, etc. Filter pack material shall not be allowed to freeze before installation.

#### 1.11 SITE CONDITIONS:

- A. Access to each well site, including any utility clearance, permits, licenses, or other requirements and the payment thereof necessary for execution of the Work, is the responsibility of the Contractor. Prior to mobilization, the Contractor shall visit each proposed well location to observe any condition that may hamper transporting equipment or personnel to the site. If clearing, or relocation is necessary, the Contractor, and the Engineer shall agree on a suitable clearing, and/or the location of any required access road.

##### 1. Soil and Groundwater Conditions:

- a. A description of existing subsurface conditions experienced during geotechnical and aquifer pump test investigations are provided in the reports titled: Mongolia II – Bulk Water Supply Expansion, Geophysical-Hydrogeological Investigation Shuvuun and Biokombinat Wellfields, Final Report, dated December 2019, found in the Attachment 3 at the end of this Section.
- b. The Contractor must anticipate difficult drilling conditions with low drilling advancement rates through sand, gravel, cobbles, boulders, and heaving soil conditions below the water-table. In addition, flooding conditions were experienced in the summer of 2019 during the hydrogeologic investigation and these conditions could be repeated. It is suggested that the Contractor monitor rainfall and stream gauge stations during construction as this may provide an early indication of flooding conditions.

#### 1.12 OTHER GENERAL REQUIREMENTS:

- A. The Contractor shall coordinate all his Work with the Engineer. When coordinating the Work in the field, the Contractor shall include the English speaking Professional Hydrogeologist, as well as the Contractor's drilling foremen, to avoid miscommunication and misunderstanding.

- B. The Contractor shall take all necessary precautions for the safety of employees on the Work and comply with all applicable provisions of applicable safety laws and building codes to prevent accidents or injury to persons on, about, or adjacent to the premises where the Work is being performed.
- C. The Contractor shall comply with applicable licenses and permits related to environmental protection.
- D. The Contractor shall coordinate with the Engineer regarding setup at each drilling location and confine his activities to areas designated by the Engineer.
- E. The Contractor shall be fully informed of the conditions relating to construction and labor under which Work will be or is now being performed and employ such methods and means in the carrying out of this Work as will not cause any interruptions or interference with any other Work at the Site.
- F. The Contractor shall keep a copy of the Contract Documents at the Site of the Work at all times while work is being performed.
- G. The Contractor shall provide whatever additional equipment and manpower as may be necessary in order to complete the project.
- H. The Contractor shall make all arrangements for and furnish at his own expense all telephone or other utility required for construction purposes.

#### 1.13 PROTECTION OF WORK AND PROPERTY:

- A. The Contractor shall carefully protect all Work so that no injury will come to it from flood water, rain, frost, ice, accident or other cause. Any injury to the Work shall be repaired at no expense to the Owner. The Contractor shall protect the Owner's property from injury or loss arising in connection with this Project and make good any damage, injury, or loss. The Contractor shall adequately protect adjacent and/or private property as provided by law and the Contract Documents.
- B. The Contractor shall not release petroleum products including petrol, diesel, motor oil, brake fluid, as well as engine coolant and antifreeze to the environment. To this end, the Contractor shall furnish, install and maintain, for the life of the Project, secondary containment for all fluids and drilling fluid additives stored on site. Secondary containment shall be provided for fluids stored in drums and buckets. Secondary containment shall have a capacity to hold 150 percent of the volume of the fuel containers. The Contractor shall leave no more than 20 liters of fuel in any piece of equipment that is unattended overnight and/or over weekends, holidays, or periods of no-work. The Contractor shall furnish, place and maintain polyethylene sheeting of minimum 30-mil thickness under all equipment containing fuel or other hazardous materials. Polyethylene sheeting shall be placed in one piece; joining of separate pieces will not be acceptable. Non-stationary equipment shall be parked over the sheeting at all times when it is not in use. The Contractor shall discuss with the Engineer in advance secondary containment of the fuel to be used during the pumping test.

- C. Proposed production wells that are installed but not accepted by the Engineer, or accepted wells where the CP-3 Contractor has not started construction by October 1st, will be marked with steel witness pole(s) and covered with 2 meters of fill to a horizontal distance of 2 meters radius by the CP-1 Contractor. Witness poles will be welded to the side of the well casing and painted fluorescent red. The fill is to help protect the well from winter freezing conditions. The witness pole(s) are to extend above the fill by 1 meter to mark the locations of the production wells. This will require coordination between the CP-1 Contractor, CP-3 Contractor, Engineer and MCA. Refer to Design Drawings Sheet 0-C-302, Temporary Embankment design details.

#### 1.14 VISIT TO THE SITE:

- A. Before mobilizing, the Contractor shall visit the proposed sites, examine conditions and become thoroughly acquainted with the conditions for performing the Work. The Contractor shall study the technical specifications and compare the same with the information gathered during the examination of the Site, as no extra compensation will be authorized for extra Work caused by unfamiliarity with the Site and/or specifications or the conditions peculiar to this Project.

#### 1.15 CLEANUP:

- A. During the course of the Work, the Contractor shall keep the Site in a clean and neat condition and shall legally dispose of all residues resulting from the construction Work and, at the conclusion of the Work, shall remove and legally dispose of any surplus materials and any other refuse remaining from the construction operations. At the conclusion of the Project, the Contractor shall remove temporary drilling platforms and access tracks and leave the entire Site of the Work in a neat and orderly condition, subject to the approval of the Engineer.

#### 1.16 WATER SUPPLY FOR CONSTRUCTION PURPOSES:

- A. Water needed for construction purposes, including water needed for drilling fluids, well sealants and other purposes, is the sole responsibility of the Contractor.
- B. The Contractor is encouraged to use groundwater from the test or observation wells installed in 2019, and located adjacent to each proposed water supply well. One of two types of test wells are present: either 273- or 300-mm diameter. These wells are capable of producing water at a rate of at least 33 liter per second (l/s). Should the Contractor choose to use this water for drilling purposes, he must first chlorinate the well for 12 to 24 hours and then test the water for those analytes shown on Table 2, Attachment 2, which include field parameters, microbiological parameters, volatile organic compounds (VOCs), and petroleum compounds. The Contractor shall provide pumps and all necessary equipment to obtain groundwater. In addition, Contractor may need to pay the GoM for the use of the water resources.
- C. If the Contractor elects to use an off-site source of water, it is the Contractor's responsibility to identify the source, obtain the water, and ensure the water quality meets the requirements for the prescribed use. The Contractor shall be responsible for taking water-quality samples and providing results to the Engineer for approval prior to any water use (shown on Table 1, Attachment 2).

- D. The use of surface water for borehole drilling or well installation is not permitted.

#### 1.17 PRECONSTRUCTION AND PROGRESS MEETINGS

- A. Refer to Specification Section 01200 PROJECT MEETINGS.
- B. Progress meetings shall be held weekly.

#### 1.18 FINAL WELL-ACCEPTANCE CRITERIA

- A. Each well shall meet the following Final Well-Acceptance Criteria before acceptance by Engineer:
  - 1. All Work shall be completed for each well in conformance with these specifications;
  - 2. At the conclusion of well development, the maximum specific capacity has been achieved for each well;
  - 3. Each well shall achieve the design pumping rate listed in Attachment 1, Table 1, as measured continuously throughout the performance pumping test;
  - 4. Each well shall meet the minimum specific capacity listed in Attachment 1, Table 1, as measured at the end of the performance pumping test;
  - 5. Each well shall be free of bacteria at the end of the performance pumping test;
  - 6. Each well shall meet the criteria for turbidity and sand content specified in Section 02672, Paragraphs 3.07G and 3.08 C;
  - 7. Each well shall meet the plumbness and alignment criteria set forth in Section 02672, Paragraphs 3.06 H and 3.06 J;
  - 8. Each well shall be free of damage or defects based on video inspection or other observation;
  - 9. Each well seal is free of damage or defects;
  - 10. All required records are properly completed and submitted.

### PART 2 - PRODUCTS

#### 2.01 WELL MATERIALS - GENERAL:

- A. All casing, screen, and other well material shall be of compatible materials to prevent galvanic reaction between components of the completed well.
- B. All materials shall be sized appropriately to create a finished water-supply well that maximizes well efficiency (specific capacity) and produces clear water that is free of turbidity and sand.
- C. All casing, screen and other well materials shall be new, clean and free from defects.

## 2.02 DRILLING FLUIDS:

- A. The drilling fluids selected must achieve the following overall goals:
  - 1. Maintain borehole stability during drilling;
  - 2. Balance the need for borehole stability with the need to minimize intrusion of the drilling fluid into the formation;
  - 3. Enable complete removal of the drilling-fluid cake from the borehole wall during well development to maximize well efficiency.
- B. In addition to these overall goals, the drilling fluids shall be:
  - 1. Water-based and suitable for use in the drilling of potable water-supply wells of the type specified herein.
  - 2. Suitable for maintaining the stability of boreholes of the depth and diameter specified herein and preventing fluid loss.
  - 3. Suitable for removing all soil cuttings from around the drill bit and lifting them out of the borehole into the drilling-fluid tubs or pits.
  - 4. Allow soil cuttings to settle out in the drilling-fluid tubs or pits.
  - 5. The Contractor shall submit for review product data and the name of the supplier for the proposed drilling fluids and additives in the Well Installation Plan within 14 days of receipt of the Notice to Proceed.

