COMPACT GOAL

MCC is currently working with the Government of Liberia (GoL) to define potential compact projects centered principally around electricity generation, electricity access and policy reform and potentially around road planning and maintenance. This program definition process is based on concepts submitted by the GoL in June 2014, and an economic constraints analysis and related social and gender and investment opportunity assessments completed in the fall of 2013.

COMPACT AT A GLANCE

Eligibility Notification	12-19-2012
Constraints Analysis.....	11-14-2013
Concept Note Received.....	10-25-2013
Eligibility Notification	12-10-2013

Eligibility Notification	
12-19-2012	MCC Board of Directors selected Liberia as eligible to develop a compact.
Constraints Analysis	
11-14-2013	The GoL finalized its constraints analysis, as well as a complementary social and gender analysis and an investment opportunity assessment, in each case following consultations with civil society, private sector, and local and national government. This analysis identified as binding constraints to economic growth electricity and roads, and access to land as a leaning binding constraint.
Concept Note Received	
10-25-2013	A core team, funded by the Government of Liberia, submitted initial concept note proposals to address the binding constraints identified in Liberia's constraints analysis and related preliminary analysis. Specifically, Liberia's concept notes included investments in energy and corridor development and regional integration.
Eligibility Notification	
12-10-2013	The MCC Board of Directors reselected Liberia as eligible in FY2014. However, because Liberia only passed 9 out of 20 indicators in the FY2014 scorecard, the Board indicated that Liberia must pass 10 indicators prior to compact signature.
