

**COMPACT GOAL**

The objective of MCC's second compact in Benin will be to reduce poverty and spur growth through increasing the quantity and reliability of electrical power and through strengthening the energy policy and institutional environment.

**COMPACT AT A GLANCE**

Concept Note Received.....	09-14-2012
Concept Paper Received.....	04-15-2013
Eligibility Notification.....	12-11-2013
Eligibility Notification.....	12-10-2014

<b>Eligibility Notification</b>	
12-15-2011	MCC Board of Directors selected Benin as eligible to develop a second compact.
<b>Constraints Analysis</b>	
08-22-2012	The Government of Benin's Unité de Coordination de la Formulation du 2eme Programme et du Suivi des Reformes de MCA-Benin (UCF) completed analyses of constraints to growth and private investment, social and gender inclusion, and private sector opportunities in August 2012. The findings of these assessments were validated through nationwide consultations with civil society, women's organizations, private businesses, donors, and local as well as national government stakeholders.
<b>Eligibility Notification</b>	
12-19-2012	MCC Board of Directors reselected Benin as eligible to continue developing a second compact.
<b>Concept Note Received</b>	
09-14-2012	UCF submitted project proposals (concept notes) for rural infrastructure, business environment, value chain support and renewable energy between September and November 2012.
<b>Concept Paper Received</b>	
04-15-2013	UCF submitted detailed project proposals (concept papers) for agribusiness institutional reform and enabling transportation and energy infrastructure. Further due diligence has narrowed potential compact investments to two geographic zones (centered around Cotonou and Parakou) and five value chains (cashew, cassava, maize, pineapple, and shea). Areas for potential policy and institutional reform include agricultural market regulation, taxation, transport, power, and trade.
<b>Eligibility Notification</b>	
12-11-2013	As a result of a failure to pass the Control of Corruption indicator on MCC's scorecard, the Board did not reselect Benin as eligible in FY2014. However, to encourage Benin to improve its scorecard performance the Board supported an MCC approach of "limited engagement" in FY2014. In keeping with this approach, Benin is not eligible to sign a compact and some components of development of a potential compact have been placed on hold. MCC is working with Benin to improve its scorecard performance.

Eligibility Notification	
12-10-2014	Benin was re-selected as eligible to develop a compact by MCC's Board of Directors.

MCC and the Government of Benin are on-track to present a power-focused compact to the MCC Board of Directors in June 2015. The proposed program includes investments in both on and off-grid electricity generation and distribution along with policy reforms to ensure sustainability and enable private sector investment.