## 2.03 TEMPORARY WELL CASINGS:

- A. Temporary casings shall be steel, have a minimum diameter of 625-mm, a minimum wall thickness of 6.4-mm, and be suitable for full penetration welds using methods and welding materials, as specified in ASME B31.1, AWS D1.1/D1.1M and MNS ISO 9956-2:2003 Technical requirements for metal welding and approvals, if welding is necessary. Temporary casings that are damaged, dented, out-of-round, crimped, or otherwise unsuitable shall be rejected by the Engineer.
- B. Steel guide centralizers of a design reviewed by Engineer shall be used to maintain proper spacing between the walls of all temporary steel casings.

## 2.04 PERMANENT STAINLESS STEEL WELL CASING:

- A. Permanent well casing shall be new Type 304 stainless steel, with an inside diameter of 450-mm and a wall thickness of not less than 9.6-mm. Well casing shall meet the requirements of ASTM A778/A778M, or Engineer approved equal, and shall be compatible with the stainless steel well screen. Well casing shall be round and straight without crimping or damage.
- B. All permanent and temporary casings shall be joined by stainless-steel materials, specifically, factory-installed threaded couplings, double spline-lock couplings or full penetration welds using methods and welding materials, as specified in ASME

B31.1, AWS D1.1/D1.1M and MNS ISO 9956-2:2003 Technical requirements for metal welding and approvals.

- C. Centralizers (“guides” or “spacers”) welded to the well casing shall be Type 304 stainless steel.
- D. The Contractor shall submit for approval product data and the name of the supplier for the proposed stainless steel well-casing and couplings in the Well Installation Plan within 14 days of receipt of the Notice to Proceed.

2.05 STAINLESS-STEEL WELL SCREEN, SCREEN PLATE, CENTRALIZERS AND PEDESTAL:

- A. Well screen shall be 450-mm diameter, Type 304 stainless steel of the continuous-slot, wire-wound design meeting the requirements of AWWA A100. Screen shall be fabricated by circumferentially wrapping a 4.8-mm, triangularly shaped wire around a circular array of internal rods. The wire configuration must produce inlet slots with sharp outer edges. The slots shall widen inward so as to minimize clogging. Each juncture between the horizontal wire and the vertical rods shall be fusion welded under water by the electrical resistance method. The screen length shall be determined through soil sampling.
- B. Well screen shall be selected so that the average entrance velocity does not exceed 0.03 meter per second (0.1 foot per second) at the design flow rate of 71 or 74 l/s.
- C. The Contractor’s Professional Hydrogeologist shall recommend a well-screen slot-size, to be reviewed and approved by the Engineer, based on the grain-size distribution curves of the native soils collected from the pilot boreholes, and in concert with selection of the manufactured glass-bead diameter. Refer to Design Drawings Sheet 0-C-301, Proposed Typical Well Design.
- D. The bottom plate of the well screen plate shall be Type 304 stainless steel, 6.4-mm thick continuously welded to the bottom of the well screen.
- E. A 450-mm (18-inch) diameter by 9.4-mm (0.375-inch) thick plate made of Type 304 stainless steel shall be welded below the screen plate to act as a “pedestal”.
- F. Perforated and louvered type well screens are not acceptable.
- G. All permanent well screens shall be joined by stainless-steel materials, specifically, factory-installed threaded couplings, double spline-lock couplings or full penetration welds using methods and welding materials, as specified in ASME B31.1, AWS D1.1/D1.1M and MNS ISO 9956-2:2003.
- H. Centralizers (“guides” or “spacers”) welded to the well screen shall be Type 304 stainless steel.
- I. The Contractor shall submit for approval product data and the name of the supplier for the proposed stainless steel well screens in the Well Installation Plan within 14 days of receipt of the Notice to Proceed.

## 2.06 ARTIFICIAL FILTER PACK – MANUFACTURED GLASS BEADS:

- A. Manufactured glass beads shall be spherical, acid-proof, polished, soda-lime glass beads, subject to the approval of the Engineer, meeting the following criteria:
  - 1. Hardness (according to Mohs Hardness Scale): > 6
  - 2. Sphericity: 0.94 to 0.98
  - 3. Compressive Resistance: > 1900 Newton
  - 4. Specific weight: 2.50 kg/liter
  - 5. Bulk Density: 1.43 to 1.53 kg/liter
  - 6. Melting Point: 1441 °C
  - 7. Composition (Approx. %): 65 – 75% SiO<sub>2</sub>; 12 – 17% Na<sub>2</sub>O; <10% CaO; <5% Al<sub>2</sub>O<sub>3</sub>; <5% MgO.
  - 8. Free of silica dust, silanes, glycol and epoxy.
- B. Manufactured glass beads shall be certified by NSF and be in compliance with NSF 61. Manufactured glass beads shall meet strict criteria for roundness, uniformity in size, smoothness, crushing strength and chemical resistance.
- C. The Contractor's Professional Hydrogeologist shall recommend a glass-bead diameter, to be reviewed and approved by the Engineer, based on the grain-size distribution curves of the native soils collected from the pilot boreholes, and in concert with selection of well-screen slot-size. Refer to Design Drawings Sheet 0-C-301, Proposed Typical Well Design detail.

## 2.07 TRANSITION PACK:

- A. A transition pack consisting of processed and graded sand shall be placed vertically between the well sealant and the artificial filter pack. The transition pack shall be sized to prevent invasion of well sealant into the filter pack.
- B. The grain-size of the transition pack shall be selected by the Contractor, subject to the approval of the Engineer.
- C. Transition pack shall also be used as backfill material that is placed: 1) at the bottom of the borehole before installation of the well materials, and 2) between blank well casing and fine-grained native soil layers, if found. (Refer to Paragraph 3.05 A, F and G, below regarding "fine-grained layers".)

## 2.08 WELL SEALANT:

- A. The annular space between the well casing and the borehole wall shall be sealed with cement grout or similar product, subject to the approval of the Engineer.

- B. Cement grout shall be mixed in a proportion of 19.7 liter (5.2 US gallons) of water per 42.6 kg (94 pounds) of portland cement conforming to ASTM C150/C150M. If bentonite is added to the grout, it shall be mixed in a proportion of 1.4 to 2.3 kg (3 to 5 pounds) of bentonite, 25 liters (6.5 US gallons) of water and 42.6 kg (94 pounds) of portland cement. Grout shall be mixed in accordance with the manufacturer's instructions.
- C. Alternatively, the well may be sealed with another product with prior approval by the Engineer, and mixed and installed according to the manufacturer's instructions.
- D. Water shall be clean as required for drinking.

## 2.09 CONDITION OF PRODUCTS:

- A. All products used to construct the wells, including well screens and casings, well sealants, and clean fill shall be new, clean, free of defects and shall arrive on site free from oil, grease, mud, soil, dust, residues and other potential contaminants. The Engineer will reject products that do not meet the above criteria, and order that they be replaced with products that do meet the criteria.

## PART 3 - EXECUTION

### 3.01 GENERAL:

- A. The following information and requirements, though not all-inclusive, are provided to assist the Contractor in the evaluation of the Work required to meet the project objectives.
- B. Drilling equipment shall be inspected, maintained and repaired in accordance with accepted industry practice.
- C. The Contractor shall disinfect all drilling equipment and materials prior to lowering equipment and materials into the well. A chlorine concentration of at least 50 parts per million (ppm) obtained by the addition of sodium hypochlorite will be used to disinfect equipment and materials.
- D. The Contractor shall furnish the materials, equipment, and labor necessary to install 625-mm (minimum) temporary steel surface-casing to a minimum depth of 6 meters and drill boreholes of minimum 600-mm diameter to a depth of at least 60 meters using rotary-drilling methods. Proposed well depths are provided in the table included in the Design Drawings Sheet 0-C-301. Actual depths shall be based on pilot borehole drilling results as approved by the Engineer. The drilling method and need for drilling additives will need to be considered by the Contractor and approved by the Engineer on a well-by-well basis.
- E. Specific tasks not completely described in this Section that are necessary or normally required as part of the Work described, or that are necessary or required to make the installation satisfactorily or legally operable, shall be performed by the Contractor as incidental work without extra cost. The expense of such work shall be included in the applicable unit prices for the Work described (SECTION 01025 MEASUREMENT AND PAYMENT).

- F. The Contractor shall be required to provide direct and reliable telephone service with the Engineer at all times during drilling, construction, and testing operations. Daily progress reports shall be communicated from the Project Hydrogeologists to the Engineer. The Contractor shall also provide a telephone list of individuals directly involved in the daily progression of Work.

### 3.02 EQUIPMENT FOR WATER-SUPPLY WELL CONSTRUCTION

- A. Provide standard, commercially available rotary-type drilling rig with required hook-load capacity and equipment capable of performing drilling operations in accordance with accepted industry practice.
- B. All equipment shall be in good working condition before drilling operations commence. Operate and maintain all equipment in conformance with manufacturer's specification. The Contractor shall submit information regarding the equipment and materials planned for use in this project before mobilization.
- C. The Contractor shall ensure that the hook load/weight capacity of the derrick and draw works meets the original manufacture's specifications or at a minimum 1.5 times the heaviest load anticipated to complete the Work.
- D. The Contractor shall be responsible for measuring (using industry standards) drilling parameters and drilling-fluid properties during the progression of Work. These parameters shall include; weight on bit (WOB), drill string weight, rate of penetration (ROP). Equipment shall be calibrated and certified by the manufacturer or appropriate testing facility before the start of drilling and shall be operational throughout drilling. Improper operation or lack of measured and recorded data is sufficient cause to suspend drilling, at Engineer's discretion.

### 3.03 PROTECTION OF EXISTING CONDITIONS:

- A. Maintain existing survey monuments and wells and protect them from damage from equipment and vehicular traffic. Repair any items damaged during this Work. Reinstall wells requiring replacement due to Contractor negligence according to these specifications.

### 3.04 DRILLING PREPARATION:

- A. Decontamination Before Mobilization:
  - 1. The Contractor shall clean all drilling, pumping equipment and all equipment and tools that enter the borehole before mobilizing to the site using high-pressure hot water/steam to remove residual oil and grease, mud, soil cuttings, residues and potential contaminants. The Engineer will inspect the drilling equipment upon its arrival at the Project Site, and if it is inadequately cleaned, the Engineer shall order that the equipment be removed from the site until the equipment is adequately cleaned.
- B. Staging of Well Installation and Construction Materials:
  - 1. During drilling and well installation operations, the Contractor shall stage all well materials, drilling tools and casings on wooden beams or a suitable

substitute, so the materials will not come in contact with the ground. Materials, tools and casings that come in contact with the ground shall be washed with high-pressure hot water/steam and then spray disinfected.

C. Disinfection During Construction:

1. The Contractor shall disinfect all drilling and pumping equipment that will come in contact with the native soils to minimize the potential for the introduction of bacteria into the aquifer. The Contractor shall mix sodium hypochlorite with clean water at a strength of 50 ppm to make a proper solution. The Contractor may apply the sodium hypochlorite solution using a spray canister or other suitable means. In addition, the Contractor shall periodically disinfect water used during the drilling process. All permanent construction materials, including well casings, and well screens shall also be disinfected on-site prior to installation to minimize the potential for introduction of bacteria. Engineer shall review and approve all proposed disinfection procedures in advance with Contractor.

D. Temporary Access Tracks and Drilling Platform:

1. The Contractor shall construct and maintain temporary access tracks and drilling platforms using approved sand, gravel, heavy rubber matting, wooden timbers or wooden planks to support the drilling rig and support vehicles, as necessary. The ground surface at the well locations may be soft and may not be capable of supporting this equipment during rainy conditions and whenever the temperatures are above freezing. The drilling platforms shall be sized to accommodate the drilling rig, support vehicles, equipment and construction materials but not exceed 400 square meters. Drilling platforms shall be sized to allow the Contractor to execute the work efficiently, while at the same time protecting the integrity of the Work and the health and safety of workers. The temporary access tracks and drilling platforms, including their dimensions, are subject to the approval of the Engineer.
2. Temporary access tracks shall be coordinated with the CP-3 Contractor (Conveyance). To the extent feasible and practical, temporary access tracks shall be constructed along the alignment of the permanent access tracks. The CP-3 Contractor shall be responsible for constructing stream crossings within the permanent access tracks needed by the CP-1 Contractor to access well-drilling sites.

E. Water Source:

1. Well drilling and well construction requires the use of water. See Paragraph 1.16 above for sources of water supply. The Contractor shall provide pumps and all necessary equipment to obtain water.

3.05 PILOT BOREHOLES:

A. Purpose of Pilot Boreholes:

The Hydrogeologic Investigation Program conducted in 2019 involved the installation

of test wells and observation wells at all 30 of the proposed well sites in the Biokombinat and Shuvuun well fields. Based on the hydrogeologic information collected in 2019, the aquifer at each of the proposed well fields appears to consist largely of fine-to-coarse sands, fine-to-coarse gravel and cobbles, in varying proportions. However, fine-grained layers (i.e., fine sand, silt and clay) were also identified, and though they appear generally to be a minor stratigraphic component, their presence must be accounted for in the final design of the production wells.

The main goal of installing pilot boreholes is to identify the presence, depth, composition and thickness of fine-grained layers, so that the finished production wells:

- 1) can be properly designed by experienced water-well professionals, and,
- 2) will pump clear water that is free of sand and turbidity, once the wells are properly constructed and fully developed.

The records of the 2019 Hydrogeologic Investigation Program included herein (Attachment 3), are provided to the Contractor for informational purposes only and should not be relied upon for final design purposes. Furthermore, the typical well design presented in these specifications is intended to be a guideline. Final well designs shall be based on actual stratigraphic conditions observed through the pilot-borehole investigations.

B. Pilot Boreholes – General Approach:

1. A pilot borehole of 152-mm (6-inch) to 203 mm (8-inch) diameter shall be advanced from the ground surface to the target depth at each proposed well location for the dual purpose of collecting soil samples and conducting borehole geophysical surveys. Soil descriptions, soil-sample photos, soil grain-size analysis and geophysical testing results shall be used in the final design of the wells, i.e., well-screen slot-size, artificial filter-pack size, well-screen depth interval(s) and blank-casing depth interval(s).
2. Pilot boreholes shall be advanced with temporary steel casing and air-rotary drilling techniques. Drilling mud will not be allowed. Engineer will consider other methods that ensure that: 1) representative soil samples can be collected, and 2) borehole geophysical surveys can be properly conducted. The Contractor shall maintain the vertical plumb of the pilot borehole as it is being advanced.
3. Soil samples shall be obtained continuously from ground surface to the target depth of the proposed well at one (1) meter intervals. To this end, Contractor shall provide a means of separating the compressed air from the soils, so that the air discharges upward into the atmosphere and representative one-meter soil samples drop into buckets, tubs or other containers placed on the ground, with a minimum loss of fine-grained soils. Soil samples shall then be placed on heavy-duty sheet plastic at consecutive depths and labeled to display the Well ID, the date of sample collection and depth interval of the soil sample, and then photographed.
4. Contractor shall keep track of drilling depth by marking the outside of the

temporary steel casing in 0.5-meter increments with chalk, heavy crayon, soapstone or other durable marker visible to a viewer from a distance of 15 meters.

5. An English-speaking hydrogeologist experienced in designing water-wells constructed in granular, unconsolidated aquifers shall supervise all aspects of the pilot borehole process, including the collection and logging of soils in the field and the borehole geophysical surveys.
6. Upon completion of the pilot borehole and all related Work, the temporary well casing shall be disinfected with a sodium hypochlorite solution with a strength of not less than 50 mg/L, and then removed.

#### C. Geologic Logs:

Written descriptions of the soils shall be documented in one (1) meter intervals on a Geologic Log Form. Field description and identification of soils shall be done in accordance with ASTM D2488 - 17e1. The Geologic Log shall include the following information:

1. Name of Project
2. Well ID and Date(s) of Pilot Borehole Drilling
3. Well Drilling Firm and Contact Information
4. Name and Contact Information of Site Hydrogeologist
5. Name and Contact Information of Supervising Hydrogeologist
6. Total Depth, Casing Diameter and Static Water Level (below ground surface)
7. Soil Descriptions, as follows:
  - Sample color;
  - Angularity/Roundness (very angular, angular, sub-angular, sub-rounded, rounded, well rounded);
  - Sorting (very well sorted, well sorted, moderately sorted, poorly sorted), where “very well sorted” denotes uniform soil grain-size, and “poorly sorted” denotes non-uniform grain-size;
  - Grain-size, where the following apply:
    - Fines, less than 0.074-mm (0.003-inch) diameter, passing the No. 200 sieve;
    - Fine sand, 0.074- to 0.42-mm (0.003- to 0.02-inch) diameter, retained on the No. 200 sieve and passing the No. 40 sieve;
    - Medium sand, 0.42- to 2-mm (0.02- to 0.08-inch) diameter, retained on the No. 40 sieve and passing the No. 10 sieve;
    - Coarse sand, 2- to 4.75-mm (0.08- to 0.190-inch) diameter, retained on the No. 10 sieve and passing the No. 4 sieve;
    - Fine gravel, 4.75- to 19-mm (0.190 to ¾-inch) diameter, retained on the No. 4 sieve;
    - Coarse gravel, 19- to 76-mm (¾- to 3-inch) diameter;
    - Cobble, 76- to 305-mm (3- to 12-inch) diameter.
    - The proportion of fines, fine sand, medium sand, coarse sand (or fine-to-coarse sand, fine-to-medium sand, medium-to-coarse sand), fine gravel, coarse gravel (or fine-to-coarse gravel) and cobbles shall be approximated in percent, or a range of percent (e.g., “fine-to-coarse sand, 50 to 60%; fine

gravel, 35% to 40%; <5% fines”).

A sample Geologic Log Form is shown in Attachment 4.

#### D. Soil Samples

1. Representative samples of the natural soil formations shall be collected at one-meter intervals for the entire depth of the pilot borehole. Contractor shall collect two (2) sets of soil samples: one (1) for Contractor's use, and one (1) for the Engineer. Samples shall be collected in 10- by 17-inch poly/cotton soil sample bags, 2-gallon resealable zip lock bags, or another suitable container that will not be subject to damage and loss of sample. The bags or containers shall be labeled in permanent indelible ink and photographed for future reference. Labeling shall include Well ID, date, and depth range. Sample bags or containers shall be placed in partitioned boxes. Boxes shall be labeled with project number and well number. Containers and boxes shall be furnished by the Contractor. The soil samples shall then be subjected to grain-size analysis.

#### E. Grain-Size Analysis:

1. Each one-meter soil sample collected from the pilot boreholes shall be subjected to grain-size analysis in accordance with ASTM C136/C136M, with the finest sieve being 0.074-mm (0.003-inch) No. 200 mesh. The Contractor shall provide a grain-size analysis report with summary sieve analysis data sheets and grain-size distribution curves. The grain-size distribution curves shall be displayed on graphs showing cumulative percent retained versus grain size in inches and mm. The grain-size analysis report shall identify numerically the 10%, 50%, and 60% grain-sizes ( $D_{10}$ ,  $D_{50}$  and  $D_{60}$ ) and the uniformity coefficient,  $C_u$ . Grain-size distribution curves shall be submitted to the Engineer for review with the Proposed Well Construction Diagram for each well.
2. Laboratory classification of soils shall be done in accordance with ASTM D2487 – 17 and MNS 2306:1986.
3. The Contractor shall not discount the volume of coarse soil material (19 mm diameter and greater) but instead shall accurately report the coarse fraction as a percentage of the overall sample. This information will be considered at least qualitatively in the selection of the artificial filter pack and slot size of the well screen.
4. A sample Grain-Size distribution curve is shown Attachment 4.

#### F. Borehole Geophysical Surveys:

1. The primary goal of borehole geophysical surveying is to identify the presence, composition, depth and thickness of fine-grained layers (clay, silt, silty fine sand and fine sand) that may occur at each proposed well location. These fine-grained layers must be accounted for in the design of the permanent well (filter pack, well casing and screen) to prevent fines from entering the permanent well, once it is constructed and fully developed.

2. Once the pilot borehole has reached the target depth, the Contractor shall log the pilot borehole using the following borehole geophysical logging techniques:
  - Natural gamma radiation, in American Petroleum Institute (API) units
  - Gamma-gamma, in units of density
  - Caliper, in millimeter (if the pilot borehole is not cased)
  - Temperature, in degrees Celsius
3. Additional logging techniques may be used at the Contractor's discretion, but the listed techniques should be considered a minimal suite of tools to be used to fulfill the borehole logging objectives. All geophysical logging should be conducted using appropriate quality assurance/quality control (QA/QC) techniques. A QA/QC plan shall be drafted which covers appropriate calibration procedures/dates for each sensor/tool, depth control, and data quality checks. Borehole data shall be collected according to best practices based on ASTM recommendations (or equivalent). In general, borehole geophysical logging shall be run at a rate of no more than 3 meters per minute (10 feet per minute). The rate shall be uniform throughout individual boreholes and from borehole to borehole.
4. The geophysical records shall be processed and presented using conventional software available in the industry, such as ALOG or WellCAD. The results of the borehole geophysical logging shall be displayed graphically, with a depth scale on the far left and the four logging records displayed side-by-side to the right. An example of a suitable graphical, geophysical report is shown in Attachment 4. The borehole geophysical records shall be interpreted by an experienced geophysicist and the logs shall be annotated to indicate the composition, depth and thickness of fine-grained layers. Geologic observations and grain size analyses should be included on each log to aid in correlating geophysical data responses to other observations.

#### G. Proposed Final Well Design Report/Well-Construction Diagram

1. Within 21 days after completion of each pilot borehole, the Contractor shall submit to the Engineer for review and approval, a Proposed Final Well Design Report/Well Construction Diagram for each permanent well. The diagram shall be a profile, having a vertical scale showing the following:
  - The diameter and depth of the borehole, proposed well-screen interval and slot-size, proposed well-casing interval(s), proposed filter-pack interval and size (diameter), proposed transition pack interval and proposed well seal interval.
  - A detailed Geologic Log describing soils extending from the top of the borehole to the bottom of the borehole, including the 50% grain size ( $D_{50}$ ) and the uniformity coefficient,  $C_u$ .
  - Calculations related to the selection of the manufactured glass bead diameter and well-screen slot-size.
  - Special note of any fine-grained layers identified from the pilot boreholes, and special considerations for the installation of blank well casing and a fine-grained filter pack that will prevent entry of the fine-grained soils into the permanent well.

- Static water level, date of measurement, and measurement reference (top of casing and ground surface).
- 2. The Contractor shall submit at a minimum the Geologic Logs, Grain-size distribution curves, Daily Activities Logs, photographs and the report of the Borehole Geophysical surveys with each Proposed Final Well Design Report/ Well-Construction Diagram.
- 3. In addition, the Contractor shall submit a Well Screen Submittal for the selected well screen indicating the material of construction, strength, slot size, open area per meter (or foot) of screen, and transmitting capacity per meter (or foot) of screen at an entrance velocity of 0.1 feet per second.

### 3.06 PERMANENT WATER-SUPPLY WELL CONSTRUCTION:

- A. The drilling method shall conform to all industry standards for water-well construction. The drilling method shall prevent the collapse of formation material against the well screen and casing during installation of the well. The inside diameter of any temporary casing shall be sufficient to allow proper placement of the permanent well screen, well casing, centralizer(s), filter pack, and seal. Grease or oil on drill rods, casing, or auger joints are not permitted; however, PTFE tape or vegetable oil (in solid phase form) are acceptable. The drill rig shall be free from leaks of fuel, hydraulic fluid, and oil which may contaminate the borehole, ground surface or drill tools. Well casing, well screen, and joint couplings shall be of compatible materials throughout each well. The well shall be an artificial filter-pack well installed in unconsolidated soils. The well shall be drilled straight, vertically plumb, and circular from top to bottom. During construction of the wells, precautions shall be used to prevent tampering with the well or entrance of foreign material. Surface-water runoff shall be prevented from entering the well during construction.
- B. The Contractor shall ensure the integrity of the final boreholes at all times to prevent damage or contamination. If there is an interruption in work, such as overnight shutdown or inclement weather, the well opening shall be closed with a watertight uncontaminated cover. The cover shall be secured in place or weighted down so that it cannot be removed except with the aid of the drilling equipment or through the use of drill tools.
- C. The Owner shall be given a one (1) week notice with a schedule of activities prior to initial mobilization. All drilling activities can be performed during normal working hours (24 hours per day, 7 days per week).
- D. Drilling Methods:
  - 1. Drilling shall be done using rotary-drilling methods acceptable to the Engineer. Drilling fluids and/or temporary casings shall be introduced into the borehole to maintain borehole stability. If mud-rotary drilling methods are employed, the Contractor shall mix and recirculate drilling fluids in mud tubs (sedimentation tanks). Use of mud pits must be approved by Engineer.
- E. Drilling Fluids (applies to mud-rotary drilling method, if employed):

1. The drilling fluids and need for drilling additives shall be described in the Drilling Fluids Plan, subject to review by the Engineer prior to drilling. The Contractor shall use only drilling fluids and additives specifically recommended by the manufacturer for use in water-well drilling operations. Mechanical removal of solids from the drilling fluid is necessary to reduce the build-up of a thick fluid (over-balanced) and formation damage due to high fluid invasion.
2. The Contractor's Drilling Fluids Engineer shall monitor the drilling fluid system continually in accordance with the Drilling Fluids Plan to assure that the fluid properties meet the specifications. This monitoring shall be done during the drilling of the 600-mm diameter boreholes, and during well construction, if necessary.
3. The Contractor shall provide all drilling fluid additives and lost circulation material, as required. The Contractor shall review drilling fluids and potential additives, itemize all products, and include the appropriate safety data sheets (SDS) to be used during the course of drilling operations. The Contractor shall submit these items in the Drilling Fluids Plan. Additives for drilling are only to be used on a well-by-well basis to address specific issues.
4. The Contractor shall provide an adequate and safe water supply for mixing operations. Refer to Paragraph 1.16, WATER SUPPLY FOR CONSTRUCTION PURPOSES, above.
5. The Contractor shall use drilling fluids with suitable additives to ensure rapid breakdown during well construction and development. Full technical details of any drilling medium or additives shall be included in the Drilling Fluids Plan.
6. The record of those observations and any other relevant details shall be delivered to the Engineer.
7. The costs of materials required to maintain the drilling fluid in a satisfactory condition shall be borne by the Contractor and shall be deemed to be included in the contract rates for drilling.

F. Daily Activities Logs:

1. The Contractor shall maintain a detailed daily log of his activities during the construction of the well on a Daily Activities Log form acceptable to the Engineer. Each daily log shall commence at the beginning of each change in shift or at each change in drillers. The log shall provide a brief and accurate record along with the time (hour of the day) of the following: generalized geologic materials and depths encountered, type of drilling, depths of lost circulation zone(s) and methods of regaining circulation, drilling rate, time, depth, description of any unusual occurrences or problems during drilling, complete record of drilling fluids added, cementing operations, repair time, depth of water table, water pressure changes while drilling, dimensions of well materials installed, and any other Work performed at the site. The Contractor shall keep the log up to date with the progress of drilling. Failure to keep this record up-to-date shall be grounds for the Engineer to stop drilling operations.

2. The Contractor must submit copies of Daily Activities Log to the Engineer on a weekly basis.

G. Borehole for Well Construction:

1. A temporary steel surface-casing of 625-mm (minimum) in diameter shall be installed from the ground surface to a minimum depth of six (6) meters. The well casing shall stand 0.5-meter above ground to prevent surface water from entering the borehole.
2. The borehole diameter from a depth of 6 to 60 meter shall be 600-mm in diameter or greater. If additional temporary well casings are proposed, these proposed casing diameters and depths shall be proposed in the Well Installation Plan and reviewed by the Engineer, prior to mobilizing to the site.
3. The Contractor shall maintain the vertical plumb of the borehole. See Paragraph 3.06 H, below, for plumbness methods and criteria.
4. Contractor shall keep track of drilling depth by marking the outside of the drilling rod in 0.5-meter increments with chalk, heavy crayon, soapstone or other durable marker visible to a viewer from a distance of 15 meters. Contractor shall maintain a tally sheet of drilling rod lengths being used for each location and each drill string.
5. Similarly, during well construction, the Contractor shall keep track of depth by marking the outside of all well screen and casing during installation. Contractor shall take frequent measurements of the depth of artificial filter pack, transition pack and well seal during their installation. Contractor shall maintain a tally sheet of well screen and well casing lengths being installed at each location. In addition, Contractor shall maintain tally sheets summarizing the material depths and volumes used for the artificial filter pack, transition pack and well seal.
6. Well-drilling equipment shall remain on site at all times during the drilling of the borehole.

H. Well Construction - Plumbness and Alignment Testing:

1. Boreholes shall be drilled round, straight, and plumb throughout. The Contractor shall perform plumbness and alignment tests of the borehole (if temporary casing is used) and finished well. Each well must meet the plumbness and alignment criteria prior to final acceptance.
2. The plumbness and alignment testing shall be performed in accordance with AWWA A100, Appendix D (Plumbness and Alignment – Procedure for Testing). AWWA A100 Appendix D shall be the governing standard for acceptance of the wells regarding plumbness and alignment.
3. The borehole shall not deviate more than 25 cm per 50 meters (10 inches per 164 feet) for its entire depth. If the test indicates that the borehole does not meet the plumbness criterion, appropriate corrective action shall be taken by the Contractor at Contractor's expense.

4. See also Paragraph 3.06 J, Permanent Well Casing, below.

I. Well Screen:

1. Once the borehole is complete, sections of 450-mm diameter well screen shall be joined together, then joined to the bottom of the 450-mm diameter stainless steel well casing and lowered into the well. The entire well screen assembly shall include the screen, a stainless steel bottom plate and the stainless steel pedestal welded to the bottom plate.
2. Sections of well screen shall be joined using factory-installed threaded couplings, double spline couplings or welding.
3. Stainless steel guides (“centralizers”) of the appropriate diameter shall be welded to the bottom and top of the well screen to center the well screen in the borehole. Additional guides shall be spaced no more than 10 vertical meters apart, unless field conditions dictate otherwise.
4. Based on the limited grain-size analyses performed during the 2019 Hydrogeologic Investigation, 80-slot well screens may be an adequate design for most of the soils encountered. However, final selection of well screen slot-size is subject to confirmation through pilot-borehole drilling and grain-size analyses. Grain-size distribution curves completed during the 2019 Hydrogeological Investigation are included in Attachment 5.
5. Where fine-grained layers are encountered, blank well casing may be necessary, instead of well screen.

J. Permanent Well Casing:

1. The top of the permanent 450-mm diameter well casing shall extend approximately 1 meter above ground (or as directed by the Engineer).
2. Permanent casing shall be joined together by means of factory-installed threaded couplings, spline-lock couplings, or full penetration welds, using methods and welding materials as specified in ASME B31.1, AWS D1.1/D1.1M and MNS ISO 9956-2:2003.
3. Stainless steel guides (“centralizers”) of the appropriate diameter shall be welded to the outside of the well casing to center the casing in the borehole and within temporary casings. The guides shall be spaced no more than 10 vertical meters apart, unless field conditions dictate otherwise.
4. The Contractor shall be responsible for maintaining vertical plumb throughout the construction of each well. Permanent well casing(s) shall not deflect from a vertical plumb line more than 25 cm per 50 meters (10 inches per 164 feet) for its entire depth.
5. The Contractor shall measure the plumbness of the permanent 450-mm diameter well casing when it is first installed (before installation of the artificial filter pack), before the well seal is installed, after the seal is installed,

and whenever requested by Engineer. The Engineer shall be present at all times when a well is being measured for plumbness.

6. Alignment of the well casing shall be tested by lowering a plumb of 6 meters (20 feet) in length. The outer diameter of the plumb shall not be more than 13 mm (1/2-inch) smaller than the inside diameter of the well casing. If the plumb fails to move freely throughout the entire length of the casing, the alignment shall be corrected. If the faulty alignment is not correctable, as determined by the Engineer, the well shall be properly abandoned and a new well drilled at no additional cost to the Owner.

#### K. Artificial Filter Pack

1. Contractor shall install approximately 0.15 to 0.3 meters of processed sand at the bottom of the borehole, and place the well assembly (casing, screen and pedestal) on the processed sand before introducing the artificial filter pack. The well screen pedestal shall rest on the processed sand.
2. Contractor shall place manufactured glass beads in the annulus between the well screen/casing and the borehole wall. The artificial filter pack shall be installed in the annulus until the top of the pack is at least 1 meter above the bottom of the temporary well casing. The artificial filter pack will likely settle during development and the Contractor should maintain the top of the pack a minimum of 1 meter above the bottom of the temporary casing. Maintaining the filter pack inside the temporary casing is to help prevent the formation from collapsing into the annulus and potentially reaching the well screen. Upon completion of well development, a minimum of 7 meters of artificial pack should remain above the top of the well screen.
3. Engineer shall select the size (diameter) of the manufactured glass beads based on the formation grain-size distribution. The bead size normally selected ranges from 5- to 10-times the 50% grain size ( $D_{50}$ ) of the formation.
4. The diameter of the manufactured glass beads shall be at least 30% larger than the well-screen slot size. Therefore, the screen shall retain 100% of the manufactured glass beads.
5. Based on the limited grain-size analyses performed during the 2019 Hydrogeologic Investigation, a 5- to 6-mm diameter glass bead may be adequate for most of the aquifer formation at each proposed well location. However, where fine-grained layers are encountered, a finer-grained filter pack, made of processed sand, may be necessary. However, final selection of artificial filter pack is subject to confirmation through pilot-borehole drilling and grain-size analyses. Grain-size distribution curves completed during the 2019 Hydrogeological Investigation are included in Attachment 5.
6. Contractor shall place a transition pack of one meter in thickness above the glass beads before installation of the cement-grout (sanitary) well seal. Two layers of transition pack of different grain size will be necessary to make the proper transition and prevent the cement-grout seal from intruding into the

glass-bead filter pack. Bentonite pellets may also be used as transition material with the approval of the Engineer.

7. Well development may cause settlement of the manufactured glass beads. Unless otherwise directed by the Engineer, the transition pack shall be installed after the well has been fully developed to avoid collapse of the transition pack.

L. Cement-Grout (Sanitary) Well Seal

1. The annular space between the 450-mm diameter permanent well casing and the borehole wall shall be sealed with a well sealant as specified. Acceptable grouting methods are detailed in AWWA A100. The bottom of the seal shall rest on top of the transition pack, as shown on the Typical Proposed Water-Supply Well diagram. Well sealant shall be installed by pumping through a 5 cm (2-inch) diameter tremie pipe that extends from the ground surface to the top of the transition pack to lift all the drilling fluids and/or groundwater from inside the borehole. The top of the well seal shall be at ground level.
2. The tremie pipe shall be thoroughly cleaned with high pressure hot water/steam before use in each well. The bottom of the tremie pipe shall be constructed to direct the discharge to the sides rather than downward. The discharge end of the tremie pipe shall be submerged at all times. Work shall not be conducted in the well within 24 hours after cement grouting.
3. Well development may cause settlement of the manufactured glass beads. Unless otherwise directed by the Engineer, the well seal shall be installed after the well has been fully developed to avoid the creation of a void beneath the well seal.

M. Elevation and Location Survey

1. At the conclusion of well construction, the Contractor shall perform a land survey at each well location to determine the finished elevations of the ground surface and well casing, which will be used to compute elevations of the top and bottom of well screen, top and bottom of well seal, top and bottom of transition pack, top and bottom of artificial filter pack, bottom of well and static water level.
2. The elevation reference shall be meters above sea level (DSM). Locations shall be determined in latitude and longitude and UTM coordinates.
3. Elevation and location information shall be entered onto As-Built Drawing. (see Section 02672, Paragraph 3.12 F.)

N. Final Report/Well-Construction As-Built Drawing

1. Within 7 days after completion of each production well, the Contractor shall submit to the Engineer for review and approval, a Final Report/Well Construction As-Built Drawing for each permanent well. The final report shall

include as a minimum, an as-built drawing, plumbness and alignment testing records, well-development records, pumping-test records, final sand and turbidity test results, pumping-test water-quality reports, final well disinfection test results, video inspections, daily activities logs, project photographs and drone surveys, and final well coordinates and elevations of constructed well components

2. The as-built drawing shall be a profile, having a vertical scale showing the following:
  - The diameter and depth of the well, well-screen and slot-size interval(s), well-casing interval, filter-pack and size (diameter) interval(s), transition pack interval and well seal interval.
  - A detailed Geologic Log describing soils extending from the top of the borehole to the bottom of the borehole, including the 50% grain size (D50) and the uniformity coefficient, Cu.
  - Calculations related to the selection of the manufactured glass bead diameter and well-screen slot-size.
  - Special note of any fine-grained layers identified from the pilot boreholes, and special considerations for the installation of blank well casing and a fine-grained filter pack that will prevent entry of the fine-grained soils into the permanent well.
  - Static water level, date of measurement, and measurement reference (top of casing and ground surface).
3. The Contractor shall also include the Geologic Logs, Grain-size distribution curves, photographs, and the report of the Borehole Geophysical surveys submitted with the Proposed Final Well Design Report/Well-Construction Diagram for the respective well site.

### 3.07 WELL DEVELOPMENT:

- A. Each well shall be developed as detailed in the Well Installation Plan. Development equipment shall be of an approved type and of sufficient capacity to remove all drilling and cutting fluids, clay, silt, sand, rock cuttings, and any other foreign material. Contractor shall also refer to the latest version of AWWA A100 regarding well development.
- B. The overall goals of well development are two-fold: to maximize well efficiency (specific capacity) and to remove formation soils and drilling fluids, so that the well pumps clear water that is free of sand turbidity.
- C. Before well development commences, Contractor shall measure and record the volume of sand accumulated at the bottom of the well during installation of the well casing, well screen and filter pack.
- D. Development shall be performed primarily by cycles of pumping-and-surgings using surge blocks. Pumping shall be achieved with the use of airlifting, submersible pumps, turbine pumps or centrifugal pumps. Because the static water level is expected to be relatively shallow at each location, i.e., within 1 to 3 meters of the ground surface, pumping by suction lift may be a feasible approach.

E. Development by Airlifting:

1. If appropriate and as dictated by field conditions, the Contractor shall develop the well by pumping by air-lifting using an airline inside an eductor (suction) pipe, in accordance with the accepted Well Installation Plan. The Contractor shall furnish, install, and operate an air compressor with sufficient capacity to exceed the maximum head pressure in the well. Airlifting shall begin at the uppermost portion of the open well and proceed downward to the bottom. Upon reaching the bottom of the well, airlifting shall continue from that point until all debris is removed from the bottom of the well and the water is clear to the unaided eye or until such time that the Engineer deems the process to be complete.
2. The discharge water shall be discharged to a low lying area near the well site, subject to the review of the Engineer. The Contractor shall be responsible for providing and maintaining all necessary pipe, pumps and equipment connections, electrical controls, valves, containers and/or chemicals required for neutralization prior to discharge and any other items required to discharge water to the appropriate location.
3. Development by direct-air (by applying compressed air without an educator pipe) shall not be allowed, as it could introduce contaminants into the well.

F. Development by Pumping-and-Surging:

1. After the Engineer confirms that air-lift development is complete, the Contractor shall commence well development by pumping and surging, in accordance with the accepted Well Installation Plan.
2. The Contractor shall provide and install pumping equipment capable of continuously pumping at a range of flow rates up to 120 l/s.
3. Three surge blocks, spaced one- to two-meters apart vertically, shall be fastened to the pump column and inserted into the well screen. The entire length of well screen shall be developed in two- to three-meter sections. Development may begin at the top of the well screen or at the bottom of the well screen. However, by the end of development, the entire length of screen shall be developed by pumping-and-surging.
4. The initial surging motion shall be gentle to observe how the well reacts. If necessary, the Contractor shall experiment with the stroke height and stroke rate (strokes per minute) to optimize the well development process.
5. The initial pumping rate shall be gradually increased until the maximum rate of 110 liter per second is achieved. Development shall consist of pumping and surging the well, interrupted by a sequence of non-pumping periods (surging only) and non-surging periods (pumping only).
6. The Contractor shall take regular measurements of well yield and water levels in the well to track improvements in specific capacity. Water levels will be measured in “meters and centimeters below measuring point”. Contractor and

Engineer shall agree upon one reference level for all water-level measurements before start of the Work.

7. The flow rate shall be measured using an approved orifice weir, capable of accuracy of 3% or better, or V-notch weir placed at the end of the temporary discharge line about 100 meters from the well. Contractor may use a calibrated magnetic flow meter in addition to the weir. Debris that accumulates behind the orifice weir shall be cleaned periodically to maintain accurate flow readings.
  8. The Contractor shall maintain a record of well development in accordance with Section 02672, Paragraph 3.12 G, Well Development Records.
- G. Sand and turbidity removed from the well during development shall be containerized in a plastic or metal tub with a minimum volume of 2,300 liters (600 gallons). Containerizing sand and turbidity is essential to measuring and tracking the daily volume of sand/turbidity production, as well as protecting the environment.
- H. Well development shall continue until there is no increase in specific capacity and the water is free of drilling fluids, sand, silt and turbidity when pumping at 110 l/s. Well water shall be clear to the unaided eye and turbidity levels shall be less than or equal to 1 NTU. Sand content shall not exceed 2 ppm at a pumping rate of 110 l/s as measured with a Rossum Sand Tester after one hour of continuous pumping.
- 3.08 PERFORMANCE PUMPING TESTS:
- A. Pumping Tests:
1. Pumping Test Procedures:
    - a. The Contractor shall furnish all labor, tools, materials and equipment; and perform all operations in connection with the performance testing of each newly installed water-supply well, which includes, but is not limited to providing and subsequently removing a temporary pumping unit with check valve(s); a temporary power supply(s) capable of powering all equipment simultaneously; stilling well; discharge pipeline; flow measurement equipment; water-sampling equipment; labor and materials for continuous monitoring of pumping equipment during performance testing; and for reading and recording drawdown and recovery water levels during and after the continuous pumping tests.
    - b. Upon completion of the permanent water-supply wells, the Contractor shall conduct a performance pumping test of each permanent well for a period of 24 hours, as specified, when approved by the Engineer. The permanent wells shall be pumped at the Design Rate, and/or as directed by the Engineer. (For water-supply wells at Biokombinat, the Design Rate is 71 l/s; for those at Shuvuun, the Design Rate is 74 l/s.)
    - c. The Contractor's pumping equipment, including the submersible pump with check valve, the discharge piping, stilling well and any other equipment that enters the wells, shall arrive on site free of oil, grease,

soil, residues and other contaminants. Any equipment that arrives on site that is not clean shall be removed from the site immediately and properly cleaned.

- d. The Contractor shall test his pumping equipment 24 hours prior to the commencement of each performance test to ensure that the pumping equipment is properly functioning, that pump output is satisfactory, that sampling taps are properly functioning and suitable to the Engineer, that the temporary discharge piping is free of significant leaks, that the check valve works properly, and that flow measurement equipment is measuring the flow correctly. The Contractor shall correct any defects observed. The Engineer will not authorize the commencement of any performance test until all defects have been corrected.
- e. Prior to installing the test pumping equipment, the Contractor shall disinfect the permanent water-supply wells and pumping unit with a sodium hypochlorite solution that will result in a chlorine level of 50 ppm for the full length of the well. At the end of the performance test, a sample of the water shall be taken and delivered to a certified laboratory for bacteriological analysis. In the event that bacteria is detected, the Contractor shall re-chlorinate and analyze samples as many times as is necessary to obtain negative bacteria results, at no additional cost to Owner.
- f. During each performance test, the Contractor shall keep pumping test records of the pumping rates, weather conditions, rainfall, drawdown and recovery in the permanent well and all observation wells selected by the Engineer during the respective pumping and recovery periods. All water-level readings shall be measured electronically using data logging pressure transducers and manually using electronic probes, and recorded to the nearest hundredth of a meter (measuring tapes are to read directly in meter, tenths and hundredths of a meter). In addition to the actual time of each water level reading, the Contractor shall record the number of minutes that have elapsed from the start of a test. Water level readings shall be taken according to the following timetable:
  - (1) Prior to startup of test (static water level)
  - (2) After 30 seconds
  - (3) One minute to 10 minutes: once every minute
  - (4) Ten minutes to 100 minutes: once every 10 minutes
  - (5) One hundred minutes to 4 hours: once every 30 minutes
  - (6) Four hours to 12 hours: once every hour
  - (7) Twelve hours to shut down: once every 2 hours
  - (8) Prior to shutdown of test.

- g. At the beginning of each performance test and during each two (2) hour reading, the Contractor shall measure and record the flow of water in liters per second.
- h. After the pump is shut off, the Contractor shall measure water-level recovery at the same frequency as specified above for the pumping phase.
- i. For the start of any performance test (first 100 minutes) and shutdown (first 100 minutes), the Contractor shall provide two (2) qualified individuals to measure and record the water level in the pumping well and one other well selected by Engineer.
- j. In consideration of laboratory holding-times, performance tests shall be initiated on a Sunday, Monday, Tuesday, Wednesday, or Thursday only, as approved by Engineer. No drilling, development or pumping of other nearby wells shall be permitted 24 hours prior to, during, or 24 hours after the pumping test unless authorized by the Engineer.
- k. At the conclusion of each pumping test, a 450-mm diameter stainless steel cap shall be welded over the top of the well casing for protection.

2. Pumping Equipment:

- a. Pumps and motors used for performance testing shall be of good quality, reliable and capable of pumping continuously throughout the test period except for necessary interruptions for adjustments that may be required. Said interruptions shall not exceed one-half (1/2) hour at any one time or more than 3% of the entire time from the beginning of a test to the end. There shall be no shutdowns in the first 2 hours or last 30 minutes of the test. If shutdowns or interruptions due to any cause exceed the specified limits, and a test is declared to be a failure by Engineer, the Contractor shall start a new performance test without receiving compensation for the test declared to be a failure. Performance testing shall not commence until such time as approved by Engineer.
- b. Electrical generators used to power the pumps shall be of good quality, reliable and capable of generating power continuously. Generators shall be equipped with a noise reduction system and secondary containment for fuel as specified and approved by Engineer. In addition, the Contractor shall place heavy duty sheet plastic, properly bermed, beneath each electrical generator to provide additional secondary containment of fuel, subject to the approval of Engineer.

3. Discharge Pipeline and Flow Measurement:

- a. The Contractor shall provide a temporary discharge pipeline, approximately 300 meter in length, to extend from the well being pumped to a discharge point approved by the Engineer.

- b. The discharge line shall be properly sized to carry a flow of up to 120 l/s to the point of discharge. It is the intent of Engineer to have the water discharged at a point where it will not flow through the ground and back into the well being pumped and influence the drawdown readings of the well being tested.
  - c. The pumping rate shall be measured using a properly calibrated magnetic flow meter capable of measuring flow rates of at least 120 l/s. A calibration record will be required to demonstrate the flow meter accuracy is within 3% of better of the actual discharge. The flow meter shall be placed within 15 meters of the well.
  - d. In addition, the pumping rate shall be measured using an approved, properly sized and properly assembled orifice weir or V-notch weir placed at the end of the discharge pipeline. If an orifice weir is used, it shall have a rigid 32-mm diameter plastic sight glass and appurtenances, to measure the head on the orifice so that the pumping rate may be accurately computed. The rigid sight glass shall have the proper fittings so that it is in the vertical position at all times. A rigid measuring tape or ruler shall be permanently attached to the sight glass.
  - e. The Contractor shall provide a gate valve within 10 meters of the well to allow for adjustments to the pumping rate. A water sampling apparatus shall be provided at the wellhead of each well. The apparatus shall be made of steel, stainless steel and/or PVC. Brass fixtures, including "lead free brass" shall not be allowed. The apparatus shall have a "tee" and two separate sampling taps, each with a valve. One sampling tap shall be a smooth-nosed stainless steel faucet to be used for collecting samples for laboratory analysis. The second tap shall have a barbed fitting for samples tested in the field.
  - f. Splashboards, plastic sheeting, hay bales or a combination of these materials shall be used to ensure that no erosion occurs as pumped water is discharged and flows across the ground. Erosion control devices shall be maintained throughout the performance tests.
4. Pumping Test Records:
- a. Within two (2) days after the conclusion of the pumping tests, the Contractor shall submit pumping test records typed or neatly handwritten in black ink on a standard form that includes in the heading: the date of the pumping test, well identification and location; and the Contractor's name, address, and telephone number. The heading shall also include information on the pumping equipment, the discharge line and the flow measurement equipment. Below the heading, records shall be done in chart form showing the actual time (date, hour and minute), the elapsed time (in minutes) from the beginning of a test; the static water levels, and water level drawdown and recovery readings (in meters, centimeters, and millimeters) in the pumped well and observation wells; the pumping rate(s) (in liters per second); the orifice

head (in millimeters); weather conditions; rainfall; and any pertinent observations or occurrences.

- b. The Contractor shall submit a blank copy of the pumping test record in advance of the pumping tests for review and approval by the Engineer. A sample pumping-test record is included in Attachment 4.

B. Test for Quality of Water:

1. At the conclusion of each performance pumping test, the Contractor shall secure samples of water in suitable containers, and of sufficient quantity, for analytical testing purposes. Water samples shall be tested for bacterial, physical, and chemical analytes by an internationally accredited laboratory, also certified by the Government of Mongolia. Water samples shall be tested for those analytes specified in Table 1 in Attachment 2 to this Section and any additional analytes listed in MNS 0900:2018 (including Annexes 1 through 7) drinking water quality standard (article 6.5) for new potable water supply wells. Expenses incident to these analyses shall be borne by the Contractor and the results of the analyses shall be furnished to the Engineer.
2. Analyses shall be performed using USEPA and GoM approved methods. Samples shall be properly collected, preserved and analyzed within the required holding times. Method detection limits shall be lower than the applicable drinking-water limits.
3. The water quality analysis must be collected in accordance with MNS ISO 5667-5:2001 and transported to the accredited laboratory according to MNS ISO 5667-3 and MNS ISO 4867:99.
4. Samples for which laboratory analyses are required shall be collected in specially designated and approved sample containers provided to the Contractor by the certified analytical laboratory for the specific parameters required. Water sampling containers shall be acceptable to the Engineer.
5. The sample containers shall be clearly labeled with the well identification, and the time and date of sample collection.
6. Samples shall be stored in the appropriate manner as instructed by the laboratory and delivered to the laboratory in accordance with the laboratory's instructions. Water samples shipped outside of Mongolia for analysis shall be subject to GoM protocols and GoM approval in advance, and subject to Engineer's review.
7. Chain of Custody forms shall be completed for all water samples. Copies of the Chain of Custody forms shall be submitted to the Engineer within two (2) days of shipment of the samples to the laboratory. All persons handling the samples shall be required to sign the Chain of Custody form.
8. The Contractor shall be aware of applicable water sampling holding times for all analytes for which he is responsible and ensure that the samples are transmitted to the laboratory within these time periods.

9. Temperature, pH, Eh (redox potential), specific conductance, and dissolved oxygen shall be measured in the field during the pumping test or at any time instructed by the Engineer, and recorded with the date and time the field measurements were taken.

C. Sand and Turbidity Test:

1. At the end of each performance pumping test, sand content and turbidity shall be measured. Each well shall be pumped at the design rate of the well, or as directed by the Engineer. Well water shall be clear to the unaided eye and turbidity levels shall be less than or equal to 1 NTU. Sand content shall not exceed 2 ppm at the design pumping rate as measured with a Rossum Sand Tester.
2. Upon completion of the performance pumping-test, any accumulation of sand found at the bottom of the well screen shall be removed.

3.09 VIDEO INSPECTION:

- A. At the conclusion of the performance pumping test, Contractor shall perform a video inspection of each water-supply well to establish its as-built condition. The inspection shall be done in the presence of the Engineer. The Engineer will examine the walls of the well casing and the well screen.
- B. The video camera and equipment shall have a color monitor for field viewing, and shall be recorded in color on DVD or pen drive. In addition, the camera shall be capable of being articulated to view in the downward and sideward directions, or have multiple cameras to view downward and sideward simultaneously. The camera shall have a built-in depth counter to monitor depth in the field and record depth on the image. The monitor shall also indicate and record the date and time of the inspection, as well as the Well ID and name of the well field ("Biokombinat" or "Shuvuun").
- C. The Contractor shall submit one (1) copy of the DVD of the video inspection to the Engineer.

3.10 FINAL DISINFECTION:

- A. After installation of the temporary pump for each performance pumping test, the wells shall be disinfected by adding sodium hypochlorite, conforming to AWWA B301, or hypochlorite, conforming to AWWA B300, in sufficient quantity so that a concentration of 50 ppm of chlorine is present the entire length of the well. Disinfection solution shall be prepared and introduced into the well in an appropriate manner and shall remain in the well for period of at least 12 hours but not more than 24 hours.
- B. Information on methods for preparing disinfection solution and introducing it into the well may be found in AWWA C654.
- C. At the conclusion of each performance pumping test, water samples shall be collected and tested for the microbiological analytes listed in Table 1, Attachment 2. Should the water test positive for coliform bacteria, the well shall be disinfected and

re-disinfected as may be required until two consecutive samples of water collected at least six hours apart are found to be free of coliform bacteria.

### 3.11 SITE CLEAN-UP:

- A. After completion of the Work, remove tools, appliances, surplus materials, temporary drainage, rubbish, and debris incidental to Work. The contractor shall prevent off-site discharge of turbid water, stormwater, and other contaminants. Excavation and vehicular ruts shall be backfilled and dressed to conform with the existing landscape. Utilities, structures, roads, fences, or any other pre-existing item which must be repaired or replaced due to the Contractor's negligence shall be the Contractor's responsibility; repair or replacement shall be accomplished prior to completion of this contract.
- B. At the option of the Owner, the Contractor shall abandon existing 273- or 300-mm diameter test wells and 168-mm diameter observation wells (installed in 2019) at the conclusion of the well-construction program. Contractor shall abandon test wells as follows:
  - 1. Contractor shall disinfect the well in sufficient quantity so that a concentration of 50 ppm of chlorine is present throughout the entire length of the well prior to well abandonment.
  - 2. Contractor shall fill the bottom of the well with processed sand (see Transition Pack in Paragraph 2.07, above).
  - 3. Contractor shall then cap the processed sand with 9 meters (30 feet) of Well Sealant (see Paragraph 2.08, above) by pumping the sealant through a tremie pipe placed at the top of the backfilled processed sand.

### 3.12 DOCUMENTATION AND QUALITY CONTROL REPORTS:

- A. Establish and maintain documentation and quality control reports for pilot boreholes, well construction and development to record the desired information and to assure compliance with contract requirements, including, but not limited to, the following.
- B. Documentation shall be submitted for those items referenced in Section 02672, Paragraph 1.04A.
- C. Product Data shall be submitted for those items referenced in Section 02672, Paragraph 1.04B, SUBMITTALS, Product Data Submittals.
- D. Test reports shall be submitted for those items referenced in Section 02672, Paragraph 1.04C, SUBMITTALS, Test Reports and Other Documentation.
- E. Borehole Logs: A borehole log shall be completed for each water-supply well installed. Borehole logs shall be prepared by the Professional Hydrogeologist present onsite during all well drilling and installation activities. Copies of complete borehole logs shall be kept current in the field at each well site and shall be available at all times for inspection by the Engineer. Final borehole logs shall be submitted to

the Engineer within seven (7) days of completion of each water-supply well. Information provided on the logs shall include, but not be limited to, the following:

1. Name of the project and site.
  2. Boring/well identification number.
  3. Location of boring (coordinates, if available).
  4. Make and manufacturer's model designation of drilling equipment and name of drilling firm.
  5. Date boring was drilled.
  6. Reference data for all depth measurements.
  7. Name of driller and name and signature of Professional Hydrogeologist preparing log.
  8. Nominal hole diameter and depth at which hole diameter changes.
  9. Total depth of boring.
  10. Method of drilling, including sampling methods and sample depths, including those attempted with no recovery. Information such as rod size, bit type, pump type, etc., shall be recorded. A description of any temporary casing used, drill fluids and fluid additives used, if any, including brand name and amount used, along with the reason for and start (by depth) of its use shall be included. If measured, fluid viscosities and weight shall be recorded.
  11. Depth of each change of stratum. If location of strata change is approximate, it shall be so stated.
  12. Description of the material of which each stratum is composed, in accordance with ASTM D2488 – 17e1. Also refer to Section 02672, Paragraph 3.05 C.7, Soil Descriptions.
  13. Depth and estimated percent of drill fluid loss or lost circulation. Measures taken to regain drill water circulation. Significant color changes in the drilling fluid return.
  14. Depth to water and date measured before, during, and after each drilling shift, and prior to well installation.
- F. Well Installation Diagrams (As-Built Drawings): Submit As-built drawings for each well installed, prepared by the Professional Hydrogeologist present during well installation operations, within seven (7) days of the completion of the well installation procedure. The diagram shall illustrate the as-built condition of the well and include, but not be limited to, the following items:
1. Name of the project and site.

2. Well identification number.
  3. Name of driller and name and signature of the Professional Hydrogeologist preparing diagram.
  4. Date of well installation.
  5. Description of material from which the well is constructed, including well casing and screen, centralizers, filter pack and transition pack; diameter and schedule of casing and screen; generalized soil description; method of placement of the filter pack, transition pack and well seal; and well-seal type.
  6. Total depth of well.
  7. Nominal borehole diameter.
  8. Depth to top and bottom of screen, filter pack and transition pack.
  9. Depth to top and bottom of any seals installed in the well boring (grout or bentonite).
  10. Type of cement and/or bentonite used, mix ratios of grout, method of placement and quantities used.
  11. Elevations of key features, including ground surface, top and bottom of well casing, top and bottom of well screen, top and bottom of filter pack, top and bottom of transition pack, top and bottom of seal, static water level and bottom of well. Elevations shall be determined by land survey in meters above sea level (DSM).
  12. Other pertinent construction details, such as slot size and percent open area of screen, type of screen, and manufacturer of screen.
  13. Well location in both latitude and longitude and UTM coordinates. A plan sheet shall also be included showing the coordinate system used and the location of each well. Well locations shall be determined by land survey.
  14. Static water level upon completion of the well, and pumping level at the conclusion of the performance pumping test.
  15. Special problems and their resolutions; e.g., grout in wells, lost casing, or screens, bridging, etc.
  16. Description of surface completion.
- G. Well Development Records: A well development record shall be prepared for each well, and submitted to the Engineer within two (2) days of the completion of development under the supervision of the Professional Hydrogeologist present during well installation operations. Information provided on the well development record shall include, but not be limited to, the following:

1. Name of project and site, well identification number, dates of development and weather conditions.
  2. Contractor name and contact information, along with name of drilling foreman.
  3. Methods used for development, to include size, type and make of equipment, and pump used during development.
  4. Well depth and initial height of sand (meters) found at the bottom of the well before development commences.
  5. Date, time, and depth of static water level in the well (each day).
  6. Progressive measurements of water-levels measured during development, along with drawdown, pumping rate, specific capacity, depth setting of surge blocks and time of measurements.
  7. Description of physical character of water removed, to include changes during development in clarity, color, particulates, and odor, and time of observation.
  8. Volume and source of water added to the well, if any.
  9. Cumulative daily volume (i.e., in liters) and physical character of sediment removed.
  10. Measurements of turbidity in Nephelometric turbidity unit (NTU) measurements, and sand content in milligram per liter (mg/l) or parts per million (ppm), and time of measurement.
  11. Measurements of pH, specific conductance, dissolved oxygen (DO), oxidation-reduction potential (ORP), and temperature during development, including time of measurements.
  12. A sample of a blank well-development record is included in Attachment 4.
- H. Well Abandonment Records: Abandonment records shall be submitted to the Engineer within seven (7) days of abandonment of each well, and include, as a minimum, the following:
1. Project name.
  2. Well or test hole number.
  3. Well/boring location, depth and diameter.
  4. Date of abandonment.
  5. Method of abandonment.
  6. All materials used in the abandonment procedure and the interval in which test materials were placed.

7. Casing, and or other items left in hole by depth, description, and composition.
  8. Description and total quantity of grout used initially.
  9. Description and daily quantities of grout used to compensate for settlement.
  10. Water or drilling fluid level (specify) prior to grouting and date measured.
  11. The reason for abandonment of the well/test hole.
  12. Engineers' written directive or authorization to abandon the well.
  13. Engineers' written approval of methods, materials used
  14. A copy of permit or regulatory approval, fee and schedule.
- I. Project Photographs/Video/Drone Surveys:
1. Refer to SECTION 01380, CONSTRUCTION PHOTOGRAPHS, VIDEO AND DRONE SURVEYS.

Manganese /total/, Mn  
Manganese /dissolved/, Mn  
Mercury / Total, Hg  
Mercury /dissolved/, Hg  
Molybdenum /total/, Mo  
Molybdenum /dissolved/, Mo  
Nickel /total/, Ni  
Nickel /dissolved/, Ni  
Nitrate, NO<sub>3</sub>-  
Nitrite, NO<sub>2</sub>-  
Phosphorus /total/, P  
Phosphate /PO<sub>4</sub> 3-  
Potassium /total/, K  
Potassium /dissolved/, K  
Selenium /total/, Se  
Selenium /dissolved/, Se  
Silicon /dissolved/, Si  
Silver /total/, Ag  
Silver /dissolved/, Ag  
Sodium /total/, Na  
Sulfate, SO<sub>4</sub>2-  
Strontium /total/, Sr  
Strontium /dissolved/, Sr  
Thallium / Total, Tl

Total dissolved solid, TDS

Uranium /total/, U

Uranium /dissolved/, U

Zinc /total/, Zn

Zinc /dissolved/, Zn

Organic and Petroleum Compounds – For Laboratory Analysis

Volatile Organic Compounds (VOCs)

Total Organic Carbon (TOC)

Total Petroleum Hydrocarbons (TPHs)

Microbiological – For Laboratory Analysis

Total Coliform

Fecal Coliform

Escherichia coli

Pathogenic bacteria (Salmonella)

Clostridium Perfringens

Table 2	
Water Supply for Construction Purposes	
Water Quality Parameters for Field and Certified Laboratory Analysis	
<u>Field Parameters</u>	
Temperature	
pH	
Conductivity	
Dissolved Oxygen (DO)	
Oxidation Reduction Potential (ORP)	
<u>Organic and Petroleum Compounds – For Laboratory Analysis</u>

Clostridium Perfringens	

This Page Intentionally Left Blank.

ATTACHMENT 3

MONGOLIA II – BULK WATER SUPPLY EXPANSION, GEOPHYSICAL-  
HYDROGEOLOGICAL INVESTIGATION, SHUVUUN AND BIOKOMBINAT  
WELLFIELDS, FINAL REPORT, DECEMBER 2019

This Page Intentionally Left Blank.

## ATTACHMENT 4

### SAMPLE RECORD AND REPORT FORMS:

1. Geologic Log Form
2. Grain-Size Distribution Curves
3. Borehole Geophysical Record
4. Blank Pumping Test Record
5. Blank Well-Development Record
6. Blank Well Installation Diagram
7. Sample Gravel Packed Well Diagram

This Page Intentionally Left Blank.

ATTACHMENT 5

GRAIN-SIZE DISTRIBUTION CURVES FROM 2019 HYDROGEOLOGICAL  
INVESTIGATION

END OF SECTION

AECOM	BGM Distribution LLC
250 Apollo Drive Chelmsford, MA 01824, USA T +1-978-905-2100	“VELOX” Center, 4 floor Batmunkh Street 39/2, Sukhbaatar District, 8-r Khoroo, Ulaanbaatar

## Appendix M List of Preparers and Contributors

No	Name	Institution
<b>Local Contributors</b>		
1	Byambakhuu Ishgaldan (Local Lead Environmental Specialist)	BGM Distribution LLC
2	Nerguibaatar Saikhanjargal (Environmental Engineer)	BGM Distribution LLC
3	Nyamsuren Chinzorigt (Environmental Engineer)	BGM Distribution LLC
4	Anarmaa Sharkhuu (Environmental Specialist)	BGM Distribution LLC
5	Altantsetseg Naigal ( Environmental management specialist)	BGM Distribution LLC
6	Enkhdul Tuuguu (Environmental chemistry, Engineer)	BGM Distribution LLC
7	Khongorzul Enkhbat (Environmental Specialist)	BGM Distribution LLC
8	Amartuvshin Tserennadmid (Social Specialist)	BGM Distribution LLC
9	Batsukh Narantuya (Social Specialist)	BGM Distribution LLC
10	Davaadorj (Soil Expert)	BGM Distribution LLC
11	Batsaikhan Nyamsuren (Biodiversity expert)	BGM Distribution LLC
12	Khuderchuluun Gantumur (Biologist)	BGM Distribution LLC
13	Ariunsuren Purvee (Botanist)	BGM Distribution LLC
14	Purevkhuu Dugersuren (Hydrogeologist)	BGM Distribution LLC
15	Barkhas Lkhagvasuren (Hydrogeologist and GIS)	BGM Distribution LLC
15	Enkhbat Donchinbuu ( Environmental Specialist)	BGM Distribution LLC
<b>AECOM Contributors</b>		
1	Donald Champenois (Project Manager)	AECOM
2	Victor P. Frankenthaler (Environmental Specialist)	AECOM
3	Joseph Tomasi (Deputy Project Manager: Environmental Engineer)	AECOM
4	Gabriel Banana (Social and Gender Expert)	AECOM
5	Hilary Byrne (Social and Gender Expert)	DT Global
